To reach this time of harvest, the grower and his field crew have led the orchard through a maze of dangers.

In winter, when ice and snow cover the ground, special wire screens must be placed around the base of the trees to protect them from field mice, which gnaw through the bark to find the tender cambium layer (the "lifegiving cells of the tree").

Early spring begins a long season of spraying to control insects, fungus and disease that could destroy the crop. Bees are brought into the orchard to help cross-pollinate those trees. The resulting honey is an added product to be sold to supermarkets or at roadside stands. Other sprays contain hormones which, at blossom time, thin the production of the tree so a controlled number of large, well formed apples are produced rather than a profusion of stunted fruit.

SPRAYING IS TRICKY

This spraying, like another designed to keep ripened fruit from dropping to the ground, is a tricky business. The mixture that is just right for one variety would completely defruit another tree. A chance wind or a misdirected spray could eliminate the harvest.

By the end of July the harvest is about to begin with one variety after another ripening through November. On this farm the fruit is grown for table use and a successful year requires that each variety be picked at just the right time in the ripening process.

"I run a number of tests," Mr. Gatto explains, "to determine just when we have to pick, including: size, color, taste, the finish of the fruit [a ripe one is sort of satiny], the depth of the cutin [the natural wax coating that makes an apple shine] and, finally, the pressure test. Each variety builds up a specific pressure inside when it is at the peak of sweetness—that's the ultimate test."

By the time the season is coming in, Claude Tatum, a 38-year-old Negro migrant labor contractor who has worked the farm for a number of years has arrived from Winter Haven, Fla., with a crew of 25 migrant pickers.

His field boss, Carl Fladger, has also spent years in the business and carefully explains to new pickers that even human hands are too tough for apples.

"You got to cup them like this," he says as his long fingers curl up to form a nest around the apple. "You don't pick them with the tips of your fingers or you will bruise them." To emphasize the point, he picked out apples picked by the new men only 20 minutes before.

On each one, five brown, round bruises had formed where the fingers and thumb had pressed two hard against the skin. "These ain't good for nothin' now," he said, throwing them to the ground.

All across the state the harvest is in full swing now. From the Canadian border, down through the Hudson Valley mostly table fruit is being harvested in the huge orchards in the west, processing apples are picked and shipped for conversion into applesauce, apple butter, jelly, vinegar and apple juice.

CIDER QUALITY VARIES

And, at roadside stands, golden jugs of apple cider are on display. The cider has been out for some time now, but connoisseurs have waited until now to shop their favorite stands. Early cider, they say, is made mostly from early MacIntosh, which tend to make a watery cider. Now that Northern Spy and some Delicious varieties are in, they say, the "real" cider is on the market.

"It's got that musky taste that's really cider," says one elderly gentleman who stopped at a stand near here. "You young folks don't know about good apples. Everybody looks for the pretty red or yellow apple when right here is the best apple known to man."

He held up a large, hard green apple called the Pound Sweet. "It's the best eating and cooking apple ever grown. We used to steal them when I was young. Nobody hardly grows them anymore."

Fortunately for the young people today the country roads around here are dotted along the way with clumps of apple trees abandoned but still producing edible fruit. Some say they are the trees Johnny Appleseed set out on his way West. Others say they are remnants of the time when every farm had a moneymaking orchard before the growth of commercial farms pushed them out.

Whatever their origin, there are plenty of trees that young boys can shinny up on a clear, bright day and eat his fill. Or, maybe, just pick a few small, hard ones to throw at fence posts on the way home.

A DEMONSTRATION FOR THE UNIVERSITY OF NEVADA PRESIDENT

HON. MARVIN L. ESCH

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. ESCH. Mr. Speaker, in an age in which college presidents are too often maligned rather than praised, it is especially refreshing to learn that one university had such high respect for their administrator that they deemed it appropriate to have a special tribute in his honor. Recently the University of Nevada in Reno paid this special tribute to President N. Edd Miller in a very unique way. It is especially gratifying to me, Mr. Speaker, to see President Miller recognized in such a way as he was a former mentor of mine and served on my doctoral committee. I am including a description of the events as published in the Washington Post on October 14:

RENO STUDENTS STUN PRESIDENT—DEMONSTRATION IS FOR HIM

RENO, NEV., Oct. 17.—Dr. N. Edd Miller, president of the University of Nevada at Reno, works a 11-hour day that starts at 6:30 a.m.

As he drove to work in the pre-dawn darkness today, he sensed something amiss.

When he reached the main gate of the campus, he saw a crowd of 2,000 students massed on the lawn. They carried bullhorns and picket signs and banged on garbage can lids. Fireworks crackled in the gloom.

In the din Miller heard people cheering. As the crowd surged forward he was able to make out the signs:

"N. Edd Miller Day."

Chanting, "We want Edd," the students took him to the administration building, where he stood blinking back tears while student body president Jim Hardesty said, "We want you to know the appreciation we have for you."

The students had been working in secrecy on "Edd Miller Day" for days.

An ROTC squad fired off a 24-gun salute. A thousand helium-filled balloons sailed into the sky as Miller went to lunch, where he was presented a plaque and his wife was given a bracelet.

Student leaders read dozens of telegrams they had solicited from friends and educators around the country. Harold's Club sent over a cake big enough to serve 400—but it was far too small.

Miller is "a giant of a man to those who know and work with him," the student news paper, Sagebrush, said in an editorial.

Miller, a 49-year-old former speech professor, came to the Reno campus in 1965 and became president in 1968. He has been a strong supporter of student government, which he feels helps prevent campus turmoil.

After the lunch, a police escort took Miller and his wife to the airport for a student-paid weekend in San Fancisco.

"Aside from being married, this is the nicest thing that ever happened to me," he said.

CREDIT CARD ABUSES

HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. ROSENTHAL. Mr. Speaker, today, I am introducing legislation which would ban the mailing of unsolicited credit cards and require that all requested credit cards be sent by certified mail. My bill marks the first attempt to provide protection against the loss or theft of all credit cards sent through the mails.

The unparalled boom in the mailing of unsolicited credit cards is much more serious and sometimes more unsettling than pornography. The unsolicited credit card is far more costly to the recipient and to the Nation than other forms of unwanted mass mailings. To the individual it can mean high interest payments, an incentive to live beyond one's means, and one more neurosis—the fear that the card may be lost or stolen.

If this is the toll "plastic credit" takes on the individual, the toll on the Nation may be even greater. For spending with credit cards cancels out the effects of existing anti-inflationary restraints on our economy. And the annual interest rate on unpaid goods and services which ranges from 18 to 50 percent is itself an important factor in spiraling inflation.

Credit cards can be useful tools for consumers. After all credit cards enable people to be flexible in purchases—buying products as they are needed and, ideally, when they are on sale. Credit cards relieve individuals from having to carry around large sums of money.

But the question at hand is not whether credit cards are used wisely by people but whether unsolicited credit cards constitute an invasion of privacy, an unfair burden on the recipient, and a menace. If the credit card is lost or stolen—the fate of 1½ million of them each year—the intended recipient may be involved in costly litigation to disprove his responsibility for incurred charges. Credit card fraud losses amount to more than $100 million each year.

The Federal Trade Commission held hearings in September on a proposal to ban the mailing of unsolicited credit cards by companies under its jurisdiction. Even if this rule were adopted, however, it would exclude transportation companies and banks. The outstanding credit under bank cards alone, much of it unsolicited, was $1.3 billion at the end of last year.

With 300 million credit cards in circulation in the United States and 100 million being added each year, curbing credit card abuses is no easy task for law enforcement agencies and is a serious burden on the consuming public. Businesses, which indiscriminately distribute plastic credit to the nonsoliciting, unsuspecting public, have abdicated responsibility to consumers.

The only solution I believe acceptable is one which provides adequate protection for consumers against the hazards of unrequested credit cards. By combining both a ban on the mailing of unsolicited cards and a requirement that all other cards be sent by certified mail, my bill protects the consumer against the hazards he might encounter in receiving credit cards he asked for as well as ones he did not request. Obviously, requested credit cards can also be lost or stolen through the mails and the consumer needs protection against losses resulting from the fraudulent use of these credit cards as well.

Businesses which zealously bombard the public with credit cards will not be more discriminating until legislative action is taken. My bill will not cure all of the problems associated with credit cards but it will put an end to a few Excedrin headaches.

IMPORTANCE OF RESEARCH IN DRUG ABUSE

HON. WILLIAM D. FORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. WILLIAM D. FORD. Mr. Speaker, in this session we have shown increasing recognition of the problem of drug abuse in this country. It is of direct concern to each one of us because it is a problem, to some degree, in each one of our constituencies. Drug abuse has penetrated every socioeconomic group and every age level. It poses a very real threat to the fabric of our society, especially because of its prevalence in the younger generation.

What have we done to manifest our concern? There have been a number of proposals relating to the control of the misuse of dangerous drugs and narcotics, relating to public education and revision of the existing penalty structure. These approaches to the problem are important ones but we cannot neglect the area of research.

We have been told time and again by experts in the drug abuse field appearing before our committees that there are simply too many unanswered questions about narcotic and dangerous drugs—questions regarding their properties;

their short- and long-range effects; their real danger to the individual and to society. Perhaps the greatest question of all is why are so many people turning to drugs, and how can this situation best be attacked? These questions can only be answered through exhaustive research. Only with such answers can we develop educational programs and revise drug control statutes in such ways that they will be most effective.

The National Institute of Mental Health has reorganized its structure in recognition of the need for concentrated research in this area, consolidating all units dealing with drug dependency into the Division of Narcotic Addiction and Drug Abuse. I am a cosponsor of H.R. 14479 introduced October 23, 1969, by my distinguished colleague from California. It provides for an authorization of $25 million to this division of NIMH—strictly for research purposes—for fiscal year 1970. Surely this is a minimal amount considering the amount of research that is yet to be done and the importance of this research to the welfare of our Nation.

Let us look at our priorities. In fiscal year 1969, NIMH's Division on Narcotic Addiction and Dangerous Drugs spent $4,549,000 for research, including extramural grants. We could practically say that this was all the money spent in the United States last year on drug abuse research because private contributions in this area are negligible. Over the same period we spent $350 million on research in chemical and biological warfare.

What are the prospects for this year? The Division on Narcotics and Dangerous Drugs expects no more funds than it received last year, but the amount spent on chemical and biological warfare research will most probably remain at the same high level.

Where are the budget cuts coming this year? Research and development obligations of the Department of Health, Education, and Welfare will decrease by $36 million. Such obligations for the Department of Defense will increase by $521 million; for atomic energy research programs there will be an increase of $16 million.

Do we claim that priorities for authorizations are based on the public welfare? If we do, then we had better give direct attention to one of our most serious and threatening domestic problems, which is drug abuse. We are talking about 8 to 12 million Americans who have experimented with or regularly used marihuana; we are talking about unknown thousands who have experimented with the dangerous drugs such as LSD, the amphetamines, and barbiturates. Many of them have died from their experience. We are talking about 67,000 known narcotic addicts who have not only ruined their own lives but have also undermined the society around them by committing crimes to support their habit. We are talking about schoolchildren, college students, servicemen, businessmen, and derelicts.

Finally we are talking about organized crime, which annually reaps approximately $300 million in profits from the illicit drug trade.

Mr. Speaker, I think that the authorization proposed in H.R. 14479 of $25 million for the Division of Narcotic Addiction and Drug Abuse will provide for the kind of immediate and intensive research we need in this vital area. I urge my colleagues to support this measure.

BLACK ECONOMIC DEVELOPMENT

HON. WILLIAM F. RYAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. RYAN. Mr. Speaker, in testimony before the House Select Committee on Small Business on July 25, 1969, Dr. Clifford C. Davis, president, Interracial Council for Business Opportunity, and Darwin W. Bolden, national executive director of that organization, made important proposals regarding minority economic development. If "black capitalism" is to be more than public relations talk, then it is essential for the administration to give full support to the Small Business Administration and the Office of Minority Enterprise.

Darwin Bolden pointed out three areas in need of executive and congressional action—the development of capital resources, the provision of management counseling services to minority entrepreneurs, and management education.

Dr. Davis recommended the creation of an Office of Federal Contract Services which would help minority entrepreneurs to obtain Federal procurement contracts.

The Interracial Council for Business Opportunity since 1963 has assisted more than 2,000 black business enterprises by providing free management consulting services. Over 1,500 men and women have attended management training courses sponsored by the council. The council has set up in cooperation with four New York City banks a fund to guarantee up to 50 percent of $3 million in soft loans.

The experience and advice of the Interracial Council for Business Opportunity should make it clear to the Congress and the administration that the powers of the Federal Government must be used to the fullest extent to free black America from economic bondage. The testimony of Dr. Clifford C. Davis and Darwin W. Bolden follows:

STATEMENT BY DR. CLIFFORD C. DAVIS

MR. CHAIRMAN: I want to thank you for giving me the opportunity to testify before this Committee in my capacity as President of the Interracial Council For Business Opportunity. I also want to thank you for inviting Mr. Darwin W. Bolden, the National Executive Director of that organization, to testify.

To save your time and simplify our presentation I would like to confine my statement to a review of the activities of the Interracial Council For Business Opportunity and to give some suggestions concerning Federal procurement policies. Mr. Bolden can then deal with some specifics of minority business enterprise. I hope that between us we can make a constructive contribution to your consideration of this urgent matter.

First, to qualify myself, let me tell you that I am the founder and chairman of the board of Riverton Laboratories, Inc., and Clifford Chemical Corporation in Newark, New Jersey. These two companies manufacture chemical and pharmaceutical products sold on the national and international markets. Both companies are multi-million dollar operations.

So, I am appearing here today both as a black businessman who has been able to break out of the confines of the ghetto to the mainstream of American business enterprise, and as the president of a national organization devoted to helping other black businessmen move in the same direction.

The Interracial Council For Business Opportunity was formed in 1963 by the Urban League of Greater New York and the Metropolitan Council of the American Jewish Congress. At first it operated only in New York City. In 1965, with the aid of a grant from the Ford Foundation, it was expanded into a national organization. Local councils were formed in Los Angeles, where it played a major role in helping black businessmen after the Watts riots, and in Newark . At that time, I became co-chaiman, together with former Governor Robert B. Meyner, of the Newark chapter. Since then local chapters have been opened in New Orleans, and here in Washington, D.C.

The National Co-Chairmen of the Interracial Council For Business Opportunity are Rodman C. Rockefeller, President of the International Basic Economy Corporation, and William R. Hudgins, President of Freedom National Bank. The Board of Directors includes over fifty nationally prominent businessmen, both black and white, from all parts of the country.

The core of the Council's program is the provision of free management consulting services to black business enterprises. In the simplest terms, we are a vehicle for bringing the black businessman who needs help together with a successful businessman who can give him that help. In the slightly over five years since the Council opened its doors more than 2,000 such businesses have been helped.

Many of those who come to the Council for help are, as you might expect, in need of management training. To meet this need the Council has developed training courses in the basics in business practice, and has worked with colleges and universities to develop management seminars in such subjects as accounting, business law, credit, sales promotion and marketing, production, advertising and personnel management. Over 1,500 men and women have attended management training courses sponsored by the Council.

A third aspect of the council program is the ICBO Fund which has been established in cooperation with four major New York City banks. Through this fund the council will guarantee up to 50 per cent of $3 million in so-called "soft" loans to minority businessmen.

Through another program the council is now assisting the development of twenty-five business ventures with a minimum capitalization of $100,000 designed to provide maximum opportunity for black employment. These range from a $100,000 computer systems corporation to a $400,000 cosmetics supply house to a $6 million hotel.

In addition, in New York City, the council has initiated a pilot program to facilitate the orderly transfer of profitable business enterprises from white to black ownership. It does so through an "internship fund" from which black businessmen receive grants-in-aid as they learn to operate businesses they will eventually purchase.

Finally, the Council has initiated a cooperative program involving major American corporations interested in aiding the growth and development of large black-owned businesses. It seeks to do so through diverting purchases to existing black-owned businesses, through aiding in the development of new black suppliers or service corporations. The aim of this program is to

develop a limited number of multimillion dollar black-owned corporations which will be labor intensive and located in or on the fringe of black communities.

Underlying all that we have done at the Council have been two fundamental considerations:

First, that black-owned businesses must be a part of the total community—they cannot and must not be confined to the ghetto.

Second, that they must not be limited to so-called "mom and pop" service establishments.

We are firmly convinced that these considerations must also underlie the activities of government in encouraging minority business enterprise. And we believe that one area where government activity can be most important is in procurement.

If major United States corporations can introduce social factors into their buying considerations—and they are doing so in helping to encourage black businessmen—there is no reason that we should ask any less of the government.

The Federal government should allocate at least 10 per cent of all its purchases to black-owned businesses.

The Federal government should slice through the red tape of process—simplifying bidding and expediting payments, so the minority businessman can afford to compete.

The Federal government should provide management assistance to help black-owned businesses compete in the procurement process.

And, finally, the Federal government should stop being price-blind in its purchases. Why should differences of pennies or nickles or even quarters divert purchases from areas of significant social and economic need? Yet that is how the present procedures work.

On that point, let me say parenthetically, I have had some personal experience. In bidding on a Veterans Administration contract recently my company lost out, for a matter of nickels, to a European firm. I find it hard to believe that the saving of those nickels was worth the loss of that contract in Newark—not to mention the added burden for our balance of payments.

To accomplish these objectives, we recommend that an Office of Federal Contract Services be established, perhaps within the Department of Commerce.

The mission of such an Office would be to systematically identify minority-owned suppliers and service corporations throughout the country, using agencies like ICBO, the National Urban League, PACT, the National Business League and others as sources of information as to what these businesses are and where they are located.

In our view, the Office should act as a broker between minority entrepreneurs and the hundreds of government agencies awarding contracts.

It may well be that the Office of Federal Contract Services ought to set up a bonus point system for bidding on government contracts—in the same way as veterans are given point preferences under the civil service system.

There is little doubt in my mind that government itself could establish thousands and thousands of new enterprises if it went about the job properly but as with anything else there are pitfalls to be avoided and experience brings to mind two major ones:

Government contracts with minority manufacturers should provide for on-site federal inspectors so that contract specifications can be maintained during the entire production process. It has happened that after tremendous investment in capital equipment and labor the output of a small factory has been rejected by the government. The businessman, of course, is left holding the bag.

The second pitfall can be avoided by making contracts of appropriate length for the service to be rendered. For example, in one case I know of a Negro dry cleaner who was awarded a contract on a military base. The contract term was two years but to service the contract he was forced to take out a ten-year loan. As you might expect he went broke.

I have tried to briefly describe the operations of one outstanding successful privately sponsored economic development agency. I think that this is where the thrust belongs—not in government agencies; and secondly, I have tried to suggest a course of action the federal government might take which without additional federal expenditures—for the contracts are awarded anyway—can significantly strengthen minority economic development in this country and in so doing can enhance the quality of life in this nation for all its citizens.

Thank you.

STATEMENT BY DARWIN W. BOLDEN

Mr. Chairman: I want to join Dr. Davis in expressing appreciation to you for the opportunity to appear here on behalf of the Interracial Council for Business Opportunity. Dr. Davis has reviewed for you the activities of the Council and proposed a number of ways in which the Federal Government can encourage minority business enterprise through its procurement policies.

I would like now, as National Executive Director of the Council, to go into some specifics of the present situation and make some additional proposals.

First let me point out, without burdening you with examples, that the economic isolation of black men in this country is a by-product of the segregation which took place in this country after the Civil War.

Prior to the Civil War, free Negroes in this country moved in the mainstream of the economy and were prominent, successful entrepreneurs in every line of enterprise. There are even today, in many southern communities—as some members of this Committee know—black-controlled enterprises that have survived from that early period.

It was not until after emancipation and after reconstruction that black businessmen were driven out of the mainstream of the American economy and confined for all practical purposes to doing business within the black community.

During the period of northern migration, starting with the First World War, millions of blacks moved into communities where control of commercial activities—stores and service establishments—was firmly in the hands of the groups which preceded them. As a result, blacks were excluded even from these enterprises.

Now we have moved to a third stage of discrimination that is even more restrictive: the systematic destruction of black enterpirse by increasing white competition.

All of a sudden, in the past few years, the white businessman has discovered the "black market"—not the black market of wartime price and wage controls, but a market comprised of 25 million black Americans with $40 billions in purchasing power. And the white man has decided he wants this, too.

As a result, the 1960 census showed a 20 percent drop in the number of black businessmen in this country. Black-owned eating places fell off by a third. Other black-owned retail outlets declined 17 percent. The black-owned hotel-motel business slumped. Even the "special" markets developed by black cosmetic firms were invaded by white competitors.

And in the midst of all this there appeared white politicians who told us we could be saved by "black capitalism." Whatever it may have meant originally, that is now a term symbolizing nothing more than the creation of a few more "mom and pop" stores in the ghettoes—stores where black men and women are expected to work from dawn to dark, six or seven days a week, with the hope of extracting a meager existence by selling the products of a white economy.

The time has come when this Administration, the Congress and all Americans must understand that the cries of Negroes and other have-not Americans are not for black, brown or other shades of capitalism but rather for the economic development of minority communities across the land. By this I mean a marshalling of public and private resources to initiate programs for the economic empowerment of the have-nots of America both black and white; both urban and rural. Business development in this context is a way to economic empowerment but not an end in itself.

I shall not belabor you with concepts or strategies for economic development. The United States Government has financed a number of economic development studies and has funded massive economic development programs around the world, but not here at home.

Within the framework of business entrepreneurship and minority economic development, there are three principal concerns to which this Congress and this Administration should address themselves. They are the development of adequate capital resources; provision for management counseling services to minority entrepreneurs; and the expansion of existing management training programs.

Capital Resources: The two principal agencies for carrying out the Administration's program in business development are the Small Business Administration and the Office of Minority Business Enterprise in the Department of Commerce. While well-staffed, the Department of Commerce Office has practically no money and relatively little authority over the 115 federal programs that can potentially relate to minority business development. The SBA has only $18,000,000 for direct loans, $90,000,000 for guaranties, and nothing for 502 programs. This is a pittance contrasted with the total need.

We need, at the very least, a National Economic Development Fund to make capital available on a rotating basis to minority businessmen. This Fund should operate through minority lending institutions and through private organizations such as the Interracial Council for Business Opportunity.

It should not be government-administered but run through private or contract agencies that are part of the minority business community and competent to operate there. The Fund should provide direct loans, loan guaranties and equity funding for minority-owned businesses. And it should give priority to enterprises with high social impact: drugstores, supermarkets, radio, TV, press and labor-intensive light industry.

We know the loan guaranty concept works. ICBO has developed and is currently operating a flexible loan guaranty fund capitalized at $750,000. It generates loans up to $3,000,000 in participation with four major New York City banks.

We are now incorporating a National Venture Capital Fund to be inititally capitalized at $1,000,000. It will operate like a mutual fund pooling investments and sharing risks designed for rapid capital turnover. Both of these programs are private efforts which now involve no government support but could certainly use it if we are to have a substantial impact on the problem of getting credit and capital for minority businessmen.

Therefore, ICBO strongly recommends that this Committee call for the establishment of a task force composed of representatives of the Committee, the Office of Minority Business Enterprise, and private organizations such as the National Business League, the Harlem Commonwealth Corporation, and Interracial Council for Business Opportunity, and others.

This task force should be directed to carry

back to the Committee proposed legislation necessary to establish a National Economic Development Fund, and this Committee should be prepared to recommend an initial appropriation of a billion dollars for this purpose. This is a not unrealistic amount when one remembers the aid advanced abroad for foreign economic programs.

Management Counseling: Money alone is not sufficient. Under racism in America, blacks and other minorities have been systematically excluded from business development and have sought jobs, rather than equity in America.

It is no secret that the black men in America, perceiving the closed doors of commerce and industry, entered the professions and government service rather than business. Those who went into the business arena were basically restricted to ghetto-based "mom and pop" operations. Those who now seek to enter business need and want technical assistance. ICBO, through its volunteer businessmen, provides free management consulting services.

Since its inception in 1963, we have provided management consulting services to more than 2,000 minority businessmen. Approximately 2,500 volunteer businessmen from all levels, both black and white, have provided free services to ICBO clients.

We believe that *only* the volunteer businessman, with experience and success in the market place, can provide the kind of technical assistance required. We believe that the best base for these services is in private agencies like ours. Volunteer businessmen seem unwilling to donate their services to government agencies hopelessly bogged down in red tape and operated by the bureaucratically inclined.

SBA's *Project Score* is a tragic failure for this very reason. What organization—public or private—can afford to have on its staff, in today's market, the diversity of skills required to assist business ventures ranging from a clothing retail outlet to a shopping center, to a television station, to a catfish cooperative? By using socially committed businessmen prepared to give freely what they know best, these services can and are being provided.

We propose that this Committee and this Congress consider ways and means of greatly expanding private initiative in this field to other urban and rural centers where it is urgently needed.

Management Education: The third area in which the government, cooperating with the private sector, can make a substantial contribution to minority economic development is that of management education.

One of the most difficult problems confronting the local ICBO offices is that of locating new minority entrepreneurs. The opportunities for small-and-medium-sized ventures today far exceed the supply of takers. We have already explained why this is so.

In each of the six ICBO cities, local staff using volunteer businessmen provide training programs to more than 1,500 persons annually. But these measures are modest and fall far short of what is really required: and that is additional management training programs designed to upgrade skills and develop new skills for existing and potential minority businessmen; and long-term business management training programs developed in cooperation with colleges and universities.

But not piecemeal training. One program recently undertaken by a university in New England provides summer training to *eight* trainees! There are two blacks in that community. I am talking about management training programs carried out in the minority communities where the people are!

Private agencies like ICBO should have federal money to help develop managers and owners of radio and television stations, trucking lines, general contracting firms, shopping centers, drugstores, substantial retail outlets, manufacturing units, etc.

Equally important are training services for the management of the 25 cooperatives now operating in the rural South. Under private aegis, a Southern cooperative management training and business center should be established in a key Southern city to aid those cooperatives already functioning as well as to help start new ones. Once again, we urge that government share in the funding but that such a facility be privately operated.

To undertake such ambitious programs will require partnership planning by federal agencies and private organizations such as the Urban League, National Business League, ICBO, and others, as well as carefully selected universities. Revolving scholarship funds, corporate internship programs and repayable tuition grants (perhaps patterned after ICBO's recoverable on-the-job internship grants) are all devices which can be used to minimize cost. They are critically important if we are to begin the flow of a substantial number of well-trained potential entrepreneurs.

I will not prolong the list of things that need to be done and which require federal participation. Certainly what I have mentioned should be enough to indicate where government should start. And we must start.

The present Administration has given only token support to the Small Business Administration and the New Office of Minority Business Enterprise. Both need money. Both need authority. And, above all, they need to be released from the superficial cosmetic concepts of this Administration.

I have tried to describe for this Committee three areas of minority economic development in which a much greater federal presence than now exists is essential if this nation is ever going to come to grips with the economic problems of a nation within a nation; a nation whose people are consigned to the outlands of what is best and most hopeful in American life; and a people whose threshhold for tolerance, frustration and despair sinks lower each day.

I have no doubt that the private and public sectors, acting in concert, can overcome *any* impediment to full participation in American life which now exists.

In fact, gentlemen, minority economic development is simply a matter of what priority we put upon the plight of this nation within a nation. And perhaps of how much time you think remains.

Thank you.

BELLAIRS, SINCERITY GO TOGETHER

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. PUCINSKI. Mr. Speaker, last week one of the most highly respected radio personalities in Chicago left his favorite spot at WBBM and moved on to his own radio station in Crystal Lake, Ill.

Mal Bellairs is a Chicago institution and we are very pleased that over the years because of the wide range of WBBM's coverage he had gained many friends in areas well beyond Chicago.

While we can well understand Mr. Bellairs desire to form his own programs on his own station in nearby Crystal Lake, I am sure I speak for many people when I say we wish him luck and great success in his new venture.

He and his wife, Jo, are two of radio's most highly respected personalities. It is comforting to know that Mal has not left radio but merely moving on to another facility.

I am sure that WBBM will miss him, but the change is understandable when one considers that WBBM is the CBS outlet in Chicago carrying an all news format.

While Mr. Bellairs proved to be an excellent newscaster in addition to all his other attributes, I believe it is safe to presume that he is more at home in his usual conversation and discussion format.

The Chicago Tribune's television and radio editor, Jerry Shnay, recently carried an excellent article about Mal Bellairs which I would like to include in the RECORD today and to take this occasion to wish Mr. Bellairs and his wife many years of happiness in their new adventure on WIVS in Crystal Lake, Ill.

The Tribune article follows:

BELLAIRS, SINCERITY GO TOGETHER

(By Jerry Shnay)

Mal Bellairs exudes an image of unvarnished, unadulterated, unmitigated, unabashed, 99 and 44-100ths per cent pure-sincerity. And ladies, really, very few folks can make that statement.

His big, butter-melting voice, one that has influenced housewives in Chicago for more than 20 years, is off the air. Friday Bellairs intoned his last carefully pearshaped words over station WBBM and headed for greener pastures allowing for even greater sincerity.

He and wife Jo [no Josephine or Joanna] are going to be the new owners of radio station WCLR in Crystal Lake. And WCLR is going to become sincere. It will be changed to WIVS [pronounced wives] and one is instantly aware to whom the audience and the commercials will be geared.

Bellairs is almost too true to be true. The unique Bellairs sound and pitch has been a hallmark of the station since May 1, 1955. For 14 years, Mal has used his "over the kitchen table" way of looking at you sincerely, while talking into a microphone. He is says one man "a perfect pitchman." In other words, Mal can sell you anything [well, almost anything] and make you enjoy it, yea, even yearn for it right now, so hurry up and get down to your store, real quick now.

Radio insiders tell you Bellairs never uses a script when he does a commercial. He doesn't need one, because he says, quite sincerely of course, that he or Jo ["my wife Jo"] has used the product. "Honest," he says sincerely, "I really do know about the product I sell. I've had difficulty only once. That was when I was doing commercials for a cigaret and after a couple of months they thought I wasn't doing a good job.

"'I [pause] know it,' I said. 'I know [pause-chuckle] it.' It's just that, well, you know, I really don't smoke, and I sort of didn't hit it off with the product."

Bellairs, from the Wyoming wilds, has been knocking around Chicago radio and TV for years. In 1946, young, married, and out of work, he came to Chicago looking for a big break. It came when he took over as an announcer at WCFL for the departing Jimmy Dudley who went to Cleveland to announce baseball games. And if you think that's an advancement, you've never been to Cleveland.

In 1950, Bellairs went to free lance work anywhere he could get a job. He did a man on the street program to a "Music Wagon" pro-

gram with Art Van Damme, his accordian, and other top acts in the Chicago area.

In 1955, Bellairs came to WBBM as an announcer and also played music.

When WBBM went to a talk radio format, with Bellairs communicating with the audience via telephone, it was right up his sincere alley. His programs, like a swap shot and other afternoon shows, drew excellent response.

It didn't last. Along came news, all news on the station, and Bellairs wasn't happy. "Look," he said sincerely, "I'm really not a news announcer. I really enjoy talking to people. That's what I like to do best."

He'll have his chance and all the ladies in the north shore and northwest suburbs of Chicago will be in tune with the station. "It'll be what I think can both entertain and inform," he replied when asked what kind of programs he would have.

"In music we want all kinds. There is good rock, there are some good folk songs. We want things that have a little beat to them, not sooo, o, I guess you could call it schmaltzy."

The big changeover will come the first week in November, which gives Bellairs two weeks to sell the station. "I really didn't want to go out while I was still working for WBBM, Ethics, of course."

HORTON SALUTES NATIONAL BUSINESS WOMEN'S WEEK

HON. FRANK HORTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. HORTON. Mr. Speaker, today, Americans have become accustomed to thinking of equal rights movements solely in terms of civil rights for minorities, or rights of the poor, the underfed, the undereducated, and the less fortunate members of American society. There is no question that upgrading the rights and opportunities of these people carries the highest of priorities. But we cannot for a moment forget that the drive for the rights of an important majority in America is still far from complete.

During National Business Women's Week, I feel it is fitting to salute the achievements of all business and professional women. To me they represent the long road women have traveled since the days of Susan B. Anthony.

The National Federation of Business and Professional Women's Clubs of the United States of America includes 180,000 members and has federations in every State, in the District of Columbia, Puerto Rico, and the Virgin Islands.

These women are well informed and active participants in their communities. They are imbued with a sense of civic responsibility and service and have made vast contributions to the country.

The fight begun by my fellow upstate New Yorkers, Susan B. Anthony—who now has an active Rochester women's Republican group named after her—and Lucretia Mott to win equal stature for America's women is still being fought. I was proud, as Congress convened this January, to contribute to this fight by introducing the Women's Right's Amendment to the U.S. Constitution.

Excerpts from recent articles I have read I think pinpoint the status of the fight for women's rights in 1969.

In a succinct and unexaggerated statement of the attitudes of the past toward women in American society, president L. W. Moore of the American Oil Co., told a Chicago convention last year:

I have been thinking a great deal lately about the way people treat other people—especially our relations with people who are different from ourselves. In an urban society that is already complex and becoming more so, we find this problem of interpersonal relationships increasingly difficult. How do we react to someone who is different?

One of the officials of the probasketball club on which Wilt Chamberlain plays was asked whether he gives the star black athlete any special treatment. He answered quickly. "No," he said, "I treat him the same way I'd treat any other 7-foot millionaire."

Unfortunately our ability to be that objective about others is too often weakened by the prejudices we inherit from the past. Dominant groups in a social structure have a way of perpetuating their status by creating myths about subordinate groups. I expect you will recognize some examples of such fictions—all widely quoted a century ago:

"Their brains are smaller and, therefore, inferior. Their station in life is determined by their mental and physical limitations. These people do not need an education; in fact they are happier without it. We cannot permit them to own property, sign contracts, speak in public gatherings, or vote. If we do, we will undermine the basic strength of our society."

Familiar examples of race prejudice? Surprising as it may be, these particular fictions were used by your great grandfathers to justify their discrimination, not against Negroes, but against women.

The attitude toward women who dared to exert their individuality by leaving the hearthside and going to work was even more extreme. Consider what happened in the United States Treasury Department in 1869, during Grant's administration. George Boutwell began his term as Secretary of the Treasury by charging that the department employed too many female clerks and that most of them were not earning their pay. So he fired them, making virtually a clean sweep of the office. He let it be known that this was the first step in fulfilling a promise he had made—to reduce the national debt.

Boutwell may not have succeeded in reaching his objective, but at least he reflected the common thinking of his time. A century ago, virtually no men and precious few women challenged the dominance of the male as a worker and breadwinner.

You will often hear today that all of these myths and prejudices of the past regarding women and their capabilities have long been wiped away—that women today are given equal opportunities with men. As we know, this is not quite the case, although much progress has been made—especially since World War II.

In today's highly technological and managerial American society which cries out for highly skilled and educated people to fill well salaried positions of responsibility, the movement toward giving women equal opportunity has been too slow. Let me read an excerpt from a Washington Star article which was published soon after the recommendations of the President's Advisory Council on the Status of Women were made public. The article is entitled, "New Mood on Women's Legal Rights"—but its highlight is the sad statistical showing of women's salaries compared to those of men:

A major problem is that salaries for men and women are moving farther apart despite recent laws requiring equal pay for equal work. . . .

It is a little like the school desegregation situation in some Deep South states; more schools are desegregated, but fewer Negroes are in classes with whites. . . .

Over the past two decades, the number of women holding down jobs has jumped 70 percent, from 16 million to 28 million.

Women's median annual salaries have increased from $3,008 to $3,973 in the past decade or so but men's comparative incomes have climbed from $4,713 to $6,848. The women who were $1,705 behind men, now are $2,875 behind.

The reasons for this are difficult to pin down, but women are convinced a variety of forms of discrimination play a big part.

One of the claims, that state laws limiting overtime hold women back, is headed toward the Supreme Court.

Perhaps the problems of employment and promotion discrimination against professional women are best expressed in the words of a woman who has been affected by such policies and who has long fought for equal status for her gender.

A constituent of mine from the Rochester area who, like her past counterparts from upstate New York in the women's rights struggle, places a high priority on woman power in the agenda for our Federal Government, wrote to me on this subject. I think you will gather from the tone of her letter that the seriousness of this problem has not escaped from her. She writes:

My intense desire that the Nixon Administration be highly successful prompts this letter to you to focus attention on a problem nearing the boiling point just below the surface.

Specifically, it is the problem of discrimination against women in opportunities for education and training, for positions other than at the lower levels, for promotions, and for executive posts. The Nation already knows there are few experiences more demoralizing than to continue to work below one's potential. Certainly the Nation no longer can afford this foolishness if its gross national product is to expand at desirable rates. And there is a rich potential in votes for the Republican Party if it will face this problem.

Organizations such as the American Association of University Women, The National Federation of Business and Professional Women's Clubs, and the General Federation of Women's Clubs tend to think the problem can be solved by upgrading the training of women. As one of their members, I know they have been successful through the years in encouraging higher education of girls and women. Alas, all too often, the women with Master's degrees or even Doctorates then were offered beginning jobs as clerk typists, stenographers, or secretaries. Reputable activist groups such as the National Organization for Women, like all activist groups, tend to have more and more problems with extremists who prefer guerrilla theater to constructive dynamism. And horror of horrors, we now are witnessing an upsurge of extremist and militantly activist groups of very questionable repute which would just as soon rip the social structure asunder to gain selfish ends.

Indeed, a whirlwind is a building and the Nixon Administration well might take action before its hand is forced. 1. It must look for the very able women where they are and it must give them a chance. It cannot expect to find many women for Cabinet or sub-

Cabinet posts, Ambassadorial or other diplomatic posts, Judgeships, and the like from among women who already have held such posts any more than either political Party was able to put up a candidate for the Presidency of the United States in 1968 who already had been President.

2. The new Administration stands to reap rich rewards if it will abandon the practice of the last Administration which announced great plans to appoint women to high level posts and then made a few token appointments. The Nixon Administration might far better actually appoint more women and then do its bragging when the record will stand out in bold relief.

3. Women of minority races certainly should be included in the appointments. Hopefully, the Nixon Administration will avoid the political cynicism which developed when the attitude began to develop that "if we must find some woman for this position, let's find a woman who is a Negro, a Mexican-American, or an Indian and kill two birds with one stone," or "let's find a woman who won't ripple any waters."

Up to this point, I have focused on backward and discriminatory attitudes of society which have held back the progress of women. What about the attitudes and priorities of American women themselves. Although there are many active women's rights groups, it would not be fair or accurate to say that our women are "up in arms" about the present situation. Judging from the numbers and the education level of American females, their attempts to influence public and business policies toward women have been much feebler than the efforts of minority racial, religious, and nationality groups to win just and equal rights.

Some of you may have read recently about the new student group at Rutgers University which calls itself the M-A-F-I-A. The Modern Alliance for Italian Americans. In spoofing student black power groups, the MAFIA at Rutgers has demanded with tongue-in-cheek more Italian-Americans on the school's governing board, more efforts to recruit Italian-American students, more courses in Italian culture and history, and so on. It would seem that Italian-Americans, Irish-Americans, Jews, and other American minorities are pretty far along the road of full acceptance and equal rights in America—perhaps much further along it than are American women. Yet few groups, humorous or serious, have formed on U.S. campuses to stand up for guarantees of full participation and rights for females, with the possible exception of those at Columbia and Barnard College who won the right to coeds to inhabit male dormitories.

Despite the lack of militance on the part of the female sex, progress is being made in American female education. The trend toward separate education which grew up in the East and especially in New England over the last two centuries is slowly being eroded by the precedent of large, coeducational schools in the Midwest, West, and South. Even Vassar is about to accept male students. Yale and Princeton are turning toward coeducational programs.

But this progress seems to be having little effect on the attitudes of those women in America who are already educated, and who are in the best position to assert themselves to bring about an end to discrimination against women.

As long as large segments of the best educated and well-to-do suburban housewives place high priorities on canasta and bridge clubs and afteroon golf matches, instead of pursuing full- or part-time professional careers, real progress will wait until the generation of today's college girl reaches for higher and more ambitious career goals.

Other societies in the world have solved the childrearing barrier to a large degree for women who seek careers equal and parallel to men. They have much more extensive child care and day-care facilities than we do. Of course, their concepts of the role of women in the family and in the home have evolved considerably from the American concept—permitting women to seek professional employment while their children are cared for in very well-staffed schools or day-care centers. Women themselves will have to determine whether our country is to move in this direction. The pressure for more skilled workers and higher salaries for women will, I think, continue to draw more women into full-time careers. A publication entitled "Vital Issues" commented on the role of the housewife a few years back in an article entitled: "Full Partnership for Women—What Still Needs To Be Done." Let me quote from this piece:

The homemaker falls far below the career woman, the guest panelist, the entertainer, the lady detective, and what-have-you, in countless movie and television dramas and even in the goals of education for women suffer the pangs of Walter Mitty when they fill out a blank labeled "Occupation" with the simple term "housewife."

Many women fight the boredom and frustrations they feel in their role as homemakers by outside activities such as coffee klatches, social activities, church work, and sheer restless shopping and automobile driving. They find little which is meaningful and fulfilling.

Many women today—particularly those with higher educations—are angered by the continued use of the old aphorism that "woman's place is in the home." Not only is it unrealistic under present employment conditions and at certain periods in a woman's life, but it indicates that old condition of servitude. Women recognize the fundamental responsibilities of mothers and homemakers and they realize society's high stake in a strong family system, but they see their own untapped capabilities and society's seeming inability or disinclination to use the full resources of its womanpower.

Contrast, if you will, the helping hands available to a mother of a century ago with those available today. In the closely-knit family life of the horse and buggy days there was often under one roof—or at least in a small, clustered community—mother, grandmothers, aunts, and cousins who shared housework, baby care, and recurring but unexpected problems of the housewife.

Today some women can still leave their young children for a time with women relatives or neighbors while they shop, visit, see a doctor, pay a bill, or perhaps go back to school to expand their learning or brush up on a skill. But a growing number of women are displaced persons who have moved with their husbands and children to new states and cities as the husband's employment demands. In many respects, they are almost completely alone. They must run down a list of strange names to find a person to "babysit" their most treasured possession. Available funds become the wherewithal for a woman's freedom to function.

Let us suppose that, through divorce or death, this lone woman becomes the sole support for her offspring. Child care during the working day becomes imperative to her—and yet few urban centers provide adequate public or private facilities for such care.

Publicly-operated child care centers in the United States bear the stigma of welfare state. A women of means should use private facilities.

Child care facilities are essential for many women whether they work outside the home or not, and yet licensed day care is now available to only 185,000 American children. Meanwhile, at work and out of the home are three million mothers who are the sole family breadwinner, with children under six.

Absence of adequate child care facilities forces many mothers to resort to unsuitable arrangements. In 1958, for example, no less than 400,000 children under 12 were completely unsupervised while other mothers worked fulltime.

While the conditions exist, there is a reservoir of experienced women whose children have grown and who have no occupations for their many idle hours. Women with the potential to supply new services needed by homemakers would, with community encouragement, retain and upgrade their skills.

Child care centers and after-school and vacation activities are needed in every community for children of all kinds of families. We need not produce these facilities in the manner of a socialist state. Facilities can be created under public and private auspices. Meanwhile, deductions for tax liability for working parents who pay for child care services might be increased and other measures taken until care centers are adequate.

Again let me emphasize that the fate of this new concept of women as occupational and professional equals to men lies in women's hands. Only if American women demand more and better public child care facilities will government respond. Only if more American women who are educated as doctors, lawyers, dentists, teachers, nurses, and secretaries decide to devote higher priorities to their careers will the Nation give higher priorities to opportunities for career women.

The constitutional amendment I have introduced will lay the legal groundwork for complete political and legal equality for women in the eyes of government. How much advantage will be taken of this new hoped-for status will be up to women themselves. Because they are in a position today of being more exposed to communications media than their husbands, American women are by far better informed citizens than men. They have an advantage in numbers, and in information about what is going on around them.

If they use this advantage to get more involved in the problems our Nation faces, particularly among the urban poor; if they use this advantage to gain career positions of greater responsibility; If they use this advantage to mold effective female voting power in America—these legal rights will be more than fulfilled. However, if politics and woman power are confided to country clubs,

card tables, and luncheons, these rights will develop far more slowly.

WASHINGTON REPORT

HON. HASTINGS KEITH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. KEITH. Mr. Speaker, I would like to take this opportunity to provide for the readers of the RECORD the text of my most recent newsletter. It includes commentary on many of the important issues of the day, that I am sure will be of interest. It also includes a questionnaire, the results of which I will report at a later date, when tabulation is completed.

The material follows:

WASHINGTON REPORT, OCTOBER 1969

(By Congressman HASTINGS KEITH, 12th District, Massachusetts)

PERSPECTIVE: 1 YEAR LATER

At this time last year the country was filled with turmoil. The bloody scenes of Chicago were fresh in everyone's mind, the situation in Vietnam was getting worse and its opponents more desperate, the simple solutions of George Wallace were looking more and more attractive to many people, and a general sense of frustration pervaded the nation.

Today, there is still shouting, and still many needs unmet. But, more and more, I find, reason is replacing rhetoric, and realism is replacing righteousness in the national debates.

A good deal of the credit for this change in atmosphere must go to the Nixon Administration. Ten months after being elected by a slim plurality, Mr. Nixon now (according to the national polls) is considered to be doing a "good job" by well over half of the American people.

His campaign slogan was "Bring us together." I believe we are more together today, in every respect, than we were a year ago.

In my opinion—part of the change from the past several years is due to the fact that the Congress has returned to its proper role of initiator of legislation.

The years of executive dominance, when the White House was the source of all wisdom and the Congress a passive recipient, are gone.

There is, for example, a growing tendency—in defense, in conservation, in fiscal matters—for the people's representatives to take the lead in defining the nation's needs and priorities. Another example of Congress leading instead of following is the recent enactment of legislation creating an Environmental Quality Council—a watchdog agency for our environment.

This movement toward restoring the balance of power the Founding Fathers intended is, in my view, healthy.

MEETING WITH NIXON

Today, 28% of our shoes, 75% of our fish, and great quantities of our textiles are supplied from abroad—and 94% of our nation's shipping sails under foreign flags.

Workers thus displaced have been partially absorbed in defense industries. If, after Vietnam is resolved, our competitive position in world markets continues to deteriorate, it will be most difficult for older people, particularly in the textile, shoe, and shipbuilding industries to be retrained for other jobs.

Meeting with President Nixon at the White House, I found him willing to support voluntary ceilings on foreign imports.

SHARING RESPONSIBILITY

One of the most welcome changes in Washington is the new Administration's attitude toward the States. The two previous Administrations attempted to solve every problem by passing a new Federal law. But the Nixon idea is to work out acceptable standards with the States, and let it be the States' responsibility to meet them. That is the essence of "the New Federalism,"—sharing responsibility with the level of government best able to handle it, rather than concentrating all power in Washington.

AND SHARING REVENUES

To help the States and municipalities handle their share of the problems, the President has proposed a new concept for sharing Federal revenues with them.

Under his plan, an increasing amount of Federal revenues would be returned directly to the States and towns, with no strings attached, for implementing their own problems. For the first year this aid would reach $5 billion.

For too long the Federal government has pre-empted most tax dollars, leaving the towns only the over-burdened property tax for support. Now, hopefully, things may change.

BILLS FILED IN THIS CONGRESS

While it would take a newsletter twice this size to list and explain all the bills I have filed this year, let me list just a few, of particular interest to my District.

HR 486 Makes *Monomoy Island* a Wilderness Area.

HR 6495 Makes it illegal to *discharge oil* from a vessel or offshore structure into coastal waters.

HR 7696 Provides for *orderly trade in footwear* by limiting imports.

HR 8328 Gives a "cost-of-living" increase to *Merchant Marine* academies and students.

HR 10799 Eliminates *oil import* controls over a ten-year period.

HR 12549 Establishes a Council on *Environmental Quality*.

HR 11363 Provides further protection of *endangered species* of wildlife.

HR 6633 Provides for cost-of-living increases in *Social Security*.

HR 1189 Establishes a *Plymouth Rock* National Memorial.

HR 1188 Provides for Federal *taxsharing* with the States.

HR 11262 Provides for inspection of *fish products*.

HR 8527 Provides for a study of *conglomerates* and their effects on the economy.

SPACE

One of the truly momentous occasions in the history of mankind was the landing of American astronauts on the moon in July. I had the privilege of attending the launching of Apollo 11, and like the rest of the world, was thrilled beyond belief at watching the landing on TV.

The tremendous feeling of unity and harmony that this epochal event brought to the peoples of the world suggested to me that the time was ripe for the President to ask other nations with scientific abilities to join us in future space efforts.

So I filed a resolution to that effect, and was immediately joined by 34 Congressmen—a strong indication of Congressional sentiment that, I believe, was not lost on President Nixon.

VIETNAM

The new Nixon strategy in Vietnam has become clear in recent months. What the President has in mind is a "Vietnamization" of the conflict, with American troops being withdrawn as fast as South Vietnamese forces are capable of replacing them.

What his policy requires, however, is time—and that depends on the American people, and their patience. This has been a long and frustrating conflict, and many people feel that we should immediately withdraw and try to forget the whole thing.

Everyone concedes that we overlooked the long-range effects of entering the conflict in Vietnam. In my opinion, we should thoughtfully consider the equally far-reaching implications of the alternatives now open to us.

OIL SPOILS

The Cape Cod National Seashore . . . twice at Falmouth . . . three times at Weymouth . . . the dangers of oil spills are now coming close to home! At the time of the Torrey Canyon disaster in 1967, I filed a "marine sanctuaries" bill that would have protected areas like Georges Banks and the Santa Barbara channel from oil drilling. It's too late now for Santa Barbara, of course, but the disaster there had one beneficial effect: it focussed national attention on the problem.

Although the Congress has not completed action yet, I am encouraged by the Nixon Administration's tough approach to the problem in setting up strict new rules regarding oil drilling and in requiring that ecological and aesthetic interests be taken fully into account before issuing any new drilling permits.

Part of the problem, especially in regard to oil, is that there is no law licensing tugboat operators. I have sponsored legislation to remedy this—to prevent incidents like the one in Falmouth, where a tugboat towing an oil barge ran aground two miles off course.

POPULATION EXPLOSION BRINGS PROBLEMS

It took all of history, until 1930, for the world population to reach 2 billion . . . by 1975, it will double to 4 billion . . . and it will nearly double again by the year 2000. And will include 300 million Americans! There is not much time left to cope with the population explosion—we must pay more attention *now* to our resources and our environment.

This means—to overcome urban sprawl—more planning for open spaces . . . more intensive but balanced use of our resources . . . protecting our coastlines and our streams from pollution. It requires establishing new agencies—perhaps a Cabinet-level post on the environment.

It is reassuring to see the impetus the Administration and Congress are giving to these problems. They *must* have this high priority if the World in 2000 AD is going to be a fit place in which to live.

One thing must be kept in mind when discussing priorities—they all cost money!! To increase the government's financial commitment in any one area means one of three things—1) raising taxes to pay the additional cost . . . 2) curtailing expenditures for other programs . . . or 3) using deficit financing, which, in the end, feeds the inflationary spiral and continues to escalate the cost of living.

These are the kinds of things I have to keep in mind when I vote. The following questionnaire includes some of the most controversial Congressional issues. Your answers will help me get a better perspective on the issues of the day and will help me to legislate more intelligently.

Sincerely,

HASTINGS KEITH.

QUESTIONNAIRE

Priorities: Please number in the order you feel they deserve attention: Conservation —; Defense —; Education —; Housing —; Inflation —; Oceanography —; Poverty —; Space —.

Vietnam: Do you favor:

—An increase in our military effort in Vietnam?

—Gradual withdrawal as South Vietnam takes over?

—Immediate withdrawal of all U.S. forces?

Space: Do you favor:

—Increasing appropriations for space exploration?

—Keeping space spending at its current level?

—Reduction of funds for space activities?

Social security: (Bearing in mind that employer-employee contributions would have to go up to meet any increase): Do you favor:

—Keeping social security benefits at present levels?

—Increasing benefits by 10% (the Nixon proposal)?

—Increasing benefits at the same rate living costs rise?

Welfare: The President's plan provides minimum payments to families with dependent children—and for financial incentives and extended job-training programs for those able to work. Do you favor his plan? Yes —, No —.

How would you judge President Nixon's performance? Good —; fair —; poor —.

AMERICANS DO CARE

HON. LOUIS C. WYMAN

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. WYMAN. Mr. Speaker, Peter Mannarini's background and message appearing recently in the Derry News is worthy of thoughtful consideration. I hope Mr. Mannarini understands that we do care and care deeply.

We are deeply grateful to the American fighting men of this and previous wars. Theirs is a status of justly deserved honor among their contemporaries and throughout our people. Long may they live with pride in their honor and with the deserved appreciation of all Americans.

The article follows:

HE ASKS: "WHO CARES ABOUT US?"

Peter Mannarini was born in Derry and attended local schools.

As a young lad he delivered the Derry News and went on to attend Pinkerton Academy. He enlisted in the army in February of this year and has been in training at Fort Dix, Fort Eustis, Virginia and Fort Stuart, Georgia. He is home on leave now, waiting to go overseas as a helicopter mechanic.

These are some thoughts and questions he has put into words:

"WHO CARES ABOUT US?

"Take a man, and put him away
Thousands of miles away from home;
Drain his heart of all but blood;
Make him live in sweat and mud;
This is the life I have to live,
My heart and soul to God I give.
You peace boys rant from your easy chairs,
But you don't know what it is like over here.
Burn your draft cards, march at dawn;
You chant your songs on the White House lawn.
All of you, you want to ban the bomb;
And forget our men in Korea, and 'Nam.
You use your drugs and have your fun,
And then you refuse to use a gun.
You haven't got anything better to do
While I'm supposed to die for you.
I'll hate you until the day I die!
You make me hear my buddy cry,
I saw his arm a bloody shred.
I can hear them say, 'this one is dead',
He had the guts to fight and die.
He paid the price, but what did he buy?
He let you live by losing his life,
When you should have died, and he should have lived;
It's a large price to pay—
Not to live another day—
But who cares what a soldier gives?
Whether he dies, or whether he lives?
His mother, his father, his wife, his sons—
These are the ones who pay for what you have done.
Now he rests in a grave with a marble stone,
Because of you the cowardly ones,
Draft dodgers and hippies; they shall not moan.
But God, he will guide us on;
And we, 'the American Soldier', give our lives
To keep the country we love from going to destruction."

—PETER MANNARINI, U.S. Army.

WHAT'S GOOD FOR CYCLAMATES IS GOOD FOR DDT

HON. DAVID R. OBEY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. OBEY. Mr. Speaker, last week with little prior notice, but generating much fanfare, the public learned that within a relatively short time cyclamates will not be allowed as an additive in any of our foods because of potential danger to our health.

As an excellent editorial in the Washington Post recently asked, why should not the Federal Government halt the use of DDT for the same reasons.

Indications have been widespread for some time that DDT is causing havoc with our environment, and threatens the extinction of a number of fish and birds. But recent studies, as well as some done a number of years ago, have revealed startling findings which indicate that DDT may have an adverse effect on humans, and like cyclamates may have cancer-causing potential.

The Environmental Defense Fund has pointed out that as far back as 1947 a study by the Food and Drug Administration itself showed that when DDT was fed to rats there was an increased incidence of liver tumors.

Recently, Hungarian scientists examined more than 1,000 mice from five generations after adding three parts per million of DDT to their diets. They found that 28 percent of the mice getting DDT developed tumors, while only 3.8 percent of the mice on clean food had tumors. Leukemia appeared in 12.4 percent of the DDT mice, but only 2.5 percent of the others.

And, in a study by the University of Miami School of Medicine, it was found that the human victims of cancer had more than twice as much DDT in their fat as did victims of accidental death. We do not know if the increased amount of pesticides caused the cancer of these victims, or if there was any relationship between the two, but this is something which can hardly be ignored.

There is certainly enough evidence to make us question the effects of DDT on the public health and safety. The same questions raised about the effects cyclamates may have on humans can be raised about DDT. One has been removed by the Federal Government. Why not the other?

I submit the text of the above-mentioned Washington Post editorial of October 25, 1969, for the review of my colleagues:

BANNING CANCER-PRODUCING CHEMICALS

The country seems to have taken in stride the sudden abolition of cyclamates from its food supply. Commercial users of these artificial sweeteners as well as consumers promptly recognized that a potential menace to health had been identified. With remarkably little fuss and friction, cyclamates have been consigned to outer darkness even without any indication that they have caused cancer in man. The finding that they had produced cancer in rats, when taken in large doses over a long period, was enough.

The experience suggests a new sensitivity in commercial as well as official circles to potential hazards to health. If this attitude prevails, the elimination of cyclamates may be only the first of many steps to safeguard the public from chemicals that have previously escaped suspicion. Secretary Finch has ordered a review of other food additives heretofore deemed to be safe. And what about the vast number of substances known to be harmful to health which do not fall into the category of food additives? HEW's action in this case has opened a wide field of inquiry which may lead to new legislation as well as tighten administrative actions.

One immediate question is whether the Food and Drug Administration will act against DDT. This widely used insecticide has a long residual life and is known to produce cancer in mice and rats. Some scientists who have probed deeply into the hazards of DDT insist that the case for banning its use is much stronger than the case against the cyclamates.

The Environmental Defense Fund and California Rural Legal Assistance, representing five pregnant or nursing women, have petitioned the FDA to lower the tolerance limits on DDT residues in human food to zero. Their case is based on the provision in the Federal Food, Drug and Cosmetics Act which led to the undoing of the cyclamates. It says that "no additive shall be deemed to be safe if it is found to induce cancer when ingested by man or animal." Since the cause of cancer is not yet known, Congress decided not to take chances with substances known to contribute to it.

Most of the present tolerance levels for DDT on raw agricultural commodities were established on the basis of hearings in 1950. The certain recognition of DDT as a carcinogenic agent is of more recent origin. Scientists now know, not only that DDT causes cancer in some animals, but also that it accumulates in body tissues after being ingested. In part the petition now before the FDA in regard to DDT rests on the finding that reservoirs of DDT accumulated over months or years will appear in a woman's milk after she has borne a child. So, it is said, a breast-fed baby may ingest three times the quantity of DDT considered safe by the World Health Organization and five to seven times as much as is tolerated in cow's milk sold on the market.

As in the case of the cyclamates, DDT is not known to have caused cancer in any human being. But a study at the University of Miami School of Medicine showed that human victims who died of cancer had twice as much DDT in their fat as did the victims of accidental death. If the FDA is ready to apply its sound rule against cancer-producing chemicals—that they are "guilty until proved innocent"—a ban on the use of DDT in its present form may well be in the making.

OFFICIAL POSITION OF THE DISCIPLES OF CHRIST CHURCH CONCERNING MILITARY TRAINING AND SERVICE

HON. WILLIAM L. HUNGATE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. HUNGATE. Mr. Speaker, since we will be considering the Selective Service Act and amendments thereto in the near future, I bring to the attention of my colleagues the official position of the Disciples of Christ Church as adopted at their biennial general assembly in Seattle, Wash., this year:

CONCERNING MILITARY TRAINING AND SERVICE

Whereas, the Christian Church (Disciples of Christ) has historically opposed military conscription except in time of great national emergency and so declared its opposition in resolutions as follows:

"We affirm our opposition to the enactment of any legislation during the present war providing for compulsory military training and services in peacetime." (1944)

". . . that this International Convention of Disciples reaffirm our opposition to conscription for military training or service in time of peace, . . ." (1946)

". . . that we call upon the Congress and the President of the United States to procure the necessary armed forces through voluntary enlistment." (1948)

"That we express again our opposition to 'Universal Military Training' in the United States in whatever form since it tends to fasten upon our people a concept of the state totally foreign to our American tradition and a spirit futility with regard to the possibility of peace which may turn out to be one of the chief blocks to its achievement . . ." (1954); and,

[*Whereas, even though military conscription has been regarded as foreign to the American tradition, the present Selective Service Act has been renewed with little regard for its violation of this tradition or serious study of alternative methods of recruiting military personnel that might have proved conscription unnecessary; and*

Whereas, the two major political parties in their 1964 platforms declared:

". . . we pledge . . . re-evaluation of the armed forces' manpower procurement programs with a goal of replacing involuntary inductions as soon as possible by an efficient voluntary system, offering real career incentives," (Republicans, 1964)

"On August 25, the Democratic Convention promised in its platform to 'pursue our examination of the selective service program to make certain that it is continued only as long as it is necessary and that we meet our manpower needs without social or economic injustice." (Democrats, 1964, Cited in Congressional Record, September 29, 1964, S. 22348); and,]

Whereas, liberal and conservative Senators of both political parties (Hatfield, Goldwater, McGovern, Dole, Nelson, Packwood, Schweiker and Prouty) have introduced in the present (91st) Congress legislation which would end the military draft and substitute an all volunteer army but maintain registration and allow the President to request Congress to reinstitute the draft if any future emergency should require such action; and,

Whereas, President Richard M. Nixon has announced that he will seek an end to the draft as soon as the Vietnam War ends;

Therefore be it resolved that the Christian Church (Disciples of Christ) assembled at Seattle, Washington, August 15–20, 1969, reaffirms its opposition to conscription except in time of great national emergency and commends President Nixon for his decision to seek an end to the draft after the Vietnam war;

Be it further resolved that we urge our congregations, state and area associations and Brotherhood agencies to study the implications of permanent military conscription in the United States as it affects individual freedom and foreign policy; and,

Be it further resolved that we support members of Congress who seek an end to the draft and a review of military manpower practices, including recruitment policies, pay scales, living conditions and career appeal; and,

Be it further resolved that we ask the General Minister and President of the Christian Church (Disciples of Christ) to send copies of this resolution to the President of the United States of America, the Secretary of Defense, the relevant committees of Congress and the leadership in Congress of both major parties.

SUBMITTED BY THE DISCIPLES PEACE FELLOWSHIP.

The General Board recommends approval of this resolution as amended.

The General Assembly APPROVED as amended.

SST—AN OPINION

HON. HASTINGS KEITH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. KEITH. Mr. Speaker, the Standard-Times of New Bedford, Mass., has recently published an editorial which roundly criticizes the decision to proceed with development of an SST prototype at the taxpayers' expense.

In the opinion of this newspaper, proceeding with SST development at this time is analogous to climbing a mountain simply because it is there—with the notable exceptions that mountain climbing does not impoverish the taxpayers or create noise pollution.

In order that all Members might have the benefits of the Standard-Times' forthright views on this controversial subject, I am inserting the editorial under unanimous consent at this point in the RECORD:

NIXON BLUNDERED ON SST

In deciding to spend more federal money on the controversial supersonic transport program, President Nixon has made a serious and costly mistake.

His own 11-member interagency committee, named to review the SST program last March, failed to reach a consensus because so many of its members had reservations or were totally opposed to going ahead with the project.

There is not a single sound argument in favor of continuing this massive boondoggle that is expected to cost the government at least $1.2 billion before it is done.

The sonic boom produced underneath the plane's flight path may make overland flights unbearable for people (and wildlife) below, cutting only a few hours from already fast flights.

The plane will benefit only a few jetsetters and will require vast new outlays for airports and ground facilities.

Introduction of jumbo jets (stretchedout conventional jets with increased passenger capacity) will reduce the potential market for the SST, and thus the likelihood that the government will get its money back through royalties on sales.

The relatively short range of the SST (a New York-Rome flight would be impossible without refueling) is a major handicap.

The only thing that an SST can do that other planes cannot is cut three hours off the U.S.-Paris flight time. In a period of government belt-tightening, pressing urban needs, and nationwide inflation, to spend millions for such a superficial and unnecessary reason is reminiscent of the man who climbed the mountain simply because it was there.

There is one difference: The mountain-climbing did not harm anyone, but in going ahead with SST, Mr. Nixon is ignoring the fact that nobody needs it but the contractors who are building it. Those Americans who really could use the billion dollars are not going to get it.

ELECTRONIC LEADER

HON. J. J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. PICKLE. Mr. Speaker, the University of Texas is firmly establishing its place among the leaders in electronic teaching—and in the process has created a modshop using a variety of combinations of sight and sound in teaching. This new center will attract the attention of teachers from all over the world.

I include in the RECORD a descriptive article from the October 15 issue of the Daily Texan:

UNIVERSITY OF TEXAS BECOMING LEADER IN ELECTRONIC TEACHING

"The University is becoming a landmark institution and will establish education norms through its use of electronic equipment in teaching," Dr. Richard Byrne, radio-television-film and drama professor, said Tuesday.

Byrne assisted in preparing and coordinating the initial list of equipment installed in the Jester Center auditorium. He currently is involved in the designs for the multi-million dollar School of Communication complex for the University.

The auditorium in Jester was designed to produce "any kind of sound and image in any combination," Byrne said. "These facilities make teaching exciting and will attract professors from all over the world."

The equipment, of the highest quality available, includes four 2-by-2-inch Carrousel high intensity slide projectors, two 3-by-4-inch slide projectors, three 16mm motion picture projectors, a turntable, a video tape recorder, two overhead projectors and a stereophonic sound system.

An intercom connects the lecturn to the projection booth or backstage. There is rheostat control on house, stage and spotlights. That is, they can be dimmed or brightened at the will of the professor.

There are tentative plans to install a color television projection and a five-poll individual response system.

Byrne said $47,000 originally was allocated for this equipment but that it will easily save that much in a year by more efficient teaching of large groups.

One new concept in education is the initial design of classroom space for a specific purpose. The idea will be evident in the proposed communication complex.

The latest sets of drawings show a sub-

terranean auditorium with sector seating. There is also continental seating and no center aisle.

Three rear projection screens cover the front wall and will produce no shadows, allowing the professor to walk freely from screen to screen. These screens can fly into the ceiling leaving a stage area to be used in speech interpretation courses.

Byrne said the complex will have a tandem classroom situation with a projection area encircling both rooms. This experimental project would allow projection into two classrooms at the same time by the use of mirrors.

There will be equipment which will be able to film audience reaction in the dark, and take skin responses. Byrne said this facility will be of physiological importance.

Plans for the lobby show a glass-encased room in which television sets showing all networks will be running simultaneously, at all times. The main purpose of this room will not be only for comparative R-T-F studies but to keep the communication students abreast of events.

One of the most unique attractions of the complex, Byrne said, will be an elongated octagonal room with 10 screens. There will be no seats, just carpeting extending five feet up the wall. This room is similar to an Expo exhibit, but is for academic purposes.

In this setting almost any environment can be produced in the 360 degree screen area. It can also be cycled to run automatically.

"Information will be dispersed in an exciting manner," Byrne said, referring to the coming age of electronic teaching.

Technology is advancing so rapidly that equipment for the complex will not be ordered until construction is well under way. Byrne said that much of the equipment that eventually will be used in the complex has not been invented yet.

THE CALLOUS BEHAVIOR OF NORTH VIETNAM IN ITS TREATMENT OF PRISONERS OF WAR

HON. MARGARET M. HECKLER

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mrs. HECKLER of Massachusetts. Mr. Speaker, about a month ago a delegation of courageous women visited Congress. They were the wives of men who are missing in action in Vietnam or known prisoners of war in North Vietnam. They came to us with a fervent plea that the POW's should not be forgotten and that the callous behavior of the North Vietnamese—in violating the minimum requirements of the Geneva Convention for Humane Treatment of Prisoners—should not be forgotten.

Despite the fact that North Vietnam, by its signature, agreed to abide by the provisions of the Geneva Convention, its behavior has demonstrated that nation's utter contempt for both international law and the laws of human decency. It has refused to abide by the convention's requirement that it should release the names of the prisoners of war; it has refused to release the sick and the seriously wounded; it has refused to permit impartial inspections of prisoner-of-war facilities, and it refuses to permit the free exchange of mail. In addition, from the lips of those brave wives and the prisoners who have been released, we have learned the true conditions existing in North Vietnamese prison camps.

Mental and physical torture has been applied freely to the American prisoners of war. Health conditions are deplorable. Their rights have been abused as they have been employed as instruments of propaganda—as, for example, when prisoners have been paraded through city streets and subjected to the insolent jeers, the stones and the spittle of onlookers. This should not be forgotten.

There is no question but that any agreement on Vietnam must provide for the release of the American prisoners of war.

There is pending before Congress a resolution which strongly urges that the President, the Department of State, the Defense Department, and all other concerned agencies of the Government, should appeal to North Vietnam to abide by the Geneva Convention and should take such other steps as to provide for humane treatment and release of the prisoners. I would hope that we will unanimously support this resolution.

One further point which we should keep in mind is suggested by an editorial in the Boston Globe of October 3, 1969, which I am submitting for the RECORD. This is the thought that such a resolution, additionally, might help break the negotiation deadlock by permitting the start of serious prisoner-of-war negotiations.

This, as the editorial notes, is what broke the deadlock in the long-stalled Korean negotiations at Panmunjom.

The text of the Boston Globe editorial reads as follows:

LET'S PROTEST TO HANOI

WASHINGTON.— There ought to be another protest after students and professors devote Oct. 15 to contending that President Nixon is not getting the United States out of Vietnam fast enough to suit them.

We need a different kind of protest.

We propose that Congress and the country join in a massive protest to Hanoi against the continuing cruel, criminal and inhumane treatment of American prisoners of war.

We propose that the House and Senate pass a joint resolution at the earliest date demanding that North Vietnam cease violating the Geneva Convention, to which Hanoi is solemnly bound, against the maltreatment of enemy prisoners. One such resolution with 200 co-sponsors has already been introduced in the House.

We propose that special means be taken—by letter to the President and Congress by circulated petitions for signatures, by newspaper advertisements and other means—to show North Vietnam and the Viet Cong that American public opinion is both united and revolted by their heedless and heartless attitude toward the men who have fallen into their hands.

Hanoi has shown itself very sensitive to the state of opinion in the United States. It hopes to win a one-sided peace by playing on the disunity and impatience of the American people.

It would be useful to let Hanoi see something of the unity and the impatience of the American people over the long-standing proved mistreatment of U.S. men in North Vietnamese prison camps.

It would be useful to let the whole world know about these conditions.

It might do more. It might help break the deadlock over serious political negotiations to begin serious prisoner-of-war negotiations as it did in the long deadlocked Korean negotiations at Panmunjom.

There are 1332 U.S. servicemen listed as prisoners or missing in action, and many missing in action may be in prison camps. More than 200 U.S. servicemen have been held more than three and a half years—longer than any U.S. servicemen were held in World War II.

Here are the minimum obligations of the Geneva Convention, which North Vietnam signed in 1957—and Hanoi's nonperformance:

1. Identify prisoners whom they hold. Hanoi has refused to do so.
2. Release the sick and injured. Hanoi has refused to do so; its medical care has often been deliberately inadequate.
3. Permit impartial inspection of prisoner-of-war facilities. Hanoi has refused to do so.
4. Permit free exchange of mail. Hanoi has refused to do so.

Here is typical testimony of those who were released and returned to the United States (nine over a five-year period): One told of "rebreaking bones in solitary confinement, of being forced to sit on a hot stool in a hot room with no sleep . . . in two days your feet swell up and then it creeps up your legs until they are numb. How long can you last before giving some kind of statement? Some have gone 150 hours. Others have passed out from heat exhaustion in 48."

Since Hanoi is concerned about American opinion on ending the war, it ought to be given an authoritative word, through unanimously passed congressional resolution, about the American state of mind on ending its brutal prisoner-of-war crimes.

It could help end the war. It could help bring the peace.

NOVEMBER AT THE SMITHSONIAN

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. FULTON of Pennsylvania. Mr. Speaker, it is a pleasure for me to place in the CONGRESSIONAL RECORD the schedule of events for the month of November at the Smithsonian Institution. Once again, the Smithsonian has planned a variety of programs and events all of which are interesting, informative, and entertaining.

I am happy to call these events to the attention of my colleagues and the American people, and strongly recommend they visit the Smithsonian during the coming month.

The schedule of events follows:

NOVEMBER AT THE SMITHSONIAN

Tuesday, November 4, Animals in Sculpture.—Sales exhibition of 48 animals and birds created by sculptor Orvelo Wood in his New York studio. Museum shop, National Museum of Natural History. Through December 31.

Wednesday, November 5, The Holy Ghost People.—A 53-minute black-and-white Film Theatre presentation. In Scrapple Creek, West Virginia, religious fervor is a way of life; attendance at one of the almost daily 4- to 6-hour meeting reveals members approaching a hypnotic, transfixed state of singing and shaking. First prize winner, San Francisco International Film Festival, 1968, 2 p.m., auditorium, National Museum of History and Technology; 8 p.m., auditorium, National Museum of Natural History. Introduction by Irving Zaretsky, visiting research

associate, Smithsonian Department of Anthropology.

Thursday, November 6, the Creative Screen.—The Music Rack. Wendell Castle, noted artist-craftsman, designs and constructs a music rack using the wood lamination process. *Reflections.* Enamelist Paul Hultberg illustrates his methods with sheets of gleaming copper and brilliantly colored enamels. Films will be shown every half hour from noon until 3 p.m. Free admission at the National Collection of Fine Arts.

The Holy Ghost People.—Film Theatre repeat. Noon, auditorium, National Museum of History and Technology.

Friday, November 7, Stained Glass Workshop.—Under direction of Clayton E. Anderson. Sponsored by the Smithsonian Associates. By subscription only. For information call 381–5159.

Saturday, November 8, the Creative Screen.—Repeat of *The Music Rack* and *Reflections.* See November 6 entry for details.

Stained Glass Workshop.—Repeat. See November 7 entry for details.

Sunday, November 9, Young People's Enameling Workshop.—Under direction of Mary Megee. Seven- and nine-year-old youngsters 9:30 a.m.-12:30 p.m.; 10- to 12-year-old children, 1:30 p.m.-4:30 p.m. Sponsored by the Smithsonian Associates. By subscription only. For information call 381–5159.

Monday, November 10, So Little Time and Birds of Prey of Northeastern United States.—Films sponsored by the Audubon Naturalist Society. The first is an environmental film that emphasizes the disappearance of our wetland habitats and their resident species. The second film portrays the raptors and their ecological importance to man. 5:15 p.m. and 8:30 p.m. in the auditorium, National Museum of Natural History.

Tuesday, November 11, Christmas in America—Sales exhibition featuring the arts, crafts and delicacies of the ethnic groups who have enriched our country with their varied celebrations at Christmastime. From Latin America and Europe, from Pennsylvania, New Mexico, North Carolina, and New England—a cornucopia of playthings, cookies, and adult gifts. Museum Shop, National Museum of History and Technology. Through December 31.

Wednesday, November 12, Movin' On—A 59-minute Black-and-white Film Theatre presentation. The story of railroading starting in 1830 is told by means of popular folk songs. The 1920's showed trains and trainmen treated as heroes in American movies. The 1930's proved to be the glorious years of the great passenger trains. 2 p.m., auditorium, National Museum of History and Technology; 8 p.m., auditorium, National Museum of Natural History. Introduction by John H. White, Jr., chairman, Smithsonian department of industries.

Thursday, November 13, The Portrait Reliefs of Augustus Saint-Gaudens—Through January 30, National Portrait Gallery, Saint-Gaudens (1848–1907), who dominated American sculpture during the last quarter of the 19th century, will be accorded the first major exhibition of his work anywhere since 1910. More than 60 portrait reliefs in marble, bronze, and plaster as well as cameos and medals are being borrowed from museums and private collections across the country for this nearly comprehensive exhibition.

Movin' On—Film theatre repeat. Noon, auditorium, National Museum of History and Technology.

Friday, November 14, People of the Horse—The influence of the nomads of the steppes on medieval European and Near Eastern art designs. Illustrated lecture by Ralph S. Yohe. Co-sponsored by the Rug Society of Washington and the Smithsonian Associates for members and guests. 8:30 p.m., Freer Gallery of Art auditorium. Public will be admitted at 8:25 as seats are available.

Contemporary Tapestries and Graphics: Yugoslavia—Exhibit in the Arts and Industries Building through February 2, 1970. The richness of Yugoslavia's cultural influences—Byzantine, Austrian, and Mediterranean—are reflected in the boldly colored contemporary designs of the 28 hand-woven tapestries in this exhibition. The 60 prints by 20 artists in serigraphy, linocut, intaglio, and lithography show the ferment of activity taking place in Yugoslavian graphic art today. The exhibition was organized by the Galley of Modern Art in Ljubljana for the Smithsonian Traveling Exhibition Service.

Sunday, November 16, Young People's Enameling Workshop—See November 9 entry for details on this Smithsonian Associate class.

Monday, November 17, Georges Melies, Creator of the Magic of Films—A comprehensive exhibition, with film showings, of the work of the great French film pioneer who first attempted dramatic themes and fantasy with the motion picture camera beginning in the 1890's. Daily film showings through January 1 in the National Museum of History and Technology at 10:30 a.m., 12:30, 2:30, and 4:00 p.m. Cosponsored by the Smithsonian Associates and Office of Exhibits.

Wednesday, November 19, Crafts From Pakistan—Sales exhibition of traditional tribal crafts from Sind and Baluchistan. Jewelry, baskets, rugs, musical instruments, toys, textiles, costumes, quilts, saddle blankets, brass, and furniture will be displayed under a brilliant applique tent; also a loan exhibition of selected Pakistani crafts from the collection of Mrs. Manuela Fuller. Museum Shop, Arts and Industries Building. Through December 31.

American and the Americans—A 52-minute color Film Theatre presentation. A blend of newsreels, enactments, live-action, old film footage, and paintings explores the paradoxes and national myths of America past and present as expressed by John Steinbeck with both love and anger. 2 p.m.,auditorium, National Museum of History and Technology; 8 p.m., auditorium, National Museum of Natural History. Introduction by Harold Skramstad, Smithsonian American Studies Program.

Thursday, November 20, Encounter—The Chesapeake Bay a multi-use resource. Second in a series of panel discussions, in which the audience is asked to participate, on critical issues of today. Panel members, who will discuss the controversial nuclear power plant planned for the Bay, include: Dr. Donald W. Pritchard, Professor of Oceanography, Johns Hopkins University; Dr. Edward P. Radford, Professor of Environmental Medicine, Johns Hopkins; Dr. L. Eugene Cronin, Director, Natural Resources Institute, University of Maryland; and Robert W. Davies, Chief Mechanical Engineer, Baltimore Gas & Electric Company. 8:30 p.m., auditorium, National Museum of History and Technology.

America and the Americans—Film Theatre repeat. Noon, auditorium, National Museum of History and Technology.

The Creative Screen—Art of Seeing. Skillful and beautiful photography converts everyday objects and scenes into sources of stimulation and pleasure while developing keener insight into the world of visual arts. *A New Way of Gravure.* Stanley William Hayter, influential printmaker of the 20th Century, is shown in his famous Paris Atelier 17 where Picasso, Miro, and Calder came to learn printmaking. Free admission at the National Collection of Fine Arts. Films will be shown every half hour from noon until 3 p.m.

Saturday, November 22, The Paper Bag Players—Award-winning children's theatre from New York. Sponsored by the Smithsonian Associates, 1:30 and 3:30 p.m., auditorium, National Museum of Natural History. *By Ticket Only.* For information call 381–6158.

The Creative Screen—Repeat of *Art of Seeing and A New Way of Gravure.* See November 20 entry for details.

Advance Stained Glass Workshop—Under direction of Clayton E. Anderson. Sponsored by the Smithsonian Associates. By Subscription Only. For information call 381–5159.

Sunday, November 23, Young People's Enameling Workshop—See November 9 entry for details.

Advanced Stained Glass Workshop—Repeat of November 22 Smithsonian Associates class.

Tuesday, November 25, Reflections on Andrea Palladio's Life and Times—Illustrated lecture by noted photographer Donald Sultner-Welles. Sponsored by the Smithsonian Associates for members and their guests. 8:30 p.m., National Museum of Natural History auditorium. Public will be admitted at 8:25 p.m. as seats are available.

Wednesday, November 26, Watermen—an intimate portrait of the Chesapeake Oysterman. A 63-minute color Film Theatre presentation. The sailing oystermen who work the Bay skipjacks operate the last commercial sailing fleet in North America, a reminder of times past in a technological age. 2 p.m., auditorium, National Museum of History and Technology; 8 p.m., auditorium, National Museum of Natural History, Introduction by Howard I. Chapelle, Senior Historian, Smithsonian.

Thursday, November 27, Watermen—Film Theatre repeat. Noon, auditorium, National Museum of History and Technology.

Saturday, November 29, Last Saturday Jazz—featuring the Lee Morgan Quintet. National Museum of Natural History auditorium, 8:00 p.m. Tickets at $2.00 apiece may be purchased at the door. Presented by the Left Bank Jazz Society in cooperation with the Smithsonian Office of Performing Arts.

RADIO SMITHSONIAN

You can listen to the Smithsonian every Sunday night from 7:30 to 8:00 p.m. on radio station WGMS (570 AM & 103.5 FM). The weekly *Radio Smithsonian* program presents music and conversation growing out of the Institution's exhibits, research, and other activities—from moonshine on the Mall to a discussion with the British Ambassador about his country in the last third of the Twentieth Century, from the coral reefs of the South Pacific to sweet melody from an antique violin. Fred Gray is producer, Cynthia Hels special correspondent in this presentation by the Smithsonian's Office of Public Affairs.

RATS

A special exhibition on the ecology and control of rats, with emphasis on the immediate neighborhood. At the Anacostia Neighborhood Museum from November 16 until January 31. For a calendar of the special programs connected with this exhibit phone 582–1300.

CONTINUING EXHIBITIONS

Objects: USA.—Two hundred and ten American contemporary artist-craftsmen from 37 states contribute 315 objects to this major survey of U.S. crafts. Works in metal, fiber, ceramic, glass, wood, enameling, plastics, beads, mosaics, and leather are included. Objects cover a wide range from jewelry and silverware to furniture and fabrics. From the Johnson Wax Company collection. Through November 16 at the National Collection of Fine Arts.

Sales Exhibition—Objects: USA.—Selected craft work done by a group of the artisans included in the National Collection of Fine Arts show: Maurice Heaton, Stanley Lechtzin, Richard Marquis, and William Wyman. NCFA Museum Shop, through November 16.

Plastic as Plastic.—The first museum exhibition examining plastic's role as a unique man-made product widely adaptable for innovative design rather than as an imitator of wood, glass, and other material. Among the

246 objects to be exhibited—including a sprayed plastic foam "environment"—are furniture, jewelry, toys, industrial uses, sculpture, housewares, and appliances. Arts and Industries Building. Through January 19.

Landscapes and Seascapes by Whistler.—An exhibition of James McNeill Whistler's landscapes and marine paintings revealing his forgotten role as an avant garde artist whose experimental paintings were a major force in the emergence of abstract art. Some 40 paintings will be displayed. At the Freer Gallery of Art for an indeterminate period of time.

The Bhahar River Tiger.—Believed to be the largest tiger ever taken in India. From tail to paw the stuffed animal is 11 feet long. It is being presented to the National Museum of Natural History through the generosity of David J. Hasinger of Philadelphia and will be placed on a platform on the Constitution Avenue main entrance to the Museum, seemingly poised as though in the act of springing upon a Chital deer. Permanent exhibit.

Barbara Morgan: Women, Cameras, and Images IV.—More than 50 photographs, including photomontages, by famed photographer, author, critic, and designer Barbara Morgan. The subjects of the pictures are varied, but special emphasis is placed on Mrs. Morgan's classic photographs of Martha Graham and other dancers. Hall of Photography, National Museum of History and Technology. Through January 26, 1970.

Josiah K. Lilly Collection of Gold Coins.—More than 6,000 gold coins in a collection unequaled in historical and geographical scope typifying the endless number of gold coins circulated throughout the world over a period of about 26 centuries. National Museum of History and Technology. Through December 30.

Energy Conversion.—Historical development of various methods for transforming an available energy source to a needed energy product, including batteries, fuel cells, solar cells and steam engines. In the Hall of Electricity, National Museum of History and Technology, through March.

Napoleon Bonaparte.—Bicentennial of his birth, 1769. A medallic illustration of Napoleon's eventful life; the epic of his many battles which led him across Europe, from Spain to Russia and from the borders of the Elba to the waters of the Nile and into exile at St. Helena where he died, is illustrated by coins and medals that were produced by him and his adversaries. Hall of Numismatics, National Museum of History and Technology. Through February 1970.

Pharmacy in Prints.—A collection of portraits, caricatures, broadsides and labels ranging from the satiric and political to the social and ethical, these prints show the doctor-pharmacist-patient relationship. Figures shown include Napoleon, Gladstone, and Presidents McKinley and Cleveland. Through February. National Museum of History and Technology.

Hurricane Fighter Plane.—This plane commemorates the Battle of Britain and the participation of the American Eagle Squadron in that historic struggle. The Hurricane was one of the first and most numerous British fighter planes in World War II, but it is now an extremely rare type of aircraft. It is shown in the Arts and Industries Building.

Atomic Art.—An exhibition of art by Alyce Simon of New York. Controlled bombardment of acrylic plastic sheets by a particle accelerator combined with flat areas of color produces a unique art form. Hall of Nuclear Energy, first floor of the Museum of History and Technology. Closing indefinite.

CHRISTMAS CARDS

The Museum Shop in the National Collection of Fine Arts is currently offering Christmas cards featuring reproductions of paintings in the collection by James McNeill Whistler, Agnes Tait, Raphael Peale, Childe Hassam, John Twachtman, and Charles Burchfield.

MUSEUM TOURS

NATIONAL COLLECTION OF FINE ARTS

Daily tours at 11 a.m. and 1 p.m. Weekend tours 2 p.m., Saturday and Sunday. For advance reservations and full information, call 381–5188 or 381–6100 message 381–5180.

NATIONAL ZOO

Tours are available for groups on weekdays 10 a.m. to 12 noon. Arrangements may be made by calling—*two weeks in advance*—CO 5–1868 Extension 268.

Visitors may purchase animal artifacts and specially designed souvenirs and books at the KIOSK, which is operated by Friends of the Zoo volunteers as a public service and to raise funds for educational programs. Open daily 12 a.m. to 4 p.m.

THE SMITHSONIAN ASSOCIATES

You are invited to participate directly in the Institution's far-reaching education and research activities by becoming a member of the Smithsonian Associates. Through numerous programs for members, the Associates provide infinitely varied opportunities to explore the arts, sciences, and humanities. Call 381–5157 for information on fees and programs.

THE AMERICAN VETERANS COMMITTEE

HON. SHIRLEY CHISHOLM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mrs. CHISHOLM. Mr. Speaker, I would like to bring to your attention and the attention of my colleagues the platform of the American Veterans Committee as adopted in June of 1969 at Atlantic City, N.J.

While I do not agree with all their resolutions, notably those concerning the draft and the Reserve Officers Training Corps, I do think that the overall platform is extremely commendable.

The American Veterans Committee, since its founding in 1943, has demonstrated that as an organization its major concern is for the welfare of our Nation as a whole, within the world context. The platform, which I now introduce as an extension of remarks, reflects that deep concern for our Nation:

[From the AVC Bulletin, July–August 1969]

PLATFORM OF THE AMERICAN VETERANS COMMITTEE, ADOPTED JUNE 13 THROUGH 15, 1969, ATLANTIC CITY, N.J.

VETERANS AND ARMED FORCES AFFAIRS

The American Veterans Committee has constantly reiterated, since its founding, its fundamental belief that rehabilitation and integration of veterans into the community is the proper scope and purpose of a veterans program. The achievement of economic security for veterans through sound economic planning for all citizens rather than through special grants or favors to veterans in basic AVC policy.

1. Compensation

For many years, AVC has pointed out the need for a thorough review and reappraisal of this Nation's policies on veterans as follows:

1. We oppose bonuses and general pensions as being class legislation and unrelated to the real needs of individual veterans and tending to set veterans apart from their fellow citizens.

In the matter of benefits, two basic standards should be applied.

(a) For death or disability incurred in military service: Are the benefits sufficient to provide a decent standard of living for the veteran, his family or survivors?

(b) For all veterans: Are the benefits so designed as to enable a readjustment from military service to civilian life with a minimum economic loss?

Since benefits are a Federal responsibility, uniform standards of administration and compensation should be applied nationally without regard to race, creed, color, sex, or national origin.

2. Draft

AVC recognizes the necessity for the United States to maintain adequate military forces in present world circumstances. It also recognizes the citizen's obligation to military service and recognizes a selective service system as an appropriate mode of raising military manpower. We object, however, to the inequalities of the draft system as presently administered, especially the deferment of students, the lack of uniform guidelines and the lack of fair representation of the citizenry, especially for minority groups, on the draft boards.

3. Reserve Programs

The world we live in, with its emphasis on speed of operation and technical superiority, demands standing Armed Forces of sufficient size, training and equipment and organization to be effective immediately for defense and counter attack. It is apparent that the Regular Armed Forces must remain our first line of defense. They must be of sufficient size and mobility for deployment anywhere on the globe within a minimum of time so that we may continue to provide when necessary, those forces needed for collective security under our international obligation in peripheral conflicts occurring in the strategic localities of the world.

AVC believes that the National Guard is ill-fitted to serve both roles which it is currently called upon to play. One role is that of assisting civil authorities in the United States in peace-time. Forces suited for that role should primarily consist of military police, possible infantry, with some supporting units (medical, signal, QM, etc.). The other role is that of forming a part of our highly complex and sophisticated Armed Forces with guided missiles, high mobility, heavy weapons and requirements for intensive technical training.

AVC regrets that the steps taken to integrate the National Guard have, so far, been far from adequate. While an office has been established in the National Guard Bureau to deal with equal opportunities, neither the staff nor the influence of that office are sufficient for the purpose.

Regrettably, while the percentage of minority group members in the regular Armed Forces is and remains relatively high, the percentage in the National Guard is low and has remained low despite certain recruiting efforts. We cannot afford to have a polarization within the Armed Forces as between the National Guard on one hand and the Regulars on the other. While the domestic peacetime tasks which the National Guard is called upon to perform tend to involve minority group civilian populations, the troops involved should not present the appearance of an army of occupation.

While a National Guard remains a part of the structure of our Armed Forces, incentives should be provided so that a larger number of minority group personnel with active duty experience will choose to enter and remain in the National Guard.

AVC is opposed to any policy whereby the Army Forces award discharges other than honorable to reserve personnel based upon the political or other activities in which these individuals may participate following separation from active service under the draft.

We believe that the conditions of discharge

should be based solely upon the military activity and efficiency of the reservists.

4. Benefit dollar

AVC believes that provision should be made to maintain automatically the purchasing power of the benefit dollar and upward adjustments be made annually in accordance with the Bureau of Labor Statistics, Consumer Price Index.

5. Civil service

AVC believes that veterans point preference in the civil service be limited to the initial appointment only, and that no person should receive a position unless fully qualified to perform the duties involved.

We oppose the principle of granting absolute preference to veterans in state and local civil service.

6. GI bill

AVC applauds the passage of a permanent G.I. Bill of Rights as a resposible means of enabling servicemen and women to return to civilian life with facility and ease at the end of their service and become useful and productive members of their communities.

However, we urge the Congress to adjust the benefits more in line with the World War II and Korean G.I. Bills and the current cost of living so that the programs may be used by veterans without the financial stress they now entail. The G.I. Bill of Rights should be administered in such manner as to guarantee the absence of discrimination.

7. VA hospitalization

AVC urges that treatment of non-service-connected disabilities in VA hospitals be continued on a space-available basis, but that such treatment be charged at the full cost, if a patient has the means to pay for such service; certificates that a veteran is unable to pay should be investigated thoroughly to determine the true ability to meet the cost of hospitalization. Further that terms of coverage of all prepaid medical associations, plans and companies be amended by action of the legislatures, supervisory bodies or membership, so as to provide payment to VA hospitals for non-service-connected treatment on the same basis as payment to private voluntary and public hospitals.

8. Unification

AVC notes with satisfaction that the process of unification of the Armed Forces has been making progress. AVC commends the actions hitherto taken in this regard and urges that the Department of Defense continue these efforts vigorously.

9. Discrimination—Foreign and domestic

We maintain that no assignment of any military personnel should be made whether within the United States or overseas, for consideration on grounds of color, religion, ancestry or national origin.

Our goal is to insure that no member or employee of the Armed Forces, and no dependents of such persons shall be subjected to discriminatory treatment, on or off base within the United States or outside the United States, on the grounds of color, religion, ancestry or national origin, and that the power including the economic power, of the United States be consciously used to further this objective.

10. Information service

We owe the men of our armed services the best possible training to equip them for the rigors of modern combat under the most adverse conditions of weather, terrain, supply and enemy action. We further believe that an orientation program be instituted in order to acquaint the prospective draftee, at the time of registration, with the rights, privileges, benetfis and special training he and his family will be entitled to if and when he is inducted into the Armed Services.

11. Jurisdiction over ex-servicemen and civilians accompanying the Armed Forces overseas

We believe that the ex-servicemen, military dependents, and civilians accompanying the armed forces abroad should not escape punishment for serious offenses committed while in such status, but should be tried before civilian courts. By serious offenses we mean crimes of the same degree of seriousness as felonies at common law.

12. Awards and benefits

All laws of the United States pertaining to the granting of military medals or decorations, military disability retirement or compensation, dependents and survivors benefits, veterans benefits (including benefits to dependents or survivors), or other special benefits to military personnel or their dependents on the basis of wartime service of such military personnel shall apply in like manner to service performed in such areas and during such periods as proclaimed by the President where combat or combat conditions exist and the United States forces to which such person is attached are either engaged in the combat, engaged in military operations designed to carry out any treaty or other international obligation of the United States.

13. Expeditious naturalization of service personnel and dependents

AVC believes that any man who assumes the risks and responsibilities of entry into the Armed Forces, whether in wartime or time of peace, should be entitled to citizenship.

AVC therefore urges the enactment of legislation which provides in substance that:

Any person regardless of age who is serving, served, or hereafter serves honorably in the Armed Forces of the United States may be naturalized, irrespective of how he entered the United States. No period of residence within the United States shall be required; no residence within the jurisdiction of the naturalization court; the petitioner shall not be required to speak the English language, sign his petition in his own handwriting, or meet any educational tests; no fee shall be charged or collected for making, filing or docketing the petition for naturalization, or for final hearing thereon, or for the certificate of naturalization, if issued.

Since some aliens who enter the Armed Services are sent overseas before the naturalization processing can be completed, even though no prior period of residence may be required, AVC urges that, following the precedent set in former Section 702 of the Nationality Act of 1940, provision be made for such a person to be naturalized while outside the United States.

AVC further urges the Amendment of Section 319(a) of the Immigration and Nationality Act which shortens the residence requirement for aliens married to citizens from 5 to 3 years be deemed met even if the spouse dies while in active service or from service causes or because of the absence of the spouse from the United States or the state by reason of military service.

Resolutions

Military Justice

AVC strongly condemns the actions of the military services in response to recent demonstrations, expressions of dissent against military policies, and stockade incidents, which have resulted in placing charges against these individuals for the most serious offenses possible.

AVC has always recognized that a proper balance must be maintained between the demands of the military to maintain order and discipline and the rights of servicemen as they are guaranteed by the Bill of Rights. However, the possible deterrent effects of harsh punitive charges and sentences must not be allowed to be the sole factor in determining the reaction of military authorities to such incidents. The rights of servicemen must be protected just as much as the rights of civilians if the system of military justice, about which serious questions as to its procedures have been raised, is to command confidence.

AVC urges the military services to treat in a restrained and judicious manner these offenses, to retain confidence in the system of military justice.

Administrative Discharge

While AVC favors in principle the legislation now pending in Congress which is designed to:

1) Provide the statutory framework for the administrative discharge process.

2) Insure that those whose administrative discharge is proposed are given a fair hearing, have access to counsel who are members of the bar, have the right to have witnesses call on their behalf and are given other safeguards.

AVC also calls for the amendment of the legislation now pending so that the so-called "General Discharge under Honorable Conditions" will be treated as the mildest form of punitive or less-than-honorable discharge. Military personnel faced with the prospect of being awarded a General Discharge under Honorable Conditions should be given safeguards which substantially approach those now proposed for the lesser forms of discharge. The oft-repeated contention of the military services that the "General Discharge under Honorable Conditions" is merely another form of Honorable Discharge is not borne out by the experiences of those whose service has been so stigmatized, and the existing power of a single commander to impose a General Discharge must be curbed.

AVC further calls for the deletion from those copies of discharge certificates which are to be exhibited to prospective employers and others of references to service regulations which reveal the reason for discharge, if such reason can reflect on the individual. If it is necessary to delete the reason for discharge from all discharge certificates in order to prevent adverse comments to be drawn from the absence of an indication of the reason, then AVC supports deletion of all reasons for discharge.

ROTC

Whereas, the Reserve Officers Training Corps, by providing many needed and well-qualified officers to our Armed Services for over 40 years, has played an important role in strengthening our Nation's Defenses. It also has served the larger goals of our nation—as these officers, graduating from civilian colleges, have contributed significantly to maintaining a civilian and civilizing influence in our military establishment, so necessary to the maintenance of a true democracy. We also recognize the value of O.C.S. and various summer training Reserve Officer acquisition programs, and

Whereas, at the same time as ROTC serves the nation's needs, it also can be of great personal value to its students, and hence to the colleges they attend. Any student wishing to should have the right to serve his military obligation through the ROTC on an elective basis, and

Whereas, it has not been adequately recognized that most ROTC courses are as deserving of college credit as any applied courses in many academic fields and that most officers assigned to ROTC units would clearly qualify under normal appointment procedures for faculty status,

Now therefore, be it resolved:

1. AVC favors the continuation of ROTC, on a voluntary basis, wherever now established with consideration of additions limited only to those units which will increase equality of opportunity in the armed services.

2. AVC deplores the action of some of our

greatest colleges and Universities in acting to remove the Air-Military-Naval Science courses from their curriculum and the ROTC units from their campuses. AVC feels this is an irrational response to a short-sighted demand—a result of understandable feelings of frustration, protest and outrage against the War in Vietnam and Draft inequities. AVC believes the college faculties and administrations are wrong in giving in to and going along with this misplaced demand of some student activists—many of whom seem to make every military uniform a target of obloquy.

3. AVC applauds the Secretary of Defense's statement of April 29, 1969, indicating he was "prepared to consider changes" to improve the ROTC program, including the flexibility of having civilian subjects such as history and navigation taught by regular faculty members. We urge that negotiations be continued with colleges now having ROTC units to work out conditions which will not violate their academic integrity and still accomplish the military training objectives.

As guidelines for such negotiations, AVC believes the Services should not necessarily insist on full academic credit for all Air-Military-Naval Science courses or full faculty status for all officer-instructors, but they should have a right to insist that host colleges, as a minimum, allow:

a. ROTC program and courses to be mentioned in college catalogues.

b. Classes and administration to be carried on in college buildings (as are many "extracurricular" activities).

c. Drilling in uniform on or in college property.

d. Scholarship, uniform allowances and other benefits to be continued.

The controlling Statute, Title 10, U.S. Code, Chapter 103 should be amended if necessary to permit this flexibility.

The draft

AVC reaffirms its position on the draft as stated in our platform and as presented in detailed testimony before the House and Senate Armed Services Committees in 1967.

AVC also continues to deplore the lack of Congressional action for specific reforms of the draft law which have received wide public support, and which were endorsed by AVC, which are urgently needed.

Further;

1. AVC reiterates its position against a mercenary army, and will seek to testify before the "President's Commission on an All-Volunteer Armed Forces."

2. AVC supports provisions which will enable students who have begun their studies to delay their active duty until they have reached a reasonable point of completion of these studies, but which will not exempt them from service. In this connection, AVC suggests that consideration be given to an adaption of the Enlisted Reserve Corps program used during World War II.

3. AVC reiterates the position it has previously taken concerning the improvement of the legal rights of draftees, composition of draft boards, system of selection, etc.

4. AVC agrees with the line of court decisions on the subject of conscientious objection which has culminated with the recent decision by Judge Wyzanski and which no longer require a religious basis for total conscientious objection, and AVC asks for a uniform implementation of the principles contained in this line of cases. AVC urges that consideration be given to ways in which sincere selective conscientious objection can be recognized.

Nondiscrimination in the military medicare program

While AVC was greatly encouraged by the decision of June 10, 1968 of the Department of Defense to coordinate its efforts in achieving non-discrimination in the Military Medicare (CHAMPUS) Program with the Title VI enforcement effort in medical facilities being conducted by the Office of Civil Rights at HEW. . . .

AVC regrets that the plans for coordination have not been implemented (except with regard to some eight hospitals), due to the failure of the Department of Defense to authorize a very minor item of reimbursement to HEW.

Calls upon the Department of Defense to implement its policy and to launch coordination efforts so long delayed.

Retraining of military personnel reentering civilian life

AVC actively supports a program of retraining members of the Armed Forces about to return to civilian life in order to enhance their opportunities for employment. The retraining should be geared to the job market and should not result in the involuntary retention on active duty of the personnel involved.

Benefits for military personnel

AVC believes that the benefits which accrue to military personnel such as disability compensation, pensions, and survivor benefits should be equal to those payable for federal civilian service of equivalent duration, provided that savings provisions protect those individuals now receiving higher benefits based on military service.

Naming of VA hospital

AVC supports the bill introduced by Congressman Bingham, H.R. 745 to rename the VA hospital in Jackson, Mississippi as the Medgar Evers Hospital.

INTERNATIONAL AFFAIRS

We the members of the American Veterans Committee, believe that in international affairs the objective of the United States is the maintenance of peace. All else aside, the world must avoid the holocaust of nuclear war. Within that framework our foreign policy, like our domestic policy, must be oriented to enhance the welfare of the individual, be he black, white, brown, or yellow, so that he may eat and sleep in safety, live his life under government of his choice and realize to the fullest extent possible the measure of his aspirations.

I. The United Nations and world government

The United Nations continues to be man's best hope for peace. American support to the United Nations must be an essential part of our foreign policy. The authority of the United Nations must be progressively strengthened in a process which sees the selective yielding of the prerogatives of national sovereignty in a manner that will enhance the fundamental freedoms and the well-being of all the peoples of the world.

Recognition of the rule of law principle in international relations is an essential of action in reinforcing the United Nations role in the maintenance of peace and security. Appropriate means must be found to widen the area of internationally accepted standards and American compliance therewith. Prompt repeal of the Connally reservation by the United States Senate would be a step in this direction.

We believe that there must be an acceleration of progress in the ratification of existing international human rights conventions by the United States. Where necessary, enabling national legislation should be enacted to bring our laws into conformity with these conventions. United States action in this respect has hindered a greater assertion of American leadership which is required.

We regard the integrity and independence of the Secretary General's office as expressed in the Charter crucial to the existence and growth of the United Nations. We shall oppose any attempt which seeks to weaken the powers of this office.

We favor encouragement and aid to the formation of supranational authorities of a regional nature consistent with the U.N. Charter and of treaty arrangements which limit the sovereignty of the participating nations in order to secure mutual advantage, such as the European Common Market, Euratom and others. The United States should further encourage and support European initiatives through the European Economic Community, Euratom, the Council of Europe, or otherwise to create, consolidate and strengthen institutions which may lead to a politically stable and prosperous European entity.

We fully support the enlargement of the peace-keeping function of the United Nations. The use of peace-keeping forces by the United Nations should be supported financially on an obligatory basis by all members of the United Nations. The allocation of military forces on a standby basis should be encouraged and established systematically through the creation of a permanent planning mechanism in the United Nations.

We favor the ultimate establishment of democratic world government.

II. Nuclear testing and disarmament

Complete elimination of nuclear weapons testing and establishment of international controls on this most dangerous weapons technology should be the goal of American foreign policy. Our world finds itself in the unique and unenviable position where one generation can make life on earth unlivable for another generation.

The adoption of the United Nations of a non-proliferation Agreement is a significant advance despite the reservations of some member states. The United States as the foremost nuclear power, must move forward in this regard by ratifying the Agreement as rapidly as possible.

The new initiatives by the United States and the USSR to begin negotiations toward the limitation of offensive and defensive nuclear ballistic missile systems is an important next step. United Nations action to convoke meetings of the five nuclear powers—Britain, France, the Soviet Union, China and the United States is further movement toward the desirable goal of creating controls of these awesome weapons. Only by showing their good faith can the nuclear powers induce other states to forego development in this most dangerous area, lower international tension, and avoid the allocation of needed resources to essentially destructive and wasteful ends.

Complete and total disarmament is the ultimate summum bonum, but this is an objective remote in time and immediate achievement is not feasible. Efforts toward that goal, nonetheless should be made by the United States and should be encouraged in other nations. Mankind can never reach its true destiny if it must continue to allocate so high a percentage of its resources to forge the weapons of war.

III. The United States and its allies

Inevitably differences will arise between the United States and its Allies, but there are differences which can be resolved around the conference table. In its negotiations the United States should seek no more than the rights and privileges of a willing partner.

The North Atlantic Treaty Organization was formed in a world considerably different from the world of today. It is time for the NATO Nations to reassess the objectives and reformulate the NATO role. Its continued organization and operation should reflect its changing purpose.

In Latin America, the United States has uneasy allies, but allies nonetheless. We must bend every effort to erase the image of the United States as a prosperous, patronizing, and paternalistic benefactor. It should be the objective of the United States foreign

policy to create instead an image of a United States that wants to be a good partner, as well as a good neighbor, in helping the peoples of Latin America work out their own destinies.

The United States should, at every turn, encourage the United Nations or the Organization of American States to be the forum in which to resolve differences and disagreements among or with our Latin American neighbors. We must show by word and deed that we have no desire to impose our own form of government or way of life upon any country of Latin America. At the same time we must make it clear that we will honor a call for help by any Latin American country whose existence and destiny is being threatened by external foreign directed activity.

IV. The United States and the world

The twentieth century is the era of the developing nations of Latin America, Africa, and of Asia. The United States must stand ready to help these nations and peoples, if they seek our help, to establish their way of life and direct their own destinies.

The forum of the United Nations must be held open to them in their efforts to develop responsible independence, and the services of the specialized agencies should be placed at their behest.

Our era is characterized by an ever-widening gap between the social and economic bases of the developed countries and those of the developing countries. This decline in the relative position of the developing countries, accompanied as it is by a population explosion, can lead to dangerous world tensions which could threaten world peace because of increased violence and disorder. New means must be found to close this gap through mobilization of efforts on a world-wide basis, including increased economic assistance from developed countries and greater self-help from the developing countries. The United States must be prepared to make greater contributions to the United Nations' efforts in this field, through other multilateral arrangements, and through bilateral aid. The goal of allotting 1% of the gross national product to this end as set by the United Nations is not unreasonable and well within the means of the United States.

United States foreign aid to developing countries should be utilized at points of greatest potential. In providing bilateral aid the United States should give priority to those countries which can make the most rational and productive use of such aid. In measuring the efficacy of United States aid, due weight should be given not only to economic considerations but also to the nation-building process including the strengthening of democratic institutions and the consolidation of efforts on a regional basis. The United States should use its financial and economic resources to help the people of weak and developing nations achieve self-government, and should, if requested, provide economic help to prevent them from engulfment or encroachment by foreign powers seeking to impose their own ideologies, disciplines or governments.

Only when asked and only when it is clear that armed force is necessary to thwart a takeover by powers inimical to the welfare of a weak and developing nation should the United States furnish military assistance. In these circumstances the United States should stand ready to give military aid to such a country to oppose imposition of an external power, and should make it clear that its military effort is directed toward that objective alone.

V. Soviet Union and Communist China

The years have shown that coexistence with the Union of Soviet Socialist Republics is not only possible but is also a necessity if the world is to remain at peace. This must be our modus vivendi for the foreseeable future. Every step should be taken to enhance, improve, and expand the spheres of coexistence whether by more frequent cultural exchanges, increased travel by United States citizens to the Soviet Union and the satellite countries, expanded trade beyond the Iron Curtain, or others. If we follow this policy and practice we shall find the areas of agreement becoming wider and the differences, narrower. The inevitable result, where people meet people, is that the government of the Soviet Union will no longer be able to insulate the Russians from the ways of the free world and disregard the yearnings of the Russian citizenry—which we believe to be the same as ours—for a world at peace and for good will to other peoples of the earth.

Communist China is the riddle wrapped up in the enigma that Russia used to be.

Any and all avenues that help us learn more about it or initiate exchange of ideas, must be explored. The forum of the United Nations is one primary means of increasing our knowledge. It should no longer be denied the Communist Chinese. We would not, however, deprive Nationalist China of its place in the United Nations.

VI. World trade

The path to world peace through world trade is long, torturous, and not always clearly marked. The United States should take the lead in, where possible, and encourage, where not, the movement toward freer trade among nations. Countries must export as well as import and stabilizing adjustment will have to be made. Where hardships are visited upon domestic industries, some form of temporary relief should be provided. AVC endorses the Trade Expansion Act of 1962 and urges its continued implementation by negotiations and agreements.

VII. The example of America

Events beginning with World War I and continuing in the post World War II world we live in have thrust upon the United States a position of power and responsibility it can neither avoid nor minimize. That position inevitably generates envy, jealousy, and hostility by less fortunate peoples of the earth. It is the difficult, but essential task of the United States to wear its mantle of world leadership gracefully, to use its power cautiously, and to exercise its responsibility wisely, striving to make the right decisions in order to preserve world peace and to enable the peoples of the world to work out their destinies in an atmosphere that accords the individual his basic human rights and permits him to achieve the fullest measure of self-expression.

Resolutions

ABM

The American Veterans Committee opposes the Anti-Ballistic Program for the following reasons:

1. The Anti-Ballistic Program tends to make armaments limitation agreement more difficult. It contributes to escalation of the nuclear armaments race and thereby heightens the balance of terror and increases the possibility of nuclear war.

2. As a matter of priorities the funds expended for the ABM Program and the additional funds that would be required by the escalation of the arms race are desperately needed for our domestic needs.

3. The Defense Department has not adequately demonstrated that the proposed ABM System will work. Our present deterrent without the ABM System is such that no country would consider that it could now launch a nuclear attack on us without suffering utter devastation and retaliation.

Arab-Israel Conflict

AVC views with concern the continued failure of existing efforts to terminate the Arab-Israeli conflict. The tenuous cease-fire has been punctuated by artillery duels, guerrilla raids and reprisals, and intermittent aerial conflict. Because renewed recourse to fighting can ignite the entire Middle East and raise the prospect of an immediate major conflict, all the major powers have a duty and an obligation to search for a peaceful resolution of the issues in dispute.

But even as the Four Powers meet to find common ground, they find themselves incapable of reaching agreement on an imposed peace because of their conflicting interests. Thus, the key to peace in the area is recognition of the need for direct negotiations between the parties that confront each other across frontiers of hostility. The historical record of three wars and the failure of third parties to maintain peace-keeping arrangements makes mandatory Arab-Israeli negotiations which alone can begin to provide a framework for peaceful settlement of their disputes.

AVC urges that American efforts in the current Four Power talks be devoted to the issuance of a joint declaration calling for such direct negotiations between the Arab States and Israel and taking the appropriate diplomatic measures to insure compliance thereto. In addition, appropriate steps to curb Great Power Rivalries would do much to contribute to peace in the area of the Middle East.

Vietnam

The war in Vietnam is far more than a military struggle taking place in one small distant country. The American presence in Vietnam is part of a continuing commitment by the United States to help maintain a structure of peace and stability in Southeast Asia as elsewhere in the world.

In attempting to halt a Communist takeover in South Vietnam, the United States has, with its allies, waged a limited war with corresponding limited objectives in an effort to control the spread of the Vietnamese conflict into a general Asian war or even another world war.

But the toll of human and material destruction wrought by the continuing conflict in Vietnam is repugnant to all people who are determined in pursue humanitarian objectives and to stop the process of killing and of destroying of property as avenues for settling disputes. The people of Vietnam have suffered severely for too long a time from controversies that had their genesis in colonialism and in ideological conflicts which most of this tortured people would surely prefer to solve through peaceful means.

AVC therefore welcomed the initiation of preparatory peace talks in Paris as a means of resolving the bloody conflict in Vietnam. We were heartened by the bombing halt of North Vietnam and the accompanying "understanding" which reestablished the Demilitarized Zone, provided limits on the fighting in South Vietnam, and saw Hanoi recognition of the Government of the Republic of Vietnam. Our hopes rose further with the Paris movement toward expanded negotiations in which the four major parties to the conflict are now represented.

Unfortunately, despite a progressive narrowing of the political differences on many matters which divided the two sides, the Paris negotiations seem to be at an impasse and have been overshadowed by an increase in the scope, size and barbarity of the war in Vietnam. Sterile propaganda debates feature the weekly meetings and underscore the tragedy of a war without issue that sees an ever increasing toll of military and civilian casualties as each side tries to reshape the destiny of Vietnam by force. This talk-talk, fight-fight strategy which seems to be the sole matter of agreement to which all parties at the conference table now subscribe can only contribute to continued exacerbation of the international situation and domestic difficulties in the United States. This intolerable situation must not be permitted to continue

as it is in the best interests of the United States and of world peace to settle this conflict as quickly as possible through peaceful negotiations resulting in a political settlement of the issues in dispute.

A new initiative for peace is called for. The appeals of the Secretary General of the United Nations, U Thant, and Pope Paul VI, as well as statements of former President Johnson regarding the desirability of a cease-fire must be translated into official American policy at the Paris talk. World-wide pressure must be exerted to get the Communist side to accept an end to the fighting.

AVC therefore urges that the American peace negotiators be instructed as a matter of the highest priority to press for a multilateral cease-fire with a mutual standstill status for all military forces in Vietnam.

The cease-fire is only a first step in liquidating the costly conflict in Vietnam by shifting the emphasis to political bargaining. To ensure a peace with honor in Vietnam and stability in Southeast Asia, as the outcome of the Paris negotiations, AVC further calls on the Administration:

1. To ensure the success of the cease-fire arrangement, by constituting a Peace-keeping Corps based either on an expansion of the existing International Control Commission through the addition of representatives from Asian Nations and using majority rule to reach decisions or the creation of an alternative unit of international supervision. This Peace-keeping Corps can also be charged with the responsibility for the inspection of military withdrawal and political arrangements.

2. To maintain as the underlying basis for political settlement the principle of self-determination in the right of all the people of South Vietnam, through free elections in which persons of political persuasions shall be entitled to vote and run for election, to choose their leaders and create an elected representative government which would be charged with the tasks of national reconciliation and of negotiating progress toward reunification. The composition of the new government, and whether or not there should be a coalition, should not be imposed, either at the negotiating table or by the military forces of either side, but should be resolved by the Vietnamese people themselves in new elections at the earliest possible date following the standstill cease fire. All sides must agree to accept the results of such an election.

3. To favor the creation of an electoral commission to oversee free elections since neither the Saigon government nor the newly-designated "Provisional Revolutionary Government," replacing the National Liberation Front in the negotiations, would accept the jurisdiction of the other in administering fair and honest elections. This electoral commission should consist of representatives of the major political factions within South Vietnam, plus international representatives from the Peace-keeping Corps which can also play a role as an impartial overseer of free political competition.

4. To negotiate provision for the protection of minorities before the International Peace-keeping Corps leaves, the new government should make explicit assurances of protection of minorities against reprisals, to avert the moral and political problem of large numbers of refugees fleeing the country, as well as to prevent the killing or imprisonment of political opponents by those who win the election.

5. To arrange for the mutual withdrawal of American and allied foreign troops and North Vietnamese armed forces from South Vietnam within a brief and explicitly defined period of time.

6. To promote the peace, security and development of Southeast Asia by focusing upon objectives of neutralizing the area, reducing the incidence of great power conflict, and facilitating the multilateral improvement of indigenous living standards through a long range development program under international auspices.

While promoting the above program for a durable and lasting peace with honor and until a negotiated peace can be attained, AVC also urges the Administration to continue its support of the elected Vietnamese Government to the end that its representative and viable character be enhanced. In line with this objective AVC supports American policies designed:

(1) To continue equipping and retraining the expanded Vietnamese Army so that it can progressively take over the responsibility of defending South Vietnam. The rapid replacement of American troops by South Vietnamese forces is both politically necessary and desirable. It will demonstrate that American soldiers need not do what Vietnamese soldiers are capable of doing for themselves and constitute pressure for the withdrawal of all non-South Vietnamese forces from the conflict as major United States forces leave.

(2) To markedly expand the American effort for refugee relief and to revamp the administration of the Refugees Program in conjunction with the appropriate Vietnamese authorities so that there is no question that supplies and monies reach the people for whom they are intended.

(3) To facilitate the aamministration and success of the newly enacted comprehensive land reform program in South Vietnam to give the peasant a stake in the future.

(4) To continue to bring pressure on the Saigon government to cease repressive measures and effect the release of the arrested Buddhists and other Vietnamese Nationalist politicians so that they may be free to participate in political life and make their contribution to a peace of reconciliation and honor.

Czechoslovakia

AVC condemns the continuing intervention of the Soviet Union in the internal affairs of Czechoslovakia. But for the brutal assertion of the "Brezhnev doctrine" by the Soviet Army, the people of Czechoslovakia would be well on the road toward realizing their age-old aspirations in a freer variant of a "socialist society." Instead, the hopeful steps toward liberalization of their closed society have been reversed by the reemergent repressive leadership installed by Soviet tanks and guns.

At issue is not only the fate of a small nation at the hands of a new-type Soviet imperialism, but the very principles of the United Nations. Little wonder that even other Communist countries and Communist parties have called into question this assertion of Soviet overlordship in the "Socialist Camp." By its flagrant violation of the charter of the United Nations, the Soviet Union gives the lie to its call for "peaceful coexistence" and destroys its credibility among the nations of the world as the champion of "non-intervention, independence and the sovereign rights of nations."

Worse still, this Soviet action has contributed to raising tensions in Europe at a time when many were hopeful of a continuing detente that could lead to the restoration of European unity. True independence for the nations of Eastern Europe is a precondition for developing an all-European structure of peace and security in that vital area. We call upon the leadership of the Soviet Union to cease taking such actions which violate the internationally accepted norms of relations between states.

Prisoners of War

AVC wishes to reaffirm its solidarity with the American and allied prisoners of war who suffer in the Communist prison camps of North and South Vietnam. We extend our sympathy to the families of these men and pledge our continued efforts in an international campaign to effect their humane treatment.

AVC condemns the continued refusal of the Government of the Democratic Republic of Vietnam to live up to its pledges as a signator of the Geneva Convention to treat humanely prisoners of war. We regret that political issues have injected into an essentially humanitarian matter. We again appeal to the Hanoi government:

1. To provide a list of names of prisoners of war.

2. To allow visits by a neutral, impartial body such as the International Red Cross.

3. To end limitations on the right of prisoners to correspond with their families.

4. To engage in immediate conversations to effect the exchange of sick or wounded prisoners of war so that they may receive the best treatment available to them in their plight.

The Communist side in the Paris Peace Negotiations have repeatedly declared themselves as favoring a "democratic solution" for the war in Vietnam. A progressive stance and behavior on the prisoner of war issue could lead to progress on other matters. The recognition of the rights of war prisoners no matter which side is involved is an elementary human consideration transcending ideological differences.

AVC calls upon all Americans to unite in demanding that Hanoi comply with internationally accepted principles of law. In particular, the peace organizations that have access to Hanoi must make known their views toward the end that American and allied servicemen who are prisoners of war be treated humanely. AVC will continue its efforts in the V.F.W. and internationally to improve the status of American and allied prisoners of war held by the Democratic Republic of Vietnam.

NATIONAL AFFAIRS

AVC stands for the Bill of Rights as a living force animating the political life of our Nation and as a firm limitation on the arbitrariness of government.

AVC stands for the Bill of Rights as a guarantee of our freedom to speak, to assemble, to believe, and to dissent without fear from the conformities of the day.

AVC stands for equality for all, regardless of race, color, ancestry, national origin, religion, sex or age, and for the constitutional guarantees of such equality.

AVC stands for just legislative representation of the people of the United States, the States and their subdivisions, without poll taxes or other property qualifications for voting, with equal weight for each vote, and on a geographically fair basis, within the framework of the Constitution of the United States.

AVC stands for a policy of gainful, full employment and security for all, as outlined in the Employment Act of 1946.

AVC stands for responsible, efficient, and honest government and for the merit system in government employment.

AVC stands for a government possessing and willing to exercise all powers necessary to bring about a solution of our national problems.

AVC supports the active intervention of government, primarily of the Federal Government, in the economy and the general welfare of our country to stimulate and provide employment to improve the physical condition of our cities and towns, of our housing and our schools, to bring all the greatest benefits from the development and conservation of our natural and industrial resources and to provide for the general welfare and health of our country to stimulate and provide employment to improve the physical condition of our cities and towns, of our housing and our schools, to bring all the greatest benefits from the development and conservation of our natural and indus-

trial resources and to provide for the general welfare and health of our people.

AVC supports a tax policy based on ability to pay and opposes regressive sales and excise taxes.

AVC stands for the recognition of equal rights for labor and management and for improved social benefits of employees.

AVC supports an educational system and a public health system which will give the American people, and America's youth in particular, the knowledge, skills, and training, and the physical and mental health and stamina, to continue their forward march toward America's democratic fulfillment.

Government and liberty

I. The Nation's freedom—The Bill of Rights

1. We affirm the basic right of all Americans to due process of law, the right to counsel and to freedom from unlawful search and seizure. We oppose all efforts to suppress freedoms to believe, speak, write, assemble, criticize, and dissent.

2. A. We urge strong and consistent enforcement of existing laws and regulations which will insure to the citizens of the United States and of the several States the full measure of their privileges and immunities of due process of law and the equal protection of the laws guaranteed to them by the Constitution, regardless of race, color, ancestry, national origin, religion, or sex, or wage, and urge the national, state and local governments to enact such further laws, ordinances and regulations as may be needed further to insure these ends.

B. We believe in the principles of the separation of church and state.

C. We favor freedom from censorship of newspapers, magazines, radio, television, motion pictures and other media by the Post Office, Customs Bureau, police departments, and other units of government as well as by private pressure groups.

D. We oppose the use of wiretapping and electronic and other forms of eavesdropping devices whether by private individuals or Government officials, elected or appointed.

E. We urge protection by Federal law of all members of the Armed Forces from physical violence because of race, color, ancestry, national origin or religion.

F. We urge making lynching a Federal crime, as well as making provisions for compensation to the families of lynching victims.

G. We favor Federal legislation making it a crime to bomb or to conspire to bomb school, church and other public and quasi-public property.

3. A. The right against self-incrimination. No inference should be drawn in regard to guilt in any legal proceeding of any person solely because he exercises this right.

B. The right to travel. The right of an American citizen to travel abroad should not be arbitrarily abridged by the Federal Government.

II. The Nation's Government

1. Freedom of information: The right of the people to full knowledge of government affairs must not be abridged, except where disclosure would imperil the national security or where disclosure would, without substantial public benefit, encroach on the right of the individual to personal liberty or freedom.

2. Congress: We urge proper changes in the rules of the Congress of the United States which will make it possible for the majority of the members to vote cloture or close debate on legislation after a reasonable period, and which will make merit, not tenure alone, the standard to be used in the selection of committee chairmen.

3. Federal-State Relations: We favor strict Federal standard-setting and enforcement in all federal grants in aid.

4. State and local government: We urge reapportionment within the States consistent with the principle "one man-one vote."

5. The Federal civil service:

A. Apart from discharges based on reorganization of Government activities or reduction in force, Government employees should be discharged only for cause and through due process of law. The employee should be presented with a written statement of charges, have the right to a hearing before an impartial board. He should have the right to present evidence, be confronted with adverse witnesses, cross-examine witnesses, and receive a transcript of the hearing free of charge. Action toward his separation from the Government service should be taken only on the basis thus made.

B. The rights granted to veterans in the Veterans Preference Act in regard to discharge procedures and appeals should be extended to all Government employees except those in probationary status.

6. District of Columbia: We urge that the District of Columbia receive, by legislation or by constitutional amendment where the matter cannot be handled by legislation:

A. The right to local self-government and;

B. The right to elect Senators and Representatives in Congress;

C. An equitable annual Federal contribution in lieu of taxes.

Economic security

III. Basic Economic Policy

1. We continue to support the Employment Act of 1946 which states it is the policy of the Government to create and maintain "conditions under which there will be afforded useful employment opportunities including self-employment for those able, willing and seeking to work and to promote maximum employment, production, and purchasing power."

2. To insure the interest of the consumer, we urge Congress to establish a Department of the Consumer, to be headed by a Secretary of Cabinet rank.

IV. Monetary Policy and Tax Policy

1. Monetary policy:

We urge the establishment of a Federal capital budget for reimbursable public works appropriations and to improve the accounting and budgetary operations of the Government.

2. Tax policy:

A. We urge elimination of special provisions in the internal revenue laws which are discriminatory in nature. As blatant examples, we point to the favored tax treatment of the extractive industries, the restricted stock options for corporate executives, the retirement income credit, the preferred tax treatment of profits on stock market transactions, and the dividend exclusion and credit provision.

B. We also call for an end to the abuse of the deductibility of business expenses to finance luxurious travel, vacations, and entertainment for business management, professional men and sales executives.

V. The Urban Crisis

AVC from its inception has been vitally concerned about the urban crisis, and we recognize the urgency of effective action to overcome the conditions which have caused it. These are many-faceted, including a shortage of jobs, of homes, of services, of educational incentives, of recreational opportunities. They also include environmental pollution and the citizen's increasing inability to influence or even participate in city government by democratic means. Many of these evils are most concentrated in the slums.

The concept embodied in the Model Cities program, of strengthening local government and the people it serves to solve these problems, offers a sensible approach to solution of the urban crisis itself. AVC urges expansion of this demonstration program to all communities which may benefit from it, with adequate financing for both the development of local plans and the federal programs which are expected to contribute to their implementation. We intend to be vigilant that the focus remains, under the new program guidelines, on the disadvantaged in the cities.

Citizen participation in the planning and administration, as provided for in Model Cities, Community Action and other programs, is the democratic means of assuring that resources intended to help the disadvantaged are not bargained away without the consent, or at least the understanding of the poor themselves. We urge the Congress to retain its requirements for citizen participation and extend them to additional programs which the federal government supports. We urge also that provision be made and funds be allocated for independent planning staff and facilities for citizens' groups and commissions.

An important aspect of the urban crisis is housing. Physical reclamation of the slums requires the provision of housing for those who now inhabit the slums, at rents or prices which are fair and which they can afford to pay. To bring this about, we favor flexible use and adequate funding of the variety of programs now in use, including rent supplements, eased purchase credit, reduced interest costs. We also recognize that it will be some time before the private housing industry will be able to play a significant role in such low-return activities, and we therefore call for the widest variety of public investments in housing, such as traditional public housing, turnkey housing, direct interest-free loans and leased housing. And we need serious thought about new approaches.

Beyond the creation of the necessary housing, our government must assure that access to housing is assured regardless of the race, color, creed, national origin, age or size of family of the prospective user. We call for vigorous enforcement of the Fair Housing provisions of the Civil Rights Act of 1968, which was a start toward elimination of the ghettos.

We also recognize that the urban crisis is affected by the rural crisis which has long been apparent but ignored. We therefore demand that the scantily-funded rural counterpart programs be revitalized and used toward stabilizing the life of our rural citizens in the countryside where they prefer to live instead of forcing them to migrate to the cities, often to be engulfed by the slums.

VI. Conservation and Development of Natural Resources

We accept as a cardinal principle of conservation policy that the natural resources of this land are given to us in trust for the people of this and subsequent generations. The benefits of these resources must be distributed widely and equitably and a share thereof must be preserved for future citizens.

Through comprehensive and coordinated national and regional planning and development, wise use, and enlightened conservation, this can be done. The very nature of the problem requires that Government play a major and controlling role in assuring that conservation.

1. Department of Natural Resources. We propose the organization of the Department of Natural Resources. Such a new department should provide for regionally decentralized opportunities for program formulation and execution, while clearly placing federal responsibility for resources development within the framework of a single agency. The regional multi-purpose concept may require that specific localities or projects be reserved or developed for one or more preferred uses.

2. Water and Air Conservation:

A. We reaffirm our strong support of comprehensive multi-purpose river basin development and urge the accelerated application of this principle to our river basins.

B. We similarly favor regional planning by the States and metropolitan areas as well as area redevelopment.

C. We urge the Federal Government to undertake the planning and construction of multi-purpose water and power projects similar to the one provided in the Tennessee Valley. Their very scope requires government development and precludes the short-term, piecemeal operations of private interests.

D. The conservation and development of adequate fresh water supplies to meet expanding needs for domestic agricultural, industrial, wildlife and recreational uses, and the protection and improvement of water quality, especially in relation to accumulated pesticides and other contaminating matters, are of increasingly urgent concern.

3. Energy resources conservation. We call for:

A. The maximum feasible development of our only renewable energy resource hydroelectric power including Federal construction of multi-purpose power dams and other waterpower, irrigation, flood control and navigation works using standards of feasibility and repayment schedules for such projects based upon their reasonably expected service life.

B. A continuation and acceleration of the Federal programs to develop and stimulate development of effective processes for the utilization of our immense reserves of oil, natural gas, shale and coal.

C. We urge a major increase in the scope and speed of air pollution prevention measures.

D. The development of atomic energy (both fission and fusion type) for power and other peaceful purposes.

4. Recreation and Wildlife:

The expansion in the demands for outdoor recreation opportunities requires that we add to our national park system and increase the recreational developments on our national forests, public lands, reservoirs and seashores.

We endorse legislation to control billboard erection in scenic areas. Urban planning and redevelopment should include provision of open spaces and outdoor recreation areas.

5. National Land Reserve.

We support the concept that our remaining public lands constitute a "National Land Reserve" to be administered for the benefit of the public with appropriate safeguards for future generations.

6. Pesticide Control.

We urge careful consideration and close supervision of pest control programs in recreational, farming, and urban areas.

VII. Agriculture

American agriculture is increasingly the victim of the owners of the new machines, themselves investors rather than farmers. Hired workers are displaced from jobs, and farm lands are being concentrated in fewer hands as farmers themselves are displaced.

AVC calls for a four-part approach to the resulting problems:

1. A reduction of subsidies to industrialized agriculture, those now being paid in proportion to production or for practices which, like some in other industries, are a normal part of the business;

2. New approaches to two problems of the sub-marginal farmers and the farm laborer, recognizing that their plight is closely related to that of the underemployed urban worker and is only in part agricultural.

3. Strengthening the economic family farm through greater attention to credit, service and marketing needs;

4. Providing for rural people the whole range of educational, cultural, recreational, health and other opportunities already accessible to dwellers in metropolitan areas.

VIII. Labor

We urge:

1. Periodic updating of the provisions of the Fair Labor Standards Act to insure the coverage of maximum numbers of categories of workers and a realistic and decent Federal minimum wage.

2. Enactment of laws for the full disclosure of the administration of pension and health and welfare plans, whether administered by unions or management or jointly by both. Federal law should follow existing Federal securities legislation and State laws such as that of the State of New York for the exemptions contained in the latter.

IX. Social Welfare

As veterans concerned with the social welfare of all citizens we urge:

1. Federal standards to increase unemployment insurance benefits, more realistic eligibility standards and lengthening of the period for which benefits are paid.

2. Development of a strong and unified child welfare program with the Department of Health, Education and Welfare.

3. Development of Federal services and grants-in-aid for the prevention and control of narcotics addiction, based on the premise that drug addiction is a disease to be treated.

X. Education

1. We recognize that "in the quality of education lies the fate of freedom itself." We urge the provision of educational opportunity for every American to the limits of his capacity, and the identification of the talented among us in order to challenge them to their highest achievement.

2. To improve and extend existing scholarship and loan programs for college and university students.

3. To extend scholarship and exchange programs for study by Americans abroad and by nationals of other countries in the United States.

4. To appropriate adequate Federal aid to communities impacted by Federal programs.

5. We oppose the use of public funds whether as grants or loans to non-public elementary and secondary schools.

XI. Public Health

We urge:

1. Increased Federal expenditures for research in the prevention and care of illness.

2. Expansion of medical insurance and group medical care plans, including a plan for national health insurance.

3. Expansion of public health facilities and services hospitals and nursing homes, without regard to race, color, ancestry, national origin, religion or sex.

XII. Indian Rights

We oppose revocation of commitments entered into by treaty between the U.S. Government or the Government of any state and the various Indian tribes.

We support all efforts (1) to safeguard Indian lands and resources from exploitation and expropriation in violation of treaty rights and (2) to make the Indian tribes capable of supporting themselves from the proper development of their resources.

We support adequate health and educational services for the Indian tribes capable of supporting themselves from the proper development of their resources. We support adequate health and educational services for the Indian reservation as well as training in modern industrial and management skills to enhance the opportunities for better living and the ability of the Indian tribes to manage their own affairs.

We also support social services to those Indians who desire to live outside their tribal reservations so as to assist them in adapting themselves especially to urban living and to protect them against discrimination and hostility in their new environment.

Resolutions

Voting Rights Legislation

AVC wholeheartedly endorses the extension of the voting rights legislation now in effect and slated to expire in 1970. In AVC's view, this legislation should be made permanent. But if this is not feasible, it should be extended for at least ten years rather than the five years now proposed. The extended legislation should uphold clearly existing bans on literacy and other special tests for voter qualification. In particular, it should not lessen existing provisions for their prohibition in the guise of making them applicable nationwide. The extent of state—or even county—or city-wide voter registration or actual voting is not a guaranty against vexatious state laws directed against participation in voting by segments of the voting population.

Tax Reform

I

AVC in its platform has called for tax reform; that is, the abolition of favored treatment of numerous types of business transactions and of the exemptions of broad classes of income from the burden of income taxation. Tax reform is NOT, however, the imposition of a token tax on a small group of very wealthy taxpayers whom the law presently enables to avoid all taxes or the repeal of the income tax which now hits some very small net income earners. If, as the Nixon Administration proposes, only these two steps were taken, it would be in effect a refusal to bring fundamental justice to our tax system. Even within this framework the Administration proposals reduce the proposed tax bite from the income of the very rich from $420,000,000 in earlier proposals to only $80,000,000 in their own current project and narrow relief for low income taxpayers to the very lowest group which pays minimal income tax in any event, and pays taxes primarily through sales taxes which some Administration leaders seem to favor on a nationwide scale under the guise of a "value added" tax. This reshuffling of income taxes would help the very low income earners very little and would certainly not relieve seriously their poverty. To this end, welfare policies must be revamped as we propose in a separate resolution. It is our hope that Congress, sensing the mood of taxpayers, will take the bit in its mouth and enact a program which will reshape our income tax to make it a fair instrument to raise the funds needed to finance national programs.

II

The areas of favored income and transactions are today well-known in their broad outlines to lay taxpayers and tax specialist alike. In general, in these areas, tax reform means the removal of the tax favored treatment. If some situations require special formulae, these would not be in the nature of exemptions, but of defining the application of the general principles imposing the income tax to particular sets of business facts.

The major classes of income which should be made fully taxable are:

1. Interest from tax-exempt state and local bonds, including industrial development bonds.

2. Capital gains, including unrealized capital gains on assets passing on their owners' deaths to his heirs or as the prinicpal of a trust upon the death of life tenant to the remaindermen.

3. Incomes from oil and gas properties and rights and other mineral and natural resources through application of depletion allowances.

Arrangements which should not give rise to tax-favored tretament include:

1. Stock options for corporate executives.

2. The splitting of a single business into multiple corporations to escape in part the surtax on corporate income.

3. Unlimited charitable contributions.

4. Charitable contributions of appreciated property.

5. Real estate transactions involving accelerated depreciation and other "tax-shelter" devices.

6. Interest paid on funds borrowed for certain types of bond purchases.

7. Farms operated primarily for loss deduction purposes by individuals and corpo-

rations engaged in non-farm callings or professions.

It has been estimated that the annual tax loss to the U.S. Treasury Department from the tax-favored treatment of these and other classes of income and transactions exceeds $20 billion at present tax rates. Obviously, many social programs for the relief of poverty and discrimination, for the improvement of housing and of our environment, and for the advancement of science and education could be financed and, in addition, relief be given to the lower and middle-bracket taxpayer.

III

The business activities and investments of charitable and educational and religious institutions, including private foundations, have grown to such an extent that the burden on the other taxpayers of the exemptions from income tax which their income from these sources largely enjoys, is seriously called into question. We endorse proposals to subject their income to taxation at a special lower rate, which recognizes implicitly the public benefit judged to flow from their activities.

We warn, however, against the misuse of the need for reform in this area, as well as in area of self-dealing and personal benefit between foundations and their founders, to impose upon foundations restrictions on the choice of their activities which reflect political prejudices of congressional majorities and bar them from innovative social projects which could not be undertaken without foundation support for the benefit of the American people.

IV

We urge immediate repeal of the investment credit provision in order to help stem present inflationary pressures.

EQUAL EMPLOYMENT OPPORTUNITY PROGRAMS

AVC expresses its grave concern over the recent actions of the Department of Defense in the handling of its Equal Employment Opportunity Program for Defense Contractors. The return to a practice of direct informal dealings between high Department of Defense officials and top officials of defense contractors, which in the past has proved barren of results in promoting effectively equal employment opportunities has seriously impaired the usefulness of this program. Such direct dealing not only in effect grants immunity for past violations and from regular enforcement procedures but also demoralizes the administrative staffs within the Department of Defense and of Labor charged with the administration of the program. For they find themselves bypassed and their authority undermined. Only a return to strict accounting for progress to be achieved under well-defined action programs and their enforcement through regular established procedures, where compliance lags, can restore the damage done by the Defense Department's handling of its program in its dealing with the big Textile firms of Burlington Mills, Cannon Mills and J. P. Stevens. Moreover, it is time that the Department of Defense publicity account for its stewardship of the equal employment opportunity program for defense contractors. Information on its activities and results in the form of detailed statistical data on initial hiring, upgrading and promotion of minority group employees have been unavailable to the public. General reassuring answers are no longer sufficient. We call on the new Secretaries of Defense and of the military departments to publish full data on the operation of the program so that the success or failure thereof can be assessed and steps taken to render it more effective. We call on the cognizant Congressional committees to obtain and publish relevant information and to exercise their influence to render the program truly useful.

We further urge that the Civil Service Commission of the United States take new steps not only to continue to combat or prevent discrimination against employees but also to foster the employment of minority group civil service employees, their promotion to higher positions in the career civil service, than has hitherto been attained, and the correction of earlier acts of discrimination which have prevented in numerous individual cases promotions and advancement of civil service employees belonging to minority groups in the same manner and to the same extent as their white majority fellow employees.

We protest the harassment by men such as Senator Dirksen of public servants who devote their best efforts to the promotion of equal employment opportunity in business, industry and Government for employees belonging to minority groups. Instead of senatorial censure they deserve the support and commendation of the National Administration, of Congress and of all citizens intent upon ending discrimination in employment and all other aspects of public and private life.

Medical Benefits

We ask for expansion and higher standards of medical care. In order to avoid a frittering away of limited available funds to pay for Medicare and Medicaid, we ask for strict controls over the performance of, and the fees paid doctors, pharamacists and paramedical personnel to avoid fraud or overreaching or slipshod handling of patients from taking root in the system wherever they may occur. We condemn those professionals and institutions which refuse to participate in public medical care and nonprofit insurance programs and urge them to reconsider their stand. The welfare of the American people requires that all those engaged in rendering any kind of health service work together closely so as to enable every American, rich or poor, to obtain the medical care which he needs.

We object to the high prices charged by drug manufacturers for their labelled drugs. As a minimum step, we urge that all public agencies procuring medicines or drugs be instructed to order them only by generic name and not by the brand name of particular manufacturers, and that doctors, hospitals and other institutions providing service under Medicaid and Medicare do likewise.

Finally, we demand the strengthening of FDA so that it can effectively and fully perform its functions of keeping ineffective and dangerous drugs from reaching the public.

Federal Employee Security Legislation

We are convinced that present laws, regulations and procedures fully protect the United States against disloyalty among and against actual or threatened breaches of security by its employees. We, therefore, view with undisguised dismay legislative proposals, now being considered in the Senate of the United States, to expand or tighten existing procedures and to institute a centralized security system for all federal employees with the Chairman of the SACB acting as Grand Inquisitor. In our view, nothing in the present situation calls for new federal employee security legislation or for centralization of administrative action within the federal government. We, therefore, urge the Senate and House and their respective committees to defeat new legislative proposals in this area decisively either in committee or on the floor whenever the occasion arises.

Welfare Policy and Services

That our national welfare system requires a complete overhaul to enable it to perform its function of providing a minimum livelihood and services to the poor has become a truism which only the most hard-hearted can deny. Action, however, has been slow to follow insight.

What is now required, especially in the light of recent court decisions abolishing waiting periods for welfare applicants who have moved from one state to another, and what we, therefore, again demand is:

(1) a uniform, nationwide system of welfare standards and rules which ensure an adequate minimum standard of living to those unable to work for health or family reasons or for lack of jobs paying an adequate wage.

(2) a system by which welfare recipients are encouraged to improve their economic situation by retaining earnings from such work as they can find or perform and by which they are enabled to become independent of welfare support.

(3) the establishment of day care centers to enable welfare mothers to provide for the children necessary care and supervision while they are at work or seek training, if they so desire.

We condemn the new budgetary and social policies, put into effect in recent months by the Federal, state and local governments across the country, which reduce public benefits and services for the working poor and those unable to provide for themselves and endanger even the continuance of the level of services heretofore provided for them by public agencies.

Specifically we protest:

I

The abolition of the Job Corps centers which deprives thousands of young men and women of the opportunity to complete training for more highly skilled and paid jobs, to gain education and to escape at least temporarily from the evils of a poverty-stricken ghetto life.

II

The transfer, in the cause of alleged economy and efficiency, of Headstart to HEW for administration by generally unsympathetic State educational bureaucracies can only result in depriving numerous young children of the poor of the opportunity to learn early and to initiate the personal development which will help them benefit from education later on.

III

The cutting of medical and welfare benefits in order to balance local budgets or to avoid a heavier tax burden on business activities. All such actions contribute only to cutting off the escape of the poor from their poverty.

IV

We urge the institution of an extensive information program by HEW and local welfare authorities to effectively inform all persons entitled to welfare benefits of their rights.

Campus Protest and Academic Freedom

Campus unrest has placed in jeopardy the freedom and very existence of institutions of higher education in the United States. Some of this unrest is a concomitant of necessary adjustment in the American educational system as it adapts to the needs of a rapidly changing technological society, to the legitimate demands of all Americans, for new educational programs and to liberalize its structure of governance.

But some campus demonstrations and activities have clearly threatened civil liberties and academic freedom by destroying the ordered environment for teaching and learning that permits the educational process to produce trained men and women who can contribute to the solution of the problems of poverty, race and peace.

As veterans who have directly benefited from the opportunities of education made available to us in recognition of our service

and as citizens who have consistently favored expansion of educational opportunity for all, we in AVC know the importance and strategic place in American life of the campus. That is all the more reason for our speaking out against those who seek to "revolutionize" the American university by destroying its essential function as an institution of free inquiry open to all by virtue of ability and not through birth, wealth or status and seek to transform it into an instrument of partisan political and social struggle.

FOR A SINGLE AMERICAN SOCIETY

As the second anniversary of the appointment of the Kerner Commission which laid out the road to an integrated and more democratic American society is drawing close, we cannot be proud of the progress made. For in many respects little has been accomplished toward the goals set out in its Report which we ringingly endorsed, when it was published. On the contrary, the recent voting trend in overwhelmingly white urban communities show that far too many white Americans refuse to accord equal consideration to the interests of the Negro minority as to their own or to treat without prejudice Negro candidates competing for public office in areas where Negroes do not predominate. We call upon the President to repudiate these racist attitudes, to rebuke sternly American racists, and to reject the support of racist politicians and voters regardless of party or electoral advantage. We urge the leaders of Congress and of political parties, and the Governors of the States to do likewise and to show unrelenting vigilance and fortitude in combating racist tendencies.

In the face of all difficulties we must not falter nor despair. As members of AVC, an organization devoted to the welfare of the American people and to the perfection of their right to participate actively in forging their own fate, we reaffirm our faith in the attainment of a truly integrated America in which all people, regardless of their ethnic or religious background, their sex, their age or the color of their skin, can share and enjoy a fruitful life as citizens, as productive members of society, as ordinary men, women and children.

Such a better America needs the help and concern of all its people. It gratefully recognizes the contribution which all Americans have made by their labor and their minds to the welfare of their country. It is proud of the heritage of all its sons and daughters. In this spirit we emphatically recognize and support the healthy desire of the Negro and Spanish-speaking and American Indian minorities to express their pride in their own past, to explore their historical and cultural background, to receive recognition for their cultural achievements and their contributions to America, and to achieve the kind of self-determination which our country vouchsaves to all other groups. We support their insistence that their culture and life become the subject of proper academic study—a demand which is, indeed, on the way to widespread realization. But these goals can be achieved only by participation and not by withdrawal or by a pseudo-revolutionary stance.

Therefore we reject the siren calls of those who assert:

that men and women of different ethnic backgrounds or skin color never in history could or cannot now live together in equality and join in cooperative behavior;

that the road of liberation for minority groups lies in withdrawal from the larger society and the conquest of a special place controlled by "nationalist" or "separatist" power seekers;

that the university and college student of negro or other minority background must limit himself exclusively to the study of his own group's condition and affairs and undergo nationalist indoctrination;

that the black and other minorities must assert its right through violence and, in particular, should attack religious or ethnic groups within the white majority, which are themselves vulnerable because they have only recently emerged, or are only now emerging, from the blight of discrimination and prejudice.

These are roads with no exit and, notwithstanding the momentary successes of spectacular or violent action, can only lead to defeat, to continued second class status and to the perpetuation of ghetto poverty and ignorance.

We are fully aware of the fact that on the road ahead we shall meet hardened resistance from many elements of the white majority. Many among its prosperous and influential business and professional segments do not desire to contribute through taxes the funds necessary to overcome the lack of jobs, bad housing and schools and all the other effects of past and present discrimination. Others feel that the rise of hitherto economically less-favored minority groups threatens their social and economic position and the job monopolies which they have secured. Obviously, there will be great resistance to make a place for rising minority group members in power, jobs, and other aspects of life. Only the ceaseless struggle of these minority groups and of all those allied with them in the battle for their rights and for freedom in the United States can win victory.

We pledge ourselves as AVCers, citizens first and veterans second, to continue the fights for social justice, freedom from discrimination, welfare and democratic rights for all Americans to whom these are denied, so that together we may attain the goal of a free, democratic and prosperous America.

MAN'S ENVIRONMENT

Whereas, a state of national and international emergency exists as a result of the accelerating destruction of man's environment, by reason of the massive and continuing pollution of air, water and other natural resources; and

Whereas, the magnitude of the factors responsible and the enormous efforts required to reverse these conditions call for action at the highest levels of every major sector of our society,

Now therefore, be it resolved that AVC, in accordance with its traditional role as a civic organization, should call upon the national administration to assemble and sponsor a White House conference of responsible leaders from the federal, state and municipal governments, from science and industry, and from the other organizations in the country, which are or should be working toward the amelioration of these horrifying and destructive conditions, to come together and start doing so.

SUPPORT GROWS FOR PUBLIC TRIAL IN SMOG ANTITRUST CASE

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. BROWN of California. Mr. Speaker, the struggle for clean air reaches a climax tomorrow in Los Angeles when Federal District Court Judge Jesse W. Curtis conducts his hearing on settlement of the antitrust charges brought against automobile manufacturers accused of conspiring to retard development of smog controls.

Public clamour against the Justice Department's proposed closed-door settlement of these charges has grown in its intensity over the past month. The list of public bodies, organizations, and individuals protesting a consent decree and asking for an open trial is long and impressive.

The range of views contained in the documents filed before Judge Curtis vary somewhat—but all insist that the public be allowed access to the mass of investigatory work that went into the original charges.

Today, I am inserting into the RECORD another series of complaints and resolutions regarding this case. I commend the cities, organizations, and individuals for their recognition of the importance of this issue, and I hope that this show of public interest will be upheld by Judge Curtis.

The material follows:

RESOLUTION 69–37

A resolution of the city council of the city of Commerce protesting settlement of the "smog" antitrust suit against the major automakers

Whereas, the problem of smog is undoubtedly the most serious domestic problem facing the residents of southern California, including the residents of the City of Commerce; and

Whereas, this menace has been increasing steadily over the last twenty years, in spite of vigorous efforts by state, local and federal officials to reduce the polluting factors; and

Whereas, the prime cause of this air pollution continues to be motor vehicle exhaust emissions; and

Whereas, a lawsuit was brought in the Federal Court by the Justice Department against the major automobile manufacturers and the Automobile Manufacturers Association to compel the development and production of effective anti-smog engines and control devices, under the anti-trust laws of the United States; and

Whereas, the Justice Department of the United States has announced a decision to settle said lawsuit by a Consent Decree, in a closed-door negotiated settlement, which will prevent the public hearing of all of the facts relating to this problem in a full and public trial;

Now, therefore, the city council of the city of Commerce does resolve as follows:

Section 1. The City Council, on behalf of the people of the City of Commerce, protests the ending of said lawsuit by a Consent Decree.

Section 2. The City Council urges that said lawsuit proceed to a full and public trial, so that the evidence which the grand jury has collected on this subject will be taken out of the secret files and into public view and so that the automakers may be required to defend their actions in the public courtroom.

Section 3. Local civic groups, and all who live, work or invest in the City of Commerce are urged to notify Attorney General John N. Mitchell and their United States senators and congressmen of their opposition to the said Consent Decree.

Section 4. The City Clerk is directed to transmit copies of this Resolution to President Richard M. Nixon, to Attorney General John N. Mitchell, to United States Senators George Murphy and Alan Cranston, and to Congressmen Del Clawson, Chet Holifield and George Brown.

Passed, approved and adopted this 6th day of October, 1969.

MAURICE H. QUIGLEY, *Mayor.*

Attest:

LAWRENCE W. O'ROURKE,
City Clerk.

RESOLUTION No. 160-69

A resolution requesting Department of Justice not to dismiss suit against major automobile manufacturers

Whereas, the City of Livermore is among those cities in Northern California having a very serious smog condition due to its proximity to the industrialized San Francisco Bay Area and the photosynthetic effect that the sun has on pollutants carried into the Livermore Valley; and

Whereas, the Department of Justice filed an anti-trust suit alleging that from the year 1953 major automobile manufacturers have conspired among each other to eliminate and restrict competition in regard to automobile air pollution devices; and

Whereas, the Department of Justice proposes to permit the dismissal of such suit; and

Whereas, this Council believes that it is completely in the public interest that said suit be maintained as a part of efforts on all fronts to obtain a solution to the ever-increasing problem of smog;

Now, therefore, be it resolved that this City Council does hereby request that the United States Department of Justice not proceed with the settlement of its anti-trust suit against the Automobile Manufacturers Association—Ford, General Motors, Chrysler and American Motors—and that said suit be prosecuted with vigor; and

Be it further resolved that the said automobile manufacturers be urged and they are hereby urged to proceed in free competition and as rapidly as possible with the development of pollution control devices in order to abate the smog problem which is rapidly becoming the major crisis of our American cities.

Be it further resolved that copies of this Resolution be sent to the Honorable John M. Mitchell, Attorney General of the United States, and to the Honorable George E. Brown, Representative 29th District, P.O. Box 69, Los Angeles, California 90028.

The foregoing Resolution was introduced by Councilman Miller, seconded by Councilman Uthe, on the 22nd day of September, 1969, and passed by the following vote:

Ayes: Councilmen Miller, Silva, Taylor, Uthe and Mayor Marguth.

Noes: None.

Absent: None.

GILBERT R. MARGUTH, Jr.,
Mayor, City of Livermore, Calif.

Attest:

DOROTHY J. HOCK,
City Clerk.

[U.S. District Court, Central District of California]

MARSHALL B. GROSSMAN AND S. JEROME TAMKIN, PH. D., INDIVIDUALLY AND ON BEHALF OF ALL OTHERS SIMILARLY SITUATED, PLAINTIFFS, *v.* AUTOMOBILE MANUFACTURERS ASSOCIATION, INC.; GENERAL MOTORS CORPORATION; FORD MOTOR COMPANY; CHRYSLER CORPORATION; AND AMERICAN MOTORS CORPORATION, DEFENDANTS

(No 69-1855-IH—Complaint Class action—Sherman Antitrust Act—on behalf of all residents of the United States of America—Demand for jury trial)

Plaintiffs allege on information and belief, except for paragraphs 1-3, 9, 17, & 18 which are alleged on knowledge, as follows:

JURISDICTION AND VENUE

1. This is a complaint brought by plaintiffs each on their own behalf and also on behalf of other members of the class, and is more fully set forth hereinbelow, for violations of of the Antitrust Laws of the United States of America, and more particularly under Section 1 of the Act of Congress of July 2nd, 1890, as amended, entitled "An Act to Protect Trade and Commerce Against Unlawful Restraints and Monopolies", commonly known as the Sherman Act (15 U.S.C. Sec. 1). Jurisdiction is conferred on this Court by Section 4 of the Clayton Act (15 U.S.C. sec. 15).

2. Each of the defendants transacts business within the Central District of California and/or may be found herein and/or has agents herein.

THE CLASS ACTION

3. Plaintiffs bring this action each on their own behalf and also as the representatives of and on behalf of all members of a class as defined by Rule 23 (a) and (b) of the Federal Rules of Civil Procedure. The members of the class, who are so numerous so as to make it impractical to bring them all before the Court, are all residents of the United States of America who have sustained and will continue to sustain damage as a result of the unlawful acts herein alleged. The claims of the plaintiffs are typical of the claims of the members of the class; there are common questions of law or fact common to plaintiffs and the members of the class; and plaintiffs will fairly and adequately represent the interests of each member of the class.

DEFENDANTS

4. Automobile Manufacturers Association, Inc., a corporation organized and existing under the laws of the State of New York with its principal place of business in Detroit, Michigan, is made a defendant herein. Automobile Manufacturers Association, Inc., is a trade association whose membership consists mainly of firms engaged in the business of manufacturing and selling motor vehicles and component parts and accessories thereto in various states of the United States.

5. The Corporations named below are made defendants herein. Each of said corporations is organized and exists under the laws of the State indicated and has its principal place of business in the city indicated. Within the period of time covered by this complaint said defendants have primarily engaged in the business of manufacturing and selling motor vehicles in various states of the United States, and also manufacture and sell component parts and accessories thereto.

[Defendant corporation, State of incorporation, and principal place of business]

General Motors Corporation, Delaware, Detroit, Michigan.

Ford Motor Company, Delaware, Dearborn, Michigan.

Chrysler Corporation, Delaware, Highland Park, Michigan.

American Motors Corporation, Maryland, Detroit, Michigan.

6. Whenever in this complaint reference is made to any act, deed or transaction of a corporate defendant, such allegation shall be deemed to mean that said corporation engaged in said act, deed or transaction by or through its officer, directors, agents or employees while they were actively engaged in the management, direction or control of corporate business affairs.

CO-CONSPIRATORS

7. Each of the corporations listed below in this paragraph is not named a defendant herein but is named as a co-conspirator and has participated as a co-conspirator with the defendants in the offense charged and has performed acts and made statements in furtherance thereof.

[Corporation, State of incorporation, principal place of business]

Checker Motor Corporation (successor to Checker Cab Manufacturing Corporation), New Jersey, Kalamazoo, Michigan.

Dimond T Motor Car Company, Illinois, Cleveland.

International Harvester Company (a consolidation of International Harvester Company, a New Jersey Corporation, and International Harvester Corporation, a Delaware Corporation), Delaware, Chicago, Illinois.

Studebaker Corporation (successor to Studebaker-Packard Corporation), Michigan, South Bend, Indiana.

White Motor Corporation (successor to the White Motor Company), Ohio, Cleveland, Ohio.

Kaiser Jeep Corporation (successor to Willys Motors, Inc., a Pennsylvania Corporation), Nevada, Oakland, California.

Mack Trucks, Inc. (successor to Mack Manufacturing Corporation), New York, New York.

8. Various other persons, firms and corporations not made defendants herein have participated as co-conspirators with the defendants in the offense charged in this complaint and have performed acts and made statements in furtherance thereof.

DEFINITION

9. As used herein, the term "motor vehicle air pollution control equipment" means equipment, or any part thereof, designed for installation on a motor vehicle or any system or engine modification on a motor vehicle which is designed to cause a reduction of pollutants emitted from the vehicle, including, but not limited to, any device for the control of emissions of pollutants from the exhaust system, the crankcase, the carburetor, or the fuel tank.

TRADE AND COMMERCE

10. Automobiles for the most part are manufactured in the State of Michigan and are shipped therefrom to each of the fifty states of the United States. Some automobiles are assembled in various states of the United States from parts manufactured in the State of Michigan and other states. In 1966, 78,315,000 passenger cars and 15,864,000 trucks and buses, exclusive of off-the-road vehicles, were registered in the United States. In that year, 8,604,712 passenger cars valued at more than $17½ billion and 1,791,587 commercial vehicles valued at more than $3.9 billion were produced in this country. Of the trucks produced, 96,560 were built with diesel motors. These figures have each increased in each succeeding year.

11. The largest number of passenger cars registered and new cars sold in any state of the United States in 1966 was in the State of California where 7,621,792 cars were registered and 832,338 new cars sold. The largest number of passenger cars registered in any county of any state in the United States in 1966 was in Los Angeles County where 2,932,980 cars were registered. Similarly, in 1966 California accounted for the largest number of truck registrations and new truck sales with 1,542,984 trucks registered and 150,927 new trucks sold, and Los Angeles County accounted for the largest number of trucks registered, numbering 436,218.

12. Since at least 1952 it has been established that motor vehicles contribute to air pollution by the emission of hydrocarbons, carbon monoxide, oxides of nitrogen and other contaminants. For example, in Los Angeles County, as of January 1967, gasoline-powered motor vehicles accounted for 12,465 tons out of a total of 14,610 tons, or 85.3% of contaminants emitted into the ambient air daily. As a result of new and continuing requirements that automotive vehicles be equipped with air pollution control devices, a large and growing market for the production and installation of such devices has developed. Motor vehicle air pollution control devices are shipped in interstate commerce either as engine or system modifications or as equipment attached to automobiles, which are shipped from Michigan and other states to each of the fifty states of the United States.

OFFENSE ALLEGED

13. Beginning at least as early as 1953, and continuing thereafter up to and including the date of this complaint, the defendants and co-conspirators have been engaged in a combination and conspiracy in unreasonable restraint of the aforesaid interstate trade and commerce in motor vehicle air pollution control equipment in violation of

Section 1 of the Sherman Act (15 U.S.C. Sec. 1).

14. The aforesaid combination and conspiracy has consisted of a continuing agreement, understanding, and concert of action among the defendants and co-conspirators, the substantial terms of which have been and are:

(a) to eliminate all competition among themselves in the research, development, manufacture and installation of motor vehicle air pollution equipment; and

(b) to eliminate competition in the purchase of patents and patent rights from other parties covering motor vehicle air pollution control equipment.

15. For the purpose of forming and effectuating the aforesaid combination and conspiracy, the defendants and co-conspirators did those things which they combined and conspired to do, including, among other things, the following:

(a) agreed that all industry efforts directed at the research, development, manufacture and installation of motor vehicle air pollution control equipment should be undertaken on a non-competitive basis;

(b) agreed to seek joint appraisal of patents and patent rights submitted to any of them by persons not parties to a cross-licensing agreement entered into on July 1, 1955, and amended and renewed periodically, and to require "most-favored-purchaser" treatment of all parties to the cross-licensing agreement if any one were licensed by a person not a party to that agreement;

(c) agreed to install motor vehicle air pollution control equipment only upon a uniform date determined by agreement, and subsequently agreed on at least three separate occasions to attempt to delay the installation of motor vehicle air pollution control equipment:

(1) in 1961 the defendants agreed among themselves to delay installation of "positive crankcase ventilation" on vehicles for sale outside of California until the model year 1963, despite the fact that this antipollution device could have been installed nationally for the model year 1962 and that at least some automobile manufacturers expressed willingness to do so, in the absence of a contrary industry-wide agreement;

(2) in late 1962 and extending into 1963, the defendants agreed among themselves to delay installation of an improvement to the positive crankcase ventilation device, an improvement which the California Motor Vehicle Pollution Control Board had indicated it would make mandatory;

(3) in early 1964 the defendants agreed among themselves to attempt to delay the introduction of new exhaust pollution control measures on motor vehicles sold in California until the model year 1967; despite the fact that all were capable of installing the improvement for the model year 1966, the defendants agreed to tell California regulatory officials that installation of exhaust antipollution measures would be technologically impossible before 1967, and only under regulator pressure made possible by competing device manufacturers not in the automobile industry did the defendants agree to a California regulatory requirement that exhaust devices be installed for the model year 1966; and

(d) agreed to restrict publicity relating to research and development efforts concerning the motor vehicle air pollution problem.

EFFECTS

16. The aforesaid combination and conspiracy has had, among others, the following effects:

(a) hindering and delaying the research, development, and manufacture—both by the defendants and co-conspirator and by others not parties to the agreements alleged herein—and the installation of motor vehicle air pollution control equipment;

(b) restricting and suppressing competition among the defendants and co-conspirators in the research, development, manufacture and installation of motor vehicle air pollution control equipment;

(c) restricting and suppressing competition in the purchase of patents and patent rights covering motor vehicle air pollution control equipment; and

(d) poisoning of the thin envelope of air surrounding the planet earth and, in particular, the air over the United States of America.

GOVERNMENTAL PROCEEDINGS

17. On January 10, 1969, a civil proceeding for violation of Section 1 of the Sherman Act was filed against defendants in the United States District Court, Central District of California, *United States of America vs. Automobile Manufacturers Association, Inc., et al.*, No. 69–75–JWC. The charges contained in that complaint are substantially the same as those contained herein. If the government prevails in that civil action, pursuant to Section 5(a) of the Clayton Act, 15 U.S.C. Sec. 16 plaintiffs intend to rely upon the judgment to the extent applicable hereto.

THE PUBLIC INTEREST

18. The subject of the within conspiracy and its effect upon the air breathed by the residents of the United States of America is a matter of wide public concern and alarm. An editorial appearing in the September 9, 1969 edition of the Los Angeles Times, one of the nation's most prestigious newspapers, stated in material part as follows:

"The American people have a right to be fully informed of this outrageous corporate callousness by a full and open trial of the issues involved. If the defendants in this case are indeed culpable a consent decree of almost any kind would undermine the penalties of the antitrust laws designed to deter future adventures in collusion."

A full and complete copy of this editorial is annexed hereto, marked Exhibit "A," and made a part hereof.

A political cartoon appearing in the Los Angeles Times on September 15, 1969, speaks for itself. A true and correct copy thereof is annexed hereto, marked Exhibit "B," and made a part hereof. [Cartoon not printed in RECORD.]

Within the last several weeks, Time, the weekly news magazine, one of the most widely read and respected periodicals in the American press, introduced a permanent news section in its magazine entitled "Environment." In their introductory editorial, the editors stated:

"Even as the world celebrates the astronauts' triumphant return from the moon, more and more people are increasingly alarmed by man's abuse of his own earth. The concern is perhaps strongest in the U.S. where America the Beautiful can all too often be described as America the Polluted, and anxiety about the quality of life has become a rising political issue."

A true and correct copy of the full editorial is annexed hereto, marked Exhibit "C," and made a part hereof.

18. Every resident of the United States of America must breathe air in order to live. The quality of the air breathed by them has been poisoned and polluted by reason of the unlawful acts of defendants alleged herein. The consequences of the unlawful acts of defendants have created a national scandal.

DAMAGES TO PLAINTIFFS AND THE CLASS

19. As a result of the aforesaid illegal acts and conduct of the defendants, plaintiffs and each member of the class have suffered substantial damages, the exact amount of which is not now known, but is believed to be in the millions of dollars, and when ascertained, plaintiffs will pray leave of the Court to amend this complaint accordingly.

PRAYER

Wherefore, the plaintiffs pray judgment against each defendant as follows:

1. That the Court adjudge and decree that the defendants have engaged in a combination and conspiracy, in unreasonable restraint of the aforesaid interstate trade and commerce, in violation of Section 1 of the Sherman Act.

2. That each of the defendants named in this complaint, its successors, assignees and transferees, and the respective officers, directors, agents and employees thereof, and all persons acting or claiming to act on behalf thereof:

(a) be enjoined from continuing, maintaining or renewing, directly or indirectly, the combination or conspiracy hereinbefore alleged, or from engaging in any other practice, plan, program, or device having a similar effect;

(b) be enjoined from entering into any agreements, arrangements, understandings, plan or program with any other person, partnership, or corporation, directly or indirectly:

(1) to delay installation of air pollution control equipment or otherwise restrain individual decisions as to installation dates;

(2) to restrict individual publicity of research and development relating to air pollution control technology;

(3) to require joint assessment of the value of patents or patent rights relating to air pollution control equipment;

(4) to require that acquisition of patent rights relating to air pollution technology be conditioned upon availability of such rights to others upon a most-favored-purchaser basis; or

(5) to respond jointly to requests by government regulatory agencies for information or proposals concerning air pollution control technology unless such agency requests a joint response in a particular case; and

(c) be required to issue to any applicant interested in developing motor vehicle air pollution technology unrestricted, royalty-free licenses and production know-how under all United States patents owned, controlled or applied for to which the cross-licensing agreement dated July 1, 1955, as amended, has been applicable, and to make available to any such applicant all other know-how related to air pollution control technology which has been exchanged with any other defendant.

3. That judgment be entered in favor of plaintiffs and each member of the class against the defendants, and each of them, jointly and severally, for three-fold the damages determined at trial to be sustained by plaintiffs and each member of the class; and that the recovery be in the form of a common fund for the benefit of all residents of the United States of America with distribution to be made upon such terms and in such a manner as the Court believes to be fair, just and equitable.

4. That the plaintiffs have such other, further and different relief as the nature of the case may require and the Court may deem just and proper in the premises, including cancellation of the cross-licensing agreement dated July 1, 1955, as amended, and an injunction ensuring that all future joint arrangements relating to air pollution control technology be appropriately limited as to subject matter of joint effort and numbers of participants so as to maintain competition in the development of air pollution technology.

5. That the Court allow and that the defendants, and each of them, jointly and severally, be required to pay the full costs of suit incurred by plaintiffs and each member of the class, respectively, including as part thereof reasonable fees for the services of the attorneys for plaintiffs.

6. That plaintiffs and the members of the class be granted such other and further relief as the Court shall deem just and proper.

EXHIBIT A

"SETTLEMENT" OF THE SMOG SUIT

Issue: Is the U.S. Department of Justice fully protecting California in its air pollution action against Detroit?

The nation's major auto manufacturers, according to the U.S. Department of Justice, entered into a series of conspiracies to delay the development and installation of smog control devices required by the State of California.

The companies "agreed among themselves to delay the introduction of new exhaust pollution-control measures on motor vehicles sold in California until the model year 1967," the government charged, "despite the fact that all were capable of installing the improvement for the model year 1966."

Filed earlier this year in U.S. District Court in Los Angeles, the antitrust action followed a prolonged Federal Grand Jury investigation of alleged foot-dragging by Detroit on pollution control.

The suit is still pending, but a number of congressmen are upset by the possibility that it may be settled out of court by means of a consent decree.

Most antitrust suits are resolved by such decrees, in which the defendant admits no liability for the alleged charges but agrees to certain specified conditions of conduct in the future.

But in a case so important to the health and welfore of California and other urban states, there is special concern over the kind of compromise that may be reached behind closed doors.

Los Angeles County officials have filed a $100 million damage suit against the auto manufacturers to prevent the settlement. And the attorney general's office is considering suing for damages on behalf of all the people of California.

If the charges against the auto companies, declared 19 congressmen, are correct, "the American people have a right to be fully informed of this outrageous corporate callousness by a full and open trial of the issues involved."

"If the defendants in this case are indeed culpable a consent decree of almost any kind would undermine the penalties of the antitrust laws designed to deter future adventures into collusion."

Since the Federal Grand Jury transcript is secret—not even California's attorney general has been apprised of its contents—it is difficult to speculate on the specifics of the federal government's case against Detroit.

In view of the very serious charges in its complaint, one must assume that there was considerable if not overwhelming supporting evidence.

We do not have all the details of the case. But we do know that millions of people suffer annually in the Los Angeles Basin from auto-caused polluted air.

We do know that agriculture has suffered tens of millions of dollars of smog damage each year.

The U.S. Department of Justice therefore should know that the people of California as well as Congress insist upon the strongest possible federal action against any who have been derelict in preventing the development and installation of devices to stop auto-caused pollution.

EXHIBIT C

A LETTER FROM THE PUBLISHER OF TIME MAGAZINE

(By James R. Shepley)

With this issue, Time introduces a new section: Environment.

Even as the world celebrates the astronauts' triumphant return from the moon, more and more people are increasingly alarmed by man's abuse of his own earth. The concern is perhaps strongest in the U.S., where America the Beautiful can all too often be described as America the Polluted, and anxiety about the quality of life has become a rising political issue. Yet the worries extend to every society around the globe where ever-growing industrialization has created a crisis of excessive waste that is poisoning—and not always slowly—plants, wildlife, and indeed man himself.

To what extent are the fears justified? What should business and government do? What role can the individual citizen play?

In seeking answers, we plan to clarify and explore man's long-ignored physical dependence on the biosphere —earth's thin envelope of air, water and soil in which life exists. Almost every week now brings new warnings of impending ecological upsets within our planet's infinitely interdependent chain of life processes: certain birds becoming extinct, hauls of inedible fish, mysterious animal sickness. Environment will tackle for example, the effects of such forms of pollution as DDT pesticides and radioactive waste, chemical fertilizers and hot water from nuclear power reactors; it will explore the cacophony of modern noises that grate on the nerves and damage living organisms; it will contemplate festering cityscapes as well as blighted landscapes; it will examine the visual pollution of ugliness that defiles the esthetic spirit and stunts man's ability to live in peace and harmony with nature.

Environment will undoubtedly contain its share of grim trends and events, but it will by no means be devoted only to gloomy news. Pessimists believe that much environmental destruction is irreversible. Optimists argue that technology and will power can salvage the situation. To that end, Environment will describe the exciting ideas of architects, city planners, ecologists, engineers, politicians and plain people. These ideas will include, among many others, dispersing glutted populations, building new experimental cities, designing steam and electric autos, restructuring mass transit, recycling all kinds of waste—and in general making this world a more liveable place.

[U.S. District Court, Central District of California]

No. 69-75-JWC

UNITED STATES OF AMERICA, PLAINTIFF, *v* AUTOMOBILE MANUFACTURERS ASSOCIATION, INC.; GENERAL MOTORS CORPORATION; FORD MOTOR COMPANY; CHRYSLER CORPORATION; AND AMERICAN MOTORS CORPORATION, DEFENDANTS

No. 69-1855-JWC—Memorandum of points and authorities in support of motion for consolidation and objections to proposed stipulation for entry of consent judgment

MARSHALL B. GROSSMAN AND S. JEROME TAMKIN, PH. D., INDIVIDUALLY AND ON BEHALF OF ALL OTHERS SIMILARLY SITUATED, PLAINTIFFS, *v* AUTOMOBILE MANUFACTURERS ASSOCIATION, INC.; GENERAL MOTORS CORPORATION; FORD MOTOR COMPANY; CHRYSLER CORPORATION; AND AMERICAN MOTORS CORPORATION, DEFENDANTS

INTRODUCTION

1.

On January 10, 1969, the United States of America filed the within action (United States of America vs. Automobile Manufacturers Association, Inc., Case No. 69-75-JWC) ("The Government Action") against the "big four auto makers" and the Automobile Manufacturers Association, Inc. The action seeks equitable relief for violation of Section 1 of the Sherman Anti-Trust Act. The complaint charges that the defendants, together with others, have been engaged in a combination and conspiracy since at least as early as 1953 in unreasonable restraint of interstate trade and commerce in motor vehicle air pollution control equipment in violation of the Sherman Act (Government Complaint, para. 12, pp. 5-7). The Government stated that the substantial terms of the conspiracy have been and are:

"(a) to eliminate all competition among themselves in the research, development, manufacture and installation of motor vehicle air pollution control equipment; and

"(b) to eliminate competition in the purchase of patents and patent rights from other parties covering motor vehicle air pollution control equipment." (Government Complaint para. 13, p. 6.)

In perpetuation of this combination and conspiracy, the defendants are charged with several specific illegal acts, including that they:

(a) "agreed that all industry efforts directed at the research, development, manufacture and installation of motor vehicle air pollution control equipment should be undertaken on a non-competitive basis";

(b) "agreed to install motor vehicle air pollution control equipment only upon a uniform date determined by agreement . . .";

(c) "agreed on at least three separate ocassions to attempt to delay the installation of motor vehicle air pollution control equipment";

(d) "agreed to restrict publicity relating to research and development efforts concerning the motor vehicle air pollution problem." (Government Complaint, para. 14, pp. 6-8)

The Government's complaint further charges that the effect of this combination and conspiracy has hindered and delayed the research, development, manufacture, and installation of motor vehicle air pollution control equipment; has restricted and suppressed competition among the defendants and others in these areas, and has restricted and suppressed competition in the purchase of patents and patent rights covering motor vehicle air pollution control equipment.

2.

It is noted that the Government Complaint was filed during the last few days of the administration of President Lyndon B. Johnson. The proposed settlement, hereinafter discussed, is being advanced by the administration of a different President.

3.

The defendants have never been required to admit or deny the allegations of the Government's complaint in this action. Stipulations for extensions of time within which to plead were filed on February 7, 1969, March 10, 1969, April 10, 1969, May 8, 1969, June 11, 1969, July 8, 1969, and August 14, 1969. The Court's file indicates the Government conducted no discovery whatsoever. It served no interrogatories, served no requests for admissions, and took no depositions. There is absolutely no public record whatsoever wherein the defendants, or any of them, have admitted or denied under oath any of the Government's charges, in whole or in part.

4.

The Government action was not filed out of whim or fancy. It followed an eighteen month investigation by a grand jury panelled in Los Angeles during 1966-1967. The testimony adduced during these grand jury proceedings, the investigative reports of the United States Government, and the relevant documentary evidence, have never been made public.

5.

On September 11, 1969, a scant eight months after the Government's action was filed, and before the taking of any discovery or the filing of any answers by the defendants, as aforesaid, the parties filed herein their "Stipulation for Entry of Consent Judgment".

6.

The subject matter of this action, and, of course, of the consent judgment, is a matter of wide public concern. This litigation, perhaps, is of greater potential effect upon the lives and well-being of the people of the United States of America than any other lawsuit in the history of our country. We are, here, dealing with air and the polluting and poisoning of air. Without air, life as we know it would vanish from the face of this earth. Without clean air, the same results may follow. For years now, the American public has been told that things are getting better, that industry and government are working together in cooperating in such a manner as to cease the poisoning and polluting of the atmosphere and to cleanse the air. Now it turns out, that at least as to these defendants, the American public has been deceived. According to the charges of the Government's complaint, the defendants have combined and conspired, for their own personal and pecuniary gain, in such a manner as to assure the continuing pollution of the atmosphere. The effects upon the American people have been staggering. The cities throughout this land are virtual jungles. The essential ingredient of life, air, has become impregnated with visible and invisible poisons from the millions of automobiles in our midst. The children amongst us are herded into cafeterias and gymnasiums during "smog alerts" and the playgrounds have the look of a blacktopped desert. The well get sick and the aged and infirmed become ill and die. Travel throughout the country is rendered less enjoyable and less pleasurable as one journeys from smog belt to smog belt. One cannot go north, south, east or west without experiencing the same disastrous effects of air pollution. And all the while, unbeknown to but a few Americans, the executives of one of our largest industries were combining and conspiring to perpetuate the evil for their own personal pecuniary and economic selfish gain. Is this not a national scandal?

7.

The government and the defendants whom it sued but eight months ago propose to terminate this litigation and shut the door to the public by having the defendants say, "We're sorry. We won't do it again." But is this enough? We think not. We believe that any acceptance of the proposed consent decree will, for all intents and purposes, serve to render the defendants immune from personal liability to those who have suffered most, the people, and will serve as an inspiration to them, and others of their calibre, to design and perpetuate further evils for their own gain with the full realization that they can buy their peace by promising never to do it again.

8.

That the public interest will best be served by bringing the facts and the evidence out into the open and allowing the proceedings to go forward is clear.

Within the last several weeks, TIME, the weekly news magazine, introduced a permanent news section in its magazine titled, "Environment". In his introductory editorial, the publisher states:

"Even as the world celebrates the astronauts' triumphant return from the moon, more and more people are increasingly alarmed by man's abuse of his own earth. The concern is perhaps strongest in the U.S. where America the Beautiful can all too often be described as America the Polluted, and anxiety about the quality of life has become a rising political issue."

On September 4, 1969, the Los Angeles Times ran an editorial titled, "Smog: The 'Impatient' Public". The editorial stated in material part:

"Los Angeles should be ashamed.

"It seems that we have been too impatient in trying to get rid of smog. Too much 'passion' and 'emotionalism' have been displayed over the threat of auto-caused air pollution.

" 'We can go along for another 10 to 15 years as we are now,' Kerryn King, an American Petroleum Institute official, told reporters Tuesday—as the smog outside was approaching a first-stage alert.

"After all, said King, it took 188 years for Los Angeles' current pollution problems to develop. The public thus should not expect solutions over night. Nor, he added, will an answer be found in passing new regulatory legislation in Sacramento.

"In one of the most remarkable statements yet made on smog, King made the oil industry appear to be as insensitive as auto makers to the air pollution situation.

* * * * *

"We cannot continue to tolerate air so polluted that ten thousand persons annually leave the Los Angeles basin on the advice of their physicans.

* * * * *

"Unfortunately Southern California may not survive that long [10 years] a wait for clean air. And certainly its citizens do not intend to put up with any such delay."

An editorial in the Los Angeles Times on September 15, 1969, was a satire on the proposed settlement with the following caption:

"That's a great anti-suit device . . . How effective is it against smog?"

An editorial in the September 9, 1969 edition of the Los Angeles Times reflected that publication's opinion of a consent decree in this action. The editorial stated in material part:

"If the charges against the auto companies, declared 19 congressmen, are correct, 'the American people have a right to be fully informed of this outrageous corporate callousness by a full and open trial of the issues involved.'

" 'If the defendants in this case are indeed culpable a consent decree of almost any kind would undermine the penalties of the antitrust laws designed to deter future adventures into collusion.'

"Since the Federal Grand Jury transcript is secret—not even California's attorney general has been appraised of its content—it is difficult to speculate on the specifics of the federal government's case against Detroit.

"In view of the very serious charges in its complaint, one must assume that there was considerable if not overwhelming supporting evidence.

"We do not have all the details of the case. But we know that millions of people suffer annually in the Los Angeles basin from auto-caused polluted air.

"We do know that agriculture has suffered tens of millions of dollars in smog damage each year.

"The U.S. Department of Justice therefore should know that the people of California as well as Congress insist upon the strongest possible federal action against any who have been derelict in preventing the development and installation of devices to stop auto-caused pollution."

9.

The following relief is respectfully requested of this Court:

1. The consent judgment proposed by the Stipulation for Entry of Consent Judgment should be disapproved by the Court;

2. If the consent judgment is approved, in whole or in part, it should be approved only after a finding by this Court that as to the people of the United States of America the consent decree is fair, reasonable and adequate and this finding should be reached, if at all, only after a consideration by this Court of all evidence in the possession of the Government, a consideration of the claims and defenses of the defendants, and only after the opportunity of cross-examining representatives of the Government and of the defendants is afforded to all interested persons.

3. If the consent decree is approved, then it should be approved only if it contains an express admission of liability on the part of the defendants which admission may be used in private treble damage civil anti-trust actions.

4. If the consent judgment is approved, then it should be approved only if it contains a provision guaranteeing to any civil anti-trust plaintiff full discovery of any and all evidence gathered and obtained by the Government in connection with this action.

I—THE PROPOSED CONSENT DECREE SHOULD BE DISAPPROVED OR MODIFIED TO CONTAIN A PROVISION FOR ADMISSION OF LIABILITY BY DEFENDANTS FOR THE PURPOSE OF PRIVATE DAMAGE SUITS AND FOR DISCOVERY BY PRIVATE LITIGANTS OF EVIDENCE GATHERED BY THE UNITED STATES

Under Section 5(a) of the Clayton Act, 15 U.S.C. Section 16(a), a final decree rendered in a proceeding brought by the United States is *prima facie* evidence in a suit subsequently brought by any other party—*except* where a consent decree is entered before any testimony has been taken. Accordingly, a consent decree does not provide civil treble damage claimants with the *prima facie* evidence of violation that Section 5(a) of the Clayton Act accords to a judgment decided adversely to a defendant in a litigated case.

Sherman Anti-Trust Act, §§ 1, 2, 15 U.S.C.A. §§ 1, 2; *Clayton Act*, Section 5(a), 15 U.S.C.A. § 16(a); *De Luxe Theatre Corp.* v. *Balaban & Katz Corp.*, 95 F. Supp. 983 (E.D. Ill. 1951).

The proposed consent decree contains no provision for the admission of liability by defendants for the purpose of private treble damage suits. This ignores the need for deterrence of future conspiratorial competition-reducing activities. In a complex case such as this, with issues of critical moment and national importance, the burdens on a private plaintiff in securing all over again the monumental amount of discovery already secured by the government prior to the filing of its complaint would be herculean. This evidence has been gathered by the government at great public effort and expense. The public should now benefit from it.

Were the proposed consent decree entered herein, it is not clear that this painfully-gathered evidence may be made available by the United States Department of Justice to any civil treble damage plaintiff in prosecuting a civil case against the defendants. Few civil plaintiffs, if any, have the resources to again gather this evidence. There is no good reason why, in a case of such great public interest, such evidence should be forever lost to plaintiffs who wish to seek redress for damages with the great deterrent of a civil treble damage suit, a procedure expressly provided by Congress.

It is respectfully submitted that the proposed consent decree should not be approved by the Court unless it contains a provision with substantially the following terms:

"Entry of this judgment shall be *prima facie* evidence of violation of the anti-trust laws on the part of defendants in a civil suit for treble damages for such violations brought by any other party under the provisions of the Clayton Act, 15 U.S.C.A. § 15 et seq."

It should be noted that recent cases have been more liberal than in the past in affording discovery of grand jury minutes or transcripts to private litigants, where those minutes have been primarily used by the government to prepare civil proceedings.

United States v. *Proctor & Gamble Co.*, 356 U.S. 677 (1958); *decision on remand*, 25 F.R.D. 485, 490 (D.N.J. 1960); and *United States* v. *Ben Grunstein & Sons Co.*, 137 F. Supp. 197 (D.N.J. 1955).

More particularly, discovery has recently been authorized in private treble damage actions under the anti-trust laws, of grand jury minutes obtained by the government in prior criminal investigations. *In re Special 1952 Grand Jury*, 22 F.R.D. 102 (E.D.Pa. 1958); *Herman Schwabe, Inc. v. United Shoe Machinery Corp.*, 194 F. Supp. 763 (D. Mass. 1958). Surely the same considerations which impelled a decision in those cases that the "need for secrecy" was outweighed by the public interest, are present in a case directly involving the physical health and well-being of every man, woman and child in the United States.

Accordingly, the proposed consent decree should not be approved unless it contains a provision with substantially the following terms:

"Any private party bringing an action against defendants for treble damages for or on account of those alleged acts of defendants complained of in the complaint herein, shall be entitled to full discovery of any and all evidence, documentary or otherwise, gathered, secured, or obtained by plaintiff United States of America in reparation for or in connection with this action, including, but not limited to, access to any and all federal grand jury minutes and transcripts of testimony."

II—NO CONSENT DECREE SHOULD BE APPROVED UNLESS IT IS PROVEN TO BE FAIR, REASONABLE AND ADEQUATE

No consent decree should be approved unless it is established to the satisfaction of the Court that it is fair, reasonable, and adequate. The Court is an indispensable party to any such decree. For the Court to effectively evaluate the proposed consent decree, it should be afforded the opportunity of hearing and considering the evidence upon which the Government's case is based, as well as the claims and defenses of the defendants and the evidence upon which they are based. Of equal significance, notice of the proceedings should be afforded to the public at large and that notice should rise to the dignity of notice required by the due process clause of the United States Constitution. It is respectfully submitted that the procedure adopted by the parties for the consideration of this consent decree fall short of due process requirements. Neither party has caused a notice of hearing to be published in such a manner as to receive nation-wide attention. Approval of the consent decree, as submitted, would effectively deprive every American of the benefits of an adverse judgment, or of an admission of liability, against the defendants. A denial of these rights, in such a fashion, is violative of due process of law.

III—THE TWO CASES SHOULD BE CONSOLIDATED UNDER RULE 42(a)

Rule 42(a). Federal Rules of Civil Procedure, provides as follows:

"Consolidation. When actions involving a common question of law or fact are pending before the court, it may order a joint hearing or trial of any or all the matters in issue in the actions; it may order all the actions consolidated; and it may make such orders concerning proceedings therein as may tend to avoid unnecessary costs of delay."

Consolidation may be ordered before issues are joined where common questions are involved.

Schultz v. Manufacturers and Traders Trust Co., 29 F. Supp. 37 (W.D.N.Y. 1939).

Each of the two cases pending before this Court involves the same questions of law and fact and the same defendants. The action of the United States is a government anti-trust action under the provisions of the Sherman Anti-Trust Act. Plaintiffs' case is a civil treble damage action under the Clayton Act, predicated on the anti-trust provisions of the Sherman Anti-Trust Act. Plaintiffs in the *Grossman* case seek damages and the government seeks injunctive relief based on the same alleged acts of defendants, namely, the conspiracy to prevent the development of anti-pollution automotive smog control devices.

"The consolidation of an action brought by the United States with another action in which either the United States or a private person is plaintiff should be governed by the general principles underlying Rule 42, since the Federal Rules are generally applicable to the United States and these actions do not involve any problem of sovereign immunity from suit." 5 *Moore's Federal Practice*, para. 42.02, p. 1208 (2d ed. 1968);

See also *Gerber Products Co. v. Beech-Nut Life Savers, Inc.*, 25 F.R. Serv. 42a.1, Case 1 (Consolidation of two anti-trust cases against a common defendant, despite one unrelated issue in each case);

Atlanta Hydratane Gas, Inc., v. Lowry Tims Co., 41 F.R.D. 164 (N.D. Miss. 1966) (Four actions by different plaintiffs consolidated where all plaintiffs sought relief against common defendant for alleged discrimination in pricing practices in violation of Robinson-Patman Act).

The two cases pending before this Court are both anti-trust cases involving the same actions on the part of the defendants. The proof necessarily to be adduced at trial would be the same. The issues are complex and the testimony required would be lengthy. Accordingly, the time of the parties, their counsel and the court should be conserved by having common discovery and by trying both cases in one proceeding.

Wherefore, plaintiffs Marshall B. Grossman and S. Jerome Tamkin, Ph.D., individually, and on behalf of all others similarly situated, respectfully pray as follows:

1. The consent judgment proposed by the Stipulation for Entry of Consent Judgment should be disapproved by the Court;

2. If the consent judgment is approved, in whole or in part, it should be approved only after a finding by this Court that as to the people of the United States of America the consent decree is fair, reasonable and adequate and this finding should be reached, if at all, only after a consideration by this Court of all evidence in the possession of the Government, a consideration of the claims and defenses of the defendants, and only after the opportunity of cross-examining representatives of the Government and of the defendants is afforded to all interested persons.

3. If the consent decree is approved, then it should be approved only if it contains an express admission of liability on the part of the defendants which admission may be used in private treble damage civil anti-trust actions.

4. If the consent judgment is approved, then it should be approved only if it contains a provision guaranteeing to any civil anti-trust plaintiff full discovery of any and all evidence gathered and obtained by the Government in connection with this action.

5. For such other relief as the Court deems proper.

Dated: October 1, 1969.

Respectfully submitted,

BENJAMIN F. SCHWARTZ,
HERBERT A. KARZEN,
SCHWARTZ & ALSCHULER,

(No. 69-1855-JWC—1. Notice of motion and motion for consolidation of cases; 2. notice of appearance in opposition to proposed stipulation for entry of consent judgment; and 3. memorandum of points and authorities and objection to proposed stipulation for entry of consent judgment)

MARSHALL B. GROSSMAN AND S. JEROME TAMKIN, PH. D., INDIVIDUALLY AND ON BEHALF OF ALL OTHERS SIMILARLY SITUATED, PLAINTIFFS, *v.* AUTOMOBILE MANUFACTURERS ASSOCIATION, INC.; GENERAL MOTORS CORPORATION; FORD MOTORS COMPANY; CHRYSLER CORPORATION; AND AMERICAN MOTORS CORPORATION, DEFENDANTS

To the following:

Raymond W. Philipps, Department of Justice, Antitrust Division, 1307 U.S. Court House, 312 North Spring Street, Los Angeles, California 90012. [Respectively, attorney for Plaintiff, United States of America.]

Gibson, Dunn & Crutcher, Julian O. von Kalinowski, Paul G. Bower, Robert E. Cooper, 634 South Spring Street, Los Angeles, California 90014. [Respectively, attorneys for Defendant, Automobile Manufacturers Association, Inc.]

Overton, Lyman & Prince, Carl J. Schuck, 550 South Flower Street, Suite 607, Los Angeles, California 90017. [Respectively, attorneys for Defendant, Ford Motor Company.]

Lawler, Felix & Hall, Marcus Mattson, Robert Henigson, 605 West Olympic Boulevard, Suite 800, Los Angeles, California 90015. [Respectively, attorneys for Defendant, General Motors Corporation.]

McCutchen, Black, Verleger & Shea, Philip K. Verleger, William G. Shea, 615 South Flower Street, Suite 1111, Los Angeles, California 90017. [Respectively, attorneys for Defendant, Chrysler Corporation.]

O'Melveny & Myers, Allyn O. Kreps, Girard E. Boudreau, 611 West 6th Street, Los Angeles, California 90017. [Respectively, attorneys for Defendant, American Motors Corporation.]

Please take notice that on October 28, 1969, at the hour of 10:00 A.M., or as soon thereafter as counsel may be heard, plaintiffs Marshall B. Grossman and S. Jerome Tamkin, Ph. D., individually and on behalf of all others similarly situated, will make formal motion in Courtroom 10, United States Courthouse, 312 North Spring Street, Los Angeles, California, for an order that both of the above entitled actions be consolidated on the following grounds:

1. The actions involve common questions of law and fact. The common questions of law and fact include whether the defendants engaged in a combination or conspiracy to prevent the development and distribution of motor air pollution control equipment. The lawsuit filed by the United States of America is predicated on the Sherman Act and seeks relief by way of injunction on the Clayton Act and is a civil treble damage suit. Both cases allege the identical acts on the part of defendants.

2. Consolidation will thus avoid expense and delay. A separate trial of each case would be an undue imposition on the time of the Court since each action arises out of the same acts of defendants. Virtually the same proof would have to be adduced at each separate trial. The law does not and ought not require idle acts.

Please take further notice that plaintiffs Marshall B. Grossman and S. Jerome Tamkin, Ph. D., individually, and on behalf of all others similarly situated, hereby file their presentation in writing, pursuant to the Order of this Court dated September 17, 1969, in opposition to the proposed "Stipulation for Entry of Consent Judgment" heretofore lodged in the action entitled "United States of America, Plaintiff, vs. Automobile Manufacturers Association, Inc., et al.," Civil Action No. 69–75–JWC. Said plaintiffs, individually, and on behalf of all others similarly situated, by their attorneys, will appear at the hearing on October 28, 1969, at 10:00 A.M., or as soon thereafter as counsel may be heard, to present such further evidence and argument, written and/or oral, as may be pertinent to the matters then pending before this Court.

Dated: October 1, 1969.

BENJAMIN F. SCHWARTZ,
HERBERT A. KARZEN,
SCHWARTZ & ALSCHULER,
By LAWRENCE KIRK,

FRANKIE FAE BRILL.

DILWORTH, PAXSON,
KALISH, KOHN & LEVY,
Philadelphia, Pa., October 14, 1969.

Hon. GEORGE E. BROWN, Jr.,
House of Representatives,
Washington, D.C.

DEAR REPRESENTATIVE BROWN: I thought you would be interested in the Comments filed by Mayor Thomas J. Monaghan of Lancaster, Pennsylvania, and Mayor Louis J. Tullio of Erie, Pennsylvania, opposing the entry of the Consent Decree in the Automobile Air Pollution Antitrust case. Mayors Monaghan and Tullio are the first public officials in our Commonwealth to take a public stand against the entry of this unwise Decree. Both are public-spirited officials, with a deep and abiding interest in the very crucial problems relating to air pollution in our Commonwealth, and they are to be congratulated for taking this stand in the public interest.

As you will note from the second paragraph of the enclosed Motion for Leave to File Comments, Mayor Monaghan and Mayor Tullio first became aware of Judge Curtis' Order of September 17 from your action in reprinting that Order in the *Congressional Record.* On behalf of Mayor Monaghan and Mayor Tullio, let me express their appreciation for your catalytic concern. I hope you will continue to pursue your present course in opposing the entry of the Consent Decree.

Sincerely,

EDWARD F. MANNINO.

[U.S. District Court, Central District of California, Civil Action No. 69–75–JWC]

UNITED STATES OF AMERICA, PLAINTIFF, *v.* AUTOMOBILE MANUFACTURERS ASSOCIATION, INC., ET AL., DEFENDANTS

Motion for leave to file comments; comments of Mayor Thomas J. Monaghan of Lancaster, Pennsylvania, and Mayor Louis J. Tullio of Erie, Pennsylvania; and affidavit of service.

MOTION FOR LEAVE TO FILE COMMENTS

Mayor Thomas J. Monaghan of Lancaster, Pennsylvania and Mayor Louis J. Tullio of Erie, Pennsylvania, (hereinafter "Movants") by their attorneys, hereby respectfully request this Honorable Court for leave to file the attached Comments opposing the entry of the Consent Decree proposed by the parties in the above-captioned case. In support of this request, Movants allege as follows:

1. The Cities of Lancaster, Pennsylvania, and Erie, Pennsylvania, have a direct interest in the resolution of this vital litigation. The Cities of Lancaster and Erie are the focal points of large and expanding metropolitan regions, with combined in-city populations of approximately 200,000, and a combined metropolitan regional population of approximately 549,000. Both Cities, in addition, experience significant problems of air pollution. As is the case with all large cities, the major portion of these problems in the Cities of Lancaster and Erie may be traced directly to the operation of motor vehicles. The allegations of the Complaint filed by the United States in this case, if proved, would establish that the Defendants have been responsible over a period of at least 15 years for preventing development of effective air pollution controls for such motor vehicles. As such, a full public trial in this case would serve the public interest by establishing the responsibility, both moral and legal, of the Defendants for the damages resulting to the citizens of Lancaster and Erie, Pennsylvania, from automobile air pollution.

2. Movants first learned of this Honorable Court's Order of September 17 upon receipt in the mail on October 3 of the September 30 daily edition of the CONGRESSIONAL RECORD, in which Representative Brown of California reprinted the said Order on Page 27842. Promptly thereafter, Movants prepared the attached Comments, and are presently submitting them to this Honorable Court for consideration.

3. No prejudice will result either to the parties to this litigation or to the Honorable Court if Movants are permitted leave to file the attached Comments. Movants will not oppose an extension of time until October 23 for any Defendant who might wish to file a Response to the attached Comments. Such an extension would neither inconvenience nor require the postponement of the Hearing presently set for October 28 on the proposed Consent Decree, and all Comments and Responses would be thus filed with this Honorable Court well in advance of that date.

Wherefore, Movants respectfully request that this Honorable Court enter an Order granting them leave to file the attached Comments of Mayor Thomas J. Monaghan of Lancaster, Pennsylvania, and Mayor Louis J. Tullio of Erie, Pennsylvania.

Respectfully submitted,

JOHN M. ELLIOTT,
EDWARD F. MANNINO,
Attorneys for Movants,
Thomas J. Monaghan, Mayor of Lancaster, Pa., and Louis J. Tullio, Mayor of Erie, Pa.

[U.S. District Court, Central District of California, Civil Action No. 69–75–JWC]

UNITED STATES OF AMERICA, PLAINTIFF, *v.* AUTOMOBILE MANUFACTURERS ASSOCIATION, INC., ET AL., DEFENDANTS

Comments of Mayor Thomas J. Monaghan of Lancaster, Pennsylvania and Mayor Louis J. Tullio, of Erie, Pennsylvania.

Pursuant to this Honorable Court's Order of September 17, 1969, inviting submission of "the views of all interested persons and public bodies," Mayor Thomas J. Monaghan of Lancaster, Pennsylvania, and Mayor Louis J. Tullio of Erie, Pennsylvania, hereby submit, through their attorneys, the following comments in opposition to the Consent Decree proposed by the parties in this case on September 11, 1969:

1. These Comments are filed on behalf of Mayor Thomas J. Monaghan of Lancaster, Pennsylvania, and Mayor Louis J. Tullio of Erie, Pennsylvania. The Cities of Lancaster and Erie are the focal points of large and expanding metropolitan regions in Pennsylvania, with combined in-city populations of approximately 200,000, and a combined metropolitan regional population of approximately 549,000. Both Cities experience significant problems of air pollution. As with all metropolitan areas, the major portion of these problems in Lancaster and Erie may be traced directly to the operation of motor vehicles. Indeed, the gravity of the automobile air pollution problem in Pennsylvania has recently been affirmed by the Joint State Government Commission of the General Assembly of the Commonwealth of Pennsylvania, which, after study, has concluded that "At the present time [1967], the air pollution originating with the motor vehicle is virtually uncontrolled in Pennsylvania." *Supplemental Report on Automotive Air Pollution*, pg. 12.

2. The substantial dangers to health posed by automobile air pollution have repeatedly been documented by state and federal agencies vested with the responsibility of safeguarding the public health and welfare. Thus, in his First Report to the United States Congress pursuant to the Air Quality Act of 1967, the Secretary of Health, Education, and Welfare reported (S. Doc. No. 92, 90th Cong., 2d Sess. (1968), at pp. 15–17):

"In terms of total quantity of pollutants, the automobile represents the most important single source of air pollution in the United States today. The nationwide contributions of the motor vehicle to five major air contaminants is shown in figure 4. It is the prime source of two of these pollutants, carbon monoxide and hydrocarbons, and it produces nearly half the total nitrogen oxides released. Carbon monoxide, which impairs the oxygen-carrying ability of the blood, can reduce visual acuity and motor ability in small concentrations and is fatal in large doses. Many of the hydrocarbons react with nitrogen oxides in the presence of sunlight to form secondary products which irritate the eyes and throat and can alter physical function and enhance respiratory disease." (Footnote and Figure omitted.)

3. The potential catastrophic impact of unchecked automobile air pollution is illustrated by numerous and increasingly recurring air pollution crises in metropolitan areas. In Donora, Pennsylvania, in 1948, for example, 20 people died and 6,000 were rendered seriously ill by air pollution, while in November 1966, a large portion of Southeastern Pennsylvania was victimized by a severe photochemical inversion. At this same time, the deaths of 100 citizens of New York City were directly related to air pollution.

4. Damage to property from air pollution is also of great magnitude. For example, cash crops losses related to air pollution are estimated to be on the order of $6 to $10 million annually in California alone, with $13 billion annually property damage from corrosive pollutants. *The Automobile and Air Pollution: A Program for Progress, Report of the Panel on Electrically Powered Vehicles to the United States Department of Commerce,* (October 1967), at pp. 13, 15.

5. The allegations of the Complaint in this action, if proved, would establish that the Defendants had exhibited a callous and synical disregard for human life and property rights by unlawfully conspiring to prevent development of effective air pollution controls for the motor vehicles manufactured over the past 15 years. As such, this is not an ordinary antitrust case, and an informed decision by this Honorable Court on whether to approve the proposed Consent Decree cannot be made without regard to the uniquely special context of this case.

6. Movants respectfully submit that approval of the proposed Consent Decree would run contrary to sharply defined and vital policies underlying state and federal air pollution legislation, discussed below, and also would violate settled federal policies, also discussed in detail below, in favor of vigorous enforcement of the federal antitrust laws.

7. The proposed Consent Decree is fatally defective in three major areas: (a) it fails to make available to potential public and private litigants the evidence gathered against the Defendants in the two-year investigation by the United States in the present case; (b) it deprives potential public and private antitrust treble-damage Plaintiffs of the collateral estoppel effect of a potential judgment in favor of the United States in this action; and (c) it imposes no adequate penalties upon Defendants commensurate with the allegations of the Complaint.

8. The vital interest in safeguarding the right of the public to clean air and a generally safe environment is manifested by the state and federal legislation set out in the following paragraphs.

9. It is clear that the United States is suing here not merely in its capacity as guardian of the public interest under the antitrust laws, but also to vindicate the important federal rights of all citizens of the United States to clean air, and to a generally safe environment. Thus, in the Air Quality Act of 1967, 42 U.S.C. § 1857(a)(2), Congress specifically found: "that the growth in the amount and complexity of air pollution brought about by urbanization, industrial development, and the increasing use of motor vehicles, has resulted in mounting dangers to the public health and welfare, including injury to agricultural crops and livestock, damage to and the deterioration of property, and hazards to air and ground transportation."

Moreover, Subchapter 2 of the Air Quality Act, 42 U.S.C. § 1857f–1–7, in recognition of the substantial acceleration of the air pollution hazard by the operation of motor vehicles, provides for motor vehicle emission standards, vesting the authority to prescribe such standards in the Secretary of Health, Education and Welfare.

10. A parallel policy determination has likewise been made by the legislature of the Commonwealth of Pennsylvania in a series of acts, *inter alia:*

(a) The Air Pollution Control Act of 1960, as amended, 35 Purdon's Pa. Stat. Annot. § 4001, *et seq.*, § 4002 of which broadens the definition of vehicular and other air pollution to include the discharge of any matter which *may* be inimical to the public health, safety, or welfare.

(b) The Metropolitan Transportation Authorities Act of 1963, as amended, 66 P.S. 2001, *et seq.*, clearly recognizes that potentially lethal air pollution is the by-product of traffic congestion and serious mass transportation problems, harmful to the economic and social well-being of the community. The Legislature mandated the sound replanning of metropolitan transportation systems and specifically manifested its concern that said replanning to the "maximum extent possible avoid vehicular air pollution." [See 66 Purdon's § 2004(28).]

(c) The Pennsylvania Urban Mass Transportation Assistance Law of 1967, [Act No. 8, 1968] found a further intensification of the traffic congestion, and attendant conditions against which the 1963 Act was directed—*inter alia,* automobile air pollution—and accordingly, for the first time funded mass transportation programs in the Commonwealth.

11. Even if the proposed Consent Decree is to be tested under ordinary principles of antitrust law, it is clear that it is inadequate to discharge the responsibilities of the United States in its capacity as trustee for potential private and public treble-damage Plaintiffs. The government has thus far expended two years and substantial sums of money in the investigation of this case. Yet the proposed Consent Decree is wasteful and ineffective in that it does not make any evidence thus gathered available to public or private bodies in subsequent litigation. In addition, said Decree would deprive such bodies of the collateral estoppel effect of a possible government judgment under Section 5(a) of the Clayton Act, 15 U.S.C. § 16(a).

12. The significant federal interest in encouraging the enforcement of the antitrust laws by Plaintiff's treble-damage actions has long been recognized by both Congress and the Courts. It is this interest which underlies the very treble-damage provision itself, which has been an integral part of the antitrust laws since 1890 (Section 7 of the original Sherman Act, 26 Stat. 210) and is presently codified in Section 4 of the Clayton Act, 15 U.S.C. § 15. The legislative determination in 1955 to vest the United States with the right to receive actual damages plus the costs of suit from antitrust violators for harm sustained as a result of such violations further testifies to the importance of permitting effective enforcement of the antitrust laws by actions for damages. (Section 4(A) of the Clayton Act, 15 U.S.C. § 15a.)

13. In addition to these clear Congressional mandates, vigorous enforcement of the antitrust laws by private and public treble-damage litigation has repeatedly been sanctioned by the Supreme Court as an effective deterrent to violations. See, *e.g., Minnesota Mining & Mfg.* v. *New Jersey Wood Finishing Co.* 381 U.S. 311, 318–19 (1965); *Radovich* v. *National Football League,* 352 U.S. 445, 453–54 (1957); *Emich Motors Corp.* v. *General Motors Corp.,* 340 U.S. 558, 567–68 (1951); *Bruce's Juices, Inc.,* v. *American Can Co.,* 330 U.S. 743, 751–52 (1947).

14. The importance for potential private and public treble-damage litigants of a prior judgment after full trial by the United States against antitrust violators stems from the fact that Section 5(a) of the Clayton Act, 15 U.S.C. § 16(a), makes such judgments *prima facie* evidence of all matters covered therein in a subsequent treble-damage action, and this obviates the necessity for time-consuming and costly discovery procedures. Recognizing this policy of lightening the burden for the private litigant, the Courts have repeatedly articulated an expansive view of the collateral estoppel effect accorded such judgments. Thus, in *Emich Motors Corp.* v. *General Motors Corp.,* 340 U.S. 558, 568–569 (1951), a criminal judgment was held available to subsequent private litigants as *prima facie* evidence of "all matters of fact and law necessarily decided by the conviction and the verdict," since Section 5(a) of the Clayton Act was viewed as articulating a legislative policy "to confer, subject only to a defendant's enjoyment of his day in court against a new party, as large an advantage as the estoppel doctrine had the Government brought suit." In addition, in the recent *Hanover Shoe* litigation, the Supreme Court declared that the prior Government decree was available to establish not merely the precise points enumerated in the decree, but could be used also as proof of any issue "actually adjudicated" in an antitrust suit brought by the Government, provided that such issue could be shown to have been adjudicated "by reference to the findings, opinion, and decree," *Hanover Shoe, Inc.* v. *United Shoe Machinery Corp.,* 392 U.S. 481, 485 (1968).

15. The possibility in a complicated case such as the present one of a successful private prosecution under the antitrust laws, absent a government decree entitled to collateral estoppel effect under Section 5(a) of the Clayton Act, is extremely unlikely. In *Hanover Shoe,* for example, the private and public treble-damage Plaintiff eventually recovered $4,239,609 in damages, plus $650,000 in counsel fees. In that litigation, Hanover relied upon the government decree in the prior *United Shoe* case to establish the violations of the antitrust laws. *Hanover Shoe, Inc. v. United Shoe Machinery Corp.,* 392 U.S. 481 (1968). The complexity of the government case, suggesting the virtual impossibility of a private party establishing liability absent a government decree, is suggested by the trial judge's opinion in the government action against United Shoe.

"[T]he hearings took 121 days and covered 14,194 pages of transcript and included the offer of 5512 exhibits totalling 26,474 pages (in addition to approximately 150,000 pages of OMR's [records concerning machines in shoe factories as of a certain date] and over 6,000 soft copies of patents) and 47 depositions covering 2122 pages. At the close of the evidence, the Court asked for briefs and requested findings of fact and conclusions of law. The Government offered briefs totalling 653 pages and requests totalling 66 pages. United submitted briefs totalling 1240 pages, and requests totaling 499 pages." *United States v. United Shoe Machinery Corp.,* 110 F. Supp. 295, 299 (D. Mass. 1953), *aff'd,* 347 U.S. 521 (1954).

In order to properly implement the significant federal interest in vigorous private enforcement of the antitrust laws, your Movants respectfully submit that this Honorable Court should refuse to approve the Consent Decree proposed in this case and order the United States to proceed to trial, since such decree as presently formulated (a) would not be entitled to collateral estoppel effect under Section 5(a) of the Clayton Act, and (b) would prevent access by potential private and public treble-damage Plaintiffs to the extensive evidence thus far gathered by the United States in the two years it has spent on the present case.

In the alternative, if the Consent Decree is approved, your Movants respectfully submit that this Honorable Court should either order that all evidence gathered by the United States be made available to any private or public treble-damage litigant, once such litigant has withstood a Motion to Dismiss its Complaint on the merits, and has established a class, thus demonstrating its intent to vindicate the rights of the public in this vital litigation, or incorporate in the Consent Decree a provision declaring that Defendants have unlawfully conspired for 15 years to retard the development of effective air pollution controls for automobiles, and making such adjudication *prima facie* evidence of an antitrust violation for any subsequent treble-damage suits. See, *e.g., United States v. Lake Asphalt & Petroleum Co.*, 1960 Trade Cases ¶69,835 (D. Mass. 1960); *United States v. Bituminous Concrete Ass'n, Inc.*, 1960 Trade Cases ¶69,878 (D. Mass. 1960); *United States v. Allied Chemical Corp.*, 1961 Trade Cases ¶69,923 (D. Mass. 1960).

Respectfully submitted,

JOHN M. ELLIOTT,
EDWARD F. MANNINO,
Attorneys for Movants, Thomas J. Monaghan, Mayor of Lancaster, Pa., and Louis J. Tullio, Mayor of Erie, Pa.

AFFIDAVIT OF SERVICE BY MAIL

I hereby certify; under penalty of perjury, that I am and at all times herein mentioned have been a citizen of the United States and a resident of the County of Philadelphia, Commonwealth of Pennsylvania, over the age of eighteen years and not a party to nor interested in the within action; that my business address is 2600 The Fidelity Building, City of Philadelphia, County of Philadelphia, Commonwealth of Pennsylvania:

That on the 9th day of October, 1969, I served the attached Motion for Leave to File Comments and Comments of Mayor Thomas J. Monaghan of Lancaster, Pennsylvania, and Mayor Louis J. Tullio of Erie, Pennsylvania, upon attorneys of record for United States of America; Automobile Manufacturers Association, Inc.; General Motors Corporation; Ford Motor Company; Chrysler Corporation; and American Motors Corporation by depositing a copy thereof, enclosed in a sealed envelope with postage thereon fully prepaid, in a United States mail box in Philadelphia, Pennsylvania, addressed as follows:

Raymond W. Phillips, Dept. of Justice, Antitrust Division, 1307 U.S. Court House, 312 North Spring St., Los Angeles, California 90012. (Attorneys for Plaintiff, United States of America).

Gibson, Dunn & Crutcher, Julian O. von Kalinowski, Paul G. Bower, Robert E. Cooper, 634 South Spring Street, Los Angeles, California 90014. (Attorneys for Defendant, Automobile Manufacturers Association, Inc.).

Overton, Lyman & Prince, Carl J. Schuck, 550 S. Flower St., Suite 607, Los Angeles, Calif. 90017 (Attorneys for Defendant, Ford Motor Company).

Lawler, Felix & Hall, Marcus Mattson, Robert Henigson, 605 W. Olympic Blvd., Suite 80, Los Angeles, Calif. 90015 (Attorneys for Defendant, General Motors Corporation).

McCutchen, Black, Verleger & Shea, Philip K. Verleger, William G. Shea, 615 S. Flower St., Suite 1111, Los Angeles, Calif. 90017 (Attorneys for Defendant, Chrysler Corporation).

O'Melveny & Myers, Allyn O. Kreps, Girard E. Boudreau, 611 West 6th Street, Los Angeles, Calif. 90017 (Attorneys for Defendant, American Motors Corporation).

and that the persons on whom said service was made have their offices at a place where there is a delivery service by United States mail, and that there is a regular communication by mail between the place of mailing and the place so addressed.

Dated: October 9, 1969.

JOHN M. ELLIOTT.

Sworn to and subscribed before me this 9th day of October, 1969.

CLAIRE BOWRON,
Notary Public.

My Commission expires: March 22, 1973.

SENATE—*Tuesday, October 28, 1969*

The Senate met at 12 o'clock meridian and was called to order by the President pro tempore.

The Reverend Horace B. Lilley, associate rector, All Saints Episcopal Church, Chevy Chase, Md., offered the following prayer:

Almighty God, as we now invoke Thy blessing since by Thy grace we come to a new day, we give Thee humble thanks for past guidance to the Members of this responsible branch of our Government. Where it has been right, establish it, where in error, redirect it. Give us faith, courage, and strength to find the right solution to so many difficult problems.

Grant that in seeking to head our country in a turbulent and troubled world, in which many of our old securities have been shattered, our own hearts and minds may be tempered with steadfast spirit which finds its strength in Thee.

Show us how we may make the ideals of democracy a stronger force in our own land, and thereby in the places of the earth where men struggle for freedom and justice.

Give us the wisdom, strength, and courage to keep alive among our citizens, their children and their children's children the spirit of reform, where needed, and give us the insight for an effective purpose, based on intelligence, and the right responsibility.

All of which we ask in the name of Thy Son, Jesus Christ our Lord. Amen.

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Monday, October 27, 1969, be dispensed with.

The PRESIDENT pro tempore. Without objection, it is so ordered.

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States were communicated to the Senate by Mr. Geisler, one of his secretaries.

REPORTS OF SECRETARY OF DEFENSE AND SECRETARY OF TRANSPORTATION, RELATING TO AWARDS FOR SUGGESTIONS, INVENTIONS, AND SCIENTIFIC ACHIEVEMENTS—MESSAGE FROM THE PRESIDENT

The PRESIDENT pro tempore laid before the Senate the following message from the President of the United States, which, with the accompanying reports, was referred to the Committee on Armed Services:

To the Congress of the United States:

Forwarded herewith in accordance with the provisions of 10 U.S.C. 1124 are reports of the Secretary of Defense and the Secretary of Transportation on awards made during the first six months of 1969 to members of the Armed Forces for suggestions, inventions, and scientific achievements.

The last previous report on the military awards program covered the calendar year 1968. Following the present six-month report, future annual reports will be submitted on a fiscal year basis. This will increase efficiency by facilitating the compilation of the report in conjunction with the Incentive Awards Program report which departments and agencies submit annually to the Civil Service Commission.

Participation by military personnel in the cash awards program was authorized by the Congress in September 1965. The success of the program in motivating military personnel to seek and suggest ways of reducing costs and improving efficiency is shown by the steadily increasing participation and the notable growth in measurable first-year benefits from adopted suggestions.

Tangible benefits from suggestions submitted by Department of Defense and Coast Guard military personnel that were adopted during the period from January 1 through June 30, 1969 totaled over $57,000,000. This figure, if projected for the entire year, would substantially exceed the total for calendar year 1968. Tangible first-year benefits derived from the suggestions of military personnel in the relatively short period since the program went into effect have now reached a total of more than $272,000,000.

130,861 suggestions were submitted by military personnel during the reporting period, and 20,757 were adopted. Cash awards totalling $924,742 were paid for these adopted suggestions, based not only on the tangible benefits cited above but also on many additional benefits and improvements of an intangible nature.

A substantial majority of the cash awards paid went to enlisted personnel at Grade E–6 and below. The size of the cash awards varied from the minimum of $15 to several awards in excess of $1,000.

Brief descriptions of some of the more noteworthy contributions made by military personnel through the suggestion

program during the first six months of 1969 are contained in the attached reports of the Secretary of Defense and the Secretary of Transportation.

RICHARD NIXON.

THE WHITE HOUSE, *October 28, 1969.*

REPORT ON WEATHER MODIFICATION—MESSAGE FROM THE PRESIENT (H. DOC. NO. 91-186)

The PRESIDENT pro tempore laid before the Senate the following message from the President of the United States, which, with the accompanying report, was referred to the Committee on Commerce:

To the Congress of the United States:

In recent months many American communities were ravaged by storms that were among the most violent and destructive in our history. Although our civilization has been able to perform the incredible feat of placing a man upon the moon and returning him to earth, we have only a very incomplete understanding of the forces which shape our weather and almost no power to control or change them. That is why this Tenth Annual Report on Weather Modification, as submitted by the National Science Foundation for Fiscal Year 1968, is of special interest.

This report tells of the important progress that is taking place in the field of weather modification—on projects ranging from augmenting precipitation and dissipating fog to simulating the life cycle of hurricanes. Such advances may someday permit us to manipulate our weather in ways which protect us from natural disasters and substantially improve the quality of our environment.

I congratulate those Americans who, in cooperation with scientists of other nations, are doing so much to achieve these goals.

RICHARD NIXON.

THE WHITE HOUSE, *October 27, 1969.*

EXECUTIVE MESSAGES REFERRED

As in executive session, the President pro tempore laid before the Senate messages from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(For nominations this day received, see the end of Senate proceedings.)

MESSAGE FROM THE HOUSE

A message from the House of Representatives by Mr. Hackney, one of its reading clerks, announced that the House had passed the bill (S. 2864) to amend and extend laws relating to housing and urban development, and for other purposes, with an amendment, in which it requested the concurrence of the Senate; that the House insisted upon its amendment to the bill, asked a conference with the Senate on the disagreeing votes of the two Houses thereon, and that Mr. PATMAN, Mr. BARRETT, Mrs. SULLIVAN, Mr. ASHLEY, Mr. WIDNALL, Mrs. DWYER, and Mr. BROWN of Michigan were appointed managers on the part of the House at the conference.

The message also announced that the House had disagreed to the amendment of the Senate to the bill (H.R. 4293) to provide for continuation of authority for regulation of exports; asked a conference with the Senate on the disagreeing votes of the two Houses thereon, and that Mr. PATMAN, Mrs. SULLIVAN, Mr. REUSS, Mr. ASHLEY, Mr. WIDNALL, Mr. MIZE, and Mr. BROWN of Michigan were appointed managers on the part of the House at the conference.

The message further announced that the House had passed the following bills, in which it requested the concurrence of the Senate:

H.R. 9257. An act to amend the code of laws of the District of Columbia with respect to facilities for the parking or storage of motor vehicles;

H.R. 12673. An act to authorize the transfer by licensed blood banks in the District of Columbia of blood components within the District of Columbia;

H.R. 13564. An act to provide that in the District of Columbia one or more grantors in a conveyance creating an estate in joint tenancy or tenancy by the entireties may also be one of the grantees;

H.R. 13565. An act to validate certain deeds improperly acknowledged or executed (or both) that are recorded in the land records of the Recorder of Deeds of the District of Columbia; and

H.R. 13837. An act to amend the Healing Arts Practice Act, District of Columbia, 1928, to revise the composition of the Commission on Licensure to Practice the Healing Art, and for other purposes.

ENROLLED BILLS SIGNED

The message also announced that the Speaker had affixed his signature to the following enrolled bills, and they were signed by the President pro tempore:

H.R. 5968. An act to amend the act entitled "An act to provide for the establishment of the Frederick Douglass home as a part of the park system in the National Capital, and for other purposes," approved September 5, 1962;

H.R. 9857. An act to amend provisions of the Perishable Agricultural Commodities Act, 1930, to authorize an increase in license fee, and for other purposes;

H.R. 9946. An act to authorize and direct the Secretary of Agriculture to execute a subordination agreement with respect to certain lands in Lee County, S.C.; and

H.R. 11609. An act to amend the act of September 9, 1963, authorizing the construction of an entrance road at Great Smoky Mountains National Park in the State of North Carolina, and for other purposes.

HOUSE BILLS REFERRED

The following bills were severally read twice by their titles and referred to the Committee on the District of Columbia:

H.R. 9257. An act to amend the code of laws of the District of Columbia with respect to facilities for the parking or storage or motor vehicles;

H.R. 12673. An act to authorize the transfer by licensed blood banks in the District of Columbia of blood components within the District of Columbia;

H.R. 13564. An act to provide that in the District of Columbia one or more grantors in a conveyance creating an estate in joint tenancy or tenancy by the entireties may also be one of the grantees;

H.R. 13565. An act to validate certain deeds improperly acknowledged or executed (or both) that are recorded in the land records of the Recorder of Deeds of the District of Columbia; and

H.R. 13837. An act to amend the Healing Arts Practice Act, District of Columbia, 1928, to revise the composition of the Commission on Licensure to Practice the Healing Art, and for other purposes.

LIMITATION ON STATEMENTS DURING TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. MANSFIELD. Mr. President, I ask unanimous consent that statements in relation to the transaction of routine morning business be limited to 3 minutes.

The PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR PROXMIRE

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the distinguished senior Senator from Wisconsin (Mr. PROXMIRE) be recognized for a period of approximately 30 minutes, beginning about 12:30 p.m. today.

The PRESIDENT pro tempore. Without objection, it is so ordered.

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that all committees be authorized to meet during the session of the Senate today.

The PRESIDENT pro tempore. Without objection, it is so ordered.

EXECUTIVE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate go into executive session to consider the nominations on the Executive Calendar.

There being no objection, the Senate proceeded to the consideration of executive business.

The PRESIDENT pro tempore. The nominations on the Executive Calendar will be stated.

U.S. ARMY

The bill clerk proceeded to read sundry nominations in the U.S. Army.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the nominations be considered en bloc.

The PRESIDENT pro tempore. Without objection, the nominations are considered and confirmed en bloc.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of these nominations.

The PRESIDENT pro tempore. Without objection, it is so ordered.

LEGISLATIVE SESSION

Mr. MANSFIELD. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to, and the Senate resumed the consideration of legislative business.

NATIONAL COMMISSION ON MATERIALS POLICY

Mr. BOGGS. Mr. President, several weeks ago, I introduced an amendment to S. 2005, which is currently under consideration by the Public Works Committee. The amendment, cosponsored by 11 other Senators including eight members of the Subcommittee on Air and Water Pollution, would establish a National Commission on Materials Policy.

The Commission would be charged with examining the use and reuse of materials in our environment and with suggesting ways for the United States to use more effectively its resources and technology.

The concept would give our Nation a fresh look, from the outside, at the full scope of the materials-environmental relationship, not limiting our perspective to a closeup of rusty cans and dirty water. Such preventatives to the pollution of materials left in our environment, I believe, would enable our Nation to develop a more effective and rational process toward environmental enhancement.

While the Commission would have a limited life, its design would be to leave a legacy of planning for all Government. The study from which the Commission idea came, "Toward a National Materials Policy," declares:

> A commission appears to give the most reasonable chance for rapidly bringing into focus issues in materials policy on a timely basis which could then be given consideration by some more permanent institution of Government.

I was pleased that in recent hearings before the Subcommittee of Air and Water Pollution, Government witnesses testified of the need for such a policy. Since those hearings, I have sent copies of amendment 153, plus copies of "Toward a National Materials Policy," to a number of environmental and materials experts for their evaluation and thoughts. I am gratified, as I know the cosponsors of the amendment must be, with the enthusiastic response it has received.

Mr. President, in order to give the Senate some idea of the opinions and reception for this amendment, I ask unanimous consent that these letters, together with a copy of my questions, be printed at this point in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

NATIONAL COMMISSION ON MATERIALS POLICY

There are several questions on which your comments would prove most helpful in a consideration of legislation to create a National Commission on Materials policy.

1. On the basis of your own experience, do you know of any important issue under the general heading of National Materials Policy that you believe is receiving insufficient attention today?

2. Should a commission, as proposed in this amendment, investigate the availability and use of materials? What limitations and restrictions, if any, should be placed on the consideration of the availability and use of materials by such a commission?

3. Do you believe that the directives in the amendment to such a commission are adequate? How might they be strengthened?

4. Do you believe that a 1½-year life and a $2,000,000 authorization is sufficient for an optimum contribution by such a commission?

5. Can you suggest other knowledgeable individuals whom the committee might profitably contact to gain a broader analysis of this amendment?

6. Do you believe the establishment of this Commission would serve a useful purpose?

7. Have you any suggestions for improvements to the amendment?

Any additional comments or thoughts you might wish to make would be greatly appreciated.

VIRGINIA POLYTECHNIC INSTITUTE,
October 3, 1969.

Senator J. CALEB BOGGS,
U.S. Senate.

DEAR SENATOR BOGGS: Thank you for your letter of October 1 regarding an amendment to S. 2005.

I was particularly impressed with Item 3 on page 3 of the amendment, which mentions recycling. Not enough attention has been given to this aspect of environmental quality control. We should direct our attention not only to the production and consumption of various items, but also to the restoration of used materials to some beneficial form. Virtually all of our technological efforts have been directed toward production, a luxury only permissible in frontier societies, if then. We should make every possible effort to redirecting technological development toward the problems of recycling various wastes.

Although I have not had the opportunity to read the report of the Materials Policy study group, I suspect that not enough attention has been paid to the sociological and educational problems of re-orientating an entire society from a use-discard way of life to a use-recycle way of life.

The problems of air pollution, water pollution, and solid waste disposal are so interrelated that I would hope the solid wastes problems would not be resolved in ways that would cause further environmental deterioration. The intent of the amendment to protect environmental quality in the larger sense is quite clear, but the ways in which the National Commission on Materials Policy activities would relate to those of other organizations charged with protecting the environment should probably be spelled out more clearly. Developing a workable system for general environmental protection will not be an easy task and yet, effective environmental quality control will probably not be workable if the various problems are considered in isolation.

In general, I feel that solid waste disposal legislation is desperately needed because we are destroying irreplaceable natural resources in the effort to avoid being buried in our own wastes. Reaching a harmonious relationship with our environment will probably require major changes in our way of life. Legislation that will enable us to make this transition with the least economic and social disruption is badly needed.

I am encouraged by your efforts and those of your colleagues toward the development of environmental quality control legislation that will enable us to enjoy the benefits of an industrial society without losing the privilege of communing with nature.

Sincerely yours,

JOHN CAIRNS, Jr.,
Research Professor, Department of Biology.

MISSOURI BOTANICAL GARDEN,
October 6, 1969.

Hon. J. CALEB BOGGS,
U.S. Senate.

DEAR SENATOR BOGGS: I wholeheartedly support the legislation you propose in the amendment for S. 2005. It is my conviction that the nation must have a careful assessment of its material resources and what it means to exploit them. How long will they last? How costly will they be? How much pollution will result from exploitation? How does the use of our resources relate to supply and demand elsewhere?

The one and a half year life sounds too short for such a commission. I believe two and a half or three years more realistic in order to accomplish a difficult job.

I am convinced that our present standard of living cannot be sustained for very many generations or if it is that the problems of wastes and pollutants will become impossible. There is a very important question to be answered which relates to: How much, for how many, for how long? An assessment of the answers to this question must be obtained.

The members of the Commission should receive compensation. I do not see consultants and others being paid and members of the Commission not paid, even though it is small.

Eventually we need to achieve a continuing study of the type proposed in your amendment. This can be judged better after this Commission has done its job.

Sincerely yours,

DAVID M. GATES,
Director.

CORNELL UNIVERSITY,
October 6, 1969.

Senator J. CALEB BOGGS,
Senate Office Building.

DEAR SENATOR BOGGS: Thank you for your good letter of October 1, inviting my comments on the Amendment to S. 2005. This calls for enhancing environmental quality and conserving materials, and I will offer a few general comments. As an ecologist I see our long term needs as going far beyond the provisions of this bill and, indeed, probably far beyond what it is reasonable to expect Congress to do very rapidly.

We are now being extremely wasteful of our natural resources and at the same time, accelerating deterioration of the environment. Without exception the situation could be greatly improved by legislation.

In the case of fuels, if we are looking to our long term needs, we should encourage imports and the development of more efficient means of utilization. This means, among other things, continual careful scrutiny of the entire transportation picture—internal combustion engines, mass transportation, etc. As regards power generation, engineers are confident that advanced systems, especially the magnetohydrodynamic generator (MHD) can greatly improve efficiency and reduce pollution. Proper incentives could hasten its development. Nuclear reactors of the present generation waste more than 99 percent of the energy in uranium and release frightening pollutants. Nuclear energy doesn't seem to have much future unless breeder reactors come along quickly. I regard the proposed fast breeders as exceedingly dangerous, but at Oak Ridge they have a prototype of a molten salt breeder reactor (MSBR) which will avoid both the main hazards and the contamination, and which will conserve our uranium and thorium. If it were my decision I would push development of the MSBR (and any equally promising systems I may not know of) and hold back on present day reactors.

As regards metals, present depletion allowances encourage mining with all its environmental effects. If it were made as expensive to mine and refine new ores as to reclaim used metal, the auto graveyards would disappear. Reuse should be encouraged—perhaps requiring deposits on aluminum cans would help.

The no deposit, no return glass bottle should be prohibited. Statistics show that deposit bottles make an average of 20 round trips so the present "one way" bottle will increase the waste disposal problem for glass

twenty fold. In fact attention should be given to eliminating glass bottles almost entirely. However, very intense studies of alternatives is needed. In Europe, especially West Germany, there are some very advanced incineration systems that burn trash and garbage with minimal environmental pollution, and generate electricity in the process! However, they find some types of plastics damaging to the grates. Such side effects should be taken into account in seeking substitutes for glass bottles. But if man is to have a long time future it will be absolutely necessary to find ways of recycling all of our wastes. Current practices are, as usual, determined by very short term (and in my view short sighted) economic considerations. During World War II even tin cans and toothpaste tubes had salvage value.

So I think the type of Commission you propose would find plenty of things to look into and, if properly constituted and staffed, could produce an invaluable report to guide future policy. However, I personally doubt that the job can be done adequately in 18 months or two years by busy people devoting part time without compensation.

Respectfully,

LAMONT C. COLE,
Professor of Ecology.

CALIFORNIA INSTITUTE OF TECHNOLOGY,
October 7, 1969.

Senator J. CALEB BOGGS,
U.S. Senate.

DEAR SENATOR BOGGS: I respond herewith to your letter of 1 October 1969 concerning your amendment to create a National Commission on Materials Policy. Overall, in my view, it is a good amendment, and I endorse it. I offer herewith the following substantive comments.

The bill itself is concerned with solid waste disposal. It is an Act concerning this matter. It is important, I think, that the bill as a whole, including its amendments, concern itself mainly with matters pertaining to solid waste. Items 204: 1, 4 and 7, while perhaps desirable in themselves, are not directly to the point of solid waste disposal.

Item 204: 2 is a really great and good innovation. We have not, in our nation, heretofore concerned ourselves greatly with population matters. Increasing population will of course sink our whole nation in solid waste, as well as in other undesirable by-products of civilization. Why should we not establish the Commission which you propose, to determine what is an optimum population size for the U.S., and methods for attaining and sustaining this optimum population? I do think that the proposed Commission could consider this matter, and that their findings would be really helpful to our country.

Responsive to your questions under the heading "There are several questions on which your comments would prove most helpful"—I offer my comments.

Question 1. "On the basis of your own experience, do you know of any important issue under the general heading of National Materials Policy that you believe is receiving insufficient attention today?"

I do indeed, particularly if we consider waste disposal. It is important, of course, that materials which can be recycled through our economic system be recycled. This is already considered in the bill as proposed, and in the amendment, as a suitable topic for discussion by the Commission. Even so, there is a certain irreducible minimum of waste which must be disposed of in some way. It is the opinion of many ecologists, and particularly of my colleague, Professor Norman Brooks, Civil Engineer of Caltech, that the best way to dispose of such irreducibly minimum wastes is at the bottom of the ocean. The bottom of the ocean is where nature has disposed of things for eons past. Let us continue this practice. Cut and fill is of limited good. Things leach out of cut and fill by rainfall, and pollute surrounding terrain. So let us dispose of the otherwise undisposable in the bottom of the ocean. Professor Brooks proposes to build a sewage canal from Chicago far out into the Gulf of Mexico, and drain the waste of the entire middle west through such a system. It is my estimate that this is a worthy enterprise to consider, and perhaps a solution in the long run to the problems of solid waste disposal in the middle west. I think that no one is seriously discussing this point, and that it should be discussed.

Question 2. You ask, "Should a commission, as proposed in this amendment, investigate the availability and use of materials?"

Yes, indeed they should. They should discuss in greatest detail the possible use of materials which are bio-degradable, or otherwise become unfit for use with age and easily disposable, preferably as sewage transported to the ocean, as noted above. Perhaps we should build our houses, not of brick, but of polyethylene, or so far as I know, of some more readily degradable material, so that houses as they become obsolete may be destroyed and degraded and transmuted into sewage. Perhaps sanctions should be imposed against the manufacture of aluminum foil, which, when transported into our out-of-doors, appears to last forever. Many such examples might be cited. The principle is, however, that the Commission, if proposed, and I think it should be, should consider and investigate.

Finally, you have outlined the directives in your amendment to the Commission on Materials Policy. I do think that the directives are sufficient. They are broad and all-inclusive. Successful operation of the Commission will depend mainly upon its personnel, upon the breadth with which they perceive their mandate. I do think the Commission can serve an enormously useful purpose. I have outlined several reasons for my belief above. Improvements for the amendment, so far as I can envisage them, would consist only in recommendations concerning the required high caliber of its personnel, and such recommendations, I realize, are politically infeasible. I hereby vote for your amendment. I think the Commission can perform a useful duty far over and above the direct purposes of its assignment.

Sincerely,

JAMES BONNER,
Professor of Biology.

UNIVERSITY OF CALIFORNIA,
LOS ANGELES,
October 7, 1969.

Senator J. CALEB BOGGS,
U.S. Senate.
Washington, D.C.

DEAR SENATOR BOGGS: I have reviewed the S. 2005 and the questions raised in your letter of October 1 on the proposed National Commission on Materials Policy, as well as the report of the materials policy study group and their recommendations.

Although I agree with the objectives of S. 2005 I am not enthusiastic about the Commission approach proposed in this amendment. The subject of materials management is part of the much broader spectrum of environmental and resource studies which historically are undertaken by many agencies of the government in a "shot gun" fashion. The proposed objective for the Commission of developing a coordinated national policy for materials management would certainly be a constructive contributioin. However, because of the complexity of the detailed problems involved in implementing any action in this area, there will probably be a need for a continuous examination, refinement, and modification of policy. For this reason the suggested 1½ year lifetime for the Commission appears to me to be inadequate. Further, the implementation of policy recommendations requires the continuous attention of an overview group after broad policies are agreed upon.

I do not believe that a short-term commission can perform these functions. In Appendix K, of the April 1969 study group report to you, the performance of several past special commissions is summarized. In particular, I call attention to the criticism of the Paley Commission on page 75. This commission did a monumental job and certainly produced valuable insight to our national materials problem. However, it resulted in "no significant legislative enactments" and "no action on its main recommendation of a continuing central coordinating agency." The criticisms of the other committees reviewed in the appendix also deserve consideration as possible difficulties with the proposed Materials Commission.

If the objective of the Commission is to bring national prominence to the issue, then the suggested activity at the presidential level will, of course, be most effective. If, however, the purpose is to develop coordinated national policy, I do not believe this would be a productive approach. For this latter objective, one could utilize the overview capabilities of non-governmental bodies such as Resources for the Future or the National Academy of Engineering for bringing together the pertinent variety of individual expertise, and for coordinating specialized studies into a composite analysis of the national problem. The suggested sum of $2,000,000 could probably finance an in-depth program of this sort for a period of about five years in the National Academy of Engineering. The Academy could utilize its volunteer on-goings committees and sub-committees with some modification for handling this task. While the same type of operation can be conducted by a permanent Commission, it would have to establish the administrative mechanism and professional contacts that now exist within the Academy.

I hope these comments are useful to you.

Sincerely yours,

CHAUNCEY STARR,
Dean, School of Engineering and Applied Science.

UNIVERSITY OF MINNESOTA,
October 7, 1969.

Hon. J. CALEB BOGGS,
U.S. Senate,
Washington, D.C.

DEAR SIR: I was pleased and honored to receive your letter of October 1 asking for an evaluation of the amendment you and your colleagues are proposing relating to the development of a "National Materials Policy." It is most urgent that our nation take meaningful steps to improve and conserve the quality of our environment. Inaction at this time will only result in a worsening state with the assurance that future generations will have occasion to deprecate the wisdom of their ancestors. I believe the following specific points should be made in relation to the questions you asked.

First, probably the most important single issue confronting the Nation in respect to a quality environment is the need to develop the technological know-how and economic feasibility to permit the degradation of fabricated materials so that their constituents can be used as elemental components in new manufacturing processes. I am sure you are aware that the most obvious scars on our landscape are a consequence of the fact that heretofore industry has had a relatively free hand (often with the concurrence of the citizenry) in the exploitation of the Nation's natural resources. This is a natural consequence of a free enterprise system. The challenge that now confronts us is to maintain this system in a minimally restricted fashion. I have long espoused the philosophy that what is really needed is a "compact" involv-

ing industry, government and the members of the scientific community, the philosophy of the compact being that it is in everyone's best interests to arrive at meaningful solutions in seeking a quality environment. Unfortunately, this procedure may require imbuing the populace with an "ecological ethic" and I'm afraid that such an educational process would require more time than we can afford.

Second, I believe the commission you have proposed should be established and that it should be guaranteed free access to materials from all government agencies and should not suffer restrictions associated with the classification of "sensitive" material. This remark is intended to apply specifically to the atomic energy industry (which is needlessly maligned because of its history) which will surely play a major role as an energy source for the future. Obviously, such a commission would have to be composed of responsible citizens whose sole purpose is to serve the best interests of the Nation.

Third, the principal way in which the directives to the commission might be strengthened would be to mandate rather than request the cooperation and assistance of other federal departments.

Fourth, if the commission were composed of individuals who were sincere of purpose, objective in their deliberations, and were duly sensitive to issues of national concern, I believe they would receive the necessary support of both industry and government and, therefore, could do an effective job in one and one-half years with a two million dollar authorization.

Fifth, the Nation includes a tremendous number of individuals who would be pleased to assist in analyzing the amendment. I believe that I will defer to Mr. Potter of the Environmental Clearinghouse and suggest that you request additional names from him. In so doing, I would like to make one point, however, and that is that, when the commission is established, it should include one or a few very prominent industrialists such as Henry Ford, Lawrence Rockefeller, etc., in addition to members of the scientific community and government.

Sixth, I wholeheartedly support the establishment of the commission and commend you and your colleagues for your action.

Seventh, the only suggestion I have for improving the amendment would be to emphasize the need for the commission having the broadest possible support from both the executive and legislative branches of government. It would be particularly significant if it could be specifically endorsed by the President so that there would be assurance of the cooperation of the government agencies with whom the commission would have to work.

I trust that these comments will be of use to you. Thank you for giving me the opportunity to respond.

Sincerely yours,

RICHARD S. CALDECOTT,
Dean, College of Biological Sciences.

INSTITUTE OF ECOLOGY,
UNIVERSITY OF GEORGIA,
October 7, 1969.

Hon. J. CALEB BOGGS,
U.S. Senate,

DEAR SENATOR BOGGS: Ed Deevey, formerly of NSF, said that pollution was unused production. While this is an oversimplified statement of the case, it is essential that we learn to recycle materials more efficiently. In a mature, stable economy we will have to maximize recycling and reuse of resources and reduce flow-through of the environment to a minimum. This policy is true not only because pollution of the environment is inimical to our welfare, but also because resources are limited and we cannot afford the cost of reconcentrating widely spread used resources. I can see the day coming when sewage and trash for each dwelling passes through commercial or government reconcentration centers where the materials are repackaged for use in manufacturing, agriculture, construction, etc.

Clearly, a National Materials Policy is essential for economic as well as for ecological reasons. I would suggest that the proposed commission not restrict its attention to specific material or resources since the problem is very wide and complicated and concerns all aspects of our ecology.

The amendment as written seems to cover all of these areas. I suspect that we do not have the knowledge available to devise feasible methods of recycling materials. Further stress might be placed on the economic value of reusing materials and therefore, increasing independence from difficult sources of supply of essential resources. This is an area where tremendous advances are going to be made and your amendment is clearly on the right track.

Sincerely,

FRANK B. GOLLEY,
Executive Director.

WOODS HOLE OCEANOGRAPHIC
INSTITUTION,
October 8, 1969.

Hon. J. CALEB BOGGS,
U.S. Senate,
Washington, D.C.

DEAR SENATOR BOGGS: Thank you for sending me the copy of your proposed amendment, S. 2005, which would create a National Commission on Materials Policy. The problems of disposing of solid waste is a serious one, and one which will certainly become more acute as our population increases and concentrates more and more densely in urban areas. It is equally obvious that we are rapidly running out of space where solid waste can be accumulated without creating an unsightly mess, so that your amendment to provide a broad overview of the entire problem is timely.

There are increasing pressures to use the oceans as the ultimate repository for solid wastes. There have been some studies on the effects of artificial reefs on the marine biota, and it appears to be true that many solid waste materials can be used to concentrate fish, primarily sport fish, in the area of the reef. Whether this is an actual increase in the production of these fish or merely an attraction of them to one locality is still unknown. Commonly these reefs, which ordinarily consist of old car bodies or building rubble, are detrimental to the commercial fisheries since they tend to tear up the nets unless the fishermen know their locations and stay away from them. The disposal of sewage sludges off Long Island, New York, produced a sizable area in which the oxygen content of the water is reduced to zero, and all of the bottom populations have been eliminated. In general, therefore, the disposal of solid waste at sea has been done without regard to the consequences and should be considered a temporary expedient the justification for which is largely "out of sight, out of mind."

As an ecologist, I am firmly convinced that our civilization must completely re-orient its thinking towards the reuse and recycling of all waste materials. I am pleased to see this included among your list of duties of the Commission. For every waste material there will certainly be some residue which cannot be recycled or reused, but we must recognize the fact that the resources of this planet are not unlimited, and the recycling of as much as possible of our waste material is the only approach which offers hope for the ultimate solution to this general problem.

In response to your specific questions, I would like to offer the following comments:

1. Considerable attention is being given to various waste disposal problems, including solid wastes by federal and state agencies. It is not the quantity but the quality of attention that I find lacking. Many problems are considered by several agencies, each with its own viewpoint and with its own objectives. This inevitably produces conflicting interests, and such conflicts may even occur within a single Department. A Commission, such as your amendment proposes, could take a broad overview and recommend actions which would eliminate some of the conflicts. The main deficiencies of most of these governmental considerations, however, result because there is a strong tendency to use the technology of the last century in an effort to solve current problems and those of the next century. As mentioned above, in regard to all matters of waste disposal, I believe that this point of view must be drastically altered.

2. A Commission, as proposed in your amendment, must certainly investigate the availability and use of materials. This would be a necessary first step in order to approach an evaluation of the problem. I would not presume to suggest any limitations or restrictions on this part of the activities of the commission.

3. The duties of the Commission as outlined in the amendment appear to me to be adequate, and to permit sufficient scope so that the Commission could conduct an effective analysis of the problem.

4. I suspect that a life of 1½ years with the Commission is probably not sufficient time to permit a detailed evaluation of this problem. I find it difficult to evaluate whether the sum of $2,000,000.00 would be adequate, since this would depend on the composition of the Commission, upon whether they can obtain support and assistance from their agency (if they are government employees), and upon how much of a staff would be necessary to accumulate the necessary facts and information.

5. It is clear from your letter that you know the members of the Board of Advisors to the Ad Hoc Committee on the Environment of the Congress, and I presume that you have sent each of them a copy of this amendment for comment. I assume that you have also sent it to the appropriate personnel in the various agencies who would be directly involved, and I hope that you have also sent it to the Naval Academy of Sciences and the National Academy of Engineering for their comments. It might also be desirable to send this to the presidents or secretaries of the various scientific and engineering societies which might have an interest in the subject.

6. Such a Commission might well serve a useful purpose if its recommendations led to a consolidation of our national efforts in the approach to this problem, and especially, as emphasized above, if it brought to the attention of the appropriate federal and state agencies and the general public, the need for a reorientation of our thinking concerning the entire waste disposal problem.

7. I have no further suggestions for the improvement to the amendment.

Thank you again for sending me this amendment for comment. I hope that the above statements will be of use to you.

Sincerely yours,

BOSTWICK H. KETCHUM,
Associate Director.

YALE UNIVERSITY,
October 8, 1969.

Senator J. CALEB BOGGS,
U.S. Senate.

DEAR SENATOR BOGGS: Thank you for your letter of October 1 regarding your proposed amendment S. 2005 to the Solid Waste Disposal Act. Following are my comments to the specific questions accompanying your letter:

1. What is needed, but may be outside the terms of reference of the proposed commission, is a meaningful National Materials Policy that evaluates all of the following components: (a) population growth, (b) changes in rate of per capita consumption of different materials, (c) efficiency of utilization of materials, and (d) national and world material resources. There seems to me to be inadequate recognition of the implications of national and world population growth, that the total supply of both non-renewable and renewable resources is essentially finite, and inadequate study of ways to control the variables a–c to maximize long-term benefits.

2. Yes. No limit, aside from time and funds.

3. The directive should stress the need for long-range goals in terms of an ecological balance of population and resources.

4. The task of this commission is too great to accomplish its objectives in 1½ years. In that period of time and with the proposed allocation of two million, they should, however, succeed in defining the problem and building a model which could lead to an effective National Materials Policy.

5. Former Secretary of the Interior, Stewart L. Udall, would have a good deal to contribute by way of more recent perspectives on a bill which he was partly responsible for.

6. The establishment of such a commission is not only useful, it is essential to our urgent needs in this area.

7. None at the present time, although I would hope that it would lead to a permanent review and study and further legislation, where needed, regarding our use and waste of materials.

Sincerely,

RICHARD S. MILLER,
Oastler Professor of Wildlife Ecology.

UNIVERSITY OF WASHINGTON,
October 9, 1969.

Senator J. CALEB BOGGS,
U.S. Senate.

MY DEAR SIR: I have your communication of 1 October concerning S. 2005. I am pleased to comment on this amendment but hasten to point out that it concerns an area that is somewhat peripheral to my own competence.

In reply specifically to your questions:

1. An area that may not, although I am not certain, be receiving adequate attention is that of the disposal of plastic materials which, in general, decompose extremely slowly under natural environmental conditions. The rapid increase in the use of such materials, in my opinion, will make this soon a pressing problem.

2. I am not competent to comment.

3. Under Sec. 204(b) should there be a mechanism to facilitate the procurement of essential information from industry?

4. One and one-half years appears to be a bit too limited. I would suggest two years.

5. I would suggest that you consult the Environmental Studies Board of the National Academy of Sciences. The chairman is Doctor Harold Gershinowitz.

6. Yes, especially if it establishes adequate liaison with governmental components and non-governmental organizations concerned with the quality of environment.

7. None other than the suggestion in 3. Beyond this, Sir, I would make only one general comment. There is rightfully a growing concern about conservation and the quality of environment—within the Government and in the private sector. I find myself increasingly concerned with the patchiness and lack of integration of these well-intentioned efforts. It seems to me that it is now imperative that attention be given to some type of integrating scheme within the federal government.

If I can be of further assistance, please do not hesitate to inform me.

Sincerely yours,

DONALD S. FARNER,
Professor of Zoophysiology and Chairman, Department of Zoology.

COMMONWEALTH OF PENNSYLVANIA,
October 10, 1969.

Hon. J. CALEB BOGGS,
U.S. Senate.

DEAR SENATOR BOGGS: I am pleased to reply to your letter of October 1, 1969, concerning your amendment to pending solid waste legislation, S. 2005, which would create a National Commission on Materials Policy. I am sure that you will understand that I am not a materials expert but rather an administrator in the field of environmental protection, and my comments reflect that viewpoint.

It is obvious, of course, that the questions involved in a study of materials policy are considerably broader than the environmental-ecological aspects. But the concept embodied in Title II of S. 2005, in effect, would provide a new "window" through which to look at national materials policy—that is, it would add the environmental viewpoint to the many others which must be taken into consideration. In my opinion, this addition is not only important, it is essential and perhaps might be considered a matter of survival.

From my point of view, there is also an inherent hazard in this approach. The hazard is that the environmental ecological aspects might be considered in such a minor way as to get lost in the many complex and difficult aspects of national materials policy.

The average citizen hardly needs an additional committee or commission to tell him that the volumes of polluting wastes emanating from man's activities due to growing affluence, higher standards of living, exploitation of natural resources, increasing industrialization and technology are resulting in wholesale and sometimes irreversible degradation of our environment. But he would be benefitted by the exploration and generation of new approaches and policies which would reduce or stem this tide through better methods leading to reductions in materials use or increased re-cycling and re-use of otherwise waste materials. Unquestionably, there needs to be spelled out the ways in which public intervention and public investment need to be activated for the common good, that is, environmental protection.

The achievement of environmental quality unquestionably requires utilization of a great many different kinds of leverages. The proposed study by a National Commission on Materials Policy could add to the armamentarium for environmental protection if adequate emphasis is given to this aspect.

Sincerely yours,

WESLEY E. GILBERTSON, P.E.,
Deputy Secretary for Environmental Protection.

GEORGIA FOREST RESEARCH COUNCIL,
October 10, 1969.

Hon. J. CALEB BOGGS,
U.S. Senate,

DEAR SENATOR BOGGS: Reference was made to your letter of October 3, 1969 to the Board of Advisors posing seven questions from which you would like to have the reaction of the advisors. I shall attempt to answer your questions in the order in which they were presented:

1. No.

2. Yes, as this commission is an investigative and study commission I suggest that they not be bound by tight limitations and restrictions.

3. Yes, I believe that the directives are adequate.

4. Yes.

5. None.

6. Yes, definitely.

7. No.

Comments: I endorse the establishment of a Commission on National Materials Policy. If I had any suggestion it would be that S. 2005 should be passed by the Senate and that the Commission should be created at the earliest possible date so that they may begin their investigation and study without delay.

Sincerely,

H. E. RUARK,
Director.

THE UNIVERSITY OF MICHIGAN,
October 13, 1969.

Hon. J. CALEB BOGGS,
U.S. Senate,

DEAR SENATOR BOGGS: The report, "Toward a National Materials Policy." which I should have received some days ago, reached me only shortly before my departure for two weeks as Adviser to the World Health Organization. Thus, I have time for only the briefest comments now. On my return, I hope to examine the report more closely, and I shall probably have more detailed comments at that time. Rather hurried answers to some of your questions are:

1. I believe that there is inadequate policy and governmental machinery for the disposal, redistribution, or whatever term is to be used, of materials after they have been used. Our culture is well equipped to *assemble* materials of many kinds into the areas of greatest concentration of people. We are very poor, however, at redistributing used materials over the earth. This redistribution will be an essential feature of any environmental improvement method.

2. I should have thought that the commission would have needed to investigate the availability and use of materials, in order to carry out the duties listed in the amendment. I am therefore not sure that I understand the full meaning of the question.

3. Yes.

4. The sum seems large and the time short, but I am by no means qualified to give an informed answer to this question.

5. All such individuals whom I know would already be members of the Board of Congressional Advisors.

6. Only if a need is felt within the administrative departments for the advice and recommendations of the proposed commission.

7. Only the general suggestion raised in answer to No. 1, above.

Yours sincerely,

NELSON G. HAIRSTON,
Director, Museum of Zoology.

INDIANA UNIVERSITY,
October 13, 1969.

Senator J. CALEB BOGGS,
U.S. Senate.

MY DEAR SENATOR: In response to your letter of October 1, 1969, may I offer the following reactions to Senate Bill 2005, The National Materials Policy Act of 1969. In attempting to be of some assistance on this matter, I will follow the list of questions mentioned with your letter.

1. The whole question of wasted materials and lack of provision for recycling of reusable materials has certainly received insufficient attention. It seems obvious that the enormous problem of waste being created by the manufacture of no return, no reuse containers, and by the manufacture of equipment which can not be repaired and can only be discarded when worn out or broken. I am convinced that material recycling will shortly become a national policy if not for reasons of material shortage, certainly then as a measure to relieve the ever mounting problem of waste disposal. I would hope that this aspect of materials policy would receive much greater emphasis in the future than it has received until now.

2. Should a commission be created as proposed in the bill I would not think it desirable to limit it's consideration of the availability of use of materials.

3. The directives in the proposed amendment to the bill seem adequate to me, although they perhaps could be strengthened by more emphasis on the relationship of a

materials policy to systems of waste management and disposal. It may be that the main body of the bill makes ample provision for this. I would be inclined to add to Paragraph 6, Section 204, a similar affirmation to effect coordination cooperation among non-governmental agencies engaged in the production, distribution and use of materials.

4. It would seem to me that the provisions of the amendment to the bill are sufficient with respect to its life and fund authorization.

5. I am not able to suggest at the moment persons other than those that would readily come to the attention of your committee who might be used in connection with the analysis of the amendment. You have no doubt been in touch with Mr. Richard Carpenter who is heading the new Environmental Policy Section in the Legislative Reference Service in the Library of Congress. I am confident that he could be very useful in this connection.

6. I believe the establishment of the commission would serve a useful purpose. There is no question but that the problems to which it would address its attention are of major and growing importance in our national economy and are major factors in the difficulties that we are now having with the management of environmental quality.

7. I do not have specific suggestions for the improvement of the amendment but it seems to me to be a desirable and constructive piece of legislation. As you know, I am hopeful that this session of the 91st Congress, or in any event, the second session can enact legislation establishing a national policy for the environment. I have followed with much interest the legislation enacted in both houses of Congress during the past several months. If the features of the several bills that have been front runners for consideration were combined in an appropriate manner I think we could have a very strong and effective piece of legislation that would be very well received throughout the country. It would seem to me that your proposed amendment to the Solid Waste Disposal Act would be a contribution to national environmental policy.

With all good wishes.

Very sincerely,

LYNTON K. CALDWELL,
Studies in Science, Technology & Public Policy.

THE UNIVERSITY OF TEXAS AT AUSTIN,
October 13, 1969.

Hon. J. CALEB BOGGS,
U.S. Senate.

DEAR MR. BOGGS: I am indeed quite glad to respond to your request of October 1 for comments on the amendment which you and various of your colleagues are proposing to S. 2005. I am very much in sympathy with the objectives of your group. I will try to answer to the best of my ability some of the questions which you have posed.

With respect to question 1, I feel that we have an inadequate national policy with respect to materials today, if indeed one can say that we do have a general policy. It seems to me that the present need is one for a policy toward the total resources of the earth and toward these resources as viewed with respect to the size of the human population. As an ecologist, I am aware that there are limits to the potential growth of any population, including that of man. This means that the earth has a carrying capacity for man that is determined by the availability of the necessities which man requires. Therefore, I feel that any consideration of materials should also carry a consideration of the desirable limits to be put on the human population. The U.S. policy toward materials should be one that takes into account the totality of resources of the planet not just those available nationally.

In answer to question 2, I feel that a commission such as proposed in your amendment should have great freedom of action in investigating the availability and potential use of materials. As stated above, I feel that the commission should take an international view rather than a purely nationalistic one.

In answer to question 3, I believe that the directives to the proposed commission are quite broad, and I can make no useful suggestion for broadening of these directives. I am particularly enthusiastic about Item 7 regarding the feasibility and desirability of establishing computer inventories of national and international material requirement supplies and alternatives. I would only add that I would hope that again the question of human population size with relation to availability might also be fed into the computer. What I am saying is that the time has come and is actually past due when the world must look at population with respect to the ability of the earth's resources to support that population. Only by computer modeling and by the use of the modern technologies provided by the computer can the complex interaction of population and resources on a world-wide basis be gainfully analyzed.

With respect to question 4, I am rather dubious that a life of 1½ years would be adequate to see the job completed as I see the job ahead.

I hope these comments have been of use to you.

Sincerely yours,

W. FRANK BLAIR,
Professor of Zoology.

TENNECO, INC.,
October 13, 1969.

Hon. J. CALEB BOGGS,
U.S. Senate.

DEAR SENATOR BOGGS: Your letter of October 1, 1969, in reference to S. 2005 was misdirected and has just now been received. I, therefore, regret the delay in my response.

For convenience, I will reply using the format of your attachment and my comments will relate to the number of the questions listed.

1. I am of the opinion that the Ad Hoc Committee Originated By The Legislative Reference Service Library of Congress has adequately defined the problem by stating it is the availability, use, and disposal of materials which should receive the attention of a National Commission to be established through legislation. It is my candid opinion that none of these areas are receiving adequate attention.

With reference to the availability of materials, I would call to your attention the impact which may result from success in the recovery of manganese nodules from the ocean floor. This is relevant to me at this point in time because Tenneco Inc., through their subsidiary Deepsea Ventures, Inc., is the first privately financed organization with a mission to economically recover manganese nodules from the deep ocean floor, i.e., 10,000 to 15,000 feet, and to process those nodules in order to extract the metals contained therein. This is just one technological activity currently under way which may have a substantial effect on the availability of certain metals currently in short supply.

Intuitively, I suspect that the United States, its Government, industry, and people are not wisely using those materials which are available and that waste may well result in material shortages which, if continued, may be strategically and economically intolerable. My point is that if such waste exists, then we as a country must recognize it and seek workable solutions which will result in the avoidance of such waste.

With reference to disposal, we have a paradox currently in existence where we have solid waste materials choking our very existence with an important percentage of this solid waste being useable fibre. While at the same time, the paper manufacturers of the United States are suffering from a lack of raw resources which could be offset by reclaiming waste fiber.

The point of these three examples is to stress the fact that all three elements of the materials problem, i.e., availability, use, and disposal, have not had the proper attention and may very well result in serious economic consequence to our country.

2. Yes, in my judgment the Commission should investigate not only the availability and use of materials but also their disposal. I have interpreted the amendment sponsored by you and your colleagues to result in the creation of a group of specialists who would, on a very broad basis, investigate the availability, use, and disposal of materials for the purpose of recommending a course of action for our Government to follow to assure a sound National materials policy. It would be my reaction that such a Commission be restricted to that function. The Commission should not be made permanent and neither should it have authority to create and/or implement National policy. I believe that each element of our material problem is inordinately complex and of a magnitude beyond the understanding of most individuals. It would seem, therefore, that in some point in time the Congress may find it necessary to establish a permanent organization which would be responsible for the development of plans and policies that would assure an intelligent National program in the materials field. I envision an organization something like the former N.A.C.A. This was an organization that contributed greatly to progress of aviation in the United States. It sponsored research internally and externally. It served as a repository for a vast array of technical information in the aeronautical sciences. It was objective, effective, and trusted by Government and industry alike. During its long history, it seemed to avoid politics in the conduct of its affairs. I see a similar organization required for material technology. There is a need to know what is being done in research, development, and standard practice; and similarly, what can be done. The former might be accomplished by the establishment of a central information repository which would include pertinent statistics, technical state of the art, procedures, technique, policy and laws. The latter may result from sponsored research and development programs within the Government organization as well as industry. On the disposal end of the material problem, we have activities fraught with politics from the township level right on through to the Federal Government. Not long past, the results of an important mayoralty race was strongly influenced by an emotional appeal related to whether or not a housewife should separate her garbage. I, therefore, believe in some way we must remove these problems from politics. We must permit science and economics to determine the proper course of action.

3. Yes, I find the directives in the amendment to be adequate. The Commission is authorized to investigate in a very broad area and I believe it should be confined to investigation and concomitant recommendations.

4. Yes, I believe the 1½ year life is adequate for an optimum contribution by a Commission. I do not, however, feel that $2,000,000 authorized for that period of time is adequate. I believe that five times that amount would be required for the Commission to do what I think is required. I can envision their using Government and private industry research and development organizations for comprehensive analyses related to systems, engineering, economics, behavior patterns and other obvious areas which relate to this problem. To do this adequately, they are going to require money.

5. Yes, Mr. George Diesk, Senior Vice President, Packaging Corporation of America, 1632 Chicago Avenue, Evanston, Illinois 60204; Mr. Steven Brown, Environmental Science Coordinator, Tenneco Chemicals, Inc., 280 Park Avenue, New York, New York 10017.

6. Yes, the Commission can serve a useful purpose.

7. None, other than increase the amount of money authorized for the Commission.

I am concerned primarily with the disposal part of the materials problem. In my investigations to date, I find little or no imagination, innovation, or aggressiveness being used in the approch to a solution of this universal problem. In reviewing extracts on the grants which have been made by the Solid Waste Division of H.E.W., I find large sums of money being spent for the construction of *new* incinerators and the development of *new* land fills. I have not seen a grant which is in support of research or development directed to new ways of disposing of such material. I would expect to find some place in the Government a research grant in support of the development of biodegradable materials. It may, for instance, be possible to rearrange the molecular structure of polyvinyl chloride (PVC) to permit degradation at a given point in time or by the introduction of a catalyst. My point here is that in my judgment, the United States, its Government, and its people are not using imagination, resourcefulness, and inventiveness to solve this serious problem that confronts the world. Without question, we have the technical capability but we seem to lack the desire to confront and resolve this problem. The Commission that you and your colleagues envision may very well serve as the catalyst in our country to develop a constructive course of action in this vital area of National interest.

Sincerely yours,

ROBERT R. LENT,
Director, Corporate Research and Development and Marketing Services.

ECOLOGICAL SCIENCE CORP.,
Miami, Fla., October 14, 1969.

Senator J. CALEB BOGGS,
U.S. Senate.

DEAR SIR: Thank you for your nice letter of October 1st and the material on proposed amendments to S. 2005, a bill to amend the Solid Waste Disposal Act.

I compliment you and your Committee on Public Works on an excellent presentation. I support your proposal enthusiastically.

I am concerned about the lack of encouragement that our present administration is providing for creative technical talent to pioneer radically new concepts that can solve our material disposal problem economically. The challenge is upon us to find a way to dispose of our exploding volume of wet and dry garbage, solid refuse and miscellaneous liquid wastes. Present methods not only are uneconomic but are imperiling survival of human beings on this earth by drastically upsetting the ecological balance that nature for so many years has provided to sustain human life. We must move with haste to encourage the greatest natural resources that we have—creative technical talent—likely found in an embryo company such as Ecological Science Corporation—to apply advanced technology to dispose of such refuse in a manner that cycles the effluents back into the rhythmic pattern that nature's ecological system can handle.

Concerning the specific questions you raised:

I don't believe the Commission should investigate the availability and use of materials. Rather, the emphasis should be on the manner materials are integrated in terms of the ultimate disposal requirement. This is the area that has been completely neglected in our society.

I believe the directives in the amendment to the Commission on materials policy are adequate. I would suggest that it specifically be understood that the Chairman of such Commission would be an individual other than the President's Science Advisor.

I think the initial appropriation of $2 million for the first 18 months is an adequate start. I believe the purpose of the Commission should be primarily of a catalytic nature—one that deals in concepts and establishes ground rules that stimulate proper application of advanced technology to the various problems at hand.

Without question, the establishment of the Commission would serve a most needed and urgent purpose.

I would be happy to appear before your Committee, Senator Boggs, to testify my enthusiastic support of what you are proposing.

If I can be of any further help, please advise.

Cordially,

HAROLD P. KOENIG,
President.

AMERICAN GEOGRAPHICAL SOCIETY,
October 14, 1969.

Hon. J. CALEB BOGGS,
U.S. Senate.

DEAR SENATOR BOGGS: Replying to your letter of October 3rd, I have read the proposed amendment to your bill on environmental quality, and find it to be excellent.

Replying to the specific questions on materials policy, I have always felt that we should know more about the available inventory of materials before we considered programs, such as we have often considered, for distributing particular things to certain groups of persons. In some cases, we are quite clearly promising to distribute more than exists in all the world. This is particularly true about programs in under-developed countries.

In another one of the specific questions, I note that the proposed authorization is for a 1½ year life for the commission. Knowing of the many delays which beset any program, I wonder whether the 1½ year figure may not be too short. I also wonder whether the $2,000,000 figure is not perhaps a little too generous. I am not familiar with the details of the staffing of such a commission or its expenses, but I would hope that these could be held to a lower figure.

With best wishes,

Very sincerely yours,

SERGE A. KORFF,
President.

ILLINOIS NATURAL HISTORY SURVEY,
Urbana, Ill., October 14, 1969.

Hon. J. CALEB BOGGS,
U.S. Senate,
Washington, D.C.

DEAR SENATOR BOGGS: I have read and reread the Amendment, the report of the Committee on a Proposed Commission on National Materials Policy, and the list of questions on the same subject. While I wish I could be of some help to you, it would be presumptuous of me to even suggest that my knowledge includes the area of materials and our National requirements in that regard. One does not have to be an authority, of course, to recognize the necessity for intelligent use of our natural resources, and for maximum reduction in waste and wastes from such use. Where wastes cannot be eliminated, some means for disposal must be found which create minimum further deterioration of our environment. Thus, insofar as these matters are to be investigated by the proposed National Commission, even I can agree with some assurance to the desirability of the Commission being formed. Despite the goodness of your intentions, however, I suspect the findings of the Commission will not result in a lasting solution to these problems because of the lack of a vehicle for assuring the implementation of the Commission's recommendations.

Perhaps I have become a bit discouraged with this sort of thing in our State and National governments. If the Commission does its job properly and conducts a genuine in-depth evaluation of materials-use as it concerns the ultimate and total welfare of mankind, the Commission's report will step on the toes of some pretty powerful organizations who, thus far, hold immediate economic profit to be more important than anything else. History does not suggest that either the Executive or the Legislative branches of our government will do anything with the report that is contrary to good practical politics. A few farsighted and genuinely conscientious individuals in the Congress will continue to try for something better, however, and I suspect that is why persons such as yourself keep pecking away at the problem in the hope that significant results will ultimately materialize.

It seems to some of us in the boondocks that the attitudes of Congress are gradually changing toward a greater realization of the consequences of mankind fouling its own nest. Now that the maintenance of environmental quality has begun to take on the aspects of a national fever, however, it is quite disheartening to note that really progressive legislation to this end is being stymied by the evident search for personal political gain by those very persons in whom we had begun to have confidence.

I apologize, Senator, for straying off on a tangent that doesn't really have considerable relationship to the questions you have asked of me. My impatience appears to be showing, perhaps, because the problem of environmental quality is becoming even more desperate while we maneuver and manipulate to satisfy other interests which, though now formidable in appearance, will prove ultimately to be of such little overall importance as to escape mention in the history of mankind.

Maybe we are attacking the environment and materials problems from the wrong direction. In my naive judgment, we might achieve greater and quicker success if, through some mechanism utilizing better perspective, a package of finite national goals could be developed—a sort of 10 Commandments which would determine the orientation of all the activities of our nation. But I would counsel that criteria for determining these goals must be—*not* the needs and pressures of national prestige whether economic development or military stature but rather—the needs revealed by a realistic and objective evaluation of the basic requirements of the physical and mental health and well-being of all mankind. Once such national goals or objectives are established and made inviolable by legislative action, we might be more effective in our search for means to achieve the goals.

Yes, I know the development of such hard and fast regulations of our national behavior is probably politically unrealistic at this time. However, if such were in force and if the improvement of environment quality was one of the highest priority national objectives, I suspect the membership of the *ad hoc* Committee on National Materials Goals and Objectives would have contained at least one individual whose basic training and experience was concerned with the components of environmental quality and that more than four lines of the proposed amendment to S. 2005 would have been devoted to treatment of this subject.

While I'm afraid I haven't been of much real help to you in this instance, please feel free to call upon me for assistance in matters where my competence may be greater.

Respectfully yours,

GEORGE SPRUGEL, Jr.,
Chief.

OCTOBER 15, 1969.

Senator J. CALEB BOGGS,
U.S. Senate.

DEAR SENATOR BOGGS: The fact that S. 2005 (with proposed Amendments) should have been introduced a generation ago does not alter its importance today. There is a bare chance yet that we may rescue our environment; S. 2005 could be one of the lifesaving instruments.

A national policy on materials is needed. Perhaps your Commission is the way to go about it. I would want some assurance that everything else in this area (and perhaps comprehended by other sections of S. 2005) will not come to a halt or be delayed while a Commission picks its way through this bristling minefield of interests. Specifically I hope that the research needed on recycling and such technical questions would not be frustrated or put off, since they are of essence. Prayer will do no good in this situation, only brains and perseverance.

Dr. Irving Bengelsdorf said in this morning's Los Angeles Times, "We must stop treating our planetary home as if we had a spare in the trunk. There not only is no spare, there is no trunk." Why not have this nice collection of words embossed on the membership certificates of your Commission?

I conclude this letter with brief comments on the seven questions attached to your letter of October 1:

1. No issue is yet receiving sufficient attention; that is why S. 2005 and the proposed amendment make so much sense.

2. No, in answer to first query. This would be diversionary. There are mountains of data that the Commission ought to be required to assimilate. In answer to the second query, the Commission ought not to be restricted in any way. It is being asked to provide guidance in a National Emergency, and should not be hobbled.

3. The language of the proposed Amendment is too placid for my taste. How to impart a sense of urgency? I don't like Sec. 203(a) ". . . demonstrated competence with regard to matters of materials policy . . ." This provision builds in back-scratching as a Commission principle. For once I'd like to see with a lively sense of the general welfare. The political process has not been enhanced in the minds of Santa Barbarans by the activities of those in and out of government with respect to the great Channel Oil spill. These are uniformly men of ". . . demonstrated competence, etc." but their competence is inevitably attached to the interests of the oil industry.

4. Yes. It will keep the Commission from horsing around.

5. Wallace Pratt (former oil geologist for Standard Oil Company (N.J.) now retired), 2820 North Torino Ave., Tuscon, Ariz. 85716; Prof. Norman Sanders, 130 Arroqui Road, Montecito, Calif. 93103.

6. Yes, as indicated above.

7. See comment on Question 3 above.

I am grateful to you for inviting my comments and wish you well.

W. H. FERRY.

SANTA BARBARA, CALIF.

WARNER BURNS TOAN LUNDE,
October 15, 1969.

Re amendment to S. 2005.
Senator J. CALEB BOGGS,
U.S. Senate.

DEAR SENATOR BOGGS: Thank you for your letter of October 1st.

I do not feel competent to answer some of the questions you have posed but in respect to the directive to the Commission, I would surely hope that the relationship of materials policy to land use would be a paramount policy question. It should clearly be the aim of national materials policy that the operations of all materials-extractive industries, *particularly terminal operations,* be conducted in a much more respectful attitude toward the land, water courses and water bodies. A positive policy toward encouraging innovation in land reclamation of such disturbed land should accompany regulatory legislation enforcing compliance with the overall requirement that the extractive industry render the land *usable* when extractive work ceases, rather than abandon the land in dereliction.

To that end may I suggest under Sec. 204 (a)(2), the insertion of a sub-para (c) as follows, "and (c) national land use policy", or some similar way of charging the Commission with the inclusion of land considerations in its social accounting approach toward materials policy.

I trust I have conveyed the significance of this point of view and, if not, please do not hesitate to contact me.

Sincerely,

FRITHJOF M. LUNDE.

THE JOHNS HOPKINS UNIVERSITY,
October 15, 1969.

Senator J. CALEB BOGGS,
U.S. Senate.

DEAR SENATOR BOGGS: It is a pleasure to comment on your letter of 1 October and S. 2005. The lateness of this reply is due to my hospitalization with hepatitis, for which I apologize (both to you and to myself).

I believe S. 2005 hits at the heart of an extremely serious problem. Our "throw-away" economy particularly offends an ecologist, such as myself, whose training revolves around the necessity of recycling materials in order that the viability of the ecosystem upon which we depend be maintained. Even more offensive is our poisoning (with pollution) of ecosystems which is surely leading to the collapse of mechanisms which make recycling possible? Needless to say, I would hate to see the collapse of our nation as a result of ecological collapse—such as probably happened to the Maya, and to the Mediterranean nations of the Middle Ages, etc. We are not so far removed from these as we sometimes think!

Your summary questions are answered briefly, in order. (1) Disposal of nuclear waste is an unresolved matter and one which causes many of us to feel that the nuclear power industry is jumping the gun on public and environmental health. The highly-secret boats of all kinds need a thorough going-over here too. In fact, the military is a major pollutor and should be brought to task most severely. Garbage and cars are the major civilian concern; the packaging (throw-away bottle and plastic carton) industry can only be afforded by such nations as the U.S. and the result is a frightful mess and heavy financial disposal burden.

(2) Yes, a commission should be appointed. It should be broad, not limited. It should be based upon *recycling of materials* and in close cooperation with any Environmental Quality group(s) set up or perhaps under the direction of one such group. It should cooperate with the USPHS and the USDI and not be subject to DOD, AEC, or other restrictions.

(3) The directives appear good, but then I am no legislator! From the point of view of the ecologist, I would emphasize the inclusion of environmental scientists (p. 2, line 10) and recycling (p. 3, paragraph 3).

(4) One and a half years and $2 million *must* be adequate. This is a problem as critical as violence, though more technical. What were the time/costs there?

(5) I am passing copies of your letter, my answer, and S2005 to the following colleagues here at Hopkins:

Dr. E. P. Radford, Department of Environmental Medicine.

Dr. R. M. Herriott, Department of Biochemistry.

Dr. C. W. Krusé, Department of Environmental Health.

Dr. Radford's expertise is in environmental health; Dr. Herriott's is in biochemistry, genetics, and their relation to public health; and Dr. Krusé is our school's leading authority on waste disposal. All are quite cognizant with "advise and consent" within government.

(6) Yes—implied in the above—provided close ties are maintained with other Environmental Quality group(s).

(7) Answer is given in (3) above.

In conclusion, you see that I take the holistic, environmental view of the latter-day ecosystem ecologist. The surest route to disaster is to consider pollution, waste, and resource use piecemeal, plant by plant or resource by resource. Water, land, and people work and live together and the best legislation will recognize the need to use and regulate ecosystems rather than resources and waste products one at a time. In this regard, the Federal structure is weak, for it is set up to regulate piecemeal (health, wildlife, power, oil, etc.) which is proving to be folly in our crowded world.

My sincere good wishes.

Sincerely,

CARLTON RAY,
Associate Professor,
Department of Pathobiology.

NATIONAL WILDLIFE FEDERATION,
October 16, 1969.

Hon. J. CALEB BOGGS,
U.S. Senate.

DEAR SENATOR BOGGS: Thank you for inviting me to comment upon your proposal for a National Commission on Materials Policy as an amendment to pending legislation on solid waste disposal.

The establishment of this Commission and a National Policy on Materials will, in my view, have much merit, if its objectives are not going to be accomplished by the President's Environmental Council or with the framework of other proposals for over-all national policy on the environment which are being considered.

If a national policy relating to solid waste disposal is to be established, I would suggest it might be well to pattern it after the programs which have been set up for air and water pollution abatement. Responding specifically to the questions asked in the attachment to your October 1 letter, I would suggest the following:

1. Problem areas which merit special consideration are the location of city dumps in places where they disturb ecological areas, such as marshes and swamps, or pollute water; and the filling of fish spawning grounds. In short, any waste disposal proposals should receive full ecological consideration.

2. Research on self-destructing packaging to replace bottles, aluminum cans, etc., is strongly recommended and we believe this is provided for in Section 204(a)(3) of your proposal.

3. and 4. Yes to both questions.

5. If you have not already done so, we recommend you contact Mr. Allen H. Seed, Executive Vice President of Keep America Beautiful, 99 Park Avenue, New York, New York 10016.

6. We believe the establishment of this Commission would serve a most useful purpose, unless another group is already planning to do the same thing.

With all good wishes.

Sincerely,

THOMAS L. KIMBALL,
Executive Director.

UNIVERSITY OF RHODE ISLAND,
October 16, 1969.

Senator J. CALEB BOGGS,
U.S. Senate.

DEAR SENATOR BOGGS: Thank you very much for your letter of October 1.

I am sorry to be late in replying, but I have been away for the past ten days, so I am behind in my correspondence.

I did have the pleasure of being in your state of Delaware on that trip.

With reference to your suggested amendment to document S. 2005, I heartily agree with its purpose, and look forward to its approval by the Congress. The only question I raise—and perhaps it's not proper to do so in the amendment—is that it may place primary emphasis upon technology rather than upon public policy. Section 4, page 3, does ask that opportunities and incentives be considered. The great difficulty in waste material management, is to get the individuals to accept the price of salvage or reclamation in the cost of the new product. If somehow conservation legislation could be enacted that would oblige producers to include disposal-salvage costs in the original price of their product, then funds for disposal and/or salvage would be collected automatically. To my mind the management of waste products—their disposal and/or conservation is more of a psychological problem than technological.

It is very encouraging to note the efforts that you and your good colleagues in the Senate are making to provide America with a more liveable environment.

Sincerely yours,

EDWARD HIGBEE,
Professor of Geography.

CONNECTICUT COLLEGE,
October 17, 1969.

Hon. J. CALEB BOGGS,
U.S. Senate,

DEAR SENATOR BOGGS: I very much favor your proposed Amendments S. 2005 in reference to the Solid Waste Disposal Act. Any Commission that can be concerned with the holistic view in resource use will aid immeasurably. Unless we begin to look at our entire ecological base holistically we shall find ourselves in a trap waiting to be sprung. For example, California produces over 40% of the vegetables for our nation yet its first and second class agricultural lands are disappearing at a fantastic rate. Unless this trend is arrested people in New York or Florida will be seriously affected by food shortages, if the population continues to increase.

Who is seriously looking at this problem besides Dr. Watt at the University of California, a systems ecologist? Currently he is restricting his efforts to one county with a proposal to study California as a whole. We should be looking at all the States since they are interdependent. I merely mention this as representing one of many problems not receiving adequate attention on a national scale. The need for a Council of Ecological Advsisors and a National Institute of Ecology is absolutely essential.

With best regards,

Sincerely,

WILLIAM A. NIERING,
Professor of Botany.

BATTELLE MEMORIAL INSTITUTE,
October 20, 1969.

Hon. J. CALEB BOGGS,
U.S. Senate.

DEAR SENATOR BOGGS: I have examined your proposed amendment (S. 2005) to the Solid Waste Disposal Act and the report on a Proposed Commission on National Materials Policy which you so kindly sent to me. As a member of the Board of Advisors to the Ad Hoc Committee on the Environment, I am pleased to have the opportunity to comment on these matters and on the specific questions raised in the memorandum attached to your letter of October 1.

The ideas I have expressed in this letter are my personal opinions and do not necessarily reflect the position of Battelle or of any of its other staff members. As an ecologist, I have no special qualifications concerning the economic or technological aspects of materials production or utilization, but I am very much concerned by the ever increasing consumption of materials and the ever increasing need to develop methods of waste product disposal which will not lead to further environmental degradation. It seems ironic to me that we might so mismanage our natural resources that the short-term social benefits of technological advances could very well be canceled in the long run by increased environmental pollution and degradation.

In many cases, we already possess the technological know-how to avoid the undesirable, long-term consequences of waste product disposal. What seems to be needed now is a means of stimulating public interest, on both the local and the national level, in the application of existing technology to present problems and the development of even more effective methods of dealing with future problems of the same kind.

I agree wholeheartedly with the statement on page 2 of the above-mentioned report to the effect that: "There must be, somewhere, a mechanism for looking at the problem as a whole, for keeping track of changing situations and the interrelation of policies and programs." I personally am convinced that a comprehensive understanding of the entire process of materials production, utilization, and disposal, and the general diffusion of this understanding, are prerequisites for the development of a National Materials Policy. Establishment of a Commission such as the one described in your amendment should contribute substantially to the development of such an understanding. It would, in my opinion, be a significant step in the direction of developing a general understanding of our entire society as a system of interacting components and processes operating on a variety of time scales; and this approach, I believe to be the only feasible approach available to us if we hope to achieve the kind of stability required for long endurance of any kind of system.

The following comments are directed to the specific questions raised in the memorandum attached to your letter of October 1.

1. I don't know of any important issue under the general heading of National Materials Policy that *is* receiving sufficient attention today. This rather extreme statement results from my understanding (or misunderstanding) of what is meant by "sufficient attention". If "sufficient attention" means a continuing program of studies to insure an adequate supply of critical materials for present and future needs, an understanding of all stages of production, utilization, and waste product disposal, and an effective program of regulations and controls to minimize the undesirable effects of these processes on man and his environment, the statement stands. The only possible exception I can think of at the moment is the management of the production, use, and disposal of nuclear fuels by the United States Atomic Energy Commission. Since the nuclear industry is virtually a government monopoly, it may not be an entirely appropriate example in this particular case; but the methodology and procedures developed over the years by the AEC should provide a great deal of useful data for consideration by a National Commission on Materials Policy.

2. As already indicated, I believe a National Commission on Materials Policy, could perform an invaluable service to the Government but I feel it would be a mistake to impose any limitations or restrictions on such a Commission other than those specified in Sec. 204. I believe such a Commission would be most effective if it is free to establish its own goals and priorities. At the same time, it would probably be unrealistic to expect a two-year program to develop the "comprehensive understanding" I referred to earlier.

3. In my opinion, the directives in the amendment would be strengthened by the following revision:

Page 3, line 1: Delete "and".

Page 3, line 2: Change ";" to "," and add the following: "and (c) such other matters as they [the Commission] may determine to be important."

Also it seems important to me that an effort should be made to develop a set of criteria, quantitative criteria if possible, which would be useful in judging the merits of proposed policies with respect to specified objectives and current knowledge of the processes involved. Since the development of such criteria may prove to be so difficult that it could not be accomplished by a short-lived Commission, it would probably be unwise to include it as a directive; but the revision suggested above would at least permit such an objective to be included in the Commission's study.

4. The Commission is being asked to "make a full and complete investigation and study" of an extremely broad subject. On the basis of my own experience in attempting such studies I would guess that $2,000,000 should be an adequate level of funding, but at least two years would be required to do a thorough job of assimilating and interpreting even a fraction of the available information. For this reason, I suggest that line 16 on page 4 be revised by changing "June 30, 1971" to "December 31, 1971".

5. Since I have no special qualifications to comment on implications of the amendment other than ecological, I would suggest that you contact socioeconomists, business types, etc. to determine if they are willing to express additional points of view.

6. In my opinion, a National Commission on Materials Policy, as described in your amendment, could make a significant contribution to the development of a comprehensive understanding of the various processes involved in materials production, utilization, and disposal; and such an understanding is prerequisite to the development of national policies and management procedures which are needed (a) to optimize the economic and other benefits of these processes, and (b) to minimize their adverse effects on man's environment.

7. My suggestions for improving the amendment are given in paragraph 2, 3, and 4 above.

Since many of the matters to be investigated by the Commission [especially items (2), (3), and (5) under Sec. 204(a)] have to do with environmental quality and ecological processes related to waste disposal, I would strongly recommend that one or two members of the Commission should be chosen "for their outstanding qualifications and demonstrated competence" in the field of ecology. Many ecologists who would be eminently qualified to serve on such a Commission are members of the Board of Advisors to the Ad Hoc Committee on the Environment. I am sure that Dr. David Gates, Chairman of that Board of Advisors, or Dr. Herbert F. Bormann, President-Elect of the Ecological Society of America and also a member of the Board of Advisors, would be happy to suggest a number of possible candidates for such an appointment.

I hope you will find at least a few of these comments—I see they've grown rather voluminous—to be helpful in promoting your commendable amendment. If I can be of any further assistance in this or any related matter, please let me know.

Sincerely yours,

WILLIAM E. MARTIN,
Associate Fellow.

PETER HUNT ASSOCIATES,
October 20, 1969.

Senator J. CALEB BOGGS,
U.S. Senate.

DEAR SENATOR BOGGS: I am gratified by your request for my review and comments on S. 2005. The subject is, without question, worthy of congressional attention and to your credit that its importance is being recognized and new approaches being sought.

Evidence of the need for a centralized group to anticipate and review problems,

generate policy, and manage the nation's interest in physical materials appears in Appendix L of your Ad Hoc Committee's Report. There are 252 dots on that chart, each representing a specific organization and function related to material resource management. Even at this, the chart is incomplete. One can only wonder at the number of federal personnel engaged in some aspect of the problem, and speculate at the annual cost of maintaining these organizations. The potential duplication of effort and conflict in behavior of such a shotgun organization of managerial responsibility, demands a higher degree of centralized planning and policy formulation.

My response to your specific questions and additional considerations are attached. I hope they will be of some value to you in furthering the needed legislation.

In answer to your specific questions:

No. 6. Would the establishment of this Commission serve a useful purpose?

The very establishment of such an organization would serve to focus national attention on the subject which would be a useful purpose. Our material resources are finite and at our accelerating rate of nonrecoverable consumption, we are imposing severe limits on our future. The greatest benefit, however, would hopefully be realized once the Commission started identifying specific problems and stimulating corrective action.

No. 1. Related issues that are today receiving insufficient attention?

I am encouraged to see that you recognize the close inter-relationship between the quality problems of the physical environment and the management of materials. True, there are environmental problems that lie outside the field of materials such as the waste heat of atomic power plants, sonic booms, etc., but many like air and water pollution are directly related to the waste disposal aspect of material management. As far as disciplines or related technologies that have not had sufficient attention, I would like to see a greater emphasis on systems analysis and the decision making techniques of Cost Benefit analysis. I confess the bias of having these as my area of specialization but unless we expand our view of the problems and take into account what the classical economists call *external diseconomies*, few significant changes can be anticipated.

No. 2. Should the Commission investigate availability and use of materials? If so, what restrictions or limitations should be placed on these investigations?

The questions of supply and demand projections coupled with impact and alternative analyses are fundamental to the mission of the Commission. Without supply/demand information, the Commission would not have the data on which to formulate policy or make substantial recommendations. Most of the data currently available is out of date or of questionable accuracy so the organization will have to develop it themselves.

As far as any restrictions, I am sure that there are economic sectors that have a vested interest in the status quo and feel that they should be excluded, the oil, chemical and extractive industries, for example, but because of our technical capacity to generate inter-industry substitutes plus the current recognition of undesirable substitutes nothing should be insulated from scrutiny. In short, no restrictions or limitations seem warranted.

No. 3. How should the directives be strengthened?

There are several ways in which the Commission might be strengthened that occur to me:

(1) Although you have touched on the subject, extra emphasis might well be placed on finding secondary uses for what is now considered waste material from industrial systems. Any gains in this area have a double payoff in that you reduce the absolute requirements that we take from the natural supply and second, you reduce the cost of disposal. I suggest the development of a national inventory and clearinghouse function for these waste products.

(2) The Commission should be authorized to hold open hearings on subjects they choose to examine. In addition, monies should be provided to pay the cost of interested private citizens so that the general public will enjoy the same opportunity to testify as the financially interested industrial sector of the economy.

(3) The Commission should be encouraged to submit interim status reports and recommendations to the Congress and the President and not withhold actionable thoughts until their final report.

(4) Broaden the qualifications for Commission membership. To rely on government service or direct experience in the materials field is a mistake. Such backgrounds could well prove to be a liability to new approaches since intensive experience tends to limit rather than broaden, and what is needed is a wide perspective of the implications. Specific expertise is always available through the channel of consultants to the Commission for specific tasks. In essence, I feel that a Commission composed of generalists who have a deep concern for the subject and are capable of seeing the full-range economic, social and military complications of the policies would serve the purposes of the legislation best.

(5) I would eliminate the computer based data bank feasibility study from the activities. For an information system of this sort, it is of really questionable value and, if it belongs anywhere, should be something for consideration by a continuing on-going organization.

No. 4. Is $2 million and 18 months adequate for an optimum contribution?

I don't think so with such an open ended job ahead of them. After all the money will only cover about 40 professionals for this period of time, and the dimensions of the task in terms of research, are large. You might ask Resources for the Future how much they spent on their 1962 study which was weak, slow and narrow in terms of what you are asking for and done for far less expensive dollars. The time period is again too short when you consider it will take about six months to get staffed up with good people.

As a way out of this box of time and dollars, I would suggest that you phase the job into three sequential pieces with interim reports at 6, 18 and 30 months, and a new budget at the mid-point.

No. 5. Other knowledgeable people:

Bruce Wilburn, Principal, Peat Marwick & Mitchell, 2000 Tower Building, Prudential Center, Boston, Massachusetts. 02199

Area: *Systems Analysis.*

Thomas Lawler, Legislative Assistant, Senator Quentin Burdick area: *Solid Waste Management.*

Norman Wilder, Director, Delaware Game and Fish Commission, Dover, Delaware 19901, area: *Land Management.*

No. 7. Suggested improvements to the Amendment?

(1) Pay the seven commission members an adequate salary to have them work full-time on the problem. You do not want them as occasional overseers of the staff's work but as total participants and leaders of the effort. The job is of sufficient importance to deserve strong, continued management.

(2) Under the assumption that the Council on Environmental Quality Bill is passed (Dingell, Muskie, Jackson version) set up a Joint Committee to manage the council and have the Materials Policy Commission report to the same congressional body since their aims and scope are similar.

(3) Give serious consideration at the outset to making this commission and its job a continuing one. This could result in significant savings in federal expenditures by reducing the materials work now being done in many departments of government (see final chart in the report), and would result in a continually updated view of material availability and technology. The group could report annually to the Congress and to the President, and act as a central clearinghouse for materials data to the remainder of the nation. Making clear this intent at the beginning, would also relieve the onus of the Commission having to recommend this themselves.

(4) Define the term of office for commission members to increase its independence.

(5) Raise the rate of pay for the consultants. You cannot attract the best people for $100/day any more.

PETER S. HUNT.

OCTOBER 20, 1969.

HON. J. CALEB BOGGS,
U.S. Senate.

DEAR SENATOR BOGGS: Although to the best of my knowledge I am not a member of the Board of Advisors to the Ad Hoc Committee on the Environment, I am very pleased to respond to your letter of October 1 concerning the proposal to establish a National Commission on Materials Policy.

Certainly a Commission on Materials Policy could increase public interest and awareness of some important problems in this area. We are, of course, getting into a great deal of this over the past few years as a result of dramatically changing demands for resources—recreation and environmental demands and those for preservation of wild areas are examples of continuing changes that will likely typify the future.

There is a danger with the establishment of a Commission that it could in fact slow down the adjustment to the changing demands, by centering attention almost exclusively upon long range projection of need. The focus of such efforts has often been on coming up with long range projections to the serious detriment of examining the policy and planning variables that make these numbers of extremely marginal worth. The real problem of course is to recognize that there may be competing demands for materials and to determine ways to reconcile these in the most efficient and equitable manner.

I would suggest that the emphasis should not be as strong on determining future requirements, but instead should be on the best means to accommodate the range of values important in materials policy. All too often studies of this nature concentrate on a determination of what are thought to be certain requirements and thereby rule out the consideration of precisely many of those things that we want to vary.

It seems to me the need is to make the allocative mechanisms, principally the market forces, more effective in providing for materials. At present these forces often do not provide what are thought to be proper allocations because of serious technical deficiencies in the incentives and restraints provided by the market. We need, for example, to look at the effect of taxes, the pervasive existence of externalities or spillover effects in providing for many materials, non-market considerations that preclude many values from being considered, and some serious problems of irreversability and discounting of future gains an losses. The total effect of all of these difficulties is that the social returns from current policies may often fall far short of what they could be with better recognition of the total range of values involved. We have cetainly seen evidence of these kinds of difficulties in the current efforts to deal with problems of waste disposal and pollution. Here non-market demands and the spillover effects are of paramount

importance and we have now begun to design programs and policies to take them into account.

I feel that the role of the Commission, if one should be appointed, should be far more in the area of determining better ways of handling current demands than on endless projections of future requirements. I would also certainly agree with Professor Garnsey in calling for less of what he terms a commodity approach; that is, studies of any number of separate material commodities. The important problems are very much common to all and a focus on these will more likely lead to ways for making improvements.

I am very pleased to have had the opportunity to examine the proposal and to make these comments. If I can offer any further views, please do not hesitate to call on me.

Sincerely,

JACK L. KNETSCH,
Director and Professor of Economics, Natural Resources Policy Center, The George Washington University.

THE CINCINNATI MILLING MACHINE CO.,
October 21, 1969.

DEAR SENATOR BOGGS: Your letter and the enclosures dealing with your proposed amendment to S. 2005 arrived while I was out of the city and this has delayed my reply.

I cannot qualify as a specialist in the field of materials but rather as a generalist accustomed to handling the broader technical economic and planning aspects of problems. Many of these have involved plastics, metals, some ceramic materials, and more recently water management. However, one does not have to be an expert to see signs in many places of a rapidly growing problem in the effective management of our materials resources.

Thus your amendment proposing a commission for studying this whole area and recommending the elements to be included in the development of a national materials policy is very timely, particularly since the formulation and implementation of any such policy generally moves rather deliberately. The time for a beginning is now, especially since this particular task in the case of materials is a monumental one. The rapid advances in the technologies related to this very complex problem are in themselves sufficient to justify immediate and continuous action toward solutions which will be of maximum benefit to the public interest. Population growth is another factor which indicates urgency in getting under way.

To be effective the commission must learn to define and understand the many facets of the problem. Then the objectives need to be set up, clarified and defined. After that the tasks required in the technical, political, social and economic areas can be set up. The charge to the commission appears adequate for a beginning. As it becomes immersed in its task, the needs and priorities will become more sharply defined.

The remarkable advances which have been made in materials and the keen competition between some of them like plastics, metals and wood which result from the requirements of the market place, including better performance at lower cost, should be encouraged.

I wonder whether this tremendous job can be done in 1½ years. It will take time to gather the basic information which will be needed to begin the formulation of policy. A time of 2 years might be more realistic. This would raise the cost above $2,000,000.

The proposal of a commission of several members to be chosen from Government and the private sector is a good one. The members from the private sector could come both from universities and from industry. It is important to include men from industry who are accustomed to applying the latest techniques and technologies to multifaceted problems and who have an appreciation of economics and time in addition to technology. Men should also be chosen who can devote some real time to the study and are not subject to overfilled schedules in addition.

The provision for and the selection of an excellent staff are essential to the success of such a study. There is no substitute for competence here. It will also be necessary to call in consultants as is provided in the bill.

A serious defect in the effective use of commissions is that they have no authority. They make their investigations and write reports which are sometimes used but are more often filed and ignored. There are in the water field alone many excellent recommentations in government reports which have never been implemented. What is needed in the field of materials is a continuing effort which can keep abreast of technological and other changes. Otherwise, the program becomes crippled and out-of-date. There is no point in setting in motion the time and effort of a commission if there is little done later to act on its recommendations.

The implementation and refinement of a national policy will involve a huge effort in gathering, classifying, storing and interpreting the data which are already available.

Fortunately with the tremendous advances in computer technology and information handling during the last decade, the tools are at hand both for storing and processing the vast quantities of data required and in setting up computer simulations of the materials systems which will eventually furnish the basic information for decisions on the management of material resources.

A systems approach of this kind is essential in making sound headway on complex problems. It permits looking at such problems in totality rather than piecemeal and indicates the consequences of various alternatives.

The Subcommittee on Water Resources Research of the National Association of Manufacturers of which I am the chairman has recommended this approach for a demonstration project on a large river basin. It would indicate the effectiveness and the cost of the various alternatives which are available in water and waste treatment on the quality of the water at all points in the river and thus generate information for making decisions in water management. Similarly, mathematical models of the supply, processing, use and disposal of materials would indicate the alternatives available and the effects which can be expected on the environment, on the economy, on national defense, and other social and political areas.

I believe your amendment is a good one and wish you success in its adoption.

Sincerely,

P. WILLARD CRANE,
Consultant.

PRESIDENT NIXON SHOULD ACCELERATE THE WITHDRAWAL OF OUR GI'S FROM VIETNAM

Mr. YOUNG of Ohio. Mr. President, it has been reported in the public press that President Nixon has privately stated, "I am not about to be the first President of the United States to lose a war." Any student of American history knows that Richard Nixon could not possibly be the first President of the United States to lose a war. Could anyone claim that we Americans were not the losers when President Eisenhower, following his campaign statement that he would go to Korea, ended that war soon after taking office, on terms rejected by President Harry S. Truman? That war was ended on terms which were not a credit to the United States or to the United Nations, under whose flag the Korean conflict was fought. Of course, that was a war we Americans did not win.

In the War of 1812 against Great Britain, Gen. William Hull, at the outset of that war, surrendered the frontier post of Detroit without firing a gun; and his force of more than 1,000 American soldiers surrendered to 300 English and Canadians, with perhaps a couple of hundred Canadian Indian allies. Then, throughout that war, American forces sustained one defeat after another. There was cause for rejoicing when on September 10, 1813, Commodore Perry won the battle of Lake Erie. Except for heroic naval exploits in destroying and capturing English frigates, the War of 1812 was a most discouraging war from the standpoint of military victories. In the Battle of New Orleans, on January 8, 1815, one of the great victorious land battles in the history of the United States, the English forces lost 2,600 men, including their commanding officer, Sir Edward Packenham, a brother-in-law of the Duke of Wellington. Only 13 Americans were killed. That was a great victory for Americans, but it was fought and won after the treaty of peace had been signed with England, but before knowledge of that fact had reached the United States.

The truth is that our involvement in Vietnam in support of a militarist Saigon regime cannot be won by military victory if such victory means the abject surrender of the forces of the National Liberation Front, or VC. Even President Nixon acknowledged that in a speech last May when he stated that the United States does not seek a military victory in South Vietnam.

During the presidential campaign, Richard Nixon stated repeatedly that he had a secret plan to end the war in Vietnam. The simple truth is that his plan for ending that immoral, undeclared war, if indeed there was or is such a plan, is not working. At the present rate of troop withdrawal, it will take at least 10 years before all of our forces are brought home. There is little hope of accelerating that rate of withdrawal so long as the administration continues its policy of supporting the militarist regime in Saigon, which lacks any popular base whatever. At most, only 20 percent of the people of South Vietnam support the military clique now in power.

The Secretary of Defense repeatedly speaks of "Vietnamization" of the war; that is, turning the war over to the so-called friendly forces of Vietnam—too friendly to fight. Week after week more young Americans have been killed and wounded in combat than South Vietnamese soldiers. The ARVN forces, for the most part, cling to coastal areas safe from VC attacks. Successive regimes in Saigon have had one opportunity after another to "Vietnamize" the war. The fact is that after 8 years we have only succeeded in more thoroughly Americanizing it each year.

The very best that can be expected from the present administration policy is a slow and halting withdrawal of American combat forces, followed by permanent occupation of South Vietnam

by 250,000 to 350,000 American troops and airmen and a permanent drain on our resources badly needed at home. Reducing the troop level in Vietnam from 535,000 men to a permanent garrison of 250,000 or 350,000 men is not what Americans had in mind when they elected Richard Nixon to end the war.

Defense Secretary Laird himself discussed as a "fallback" position the possibility of maintaining a 200,000-man garrison in South Vietnam indefinitely. Unfortunately, it appears that this is what the Joint Chiefs of Staff have in mind and are really talking about when their spokesmen renew their old, stale propaganda of the war being almost won or their promises that it will slowly fade away, or that they can see the light at the end of the tunnel.

Mr. President, is it the policy of this administration to seek an end to this immoral, unpopular, undeclared war or merely to reduce the casualties and the troop commitments to what it supposes to be politically tolerable levels?

Until the President begins to make a real effort to solve the central task of forming a coalition government in Saigon, he cannot begin to make good the pledge on which he was elected. The President needs a new policy aggressively directed to a realistic political settlement. The present administration policy is totally inadequate. It rests upon the concept of an election to be conducted and essentially controlled by the Saigon militarist regime while huge numbers of American troops remain in South Vietnam. The VC and the Hanoi Government quite obviously will not accept a rigged election of that sort. Indeed, they may not accept any settlement to which the present Thieu-Ky militarist regime is a party.

The President has never really faced up to this issue. His statements about not "imposing" a government in South Vietnam miss the point entirely. In fact, the administration is imposing the Thieu-Ky militarist regime on South Vietnam every day of the year. Were we to withdraw only our financial support from that dictatorship and the huge subsidy to meet the payroll of its troops, the Saigon Government would fall within a month. Thieu and Ky would then be forced to flee and rendezvous with their unlisted bank accounts in Hong Kong and Switzerland.

The fact is that while professing a desire for peace, the administration has failed to create political conditions in Vietnam under which peace is possible. The desire of those Saigon militarist leaders to remain in power is totally inconsistent with President Nixon's statement that "What is important is what the people of South Vietnam want." These incompatible policies hold out the prospect not of peace but of a prolonged military occupation which will continue indefinitely to drain American treasure and lives.

President Nixon and all responsible Americans want to get out of Vietnam as soon as possible. Walter Lippmann has stated that we are fighting a major war in South Vietnam in order to save face. It is true just as the Chinese sage Confucius said many centuries ago:

A man who makes a mistake and does not correct it, makes another mistake.

The same is certainly true regarding nations.

It is now evident to practically all Americans that we do not have any mandate from Almighty God to police the world. There is a general realization that we never should have supported the French from 1946 to their defeat at Dienbienphu in 1954 in their attempt to reestablish their lush Indochinese colonial empire.

Then, it was a tragic mistake that we went into Vietnam with our Armed Forces and our tremendous air power and napalm bombed so many cities, villages, and hamlets in South Vietnam to "save them." We are compounding that mistake the longer our Armed Forces remain there.

Moratorium day, October 15, was the greatest peaceful mass demonstration in the history of our Republic. Americans paraded with dignity or remained away from work to show to administration leaders that Americans want the war to end without delay—that Americans demand a halt to the loss of priceless lives of recent high school graduates and the flower of the young manhood of America in a faraway little country of no importance to the defense of the United States.

Very definitely, we should bring home as quickly as possible by ship and plane, in the same manner our Armed Forces were sent, the more than 500,000 Americans in our Armed Forces now in South Vietnam. At the same time we should call on the North Vietnamese to withdraw without delay all of their forces now in South Vietnam. This total according to former Ambassador Averell Harriman, a truly great American and our most skilled and experienced negotiator, is estimated to number not more than 40,000.

I am hopeful that President Nixon will accelerate the withdrawal of American troops from South Vietnam. He should respond to the overwhelming will of the majority of Americans and immediately withdraw all of our Armed Forces from Vietnam.

The PRESIDING OFFICER. Is there further morning business?

Mr. PEARSON. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. PELL. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. PEARSON in the chair). Without objection, it is so ordered.

ANNIVERSARY OF THE ENTRY OF GREECE INTO WORLD WAR II

Mr. PELL. Mr. President, today, October 28, marks the 29th anniversary of the entry of Greece into World War II. It is an important holiday in Greece for it marks the turning point in that countyr's struggle for liberty and freedom.

On October 28, 1940, the Greek people began a decade of fighting and sacrifice, marked by both triumph and tragedy, which encompassed some of Greece's most desperate moments and some of its finest hours. Those of us who care about the ideals for which the Greeks fought, and who care about the courageous people of that country, find it difficult to celebrate today, because of the fact that Greece is in the hands of a military regime which has made a mockery of the victories won by Greece during that turbulent 10-year period.

I have spoken many times on the floor of the Senate in recent months on this subject. I do not intend to repeat or recapitulate these comments today. Suffice it to say that the regime continues to be repressive. The Greek people do not enjoy the civil liberties which are the fundamental characteristic of a democracy. Reports of torture by reliable observers continue, despite official denials. In fact, the regime has been censored by the Consultative Assembly of the Council of Europe for violating the European Convention on Human Rights and a subcommission on human rights of the Council will present a report on this subject in December. Finally, there are persistent reports of a growing anti-American sentiment in the country based on the feeling that the United States is supporting the present regime.

The people of Greece should know that there are many in this Chamber, many in the House of Representatives, and millions of Americans who deplore the present situation in Greece. We are not only saddened by the apparent unwillingness of the Government to move toward the restoration of democracy, in the land in which democracy was born, but outraged by the violent methods being used by the regime toward those who question its principles and practices.

There is, of course, little that we can do to help the Greek people, for the character of their regime is, in the final analysis, their own internal affair. But there is something that we can do not to help the military dictatorship. To this end, I have proposed an amendment to the foreign aid bill which would curtail military aid to Greece by insuring that no additional aid is programed until the Congress so approves. I shall do all that I can and have that proposed amendment enacted into law.

The PRESIDING OFFICER. Is there further morning business?

NOMINATION OF CLEMENT F. HAYNSWORTH, JR., TO BE AN ASSOCIATE JUSTICE OF THE SUPREME COURT

Mr. BELLMON. Mr. President, since the nomination of Clement F. Haynsworth, Jr., for the position of Associate Justice of the Supreme Court on the 18th of August of this year, every Member of this body and particularly those Members who serve on the Committee on the Judiciary have been flooded with comments from their constituents, special interest groups, labor organizations, and from many of their colleagues, concerning this appointment.

Mr. President, every Member of this

body has heard of the "Darlington case" and the "Brunswick case." The facts of those cases and the judge's role in them have been repeated many times here on the floor of the Senate and any objective study of them can, in my opinion, only lead to the conclusion that the charges made are in fact not substantiated by any evidence before the committee or the Members of this body.

From my examination of the testimony presented at the hearings on Judge Haynsworth's confirmation, the committee was primarily interested in determining whether three basic criteria had been met by this nominee. First, is Judge Haynsworth a person of great integrity; second, has Judge Haynsworth demonstrated judicial temperament; and third, does Judge Haynsworth possess a high level of professional ability.

Using these basic criteria as guidelines upon which one should base his opinion in considering the nomination, I have found ample evidence that the nominee qualifies with flying colors.

Judge Haynsworth has made disclosures of his financial holdings in more detail than is required by any Member of this body and in much greater detail than most members of the judiciary who have previously been confirmed by the Senate.

Many members of the legal profession who have conducted cases before Judge Haynsworth as well as the organized bar, in the form of the American Bar Association, have expressed confidence in his ability as a judge to render a fair and just decision in any case appearing before him.

I would also like to point out that many of those expressing that view had, in fact, lost cases in the judge's court. However, it appears that they still hold to the opinion that the decisions were rendered fairly, using the cases decided in the past and the evidence which had been presented.

Mr. President, there is need for serious concern over the impact of this controversy on the Supreme Court.

I can find no reason to oppose a person solely because his philosophy is contrary to my own. I can find nothing which indicates that the judge has committed an unethical practice. Judge Haynsworth has been a distinguished circuit judge, and I believe he will be an outstanding addition to the U.S. Supreme Court.

Mr. President, a major confrontation over the nomination of Judge Haynsworth to the Supreme Court is coming up on the Senate floor in the near future. The public's interest in the Court, and the intense press coverage of the nomination hearings, and attacks against the nominee insure that the Nation will be watching closely as the Senate votes on this nomination.

The President has made it clear that he stands behind Judge Haynsworth's nomination. After reviewing all of the attacks made against the nominee on his civil rights record, his labor record, and on his integrity, the President reaffirmed his confidence in Judge Haynsworth. His letter of October 3, 1969, to the minority leader states:

In order that there be no misunderstanding on the part of anyone, I send this letter to confirm that I steadfastly support this nomination and earnestly hope and trust that the Senate Judiciary Committee and the Senate will proceed with dispatch to approve the nomination.

It is equally clear that those who oppose the nomination are not ready to relent. The machinery to block confirmation has been set in motion and it is questionable if the attack could be stopped now even by those who started it.

Thus, notwithstanding the fact that a great deal of balance has been added to the whole discussion in the Senate by the efforts of the distinguished Senator from Nebraska (Mr. HRUSKA) and the distinguished Senator from Kentucky (Mr. COOK), thousands of labor union and union members and thousands of supporters of civil rights are writing and telegraphing their opposition to their Senators. Most of these communications reflect an understanding of, or exposure to, only one side of the issue. They represent the product of the massive effort that was begun several weeks ago when the entire story had not been presented. We are confronted, now, by thousands of people and organizations who have publicly committed themselves to fight the Haynsworth nomination, right or wrong.

There is another dimension to the "stop Haynsworth" effort: The outright lobbying of Senators by private interest groups. Lobbying is neither illegal or immoral. Private groups are entitled to their opinions on Supreme Court nominees as they are on any other subject. But, in the case of Court nominees, the Senate has a duty, under the Constitution, to consider their integrity, capability, and experience, and if they approve the nominee on this basis, to advise and consent to the nomination. I question what new insight into these issues will be provided by a powerful lobbying effort.

Mr. President, this lobbying effort is discussed in some detail in a Washington Post article of October 16, 1969, and I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AFL–CIO RATES HAYNSWORTH FOR "SPECIAL" FIGHT

(By Murray Seeger)

Sen. Thomas J. Dodd (D-Conn.) received a telephone call a few days ago from an old friend, Jay Lovestone, director of international affairs for the AFL–CIO.

The two men usually discuss their common interest in fighting communism, but this recent conversation was different. Lovestone was trying to get a commitment from Dodd that he would vote against confirming Clement F. Haynsworth Jr. as an associate justice of the U.S. Supreme Court.

"We don't usually use Jay on something like this," an AFL–CIO staff man said this week. "But the Haynsworth case is special."

The special nature of the Haynsworth case that it represents the first occasion since 1930 that the labor federation has actively opposed a Supreme Court nomination.

That nominee was John J. Parker of North Carolina, the last court appointee to lose a Senate confirmation vote.

As one of the 10 Democrats on the majority side of the Senate Judiciary Committee, Dodd warranted special attention in the view of the AFL–CIO. He voted to send the Haynsworth nomination to the Senate floor, but may vote against confirmation.

Another Democratic member of the committee, Sen. Joseph D. Tydings of Maryland, had an unusual visit from Al Barkan, director of the AFL–CIO Committee on Political Education before voting "no" on the nomination.

Sen Hugh D. Scott of Pennsylvania, the minority leader of the Senate who is still uncommitted on the nomination, has been pressured to vote "no" by the only Republican in the AFL–CIO hierarchy, Lee W. Minton, of Philadelphia, president of the Glass Bottle Blowers' Association, and the United Steelworkers, biggest union in his state.

Haynsworth has become the biggest single issue for the AFL–CIO in this session of Congress and represents the first serious break between the federation and the nine-months-old Nixon administration.

The campaign against Haynsworth has also renewed the alliance between the AFL–CIO and major civil right organizations at a time when local unions and minority groups are battling in several cities.

"This has already become part of the 1970 congressional elections," one union source said.

When Haynsworth's name first came through the Washington rumor mill, Tom Harris, the AFL–CIO associate general counsel, and Andrew J. Biemiller, legislative director, met with Joseph L. Rauh Jr., well-known Washington lawyer representing several civil rights groups.

They alerted George Meany, president of the AFL–CIO, and Clarence Mitchell of Baltimore, top lobbyist for the NAACP and other civil rights organizations.

The AFL–CIO had a file on Haynsworth because of his involvement in the long, tangled legal case involving the Darlington Manufacturing Co. and Textile Workers Union, his participation in Carolina Vend-a-Matic Co. and his civil rights record as a judge on the Federal Court of Appeals.

Harris telephoned Daniel J. Moynihan, urban affairs specialist on the White House staff who was with the President in California, and Jerris Leonard, Assistant Attorney General, on Aug. 15 and warned them of what the AFL–CIO, considered Haynsworth's anti-labor and anti-civil rights record as well as issues involving his ethical conduct while on the bench.

In addition, Meany sent a telegram directly to the President raising the same issues.

"The President didn't reply, he didn't reply at all," Meany said recently. "His reply came a few days later when he announced the appointment of Judge Haynsworth."

Mr. BELLMON. Mr. President, it is clear, in view of the President's position and the organized opposition, that there will be a major confrontation on the Senate floor over the nomination of Judge Haynsworth.

The question has been raised from several sources that profess only an abiding concern for the well-being of the Supreme Court: "Why does not the President withdraw the nomination and avoid the bloody confirmation fight?"

Mr. President, there is need for serious concern over the impact of this fight on the Supreme Court. The image of the Court has been tarnished recently by the resignation, under fire, of the Associate Justice whom Judge Haynsworth is supposed to replace. We need to be greatly concerned by the public's loss of confidence in the impartiality of this Court.

Concern for the Court, however, does not dictate the withdrawal of Judge Haynsworth's name by the President. Instead, it counsels those who attack Judge Haynsworth recklessly to consider and decide whether their pique over the

choice of a man of his philosophy is sufficient to justify the lasting damage they may inflict on the Court.

The demands for withdrawal of Judge Haynsworth's name seem to rest on an argument that goes like this: While Judge Haynsworth has not done anything wrong, or anything that would disqualify him, he is an undistinguished choice and it would be better for the Court if another man were nominated.

Mr. President, the only part of that argument with which I can agree is that he has done nothing wrong, nothing that would disqualify him. Thereafter, my disagreement with those who make the argument is complete.

Judge Haynsworth has been a distinguished circuit court judge and it has been predicted that he will be an outstanding addition to the U.S. Supreme Court.

The public has shown little understanding of the qualities which fit Judge Haynsworth for his position. I think these qualities should be reviewed, because too many people are operating under serious misapprehension.

The nomination by President Nixon of Judge Clement Haynsworth, Jr., does not result in the Senate considering "just another Federal judge"; but rather an outstanding jurist who possesses in great measure the attributes needed for service on the Nation's Supreme Court: the intelligence, experience, character, intellectual and personal integrity, judiciousness, and proper temperament.

These qualities make for a professional qualification much needed and highly desirable in the highest court of the land.

These are the qualities which together with his personal characteristics will serve to make him an outstanding Justice. The hearings included testimony of many highly qualified witnesses in regard to the record and activities of the nominee. They studied, analyzed and considered, in detail, all aspects of this man's career, his works and his activities. They speak authoritatively on basis of fair, evenhanded appraisal.

President Nixon showed his judgment of Judge Haynsworth and confidence in him by reason of the nomination as originally made. He reaffirmed both on October 2, after the hearings were completed in a letter urging the Judiciary Committee, and the Senate to approve the nomination. The letter further read in part:

> I am conversant with the various allegations that have attended this nomination. I have most carefully examined the record. There is nothing whatsoever that impeaches the integrity of Judge Haynsworth. There is no question as to his competence as a Judge. There is not proper faulting of his posture vis-a-vis Civil Rights or Labor.
>
> It would be very wrong to allow unfounded allegations to deny this country of the distinguished service of Judge Haynsworth on the Supreme Court. I intend to do all that I can to secure his confirmation.

The American Bar Association Committee on Federal Judiciary, Lawrence Walsh, chairman—former Deputy U.S. Attorney General, former Federal district judge—reported that Judge Haynsworth was "highly acceptable from the viewpoint of professional qualification." It recited that it sought candid reports from a representative sample of the bar and bench of the fourth circuit. The report reads:

> All of the persons interviewed regarding Judge Haynsworth expressed confidence in his integrity, his intellectual honesty, his judicial temperament and his professional ability. A few regretted the appointment because of difference with Judge Haynsworth's ideological point of view, preferring someone less conservative. None of these gentlemen, however, expressed any doubts as to Judge Haynsworth's intellectual integrity or his capability as a jurist.

Mr. Norman Ramsey, of the Maryland and Baltimore bar, a member of the ABA Committee, testified that:

> In the opinion of the Board of Governors of the Maryland State Bar Association, he (Judge Haynsworth) is eminently well qualified to be a member of the Suprem Court. . . .

He explained that it was unvaryingly the opinion of the board that the overwhelming opinion of the lawyers of Maryland who have had any contact, direct or indirect, with Judge Haynsworth would be that he, regardless of his political philosophy or political allegiance or political registration, is competent and qualified to be a Justice of the Supreme Court.

Charles Alan Wright, professor of law at the University of Texas, specialist in Federal courts and in constitutional law, author of renown—a seven-volume revision of the Barron and Holtzoff; Treatise on Federal Practice and Procedure; one on civil litigation, "Wright on Federal Courts"; and other writings—since 1964, a member of the standing committee on "Rules of Practice and Procedure" of the Judicial Conference of the United States; American Law Institute Reporter for the "Study of Division of Jurisdiction Between State and Federal Courts"; in his statement to the committee, Professor Wright said:

> With his professional interest, and with these writing commitments, I necessarily study with care all of the decisions of the federal courts, and inevitably form judgments about the personnel of those courts. We are fortunate that federal judges are on the whole, men of very high caliber and great ability. Among even so able a group, Clement Haynsworth stands out. Long before I ever met him, I had come to admire him from his writings as I had seen them in *Federal Reporter*.

Professor Wright's original statement concludes as follows:

> History teaches us that it is folly to suppose that anyone can predict in advance what kind of a record a particular person will make as a Justice of the Supreme Court.
>
> All that one can properly undertake, in assessing a nominee to that Court, is to consider whether he has the intelligence, the ability, the character, the temperament, and the judiciousness that are essential in the important work he will be called upon to perform. Clement Haynsworth has shown in twelve years on the circuit court bench that he possesses all of these qualities in great measure. I hope that he will be quickly confirmed.

Later Professor Wright send a supplemental statement which consists of a thorough and scholarly analysis and comment of the cases in which Judge Haynsworth has participated, centering on the areas of criminal procedure and freedom of expression. The concluding paragraph of this supplement reads:

> I end as I began. I cannot predict the votes of Justice Haynsworth. . . . But I support his nomination, not because his views on these subjects or others are similar to mine, but because his overall record shows him to have the ability, character, temperament, and judiciousness that are needed to be an outstanding Justice of the United States Supreme Court.

Prof. G. W. Foster, Law School of University of Wisconsin since 1952, one-time administrative aide to Secretary of State Dean Acheson, and legislative assistant to U.S. Senator Francis J. Myers, Democrat, of Pennsylvania, at that time whip of the U.S. Senate, served from 1964 to 1967 as a consultant on problems of school segregation to the U.S. Office of Education. At one point in his statement he testified:

> In the area of racially sensitive cases I have followed closely the work of the federal courts in the South over the entire span of time Judge Haynsworth has been on the Court of Appeals for the Fourth Circuit. I have thought of his work, not as that of a segregationist-inclined judge, but as that of an intelligent, open-minded man with a practical knack for seeking workable answers to hard questions. Here and there, to be sure, were cases I probably would have decided another way. I am not aware, however, of a single opinion associated with Judge Haynsworth that could not be sustained by a reasonable man.

By way of conclusion, Professor Foster used these words:

> To sum up: Judge Haynsworth is an intelligent, sensitive, reasoning man. He does not fit among that small handful of front-running federal judges, who have consistently made new law in the racial area. He has earned a place, however, among those who serve in the best tradition of the system as pragmatic, open-minded men, neither dogmatic nor doctrinaire.
>
> Thus the question for me is not whether I would have made another nomination for the Supreme Court. It is rather the question whether Judge Haynsworth possesses the qualities required to become a fine Justice of the Supreme Court. My view is that he will make a first-rate Associate Justice.

It is clear, then, that we are dealing with demands to withdraw the name of a distinguished jurist who will be an outstanding Associate Justice. It is no trifling matter to turn such a man aside.

The attacks on Judge Haynsworth, as they have been presented to date, are ill conceived and founded more on fancy than on fact. I will not attempt to go into detail on these matters at this time. Memorandums have been distributed to all Senators discussing Judge Haynsworth's record as a judge. It is clear to me that at no time has he exhibited a bias toward any party that deprived that party of justice or that disqualified the judge from sitting in the case. His ethical conduct has been reviewed carefully and no violations of statute or canon have been substantiated. Throughout it all, Judge Haynsworth has been as cooperative and as candid and as patient as you could expect any man to be.

For the Senate to fail to confirm him now, despite the lack of substance in the

attacks made upon him, would be to yield to coercive political pressure.

To look to expediency as the justification for defeating this nomination, in my opinion, would be to sacrifice Judge Haynsworth and ultimately the well-being of the Supreme Court.

The independence of the judiciary as a whole and the Supreme Court in particular is a vital element in our system of self-government. Judges are appointed to the bench for life and serve to interpret the law without depending upon a constituency that they must please. They are not expected to make "popular" decisions, they are charged with the duty of applying the law, as they see it, in as fair and careful a manner as humanly possible.

What happens to the independence of the Supreme Court if a nominee can be forced into defeat by powerful opponents not because he is unqualified, but because they oppose his philosophy?

What prospective nominee, who values his independence, will submit himself to a political litmus test controlled by special interest groups. The lessons of the Haynsworth nomination are apparent. If he fails the test, will another worthy nominee willingly submit their integrity and honor to attack? The importance of this case goes far beyond this single instance.

The defeat of Judge Haynsworth would have deep meaning to the public. It will be obvious that only nominees with particular views will be entitled to sit on the Court. The reason for the public to have confidence in the Court's independence will be sadly diminished.

Just as the Supreme Court cannot decide constitutional questions on the basis of expediency, Mr. President, the Senate cannot afford to select Justices on the basis of expediency.

Judge Haynsworth is a highly qualified and truly honorable man who will grace the Court.

I commend the President for his support of the nominee and urge the Senate to advise and consent to the nomination. I intend to give him my full and unqualified support.

Mr. HRUSKA. Mr. President, will the Senator from Oklahoma yield?

Mr. BELLMON. I yield.

Mr. HRUSKA. I commend the Senator from Oklahoma for the statement he has made on the subject he just discussed. It is apparent that the Senator has done a commendable thing; namely, he has gone into the record and determined for himself the facts upon the points he has canvassed in his remarks. This we all should do.

Mr. President, I speak as one who has been present at the bulk of the Haynsworth hearings and who has familiarized himself with all of the record. I believe that the points stressed and emphasized by the Senator from Oklahoma today should be taken to heart, not only for the instant case, but also because of the impact the decision in the matter of confirmation of Judge Haynsworth will have upon similar situations in the future. This is certainly something which will be of great influence, not only in the Supreme Court, but also in the inferior courts as well.

Again I want to say it is well that the Senator from Oklahoma has spoken as he has after the careful and studious attention he has given to the record.

Mr. BELLMON. Mr. President, I thank the Senator from Nebraska for his remarks.

Mr. STEVENS. Mr. President, will the Senator from Oklahoma yield?

Mr. BELLMON. I yield.

Mr. STEVENS. I have just arrived in the Chamber and assume that the Senator from Oklahoma has stated his position on Judge Haynsworth. We discussed this matter yesterday, and I want to congratulate him on reaching his decision.

Let me say that I have not yet reached mine but that the comments the Senator has made today, which we discussed yesterday, will have a great deal of impact, I think, on those of us who share freshman status with him.

I thank the Senator from Oklahoma very much.

Mr. BELLMON. I thank the Senator from Alaska.

ORDER OF BUSINESS

Mr. BELLMON. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. COOK. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

U.S. INTERVENTION IN SOUTHEAST ASIA

Mr. COOK. Mr. President, I have probably received more mail on the Vietnam conflict than upon any other subject of national concern during my first year in the Senate. Of all the many hundreds, even thousands, of communications, two stand out in my memory. They came from men involved in the war as members of the U.S. Army.

Now, I have not broken with the administration in its conduct of the war because I sincerely believe that no one seeks a more rapid termination of the conflict than does the President. However, I have always believed our involvement in any land war in Southeast Asia is ill advised. This feeling applies not only to our initial decision to become involved in Vietnam, but also to any possible intervention in the future in Laos, Thailand, or other Southeast Asian countries.

The frustrations and heartbreak which would result from such interventions in the future can be anticipated by benefiting from the lessons of the past. These lessons can best be taught by those with the greatest experience; those who are called upon to fight and die for causes which they do not comprehend—the young American fighting men.

The greatest lesson any Senator can learn about the futility of any more Vietnams can be acquired by reading the following letters from two of my constituents. Mr. President, I ask unanimous consent that the letters I received this year from Sp4c. Raymond Clooney and Pfc. Ronald E. Bogle appear in the RECORD at this point.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

DEAR SENATOR COOKE: I have been asked by my husband to forward this letter to you. It reads as follows:

It's hard to begin because where did Vietnam begin, (or I should say this war in Vietnam)? Why did this war begin and when will it end? These are questions that so far have not been answered by our State Department. I don't really propose to attempt to answer these questions—that would be foolish. I simply wish to give a few of my impressions of this war from where I am right now. And right now I'm sitting damn close to a "foxhole" about five miles from the Cambodian border in what is called III Corps.

For six months now, I have been involved in search and destroy and night ambush missions. My unit searches for enemy bunker complexes during the day and sets ambushes on jungle trails by night. The ultimate mission is to kill the enemy. And we do. They also kill us. Boris Pasternak refers to this as a product of man's insane logic. In his novel, Doctor Zhivago, Pasternak refers to war as "mutual extermination." Most people sit back and say, "Yes, how true"—and yet are insulated from the torn flesh, screams and cries of the dying, and the eternal anxiety of those still alive who must carry this war to the next day.

The horrors of this war are as real as those of our past wars and it continues year after year without abate.

The people closest to the war are the "grunts." These are the young people drafted into the army and forced with the threat of imprisonment if they don't fight and kill. These are the same people who hate this war the most. These are the people who know their lives are at stake.

Right now I am tempted to quit writing this letter, it seems so useless. But the death of a friend several hours ago forces me to continue. His death was in vain, and perhaps, this will be too.

Maybe all this will be is a plea in the distance for the people here to come and say a sad prayer for those who have already died. This is a plea for you at home to put pressure on the elected representatives to fight for total disengagement from this battlefield.

It is time for the people of South Vietnam to take up this battle. They have the people, they would have our continued financial support, and have had a ten year period to organize an effective army. They should be able to take this battle from our shoulders, if they want to. If they don't want to take up the battle, how much longer can we sustain them in this present quasi military government? There's a crude saying in reference to a hesistant bowel movement that applies here.

I must end this letter now, dark is here. I hope the young people will read this letter (it has been sent to various newspapers) it's their lives as stake. As for the older people, your son's lives. Those of us over here have faith in our government at home and I hope we are not let down.

Do not accept Plato's philosophy that, "Only the dead have seen the end of war." Many people already are asking "Where have all the young men gone?"

Hope to see Kentucky again.

Sincerely,

Sp4c. RAYMOND CLOONEY,
1st Air Cavalry Division.
APO SAN FRANCISCO.

DEPARTMENT OF THE ARMY,
APO San Francisco, July 7, 1969.

Senator MARLOW COOK,
Senate Office Building,
Washington, D.C.

DEAR SENATOR COOK: I hope you will excuse the informality of this letter, but I am writing this letter more on a personal basis. At the present time I am serving with the Armed Forces in the Republic of Vietnam. I am a Georgetown College graduate, and hopefully a future member of the Louisville and Kentucky State Bar Association. I am a staunch Republican and have worked faithfully for the Republican party, and you in particular. I have always been, and always will be, a loyal American. I have earnestly tried to support our President and our government in all matters, and that is the reason for my writing this letter. In particular I am referring to the war in Vietnam.

The time has come when I can no longer support the policies of our government in relation to Vietnam. I do not stand alone in this respect. The general feeling, from what I am able to gather, is one of great dissatisfaction. Perhaps that is the wrong word, but at the same time it is very appropriate. I can not speak for all of the men in Vietnam so I will limit the questions and opinions to those of my own.

At the present time both sides seem to be making some moves toward de-escalation. However, those of North Vietnam have not been fully interpreted. Secretary Rogers has admitted that infiltration and enemy action has greatly slowed down and this could affect decisions on troop withdrawals. Yet, he also states that a cease-fire does not appear PRACTICAL. How do you justify practicality to dead men and their grieving families. He further states that, "we're certainly willing to take some risks to end the war." What risks have been taken or will be taken other than by the men serving in Vietnam. Most leaders will readily admit this war should have ended long ago yet the war continues. It seems that our leaders, with the exception of a small minority, are content to keep quiet. Thank God for those who have the intestinal fortitude to say I am concerned about our American men in Vietnam, and I want them home. Unfortunately, these people seem to be a small minority.

How much longer are we going to allow President Thieu to dictate the course of action to be followed. You know as well as I do that this war could end very quickly if it were not for Thieu and his unwillingness to compromise. Don't misinterpret my statements and feelings. I am not willing to give up Vietnam at any cost, because then the many thousands of lives lost would have been in vain, but before many more thousands are lost this war must be ended.

While the diplomatic and political rhetoric continues men are dying because it's leaders remain silent. Because it's leaders refuse to make a firm decision. I would not be so ignorant as to label it unconcern or indifference. Everyone talks about 't, ' ut no one does anything about it. I make this appeal to you Senator Cook, not for myself but for the men of Vietnam, to exert what force you have to bring this war to an end. As long as our leaders remain silent the war will continue.

There are many suggestions being made to end the war. Many seem to be the answer to the war, but they remain only suggestions. It is up to people like yourself, our elected leaders, to bring forces to bear.

Perhaps I have not made myself entirely clear, but I wanted my voice and feelings to be heard and counted.

The irony of all of this seems to me that we are fighting the wrong war anyway. It seems to me that as long as we are in Vietnam that our purpose should be to improve the plight of the Vietnamese people. The vast majority are peasants. Will they be any different when this war is over and we have gone home. That should be our war—a war to improve the plight of these people. I pose this question in regard to the people—how much worse off would these people be under Communism than they are now? They do not have a democraic government now. How much does Thieu's government actually differ from forms of Communism. Why should our nation spend billions and billions to kill and be killed? We are supposedly here to save the people of South Vietnam—Why aren't we doing that. I don't mean militarily but economically and educationally. Otherwise, our years and lives have been in vain. That is my reason Senator Cook for writing this letter. If we are to save South Vietnam we must do it now. I beseech you and others to seek a rapid end to this war, and get down to the work at hand if saving the South Vietnamese is our main concern.

I hope you will take the time to to read this letter and perhaps answer some of these questions for me. If not I remain

Respectfully yours,

RONALD E. BOGLE.

Mr. COOK. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. DOLE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

NORTH VIETNAM IS RESPONSIVE TO WORLD OPINION

Mr. DOLE. Mr. President, I was gratified to see in the newspaper today that the North Vietnamese are responding to the longstanding pleas of Americans for information about our prisoners of war. The delay in making this information available is completely inexcusable, but the fact that the North Vietnamese are taking this step shows that the North Vietnamese are subject to the weight of world public opinion.

It is important to recognize and emphasize this fact. In debate on the floor last week, I urged that public criticism be directed at the North Vietnamese for failing to show a positive attitude at the Paris peace talks. I was answered that such crisicism did not have any effect and that all our criticism should be leveled at our Government and the South Vietnamese. Of course, the Communists are not going to admit that they are acting in response to world opinion, but in fact they do respond to it. This opinion needs to be stimulated and focused upon the North Vietnamese and Vietcong.

If sufficient attention is directed to their intransigence at Paris, they cannot afford to maintain their uncooperative attitude. If those who call for changed American policy and decry the errors and shortcomings of the Saigon government would devote some of their energies to pointing out the faults of the North Vietnamese who are our enemies, and who are killing Americans, the North Vietnamese would have to negotiate in earnest.

Mr. President, I would hope that everyone will see the underlying significance in the reelase of this information on American prisoners of war, and will seek to employ this political reality to reach an end to the conflict in Vietnam.

EXECUTIVE COMMUNICATIONS, ETC.

The PRESIDENT pro tempore laid before the Senate the following letters, which were referred as indicated:

REPORT ON AIR FORCE MILITARY CONSTRUCTION CONTRACTS AWARDED WITHOUT FORMAL ADVERTISEMENT

A letter from the Secretary of the Air Force, transmitting, pursuant to law, a report on the Air Force military construction contracts awarded by the Department of the Air Force without formal advertisement for the period January 1, 1969, through June 30, 1969 (with an accompanying report); to the Committee on Armed Services.

REPORT ON PROPOSED CLOSURE OF CERTAIN MILITARY INSTALLATIONS

A letter from the Secretary of the Air Force, transmitting, pursuant to law, a full report of the facts, and the justification for the proposed closure of certain military installations in the United States (with an accompanying report); to the Committee on Armed Services.

REPORT OF THE COMPTROLLER GENERAL

A letter from the Comptroller General of the United States, transmitting a report to the Committee on Finance, U.S. Senate, on the results of a review of medicare payments for services of supervisory and teaching physicians at Cook County Hospital, Chicago, Ill., Social Security Administration, Department of Health, Education, and Welfare, dated September 3, 1969 (with an accompanying report); to the Committee on Government Operations.

PROPOSED LEGISLATION DESIGNED TO FACILITATE TRAVEL TO THE UNITED STATES BY FOREIGN TOURISTS AND BUSINESS VISITORS

A letter from the Secretary of State, transmitting a draft of proposed legislation designed to facilitate travel to the United States by foreign tourists and business visitors (with an accompanying paper); to the Committee on the Judiciary.

REPORT ON THE FEDERAL METAL AND NONMETALLIC MINE SAFETY ACT

A letter from the Secretary of the Interior, transmitting, pursuant to law, a report on the Federal Metal and Nonmetallic Mine Safety Act for the period January 1 through December 31, 1968 (with an accompanying report); to the Committee on Labor and Public Welfare.

PETITIONS AND MEMORIALS

Petitions, etc., were laid before the Senate, or presented, and referred as indicated:

By the PRESIDENT pro tempore:

A resolution adopted by the County of Gogebic, Bessemer, Mich., praying for the enactment of legislation relating to the inclusion of county governments within the definition of "local governments," so as to participate in the Federal system; to the Committee on Finance.

A resolution adopted by Iron County, Crystal Falls, Mich., relating to the inclusion of counties within the definition of "local governments," so as to participate in the Federal system; to the Committee on Finance.

BILLS AND A JOINT RESOLUTION INTRODUCED

Bills and a joint resolution were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. STEVENS (for himself and Mr. GRAVEL):

S. 3075. A bill to convey the interest of

the United States in certain property in Fairbanks, Alaska, to Hillcrest, Inc.; to the Committee on Interior and Insular Affairs.

(The remarks of Mr. STEVENS when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. KENNEDY:

S. 3076. A bill to amend title III of part I of the Foreign Assistance Act of 1961 to provide for a program of investment guaranties in Latin American countries to encourage local participation in agricultural credit and self-help community development projects, and for other purposes; to the Committee on Foreign Relations.

(The remarks of Mr. KENNEDY when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. RIBICOFF (for himself, Mr. BAKER, Mr. BOGGS, Mr. CANNON, Mr. CURTIS, Mr. DODD, Mr. GRAVEL, Mr. HARRIS, Mr. HART, Mr. HARTKE, Mr. HOLLINGS, Mr. MAGNUSON, Mr. MCGOVERN, Mr. NELSON, Mr. PROXMIRE, Mr. RANDOLPH, Mr. SAXBE, Mr. SCHWEIKER, Mr. SCOTT, Mr. SPARKMAN, and Mr. THURMOND):

S. 3077. A bill to amend the Internal Revenue Code of 1954 to allow a credit against income tax to individuals for certain expenses incurred in providing higher education; to the Committee on Finance.

(The remarks of Mr. RIBICOFF when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. ANDERSON:

S. 3078. A bill to provide for the issuance of a special series of postage stamps in commemoration of Ernest "Ernie" Pyle; to the Committee on Post Office and Civil Service.

(The remarks of Mr. ANDERSON when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. BYRD of West Virginia:

S. 3079. A bill for the relief of Elizabeth Currado; to the Committee on the Judiciary.

By Mr. MAGNUSON (by request):

S. 3080. A bill to improve and clarify certain laws affecting the Coast Guard Reserve; and

S. 3081. A bill to improve and clarify certain laws affecting the Coast Guard; to the Committee on Commerce.

(The remarks of Mr. MAGNUSON when he introduced the bills appear in the RECORD under separate headings.)

By Mr. BROOKE:

S. 3082. A bill to authorize the disposal of type B, chemical grade manganese ore from the national stockpile and the supplemental stockpile;

S. 3083. A bill to authorize the disposal of corundum from the national stockpile;

S. 3084. A bill to authorize the disposal of type A, chemical grade manganese ore from the national stockpile and the supplemental stockpile;

S. 3085. A bill to authorize the disposal of shellac from the national stockpile;

S. 3086. A bill to authorize the disposal of industrial diamond crushing bort from the national stockpile and the supplemental stockpile;

S. 3087. A bill to authorize the disposal of chrysotile asbestos from the national stockpile and the supplemental stockpile;

S. 3088. A bill to authorize the disposal of tungsten from the national stockpile and the supplemental stockpile; and

S. 3089. A bill to authorize the disposal of castor oil from the national stockpile; to the Committee on Armed Services.

(The remarks of Mr. BROOKE when he introduced the bills appear later in the RECORD under the appropriate heading.)

By Mr. KENNEDY:

S. 3090. A bill to amend the act of September 21, 1959 (73 Stat. 590) to increase the authorization for the Minute Man National Historical Park, and for other purposes; to the Committee on Interior and Insular Affairs.

(The remarks of Mr. KENNEDY when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. MONTOYA (for himself, Mr. PELL, Mr. RANDOLPH, Mr. JAVITS, Mr. BAYH, Mr. BURDICK, Mr. CANNON, Mr. CHURCH, Mr. COOK, Mr. CRANSTON, Mr. EAGLETON, Mr. GOODELL, Mr. GORE, Mr. GRAVEL, Mr. HARRIS, Mr. HART, Mr. HARTKE, Mr. HUGHES, Mr. KENNEDY, Mr. MATHIAS, Mr. MCGOVERN, Mr. MCINTYRE, Mr. METCALF, Mr. MONDALE, Mr. MOSS, Mr. NELSON, Mr. PASTORE, Mr. RIBICOFF, Mr. SCHWEIKER, Mr. SPONG, Mr. WILLIAMS of New Jersey, Mr. YARBOROUGH, Mr. ALLEN, Mr. DODD, and Mr. TOWER):

S.J. Res. 163. A joint resolution to supplement the joint resolution making continuing appropriations for the fiscal year 1970 in order to provide for carrying out programs and projects, and for payments to State educational agencies and local educational agencies, institutions of higher education, and other educational agencies and organizations, based upon appropriation levels as provided in H.R. 13111 which passed the House of Representatives July 31, 1969, and entitled "An act making appropriations for the Departments of Labor, and Health, Education, and Welfare, and related agencies, for the fiscal year ending June 30, 1970, and for other purposes"; to the Committee on Appropriations.

(The remarks of Mr. MONTOYA when he introduced the joint resolution appear later in the RECORD under the appropriate heading.)

S. 3075—INTRODUCTION OF A BILL CONVEYING THE INTEREST OF THE UNITED STATES IN CERTAIN PROPERTY IN FAIRBANKS, ALASKA, TO HILLCREST, INC.

Mr. STEVENS. Mr. President, for myself and my colleague, Mr. GRAVEL, I introduce, for appropriate reference, a bill which would authorize conveyance of all right, title, and interest of the United States reserved or retained in certain lands, in Fairbanks, Alaska, which were conveyed to the Hillcrest Home for Boys under the Recreation and Public Purposes Act of January 24, 1961.

Hillcrest Home for Boys was first organized at a meeting at the Eagle's Hall on September 11, 1958. Hillcrest, a home for boys without a home, is a community project and will accept all boys without regard to race, creed, or color. It is not a detention home nor a correctional institution. Rather, it is a home to live in during their 4 years of high school. Hillcrest will provide housing, school guidance, counseling, part-time opportunities for work, and the interest and care of a director who presides at Hillcrest.

Surveys have made apparent the need for Hillcrest, and Hillcrest has the support of both public and private agencies and service groups. Hillcrest plans to cooperate to the fullest degree possible with others in the field including Federal, State, and private organizations.

Hillcrest currently accommodates nine boys, and all available funds are needed to maintain the operation as is. Hillcrest wants to expand their facilities to accommodate up to 20 boys, a situation which is financially impossible now. If title were granted to Hillcrest for the land, a portion of the land could be sold to finance the desired expansion of their facilities. Currently, boys waiting to get into Hillcrest are housed in the State jail—a situation which is certainly not desirable. The entire concept of Hillcrest rests on taking disadvantaged youngsters and giving them the best possible environment and hope for the future.

Hillcrest is the only private institution in the State of Alaska which handles boys of this age group. These young men represent an important resource for Alaska and the Nation, and we should do our best to see that they are properly taken care of through the high school years.

The land in question, acquired under the Recreation and Public Purposes Act, can be used as income property if the bill I introduced today is favorably considered.

Mr. President, I ask unanimous consent that the full text of the bill be printed at this point in the RECORD.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 3075) to convey the interest of the United States in certain property in Fairbanks, Alaska, to Hillcrest, Inc., introduced by Mr. STEVENS, was received, read twice by its title, referred to the Committee on Interior and Insular Affairs, and ordered to be printed in the RECORD, as follows:

S. 3075

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of Interior is authorized and directed to convey to Hillcrest, Incorporated, without consideration, all of the right, title, and interest of the United States in and to the tract of land (together with any buildings or other improvements thereon) described as the southeast quarter, section 26, township 1 north, range 2 west, Fairbanks meridian, such tract being the tract conditionally patented to Hillcrest Incorporated, by patent numbered 1216565 under the Recreation and Public Purposes Act of June 14, 1926 (43 U.S.C. 869), for use as a home for juvenile boys.

S. 3076—INTRODUCTION OF A BILL AMENDING THE FOREIGN ASSISTANCE ACT OF 1961 TO PROVIDE FOR GUARANTEED COMMUNITY SELF-DEVELOPMENT LOANS FOR LATIN AMERICA

Mr. KENNEDY. Mr. President, I introduce for appropriate reference a bill to amend the Foreign Assistance Act of 1961 to establish a new program of guaranties for community self-development loans for Latin America. Similar legislation was introduced in the House of Representatives last May by Congressman JOHN E. MOSS of California.

The primary purpose of the proposed legislation is to fund a $25 million program under which the United States would guarantee loans by private Latin American banks and other financial institutions to low income groups who have no other reasonable source of credit to finance community self-development projects. Under the bill, guaranties of up to 25 percent would be available to encourage loans for a variety of urban and rural community development projects in Latin America. As illustrations of the types of projects that are intended to be encompassed by the program, the bill

lists the following: Wells, pumps, farm machinery, small schoolhouses, short access roads, improved seed, fertilizer, pesticides, vocational training, improved breeding stock for farm animals, grain warehouses, sanitation facilities, looms, and other handicraft aids. These examples, however, are only a small part of the immense variety of community development projects for which assistance might be available under the bill.

As President Kennedy said in his address at the state dinner in the San Carlos Palace in Bogota in 1961:

My real message is for millions of people in a thousand cities and villages throughout the mountains and plains of this majestic land. To you—to the workers, to the compesinos on the farms, to the women who toil wearily each day for the survival of their children—to you I bring a message of hope. Every day, every hour in far-off Washington and in the capital of your own country, dedicated men are struggling to bring nearer the day when you will have more to eat and a decent roof over your head and schools for your children—when you will have a better and more abundant life to accompany that great human dignity and love of freedom from which all of us have much to learn. And . . . I pledge to you that, with your help, that day will come.

The key feature of the bill is its emphasis on Latin American financing for Latin American development. By encouraging private Latin American institutions to lend funds for community development projects in their own nations, the bill is designed to promote a system of joint participation by both the rich and the poor in Latin American development.

In recent years, we have witnessed the birth of a remarkable precedent for the program proposed in the bill. Since 1966, the Pan American Development Foundation—PADF—has sponsored a similar type of program in a number of Latin American countries. The PADF, a private development foundation, was established in 1963 upon the recommendation of the Organization of American States. I am privileged to serve as a member of the board of trustees of PADF, along with some 30 other distinguished public officials and private citizens representing Latin America and the United States.

One of the primary goals of the PADF has been to encourage the private sector in Latin America to play a greater role in Latin American community development. To achieve this goal, the PADF has sponsored the establishment of local Latin American institutions known as "national development foundations—NDF." These local foundations are entirely autonomous. They serve to mobilize the personal energies and financial resources of all social and economic levels in Latin America in order to foster more extensive involvement in a broad spectrum of community self-help development projects. By stimulating the use of private nongovernmental resources, the foundations supplement official government efforts and accelerate the rate of local development.

The NDF program was a major new idea in Latin American economic development. The essence of the program—which is carried forward in the bill I am introducing today—is to provide credit in the form of small loans on reasonable terms to finance community projects in cases where conventional forms of bank credit are not available. Unlike the traditional U.S. foreign aid program, which provides grants to governments and loans and loan guaranties to wealthy developers, the NDF program reaches out directly to all the people. It thereby helps low-income groups in Latin America to become partners in the development process, rather than merely waiting for the benefits of capital development to "trickle down" to the lowest social level. For this reason, the NDF program has been widely acclaimed as the best new idea in foreign aid since the Marshall plan.

The NDF program has been a pioneering approach to development by the private sector in Latin America. Each National Development Foundation draws its board of directors and staff from within the country in which it is established, and determines its own policies and procedures. By relying on persons already active in each country to stimulate loan requests, such as agricultural extension agents, village priests, teachers, community development workers, Peace Corps volunteers, or government health workers, it has been possible for the foundations to function effectively on extremely low administrative budgets.

The first National Development Foundation was established in the Dominican Republic in July 1966. Since that time, similar foundations have been established in four other Latin American nations—Chile, Colombia, Ecuador, and Guatemala. In addition, National Development Foundations are now being organized in eight other nations—Argentina, Honduras, Mexico, Nicaragua, Panama, Peru, Uruguay, and Venezuela.

In the 3 years since the program was instituted, the existing National Development Foundations have extended over $1 million in loans to approximately 1,000 community groups in Latin America. Perhaps the most remarkable aspect of the program is that repayment of the loans is averaging better than 95 percent—in spite of the fact that the loans are largely unsecured in the traditional sense and are made to the most marginal sectors of the economy. Obvously, as the extraordinary high rate of repayment demonstrates, the loans have a higher security—the sense of new responsibility, pride, and integrity engendered in citizens who have become partners in development.

The flexibility of the NDF program has enabled it to operate at a level which neither commercial nor Government banks can presently reach. For example, loans have been made to finance projects such as a water pump, irrigation pipe, seed, fertilizer, and insecticide for a small agricultural cooperative; a truck or boat for moving farm produce; a diesel generator for village electricity or a pump for village water; oxen to replace hand labor, and tractors to replace oxen; rural health clinics to bring doctors and new medical techniques to isolated areas.

At the beginning of this month, 45 representatives of the 13 National Development Foundations already in existence or in the process of being organized held a series of seminars in Racine, Chicago, and the District of Columbia to document their past experience and plan for the future. It was my privilege to meet with these representatives during their seminar in Washington and to learn first hand of the remarkable success they have had.

As was frequently emphasized during the seminar, the history of the National Development Foundations is far more than the mere history of loans to the poor to take the first steps toward realizing their expectations for a better life. It is also the history of changing attitudes and motivations among both the rich and the poor of Latin America. It is a recognition of the emerging truth that effective development programs are not the special prerogative of a particular economic or social class, but must be carried out with the shared participation of all citizens.

It is time for us to begin to build on the experience of these National Development Foundations, and to foster the creation of similar programs wherever the need exists in Latin America. The legislation I am introducing today seeks to achieve this goal, and I am hopeful that it will receive early enactment.

I ask unanimous consent that the bill be printed in the RECORD.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 3076) to amend title III of part I of the Foreign Assistance Act of 1961 to provide for a program of investment guarantees in Latin American countries to encourage local participation in agricultural credit and self-help community development projects, and for other purposes, introduced by Mr. KENNEDY, was received, read twice by its title, referred to the Committee on Foreign Relations, and ordered to be printed in the RECORD, as follows:

S. 3076

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That title III of part I of the Foreign Assistance Act of 1961, which relates to investment guaranties, is amended by adding at the end thereof the following new section:

"SEC. 225. Agricultural Credit and Self-help Community Development Projects—(a) It is the sense of the Congress that in order to stimulate the participation of the private sector of Latin American countries in the economic development of such countries, the authority conferred by this section should be used to establish a program to encourage private banks, credit institutions, similar private lending organizations, cooperatives, and private nonprofit development organizations to make loans on reasonable terms to organized groups and individuals residing in a community for the purpose of enabling such groups and individuals to carry out agricultural credit and self-help community development projects for which they are unable to obtain financial assistance from other sources on reasonable terms. Agricultural credit and self-help community development projects include, but are not limited to, material and such projects as wells, pumps, farm machinery, small schoolhouses, short access roads, improved seed, fertilizer, pesticides, vocational training, improved breeding stock for farm animals, grain ware-

houses, sanitation facilities, and looms and other handicraft aids.

"(b) To carry out the purpose of subsection (a), the President is authorized to issue guaranties, on such terms and conditions as he shall determine, to private lending institutions, cooperatives, and private nonprofit development organizations in Latin American countries assuring against loss of not to exceed 25 per centum of the portfolio of such loans made by any lender to organized groups or individuals residing in a community to enable such groups or individuals to carry out agricultural credit and self-help community development projects for which they are unable to obtain financial assistance from other sources on reasonable terms. In no event shall the liability of the United States exceed 75 per centum of any one loan.

"(c) The total face amount of guaranties issued under this section outstanding at any one time shall not exceed $25,000,000.

"(d) Notwithstanding the limitation contained in subsection (c) of this section, foreign currencies owned by the United States and determined by the Secretary of the Treasury to be excess to the needs of the United States may be utilized to carry out the purposes of this section, including the discharge of liabilities incurred under this section. The authority conferred by this subsection shall be in addition to authority conferred by any other provision of law to implement guaranty programs utilizing excess local currency.

"(e) The President shall, on or before January 15, 1972, make a detailed report to the Congress on the results of the program established under this section, together with such recommendations as he may deem appropriate.

"(f) The authority granted under this section shall terminate on June 30, 1972."

S. 3077—INTRODUCTION OF A BILL ALLOWING TAX CREDITS FOR HIGHER EDUCATION

Mr. RIBICOFF. Mr. President, I introduce, for appropriate reference, a bill creating a Federal income tax credit to offset the expenses of higher education tuition and fees.

Six years ago, I proposed legislation on the floor of the Senate which offered substantial tax relief to ease the growing financial burden of providing undergraduate and graduate education. Since 1963, the concept of a tuition tax credit has continued to gain support, and in 1967 the Senate approved this legislation in an amendment to the bill reinstating the investment tax credit. Regrettably, the amendment did not survive the conference with Members of the House of Representatives.

Today, the need for a tax credit is greater than ever before. Tuition costs have continued to climb. Federal, State, and local taxes have combined to squeeze the lower- and middle-income classes unmercifully. The opportunity to send a child to college without substantial scholarship assistance is rapidly disappearing.

About 7 million students are now working toward undergraduate or graduate degrees. While this is three times the number of students in 1955, we can look forward to another 2 million students by 1975.

Increasing enrollment has pushed tuition costs upward as colleges and universities seek to expand their crowded facilities and maintain a high standard of education.

The advancing frontiers of knowledge and technology have forced educational institutions to develop new teaching concepts and tools. Very simply, the cost of a good education is inflating.

In 1965, the average required tuition and fees at public and private universities were $200 and $812, respectively. At public institutions the average annual cost has risen by 50 percent to just under $300 in only 4 years. In the same period, at private universities, tuition fees and book costs have soared by 70 percent to $1,380.

This year the average minimum cost of 1 year of undergraduate education at a public university, including no other living expenses but room and board, will be $1,092. At a private university or college this basic minimum expense is $2,328. Thus, an American family with a son or daughter approaching college age, can look forward to a total expenditure of about $10,000 or more before graduation.

This inflationary spiral spells financial disaster for many Americans. The costs of education have become nearly unbearable.

For some families, of course, relief is available in the form of scholarships or educational loans. For many, however, especially in the middle-income brackets, financial assistance is nonexistent.

Our children's education is an investment in the future. We have made similar investments in the past, such as the GI bill, and the results have surpassed even our best expectations. We would do well to learn from these lessons.

As we face the necessity of finding solutions to the difficult and complex social problems facing this Nation we must recognize the essential role that education plays in our society. A better educated population is the primary tool for the continued growth and development of our Nation.

This bill proposes a maximum tax credit of $325 per student. The credit would be computed on the basis of 100 percent of the first $200 of qualifying expenditures for tuition, fees, and books; 25 percent of the next $300, and 5 percent of the subsequent $1,000. No credit would be allowed for student costs above $1,500.

The resulting credit would be allowed against the tax of any person who paid the expenses of education for himself or another person at a qualified educational institution. A qualified institution includes recognized colleges, universities, graduate schools, vocational, and business schools.

Mr. President, the bill is drafted to relieve the heavy burden of educational costs now borne by the average American citizen. It would not benefit, or provide a loophole, for wealthy individuals who can easily afford these costs.

The available credit would begin to be phased out when the taxpayer's adjusted gross income reached $15,000. One full credit would be phased out at each $10,000 level above $15,000. A family paying the expenses of one college-age child would be entitled to some tax credit up to an income level of $25,000. Similarly, only a taxpayer supporting two or more students would be entitled to a credit if his income was above $25,000. Similarly, only a taxpayer supporting three students could obtain a credit if his income was above $35,000. Thus, the effect of the credit is spread upward only in relation to true economic circumstances of the taxpayer.

This tax credit legislation will have a marked beneficial effect on the rapidly deteriorating ability of private individuals to finance the college education of a son or daughter. At the University of Connecticut, for instance, the cost of required tuition and books is $390. For the Connecticult resident who paid these fees and whose income was less than $15,000, the available credit would mean that his actual outlay would be reduced by $247.50, or two-thirds.

At a private institution where tuition alone may exceed $1,500 the full credit of $325 would be available to the same taxpayer, thus reducing the expenditures by more than 20 percent.

Mr. President, legislation of this type has received strong support from all segments of our society. Our ability to meet the problems and challenges of the future rests squarely on the strength of our educational institutions and the quality of education we are able to give all our citizens. This bill will substantially assist millions of Americans to meet the rising costs of providng qualty education. I urge that the Senate again give this legislation favorable consideration.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 3077) to amend the Internal Revenue Code of 1954 to allow a credit against income tax to individuals for certain expenses incurred in providing higher education, introduced by Mr. RIBICOFF, for himself and other Senators, was received, read twice by its title, and referred to the Committee on Finance.

S. 3078—INTRODUCTION OF A BILL TO PROVIDE FOR THE ISSUANCE OF A SPECIAL SERIES OF POSTAGE STAMPS IN COMMEMORATION OF ERNEST "ERNIE" PYLE

Mr. ANDERSON. Mr. President, on August 3, 1900, in an inconspicuous corner of the Midwest, a son was born to a plain-spoken, hard-working farm family. Neither of his parents got past the 8th grade. Their life was one of cutting broom corn, husking field corn, and jouncing along by buggy to church meetings and square dances. No one could have suspected that that son would grow up to become one of the most widely known figures, perhaps the most sensitive and thoughtful journalist, of his day. And yet that is what happened.

That son was named Ernest Taylor Pyle, later to be known by millions under the byline, "Ernie Pyle."

Mr. President, I am today introducing

legislation calling for the issuance of an Ernie Pyle memorial postage stamp, a fitting tribute to an honorable man and a respected journalist.

We in New Mexico have long held Ernie Pyle in high regard, and I am pleased to say that he felt the same about his adopted State. He was a resident of my own city of Albuquerque when, on April 18, 1945, on a tiny South Pacific island, he was killed by a Japanese bullet.

To this day, most people seem to remember Ernie Pyle as a war correspondent, but he was a great reporter and writer before the war came. It was his love of peace, of this land of ours, that caused him to be revered by all of us, caused him to write with such simple eloquence.

This is not my view alone, Mr. President. Let me quote from Ed Ainsworth, who wrote in the preface of one of Ernie Pyle's books:

> Many still think of Ernie almost entirely as the war correspondent who, through his courage and his understanding words, became the favorite not only of the public at home in the United States but also of the fighting men everywhere on far-flung battlefronts. Yet Ernie was world-famous for human, down-to-earth, sensitive columns about men, women, children and places long before World War II. And his love for the solitary places of the Southwest was part of his nature.

Or, perhaps best, let me turn to the great journalist himself, who, back in 1935 before we went to war, wrote this:

> From the Pecos to the Colorado, what a country! Its ancient history—Santa Fe was a thriving village long before the Pilgrims ever heard of Plymouth Rock; its modern history—the wild days of mining and cattle raising are an epic probably not duplicated anywhere in the world; its surface—the diverse and luxurious desert plants, beautiful in bloom, solemn and mysterious when bare; the land itself—spaceless, free, a land of humility and good taste. I love the Southwest.

Mr. President, there are volumes which testify to Ernie Pyle's humanity and eloquence, so I will not dwell on that.

I will simply note again his love for peace and for the land, the high esteem which we all held for him, and his affection for the Southwest and New Mexico. I think the issuance of a memorial postage stamp in his honor is fitting and necessary.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 3078) to provide for the issuance of a special series of postage stamps in commemoration of Ernest "Ernie" Pyle, introduced by Mr. ANDERSON, was received, read twice by its title, and referred to the Committee on Post Office and Civil Service.

S. 3080—INTRODUCTION OF A BILL IMPROVING AND CLARIFYING CERTAIN LAWS AFFECTING THE COAST GUARD RESERVE

Mr. MAGNUSON. Mr. President, I introduce, by request, a bill to improve and clarify certain laws affecting the Coast Guard Reserve. I ask unanimous consent to have printed in the RECORD a letter from the Secretary of Transportation, together with a sectional analysis of the bill.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the letter and section analysis of the bill will be printed in the RECORD.

The bill (S. 3080) to improve and clarify certain laws affecting the Coast Guard Reserve, introduced by Mr. MAGNUSON, by request, was received, read twice by its title, and referred to the Commitee on Commerce.

The material presented by Mr. MAGNUSON is as follows:

THE SECRETARY OF TRANSPORTATION,
Washington, D.C., September 2, 1969.

Hon. SPIRO T. AGNEW,
President of the Senate,
Washington, D.C.

DEAR MR. PRESIDENT: There is transmitted herewith a draft of a proposal bill, "To improve and clarify certain laws affecting the Coast Guard Reserve."

The proposed bill would make changes to title 14, United States Code. Some of the changes clarify existing language or deal with minor areas where the existing statutory language does not completely cover a situation. These do not involve significant changes in substantive law.

The remainder of the changes would alter or add to substantive provisions in several areas. One major change in the proposal is that which would change the promotion system affecting Reserve officers to have it conform more closely with the promotion system applicable to Regular officers while providing for equality of treatment of officers of the Women's Reserve. In 1963, there was a comprehensive revamping of the system used to select for promotion, officers of the Regular Coast Guard. The fundamental change embodied in the new system required selection on a best-qualified basis for promotion to grades above lieutenant (junior grade) rather than on the basis of a modified seniority system under which all qualified officers were promoted.

The major purpose of the amendments to chapter 21 of title 14, is to adopt the best-qualified system for the promotion of Reserve officers. Such a system will not only permit the same standards to be maintained for the Reserve as are maintained for the Regular service, but will also aid in eliminating a severe stagnation problem in the grades of captain, commander, and lieutenant commander.

This stagnation results from the fact that upon the establishment of the Coast Guard Reserve in 1941, an extremely large number of Reserve officers entered the Reserve. The movement of these officers into the grades of captain, commander, and lieutenant commander has severely retarded the promotion of junior officers. The stagnation has been somewhat aggravated also by reason of the fact that more Reserve officers have become eligible for promotion as a result of the acceleration of promotion of Regular officers under best-qualified standards and the operation of the running-mate system. While Regular officers may expect to be promoted to captain, commander, and lieutenant commander in 22, 14, and 8 years, respectively, Reservists are 14, 4, and 2 years behind their running mates and the time lag is rapidly widening. This slowdown in promotion will have serious adverse effects upon the quality of leadership, morale, and interest of Coast Guard Reserve officers. It will also increase the difficulties of attracting and retaining high quality Reserve officers.

The proposed legislation is necessary to alleviate the present stagnation in the grades of captain, commander, and lieutenant commander and to prevent it from spreading to the lower grades. While this is the immediate need for this legislation, the more important and long range objective is to enhance the quality of the Coast Guard Reserve by increasing the quality of its officer corps. A best-qualified system will help to assure that those officers possessing the requisite degree of knowledge, judgment, and leadership ability to perform their duties efficiently in the light of an increasing emphasis on science, technology, and management will be selected. Adoption of the system will provide the means to control the flow of promotion, eliminate disparities, utilize manpower efficiently, and attract and retain officers of high capability.

Related to this major change are other provisions which would modify the Reserve officer structure by removing certain restrictions affecting officers of the Women's Reserve; by providing a modified, best-qualified promotion system for officers of the Women's Reserve; by eliminating the existing dual promotion system for officers serving on extended active duty, thus permitting actions taken in active duty status to be effective for Reserve status purposes; by providing for the elimination from an active status of those officers who have failed of selection for promotion to the next higher grade; by providing that a promotion appointment will be deemed accepted unless delivery cannot be effected; by modifying the running mate system; by stabilizing the precedence of officers; and by limiting the time in grade as a Reserve rear admiral.

Certain restrictions have been removed relative to officers of the Women's Reserve to incorporate some of the provisions applicable to women of the other Armed Services under Public Law 90–130. Because of extremely small numbers and maldistribution within year groups, it is impossible to provide for a best-qualified system of promotion with competition among themselves only, and still provide opportunity of promotion equal to that of male Reserve officers. For this reason, it is proposed to retain the fully qualified method of selection for officers of the Women's Reserve through the grade of lieutenant commander and to establish a best-qualified system for higher grades.

The dual system of promotion presently in effect for Reserve officers serving on active duty has resulted in duplication of effort and administrative delays. With the adoption of a best-qualified system of promotion for Reserve officers serving on inactive duty which parallels that presently employed for officers serving on active duty, the need for dual consideration would no longer exist. The proposal includes carry-over provisions to protect officers who have been selected for promotion while on active duty but could not be promoted before release to inactive duty, and vice versa.

The proposal to eliminate officers who have twice failed of selection to a higher grade and who had a full career is necessary to prevent officers who are no longer eligible for selection to a higher grade from filling billets which would impede the flow of promotion. It recognizes that the officers who are needed in an active status are those found to be best-qualified. At the same time there are provisions which protect the investment made in a Reserve career by those who are to be eliminated, and provide flexibility if it is necessary to retain individuals to meet mobilization requirements.

The proposal to assign an officer on the active duty promotion list, whether he is a Regular or Reserve officer, as the running mate of Reservists not on the active duty promotion list will effect an administrative improvement, by doing away with the necessity of assigning Regular officers to newly

commissioned ensigns commencing their three-year tour of active duty, and will eliminate a superfluous action since active duty promotions are governed by provisions of law in chapter 11 of title 14.

Recently, some discrepancies in precedence were noted where because of operation of law, an officer either gained or lost precedence without cause. The legislative proposal would prevent such occurrences in the future and provide authority to rectify present injustices.

At present, there are no time in grade limitations concerning the retention in an active status of Reserve rear admirals except those pertaining to mandatory retirement for age. Although the lack of such limitations has not proved troublesome in the past, it is considered that with the advent of a best-qualified promotion system and an increased use of other methods of attrition, a definite time in grade limitation should be provided for to increase the opportunity for promotion of captains to flag rank. The proposal to limit service in an active status of Reserve rear admirals to five years is considered to be reasonable and, at the same time, adequate for the officers to gain the desired level of experience in the grade.

It is anticipated that the enactment of this legislation would involve little, if any, additional expenditure of funds for retired pay.

It would be appreciated if you would lay this proposal before the Senate. A similar bill has been submitted to the Speaker of the House of Representatives.

The Bureau of the Budget has advised that there is no objection from the standpoint of the Administration's program to the submission of this proposed legislation to the Congress.

Sincerely,

JAMES M. BEGGS,
Acting Secretary.

SECTIONAL ANALYSIS

The bill is divided into 2 sections. Section 1, comprising the major portion of the bill, contains extensive amendments to title 14, U.S. Code. These amendments (1) establish an entirely new system for the promotion of male Reserve officers above the rank of ensign and for officers of the Women's Reserve above the rank of lieutenant commander; (2) revise provisions relating to retention and elimination of Reserve officers; (3) revise the running mate system to conform more closely to that of the Naval Reserve; (4) amend the provisions relating to precedence of officers to stabilize their lineal position and (5) make other changes to adapt chapter 21 of title 14 to the provisions of the bill. Section 2 contains saving provisions to provide equitable transition from existing law to this new law.

Clause (1) amends subsection (b) of section 762 by removing the restriction on rank of women officers by deleting the words "but not above the grade of captain."

Clause (2) amends 770 by technical changes only to provide that the subchapter comprise sections 770 to 798, and that the active duty promotion list refers to that defined in section 41a of title 14.

Clause (3) amends section 772 by a technical change to provide for an excess of officer personnel above the authorized total or the authorized percentages in any grades due to operation of mandatory provisions of law.

Clause (4) amends section 774 by a technical change referencing provisions of section 787.

Clause (5) amends section 775 to add a provision that whenever women officers are being considered for promotion, there will be women officers appointed as members of the selection board.

Clause (6) amends subsections (c) and (d) of section 780 and adds subsection (i), to establish an entirely new promotion system for male officers in the grade of lieutenant (junior grade) and above, and officers of the Women's Reserve in the grade of lieutenant commander and above, not serving on active duty. It is designed to parallel as closely as possible the promotion system of the Regular Coast Guard established in 1963, and that under which the Naval Reserve has been operating for several years. The existing system of promoting all Coast Guard Reserve officers on inactive duty by seniority on a "fully qualified" basis is replaced by a system whereby male officers above the grade of ensign and officers of the Women's Reserve above the grade of lieutenant would be promoted on a "best qualified" basis. A "fully qualified" system for promotion to the next highest grade would be retained for all ensigns and officers of the Women's Reserve through the grade of lieutenant. Promotions of male and female officers differ slightly under Clause (6) because the wide disparity in year groups, sometimes involving only a single officer, make competition on a best qualified basis not feasible. Junior women officers are all direct commissioned, having no officer candidate school background nor active duty except for annual two week periods. If they were required to compete with male graduates of OCS, averaging three years active duty, they would virtually be denied promotion beyond lieutenant (junior grade). These provisions would deal more fairly with junior women officers and incorporate the spirit of P.L. 90–130 relating to the removal of career restrictions on women officers of the other Armed Services. The subsections are described in detail as follows:

Subsection (c) provides that a selection board shall recommend for promotion, from among the officers whose names are submitted to it, (1) those male officers above the grade of ensign whom it considers to be best qualified; (2) those officers of the Women's Reserve above the grade of lieutenant it considers to be best qualified; (3) those male ensigns whom it considers to be fully qualified; and (4) those officers of the Women's Reserve in the grades of ensign, lieutenant (junior grade), and lieutenant it considers to be fully qualified.

Subsection (d) requires the Secretary, before convening a selection board to recommend officers for promotion to any grade above lieutenant (junior grade), to determine the total number of officers to be selected for promotion to that grade. Unless the Secretary takes action under section 772(c) of this subchapter, this number shall be equal to the number of vacancies existing in the grade, plus the number of additional vacancies estimated for the next twelve months, less the number of officers previously selected for that grade but not yet promoted. Subsection (c) of section 772 referred to above allows the Secretary to determine the number of officers who may be promoted annually in order to provide an equitable promotional opportunity among succeeding groups of officers and to maintain an adequate continuing strength of Reserve officers in an active status.

Subsection (i) provides equivalent promotion selection opportunity for male and female officers.

Clause 7 amends section 781 to provide that Reserve officers hold rank and take precedence not only among themselves but with officers of the Regular Coast Guard including the permanent commissioned teaching staff at the Coast Guard Academy.

Clause 8 amends subsection (a) of section 782 to provide that any officer on the active duty promotion list, whether Regular or Reserve, may become the running mate of any Reserve officer in an active status who is not on the active duty promotion list. It also amends subsection (b) by expanding the reasons for assigning a new running mate and by providing a means for determining the new running mate such that no officer will gain or lose precedence without cause.

Subsection (c) will provide for the adjusting of dates of rank of those officers who have gained or lost precedence because the present law operated unfairly. Example: Three Reserve officers, X, Y, and Z, served 3 years on active duty after graduation from OCS, all having the same date of rank as lieutenants (junior grade) of 12/1/66. On 1/15/67 X, the senior officer remained on active duty and Y and Z were released to inactive duty. On 11/1/67 the running mate for all 3 officers was promoted to lieutenant. Y and Z were then promoted with date of rank 11/1/67. X, however, could not be promoted until a vacant billet occurred on the active duty promotion list. He subsequently was promoted as of 1/1/68. On 5/1/ 68 Y was recalled to extended active duty. Although once junior to X, he is now senior to him by 2 months. Subsection (c) will rectify this injustice.

Clause (9) letters the present paragraph under section 7884 as "(a)" and adds a new paragraph (b) which provides that a Reserve rear admiral shall become entitled to the pay and allowances of the upper half for duty performed from the date his running mate becomes so entitled. This paragraph is added to delineate entitlement to such pay and allowances since there is no present provision of law contained in title 14, U.S. Code which specifically provides for such entitlement.

Clause (10) amends section 787 and covers failure of selection for promotion, and provides for a substantially different system of attrition.

Subsection (a) provides that a woman officer being considered for promotion on a "fully qualified" basis shall not be considered by ensuing selection boards if she fails of selection to grade of lieutenant or lieutenant commander when first considered. All ensigns plus those officers being considered on a "best qualified" basis shall not be considered again if they fail of selection twice.

Clause (11) amends section 790 by merely technical changes to adapt the present language to the new running mate system.

Clause (12) amends section 791 to eliminate the present dual systems of promotion for Reserve officers and to establish carry-over provisions to prevent duplication of effort and administrative delay. The various subsections are analyzed in detail as follows:

Subsection (a) provides that a Reserve officer serving on active duty other than active duty for training or other than for duty on a board shall not be eligible for consideration for promotion under the provisions of this subchapter. Instead, it provides that such an officer shall be considered for promotion and promoted pursuant to appropriate provisions of law contained elsewhere in title 14. This subsection further provides that if such an officer is so promoted, he shall be considered an extra number in the grade to which promoted for purposes of grade distribution prescribed in this subsection and shall not be counted in such distribution until he is released from active duty.

Subsection (b) provides that notwithstanding the provisions of subsection (a) of this section, a Reserve officer who, at the time he reports for active duty, has already been selected for promotion under the provisions of this subchapter shall be promoted as though he were selected while serving on active duty.

Subsection (c) provides that a Reserve officer who has been recommended for promotion at the time he is released from active duty shall be promoted under the provisions of this subchapter, as though he had been selected while not serving on active duty.

Subsection (d) provides that a failure of selection shall be counted for all purposes

regardless of the officer's status at the time it occurred.

Clause (13) adds three new sections relative to failure of selection of officers; acceptance of promotion when tendered; and maximum time in grade as a rear admiral. The sections are treated individually as follows:

Section 796. Failure of selection for promotion.

Present provisions of law do not specifically enumerate the conditions which must exist to constitute a failure of selection although it is implied in sections 780 and 787 of this subchapter that if an officer is considered by the board and is not recommended for promotion, he has failed of selection. As a practical matter, officers so situated have been held to have failed of selection. The insertion of subsection (a) clarifies the intent of the subchapter.

Subsection (b) is a savings provision with respect to any officer who was not considered by a selection board because of administrative error. Such an officer shall not be considered to have failed of selection. If selected by the next succeeding selection board after the error is discovered and promoted, he will assume the date of rank and precedence which he would have held if he had been selected for promotion by the board which would have considered him but for the error.

Subsection (c) provides that when a selection board is considering women officers for promotion to a grade below commander, such officers shall be considered in the order of their seniority and that when the number of officers found to be qualified equals the number of vacancies to be filled, the board shall not consider any officers junior to the last one found to be qualified. Junior officers not considered are not deemed to have failed of selection and they are eligible to be considered by the next board convened.

Section 797 is inserted and entitled "Promotion; acceptance; oath of office". This new section provides that the effective date of a promotion appointment shall be deemed to be the date of its issuance unless delivery of the appointment cannot be effected. Further, it provides that an officer who has previously taken the prescribed oath of office and has served continuously thereafter need not repeat the oath upon issuance of a promotion appointment.

Section 798 contains a new provision which requires that a Reserve rear admiral must be eliminated from an active status or discharged on the date on which he completes five years of service in that grade unless he is retained until age 64 as provided for in section 789 of this title. At the present time, there are no sections of law requiring such action to be taken until mandatory retirement age of 62 or 64 is reached. It is considered desirable to prevent a possible stagnation of promotion to flag grade since only 2 flag officers are authorized for the Coast Guard Reserve.

Section 2 contains three savings provisions necessitated by the change from a "fully qualified" system to a "best qualified" system. These three savings provisions are analyzed in detail as follows:

Subsection (a) provides for the promotion of officers who have been recommended for promotion under the present system but who have not been promoted as of the effective date of the Act. This subsection provides the authority to promote such officers without further selection. Thus, there would be no interruption in promotions.

Subsection (b) provides that officers who have failed of selection for promotion under existing laws will be considered as having failed of selection under the provisions of this Act. This makes them subject to the mandatory attrition features prescribed by this Act for such officers.

Subsection (c) insures that enactment of this Act will not result in the termination of the promotion appointment of any officer even though such appointment may have been received pursuant to a section of law or as a result of a system of promotion that is changed by the provisions of this Act.

761. Engaging in civil occupation; leave for training duty.
762. Women's Reserve.
763. Certificate of honorable service of temporary members.

COMMISSIONED OFFICERS

Sec.
770. Definitions.
771. Applicability of this subchapter.
772. Authorized number of officers.
773. Constructive credit upon initial appointment.
774. Eligibility for promotion; retention in active status.
775. Selection boards; appointment.
776. Grade on entry upon active duty.
777. Recommendation for promotion of officers previously removed from active status.
778. Suspension of this subchapter in war or national emergency.

§ 770. Definitions.

As used in section 770–79[5]*8*, inclusive of this title—

* * * * *

(9) the "active duty promotion list" is as defined in section 41a of this title.

[9] *(10)* "this subchapter" means section 770 to 79[5]*8*, inclusive of this title.

* * * * *

§ 772. Authorized number of officers.

* * * * *

(b) The authorized number of officers of the Coast Guard Reserve in active status in each of the grades below the grade of rear admiral shall be a percentage of the total authorized number of such officers in active status below the grade of rear admiral, and shall be 1.5 percent in the grade of captain, 7.0 percent in the grade of commander, 22.0 percent in the grade of lieutenant commander, 37.0 percent in the grade of lieutenant, and 32.5 percent in the combined grades of lieutenant (junior grade) and ensign, except that when the actual number of Coast Guard Reserve officers in an active status in any grade is less than the number which is so authorized, the difference may be applied to increase the authorized number in any lower grade or grades. No Reserve officer shall be reduced in rank or grade solely because of a reduction in an authorized number provided in this subsection [.] *or because an excess results directly from the operation of mandatory provisions of this or other laws.* The authorized number of Coast Guard Reserve officers in an active status in the grade of rear admiral shall be two.

* * * * *

§ 774. Eligibility for promotion; retention in active status.

[To be eligible for consideration for promotion under this subchapter] *A* Reserve officer must be in an active status [.] *to be eligible for consideration for promotion and to be promoted under this subchapter. Officers retained in an active status and excluded from promotion by the provisions of section 787 of this title are not eligible for consideration for promotion.*

§ 775. Selection boards; appointment.

* * * * *

(f) *Whenever a selection board is convened to consider officers of the Women's Reserve not serving on active duty, membership of the board shall include, when reasonably available, not less than two members of the Women's Reserve not serving on active duty.*

* * * * *

§ 780. Promotion; recommendations of selection boards.

* * * * *

(c) Each selection board, from among those officers whose names are submitted to it as determined by section 783 of this title, [and without regard to existing precedence or seniority, shall recommend for promotion those officers whom it considers to be qualified to assume the duties of the next higher grade. Such officers shall receive consideration in the order of their relative seniority and when the number of officers found to be qualified equals the number of vacancies to be filled, the board need not consider any officers junior to the last officer found to be qualified and recommended for promotion.] *shall recommend for promotion to the next higher grade:*

(1) those male officers serving in the grade of lieutenant (junior grade) or above whom it considers to be best qualified;

(2) those male officers serving in the grade of ensign whom it considers to be fully qualified;

(3) those officers of the Women's Reserve serving in the grade of lieutenant or below whom it considers to be fully qualified; and

(4) those officers of the Women's Reserve serving in the grade of lieutenant commander or above whom it considers to be best qualified. The recommendation of a selection board shall be based on comparative fitness for the duties to which officers of the Women's Reserve are normally assigned.

(d) [Any such junior officers not considered pursuant to subsection (c) of this section shall not be considered to have failed of selection, and the names of such officers shall be again submitted to the next ensuing selection board.] *Before convening a board to recommend officers for promotion to any grade above lieutenant (junior grade), the Secretary shall determine the total number of officers to be selected for promotion to that grade. Unless the Secretary takes action pursuant to the provisions of subsection (c) of section 772 of this subchapter, this number shall be equal to the number of vacancies existing in the grade, plus the number of vacancies estimated for the next twelve months, less the number of officers on the promotion list for that grade.*

* * * * *

(i) *Vacancies in all grades shall be filled by the combined total of those officers, male and female, who have been selected for promotion. Selection opportunity for officers of*

the Women's Reserve to grades above lieutenant commander shall be equivalent to that prescribed for male officers of the same grades. Officers of the Women's Reserve being considered for promotion to the grades of lieutenant commander or below shall be considered and selected in their order of precedence up to the number designated to be selected.

* * * * *

§ 781. Precedence.

Officers of the Reserve shall have rank and take precedence in their respective grades among themselves and with officers of the same grades [of the Regular Coast Guard respectively] *on the active duty promotion list and the permanent commissioned teaching staff* in accordance with the dates of rank as stated in their commissions. When Reserve officers and [Regular] officers *on the active duty promotion list or the permanent commissioned teaching staff* have the same date of rank in a grade, such officers shall take precedence as determined by the Secretary.

§ 782. Running mates.

(a) Each officer of the Reserve in an active status *not on the active duty promotion list* shall [have] *be assigned* a running mate who shall be the officer [of the Regular Coast Guard] of the same grade *on the active duty promotion list* [exclusive of extra numbers,] who is next senior to him in precedence as determined in the manner prescribed in section 781 of this title. *Officers who are extra numbers, who have twice failed of selection, or who have not been recommended for continuation under section 289 of this title shall not be assigned as running mates under this section.*

* * * * *

(1) If a running mate is [retired, dies, or otherwise is separated from the service,] *promoted from below the promotion zone, is removed from the active duty promotion list,* suffers loss of numbers, or fails to qualify for promotion, the new running mate shall be the officer of the [Regular Coast Guard of the] same grade *on the active duty promotion list* who was next senior to the old running mate, [exclusive of extra numbers,] or if there be no such [Regular] officer then the most senior [Regular] officer in [the] *that* grade [.] *on the active duty promotion list. If the old running mate was on a list of selectees for promotion the new running mate shall be on a list of selectees.*

(2) If an officer of the Reserve suffers loss of numbers, the new running mate, shall be the officer [of the Regular Coast Guard exclusive of extra numbers,] *on the active duty promotion list* who is the running mate of the Reserve officer next senior to the officer concerned after the loss of numbers has been effected.

(3) If an officer of the Reserve *is considered for promotion at approximately the same time as his running mate and* fails of selection [or], fails to qualify for promotion *after selection, or declines an appointment after having been selected for promotion* and his running mate is promoted, the new running mate shall be the *next* senior officer [of the Regular Coast Guard] remaining in [that grade,] *the same grade on the active duty promotion list,* [exclusive of extra numbers,] whose name is not on a [promotion] list [.] *of selectees and who is eligible for consideration for promotion.*

[(4) If a running mate is retarded in rate of promotion or has attained the highest rank to which he may be promoted, the new running mate shall be the officer of the Regular Coast Guard who is next senior to the old running mate, exclusive of extra numbers, or if there be no such Regular officer then the Regular officer of the same grade who is next eligible for promotion. An officer shall be considered to have been retarded when another officer in his grade junior to him is eligible for promotion ahead of him. If subsequently the old running mate is promoted and is restored to the precedence he would have held but for the retardation, he shall be reassigned as the running mate of the Reserve officer concerned.]

"(4) If an officer of the Reserve was not considered for promotion at approximately the same time as his running mate, and the Reserve officer subsequently is considered and fails of selection or fails to qualify for promotion, such failure shall be deemed to have occurred at the same time as his running mate was considered. His new running mate shall be the next senior officer remaining in the same grade on the active duty promotion list, whose name was not on a list of selectees at the time the original running mate was selected."

"(5) In any situation not expressly covered by this subsection or where the assignment of a running mate would result in an inequitable change in precedence, the Secretary may assign an appropriate running mate to effect the intent of this section that no unjust benefit or detriment will result to any officer from the operation of this section."

"(6) A Reserve officer on the active duty promotion list shall become the running mate of all the inactive duty Reserve officers who are junior to him and had a running mate in common with him at the time of his being placed on the active duty promotion li[illegible]."

"(c) The Secretary is authorized to adjust, as necessary, the dates of rank of Reserve officers not on active duty so that the dates will correspond with those of the running mates assigned to them in accordance with the provisions of this section. However, the dates of rank of those Reserve officers whose names are on a list of selectees for promotion to the next higher grade at the time of enactment of this subsection, shall not be adjusted until such time as the officers have been promoted. If overpayments of pay and allowances will have resulted from the adjustment of dates of rank, such overpayments shall not be subject to recoupment."

§ 784. Date of rank upon promotion; entitlement to pay.

(a) When an officer of the Reserve is promoted to the next higher grade under the provisions of this subchapter either for temporary service or for service in permanent grade, he shall be assigned the same date of rank as that assigned to his running mate for either and/or both types of service and a Reserve officer so promoted shall be allowed pay and allowances of the higher grade for duty performed from the date of his appointment thereto.

"(b) Notwithstanding any other provision of law, a Reserve rear admiral shall become entitled to the pay and allowances of the upper half for duty performed from the date his running mate becomes so entitled."

* * * * *

§ 787. Failure of selection and elimination.

"(a) [A Reserve officer not above the grade of lieutenant after failing of selection for promotion to the next higher grade for a second time may be retained in or eliminated from an active status in the discretion of the Secretary.] *Officers of the Women's Reserve in the grades of lieutenant (junior grade) and lieutenant failing of selection for promotion to the next higher grade, and all other Reserve officers after failing of selection for promotion to the next higher grade for a second time, may be retained in or eliminated from an active status in the discretion of the Secretary.* [Other] *Those* Reserve officers [whose names are not on a promotion list after failing of selection for promotion to the next higher grade a second time] *who are not retained in an active status* shall be given an opportunity to apply for transfer to the Retired Reserve if qualified, but unless so transferred shall be discharged on June 30 of the fiscal year in which they have completed the following periods of total commissioned service for the grades specified:

Grade:	*Total years of commission service*
Captain	30
Commander	26
Lieutenant commander	20

For the purpose of this subsection, the total commissioned service of an officer who shall have served continuously in the Coast Guard Reserve following appointment therein in the grade or rank of ensign shall be computed from June 30 of the fiscal year in which he accepted appointment. Each Reserve officer initially appointed in a grade above that of ensign shall be deemed to have for these purposes, as much total commissioned service as any officer of the Regular Coast Guard who has served continuously since original appointment as ensign, has not lost numbers or precedence and who is, or shall have been, junior to such Reserve officer, except that the total commissioned service that such Reserve officer shall be deemed to have shall not be less than the actual number of years he has served in commissioned officer status above the grade of commissioned warrant officer.

* * * * *

§ 790. Type of promotion; temporary; permanent.

(a) Notwithstanding any other law, if a Reserve officer is promoted when his [or her] running mate [in the Regular Coast Guard] is promoted and such promotion of the [Regular] running mate is on a temporary basis, the promotion of the Reserve officer concerned shall be on a temporary basis, and if subsequently the [Regular] running mate is reverted to a lower grade (for reasons other than disciplinary or for incompetence or at his own request), the Reserve officer shall likewise revert to the same lower grade in the same manner as his running mate [in the Regular service] and take corresponding precedence.

* * * * *

§ 791. Promotion of officers on active duty.

[While serving on extended active duty, an officer of the Reserve may be promoted in the same manner as an officer of the Regular Coast Guard. If so promoted by reason of being on active duty, the officer concerned will be considered an extra number in the higher grade of the Reserve and when released from such active duty, unless permanently promoted while on extended active duty, shall resume his permanent rank and status in the Reserve. Such officers shall also be considered by promotion boards for officers of the Reserve if they otherwise meet the requirements of this subchapter and the regulations of the Secretary and may be promoted in the normal manner for Reserve officers if qualified under the provisions of this subchapter.]

(a) While serving on active duty other than active duty for training, or other than for duty on a board, a Reserve officer shall not be eligible for consideration for promotion or for promotion under the provisions of this subchapter. Such an officer shall be considered for promotion and promoted pursuant to appropriate provisions contained elsewhere in this title. If so promoted, such an officer shall be considered as having been promoted under this subchapter and shall be considered as an extra number in the grade to which promoted for the purpose of grade distribution prescribed in this subchapter and shall not be counted in such

distribution until he is released from active duty.

(b) Notwithstanding the provisions of subsection (a) of this section, a Reserve officer who, at the time he reports for active duty has been recommended for promotion to the next higher grade under the provisions of this subchapter, shall be promoted to such grade subject to the same conditions as though selected under provisions of law applicable to a Reserve officer serving on active duty.

(c) A Reserve officer who, at the time he is released from active duty, has been recommended for promotion to the next higher grade under provisions of law applicable to a Reserve officer serving on active duty, shall be promoted to such grade subject to the same conditions as though selected under provisions of this subchapter.

(d) A failure of selection for promotion to the next higher grade shall be counted for all purposes regardless of whether it occurred under the provisions of this subchapter or under other provisions of law.

* * * * *

§ 796. Failure of selection for promotion.

(a) A Reserve officer, other than an officer serving in the grade of captain, who is, or is senior to, the junior officer in the promotion zone established for his grade, fails of selection if he is not selected for promotion by the selection board which considered him, or if having been recommended for promotion by the board, his name is thereafter removed from the report of the board by the President.

(b) An officer shall not be considered to have failed of selection if he was not considered by a selection board because of administrative error. If he is selected by the next succeeding selection board after the error is discovered and is promoted, he shall be given the date of rank and precedence that he would have held if he had been recommended for promotion by the selection board which would have considered him but for the error.

(c) Those officers of the Women's Reserve in the grades of lieutenant and lieutenant (junior grade) who are junior to the last officer selected by a board pursuant to subsection (i) of section 780 of this title shall not be considered to have failed of selection, and the names of such officers shall be submitted to the next ensuing selection board.

§ 797. Promotion; acceptance; oath of office.

(a) An officer who has been appointed under the provisions of this subchapter is considered to have accepted such appointment unless delivery of the appointment cannot be effected.

(b) An officer who has served continuously since he subscribed to the oath of office prescribed in section 3331 of title 5, United States Code, is not required to take a new oath upon his appointment in a higher grade.

§ 798. Rear admiral; maximum service in grade.

A Reserve rear admiral, unless retained in or removed from an active status under other provisions of law, shall be removed from an active status on the date he completes five years of service in the permanent grade of rear admiral.

S. 3081—INTRODUCTION OF A BILL AND CLARIFYING CERTAIN LAWS AFFECTING THE COAST GUARD

Mr. MAGNUSON. Mr. President, I introduce, by request, a bill to improve and clarify certain laws affecting the Coast Guard. I ask unanimous consent to have printed in the RECORD a letter from the Secretary of Transportation, together with a statement showing changes in existing law made by the proposed bill.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the letter and statement will be printed in the RECORD.

The bill (S. 3081) to improve and clarify certain laws affecting the Coast Guard, introduced by Mr. MAGNUSON, by request, was received, read twice by its title and referred to the Committee on Commerce.

The material presented by Mr. MAGNUSON is as follows:

THE SECRETARY OF TRANSPORTATION,
Washington, D.C., September 10, 1969.

Hon. SPIRO T. AGNEW,
President of the Senate,
Washington, D.C.

DEAR MR. PRESIDENT: There is transmitted herewith a draft of a proposed bill, "To improve and clarify certain laws affecting the Coast Guard."

The proposed bill would make changes to title 14, title 10, and title 37, United States Code. Some of the changes are minor in nature and either clarify existing language or deal with minor areas where the existing statutory language does not completely cover a situation. These do not involve significant changes in substantive law. The remainder of the changes would alter or add to substantive provisions in several areas.

The Coast Guard Academy would be the subject of several substantive of changes. The first of these would increase the number of cadets authorized to be appointed annually from 400 to 600. Relief from the present ceiling is necessary to insure continued support by the Academy of service officer corps needs. Secondly, the bill would provide authority to order a cadet to active duty as a member of the Coast Guard Reserve in an appropriate enlisted grade for a period not to exceed four years, if he does not complete the course of instruction or if he refuses to accept a commission. The third change would authorize the instruction of not to exceed four cadets from the Republic of the Philippines at the Coast Guard Academy. The second and third provisions are similar to existing provisions of title 10, United States Code, applicable to the Naval Academy. A fourth change provides authority for a member of the permanent commissioned teaching staff to serve until age 64. This change would parallel existing authority for the Military and Air Force Academies, the other academies with permanent commissioned professors on the teaching staff.

Certain personnel provisions concerning the Regular Coast Guard would also be amended by the proposal. The bill seeks to authorize the promotion of ensigns to lieutenant (junior grade) after 12 months active service if desired. At the present time the Navy is effecting promotions after 12 months service in the grade of Ensign. Another change relating to personnel removes reserve officers assigned to the Selective Service System from the active duty promotion list. This modification will afford these officers opportunity for promotion commensurate with their background and assigned duties. A final change in this area seeks to authorize the recall of retired regular officers with their consent, regardless of their age.

Another area in which substantive authority would be added concerns housing and transportation of dependent school children.

The proposed addition would make permanent the temporary authority to lease housing for assignment as public quarters which was contained in Public Law 90-334 and which will expire on June 30, 1970. There is a continuing need for this authority in order to provide sufficient housing for Coast Guard personnel. In addition, authority would be provided for the Secretary of designate as rental housing certain government-owned housing which does not meet current standards for public quarters and, therefore, is inadequate. The rental charge would be set according to parameters set forth in the proposed amendment section. This authority would permit the continuance of a program which was commenced some years ago.

With the increased acquisition and construction of housing at Coast Guard units in recent years, a necessity has developed for providing for the transportation of dependent school children between the site of the housing and the schools serving the area. Frequently, Coast Guard units with public quarters attached are located at some distance from public transportation facilities, if they exist at all. There is no feasible method of getting the children to their schools. The proposed authority would allow the Coast Guard to provide this transportation, where necessary and would parallel similar procedures effective in the other armed forces.

Among the remaining changes is one which would permit obligations to be incurred against anticipated reimbursement to the Coast Guard Supply Fund as the Secretary, with the approval of the Director of the Bureau of the Budget, determines to be necessary. The funding capability of the Supply Fund has been considerably reduced in recent years due to increased inventory levels required by the expansion of Coast Guard activities, inflationary trends and increased lead time for material on order. The authority sought presently exists for the Department of Defense and is codified in 10 United States Code 2210(b).

The last significant change to title 14 concerns the existing limitation found in section 432(g) on the compensation of personnel of the former lighthouse service. This limitation of $5,100.00 has prevented the more senior employees from receiving the full benefits of pay increase legislation particularly in the past few years. Additionally, an adjustment in accordance with current directives of the Bureau of the Budget in rental charges for quarters furnished these employees will result in an increased charge against them which, in effect, will lower their effective level of compensation. The proposed increase in the maximum limitation to $7,500 will allow these employees to receive pay increases as they are enacted and will allow some flexibility in adjusting position levels to reflect the increased rental charge without reducing the take-home pay of the employees concerned.

The remaining changes to title 14 are technical changes to existing language to clarify it or to deal with minor problems. These include amendments to insure complete understanding as to Coast Guard responsibility for underwater research and rescue, maritime safety and law enforcement.

In addition to amendments to title 14, certain amendments to titles 10 and 37 of the United States Code are also included. The amendment to the Armed Forces title would add Coast Guard dependents to the existing authority for the training of dependents of members of the other armed forces in foreign language in anticipation of the members' permanent dusty assignment outside the United States.

The Pay and Allowances title would be amended to provide authority for the payment of Coast Guard aviation cadets similar to that for aviation cadets of the Navy, Air Force, and Marine Corps. Additionally, it would be amended to provide for the payment of a uniform allowance to enlisted members of the Coast Guard appointed to permanent warrant officer grade similar to the allowance provided enlisted members when appointed to temporary officer status. Finally, it would be amended to provide authority to increase the pay of a member of the permanent commissioned teaching staff at the Academy, at the thirty-sixth year of service, producing a pay comparable to that authorized at the other service academies with permanent commissioned professors on the teaching staff.

The additional expenses caused by this

legislation, if enacted, will depend, in great measure, upon the extent to which some of the authority granted is implemented. The impact of certain of the provisions can be estimated with some certainty. For example, the annual cost resulting from the increase in the limitation on the maximum compensation to be paid to personnel of the former lighthouse service would be about $1,500.

When the authority to train cadets from the Republic of the Philippines is fully implemented it will cost annually approximately $10,000 for the four cadets. The annual expenditure for transportation of dependent school children is not expected to be a significant amount. It is anticipated that some savings will result from the authority to require enlisted service from cadets who do not complete the course of instructions at the Academy. However, the amount of such savings is difficult to estimate.

It would be appreciated if you would lay this proposal before the Senate. A similar proposal has been submitted to the Speaker of the House of Representatives.

The Bureau of the Budget has advised that there would be no objection from the standpoint of the Administration's program to the submission of this draft legislation to the Congress.

Sincerely,

J. C. WOLFF.

COMPARATIVE TYPE SHOWING CHANGES IN EXISTING LAW MADE BY THE PROPOSED BILL

(Matter proposed to be omitted is enclosed in brackets; new matter is italic)

TITLE 41

§ 2. Primary duties.

The Coast Guard shall enforce or assist in the enforcement of all applicable Federal laws [upon] *on and under* the high seas and waters subject to the jurisdiction of the United States; shall administer laws and promulgate and enforce regulations for the promotion of safety of life and property on *and under* the high seas and [on] waters subject to the jurisdiction of the United States covering all matters not specifically delegated by law to some other executive department; shall develop, establish, maintain and operate, with due regard to the requirements of national defense, aids to maritime navigation, [ice-breaking] *icebreaking* facilities, and rescue facilities for the promotion of safety on, *under,* and over the high seas and waters subject to the jurisdiction of the United States; shall engage in oceanographic research on the high seas and in waters subject to the jurisdiction of the United States; and shall maintain a state of readiness to function as a specialized service in the Navy in time of war.

* * * * *

§ 41a. Active duty promotion list.

(a) The Secretary shall maintain a single active duty promotion list of officers of the Coast Guard on active duty in the grades of ensign and above. Retired officers, officers of the permanent commissioned teaching staff of the Coast Guard Academy, and officers of the Women's Reserve shall not be included on the active duty promotion list. Reserve officers on extended active duty, other than those serving in connection with organizing, administering, recruiting, instructing, or training the Reserve components [,] *or assigned to the Selective Service System,* shall be included on the active duty promotion list.

* * * * *

§ 88. Saving life and property.

(a) In order to render aid to distressed persons, vessels, and aircraft on *and under* the high seas and on *and under* the waters over which the United States has jurisdiction and in order to render aid to persons and property imperiled by flood, the Coast Guard may:

* * * * *

Chapter 9.—Coast Guard Academy

Sec.
181. Administration of Academy.
182. Cadets; number, appointment, obligation to serve.
183. Cadets; initial clothing allowance.
184. Cadets; degree of bachelor of science.
185. Cadets; appointment as ensign.
186. Civilian instructors.
187. Permanent commissioned teaching staff; composition.
188. Appointment of permanent commissioned teaching staff.
189. Grade of permanent commissioned teaching staff.
190. Retirement of permanent commissioned teaching staff.
191. Credit for service as member of civilian teaching staff.
192. Assignment of personnel as instructors.
193. Advisory Committee.
194. Annual Board of Visitors.
195. Admission of foreigners for instruction; restrictions; conditions.

* * * * *

§ 182. Cadets; number, appointment, obligation to serve.

(a) The number of cadets appointed annually to the Academy shall be as determined by the Secretary but the number appointed in any one year shall not exceed [four] *six* hundred. Appointments to cadetships shall be made under regulations prescribed by the Secretary, who shall determine age limits, methods of selection of applicants, term of service as a cadet before graduation, and all other matters affecting such appointments. The Secretary may summarily dismiss from the Coast Guard any cadet who, during his cadetship, is found unsatisfactory in either studies or conduct, or may be deemed not adapted for a career in the Coast Guard. Previous to his admission each cadet shall obligate himself, in such manner as the Secretary shall prescribe, *to complete the course of instruction at the Coast Guard Academy and* to serve at least five years as an officer in the Coast Guard after graduation, if his service be so long required. Cadets shall be subject to rules governing discipline prescribed by the Commandant.

(b) A cadet who does not fulfill his obligation to complete the course of instruction or refuses to accept an appointment as an officer in the Coast Guard may be transferred by the Secretary to the Coast Guard Reserve in an appropriate enlisted grade or rating, and, notwithstanding section 651 of title 10, United States Code, may be ordered to active duty to serve in that grade or rating for such period of time as the Secretary prescribes, but not for more than four years.

§ 190. Retirement of permanent commissioned teaching staff

Professors, associate professors, assistant professors, and instructors in the Coast Guard shall be subject to retirement or discharge from active service for any cause on the same basis as other commissioned officers of the Coast Guard, except that they shall not be required to retire from active service under the provisions of section 288 of this title, nor shall they be subject to the provisions of section 289 of this title, *nor shall they be required to retire at age 62 but may be permitted to serve until age 64 at which time unless earlier retired or separated they shall be retired.* The Secretary may retire any member of the permanent commissioned teaching staff who has completed thirty years' active service. Service as a civilian member of the teaching staff at the Academy in addition to creditable service authorized by any other law in any of the military services rendered prior to an appointment as a professor, associate professor, assistant professor, or instructor shall be credited in computing length of service for retirement purposes. The provisions of law relating to retirement for disability in line of duty shall not apply in the case of a professor, associate professor, assistant professor, or instructor serving under a temporary appointment.

§ 195. Admission of foreigners for instruction; restrictions; conditions

(a) Upon designation by the President, the Secretary may permit not to exceed four persons at a time from the Republic of the Philippines to receive instruction at the Academy.

(b) A person receiving instruction under this section is entitled to the same pay and allowances, to be paid from the same appropriations, as cadets at the Academy.

(c) Except as the Secretary determines, a person receiving instruction under this section is subject to the same regulations governing admission, attendance, discipline, resignation, discharge, dismissal, and graduation as a cadet; however, a person receiving instruction under this section is not entitled to an appointment in the Coast Guard by reason of his graduation from the Academy.

Chapter II.—Personnel

* * * * *

§ 271. Promotions; appointments.

* * * * *

(c) An officer serving on active duty in the grade of ensign may if found fully qualified for promotion in accordance with regulations prescribed by the Secretary, be promoted to the grade of lieutenant (junior grade) by appointment after he has completed [eighteen] *twelve* months' active service in grade. The date of rank of an officer promoted under this subsection shall be the date of his appointment in the grade of lieutenant (junior grade) as specified by the Secretary.

* * * * *

§ 332. Recall to active duty with consent of officer

(a) Any regular officer on the retired list may, with his consent be assigned to such duties as he may be able to perform. [But no officer on the retired list who has reached the age of sixty-two years shall be recalled in time of peace.]

* * * * *

§ 432. Personnel of former Lighthouse Service

* * * * *

(g) The head of the department in which the Coast Guard is operating under regulations prescribed by him, may regulate the hours of duty and the pay of civilian keepers of lighthouses and civilians employed on lightships and other vessels of the Coast Guard, but such personnel may be called upon for duty in emergency circumstances or otherwise at any time or all times. The existing system governing the pay of such employees may be continued or changed except that overtime compensation, night differential, and extra pay for duty on holidays shall not be paid to such employees. In lieu thereof additional annual compensation may be authorized, which may be prescribed either as a fixed differential or as a percentage of the basic compensation otherwise applicable to such employees. In no case shall basic compensation exceed [$5,100] *$7,500* per annum, except that nothing contained in this subsection shall operate to decrease the basic compensation of any person employed by the Coast Guard on the date of enactment of this subsection, and in no case shall additions thereto exceed 25 per centum of such basic compensation. Provisions may be made for compensatory absence from duty when

conditions of employment result in confinement because of isolation or in long periods of continuous duty, and provisions may likewise be made for extra allowance for service outside the continental limits of the United States.

Chapter 13.—Pay, allowances, awards, and other rights and benefits

Sec.
461. Pay and allowances; pay of officers indebted to the United States; remission of indebtedness of enlisted members.
462. Pay and allowances of rear admirals.
462a. Retired rear admirals; retired pay after two years of active duty.
464. Allotment of pay.
465. Advances to officers ordered to and from sea or shore duty beyond the seas.
466. Settlement of accounts of deceased officers and men.
467. Computation of length of service.
468. Procurement of personnel.
469. Training.
470. Special instruction at universities.
471. Attendance at professional meetings.
473. Allowances to under-age discharged persons.
474. Compensation for travel tolls and fares.
475. [Hiring of quarters for personnel.] *Leasing and hiring of quarters; rental of inadequate housing.*
476. Contingent expenses.
477. Equipment to prevent accidents.
478. Rations or commutation therefor in money.
479. Sales of ration supplies to messes.
480. Flight rations.

* * * * *

[§ 475. Hiring of quarters for personnel

Where sufficient quarters are not possessed by the United States, the Commandant may hire quarters for personnel, including personnel on sea duty at such times as they may be deprived of their quarters on board ship due to repairs or other conditions which may render them uninhabitable. Such accommodations shall not be available for occupancy by the dependents of such personnel.]

§ 475. Leasing and hiring of quarters; rental of inadequate housing

(a) The Secretary is authorized to lease housing facilities at or near Coast Guard installations, wherever located, for assignment as public quarters to military personnel and their dependents, if any, without rental charge upon a determination by the Secretary, or his designee, that there is a lack of adequate housing facilities at or near such Coast Guard installations. Such public housing facilities may be leased on an individual or multiple-unit basis. Expenditures for the rental of such housing facilities may not exceed the average authorized for the Department of Defense in any year.

(b) Notwithstanding the provisions of any other law, members of the Coast Guard, with dependents, may occupy on a rental basis, without loss of basic allowance for quarters, inadequate quarters under the jurisdiction of the Coast Guard notwithstanding that such quarters may have been constructed or converted for assignment as public quarters. The net difference between the basic allowance for quarters and the fair rental value of such quarters shall be paid from otherwise available appropriations; however, no rental charge for such quarters shall be made against the basic allowance for quarters of a member of the Coast Guard in excess of 75 percent of such allowance except that in no event shall the net rental value charged to the member's basic allowance for quarters be less than the cost of maintaining and operating the housing.

(c) The Secretary is authorized, subject to regulations approved by the President,

(1) to designate as rental housing such housing as he may determine to be inadequate as public quarters; and

(2) to lease inadequate housing to members of the Coast Guard for occupancy by them and their dependents.

(d) Where sufficient quarters are not possessed by the United States, the Commandant may hire quarters for personnel, including personnel on sea duty at such times as they may be deprived of their quarters on board ship due to repairs or other conditions which may render them uninhabitable. Such accommodations shall not be available for occupancy by the dependents of such personnel.

Chapter 17. Administration

Sec.
631. Delegation of powers by the Secretary.
632. Functions and powers vested in the Commandant.
633. Regulations.
634. Officers holding certain offices.
635. Oaths required for boards.
636. Administration of oaths.
637. Stopping vessels; immunity of Coast Guard officer.
638. Coast Guard ensigns and pennants.
639. Penalty for unauthorized use of words "Coast Guard."
641. Disposal of certain material.
642. Deposit of damage payments.
643. Rewards for apprehension of persons interfering with aids to navigation.
644. Payment for the apprehension of stragglers.
645. Settlement of claims incident to activities of the Coast Guard.
646. Claims for damages occasioned by vessels.
647. Claims for damage to property of the United States.
648. Accounting for industrial work.
649. Supplies and equipment from stock.
650. Coast Guard Supply Fund.
651. Annual report.
652. Removing restrictions.
653. Employment of draftsmen and engineers.
654. Public and commercial vessels and other watercraft; sale of fuel, supplies, and services.
655. Arms and ammunition; immunity from taxation.
656. Use of appropriations to restore, replace, establish, or develop facilities.
657. Dependent school children; transportation of.

* * * * *

§ 650. Coast Guard Supply Fund

(a) A Coast Guard Supply Fund is authorized. The Secretary may prescribe regulations for designating the classification of materials to be stocked. In such regulations, whenever the fund is extended to include items not previously stocked, the Secretary may authorize an increase in the existing capital of the fund by the value of such usable materials transferred thereto from Coast Guard inventories carried in other accounts. Except for the materials so transferred, the fund shall be charged with the cost of materials purchased or otherwise acquired. The fund shall be credited with the value of materials consumed, issued for use, sold, or otherwise disposed of, such values to be determined on a basis that will approximately cover the cost thereof.

(b) Obligations may, without regard to fiscal year limitations, be incurred against anticipated reimbursements to the Coast Guard Supply Fund in such amount and for such period, as the Secretary, with approval of the Director of the Bureau of the Budget, may determine to be necessary to maintain stock levels consistently with planned operations for the next year.

§ 657. Dependent school children; transportation of

Whenever the Secretary, under such regulations as he may prescribe, determines that schools located in the same area in which a Coast Guard facility is located are not accessible by public means of transportation on a regular basis, he may provide, out of funds appropriated to or for the use of the Coast Guard, for the transportation of dependents of Coast Guard personnel between the schools serving the area and the Coast Guard facility.

TITLE 10.—ARMED FORCES

* * * * *

Chapter 101. Training generally

* * * * *

Sec.
2002. [Dependents of members of Army, Navy, Air Force, or Marine Corps; language training.] *Dependents of members of armed forces: language training.*

* * * * *

§ 2002. [Dependents of members of Army, Navy, Air Force, or Marine Corps: language training.] *Dependents of members of armed forces: language training.*

(a) Notwithstanding section 1041 of title 22 or any other provision of law, and under regulations to be prescribed by the Secretary of Defense [,] *or, with respect to the Coast Guard when it is not operating as a service in the Navy, the Secretary of Transportation,* language training may be provided in—

(1) a facility of the Department of Defense;

(2) a facility of the Foreign Service Institute established under section 1041 of title 22; or

(3) a civilian educational institution; to a dependent of a member of the [Army, Navy, Air Force, or Marine Corps] *armed forces* in anticipation of the member's assignment to permanent duty outside the United States.

(b) For the purpose of this section, the word "dependent" has the same meaning that it has under section 401 of title 37.

TITLE 37.—PAY AND ALLOWANCES OF THE UNIFORMED SERVICES

* * * * *

CHAPTER 3.—BASIC PAY

* * * * *

§ 201. Pay grades: assignment to; general rules.

* * * * *

(e) An aviation cadet of the Navy, Air Force, [or] Marine Corps, *or Coast Guard* is entitled to monthly basic pay at the rate of 50 percent of the basic pay of a commissioned officer in pay grade 0–1 with two or less years of service computed under section 205 of this title.

* * * * *

§ 203. Rates.

* * * * *

(b) While serving as a permanent professor at the United States Military Academy or the United States Air Force Academy, *or as a member of the permanent commissioned teaching staff at the United States Coast Guard Academy,* an officer who has over 36 years of service computed under section 205 of this title is, in addition to the pay and allowances to which he is otherwise entitled under this title, entitled to additional pay in the amount of $250 a month. This additional pay may not be used in the computation of retired pay.

Chapter 7—Allowances

* * * * *

§ 415. Uniform allowances; officers; initial allowance.

* * * * *

(e) An enlisted member of the Navy, Marine Corps, or Coast Guard who is initially appointed as a temporary officer under sec-

tion 5596 or 5597 of title 10 or section 214 of title 14, *or a warrant officer under section 213 of title 14,* as the case may be, is entitled to a uniform allowance of $250.

S. 3082 THROUGH S. 3089—INTRODUCTION OF BILLS RELATING TO DISPOSAL OF CERTAIN EXCESS PRODUCTS FROM THE NATIONAL STOCKPILE

Mr. BROOKE. Mr. President, I introduce today, on behalf of the General Services Administration, eight bills for the disposal of certain excess products from our national stockpile.

Since authority for the release of these products has already been exhausted in some cases and is due to run out shortly in others, I urge that these bills receive prompt consideration.

For the information of my colleagues, I ask unanimous consent that the bills be printed at this point in the RECORD.

The PRESIDING OFFICER. The bills will be received and appropriately referred; and, without objection, the bills will be printed in the RECORD.

The bills, introduced by Mr. BROOKE, were received, read twice by their titles, referred to the Committee on Armed Services, and ordered to be printed in the RECORD, as follows:

S. 3082

A bill to authorize the disposal of type B, chemical grade manganese ore from the national stockpile and the supplemental stockpile

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Administrator of General Services is hereby authorized to dispose of approximately sixty-five thousand, eight hundred short dry tons of type B, chemical grade manganese ore now held in the national stockpile established pursuant to the Strategic and Critical Materials Stock Piling Act (50 U.S.C. 98–98h) and the supplemental stockpile established pursuant to section 104(b) of the Agricultural Trade Development and Assistance Act of 1954, 68 Stat. 456, as amended by 73 Stat. 607. Such disposition may be made without regard to the requirements of section 3 of the Strategic and Critical Materials Stock Piling Act: *Provided,* That the time and method of disposition shall be fixed with due regard to the protection of the United States against avoidable loss and the protection of producers, processors, and consumers against avoidable disruption of their usual markets.

SEC. 2. (a) Disposals of the material covered by this Act may be made only after publicly advertising for bids, except as provided in subsection (b) of this section or as otherwise authorized by law. All bids may be rejected when it is in the public interest to do so.

(b) The material covered by this Act may be disposed of without advertising for bids if—

(1) the material is to be transferred to an agency of the United States;

(2) the Administrator determines that methods of disposal other than by advertising are necessary to protect the United States against avoidable loss or to protect producers, processors, and consumers against avoidable disruption of their usual markets; or

(3) sales are to be made pursuant to requests received from other agencies of the United States in furtherance of authorized program objectives of such agencies.

S. 3083

A bill to authorize the disposal of corundum from the national stockpile

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Administrator of General Services is hereby authorized to dispose of approximately one thousand, nine hundred fifty-two short tons of nonstockpile grade corundum now held in the national stockpile established pursuant to the Strategic and Critical Materials Stock Piling Act (50 U.S.C. 98–98h). Such disposition may be made without regard to the requirements of section 3 of the Strategic and Critical Materials Stock Piling Act: *Provided,* That the time and method of disposition shall be fixed with due regard to the protection of the United States against avoidable loss and the protection of producers, processors, and consumers against avoidable disruption of their usual markets.

SEC. 2(a) Disposals of the material covered by this Act may be made only after publicly advertising for bids, except as provided in subsection (b) of this section or as otherwise authorized by law. All bids may be rejected when it is in the public interest to do so.

(b) The material covered by this Act may be disposed of without advertising for bids if—

(1) the material is to be transferred to an agency of the United States;

(2) the Administrator determines that methods of disposal other than by advertising are necessary to protect the United States against avoidable loss or to protect producers, processors, and consumers against avoidable disruption of their usual markets; or

(3) sales are to be made pursuant to requests received from other agencies of the United States in furtherance of authorized program objectives of such agencies.

S. 3084

A bill to authorize the disposal of type A, chemical grade manganese ore from the national stockpile and the supplemental stockpile

Be it enacted by the Senate and the House of Representatives of the United States of America in Congress assembled, That the Administrator of General Services is hereby authorized to dispose of approximately one hundred eleven thousand, nine hundred short dry tons of type A, chemical grade manganese ore now held in the national stockpile established pursuant to the Strategic and Critical Materials Stock Piling Act (50 U.S.C. 98–98h) and the supplemental stockpile established pursuant to section 104(b) of the Agricultural Trade Development and Assistance Act of 1954, 68 Stat. 456, as amended by 73 Stat. 607. Such disposition may be made without regard to the requirements of section 3 of the Strategic and Critical Materials Stock Piling Act: *Provided,* That the time and method of disposition shall be fixed with due regard to the protection of the United States against avoidable loss and the protection of producers, processors, and consumers against avoidable disruption of their usual markets.

SEC. 2(a) Disposals of the material covered by this Act may be made only after publicly advertising for bids, except as provided in subsection (b) of this section or as otherwise authorized by law. All bids may be rejected when it is in the public interest to do so.

(b) The material covered by this Act may be disposed of without advertising for bids if—

(1) the material is to be transferred to an agency of the United States;

(2) the Administrator determines that methods of disposal other than by advertising are necessary to protect the United States against avoidable loss or to protect producers, processors, and consumers against avoidable disruption of their usual markets; or

(3) sales are to be made pursuant to requests received from other agencies of the United States in furtherance of authorized program objectives of such agencies.

S. 3085

A bill to authorize the disposal of shellac from the national stockpile

Be it enacted by the Senate and the House of Representatives of the United States of America in Congress assembled, That the Administrator of General Services is hereby authorized to dispose of approximately four million, three hundred thousand pounds of shellac now held in the national stockpile established pursuant to the Strategic and Critical Materials Stock Piling Act (50 U.S.C. 98–98h). Such disposition may be made without regard to the requirements of section 3 of the Strategic and Critical Materials Stock Piling Act: *Provided,* That the time and method of disposition shall be fixed with due regard to the protection of the United States against avoidable loss and the protection of producers, processors, and consumers against available disruption of their usual markets.

SEC. 2 (a) Disposals of the material covered by this Act may be made only after publicly advertising for bids, except as provided in subsection (b) of this section or as otherwise authorized by law. All bids may be rejected when it is in the public interest to do so.

(b) The material covered by this Act may be disposed of without advertising for bids if—

(1) the material is to be transferred to an agency of the United States;

(2) the Administrator determines that methods of disposal other than by advertising are necessary to protect the United States against avoidable loss or to protect producers, processors, and consumers against avoidable disruption of their usual markets; or

(3) sales are to be made pursuant to requests received from other agencies of the United States in furtherance of authorized program objectives of such agencies.

S. 3086

A bill to authorize the disposal of industrial diamond crushing bort from the national stockpile and the supplemental stockpile

Be it enacted by the Senate and the House of Representatives of the United States of America in Congress assembled, That the Administrator of General Services is hereby authorized to dispose of approximately seventeen million, nine hundred thousand carats of industrial diamond crushing bort now held in the national stockpile established pursuant to the Strategic and Critical Materials Stock Piling Act (50 U.S.C. 98–98h) and the supplemental stockpile established pursuant to section 104(b) of the Agricultural Trade Development and Assistance Act of 1954, 68 Stat. 456, as amended by 73 Stat. 607. Such disposition may be made without regard to the requirements of section 3 of the Strategic and Critical Materials Stock Piling Act: *Provided,* That the time and method of disposition shall be fixed with due regard to the protection of the United States against avoidable loss and the protection of producers, processors, and consumers against avoidable disruption of their usual markets.

SEC. 2 (a) Disposals of the material covered by this Act may be made only after publicly advertising for bids, except as provided in subsection (b) of this section or as otherwise authorized by law. All bids may be rejected when it is in the public interest to do so.

(b) The material covered by this Act may be disposed of without advertising for bids if—

(1) the material is to be transferred to an agency of the United States;

(2) the Administrator determines that methods of disposal other than by advertising are necessary to protect the United States against avoidable loss or to protect producers, processors, and consumers against avoidable disruption of their usual markets; or

(3) sales are to be made pursuant to requests received from other agencies of the United States in furtherance of authorized program objectives of such agencies.

S. 3087

A bill to authorize the disposal of chrysotile asbestos from the national stockpile and the supplemental stockpile.

Be it enacted by the Senate and the House of Representatives of the United States of America in Congress assembled, That the Administrator of General Services is hereby authorized to dispose of approximately two thousand eight hundred forty-four short tons of nonstockpile grade chrysotile asbestos now held in the national stockpile established pursuant to the Strategic and Critical Materials Stock Piling Act (50 U.S.C. 98–98h) and the supplemental stockpile established pursuant to section 104(b) of the Agricultural Trade Development and Assistance Act of 1954, 68 Stat. 456, as amended by 73 Stat. 607. Such disposition may be made without regard to the requirements of section 3 of the Strategic and Critical Materials Stock Piling Act: *Provided,* That the time and method of disposition shall be fixed with due regard to the protection of the United States against avoidable loss and the protection of producers, processors, and consumers against avoidable disruption of their usual markets.

SEC. 2. (a) Disposals of the material covered by this Act may be made only after publicly advertising for bids, except as provided in subsection (b) of this section or as otherwise authorized by law. All bids may be rejected when it is in the public interest to do so.

(b) The material covered by this Act may be disposed of without advertising for bids if—

(1) the material is to be transferred to an agency of the United States;

(2) the Administrator determines that methods of disposal other than by advertising are necessary to protect the United States against avoidable loss or to protect producers, processors, and consumers against avoidable disruption of their usual markets; or

(3) sales are to be made pursuant to requests received from other agencies of the United States in furtherance of authorized program objectives of such agencies.

S. 3088

A bill to authorize the disposal of tungsten from the national stockpile and the supplemental stockpile

Be it enacted by the Senate and the House of Representatives of the United States of America in Congress assembled, That the Administrator of General Services is hereby authorized to dispose of approximately one hundred million pounds (W content) of tungsten now held in the national stockpile established pursuant to the Strategic and Critical Materials Stock Piling Act (50 U.S.C. 98–98h) and the supplemental stockpile established pursuant to section 104(b) of the Agricultural Trade Development and Assistance Act of 1954, 68 Stat. 456, as amended by 73 Stat. 607. Such disposition may be made without regard to the requirements of section 3 of the Strategic and Critical Materials Stock Pile Act: *Provided,* That the time and method of disposition shall be fixed with due regard to the protection of the United States against avoidable loss and the protection of producers, processors, and consumers against avoidable disruption of their usual markets.

SEC. 2(a) Disposals of the material covered by this Act may be made only after publicly advertising for bids, except as provided in subsection (b) of this section or as otherwise authorized by law. All bids may be rejected when it is in the public interest to do so.

(b) The material covered by this Act may be disposed of without advertising for bids if—

(1) the material is to be transferred to an agency of the United States;

(2) the Administrator determines that methods of disposal other than by advertising are necessary to protect the United States against avoidable loss or to protect producers, processors, and consumers against avoidable disruption of their usual markets; or

(3) sales are to be made pursuant to requests received from other agencies of the United States in furtherance of authorized program objectives of such agencies.

S. 3089

A bill to authorize the disposal of castor oil from the national stockpile

Be it enacted by the Senate and the House of Representatives of the United States of America in Congress assembled, That the Administrator of General Services is hereby authorized to dispose of approximately eighteen million five hundred thousand pounds of castor oil now held in the national stockpile established pursuant to the Strategic and Critical Materials Stock Piling Act (50 U.S.C. 98–98h). Such disposition may be made without regard to the requirements of section 3 of the Strategic and Critical Materials Stock Piling Act: *Provided,* That the time and method of disposition shall be fixed with due regard to the protection of the United States against avoidable loss and the protection of producers, processors, and consumers against avoidable disruption of their usual markets.

SEC. 2. (a) Disposals of the material covered by this Act may be made only after publicly advertising for bids, except as provided in subsection (b) of this section or as otherwise authorized by law. All bids may be rejected when it is in the public interest to do so.

(b) The material covered by this Act may be disposed of without advertising for bids if—

(1) the material is to be transferred to an agency of the United States;

(2) the Administrator determines that methods of disposal other than by advertising are necessary to protect the United States against avoidable loss or to protect producers, processors, and consumers against avoidable disruption of their usual markets; or

(3) sales are to be made pursuant to requests received from other agencies of the United States in furtherance of authorized program objectives of such agencies.

ADDITIONAL COSPONSORS OF BILLS AND JOINT RESOLUTION

S. 2228

Mr. THURMOND. Mr. President, I ask unanimous consent that, at the next printing, the name of the Senator from Texas (Mr. TOWER) be added as a cosponsor of the bill (S. 2228) to provide for the increase of capacity and the improvement of the operations of the Panama Canal, and for other purposes.

The PRESIDING OFFICER. Without objection, it is so ordered.

S. 2524

Mr. MATHIAS. Mr. President, I ask unanimous consent that, at the next printing, the name of the Senator from Pennsylvania (Mr. SCHWEIKER) be added as a cosponsor of S. 2524, to adjust agricultural production, to provide a transitional program for farmers, and for other purposes.

The PRESIDING OFFICER. Without objection, it is so ordered.

S. 2636

Mr. BOGGS. Mr. President, I ask unanimous consent that, at the next printing, the name of the Senator from Utah (Mr. BENNETT) be added as a cosponsor of S. 2636, a bill to make the provisions of the Vocational Educational Act of 1963 applicable to individuals preparing to be volunteer firemen.

The PRESIDENT pro tempore. Without objection, it is so ordered.

SENATE JOINT RESOLUTION 61

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that, at the next printing, my name be added as a cosponsor of Senate Joint Resolution 61, proposing an amendment to the Constitution of the United States relative to equal rights for men and women.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADDITIONAL COSPONSOR OF AMENDMENTS

AMENDMENT NO. 240

Mr. PROXMIRE. Mr. President, on behalf of the Senator from New Jersey (Mr. WILLIAMS), I ask unanimous consent that, at the next printing of amendment No. 240 to S. 2821, the Public Transportation Assistance Act, the name of the Senator from Massachusetts (Mr. KENNEDY) be added as a cosponsor.

The PRESIDING OFFICER. Without objection, it is so ordered.

AMENDMENT NO. 254

Mr. PROXMIRE. Mr. President, I ask unanimous consent that, at the next printing, the name of the Senator from Montana (Mr. METCALF) be listed as a cosponsor of amendment No. 254 to H.R. 13270, to reform the income tax laws. His name was originally omitted through clerical error.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. KENNEDY. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. PROXMIRE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

MILWAUKEE COMMISSIONER ZUBRENSKY FIGHTS FOR HELP FOR UPROOTED FAMILIES

Mr. PROXMIRE. Mr. President, one aspect of the Nation's highway program which has received far less attention than it deserves is the question of displaced families.

We spend a great deal of time worrying about the rising costs of highway construction, forecasts of traffic increases, automobile accidents and highway safety, and automobile air pollution. This is as it should be. But these concerns have, unfortunately, tended to eclipse another issue involved in highway construc-

tion, and one that is every bit as important; namely, what happens to the people whose homes are paved over with concrete?

The reaction of most people to this question is—"well, aren't they compensated?" The answer is yes; if—and this is a big if—they happen to own their own homes. Then there is compensation for the property that is taken, and possibly other reimbursement as well.

But what about those who rent dwelling space in the path of the highway onslaught? Who provides for them? Where do they go? Amazingly, no one has answers to these questions. These displaced tenants are forced to fend for themselves, to find new rental space elsewhere. And, in the housing crunch in which this country now finds itself, alternative housing is not always available.

I am pleased to report that in Wisconsin at least, someone is worrying about these problems, and attempting to do something about it. That someone is Leonard S. Zubrensky, a member of the Milwaukee expressway commission, and a man with some excellent ideas about how to solve these problems. Some of his ideas include an appeals tribunal which can recommend that displacees be given up to 6 months in homes taken for freeways, a county relocation agency to enable the State to take advantage of liberalized provisions of the 1968 Highway Act, and provisions which would give displacees up to 2 months rent free in homes bought for freeway purposes.

Mr. President, I think Mr. Zubrensky's efforts on behalf of displacees deserve both our commendation and our attention. His farsighted ideas which are now being tried in Milwaukee deserve to be tried on the Federal level as well. I hope they will be.

Mr. President, I ask unanimous consent that an article about Mr. Zubrensky in this Sunday's Milwaukee Journal be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FEW LOBBY FOR UPROOTED FAMILIES

(By Paul G. Hayes)

When one of Milwaukee's expressway commissioners views a freeway, it isn't cars he sees, but sacred cows moving at will, as in India, among the needy.

"The automobile," said Leonard S. Zubrensky last week, "has been a sacred cow in American life for so long because every politician knows that every voter owns at least one car.

"Whereas the displaced," he continued, "is all by himself. He's got no allies. He is living in his home and suddenly the boom is lowered on him and he learns he is going to lose his house whether he likes it or not.

"He has no political muscle. There aren't so many of him and there's nobody lobbying for him."

Well, almost nobody. For more than a year, Zubrensky has been the county's loudest voice in behalf of the thousands of people who have been, or may be, uprooted by freeway projects.

That voice will be muted Dec. 17, when Zubrensky's five year term on the commission ends. A liberal Democrat appointed by his former boss, Gov. John Reynolds, he says he has no illusions about being reappointed by Republican Gov. Knowles.

But he is not worried. He believes the relocation issue has enough momentum to run on its own now and points to progress made:

The expressway commission now allows displacees to live in the homes bought for freeway purposes for two months without paying rent.

His idea of an appeals tribunal, which can recommend that displacees be given an additional six months in homes taken for freeways, has been put into effect.

His proposal for a county relocation agency is moving successfully through the county's legislative machinery.

He helped draft the relocation bill of Assemblyman Dennis Conta (D-Milwaukee), which would enable the state to take advantage of the liberalized relocation payments authorized by the 1968 federal highway act.

Last week, in an interview in his downtown law office where he is surrounded by the mementos of his involvement in liberal and Democratic activities—a signed picture of LBJ, a painting of the state capitol, an award from the Wisconsin Civil Liberties Union—he talked about the commission and his role on it.

"In the first two years of my five year term, the expressway commissioners were really expected to come to the meetings and spend a cheerful hour being briefed by the staff on how to vote.

"Then the next hour we'd have just dozens of items thrown at us, many of which we really didn't understand very well, and we would cheerfully get a recommendation that the staff favored this or did not favor this.

UNANIMOUS ACCEPTANCE

"The chairman would say, 'Is there a motion?" and someone would say 'I move that we accept staff's recommendation' and someone else would say 'I second it' and all those in favor would say 'aye' and it would always pass unanimously."

"I realized," Zubrensky said, "that it's really an overwhelming job to disagree with the staff. You have to follow staff recommendations because, if you don't, you begin having to do the work by yourself that the staff has over a hundred people doing."

Thus ran Zubrensky's career on the commission for the first couple of years.

He traces his activism on the part of displacees to a single television program on channel 10 in which residents of Milwaukee's inner core participated.

"I was sitting in my living room one night and a black lady got up and—these were all informal settings on television—and she began denouncing the expressway commission, saying that she knew lots of people who were black like herself who had been dislocated by the expressways and there wasn't anyone doing a damned thing about it."

"CROWDED CONDITIONS"

"She said that people were doubling up and living in crowded conditions with other families and it was a disgrace," said Zubrensky.

"And, as I watched that program, I said: 'My God, that's me, I'm on the commission and I'm doing all this.' "

"It shook me up," he continued. "I began to look into it and I found a condition which was beyond my belief."

Not only were there no relocation provisions in the federal highway programs, as there were for urban renewal programs, but no records existed at the county of persons already displaced, he said.

"We don't even know whom we've displaced today, so that if we wanted to we couldn't find them to see whether they are still living doubled up, as I believe many families are," said Zubrensky.

IMPROVEMENT SOUGHT

Early in July, 1968, Zubrensky made a report to the expressway commission in which he called the relocation program "pitifully inadequate" and encouraged a slowdown on the freeway building program until aids were improved.

Such a condition was made possible, Zubrensky said, because "the expressway commissioners come once a month and these problems never confront them."

As for the staff he said, "these men are primarily engineers. I think the self-image of the engineers is that they have a job to do and that is to build highways."

However, he said, the staff helped him when he requested information and he had little trouble, when he could make a persuasive case for his proposals, in mustering a majority of votes on the commission.

HAS NO PLANS

For the first time in a long time Zubrensky, 47, has no plans for a public role after he leaves the commission.

His role as maverick on the expressway commission has brought the commission solidly into the relocation issue and perhaps caused it, in Zubrensky's words, to accept a broader responsibility than building freeways.

"I think my responsibilities go beyond that. They go to see to it that we don't damage a minority of people to benefit the majority. In a democratic society, this is often a tough job."

ADMINISTRATION POLICY REVIEW ON THE HUMAN RIGHTS CONVENTIONS—WHERE IS IT?

Mr. PROXMIRE. Mr. President, it has been reported that the Nixon administration earlier this year had begun a major review of policy on a series of treaties aimed at protecting human rights. These treaties were, of course, the Human Rights Conventions on Genocide, Political Rights of Women, Forced Labor and Racial Discrimination. This was disclosed in May by Mrs. Rita Hauser, who was appointed by the administration to the United Nations Commission on Human Rights. She referred to the policy review in a speech bitterly assailing the United States' record of refusing to approve the treaties.

Her position is very pleasing to me. I have been trying to do this daily for the last 2 years in an effort to persuade the Foreign Relations Committee to report these treaties to the floor of the U.S. Senate. This is the only obstacle in the way of ratifying treaties that our Presidents have very enthusiastically recommended. The treaties seem to be overwhelmingly approved by the American people, and there is every moral reason for us to support them.

In a speech before the annual meeting of the American Jewish Committee at the Waldorf-Astoria, Mrs. Hauser noted that the United States' failure to ratify these treaties has prompted questions about the Government's sincerity. She protested that the word "hypocritical" was frequently applied.

Since that time there has been no word from either the White House or the State Department on the administration's position of these treaties. Is there such a policy review? Has it been completed, or is it still underway? I would hope and request that the administration make known its position on these human rights treaties. And I would hope that the administration would lend its weight in behalf of these Conventions on Genocide, Political Rights of Women, Forced Labor, and Racial Discrimination.

ORDER OF BUSINESS

Mr. PROXMIRE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. CHURCH. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. RIBICOFF in the chair). Without objection, it is so ordered.

THE BATTLE FOR VIETNAMESE SELF-DETERMINATION MUST BEGIN IN SAIGON

Mr. CHURCH. Mr. President, President Nixon has declared that our irreducible goal in Vietnam is to guarantee self-determination for the South Vietnamese people. At a recent press conference, the President declared that we are willing to negotiate on anything except, "the right of the South Vietnamese to choose their own leaders."

The Saigon government's feelings about free elections, however, differ greatly from our own. As I am sure other Members of the Senate remember, one of President Thieu's first official acts was to arrest the man who was the runnerup in the last Vietnamese election.

Mr. Truong Dinh Dzu, who campaigned on a peace platform in the September elections of 1967, was placed under house arrest shortly after election day—at a time when he was pressing charges of fraud in an effort to invalidate the results. In July 1968, he was tried on charges of "activities that weaken the anti-Communist spirit of the South Vietnamese armed forces and people." Specifically, Mr. Dzu's campaign had advocated negotiations with Hanoi and talks with the National Liberation Front, leading to a coalition government. Mr. Dzu was found guilty, and is now serving a sentence of 5 years at hard labor.

Mr. President, that trial went far toward revealing the absence of genuine freedom in South Vietnam. Today, when the negotiations that Mr. Dzu called for are supposedly underway, his continued imprisonment is a black blot upon the government we support.

I have recently received a letter from Mr. Dzu's son, David Truong, who is in this country searching for ways to obtain his father's release. I think publication of the letter can strengthen President Nixon's hand as he works for real self-determination for the South Vietnamese people. Accordingly, I ask unanimous consent that it be printed at this point in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

VIETNAM POLITICAL
FREEDOM COMMITTEE,
New York, N.Y., October 5, 1969.

HON. FRANK CHURCH,
Senate Office Building,
Washington, D.C.

DEAR SENATOR: I have been seeking the release of my father, Truong Dinh Dzu, runner-up in the 1967 presidential elections in South Vietnam. He was sentenced to hard labor for his stand during his campaign, a stand now adopted by the Saigon regime. Recently, he suffered a serious heart attack resulting from deliberate starvation. He eventually received some medical help due to public and official pressure from the States.

As the anniversary of the Revolution, November 1st, comes nearer for South Vietnam, I hope that enough pressure would be generated here for his release. As usual, General Thieu has leaked false news to the effect that he would free Dzu with others. This has been the pattern for every Vietnamese holiday, merely a move to deflect any American pressure on this matter. We naturally are distressed over the conduct of the regime, and seek your help to redress the situation.

I sincerely hope that you would press on this issue beside the President for November 1st. The release of such prisoners surely gives much meaning to the President's emphasis on the right to self-determination of our people. I further believe that something could be done here to advance our common search for peace in Vietnam regardless of political stands.

I want to thank you very much for your consideration and assistance at a time so critical for both nations. I shall look forward to hearing from you.

Very truly yours,

DAVID TRUONG D.H.

IT'S LUCKY MEN DON'T CONTROL EVENTS

Mr. CHURCH. Mr. President, possibly the chief lesson to be learned from our recent experience in world affairs is that ideology is less important than nationalism and popular aspirations for a better life. In a recent Washington Post article entitled "It's Lucky Men Don't Control Events," John Kenneth Galbraith points out that the problems of producing goods to meet the needs of populations dominate the policies of all countries, regardless of their particular creeds.

Modern industrial organization and super-power rivalry have combined to elevate the military to positions of eminence in both the United States and the Soviet Union. But unmet civilian needs plus the immense cost and questionable utility of advanced defense technology have brought the American military budget under close scrutiny. If the Galbraith logic holds true, the Soviets should be learning the same lessons.

Mr. Galbraith's article provides an excellent perspective for those who make our foreign policy. I ask unanimous consent that it be printed here in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IT'S LUCKY MEN DON'T CONTROL EVENTS

(By John Kenneth Galbraith)

It is perhaps natural that foreign policy should be peculiarly the domain of the pompous myth. In other walks of life, pomposity is an occupational hazard; in diplomacy it is commonly called high professionalism. And resort to myth as a disguise for the harsher truth undoubtedly has done much over the centuries to keep compulsively hostile states on speaking terms. Yet even the most benign of fairy tales gets in the way of reality.

One such is that individuals, those modestly billed as the masters of international statecraft, are a prime force in the making of foreign policy. The last quarter century has shown only how dreadfully they can be frustrated. Although Winston Churchill certainly did not become the king's first minister to preside over the liquidation of the Empire, he would surely have done so if he had been re-elected in 1945. And in degree he did when he returned to the office in 1951.

No man was more committed to the Cold War than John Foster Dulles; his speeches and perhaps even his convictions conjured up images of Pope Urban commanding Christians to the First Crusade. Yet the rollback of communism which he promised was never practical and, on the whole, he presided over a period of easing relations with that endemically wicked world. The Suez crisis even brought him briefly into alliance with the battalions of darkness.

The most determined disciple of the vintage Dulles was Dean Rusk. He came to office with an impressively developed view of a world Communist conspiracy, closely knit and tightly controlled, and a responding policy that would firmly blunt its probes wherever they might occur.

By the time he left office, having never quite renounced this vision, Moscow and Peking (the latter a regional office in his system which he had only recently ceased to call Peiping) were being held by some connoisseurs of violence to be contemplating each other's destruction. A course of action in Vietnam appropriate to the imperial and conspiratorial view of communism had become the worst disaster in the history of American foreign policy, rejected by the country and with a special vehemence by the more circumspect of its early defenders.

A TRANSIENT ROLE

The slight and transient role of individuals in foreign policy is a matter on which Gen. de Gaulle—overtaken by circumstance in the improbable form of Danny the Red and a few thousand followers—would bear witness. And it extends, of course, with special force to secondary figures—as those of us who have been such can also testify. It is a useful thing to bear in mind.

In these last months, like the rest of my compatriots, I have read with interest of the British reaction to Mr. Nixon's ambassador to the Court of St. James's. Although it is not always my tendency, I am disposed to defend the President. Walter Annenberg is, beyond doubt, a richly comic figure; anyone who would choose the platform of U.S. ambassasor to attack young radicals in American colleges is intrinsically hilarious. But the damage done by the ambassador's eccentric expressions and erratic syntax is only to those Londoners who no longer find their self-esteem enhanced by an invitation out to Regent's Park. They are not nearly as important for Anglo-American relations as they imagine. For other purposes, an American ambassador is a man of negligible consequence.

The truth is that men do not dominate events, the oratory to the contrary. And they do not dominate bureaucracy, either. And it is circumstance that makes foreign policy and it is bureaucracy, overwhelmingly, that accommodates action to circumstance.

On the whole, we should be glad that this is so—especially if one is asked to look ahead. For it means, great accidents always apart, that foreign policy is much more predictable than if made by men. This is true of relations between the United States and the Soviet Union—a relationship which quite a few people in the world consider, not without reason, to be nearly all of the world's foreign policy. For here circumstance is very important and in both countries bureaucracy is a transcendent force.

THE LIMITS OF EVANGELISM

On the reassuring side, circumstance is forcing both of the superpowers to be far less evangelistic in both spirit and action than they were a mere 10 years ago. This is

because both have learned, as Arthur Schlesinger has pointed out, that superpowers are infinitely less superior in their power than they once seemed.

Vietnam has been a superb lesson in this regard. A half million men and a trillion dollars have given us authority in that country only within mortar range. And as President Nguyen Van Thieu and his devious minions have an almost pedagogical genius for demonstrating, it is far from plenary even there. Even our own operations in Vietnam—the AID program, military construction, spying and the operation of the post exchanges—have, it often seems, been uncontrollably affected by the Vietnamese environment and the local talent for combining chaos with grand larceny.

But elsewhere in the natural area of competitive evangelism, now called the Third World, we have discovered how much we underestimated the problems of growth and development and therewith the importance of evangelism.

One lasting consequence of European recovery, aided by the Marshall Plan, was a wide-ranging optimism as to what could be accomplished by apparently similar effort in India, Pakistan, Indonesia, Africa and Latin America. Those associated with the Marshall Plan attributed European recovery not to the briefly latent vigor of Europe, its true source, but to the wonders of capital infusion combined with their own genius.

Since the resulting development would be rapid and the resulting nations powerful, it was important that they be committed to Western economic forms, not communism. And this calculation in its hard-headed realism greatly reassured those who would have been put off by any suspicion, however exiguous, of lurking idealism. It is fair to assume that the Western concern for a noncommunist development was matched by a Soviet anxiety for the opposite.

Now, alas, we know that it doesn't matter. We know that the development will be so slow that the question of what ultimately emerges is academic.

And in the interim a jungle, whether a capitalist jungle or a Communist jungle, is still a jungle, and the difference cannot be told by anyone walking through. And a desert, whether a capital or a Communist desert, is still most notably a desert. And a poor peasant society, whatever it calls itself, is subject to the same cruel parameters of overpopulation, insufficient land, insufficient capital, insufficient education and a technology that is limited by all these. And, to repeat, one cannot but imagine that the Soviets agree. Circumstances, if sufficiently obdurate and compelling, leaves little opening for ideological preference.

The danger in American-Soviet relations in the last quarter century has been thought a twofold one. One danger was that the two superpowers would meet in conflict in some third country as part of that struggle for the ideological soul. The other was that the inherent incompatibility of the systems would lead eventually to a direct clash as it became evident that the two incompatible systems could not survive on the same planet.

Coexistence, in the view of an extreme right wing in the United States and its left counterpart in the Soviet Union, was both immoral and impractical. Policy should be made on the assumption of inevitable conflict. And policy so made, needless to say, would then have many elements of a self-fulfilling prophecy. What of the prospect on this aspect of relations between the superpowers?

INDUSTRIALISM'S SIMILARITY

Although the purists on both sides greatly resist the evidence, there can be no real doubt that the two systems have a broadly convergent tendency.

This is not from choice. Nor is it from the Soviets discovering the magic of the market, in accordance with one simplistic Western view. Rather it is that both communities are subject to the common imperatives of large-scale industrial production with advanced technology.

So both systems repose large responsibilities on the industrial firm, the one inescapable instrument of industrialism. In both, men are subject to its social and mental disciplines. The Soviets have had to make concessions to the autonomy that the firm evolving from the market economy has enjoyed as a matter of course in Western economies. But industrialization also requires planning, and here the concessions have been made by the West.

The big industrial firm must control costs, prices and in substantial degree consumer behavior if it is to have the stable and planned environment that industrial success requires. The state must intervene to stabilize demand, provide trained manpower and underwrite risky technology—things the industrial firm cannot do for itself (the U.S. government far outstrips that of the Soviet Union in underwriting, subsidizing or otherwise socializing expensive technology). So there is movement to a similar central form.

Additionally, in both societies the guiding and directing force is not the individual but the organization. In consequence, a prime source of social tension in both is the seeming helplessness of the individual in his relation to the resulting industrial and public bureaucracy.

As I say, acceptance of these convergent tendencies is resisted on both sides. To those on the left who learned once and for all the difference between capitalism and Marxist-Leninist society, it dangerously implies heresy or anyhow the need for new thought. For older members of the military and diplomatic bureaucracy in the United States, the knowledge that communism and capitalism are very different, and the one wicked and the other good, is the only social information to which they are heir. Naturally, so precious a treasure must be safeguarded.

The Cold War brought into being in the United States a generation of columnists and news commentators whose test of political sophistication was the ability to see the total irreconcilability of democracy and communism. They are now aging; a few, Joseph Alsop in the featured case, have been casualties of the Vietnam war and the disastrous belief, relentlessly communicated, that generals could not be wrong and that victory could never be more than a few months distant. But others are still taken seriously; they continue gravely voluble in their commitment to enduring difference. Even the academic world has a substantial vested interest in the difference between planning and the market. It remains the last chapter in all the economics textbooks.

Yet the convergent power of industrialism and technology exists. One can easily, in enthusiasm, be carried away by these similarities, as those who find the tendency ideologically repugnant are never weary of warning. But one can hardly doubt that the cultural shock in passing from Magnetogorsk to Pittsburgh is infinitely less than in going from either of these cities to a typical farming village (the archetypal economic form) in China or India. Intellectual vested interest, however great, cannot stand against circumstance forever. And as the similarity becomes more and more evident, the notion of inevitable conflict erodes even among the most warlike.

MILITARY'S FUNCTIONAL ROLE

There remains, however, one legacy of the Cold War that is not enchanting. That is the strongly functional role that military expenditures, especially those for advanced technology, have come to play in the modern industrial economy.

That there is a vested interest in military expenditure in the Soviet Union we must assume. It would be astonishing if the Soviet defense establishment did not defend itself vigorously against competing claims on resources or proposals for disarmament. As in so many matters, absence of discussion gives the Soviet system a spuriously benign aspect. Because the Soviet military-industrial complex is not discussed, it is not absent. Because the Soviets do not much discuss the role of the military in their economy does not mean it is unimportant.

It is not unimportant in the United States. The military budget, in combination with the corporation income tax and the progressive income tax, is an integral part of the Keynesian stabilization apparatus—an apparatus which has served the American economy very efficiently since World War II.

It insures that a large and reliable flow of public expenditures is sustained by a tax system which increases more than proportionately with increases in income, and releases income when the rate of expansion slackens or stops. Of total Federal expenditure, arms outlays comprise about half.

For a long while it was a liberal economic cliche that military spending served no unique function. Public spending was homogeneous; if military spending subsided, civilian expenditures, public or private, could readily take its place. Now only hardened apologists would so argue.

It is recognized that military expenditures sustain a large and influential industry, that the military services themselves are bureaucratically entrenched and powerful and that, accordingly, military spending is far easier to come by than civilian spending. And no civilian spending, space exploration apart, sustains the same amount of technical expertise.

Moreover, at a certain stage in industrial development, much technical development becomes too expensive and too risky for the private industrial corporation. It must be socialized. So it was with atomic energy, air transport development, computer technology and advanced electronics. Military spending is our principal design for accomplishing this socialization without having to admit it.

LABELING A PORK BARREL

The military-industrial estate cannot be overtly for an arms race. But it can respond with crushing pressure to any Soviet action that seems to justify it. And it can, within limits, use its control of intelligence to invent justification.

And if one assumes that there is a counterpart power in the Soviet Union, then the necessary encouragement, real or indicative, will be forthcoming. The race will go on until some accident or action will precipitate the ultimate disaster. The problem of relations between the superpowers, not unpromising in their tendency in other respects, will then be solved by eliminating both powers and all between.

Yet even here, while there is no reason to be optimistic, there are rays of light. Increasingly in the United States, the arms race is being seen in the terms just described. As a result, military spending has recently become subject to unprecedented scrutiny.

It was not remarkable that the administration won the battle for the Safeguard antiballistic missile system. The remarkable achievement was that 50 votes, half the Senate, were mobilized against it.

The heavy claims of competing civilian needs had something to do with this opposition. So, of course, did the technical weaknesses of the Sentinel-Safeguard system. But for the first time many legislators, as Sen. George McGovern (D-S.D.) has said, were willing to say that it was a boondoggle—that military gadgetry had become the engineering, scientific and industrial successor to that most celebrated of our public pork barrels, the rivers and harbors appropriation.

LIBERALS OFF THE DEFENSIVE

Additionally, a still ill-appreciated shift in political alignments has altered the position

of the military power in the United States with a much greater change in prospect.

In the two decades following World War II, on matters of foreign policy, American liberals were on the defensive. The wartime alliance with Stalin and his postwar reversion to type, the Chinese revolution, the spy episodes and the Korean war made them vulnerable to conservative attack or so to regard themselves. In consequence, they contracted the foreign policy of the Democratic Party out to the professionals in the State Department and military services—to the bureaucracy—and, for leadership and window-dressing, to the Republicans of the New York Establishment.

John J. McCloy, John Foster Dulles (who came into the State Department under President Truman), Allen Dulles, Douglas Dillon, Arthur Dean, McGeorge Bundy, Lucius Clay and, of course, Dean Rusk all served the Democrats in this fashion. All were Republicans except Rusk, who had been only marginally active in domestic politics. Since the same men with some exceptions also served President Eisenhower, it had come to be assumed, not the least by those involved, that they were the natural custodians of the foreign policy of the republic.

The only liberals who could similarly be trusted to deal with the Soviets without suspicion of appeasement were, in general, those who outdid them in cold war militancy. While these men on occasion restrained the generals, they were (with the eventual exception of Arthur Dean) unworried by the military power. A few, most notably Rusk, looked upon diplomacy as the servant of military convenience.

The Vietnam war, reinforced by events preceding the election last autumn, ended the association between the liberal Democrats and this group—one can safely assume forever. Both individual members and the broad point of view espoused are inextricably associated with the Vietnam debacle. In consequence, they have become not a political asset but a political liability.

Respectability in foreign policy is now, if anything, associated with those—Sens. J. W. Fulbright. Eugene McCarthy, Edward M. Kennedy, George McGovern, Frank Church—who opposed the war and who are anything but sanguine about the military power. In consequence, the military has lost the protection of those who, on a bipartisan basis, so effectively ran interference for it.

Prior to the election a year ago, it is now widely known, the State Department allowed President Thieu to stall the negotiations leading to the bombing halt—the action that Vice President Hubert Humphrey needed to win and which, when belatedly it came, almost allowed him to win.

Thieu, it is assumed, was hoping for the election of Mr. Nixon, who, on his hard-line record, could be expected to accord him even more support. Rusk and the State Department thus made themselves the silent allies of President Thieu and Mr. Nixon against the Democrats and Vice President Humphrey. This experience has further strengthened the belief among Democrats that foreign policy, the nemesis of both Johnson and Humphrey, must never again be allowed out of their control.

So long as the Democrats were in power and the foreign policy was contracted out to the bureaucracy and the Establishment, the party was divided between those who went along with the Executive Branch out of party loyalty (or conviction assisted by party loyalty) and those who felt that the policy left no alternative but opposition. Now the claims of party regularity can no longer be invoked against Democrats on behalf of the military. (It is, indeed, the liberal Republicans who get the pressure.)

In consequence, the opposition to militarily dominated arms policy and the support for arms control negotiations and an arrest of the arms race is more unified and far stronger than for many years.

A WELL-TIMED LESSON

There remains the question of the Soviet reaction. Although we can assume that the Soviet leaders have a realistic view of what nuclear weaponry can accomplish, no one knows how this relates to attitudes toward negotiation. All one can say for sure is that similar attitudes in the two countries are reciprocally reinforcing.

A moderate and forthcoming attitude by the Soviets greatly strengthens the position of American moderates. And their hard-liners are greatly helpful to ours. A relatively small number of threats and counterthreats, promises of first-strike destruction and counterpromises of first-strike destruction will do wonders to keep the arms race running.

Overt actions can be even more serviceable. One evening a year ago last August, having been briefly designated Sen. McCarthy's foreign policy spokesman, I had just finished testifying before the Democratic Resolutions (Platform) Committee. The Secretary of State had begun on what was already the much less agreeable task of defending the wisdom and more especially the righteousness of our policy in Vietnam. A messenger came in with the word that the Soviet army was moving into Czechoslovakia.

One could sense, almost tangibly, the pleasure of the opposition. (I do not include Rusk, who promptly left.) The Communists were behaving as they were meant to behave. Those who were questioning the wisdom of our resistance to them in Vietnam could not have had a better-timed instruction.

In the end, this was not, I would sense, the public judgment. It was rather that the Soviets had still to learn the obloquy that attaches to big countries that try to control the destinies of small ones. But that was far from clear that night.

On the decisive question of arms control, then, the issue is not between governments. It is between the political forces within the two powers as they react on each other and ultimately on public action. In the United States the portents are, if not favorable, better than in the past. As to the Soviet Union, one can only hope.

Here, of course, is the critical foreign policy relationship between the superpowers. It is not, as President Kennedy once said, that we live with a sword suspended over our head. Rather we live with many of them and with diverse hands struggling for contrary purposes to get hold of the string.

PRAYERS FOR PEACE

Mr. McINTYRE. Mr. President, today marks the 21st anniversary of a movement which got underway in Manchester, N.H., and without benefit of formal organization or calculated publicity over the years has attracted a considerable amount of support and participation.

I speak of the "Prayers for Peace" movement originated by a group of American veterans of World War I at Manchester on October 28, 1948, and championed for years by the late Herve J. L'Heureux, a U.S. Foreign Service officer and a native of Manchester.

Not an organization, Prayers for Peace is but a simple idea, an idea directed toward establishing a custom whereby men, women, and children would pause for 1 minute at noon each day and pray to God for protection of our servicemen, for a just and abiding peace, and for a world restored to tranquillity.

Appealing in its simplicity, the movement attracted the support of thousands of groups and individuals, organiizations of ex-servicemen and their auxiliaries, service clubs, fraternal societies, student bodies and alumni, church lay groups, business firms, and Government employees.

I am happy to report that the movement is still flourishing and still has its focal point in Manchester, N.H., where today the William Jutras Post of the American Legion in that city will mark the anniversary with a special program.

Mr. President, in our travail over Vietnam we should welcome the concentrated prayers for peace by millions of Americans.

We should welcome them in behalf of our troops in that beleaguered country, asking their safety and well-being until the conflict is resolved, and in behalf of the President as he labors for a just resolution of the conflict itself.

No other war has so divided the Nation. No other war since the War Between the States has concentrated so much human tragedy in psychological as well as physical terms. No other war in history has cried out so desperately for resolution.

Mr. President, I would urge all Americans to follow the lead of Manchester, N.H., in supplicating the Lord each day for the protection of our troops, the guidance of our President, and an end to this tragedy.

THE RESPONSIBILITY FOR INFLATION

Mr. SCOTT. Mr. President, President Nixon recently delivered to the Nation a well conceived address on the subject of inflation. In response to the President's call, and in support of it, the Philadelphia Inquirer recently published an excellent editorial entitled "The Responsibility for Inflation." I ask unanimous consent that it be printed in the RECORD:

There being no objection, the editorial was ordered to be printed in the RECORD) as follows:

THE RESPONSIBILITY FOR INFLATION

Who is responsible for inflation?

The clearest way to answer that question is to define who is not responsible for inflation.

The harried taxpayer, who is paying out more and more of his hard-earned money to support the wasteful extravagances of government at all levels, and who is growing weary of being told that high taxes are good for him, is not responsible for inflation. He is the victim of inflation.

The desperate housewife, trying to stretch a food budget that already has been stretched almost to the breaking point, as prices at the grocery store and the meat market keep skyrocketing, is not responsible for inflation. She is the victim of inflation.

The worried wage-earner, who sees every pay increase totally wiped out, and then some, by spiraling taxes and prices, and who is being pushed harder and harder against the financial wall, is not responsible for inflation. He is the victim of inflation.

The retired pensioner, trapped by a fixed income that keeps shrinking in buying power, is not responsible for inflation. He is the victim of inflation.

The frantic house or apartment hunter, staggered by the runaway rise in the cost of putting a roof over one's head, is not re-

sponsible for inflation. He is the victim of inflation.

The struggling businessman, hoping to hold the line on prices but overwhelmed by taxes and operating costs that keep going up and up, is not responsible for inflation. He is the victim of inflation.

The responsibility for inflation rests with big-taxing, big-borrowing, big-spending government—federal, state and local. Government in America has become an all-embracing, money-oriented giant dedicated to the proposition that the taxpayer is best separated from as much of his cash as it is possible to take from him. The inflation that grips the country today is the direct result of the big-tax, big-budget, big-debt philosophy that has prevailed for far too long in bureaucratic circles.

President Nixon, in his address to the American people Friday and in his follow-up message to the nation's business and labor leaders Saturday, zeroed in on the right target when he stated flatly that "it was past government policy that caused our present inflation" and when he placed "self-discipline by the government" ahead of self-discipline by anybody else as the essential cure for inflation.

The Nixon Administration, fighting against the big spenders on Capital Hill, is trying to put the brakes on inflation through a policy of fiscal responsibility at the federal level. It isn't going to be easy. In any event, the prospect of relief at state and local levels is exceedingly bleak.

The American taxpayer—the ordinary fellow caught in the inflationary squeeze and trying to keep body and soul and family together as the bills keep piling up and the dollar buys steadily less and less—needs help. Government, at all levels, can give him the kind of help he needs simply by getting off his back.

DAY OF BREAD

Mr. YOUNG of North Dakota. Mr. President, today, October 28, has been designated by President Nixon to be the Day of Bread in the United States. This occasion provides an excellent opportunity for us to reflect on the great bounty we, as Americans, enjoy and to consider the reasons for it and the importance of retaining this great national strength.

Americans today are the best fed people in the history of the world. This has been accomplished even though our people spend a smaller portion of their income for food than in any other nation. Too often, our newspaper headlines trumpet the word that the cost of living is up again—because of increases in the cost of food. Seldom does the true story get told—food is the greatest bargain of the American housewife today.

I could relate how this has come about because of improvements in efficiency on the part of the farmer. How he has adopted improved technology, how he has learned to better manage his operations, and how he is, in most cases, selling his commodities for the same price today as he did 20 or more years ago. This would help explain the situation. It would not be the entire story by any means.

Agriculture today is a vast, complex industry. It stretched from the farms and ranches of the American heartland to the centers of industry and finance. Production, transportation, processing, wholesaling, and retailing of farm commodities is our biggest industry. It is also our most important.

Between the North Dakota or Kansas farmer who raises wheat and the checkout girl at the local supermarket where the housewife buys a loaf of bread, there is a great story to be told. It is a success story unrivaled in history.

Plant breeders and geneticists have overcome disease threats that have threatened to wipe out our production. Engineers have developed equipment and facilities for the improved handling and storage of grain as well as improved production equipment.

Chemists have found new ways to improve yields and reduce production costs by permitting better weed, insect, and disease control. The farmer himself has applied all of these developments to his operations with the result that we have greater abundance and quality of food today than ever before.

This is but a part of the story. To detail all of it would require many, many hours.

I think it is particularly fitting that we should observe a Day of Bread. Bread, the staff of life, has been basic in the diet of man almost since the dawn of time. Ever since that prehistoric man found that he could improve his food supply by raising grain, bread has had a key role in man's history and development.

Great civilizations have risen and flourished where a reliable, stable supply of this basic grain was at hand. On the same note, we have seen them decline, when their agriculture declined.

North Dakotans are particularly cognizant of this Day of Bread. We are an agricultural State and wheat is central to that agriculture. Our farmers lead the Nation in the production of Hard Red Spring wheat and Durum wheat. Both of these classes of wheat are in strong demand both in the domestic and foreign markets. Hard Red Spring wheat, of course, is noted for its high protein and strong milling qualities. Durum produced in North Dakota provides the high quality semolina needed to produce the quality macaroni products demanded by today's housewife.

It is a pleasure for me to take this opportunity to recognize the many people and organizations that have so effectively contributed to the success of our food industry. The Day of Bread observance is a fitting occasion for this.

TAX REFORM ACT OF 1969—ACTION OF COMMITTEE ON FINANCE

Mr. LONG. Mr. President, yesterday, October 27, the Committee on Finance met in executive session and announced decisions made with respect to the proposed tax treatment of private foundations. Additionally, the committee reconsidered an earlier vote regarding charitable contribution deductions for gifts of appreciated tangible personal property and agreed to relieve gifts to museums from the tax on appreciation in value of the gift property.

So that Senators might follow the progress of these executive sessions, I ask unanimous consent that a press release be inserted in the RECORD.

There being no objection, the press release was ordered to be printed in the RECORD, as follows:

[A press release from the Committee on Finance, U.S. Senate, Oct. 27, 1969]

TAX REFORM ACT OF 1969—PRIVATE FOUNDATIONS, COMMITTEE DECISIONS

The Honorable Russell B. Long (D., La.), Chairman of the Committee on Finance, announced today that the Committee had reached further major decisions with respect to the Tax Reform Act of 1969. The subject before the Committee at today's executive session concerned the treatment of private foundations. The Chairman stated that the principal decision reached by the Committee would place a time limitation on the life of private foundations, which are not operating foundations. Under this action private foundations would have to dispose of their assets for charitable purposes, or to a public charity, and terminate existence within forty years. For foundations currently in existence, this new rule would require that they terminate not later than the year 2009.

A complete explanation of the actions taken by the Committee follows:

Limitation on Life of Foundations.—The Committee adopted an amendment to limit the life of a private non-operating foundation to forty years. (Existing foundations could continue in existence forty years from the date of enactment of the bill.) By the end of the forty-year period, the foundation must either become a public charity or an operating foundation or it must distribute all its assets to a public charity or an operating foundation.

Tax on Investment Income.—The Committee agreed to delete the portion of the House bill which provides for a 7½% tax on private foundations' net investment income, and to assert in its stead a tax of ⅓ of 1% based on the fair market value of the assets held by the foundation, or $100, whichever is greater. In doing so, the Committee indicated that the tax generally was intended as a supervisory fee to provide funds for proper administration of the Internal Revenue Code provisions relating to exempt foundations.

Prohibition on Self-dealing.—The Committee generally adopted the provisions of the House bill relating to self-dealing between a private foundation and "disqualified persons."

Substantial Contributor.—However, it amended the House bill by changing the definition of a "substantial contributor" to a person who contributes $5,000 or more than 2% of the total contributions previously made to the foundation, whichever is higher. In the case of a husband and wife their contributions would be treated as one unit.

Transitional Rules; Leases and Loans; Shared Facilities.—The Committee also adopted a transition rule in the case of leases and loans outstanding on October 9, 1969. Where the terms of the lease or loan is at least as favorable to the private foundation as it would be in an arms-length transaction, then the self-dealing rules would not be applicable for ten years from the date of the enactment of the bill. The Committee further agreed that where goods, services, or facilities are shared by disqualified persons and a private foundation under an arrangement in existence on October 9, 1969, which is beneficial to the private foundation, such an arrangement will not be subject to the self-dealing rules for a period of ten years from the effective date of the bill. This period will allow time for foundations to revise existing arrangements.

Sales Commissions.—In cases where a private foundation is permitted to sell stock to a disqualified person in order to comply with the divestiture rules the Committee indicated that this would not be self-dealing even if the sales price is reduced by the amount of the sales commissions which would have to be paid if the stock were sold in the open market.

Attribution Rules; Brothers, Sisters, Partners.—The Committee decided to remove

brothers and sisters of substantial contributors and their descendents from the category of disqualified persons. It also agreed to remove partners of substantial contributors from the disqualified persons category unless their profits interest was 20% or more.

Penalties.—The Committee agreed to change the treatment of foundation managers who "knowingly" violate the self-dealing requirements of the House bill so that (1) the Internal Revenue Service would be permitted to waive the penalty where it finds that the foundation manager's violation is not willful and is due to reasonable cause, and (2) the burden of proving the "knowing" violation would be upon the Internal Revenue Service to the same extent as in the case of civil fraud under present law.

State Litigation, Abatement of Federal Tax.—The Internal Revenue Service would be authorized to abate Federal taxes imposed on private foundations (except the ⅕ of one percent supervisory tax), where it finds that the action by a State Attorney General to correct the violations satisfies the requirements of the bill.

Stock Transactions.—The Committee also agreed that it should be made clear that self-dealing may occur without the transfer of money or property between the private foundation and the disqualified person. For example, it would be self-dealing where stock is bought and sold by the Foundation in order to manipulate the stock's price for the benefit of the disqualified person.

Distribution of Income.—The Committee generally approved the rules in the House bill relating to the distribution of income. However, it agreed to the modifications listed below:

Phase-in of Five Percent Payout.—The Committee accepted the 5% payout requirement contained in the House bill, but allowed a transition period by providing that only 3½% need be paid for 1972, 4% for 1973, 4½% for 1974 and 5% for 1975 and following years. In taking this action the Committee noted further that the payout requirement could be satisfied by distributions of cash or other assets.

Deficiency Distributions.—The Committee decided to permit foundations to make deficiency distributions where they have not met the 5 percent pay-out requirement because of an incorrect valuation of assets that is not willful and is due to reasonable causes. This would avoid the payment of penalties in situations where the action was inadvertent.

Twelve-Month Pass-Through.—The Committee adopted a recommendation to amend the House bill by treating as a qualifying distribution a payment made by a private foundation to a private operating foundation or to another private foundation (even though controlled by the distributing foundation), if the money is spent or used for charitable purposes within one year of its receipt by the controlled organization. The donee organization would not be permitted, however, to pass the grant through to another private, non-operating foundation.

Expenses.—The Committee adopted a proposal which would treat as a qualifying distribution the supervisory tax imposed on investment income and the unrelated business income tax. This would reduce the amount that the foundation would otherwise have to distribute currently for charitable purposes. The Committee also provided that it should be made clear that the administrative expenses of operating a foundation should also be treated as a qualifying distribution.

Controlled Organization.—The Committee agreed to make it clear that a recipient organization is considered as "controlled" when disqualified persons of the granting foundations can, by aggregating their votes or positions of authority, require the organization to make a distribution or prevent it from making such a distribution. In adopting this rule, the Committee pointed out that if an organization has been created by several private foundations, all of which are independent of one another, none of the creating foundations would be said to control the other organizations, if each creating foundation has an equal vote on the Board of Trustees of the new foundation and the Board proceeds to operate the organization by majority vote.

Repayments of Prior Distributions.—The Committee adopted a rule that where a private foundation receives money or assets as a result of previous expenditures made by the foundation that were treated as qualifying distributions (e.g., student loans), such monies or assets will be considered income for minimum distribution purposes.

Transition Rule for Commitments.—The Committee agreed that where a private foundation had made a written commitment by October 9, 1969, that is binding upon it to make a grant to a non-controlled, non-operating private foundation, it will be allowed to treat the grant as a qualifying distribution if it is made to carry out the charitable, educational, or other purpose for which the organization is exempt. This rule would not operate to allow grants to be treated in this manner for a period any longer than five years from the date of the enactment of the bill.

Limitation on Use of Assets.—The Committee approved those provisions in the House bill forbidding a private foundation from investing its corpus in such a manner as to jeopardize the carrying out of its exempt purposes. However, it made the following modifications in these provisions of the House bill:

Sanctions.—The Committee decided to adopt an initial sanction on private foundations of five percent of the amount involved and an initial tax on the foundation manager, where he knowingly jeopardizes the carrying out of the foundation's exempt purposes, of five percent (up to a maximum of $5,000). It also agreed to a second level sanction, where the jeopardy situation is not corrected, of 25 percent on the foundation and five percent on the foundation manager who refuses to take action to correct the situation. (In the case of the foundation manager, the sanction cannot exceed more than $10,000.) In adopting these rules for the tax on the foundation and the manager, the Committee provided that, before the second-stage sanction is imposed, the State Attorney General should be given an opportunity to intervene in the case to exercise whatever powers he has to correct the situation. Where the situation is corrected, the second-level sanctions would not be imposed.

Program-Related Investment.—The Committee made it clear that a program-related investment—such as low-interest or interest-free loans to needy students, high-risk investments in low-income housing, and loans to small business where commercial sources of funds were unavailable—should be considered as being charitable expenditures and not investments which might jeopardize the foundation's carrying out of its exempt purposes. However, in order to qualify as a program-related investment treated in this way, the investment must be for charitable purposes and not for any major purpose of making profit for the foundation.

Limitation on Foundation Activities.—The Committee accepted the provisions of the House bill with certain modifications.

Voter Registration Drives.—It decided to delete that portion of the bill which would allow private foundation funds to be used for voter registration drives.

Lobbying.—It also adopted a recommendation which, in effect would use the tests applied under the present law respecting the influencing of legislation, except that it would drop the test of "substantiality," now in use. Hence, lobbying activities—both grassroots lobbying and the buttonholing of Government officials—would be prohibited. However, examination of broad problems that the Government would ultimately be expected to deal with would not be prohibited, although lobbying on matters that have been proposed for legislative action would still be forbidden. Also, the Committee's decision would permit the offering of advice and technical assistance in response to written governmental requests.

Educational Broadcasting.—The Committee noted that in establishing the rules respecting attempts to influence legislation, where non-commercial educational television and radio stations are involved, adherence to the FCC regulations and the "fairness doctrine" (which require balanced, fair, and objective presentations of issues and which forbid editorializing by such broadcasting stations), will constitute compliance with the provisions of the bill. Under this rule a private foundation would be able to make grants to non-commercial educational television and radio without any sanctions being applied under this provision.

Expenditure Responsibility.—The Committee accepted a recommendation that the provision of the House bill which places "expenditure responsibility" on private foundations be clarified so that it will not be interpreted as making the granting foundation an insurer of the activities of the recipient organization, so long as the private foundation making the grant uses reasonable efforts and establishes adequate procedures so that the funds will be used for proper charitable purposes.

Sanctions.—With respect to the sanctions imposed in the House bill on certain prohibited activities, the Committee agreed to provide an initial tax on the foundation of ten percent of the amount improperly spent and a second tax of 100 percent if the foundation failed to correct the earlier improper action. The Committee also decided that the initial tax on a foundation manager who knowingly made the improper expenditure should be 2½ percent, up to a maximum of $5,000, and the second tax should be 50 percent of the amount involved, if the manager refused to correct the earlier action.

Prizes and Awards.—The Committee decided to allow private foundations to make a grant to an individual in the form of a prize or award if the individual is selected from the general public on the basis of merit or unusual achievement. Under the House bill, awards could only be made to individuals in the form of scholarship or fellowship grants, or where the purpose of the grant is to achieve certain objectives such as the production of a report or improvement of certain skills.

Individual Grants.—The Committee decided to add to the provisions of the House bill permitting individual grants for various purposes an additional category of "teaching skills." It did not change the rule that the grant procedure must be approved in advance by the Internal Revenue Service.

Influencing the Outcome of Any Public Election.—The Committee decided to amend the language of the House bill which would prohibit expenditures "to influence the outcome of any public election." The Committee limited the language to any *specific* public election because it recognized that almost any statement or study or general educational activity might become an issue in an election at some future time. Under the Committee action, preparation of any materials designed to favor or hinder any particular candidate for public office or any particular viewpoint in the case of referendum would still be prohibited.

CHARITABLE CONTRIBUTIONS

Appreciated Gifts—Tangible Personal Property.—The Committee reconsidered an earlier vote with respect to charitable contribution deductions for gifts of appreciated tangible personal property (see press announcement of October 13, 1969). Upon reconsideration, the Committee removed gifts of tangible personal property—art objects, paintings, etc.—from the types of property the appreciation in value of which would have to be taken into account by the donor in computing his charitable contribution deduction. (Under the House bill, the donor of such property must either (a) reduce his charitable contribution deduction to the amount of his tax basis for the gift property, or (b) claim a charitable contribution deduction for the full fair market value of the property and include the amount of appreciation in value in his gross income for tax purposes.) This Committee amendment would not apply, however, unless gain from the sale of the appreciated asset would have been taxed as a long-term capital gain. This rule would allow a donor to continue to contribute works of art to museums, educational institutions, etc., and compute his deduction under the rules of present law.

RETREAT ON CIVIL RIGHTS

Mr. MONDALE. Mr. President, most interested Americans by now are well aware that the Nixon administration's record in the area of civil rights leaves much to be desired. Hardly a day goes by without articles in the press about departures by the Nixon administration which have had the effect of weakening civil rights and equal opportunity programs. As legislators who have been involved in the enactment of these programs, we should be concerned about what is happening—or perhaps more accurately, not happening—in this administration.

The October 13 issue of Congress Biweekly contains an article, written by Marvin Caplan, director of the Washington office of the Leadership Conference on Civil Rights and a legislative representative of the industrial union department of the AFL–CIO, chronicling the miserable record of this administration in civil rights. I urge all readers of the CONGRESSIONAL RECORD to take a few moments to read Mr. Caplan's article which documents the shocking and consistent civil rights retreats of the Nixon administration.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RETREAT ON CIVIL RIGHTS

(By Marvin Caplan)

Down here in Washington they're weakening the programs.

The modest advances in school desegregation, voting rights, equal employment, the war on poverty are being slowed or face the threat of slowdown. Such is the artistry of the performance that most people do not grasp the import of what is happening; there is even the illusion, sometimes, that we are making progress. Except for an occasional outburst—(Roy Wilkins, for instance, that gentle man, exclaiming at the policy statement on school desegregation, "It's almost enough to make you vomit"), scattered demonstrations at the cuts in anti-poverty funds, a threatened rebellion by Justice Department civil rights attorneys—there are few signs of public indignation. Most people are quietly, resignedly settling for less—how much less we may not know for some time yet. What is certain is that in spite of the occasional development that raises hope—a proposal for welfare reforms that has some promising features, a suit to stop housing discrimination—we are losing momentum in our attempt to deal with domestic problems.

The Nixon Administration's retreat on school desegregation provided the first portent of what was to come. Only ten days after President Nixon took office, Secretary of Health, Education and Welfare, Robert H. Finch, was confronted by five Southern school districts that were scheduled to lose their Federal aid money for stubbornly failing to desegregate their schools. He announced the cutoff—actually he had no choice—but in an unprecedented show of leniency gave the five diehard districts 60 days in which to come up with acceptable proposals for desegregation. He dispatched teams to help them develop plans and put the money in escrow in case something could be worked out.

It is a measure of the insensitivity to the politics and moral imperatives of school desegregation that Finch was reportedly hurt and surprised when civil rights groups angrily attacked him for his move and when the *Atlanta Constitution* said his action "slaps the face of every Southern school board and every Southern school superintendent who has moved with great difficulty to obey the law" and "strentghen the forces of defiance."

His announcements of the cutoff was a model for the sort of statement the Administration has issued in subsequent domestic crises, balancing the inescapable need to enforce the law ("When all of the alternatives have been exhausted") with an "however" (the dispatch of teams, the funds in escrow) that opens loopholes in the law and heartens opposition to it.

The truth is Mr. Finch did not have to issue a statement. He didn't have to do a thing. The fund cutoff, under HEW's procedures at that time, would have gone into effect automatically. His statement and his slight alteration in established policy, the rhetoric of upholding the law while yanking it down a bit, sets a pattern one can trace thereafter in other decisions on domestic policy. An outrageous deed is balanced with a palliative, or it is disclaimed until it is too late to do anything about its effect. This, at any rate, is the pattern that runs through the school desegregation moves.

In March, only a month after the furor over the five school districts, an HEW intra-agency memorandum was leaked to the press. Emanating from Robert C. Mardian, a conservative Republican who was scheduled to become the Department's General Counsel, it described how a statement "clarifying" HEW's guidelines for school desegregation could be used to relax those guidelines. Roy Wilkins, as chairman of the coalition Leadership Conference on Civil Rights, whose representatives only a week earlier had received personal assurance from Finch that there would be no erosion of the guidelines and no relaxation in enforcement, immediately demand to know from Mardian and Finch if the press reports on the memo were true. Neither answered him. But Finch issued a statement disavowing any official standing for the memorandum; it was "a working paper" representing Mr. Mardian's personal views.

Mardian was confirmed as General Counsel and went on to become one of the authors of a clarifying statement that *was* official, a joint pronouncement on school desegregation by Mr. Finch and U.S. Attorney General John Mitchell. Issued July 3, the statement was less blatant in its manipulation of the law than the Mardian "working paper." But in its ambiguity, its desire to placate everyone and its inability to satisfy anyone, it surpassed the Finch statement on the five districts. While avowing an unequivocal commitment to "ending racial discrimination in schools, steadily and speedily" it reinterpreted the guidelines in ways designed to dilute them. It broadened the base for granting extensions of time to districts that were expected to desegregate their schools in the 1969–70 school year or lose Federal aid. More seriously, it announced an important shift in enforcement, from administrative action to litigation. HEW's use of its ultimate sanction—the threat of a fund cutoff—had brought many Southern school districts into line. Henceforth, the July 3 statement said, enforcement would no longer rest so much with HEW but "to the extent practicable . . . would be handled by the Justice Department." Since court action in school cases generally takes longer than administrative action and results in less desegregation, this was an ominous change.

Events since July 3 strengthened such forebodings. As though anticipating the cries of rage from civil rights groups, Justice announced, shortly after the statement was issued, that it was undertaking a spate of desegregation suits, so many that the *Washington Post* was moved to say it was "a little like the finale of *Hellzapoppin*." There was more appearance than substance. Many of the court actions were not new; they were already in the pipeline. And one, the statewide suit against Georgia, affords a good example of how court action can undercut administrative remedy. For there is every likelihood that at least 36 Georgia districts, whose Federal funds were cut off for failing to comply with the law, may now have their money restored during the time it takes to move the suit through the courts.

Worse has followed from HEW's and Justice's closer collaboration. They went into court last month to ask that desegregation be delayed in some 30 Mississippi school districts. Even the *Wall Street Journal* felt that went too far. "The Mississippi delay opens a wide door for delay throughout the South," it said and hoped this was not the start of a trend. Forty Justice Department attorneys threatened to quit, but as yet have not.

The same consideration the Administration tends to show to violators of the law in school cases appears, at least in one notable instance, in the Administration's dealings with defense contractors. On February 7, the Defense Department awarded $9.4 million worth of contracts to three major textile companies—Dan River Mills, Inc., Burlington Industries and J. P. Stevens, Inc.—even though they were all in violation of Federal regulations prohibiting racial discrimination by firms doing government work. Deputy Secretary of Defense David Packard, in making the awards, ignored the requirement that such firms must submit, in writing, goals and timetables and assurances of compliance before they can be eligible for new contracts. He appears to have acted entirely on the basis of oral assurances he received in telephone conversations or talks with the officials of the three companies.

This insensitivity was further reflected, when Clifford Alexander, the Negro chairman of the Equal Employment Opportunity Commission, during a Senate subcommittee inquiry into the award of the textile contracts, was accused by the late Senator Everett M. Dirksen of "punitive harassment" of businessmen and was subsequently advised, in a public speech by Jerris Leonard, Assistant Attorney General for civil rights enforcement, to resign his chairmanship. That the President later mildly disavowed Leonard's suggestion did nothing to correct the slight and only increased the impression of confusion that seems to attend the Administration's handling of civil rights.

But confusion can be a charitable excuse. In testimony before Congress, Administration officials have shown how ringing statements in support of a law can accompany plans to sabotage it. An example of this is the Justice Department's stand on one of the crucial civil rights issues of this Congress—whether or not to continue the pro-

tections of the Voting Rights Act of 1965. In its brief history the law has shown its great value. More than 800,000 Negro voters have been registered under it and some 400 black officials have been elected in the South since its passage. But key provisions of the law, those that prohibit discriminatory literacy tests and set up the system of Federal registrars, are scheduled to expire August 6, 1970. Considering how difficult it is to get civil rights legislation through Congress, proponents of the law support a bill that would simply extend the key features of the Act another five years. The South, of course, opposes this.

Justice wrestled with the matter a long time, Attorney General Mitchell postponing his testimony before a House Judiciary subcommittee four times. When he finally appeared it was to unveil a complicated bill of his own that under the guise of improving the law threatens to let it die. Echoing a familiar Southern criticism, he proposed that the ban on literacy tests, which under the present formula applies to 7 Southern states, be extended nationwide, even to the 13 states that have never used their tests to bar voters because of race. More dangerous still, he proposes eliminating the present requirement that states covered by the Act must clear new voting laws and practices with the Attorney General or the District Court of the District of Columbia before putting them into effect. Instead, states would be able to pass any election laws they pleased, leaving it to an understaffed Justice Department to catch up with them.

Republican and Democratic members of the subcommittee rejected Mr. Mitchell's proposals. Rep. William M. McCulloch, of Ohio, ranking Republican on the Judiciary Committee, said the Administration was aligning itself with the Attorney General of Mississppi who wants the law "scuttled" so that voting discrimination can "thrive again" in the South. Committee Chairman Emanuel Celler (D., N.Y.) likened Mr. Mitchell's proposal to an "apple of Sodom" which looks delicious until it is picked, when it turns to dust and ashes in the hand. Mr. Celler's committee reported out the simple five year extension and it will shortly become the pending business before the House.

Again, professing only to improve the law, the Administration has come forward with a plan to strengthen the EEOC that is, at least suspicious. Since its inception in 1964, the EEOC has suffered under many disadvantages, one of the gravest being its inability to order violators of the law to stop discriminating. To remedy this, 35 Republican and Democratic Senators have introduced a bill that would, among other things, give EEOC the customary power all regulatory agencies have to issue cease-and-desist orders. EEOC has repeatedly asked for this power. In fact its new chairman, William Brown III, who succeeded Cliff Alexander and is also a Negro, supported the cease-and-desist authority in a speech he gave the week before he appeared before a Senate Labor Subcommitte. There, he shifted ground and came out for an Administration bill that would do no more than allow the Commission to go into court, should conciliation fail, and seek to enjoin unlawful employment practices through litigation. EEOC now depends on Justice to carry its cases into court.

Hearings on the EEOC legislation continue, but the Administration's new proposal endangers the enactment of the cease-and-desist authority.

HOPE FOR THE FUTURE?

Sometimes the Administration can weaken enforcement by silence. Earlier this year, for instance, it was silent when Rep. Jamie Whitten (D. Miss.) succeeded in adding to the Labor-HEW appropriations bill, two amendments that would require HEW to accept "freedom of choice" plans for desegregating schools even though the Supreme Court has held such plans unacceptable unless they effectively end racially separate school systems. Attempts to strike or nullify the Whitten amendments failed on the House floor, on one occasion by four votes. Civil rights forces urged the Administration to speak out against the amendments. It did not. Republican House leader Gerald Ford, of Michigan, said nothing, but during the unrecorded "teller votes," when members walk up the center aisle of the House and are counted by tellers, he joined the Dixiecrats in support of the amendments.*

Since then, the Administration has had a change of heart. The night before the Civil Rights Commission issued its highly critical report on desegregation, Secretary Finch announced his opposition to the Whitten amendments; indeed, his press release said he "reiterated" it, though he had never officially expressed it before. It is up to the Senate, now, to try and lift this yoke from HEW's neck and it may do so, if the Administration will do more than issue statements.

There is, unfortunately, little to sustain such hope. The Administration has shown little disposition to fight for domestic programs even when it is announced in support of them. And its current economy drive can only inhibit it further, particularly in areas like education and anti-poverty where large sums are needed. So, though it professedly supports fair housing the Administration has done nothing to help the Department of Housing and Urban Development obtain enough money to adequately enforce the existent laws.

Alloting too little money is, of course, a traditional way Congress has of undermining programs it doesn't like. Asking too little money for programs is the Administration's way of weakening them. So is putting people in charge that have little sympathy for their assignments.

It is hard to estimate the effect the Administration's attitudes and practices have had on good men still in government. There are still good men of both parties in HEW, committed to strong enforcement of the law. They are under enormous pressure to conform to the Finch-Mitchell compromises and if they finally give up, disheartened, who can blame them?

*Democrats, too, must share the blame for this defeat. At least 50 Republicans voted against the Whitten amendments and did not follow Ford. The absence from the floor of many liberal Democrats (the hour was late) and the help of Rep. Edith Green (D., Ore.) who spoke in favor of the amendments, carried the day for Whitten.

DEFENSE SNAFUS

Mr. HATFIELD. Mr. President, being in Washington, where defense policies have been under scrutiny and criticism in recent months, one begins to wonder what impact the conglomerate of disclosures of questionable policies is having on the American public. While my home State of Oregon may be more than 3,000 miles away, there is little need for curiosity, for the repercussions and suspicions of the people there can be loudly heard.

It is with high regard for the startling compilation of defense-related "snafus" by Eric Allen, Jr., editor of the Medford Mail Tribune, that I ask unanimous consent that his review of discrepancies in military policies be printed in the RECORD. It indicates that the public, too, is questioning defense spending.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SNAFUS HAPPEN—BUT . . .

Few Americans expect perfection in their public servants.

But . . .

When a high officer sells confiscated guns for his own enrichment, then pays no income tax on the proceeds, the while protesting that he "meant no harm";

When the nation's "No. 1 enlisted man" is accused of criminal conspiracy to defraud for his own profit;

When Army Green Berets are accused of murder and then unaccused, all within weeks, and without the American people being told the truth;

When a Cuban jet fighter plane can get to within minutes of a major Air Force base (where the President's plane is being kept) before being detected;

When the Army tests deadly chemical-biological-bacteriological weapons in secret in at least two states (and winding up lying about the tests and about killing some thousands of sheep);

When the spy-ship U.S.S. *Pueblo* is sent unprotected on a secret mission, is captured by a 10th rate naval power, its crew is subjected to prison tortures and indignities, and when the U.S. has to lie publicly to get them home again;

When the Army ships deadly gas across country in trains with the intent of dumping it in the Atlantic Ocean, and is stopped only by a public outcry;

When a Navy submarine sinks at drydock;

When an Army tank, developed at the cost of millions of dollars, proves so faulty as to be unusable;

When an Army weapon jams repeatedly under combat conditions;

When cost over-runs of a new airplane approach a total estimated in the billions of dollars;

When the chief of Selective Service, an Army general, refuses to follow court orders not to use the draft as punishment for young draft-eligible men of whose conduct he disapproves;

When brutal physical punishment is regarded as standard procedure in a Marine Corps brig—

When all these things happen, one is entitled to wonder about the kind of returns we are getting for the dollars we pour into the military establishment.

Goof-ups happen, and "snafu" is a word with Army origins, and everyone understands this.

But for $80 billion a year aren't we entitled to something better than all this?

THE PESTICIDE PERIL—LXXI

Mr. NELSON. Mr. President, last week's U.S. News & World Report featured a comprehensive report on the controversy over the seriousness of the dangers to our environment and to human health from the use of persistent, toxic pesticides.

The article states that those who favor continued use of DDT and related pesticides note that "these chemicals have enhanced the world's health and food supply with virtually no evidence of harm to mankind."

Those advocating improved controls on DDT and other persistent pesticides acknowledge the role these chemicals have played in the past, but they believe that the evidenced destruction of fish and wildlife and potential links to cancer in man justify steps to eliminate the hazards of pesticides. The anti-DDT forces "see their accumulation in the environment as a time bomb that will explode at some future date with disastrous effects to mankind."

Unfortunately, the article includes the shopworn claims of the pesticide industry that livestock and crop production would drop and consumer prices would increase without pesticides.

But it is not an all or nothing situation. Effective, economical, alternative means of pest control have been developed to make many currently used persistent pesticides obsolete.

For example, the U.S. Department of Agriculture suggests an effective alternative for DDT on virtually every crop on which this most persistent, most expendable pesticide is presently used. In addition, a host of nonchemical means of pest control have been applied with great success in many parts of the country, including the development of crop varieties that resist insect attack, the introduction of natural enemies into the pest's environment, insect sterilization, and integrated procedures which combine chemical and biological control measures.

Despite the recognized need to develop additional alternatives to DDT and other hard pesticides, the Department has failed to mount an all-out research effort in this area. A spokesman for the Agricultural Research Service has admitted to me that the Department's program for improved means of nonchemical pest control is presently underfunded by at least $4 million. These funds could be used this year by the Department but were not included in the budget submitted to Congress. The research areas being shortchanged include biological control, hormonal techniques, natural plant resistance, and cultural control.

I ask unanimous consent that the U.S. News & World Report article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PESTICIDES: PRO AND CON

Across America, there is rising concern that man is befouling his environment. Much of this worry centers on widespread use of chemical insecticides—particularly DDT and other "persistent" pesticides.

These chemicals, say critics, have contaminated rivers, lakes and oceans, and they pose a danger to man.

DDT has been banned indefiintely in Michigan. Arizona has barred its use for a year. New York and Minnesota have restricted pesticide use, and other States are considering similar action. The U.S. Department of Agriculture has limited use of DDT and other similar pesticides in some Government spray programs.

Yet, despite these official actions and rising protests, respected scientists are urging continued use of DDT and other pesticides.

Without them, say these scientists, food production and human health would suffer greatly.

From authoritative sources, you get both sides of an important and growing debate.

THE CASE AGAINST CONTINUED USE OF PERSISTENT PESTICIDES

Those who would ban the use of DDT and similar pesticides admit that there is as yet no hard evidence that these chemicals, properly used, will cause death or serious injury to humans.

These critics do say, however, that there is enough evidence of death and sickness among lower animals related to widespread use of such pesticides to warrant a complete bar to their use.

DDT and its chemical relatives are nerve poisons. In lethal doses they bring on violent convulsions, followed by death from heart or lung failure.

DDT is a chlorinated hydrocarbon. In this same chemical family are such pesticides as lindane, dieldrin, aldrin, heptachlor and several others widely used. All are persistent chemicals. This means that when sprayed on crops to kill insects, or into swamps to kill mosquitoes, they do not break down readily into less potent forms.

These persistent chemicals have been carried down rivers and streams into the lakes and oceans of the world. DDT, the most widely used pesticide, has been found in the fatty tissues of birds and fish in the Arctic and Antarctic.

The average human being, scientists say, now carries 10 to 20 parts per million of DDT in his body. The chemical is transmitted to babies through mothers' milk. It has been shown to kill fish and birds and to cause cancer in laboratory animals.

Dr. James T. Grace, director of the Roswell Park Memorial Institute in Buffalo, recently told the Environmental Health Subcommittee of the New York State legislature that tests show "clearly" that chlorinated hydrocarbons can cause tumors in mice. Said Dr. Grace: "If we find these chemicals create problems in lower forms, then we must be extremely careful how we gamble on their use in our environment."

At hearings in Wisconsin, Dr. Richard W. Welch, a pharmacologist, reported that laboratory experiments showed that DDT will produce changes in sexual activity of both male and female rats. He suggested that this change "probably does occur is humans."

Dr. Goran Lofroth, a Swedish toxicologist, has warned that breast-fed infants throughout the world are ingesting twice the amount of DDT said by the World Health Organization to be safe.

Another finding, reported by Dr. William B. Deichmann of the University of Miami school of medicine: Persons afflicted with liver cancer, leukemia, high blood pressure and carcinoma had at death two to three times the residues of DDT and related pesticides stored in their body tissues as did persons who died accidental deaths.

Senator Gaylold Nelson (Dem.), of Wisconsin, one of several Congressmen demanding that use of DDT and similar pesticides be barred in the U.S., cited a study by the U.S. Bureau of Sport Fisheries and Wildlife. This research found DDT in 584 of 590 samples of fish taken from 45 U.S. rivers and lakes.

In June, 60 marine scientists formally petitioned California Governor Ronald Reagan to place an absolute ban on DDT in his State. They expressed fear of "wholesale damage to important world fisheries" and "loss of whole categories of animals" important to man. These scientists said:

"DDT is no longer an essential weapon in the battle for human health and food. It is less effective than it once was, for nearly 150 species of insect pests have developed resistance to it, and many other pesticides which are less destructive to man's environment are now available to take its place."

In May of this year, the National Research Council's Committee on Persistent Pesticides reported, after an 18-month study for the U.S. Department of Agriculture: ". . . There is an immediate need for worldwide attention to the problem of build-up of persistent pesticides in the total environment."

To some scientists, the problem is that DDT and other persistent chemicals in the modern environment may combine, with each other and with other factors, to upset human well-being. In this view, the fact that residual amounts of any one chemical are tiny, when measured, does not lessen their potential for harm to humanity over the long range.

THE CASE FOR CONTINUED USE OF PERSISTENT PESTICIDES

Opposing a ban on the use of DDT and similar pesticides are many top scientists in the U.S. and other countries. They say that, on balance, the report of the Committee on Persistent Pesticides supports their position. Cited are such statements as the following from that committee's report:

"Through use of these chemicals, spectacular control of diseases caused by insect-borne pathogens has been achieved, and agricultural productivity has been increased to an unprecedented level. No adequate alternative for the use of pesticides for either of these purposes is expected in the foreseeable future."

In July, Dr. M. G. Candau of Brazil, Director General of the World Health Organization, told the group's assembly in Boston: "The record of the safety of DDT to man has been outstanding during the last 20 years, and its low cost makes it irreplaceable in public health at the present time."

Samuel Rotrosen, president of Montrose Chemical Corporation, the largest U.S. manufacturer of DDT, cites these figures as evidence of the chemical's effectiveness against the malaria-carrying mosquito:

"In India, for example, before DDT there were 100 million cases of malaria, with 750,000 dying each year. Today, there are only 15,000 cases, with 1,500 dying a year."

The World Health Organization which is a United Nations agency, estimates that DDT saved 5 million lives and prevented 100 million illnesses in the first eight years of its employment.

"I think it is safe," says Dr. Wayland Hayes, former chief toxicologist of the National Communicable Disease Center in Atlanta. "Volunteers were fed doses 200 times what you and I get every day for 12 months, and they showed no ill effects."

A report of the American Chemical Society in September stated that "despite the vast increase in the availability and use of pesticides, the incidence of fatal poisoning in the U.S. has held virtually constant at 1 per 1 million population over a 25-year period."

Workers engaged in manufacture of persistent pesticides, say industry experts, carry many times the normal burden of these chemicals in their body tissues, yet suffer no ill effects.

Scientists who have studied effects of DDT on humans say that once a certain amount of the chemical accumulates in the body, added amounts are thrown off.

The 1966 "Yearbook of Agriculture," published by the U.S. Department of Agriculture, stated:

"Without insecticides, production of livestock would soon drop about 25 per cent. Food prices might then go up as much as 50 to 75 per cent, and the food still would not be of good quality."

At a recent symposium on the use of pesticides, Dr. Donald G. Crosby, toxicologist at the University of California, said:

"We're not talking about a cockroach in a bedroom. We're talking about insects that devour up to 80,000 tons per day—capable of stripping bare an area of the size of Rhode Island. . . . We should accept the self-interest of our species."

Actually, production of DDT in the U.S. is down by about 20 per cent since 1960. The U.S. Department of Agriculture, where officials deem it feasible, is substituting other pesticides in Government spray programs and urging private users to do likewise.

Other means are being sought to control pests—for example, parasites and predators that will kill harmful insects. There is prom-

ise, too, in new strains of crops that resist insects and plant diseases.

The big debate over persistent pesticides, in broad terms, comes down to this:

Those who would outlaw these chemicals see their accumulation in the environment as a time bomb that will explode at some future date with disastrous effects to mankind.

Those who urge continued use of the persistent pesticides say that these chemicals have enhanced the world's health and food supply with virtually no evidence of harm to mankind.

REVENUE SHARING ACT OF 1969

Mr. BAKER. Mr. President, on September 23, I introduced S. 2948, the Revenue Sharing Act of 1969, which had been recommended by the Nixon administration. I was joined by more than 30 other Senators in sponsoring this proposal, and many others have expressed interest in the concept set forth in this legislation.

A section-by-section analysis of this act has been prepared. For the information of Senators and others who may be interested, I ask unanimous consent that the analysis be printed in the RECORD.

There being no objection, the analysis was ordered to be printed in the RECORD, as follows:

SECTION-BY-SECTION ANALYSIS OF REVENUE-SHARING ACT OF 1969

SECTION 101—SHORT TITLE

(a) *Short Title.*—Section 101 provides that the Act may be cited as the "Revenue-Sharing Act of 1969".

SECTION 201—DEFINITIONS

(a) *In general.*—Subsection (a) of section 201 provides general definitions for purposes of the Act.

Fiscal year

Paragraph (1) of section 201(a) provides that the term "fiscal year" means the fiscal year of the Federal Government of the United States.

General revenue

Paragraph (2) of section 201(a) provides that the term "general revenue" of State and local governments means general revenue from their own resources, as defined by the Bureau of the Census of the Department of Commerce, provided that in the case of the District of Columbia it includes the Federal payment authorized under 47 D.C. Code section 5201(a).

Governor

Paragraph (3) of section 201(a) provides that the term "Governor" means the chief executive officer of a State or his delegate.

Individual income tax returns

Paragraph (4) of section 201(a) provides that the term "individual income tax returns" means the returns of tax required to be filed on the income of individuals under the Internal Revenue laws.

Local government

Paragraph (5) of section 201(a) provides that the term "local government" means a municipality, country or township (but does not include independent school districts or special districts), as defined and used by the Bureau of the Census of the Department of Commerce.

Personal income

Paragraph (6) of section 201(a) provides that the term "personal income" means personal income as defined by the Office of Business Economics of the Department of Commerce.

Population

Paragraph (7) of section 201(a) provides that the term "population" means total resident population, as defined and used by the Bureau of the Census of the Department of Commerce.

Secretary

Paragraph (8) of section 201(a) provides that the term "Secretary" means the Secretary of the Treasury or his delegate.

State

Paragraph (9) of section 201(a) provides that the term "State" means the several States of the United States and the District of Columbia.

Taxable income

Paragraph (10) of section 201(a) provides that the term "taxable income" means taxable income as defined by the Internal Revenue laws.

Units of government

Paragraph (11) of section 201(a) provides that the term "units of government" means all units of local government (including independent school districts and special districts), as defined and used by the Bureau of the Census of the Department of Commerce.

(b) *Changes and modifications in definitions.*—Subsection (b) of section 201 provides that the definitions in subsection (a) shall be based on the latest published reports available, and the Internal Revenue laws in effect, on the date of enactment of this Act. The Secretary may, by regulation, change or otherwise modify the definitions in subsection (a) (other than paragraphs 1, 3, 8 and 9) in order to reflect any change or modification thereof made subsequent to such date.

SECTION 301—REVENUE SHARING APPROPRIATION

(a) *Appropriation.*—Subsection (a) of section 301 provides that for each fiscal year beginning on or after July 1, 1970, there shall be appropriated an amount equal to the percentage provided in subsection (b) of section 301 multiplied by the total taxable income reported on Federal individual income returns for the calendar year for which the latest published statistical data are available from the Department of the Treasury at the beginning of such fiscal year.

(b) *Applicable percentages.*—The applicable percentages are—

(1) for the fiscal year beginning July 1, 1970, 2/12th of one percent;

(2) for the fiscal year beginning July 1, 1971, 5/12th of one percent;

(3) for the fiscal year beginning July 1, 1972, 7/12ths of one percent;

(4) for the fiscal year beginning July 1, 1973, 9/12ths of one percent;

(5) for the fiscal year beginning July 1, 1974, 11/12ths of one percent; and

(6) for each fiscal year beginning on or after July 1, 1975, one percent.

(c) *Fiscal year limitation.*—Subsection (c) of section 301 provides that amounts appropriated pursuant to this Act shall remain available without fiscal year limitation for the expenditures authorized by this Act.

SECTION 401—PAYMENTS TO STATES

(a) *In general.*—Subsection (a) of section 401 provides that for any fiscal year each State is entitled to an amount, determined by the Secretary, equal to the revenue-sharing appropriation for such year pursuant to section 301 multiplied by the factor for such State.

State factor

Paragraphs 1 and 2 of subsection (a) provide that each State's factor shall be obtained by (1) multiplying such State's population by its revenue effort, and (2) dividing the product obtained in paragraph 1 by the sum of such products for all States.

(b) *Payments.*—Subsection (b) of section 401 provides that the payments determined under subsection (a) of this section shall be paid by the Secretary to the Governor of each State at such times as the Secretary may determine during any fiscal year, but not less often than once each quarter.

(c) *Revenue effort.*—Subsection (c) of section 401 provides that the revenue effort of each State for any fiscal year is obtained by dividing the total general revenue derived by such State and all of its units of government from their own resources by the total personal income for such State.

(d) *Data determinations.*—Subsection (d) of section 401 provides that for each fiscal year, the Secretary shall, on the basis of the latest available data for all States furnished by the Department of Commerce, determine the population of each State referable to the same point in time, the total annual general revenues of each State (including all units of government), and the total annual personal income, for each State.

(e) *Final and conclusive determinations.*—Subsection (c) of section 401 provides that all computations and determinations by the Secretary under sections 301 and 401 shall be final and conclusive.

SECTION 501—PAYMENTS BY STATES TO LOCAL GOVERNMENTS

(a) *Computation of pass-through amount.*—Subsection (a) of section 501 provides that the local governments of each State are entitled to an amount equal to the payment to such State pursuant to section 401 multiplied by a distribution fraction computed on the basis of the latest data available from the Department of Commerce

Numerator

The numerator of the distribution fraction is the total general revenues derived by all local governments of such State from their own resources.

Denominator

The denominator of the distribution fraction is the total general revenues derived by such State and all of its units of government from their own resources.

(b) *Payment to each local government.*—Subsection (b) of section 501 provides that, within 30 days after receipt of a payment pursuant to section 401, each State shall pay to each local government an amount equal to the amount determined under subsection (a) of section 501 multiplied by the ratio of such local government's general revenue from its own resources to the general revenues of all local governments in such State from their own resources.

(c) *Alternative distribution formula.*—Subsection (c) of section 501 provides that the Secretary shall accept an alternative formula for the distribution of funds if requested by the State, provided such formula is approved by the State and by its local governments.

Approval

(1) *State.*—Paragraph (1) of subsection (c) provides that the alternative formula must be approved by the State in the same manner as authorized in such State's constitution for the enactment of its own laws.

(2) *Local governments.*—Paragraph (2) of subsection (c) provides that the alternative formula must be approved by a formal resolution of more than one-half of the governing bodies of the local governments, and it must be approved by a formal resolution of the governing bodies of the local governments which would be entitled to receive more than one-half of the payments otherwise required by this Act.

Filing

The alternative formula must be filed not later than 180 days preceding the fiscal year to which it would be applicable.

Period of effectiveness

The provisions of the formula are effective for the period provided in such alternative formula.

Modification of termination of formula

The alternative formula may be modified or terminated if such modification or termination is approved by the State and its local governments in the same manner as provided in this section for adopting such formula.

SECTION 601—QUALIFICATIONS

(a) *In general.*—Subsection (a) of section 601 provides that, in order to qualify for payments under this Act, a State Government must warrant to the Secretary that it waives immunity from suit by its local governments in the United States Court of Appeals under the provisions of this Act. The State must give the Secretary such assurances as he may require that the State and its local government account for such funds in accordance with this Act.

Governmental purposes

Paragraph (1) of subsection (a) provides that payments received pursuant to this Act shall be used for governmental purposes.

Accounting and disbursement

Paragraph (2) of subsection (a) provides that a State and its local governments shall use proper accounting procedures for payments received under this Act and that such State will use such fiscal and accounting procedures as may be necessary to assure that it properly disburses amounts to which the local governments are entitled.

Compliance

Paragraph (3) of subsection (a) provides that a State and its local governments must provide the Secretary, on reasonable notice, access to, and the right to examine, any book, document, paper or record that he may reasonably require for the purpose of reviewing compliance with this Act.

Reports

Paragraph (4) of subsection (a) provides that the State and its local governments shall make such reports to the Secretary in such form and containing such information as he may reasonably require, including in such reports any computations made pursuant to section 501.

(b) *Maintenance of Existing Payments.*—Subsection (b) of section 601 provides that, except when an alternative formula is adopted pursuant to section 501(c), a State's aggregate payments to all of its local governments for such State's fiscal year (from all sources other than amounts received under this Act) shall be an amount not less than the average proportion of such State's general revenues received by its local governments for the three fiscal years of such State next preceding the date of enactment of this Act.

SECTION 701—POWERS OF THE SECRETARY

(a) *Regulations.*—Subsection (a) of section 701 provides that the Scretary is authorized to prescribe reasonable rules and regulations for carrying out the provisions of this Act and to request from any Federal agency statistical data, reports and such other information as he may deem necessary for the purpose of carrying out his functions under this Act.

(b) *Failure of Compliance by State Govment.*—

In General: Subsection (b) of section 701 provides that if, after giving reasonable notice and an opportunity for a hearing to the Governor of a State, the Secretary determines that a State Government has failed to comply with any provision, rule or regulation of this Act, he shall proceed as specified in this section.

Notification: The Secretary shall notify the Governor that if the State Government fails to take corrective action within 60 days from the date of a determination that it has failed to comply with this Act, further payments to such State (in excess of the amounts to which the local governments of such state are entitled under section 501) will be withheld for the remainder of the fiscal year and for any subsequent fiscal year until such time as the Secretary is satisfied that appropriate corrective action has been taken and that there will no longer be any failure to comply. Until he is satisfied, the Secretary shall make no further payments.

(c) *Cancellation of Payments.* If a State Government fails to comply with the provisions of this Act for a period of six months after the expiration of a 60-day notice that its payments will be withheld, the Secretary shall cancel any payment withheld pursuant to subsection (b) for the current and for any subsequent fiscal year.

Reapportionment of payments: The Secretary shall reapportion any cancelled payments to all other States then entitled to receive payments under section 401 of this Act, in proportion to the original installments paid to such States for the fiscal year to which such cancelled payments pertain.

Distribution to local governments: Amounts redistributed to States pursuant to section 701 are considered payments made pursuant to section 401. The local governments of each State shall receive the amounts to which they are entitled pursuant to section 501.

(d) *Payments to local governments.* If payments to a State Government are withheld or cancelled pursuant to this section, the Secretary shall continue to pay to the Governor of such State the amount to which the local governments of such States are entitled pursuant to section 501 (computed as if the payment to such State had been made) and such State shall continue to distribute such amounts among its local governments.

(e) *Failure of Compliance by Local Government.*—

(1) *In General.*—The Governor shall be responsible for determining that local governments within his State have complied with the requirements of this Act and the rules and regulations issued pursuant thereto.

(2) *Notice of Failure of Compliance.* If after giving reasonable notice and an opportunity for a hearing to the chief executive officer of a local government, a Governor determines that a local government within his State has failed to comply with this Act, he shall notify such local government that if it fails to take corrective action within 60 days from the date of such determination, further payments to such local government will be withheld for the remainder of the fiscal and for any subsequent fiscal year, until such time as he is satisfied that appropriate corrective action has been taken.

Notification to Secretary.—The Governor shall notify the Secretary of his action.

Cancellation of Payments.—If a local government fails to comply for a period of six months after the expiration of the 60-day notice, the Governor shall cancel any payments withheld for the current and for any subsequent fiscal year.

Reapportionment. The Governor shall reapportion and pay any cancelled payment to all other local governments of such State then entitled to receive payments pursuant to section 501, in proportion to the original payments made to such local governments for the fiscal year to which the cancelled payments pertain.

SECTION 801—JUDICIAL REVIEW

(a) *In general. Filing of a Petition for Review.* Subsection (a) of section 801 provides that any State or local government which receives a 60-day notice pursuant to a determination that payments to it will be withheld may, within 60 days after receiving such notice, file with the United States Court of Appeals for the circuit in which such State or local government is located, or in the United States Court of Appeals for the District of Columbia, a petition for review of the Secretary's action. A copy of the petition shall be transmitted to the Secretary.

Record of Proceedings.—The Secretary shall file, in the appropriate Court, the record of the proceedings on which he based his action.

(b) *Objections to Secretary's Action.* Subsection (b) of section 801 provides that no objection to the action of the Secretary shall be considered by the Court unless such objection had been urged before the Secretary, or unless there were reasonable grounds for a failure to do so.

(c) *Jurisdiction of Court.* Subsection (c) of section 801 provides that the Court may affirm or modify the Secretary's action, or set it aside, in whole or in part.

Findings of Fact.—The findings of fact by the Secretary, if supported by substantial evidence, shall be conclusive. If any finding is not supported by substantial evidence, the Court may remand the case to the Secretary to take further evidence, and the Secretary may thereupon make new findings of fact and may modify his previous actions.

(d) *Review.* Subsection (d) of section 801 provides that the judgment of the Court shall be subject to review by the Supreme Court of the United States upon certiorari or certification, as provided in section 1254 of Title 28 of the United States Code.

(e) *Cancellation of Payments.* Subsection (e) of section 801 provides that, in the event that judicial proceedings are instituted pursuant to this section, the Secretary shall, after the expiration of the six months period provided in section 701 or the point at which any judicial decision becomes final, whichever is later, cancel, reapportion, and pay any payments withheld pursuant to section 701 for the current and any subsequent fiscal year.

(f) *The Term "Secretary".* Subsection (f) of section 801 provides that, for the purposes of section 801, the term "Secretary" means the Secretary of the Treasury, or the Governor of a State, whichever is appropriate.

SECTION 901—REPORT BY THE SECRETARY

In General.—Section 901 provides that the Secretary of the Treasury shall report to the President of the United States and the Congress, as soon as is practicable after the end of the fisacl year, on the operation of this Act during the preceding fiscal year.

SECTION 1000—ADMINISTRATIVE EXPENSES

In General.—Section 1000 authorizes an appropriation of such sums as may be necessary for the administrative expenses required to carry out the functions of the Federal Government under this Act.

SECTION 1001—EFFECTIVE DATE

Section 1001 provides that the effective date of this Act shall be January 1, 1971.

WELFARE REFORM AND FEDERAL REVENUE SHARING

Mr. CRANSTON. Mr. President, on October 10 I had the pleasure of sharing with California county supervisors some thoughts on the relationship of President Nixon's new welfare reform proposal and the need for Federal revenue sharing by State and local agencies. Since I hope that these ideas may contribute to the continuing dialog on new solutions to these problems, I ask unanimous consent that my speech be printed in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

SPEECH BY SENATOR ALAN CRANSTON BEFORE THE CALIFORNIA SUPERVISORS ASSOCIATION, SQUAW VALLEY, OCTOBER 10, 1969

With all of the incredibly complex problems which face a U.S. Senator, trying to decide what's best for the United States, I must say that I do not in the least envy the job of a California County supervisor.

On a daily and face-to-face basis, you must justify to the voters, including your own friends and neighbors, both the cost and the efficiency of county government and the tax rate you impose on their homes, their farms, their businesses.

One of your most difficult tasks, I know, stems from the major, immense responsibility you bear in administering a welfare program which aggravates instead of solves our poverty problem.

I realize, of course, that your burden is lightened and your task simplified because of the fact that you support this welfare program financially by taxing your friends, neighbors and constituents with the most unpopular and least equitable of all our levies—the property tax. In Washington and in California alike, we all know that we must find a solution to this problem.

I was greatly encouraged by President Nixon's recent message on welfare reform. Declaring candidly that "The present welfare system has failed us," the President outlined a bold and broad new program of family assistance. Under his plan, which is now before Congress, any family which can earn no income at all would receive a minimum of $1,600 of Federal funds.

If a family's earnings are below the poverty level, Federal funds would be available to bring its earnings up to acceptable minimums. Thus, no American would be discouraged from getting a job and earning a living. An end would come at long last to the sorry system—built into the present program—that penalizes initiative and holds back those who want to help themselves.

States would be required to supplement these payments from the Federal Treasury, depending on their present public assistance programs. Every state would be guaranteed at least a 10 percent decrease in its present level of welfare support. In addition, the President called for mandatory work incentives with training and job development programs.

I believe that the program needs strengthening in this aspect to insure that enough job opportunities are available. The Administration proposal would approximately double the Federal contribution to public assistance, from 4 to 8 billion dollars. I have no doubt there will be many changes in this new family assistance plan before it is enacted. Already, since the President's initial August message, the Administration has broadened its concept of the role of food stamps in the program, and made other improvements.

But after all the arguments about the sufficiency of the supports and the fairness of the work requirements have been resolved, the fact will remain that President Nixon deserves our nation's thanks for a comprehensive and constructive proposal. It is a proposal designed to get us out of the paternalistic and debilitating quagmire of our present welfare system.

One of the most important new precedents established by the proposal is that the problem of poverty and the need for public assistance are recognized formally by the President of the United States as a national problem requiring a national solution.

Californians should be in complete agreement with this principle. With the end of residence requirements for public assistance, our comfortable climate and magnificent environment, plus our high rate of welfare payments—which will be correspondingly high compared to other states under the Nixon Family Assistance Program—all of these attractions will make California an enticing home for many of our nation's poor people.

This in turn will add something to the burden of welfare on our California tax payers—although hopefully not enough to cancel out the initial 10 percent cut guaranteed us in the plan.

I feel that the best solution, and the only fair solution, to this threat of a discriminatory tax burden on citizens of California and other wealthy states is complete Federal support of our nation's welfare program.

In his August speech, President Nixon touched upon much more than welfare reform. He called for a "no-strings-attached" revenue sharing program which by fiscal 1976 would amount to 5 billion dollars to be returned to the states in block grants. While I have long supported the concept of Federal revenue sharing, I believe that total Federal support of our welfare system would accomplish the same ends as block grants without stirring up the violent battle which is the inevitable consequence of trying to get Congress to appropriate block grant funding.

If counties were completely relieved of the need to support welfare, they would be able to support schools, road construction, police and fire protection, and their other areas of responsibility just as if they were receiving free Federal funds. I believe there would be much more freedom of choice for local cities and counties under this kind of revenue sharing.

Frankly, I do not believe that Congress will be willing to give "no-strings-attached" money to the states or to local government. While there is substantial agreement on the need for Federal revenue sharing with state and local government, such sharing can well mean ear-marked funds with Federal regulations and restrictions on its use by state and local government.

This can mean the continued centralization of decision-making in Washington—and greater Federal intereference in our schools and other aspects of local government.

At a time when most Americans want to see government decentralized—brought closer to the people and made more responsive to their needs—any further restrictions on local and regional authority are clearly a mistake.

On the other hand, if the entire burden of welfare were shifted to the Federal government by extending President Nixon's welfare reform proposal, the local tax dollars freed from the welfare drain would be entirely in the jurisdiction of local officials to be spent without Federal regulations. Nationalizing our system of welfare supports would accomplish the same ends as the President's revenue sharing proposal.

It would protect local options and autonomy in other areas of spending.

It would remove the threat the existing situation poses to California taxpayers.

LETTERS TO CONGRESSMEN TABOO

Mr. HATFIELD. Mr. President, I was shocked to read recently in the Baltimore News-American a front-page article bearing the headline "Letters to Congressmen Taboo, Army Redtape Gags GI's," written by Leslie H. Whitten.

The story quotes a directive issued to enlisted men at Fort Bragg, N.C., as saying, among other things, that—

The only effect a congressional (inquiry) has on the administrative process is to disrupt normal processing and delay other actions pertaining to your buddies.

Mr. President, the right of every American citizen to communicate with his elected representatives in Congress is clearly guaranteed by the Constitution. A man does not surrender that constitutional right when he dons a military uniform.

That is why I was genuinely distressed to see this news story of an apparent attempt by some clearly misguided Army officers to intimidate their men and discourage their communicating with us. I have since obtained a copy of the Army document in question and find that reporter Whitten has quoted it entirely accurately.

This is the kind of incident which gives rise to the derisive comments we sometimes hear about the "military mind." It is only mindless disregard for basic rights and for logic that gives rise to the kind of memorandum circulated at Fort Bragg.

I call upon Secretary of Defense Laird to reaffirm the clear policies of his Department guaranteeing to every member of the military the right to communicate freely with his Senators and Representatives without fearing retribution from his immediate superiors. The Secretary has the clear duty to put an end to the issuance of such outrageous memorandums as that uncovered by reporter Whitten.

Mr. President, I ask unanimous consent that the Baltimore News-American article and the so-called Personnel Information Letter issued at Fort Bragg be printed in the RECORD.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

LETTERS TO CONGRESSMEN TABOO: ARMY RED TAPE GAGS GI'S

(Leslie H. Whitten)

WASHINGTON, August 29—An Army intelligence center is trying to discourage servicemen from writing gripes to their congressmen because it contends the letters "disrupt normal processing."

A serviceman's right to communicate with his congressman is guaranteed by law and by Defense Department policy.

The Army unit seeking to restrain letter-writing to congressmen is the Continental Army Command Intelligence Center, Fort Bragg, N.C. In a July 18 letter to its 900-soldier members the headquarters of the unit, through its personnel office, said:

"Your personnel section has been slightly offended here lately. It seems that some of our customers have written to their elected representatives in Congress when the help and information was available here for them."

The letter then goes on to mention such matters as overseas assignments, hardship discharges and early release for school and seasonal employment as matters that are handled by the personnel office. It concludes:

"A congressional inquiry does not influence a commander's decision . . . the only effect a congressional (inquiry) has on the administrative process is to disrupt normal processing and delay other actions pertaining to your buddies."

The letter was signed by Chief Warrant Officer Alfred Leonardo Jr. His superior, the commanding officer of the center, Col. Charles A. Morris, conceded that he had "thrown out a grain of information" to get Leonardo started on the letter. He backed Leonardo all the way, Morris said.

Leonardo said he had written similar memoranda when he was with units in Vietnam and Germany. He estimated 40 to 50 inquiries from congressmen had been processed by the unit this year and each one took one to two extra hours of work.

Col. Morris insisted that it was not his aim

to intimidate his men. Quite the contrary, he said, "What we're trying to get them to do is to first exhaust military channels. Then by all means they can write to their congressmen. They could and should."

The letter was obtained by Hearst Newspapers after it had been sent to an intermediary by a disgruntled army employe, who saw it as an effort to restrict Army gripes to the soldiers' elected representatives.

At the Defense Department, a spokesman explained that "sometimes people with legitimate gripes will not bother to talk to their first sergeants even. They'll go straight to God."

Another department spokesman, asked whether letters such as those sent out at Fort Bragg were part of Army policy, said obliquely that "the department has no restrictive policy concerning members of the armed forces community with a member of Congress."

Sen. Sam Ervin (D., N.C.) has said his constitutional rights subcommittee could never have pushed through its "GI Bill of Rights" without servicemen's complaints.

The Army center's letter does not bar servicemen from writing their congressmen, but the Ervin committee and other constitutional rights backers have pointed out that inclosed societies like the military, a hint of displeasure goes a long way.

HEADQUARTERS CONTIC,
OFFICE OF UNIT PERSONNEL,
Fort Bragg, N.C., July 18, 1969.

Subject: Personnel information letter.

1. Your Personnel Section has been slightly offended here lately. It seems that some of our customers have written to their elected representatives in Congress when the help and information was available here for them. By here we mean the Personnel Section at CONTIC, the Personnel Section in our battalions, and your unit orderly rooms. It is realized that there are many things that occupy a Personnel Officer or a Personnel Sergeant's time. To make it even easier to get information on personnel matters, anyone in this command desiring to know procedures, information, or just status of his particular action may write a note or letter to the Personnel Officer or Personnel Sergeant, HQ CONTIC, direct. We promise you our reply will be much faster, helpful, and in more detail. (However, there are things we cannot tell you. Items such as reasons for nonselection for promotions, leaves, etc, can only be obtained from your unit commander.)

2. Some of the reasons some personnel actions are delayed is that they are improperly prepared. We get them with missing documents, missing signatures, etc.

3. Following are typical types of various personnel actions that we normally process and the expected time frame to completion.

a. *Overseas assignments.* These take from 30 to 180 days for approval. If approved the individual will normally appear on a volunteer levy. In the event he has not heard anything in a 180-day period, we recommend that he try again if he still wants to go. NOTE: Do not be discouraged if your commander recommends disapproval. It still has to go to DA if you meet the requirements of AR 614–30, and many do go despite a commander's recommendation of disapproval. Personnel CONTIC will send you a note informing you when your application left our office and what recommendation CONTIC has made.

b. *Hardship discharges.* This type of action receives top priority in our office. The CG, XVIII Airborne Corps, has the approving authority; however, that HQ may send a doubtful case to DA for approval. Hardship Discharges that are based on medical conditions are referred to the Surgeon's Office WOMACK, for his recommendation. All cases are referred to the Selective Service Board serving your hometown for their recommendation, and this is where the delays occur. It is estimated that the hospital takes one (1) week (includes mailing time) and Selective Service anywhere from 30 to 60 days.

d. *Early release for school and seasonal employment,* CG XVIII Airborne Corps, has the authority for approval. Applications take from 15 to 30 days. IAW DA Message 915445, Dated 8 July 1969, Subject; Interim Change to AR 645–200, Separation to attend school will be effected not earlier than 15 days prior to the first day of the school term for which registered. Previous requirement was 10 days prior to last possible registration date. Date must still fall within last 90 days of service.

e. *OCS application.* A priority item with command emphasis. Selection process accomplished by Post Board and 3A Selection. Estimated to completion 25 to 60 days.

f. *Warrant officer applications.* Another priority item. Post Board required. Final selection by DA. Non MI Warrants take 3 to 9 months. MI Warrants take 6 to 24 months. Applicants for MI Warrants are required to undergo a brand new complete Background Investigation.

4. In summary, a congressional inquiry does not influence a commander's decision. A commander is charged with certain responsibilities and must act accordingly. The only effect a congressional has on the administrative process is to disrupt normal processing and delay other actions pertaining to your buddies. Your personnel actions are receiving the best possible care we can give it. All personnel actions are acknowledged. Our office will send each applicant a note letting you know what we did with your request and CONTIC's recommendation. We ask that you inform your parents and wives of the processing time. Bring your business to us. We are here to help you.

A. LEONARDO, Jr.,
Personnel Officer.

THE OEO AND THE ELDERLY POOR

Mr. WILLIAMS of New Jersey. Mr. President, within recent weeks I have expressed my concern to OEO Director Donald Rumsfeld about the effects of recent organizational changes upon programs meant to help the elderly poor. However, I do not believe that the urgency of the situation has yet been recognized within the highest levels of OEO.

I, therefore, ask unanimous consent to have printed in the RECORD a letter and position paper presented to me today by the National Council of Senior Citizens. I think that both documents make a compelling case for action—at the earliest possible date—to deal with regressive developments of recent months.

As chairman of the Special Committee on Aging, I am especially concerned about the issues described in the material from the council. The Committee on Aging, in 1965 and 1966, conducted hearings which resulted in a strongly worded report pointing out that the Office of Economic Opportunity had paid scant attention to the elderly poor of this Nation. The committee also recommended "that there be established within the Office of Economic Opportunity a high-level position or positions charged with responsibility and authority to assure adequate consideration of the needs of the elderly in conducting the war on poverty, with tenure and security for the occupant of this position."

With strong support from the Senate Committee on Labor and Public Welfare, this position was later established. Senator EDWARD KENNEDY, chairman of the Subcommittee on Aging in that committee, took an active and effective part in achieving that goal and in advancing other goals meant to make the war on poverty more responsive to the elderly.

It is my opinion, however, that all previous progress is now endangered. Furthermore, I believe that the OEO should give sympathetic attention to the views of the National Council of Senior Citizens and other national organizations which have expressed similar concern since Mr. Rumsfeld took office. I believe that the council statement is emphatic, timely, and significant. I commend it to the OEO and to everyone else who should be concerned about our elderly poor.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

NATIONAL COUNCIL OF SENIOR CITIZENS, INC.,
Washington, D.C., October 21, 1969.

Hon. HARRISON A. WILLIAMS,
Chairman, Senate Special Committee on Aging, Washington, D.C.

DEAR SENATOR WILLIAMS: The Executive Board of the National Council of Senior Citizens, meeting in Washington October 14 and 15, considered the plight of the elderly poor and the unfortunate consequences for them of the reorganization of the Office of Economic Opportunity.

The National Council of Senior Citizens represents 2,500,000 older persons in every State. The Executive Board has directed me to bring to your attention the contents of its anti-poverty resolution.

The elderly poor have been largely bypassed by the Office of Economic Opportunity up to now. But, in recent years, Congress made changes in the Economic Opportunity Act which were beginning to provide some new OEO focus on the problems of the elderly. Under the new reorganization ordered by the President, however, these changes are being completely ignored and the elderly programs are being reduced and downgraded.

The National Council of Senior Citizens recognizes the desperate need of the poor and disadvantaged of all ages. Older Americans are deeply concerned about the effects of poverty on youth and see the justice of placing heavy emphasis on anti-poverty programs for youth.

However, the National Council of Senior Citizens respectfully insists that the elderly poor are also entitled to a degree of assistance proportionate to their need.

Those 65 or over helped America win two world wars. They worked hard to provide the unprecedentedly high living standard enjoyed by the great majority of Americans.

Yet, it is a tragic fact that one-fourth of the U.S. poor are elderly and more than one-third of those 65 or over—7,000,000 in all—live in abject poverty while millions of others 65 or over live perilously close to the poverty line.

The elderly comprise one of the only two poverty categories to show an increase in the 1960's. (Families headed by women are the other category that has been increasing).

The National Council of Senior Citizens seeks to impress uopn the Administration the fearful plight of the elderly poor and the importance of developing anti-poverty programs adequate to their need.

Our 2,500,000 members ask that OEO appoint an Assistant OEO Director for Older Persons Programs (a statutory office that has remained unfilled since the departure of Genevieve Blatt last year) and re-establish an operating Office for Older Persons programs under the OEO Community Action Agency (this office has been so thoroughly downgraded there is no possibility it can

generate innovative programs for the elderly in the future).

The National Council of Senior Citizens asks Congress to provide at least $20,000,000 for OEO Senior Opportunities and Services programs to fill the great demand for programs of this kind in hundreds of communities across the nation.

I am enclosing a copy of the position paper prepared by the National Council of Senior Citizens reporting in some detail on the OEO cutbacks in the programs for older Americans resulting from President Nixon's decision to reorganize the Office of Economic Opportunity.

With every good wish, I am

Sincerely,

WILLIAM R. HUTTON,
Executive Director.

NATIONAL COUNCIL OF SENIOR CITIZENS
POSITION PAPER ON OEO

President Nixon's decision to reorganize the Office of Economic Opportunity, with the stated object of making it more effective in dealing with the problems of the U.S. poor, is of special concern to the low income elderly.

Up to now, the elderly have been largely ignored by the anti-poverty agency. Now, it seems likely they will be further by-passed.

Relatively few OEO programs have been designed to serve the elderly.

In 1968, the U.S. Senate Appropriations Committee reported that less than 5 per cent of OEO funds had gone for programs specifically directed toward meeting the problems of men and women age 55 or over.

Yet the poor in this age group represent more than a quarter of all Americans living in poverty.

The elderly constitute one of the only two poverty categories to show an increase in the 1960's. (Families headed by women are the other poverty category that has been increasing.)

The implications of this situation are most disturbing.

Older Americans generally must live on incomes that are substantially less than the incomes of younger people.[1]

This retirement income gap is steadily worsening.

At the same time, more Americans are spending more years in retirement.

Unless positive action is taken to reverse this trend, the economic position of the elderly will continue to deteriorate markedly in the years ahead.

From its inception, the OEO has evidenced little real regard for the plight of the elderly poor. Its youth-oriented attitude has greatly disappointed those with an understanding of the desperate financial crisis facing millions of the older generation.

The agency's record brings this clearly into focus.

The original OEO legislation contained no specific reference to the elderly poor.

In 1965, however, Congress noted the need for employment programs for older workers and added to the OTO legislation a section entitled Programs for the Elderly Poor. This section of the legislation stated: "It is the intention of Congress that, wherever feasible, the special problems of the elderly poor shall be considered in the development, conduct and administration of programs under this Act." [2]

In 1966, the report of the Senate Committee on Education and Labor on the operation of the OEO program asked that greater attention be given by OEO to problems of the elderly poor.

This report said: "The committee has found that the needs of the older person have not been appropriately considered. . . . This finding was reinforced by many hearings of the (Senate) Special Committee on Aging." [3]

In order to assure high priority for programs for the elderly, the Senate Committee ordered creation of an additional Assistant Director of the Office of Economic Opportunity.

The Committee's 1966 report states: "The Committee intends that this official will assist the Director with problems of the elderly poor, particularly with respect to the development of new programs and the coordination of programs related to the needs of the elderly.

"It is also the Committee's intention that this Assistant Director be provided with staff at the policy level . . ."

The 1967 amendments to the Economic Opportunity Act reemphasized congressional concern for the elderly poor by asking for new programs to be called Senior Opportunities and Services and to be maintained on a par with such major OEO programs as Head Start, Legal Services and Neighborhood Health Centers.

The Senate Appropriations Committee reviewed OEO's performance in 1968 and again found that, despite very specific legislative reference to the need for more programs for the elderly, "OEO has continued to relegate older persons programs and services to second, or less, priority with the result that 5 per cent of OEO funds have been directed to serve the 55 and over group which represents from 25 to 30 per cent of the poor." [4]

To highlight its concern for the elderly poor, the Committee's 1968 report said: "For the past four years, OEO has chosen to give only token acknowledgement to the problems of the elderly."

The report continued: "The Committee therefore feels it has no choice but to specifically require OEO to meet its statutory and programmatic mandate and earmarks $50 million in Title II funds to be channeled through Section 222 (a) 8 of the Act."

Also in 1968, several members of the OEO's Advisory Committee on Older Persons Programs resigned in a protest against the agency's refusal to fund more programs for the elderly." [5]

Clearly, the OEO's record in dealing with problems of the elderly poor has been disappointing.

Worse still, it now appears the comparatively few programs for the elderly that OEO has so far set up are threatened.

The OEO reorganization plan, dated August 11, 1969, states that the former offices of rural and older persons will be incorporated into OEO's new Office of Program Development.

Since then, the status of the older persons division as an operating division within the Office of Programs Development has been downgraded to the point of effectively removing older persons interest from OEO's operational scheme. The staff function as presently conceived provides no operational authority to initiate new developmental programs in the field of aging.

The obvious result of the reorganization plan will be to eliminate the statutory office of Older Persons Programs.

Moreover, the operational responsibilities of OEO's former Community Action Program Older Persons Branch are being abolished with respect to initiating innovative programs, monitoring ongoing research and development programs and guiding field-operated Senior Opportunities and Services programs.

Thus, the OEO reorganization plan, as it now stands, appears designed to eliminate the elderly poor as an OEO program concern.

In addition, existing OEO programs for the elderly face a highly uncertain future including 217 local Senior Opportunities and Services programs and other minor programs financed with anti-poverty funds.

Discussing his intention to reorganize OEO, the President in a nation-wide address on August 8 said: "The OEO reorganization to be announced next week will stress OEO's innovative role."

However, the actual reorganization plan extinguishes any likelihood of new programs for the elderly and casts a dark shadow over existing OEO programs for the elderly.

Accordingly, the following recommendations appear proper:

The Office of Economic Opportunity should adhere to the intent of Congress by incorporating a staff position of Assistant Director for Older Persons Programs in its reorganization plan.

The Assistant Director for Older Persons Programs should be given sufficient staff and budget to carry out programs responsive to the needs of the elderly poor.

The research and development functions previously assigned the OEO Community Action program's Office of Older Persons should be "carried through" by that office into the newly formed Office of Program Development.

In the future, more OEO resources should be used to meet the needs of the elderly poor.

Prompt action on these recommendations alone can guarantee decent consideration of the needs of the elderly poor by the OEO.

PROGRAMS FOR THE ELDERLY POOR

SEC. 610.[1] It is the intention of Congress that whenever feasible the special problems of the elderly poor shall be considered in the development, conduct, and administration of programs under this Act.

SUPPLEMENTAL REFERENCE

These members of the OEO Advisory Committee on Older People's Programs resigned in February, 1968, as a protest against the refusal of OEO to fund more programs for the elderly; John W. Edelman, then President of the National Council of Senior Citizens; William C. Fitch, the OEO Advisory Committee Chairman and then a consultant to the American Association of Retired Persons; Dr. Harold L. Sheppard, a sociologist with Upjohn Institute for Employment Research and former chairman of the OEO Advisory Committee; and Dr. Juanita Kreps, an economist on the staff of Duke University.

PROGRAMS FOR THE ELDERLY FINANCED WITH ANTI-POVERTY FUNDS

Project for repairing sub-standard housing in Kentucky.

Legal Research and Services for the Elderly, a program to identify legal problems of the aged and develop better methods of solving them. (operated by the National Council of Senior Citizens).

Employment of the elderly in community service under programs operated by the National Council of Senior Citizens, the National Council on the Aging, the National Retired Teachers Association.

Late Start, a program to test whether intervention through group experience can alter life problems or patterns.

Action for Housing in Cambridge, Mass., involving the elderly in efforts to improve local housing conditions.

Senior Opportunities and Services: 217 Community Action programs for employment of the elderly in community activities.

Green Thumb, a program to employ the elderly on beautification of highway right of way and other public property (operated by the National Farmers Union).

Foster Grandparents, a program for institutionalized children who are visited regularly by elderly persons (operated by the U.S. Administration on Aging).

Project FIND, an outreach program carried on at the local level to acquaint the isolated elderly with benefits available to them through public and non-profit community agencies.

NEW DIRECTIONS FOR AMERICAN FOREIGN POLICY

Mr. MATHIAS. Mr. President, on October 27, 1969, at Stephens College, Columbia, Mo., the Senator from Illinois (Mr. PERCY) delivered an important address entitled "New Directions for American Foreign Policy in the 1970's." In the address, Senator PERCY discusses the problems confronting the United States in Asia, Europe, and Latin America. I ask unanimous consent that the address, which contains important information, be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

NEW DIRECTIONS FOR AMERICAN FOREIGN POLICY IN THE 1970's

T. S. Eliot once said: "Time present and time past are both present in time future. And time future is contained in time past." In looking together at the future of America's foreign policy, perhaps the best way to begin is to take a brief look at the past—the rear-view mirror known as "modern history."

As your generation came to maturity, American policy-makers began to worry less about a potential direct military clash with the Soviet Union and worried a great deal more about the real (though still undeclared) war in Vietnam.

Throughout the Johnson years, while we built up our military strength in Vietnam to more than half a million men, it was believed by those who were then making policy in Washington that military success was just around the corner. Somehow, it was held, if we spent enough money, if we sent enough men, if we expended our blood and treasure in that far-off Asian nation, we would prevail. The bombing of the North, in particular, was supposed to strangle the enemy and eventually force him to his knees.

Of course, in the end, all these estimates proved wrong. Late last year, President Johnson finally stopped bombing the North and the level of casualties actually fell.

When President Nixon took office, the policy in Washington still appeared to be to seek a military solution to the war. Military commanders were under orders to put maximum pressure on the enemy and the emphasis was clearly on offensive operations. In the meantime, not much attention was being paid to strengthening the South Vietnamese army and putting the main combat responsibility in their hands.

President Nixon wisely followed with a commitment to begin withdrawing substantial American forces from Vietnam while ordering his commanders in the field to use protective rather than aggressive tactics. This in turn has brought a still further dramatic decrease in the number of American dead within the last few months. In fact, I am reliably informed many of our field casualties today are being caused by land mines rather than by actual combat with the enemy.

While the Nixon Administration seeks a political settlement through negotiations in Paris, it has also undertaken steps to wind down the conflict. These steps are going forward despite the disappointing lack of progress at the peace table. On a policy level, we have offered to withdraw United States and allied forces over a 12-month period if the North Vietnamese also withdraw.

We have declared that we would retain no military bases in Vietnam.

And, most specifically, we have begun to reduce the American presence in South Vietnam by setting in motion the withdrawal of more than 60,000 American troops—which represents some 20 per cent of the total U.S. combat force in Vietnam. And, all along, the Administration has consistently emphasized that casualties should be held to an absolute minimum.

Now, I believe the time has come to take further concrete steps to end the fighting. The troop withdrawals should be speeded up and as soon as practicable no draftees, only volunteers and regular military personnel, should be sent to Vietnam.

The U.S. should take the initiative in ending offensive operations so long as the other side responds in kind. This will not only reduce battlefield deaths but also help create the kind of climate of reciprocity needed to yield meaningful peace talks and to end the killing permanently.

And, finally, the time has come to make it absolutely clear to the governments in Hanoi and Saigon that they cannot determine or influence American policy.

We must not allow Hanoi to succeed in its current attempt to polarize American opinion by seeking to embarrass those patriotic Americans who express their desire for an early end to the war.

And Saigon must understand firmly and unequivocally that we will not continue to spill our blood there indefinitely. For, in the last analysis, the future of the Saigon government depends not on American troops but rather on its own ability to gain and held the loyalty and support of the South Vietnamese people.

In Vietnam, as elsewhere in the world, we must act according to our best judgment of our best interests. We must determine our interest and do so not on the basis of what appears to be just good or bad for either Hanoi or Saigon. We have an overriding responsibility to do what is best for the United States and the American people. No matter how many men die in a war, it is always too many. Yet, by now, more than 40,000 Americans have died in the tragic Vietnam war.

There is a great lesson to be learned from Vietnam. This nation is not likely to pour its blood soon again in an undeclared war on behalf of a regime that lacks the support of its people.

Since we are a world power, we can expect to see more crisis and more confrontations in the 1970's. But it would take a forgetful people and a foolish government to repeat the mistake of Vietnam. We should not expect that to happen in the 1970's. I do not expect it to happen under the Nixon Administration. And, as a result, there is reason to hope for a better and more peaceful future for us all.

The post-Vietnam power balance also raises serious questions for the future. What Japan does in Asia in the 1970's may count for more than what the United States can or cannot do.

For Japan has become an economic power of the first-rank, a world leader in shipbuilding, second only to the United States in electronics, a larger producer of steel than Great Britain and West Germany put together.

Until now, the Japanese have been understandably cautious about assuming political leadership in Asia. But the enemies of another generation, the defeated powers of the 1940's—Germany in the heart of Europe and Japan in East Asia—are powers to be reckoned with in the 1970's. While neither nation is expected to again be a major military threat in our time, their political weight in world affairs will continue to increase with their prosperity. That is why in the next decade both Germany and Japan must be counted among the movers and shakers of the world.

Mainland China will undoubtedly also play a major role in Asia during the 1970's. While she will remain poor and not fully developed, we must strive for cultural, trade and constructive diplomatic contacts so that China and her 700,000,000 people will not be isolated and removed from normalizing influences. An outlawed nation and people are always potentially dangerous.

Meantime, much of the so-called Third World remains confused and chaotic, eager for development but uncertain of its relations with the developed world. In Africa we see tribal wars, hunger and frontier problems. In Asia, and particularly in India, we see self-sufficiency in food production and new efforts in population control.

In Latin America, more than half the population is under 16 years old and the average age will continue to fall in the 1970's. There aren't nearly enough doctors to care for them or schools to teach them to read and to write or jobs for them to grow into after school, if indeed, they have schools to go to. As a result, the vast majority of Latins are illiterate and many go to bed hungry every day. This is hardly the climate in which a responsible and popular democracy can flourish. In this setting, many countries of Latin America are ruled by military dictatorships.

I am convinced that the United States will have a major world role in the decade of the 1970's. In the post-Vietnam climate, we should take specific steps to reduce international tensions and maintain world peace. Let me cite a few concrete ideas that merit further attention.

U.N. PEACE CORPS

Until now, volunteer service to the community has been a national or at best a bilateral proposition. Governments and private groups help those who are willing to work for little or no pay among the poor of their own country or to aid developing nations overseas, sharing their skills in such tasks as increasing food output and educating the community.

While the achievement of these national and bilateral efforts is one of the bright spots of this decade, much more can be done. Multi-national teams could be sent to developing countries under UN auspices. No opposition party, suspicious power or heavy handed "protector" could level charges of imperialism against such UN volunteer teams.

MULTILATERAL AID

In the same way, certain aspects of the foreign aid program should be revised to provide for more multilateral help to developing nations. The record has clearly shown that bilateral aid programs, however well managed, are vulnerable to political pressure or to the equally damaging suspicion of political pressure. Indeed, many thoughtful Americans feel what is needed in the 1970's is a shift to a multilateral program vested in international agencies such as the World Bank. Such institutions can more easily impose objective standards in the granting of aid funds and, equally important, enter into an *institutional* rather than *political* relationship with the client country.

NUCLEAR ARMS CONTROL

More needs to be done to prevent the holocaust of a nuclear war sparked through the willy-nilly spiral of weapons of ultimate destruction. Certainly the extension of the nuclear test-ban treaty to mainland China and to France, as well as a ban on underground testing, are difficult but worthy goals for the coming decade.

Finally and perhaps most important of all, the United States and her people must come to a new realization of our proper role in the world. Our commitments abroad must be limited within our measure to meet them and clearly justified in terms of our national interest. New ways must be found to give our people more of a say in the shaping of policies that involve their very lives and the spending of billions of their tax dollars.

The American people must never again be dragged, inch by inch, unknowing and unaware, into the abyss of war. We must never again make war without the full knowledge and consent of the people and their elected representatives.

In sum, a renewal of participatory democracy must occur in our generation to keep ourselves true to the principles of our founding heritage. It can be done. Your active involvement will be essential to bring it about.

REDUCTION OF FUNDS FOR MEDICAL RESEARCH AND TRAINING

Mr. MONDALE. Mr. President, the drastic reductions in funds for medical research and training announced by the administration has precipitated an understandably bitter and perplexed reaction on the part of the medical community and informed citizenry of this Nation. Major cutbacks in areas such as chronic disease control, rehabilitation, research and training, and health professions scholarship and loan funds, represent an indefensible distortion of our national priorities.

A reduction of $290 million in NIH medical research funds, if approved by the Senate, will result in a 5-percent across-the-board reduction in NIH continuation grants, a 10-percent reduction in funds available for new grants, the phasing out of five major programs to attack chronic and crippling disease, the phasing out of 19 clinical research centers, the cancellation of a major heart research project, and the dismantling of a large number of unique medical research teams. These are but a few of the specific effects of this budget-slashing decision.

It seems incredible to me, and to many of my constituents, that a nation willing to expend billions of dollars on defense procurement and supersonic transports lacks the will to support desperately needed research on cancer, stroke, diabetes, arthritis, or heart, respiratory, and neurological disease. It seems equally incredible that we, as a nation, lack the resources to invest in the well-being of our citizens through supporting the educational development of every person capable of becoming a member of the health profession.

The issue of HEW appropriations is not simply one of applying short-term fiscal constraints as part of the fight against inflation. We must consider the more complex long-range implications of indiscriminate reductions in medical research and health professions personnel development on the quality of life in America. The level of HEW appropriations is directly related to the pressing need for an intelligent re-examination of our national priorities. Such an assessment would, it is hoped place human needs—those reflected at the Federal level in health, education, and welfare programs—above any and all competing Federal expenditure commitments.

Mr. President, as a representative of a State which is world-renowned as a center of medical and scientific research, with our Mayo Clinic and University of Minnesota health complex, I feel deeply obligated to support a continued Federal commitment toward improving the health of America's citizens. I ask unanimous consent that certain relevant letters from leaders of Minnesota's outstanding medical community be printed in the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD as follows:

UNIVERSITY OF MINNESOTA,
DEPARTMENT OF PHARMACOLOGY,
Minneapolis, Minn., October 1, 1969.

Hon. WALTER MONDALE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MONDALE: I wish to express my deep concern about the cuts being made on research grants from the National Institutes of Health. My concern is specifically aimed at research and training in the basic medical sciences which include biochemistry, physiology, pharmacology, anatomy, microbiology, biophysics and other related fields. The basic sciences provide the main foundation on which modern science stands and from which it flourishes and advances.

The present governmental policy to sharply reduce the present level of support for basic medical sciences is several steps backward in the pursuit of new medical knowledge as well as in the training of scientific personnel. Our research and training grants produce faculty members and research workers for our medical and other health related schools and our governmental and industrial laboratories that deal with the health sciences. I wish to point out that at a time when our society is rightly demanding more medical schools, physicians and health care, cuts in our programs will acutely reduce the *only* immediate source for new and replacement faculty members of basic science departments in medical schools.

I am concerned that the yearly decrease in buying power will actually mean a drop in support of 5 to 10 percent even with *no* increase in support of basic medical sciences. Many of the research programs have been completely cut while others are straining to maintain their research activities. But by 1970 I think this situation will become critical. With no money to do research and train graduate students, the country is going to suffer an unthinkable and deplorable "dry spell" of well-educated scientific personnel for as many years as the support is withdrawn. I don't think I need to elaborate on the effect, qualitatively and quantitatively, this would have on health related schools as well as research laboratories in health sciences.

I would like to briefly illustrate what the budgetary cuts have meant personally. In my laboratory which consists of two postdoctoral fellows, two graduate students and two research technicians, we are faced with the possibility of spending our allotted funds by the end of this year. Since the fiscal year of the grant begins June 1st, this will mean that my scientific personnel may be sitting on their hands for a half year; what a waste of scientific talent and manpower! We could slow our pace to make the money last until June. This means we would forcibly impede scientific progress which is hypocritical in our business.

I can assure you that members of our department and those of other basic science departments join me in the hope that you and your congressional colleagues will seriously consider the matters I have mentioned above. I hope you will work toward the strengthening of our national programs in the basic medical sciences.

Sincerely yours,
A. E. TAKEMORI, Ph. D.,
Professor of Pharmacology.

UNIVERSITY OF MINNESOTA,
DEPARTMENT OF PHARMACOLOGY,
Minneapolis, Minn., October 7, 1969.

Hon. WALTER MONDALE,
House of Representatives,
Washington, D.C.

DEAR MR. MONDALE: I hope that there is still time to put a stop to this administration's irresponsible cutting of NIH funds for support of the basic medical sciences. Not only are these cuts delaying progress in important research projects, but without exaggeration are threatening abolishing basic research altogether. We research workers must at this time attempt to make it very clear to our representatives in Washington that the situation is critical and the nation is rapidly digressing scientifically to the pre-Sputnik era. This de-emphasis of basic research will eventually have a profound effect on us and will severely harm the "health" of this nation. Only through research at the subcellular and cellular level in experimental animals have the important advances in medical sciences been achieved. I consider our current ability to deal with disease through use of drugs and other medical procedures as only fair to good; we stand to improve greatly upon our medical knowledge and know-how if only basic research is permitted to continue unabated. The current stress on producing greater numbers of physicians to deal with medical problems in the urban centers can only succeed if basic research is also strengthened concurrently. The President and his advisers must be made to understand that the current domestic budget cutting with essentially no decreased defense spending is a great mistake which has to be rectified.

In past years the budget cuts and austerity programs which we have experienced were only bothersome to me personally and to my research program, but presently, partly because of the inflation, I am finding it very difficult to continue my usual research effort. I am also aware of how the recent cuts have affected my colleagues and their work. The people hurt most of all are those young investigators who are freshly trained and most enthusiastic, but who unfortunately are receiving little or no financial support for their research. I implore you and your fellow senators and congressmen to make President Nixon see the light.

Sincerely yours,
BEN G. ZIMMERMAN, Ph. D.,
Associate Professor of Pharmacology.

UNIVERSITY OF MINNESOTA,
DEPARTMENT OF PEDIATRICS,
Minneapolis, Minn., September 16, 1969.

Senator WALTER MONDALE,
Senate Office Building,
Washington, D.C.

DEAR SENATOR MONDALE: The most recent in a series of drastic reductions in the budgets of the National Institutes of Health for the categories of extramural research grants reflects serious misinterpretations of the history of support for academic medicine. We would like this opportunity to present information to you and to request a reply which

jusifies the current programs while reflecting previous philosophies.

You are no doubt aware of the considerable escalation of efforts in bio-medical research since the middle 1950's. These were generously supported by funding from the NIH. Acknowledging the scientific merit of those efforts, let us consider the results of this era of enlightenment from the point of view of the mechanisms of medical education. During this period of time medical students have been exposed to a new science of medicine in which they became aware of the mechanism of the diseases confronting their patients. It has given them a sound basis upon which they can continue to build their knowledge throughout their practicing careers. For the first time in the history of medicine, logical rationale for applications of diagnostic techniques and therapeutic measures have been available. A "beginning" has been initiated. Only a fraction of practicing physicians is so fortunate as to have been so exposed. An urgent effort must still be initiated to bring this information to the groups of physicians not as fortunate. And what about the mechanisms for the continuation of the dissemination of this vast and extremely complex material? The basic structure for assuring continuing education within academic medicine has yet to be firmly established. Indeed the critical mass of academic medicine is threatened by the current and continuing financial squeeze which constricts and seriously limits medical research.

Now, in these contexts, we must urge you to recognize that the persons disseminating this information (the medical school faculties) are also actively engaged in research. First, *all* educators agree that the most effective teachers are those who have delved intensively into the mechanisms of disease.

Furthermore, support for research programs by academic personnel has never been adequate through any local sources. State funds are allocated solely for teaching and currently support only 17 percent of the faculty budget of the Department of Pediatrics of the University of Minnesota. Finances for the Bulk of the teaching efforts including such mundane matters as secretarial help, teaching materials and related patient care have come largely from research funds. Even the costs of such items as janitorial help and building maintenance are indirectly supported by research funds. In order to continue their patient care and teaching efforts, academic physicians have been very aggressive in justifying their funds for research by the excellence of their research productivity.

In addition, the same teachers and researchers have always taken on the additional burdens of the care of the medically indigent populations in this nation by whatever meager means were available. Many of these efforts have been centered within the structure of the large General Hospital systems, strongly supported by the University. They complained about the inadequacies of these means but who was there to listen or care? There was inadequate support at both the State and Federal level for teaching let alone the care of the poor! Documentation of the meager support of medical schools is readily available and widely disseminated but only rarely read by responsible persons with an eye to correcting the situation in a realistic or productive manner.

At a time when the shortage of medical personnel is most critical, the wherewithal to train physicians and allied personnel is being withdrawn. Please keep in mind the fact that one cannot discuss the support of the teachers without some assurance that their invaluable research efforts can continue. Who will be the new teachers in the expanded personnel training programs? It would be extremely unfortunate if one had to resort to justification of these programs by resorting to the logic of the Department fo Defense but so be it. Would one logically consider an order to produce a new weapons system without including the costs of its research development? It would be totally irrational and fruitless to pursue such an approach. How can we consider the case in the health field any less logical?

Please consider this letter as an inquiry. We appreciate your efforts, especially the recent struggle with the DOD, and the pressures of your work load, but plead for your indulgence and for your reply.

Thank you for your kind consideration.

Sincerely yours,

DAVID M. BROWN, M.D.,
Assistant Professor, Pediatrics and Laboratory Medicine.
ALFRED F. MICHAEL, M.D.,
Professor, Department of Pediatrics.
ROBERT L. VERNIER, M.D.,
Professor, Department of Pediatrics.

UNIVERSITY OF MINNESOTA, DEPARTMENT OF PHYSICAL MEDICINE AND REHABILITATION,
Minneapolis, Minn., October 3, 1969.

Hon. WALTER F. MONDALE,
U.S. Senate,
Senate Office Building, Washington, D.C.

DEAR SENATOR MONDALE: I am enclosing a copy of a letter which I have just received from Dr. James F. Garrett, Assistant Administrator for Research, Demonstrations and Training, Social and Rehabilitation Service, stating that our Regional Rehabilitation Research and Training Center grant has been decreased 5 per cent below the budget of last year as an anti-inflationary measure.

I am both appalled and confused by this announcement. I am confused because it was my understanding that Congress had maintained the budget for the Rehabilitation Service Administration and the Regional Rehabilitation Research and Training Centers as one area of endeavor which they wish to maintain. I would appreciate learning from you whether it was Congressional intent to economize in this type of activity.

I am further confused because I thought the emphasis in H.E.W. was to increase activity to meet the health manpower shortage—more training of physicians, therapists, nurses, vocational counselors, social workers, and others working with the sick and dependent. It was my understanding that the intent was to emphasize the neglected areas of health care which result in the greatest dependency costs; this means primarily chronic disease, with which we are concerned.

I am confused regarding the concept of this reduction as an anti-inflationary measure because in the past three years we have not had an increase in our budget. Consequently we have been in no position to promote extravagances. Rather each year we have had to retrench to handle the problem of the rising cost of living. Now, in addition to the retrenchment forced on us again this year by increasing costs, we have received a further 5 per cent reduction in the budget.

An increasingly larger proportion of this budget has been devoted to training of personnel in the health professions, particularly those concerned with chronic disease, because we have attempted to maintain the training programs in spite of the increasing costs at the expense of curtailing our research activities. Direct reduction of the budget will require curtailment of training programs as well as research. Is it the intent of Congress to offer bonuses for the expansion of training programs on the one hand and curtail support for established and efficient training programs on the other?

I am appalled at the economy move of cutting back on support of education and research in health care for chronic disease, which has been a much neglected field, at the same time that President Nixon is calling for the multibillion dollar support of a supersonic transport plane which does not appear to have practicality nor usefulness and even is proposed merely as an ego symbol for the United States. Maybe the more honest and bigger factor is that this would assure continuing production, high salaries and overtime work in the aeronautic and electronic industries and a fat profit at the end of the line. The incongruity of failure to maintain training in the health professions where there is an admitted acute need and the advocacy of a machine which is expensive and useless is indeed appalling.

Is there anything that can be done to reverse this administrative decision to cut back on our grant for the Regional Rehabilitation Research and Training Center?

I would appreciate any suggestions or help

Sincerely,

FREDERIC J. KOTTKE, M.D.,
Professor and Head, Department of Physical Medicine and Rehabilitation.

MAYO CLINIC,
Rochester, Minn., September 2, 1969.

Senator WALTER MONDALE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MONDALE: It has been called to my attention that restrictions in the forthcoming Federal Budget may result in a relative reduction of support for medical research and education from the National Institutes of Health and the National Science Foundation. My observations of medical practice and public health in the many foreign countries I have visited provides a sharp contrast to that in the United States and research is largely behind our continuing high level of medical services. Any retardation in the growth of the research and teaching activities pertaining to medicine will, I am certain, have serious consequences in the future. With increasing environmental contamination, medical scientists must find means of understanding the mechanism of action of many toxic agents and the soundest means of preventing ill effects. Similarly, a sizeable contribution to our medical problems by hereditary diseases can only be reduced if we understand their nature and mechanism. This has become possible in recent years in only a few areas but the pattern for understanding has been set.

It is my sincere hope that you and the members of the House and Senate Appropriations Committee will recognize the need for continuing the liberal support of our medical research programs which have been so effective through funding to the National Institutes of Health and the National Science Foundation. Certainly when one compares the benefits to the population of the numerous ways that the federal dollar can be spent, this is one that should need little justification, and one which has shown an outstanding return.

Sincerely,

LEONARD T. KURLAND, M.D.,
Professor of Epidemiology, Mayo Graduate School of Medicine and Head, Section of Medical Statistics, Epidemiology and Population Genetics.

MAYO CLINIC,
Rochester, Minn., September 12, 1969.

Hon. WALTER MONDALE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MONDALE: It has recently come to my attention that the neurosurgical programs of the nation are in danger of being curtailed when the House of Representatives passed the House Appropriations Bill for the fiscal year 1970.

Although the neurosurgical training program in the Mayo Graduate School of Medicine has not been subsidized by any NIH grant, many of the fine programs in this country are dependent on such training grants. I am sure it is unnecessary for me

to emphasize the necessity in training neurosurgeons, both for the academic world and for the practice of our specialty, particularly in view of the need for neurosurgeons to enter the academic environment of this time as well as to take care of the number of head injuries associated with the increasing accident rate on our nation's highways.

I therefore am speaking not only for myself but for the other training directors throughout the nation, and I hope that when the Senate acts on the bill in the next few weeks that the Senate will vote on the budget proposed by the Senate Committee and presented by Dr. David Daly and his colleagues.

Very truly yours,

COLLIN S. MACCARTY, M.D.,
Professor of Neurologic Surgery, Mayo Graduate School of Medicine; Chairman, Department of Neurologic Surgery, Mayo Clinic, Mayo Foundation.

VETERANS ADMINISTRATION HOSPITAL,
Minneapolis, Minn., August 29, 1969.

Hon. WALTER MONDALE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MONDALE: It has been brought to my attention—and to that of others concerned—that the budget of the National Cancer Institute for the fiscal year 1970 has been lowered from $184.4 million to $180.7 million. The curtailment of funds for research in the health fields (including cancer research) and the various sciences basic thereto that was initiated by the last Administration is a very serious matter that without a doubt will have deplorable consequences. If this trend is continued under the current Administration, many productive on-going programs in the medical field of which cancer research is a vital sector may have to be terminated and, what is worse, no new ones will be initiated because of lack of funds. If this situation is allowed to prevail, it will discourage or prevent young scientists with new and creative ideas from entering medical and cancer research. It is obvious that unless this trend is reversed the growth of the medical and allied sciences will be stunted and the sources, upon which the health and welfare of the American and other people ultimately depend, will dry up. It is clearly a short-sighted approach to national problems to neglect the support of the health sciences which benefit all people in favor of spectacular and extremely costly programs in space and defense whose immediate, as well as long-range, benefits are questionable and, certainly, debatable. It is the American people that eventually stand to lose the most from this unbalanced choice of priorities and appropriations. Accordingly, it is imperative that the legislators who, by the appropriation of funds, have the final responsibility for these vital matters are clearly aware of the serious situation that confronts American medical science and, particularly cancer research. In the light of this, I would urge you most seriously to intercede with the members of the Senate subcommittee that handles the appropriations for the National Cancer Institute to restore the cuts in the 1970 budget of the Institute.

Thank you for your consideration.

Sincerely yours,

H. R. GUTMANN,
Special Investigator, Cancer Research Lab., VA Hospital, and Professor of Biochemistry, University of Minnesota.

MAYO CLINIC,
Rochester, Minn., September 22, 1969.

Senator WALTER MONDALE,
Senate Office Building,
Washington, D.C.

DEAR SENATOR MONDALE: May I continue our "dialogue" regarding the question of the creation of a National Lung Institute within the National Institutes of Health.

It has just come to my attention that one of the appropriation bills passed by the House of Representatives included an appropriation for the National Heart Institute for the fiscal year 1970 in the amount of $160,513,000. The appropriation for the fiscal year 1969 had been $166,927,500. This is a decrease of $6,414,500. Obviously, if there is to be any increased work on lung diseases by the National Heart Institute, there will have to be a decrease in their attention to the problems of heart disease. This does not seem to be a solution to the problem. In contrast, the appropriation bill passed by the House included an appropriation of $23,685,000 for the newly created National Eye Institute. It seems to me that this is at least suggestive evidence that a specific categorical institute is more apt to be adequately financed for a service to the American public than will occur when it is assumed that a problem will be tackled by an established institute with a primary interest in other problems.

I realize that changes may very well be made in the appropriations by the Senate and hope that it will be possible to increase the funds allocated to the National Heart Institute with a specific portion being designated for the work on pulmonary disease which will have to be conducted by the National Heart Institute until such time as a more adequate provision is made for the work of the National Institutes of Health in the battle against pulmonary disease.

With kindest regards.

Sincerely yours,

DAVID T. CARR, M.D.

DIABETES DETECTION AND EDUCATION CENTER,
Minneapolis, Minn., October 3, 1969.

Hon. WALTER F. MONDALE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MONDALE: I am greatly concerned with the recent indiscriminate federal budget cuts, particularly as they deal in the areas of health and specifically in the field of delivery of care such as cuts in the Regional Medical Program and the Chronic Disease Programs. There are certainly serious major deficits in the delivery of health service to individuals throughout the entire country and the decision to indiscriminately cut these has apparently been done by people who are more concerned about budget rather than by individuals who are knowledgeable in the area of health and health care needs.

We are obviously concerned about the alterations on chronic diseases which are the leading causes of death in this country. In the field of diabetes, which now affects over 4.4 million individuals in the United States, vital programs have been eliminated which will result in loss of a great deal of information through cancellation of studies and through the loss of large numbers of very valuable, knowledgeable personnel. I am certain you, too, are concerned about these matters. I would like to express my hope for your continued legislative support of health and health care programs in this country.

Sincerely,

DONNELL D. ETZWILER, M.D.,
Project Director.

NATIONAL CYSTIC FIBROSIS RESEARCH FOUNDATION,
Excelsior, Minn., October 7, 1969.

Hon. WALTER F. MONDALE,
Senate of the United States,
Senate Office Building,
Washington, D.C.

DEAR SENATOR MONDALE: It has come to my attention that the House of Representatives, on July 31st, voted the appropriation for Fiscal Year 1970 for the National Institute of Arthritis and Metabolic Diseases which includes the funds for cystic fibrosis programs. It cut the overall institute figure by $6,220,000—lowering it from the 1969 level of $143,888,000 to $137,668,000.

The recommendation for the appropriation by the voluntary health organizations involved was for $154,839,000. Medical authorities concerned with programs of arthritis, diabetes, kidney disease, and cystic fibrosis recommended this figure as the necessary amount to continue programs for which the institute is responsible.

Our Minnesota Chapter of the National Cystic Fibrosis Research Foundation is asking you to speak on our behalf to the members of the Subcommittee on Appropriations (chairman, Senator Warren Magnuson) before the Senate acts on the bill within a few weeks. We urge the adoption of the budget of $154,839,000.

The support we receive from the institute is the lifeblood of our basic research and training programs and, our medical department tells us, the answers to the puzzling disease of cystic fibrosis are just around the corner. To cut back now would be tragic for all of us. Please do what you can to insure a continuing program.

Yours very truly,

Mrs. WALTER G. BURRY,
National Trustee, Region Ten and Minnesota Chapter Board Member.

UNIVERSITY OF MINNESOTA,
THE HORMEL INSTITUTE,
Austin, Minn., September 19, 1969.

Senator WALTER F. MONDALE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MONDALE: This letter is being written in the interest of an important nationwide need. I know that you are constantly giving support and have initiated congressional actions that will best serve the needs and interests of this country (and mankind generally), including action on behalf of the health and welfare of the nation's people. However, some of the reductions in Federal spending have been especially damaging to some of the more important federally-supported programs, and one of these, among others, with which I am concerned at the moment is the reduction in Federal support for scientific research relating to the health of American people.

Specifically, the reduction in Federal support for scientific research conducted or administered by the National Institutes of Health has produced some serious adverse results.

At first glance, it might appear that the reduction in support for the National Institutes of Health would affect research programs adversely merely in proportion to the reduction in the amount of support. Actually, the adverse effects are much greater. It has been necessary to curtail many research programs that were nearing fruition in relation to benefiting the health of American people, with a concomitant waste of money and the time of research scientists that had already been expended. Although one cannot deny that it is desirable to effect economies in Federal expenditures whenever it is possible to do so without damaging results, the shortsighted manner in which Federal expenditures have been reduced in endeavors that are of great importance to the present and future health of the American people is little short of calamitous.

In addition to the adverse effects to which I have already alluded, there are a number of others, such as the disenchantment and loss of morale among scientists and technicians who are dedicated to solving problems of health. Because of this, the reduced research productivity will continue for an appreciable time beyond the point when Federal support of research in health-related problems is restored to previous levels, or even higher levels (taking into account the inflationary spiral which affects research costs as well as all other productive activities).

I hope that you will not only continue your supporting efforts to reinstate previous Federal expenditures for measures pertaining to the public health and welfare, but also that you will initiate legislation pertaining specifically to increased support for research programs of the National Institutes of Health. You may count on full support for any efforts that you make in this direction from thousands of scientists and technicians throughout the nation.

Kindest personal regards and best wishes.

Sincerely yours,

W. O. LUNDBERG,
Director.

ALCOHOLISM: A DRAIN ON THE COMMUNITY

Mr. WILLIAMS of New Jersey. Mr. President, the distinguished former Governor of New Jersey, Robert B. Meyner, has issued a statement which forcefully calls to our attention the need for action to combat one of the most serious illnesses in America: alcoholism. Mr. Meyner notes that this sickness, afflicting 220,000 persons in New Jersey alone, sharply reduces life expectancy and has a disastrous effect on family life. Alcoholism accounts for one of every three arrests in the United States and costs American business at least $4.3 billion annually.

Thanks to Bob Meyner's initiative during his gubernatorial term, New Jersey has a model program of alcoholism treatment centers connected with community hospitals. In his statement of October 11, entitled "Alcoholism: A Drain on the Community," he calls for detoxification centers to stop what he correctly describes as "the revolving-door cycle of drunk tank and jail which produces such a financial and manpower drain on our courts and police departments and serves no rehabilitative or preventive function." In addition, he proposes a comprehensive State educational and treatment program on alcoholism, utilizing State medical, psychiatric, and educational institutions.

These humane proposals for a war on alcoholism, reflecting an advanced understanding of the causes and proper treatment of this widespread illness, merit serious attention because of Robert Meyner's record of effective service to his State.

Mr. President, I ask unanimous consent that the statement be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

[From the Meyner program paper No. 17, Oct. 11, 1969]

ALCOHOLISM: A DRAIN ON THE COMMUNITY

More than 220,000 New Jersey residents are afflicted with a disease which destroys careers, ruins family life, shatters personalities, and kills: alcoholism.

Contrary to the stereotype, the "average" alcoholic is *not* a Skid Row derelict. He is far more likely to be an established member of the community, typically between the ages of 30 and 55 and therefore at the peak of his productive powers. The great majority of alcoholics reside in respectable neighborhoods, live with their husbands or wives, earn a livelihood, pay taxes, attend church and try to send their children to college.

However, the health, social and economic losses due to alcoholism are enormous. Alcoholism is a major cause of death in America. The life expectancy of the alcoholic is estimated to be 10 to 12 years below the average. The alcoholic is seven times as likely to die in an accident as the average man and three times as likely to die of any other cause. The alcoholic on the highway means tragedy for others as well as for himself.

Given the alcoholic's typical age and employment record, this disease does enormous harm to our economy. The National Council on Alcoholism estimates that alcoholism costs American business at least $4.3 billion a year in lost manpower, inefficiency, replacements, fringe benefits, and lost investment in training. No price tage can be placed on lowered morale, damaged public relations, and unsound managerial decisions traceable to alcoholism.

One of every three arrests in America is for the offense of public drunkenness. A very large percentage of these arrests involve alcoholics. The great volume of these arrests places an extremely heavy load on the operations of the criminal system. It burdens police, clogs lower criminal courts and crowds penal institutions.

The present financial cost of dealing with alcoholics in the system of criminal justice is enormous. Effective measures to deal with alcoholism as a health and rehabilitation problem would free many police and judges to deal more effectively with crimes and other disorders and could in the long run save tax dollars.

Aside from the measurable effects of alcoholism on health, on our economy, and on the effectiveness of our law enforcement, there is the unmeasurable effect of this disease on human well-being. Typically, each alcoholic directly affects the lives of five other people. The destruction of family life is often disastrous, with the alcoholism of the parent leaving a crippling imprint upon the spouse and children.

A successful response to the problems of alcoholism requires the concern and cooperation of all levels of government and civic and private groups, such as Alcoholics Anonymous. If elected, I intend dramatically to expand State efforts to provide the coordination, staff and facilities necessary to deal more effectively with this debilitating disease. I propose an eight point program.

1. *Alcoholism Treatment Centers.* During my administration, outpatient treatment centers for alcoholics were established in six community hospitals. Since that time, three additional units have been created. These clinics are meant to serve as a primary community treatment resource. Working closely with Alcoholics Anonymous and other private and public groups, they are charged with the responsibility of providing medical and counseling help for the alcoholic and his family and information and referral services for the entire community.

I intend substantially to expand these centers to ensure a more vigorous, effective and extensive effort to combat alcoholism.

Substantially increased resources are necessary to permit more patients and family members to be seen, to provide follow-up services, to permit more adequate response to emergency situation, and to make possible a reaching out into the community.

I intend also to establish new centers. The nine alcoholism clinics currently in operation in New Jersey are well distributed geographically, but there are areas of the State which remain unserved. The establishment of clinic facilities in these areas, to be housed in existing community facilities, would put a specialized alcoholism resource within reasonable distance of nearly every New Jersey resident.

2. *Emergency Medical Attention.* Too many acutely sick alcoholics die in jail without medical help. We must take steps immediately in cooperation with counties and municipalities to ensure that, where appropriate, jails have several beds and a doctor on call 24 hours a day for the treatment of acutely sick individuals.

3. *Halfway Houses.* The President's Crime Commission has recognized that homeless alcoholics cannot be treated without supportive residential housing, which can be used as a base from which to reintegrate them into society. I propose to establish a series of halfway houses to serve this function. For some men this transitional facility would bridge the gap between in-patient institutional care and independent living in the community. Others would come directly to the half-way houses from the community. For many, the availability of such a resource would make costly institutionalization unnecessary. These facilities would work closely with Alcoholics Anonymous and other health and welfare agencies in the State.

4. *Detoxification Centers.* We must consider the establishment of detoxification centers in major urban areas. These would be centrally located medical-rehabilitation units serving as a first-line resource for persons in an acutely intoxicated condition. The detoxification center would replace the police station as an initial detention unit for many public inebriates and would provide an enlightened alternative to the revolving-door cycle of drunk tank and jail which produces such a financial and manpower drain on our courts and police departments and serves no rehabilitative or preventive function. These centers would provide initial intensive medical care during the "drying out" period and then other appropriate counseling and rehabilitation services including referral to community services prior to release of the patient.

Detoxification units would be located and operated in conjunction with a community general hospital, a municipal or county hospital, or as a separate facility, depending upon local circumstances. Many of the patients would be brought to the unit by the local police, but some would be referred by other community agencies and some on a self-referral basis. The operation of the Center would be closely coordinated with all existing health and welfare agencies in the area.

5. *A Comprehensive Program at the Martland Hospital Unit of the New Jersey College of Medicine and Dentistry.* I intend to establish a comprehensive alcoholism program at the New Jersey College of Medicine and Dentistry. This program will include not only in-patient and out-patient care but will provide special training of medical students who can bring the results of this training to other facilities throughout the State.

6. *Alcoholism Ward for Women at the Neuro-Psychiatric Institute.* The Department of Institutions and Agencies presently operates an intensive care in-patient program for male alcoholics at the Neuro-Psychiatric Institute near Princeton. There is no reason why this program should continue to be limited to male patients. More than one fourth of all alcoholics are women. My administration will supply the additional facilities and staff necessary to expand this unit to provide treatment for female alcoholics.

7. *Information, Evaluation & Education on Alcoholism.* The Center of Alcohol Studies at Rutgers is the Nation's foremost institute of alcohol studies. New Jersey must make greater use of this important asset for the development of more effective systems of reporting on the nature and extent of these problems, for continuing, objective evaluation of programs for rehabilitation, control and prevention, and for the training of professionals and lay citizens in teaching, therapy, counseling, and community organization and education. If elected, I will seek an expanded scholarship program for such training and will suport increased state assistance to further the expansion and development of local Councils on Alcoholism which play

a vital role in community education and action.

8. *Problem Drinking in Business and Industry.* In view of the alarming costs of problem drinking and alcoholism in business and industry, I will propose establishment of a high level task force, involving labor, management, the Rutger Center and appropriate government representatives to initiate a comprehensive and major attack upon this largely unnecessary and preventable drain upon the manpower resources of the State.

While the program I have described represents a major step forward, it is really a beginning of what we must do to cope effectively with this debilitating disease. We must ultimately ensure that adequate treatment is available for alcoholics at hospitals throughout the State.

The terrible economic, social and human toll of alcoholism in New Jersey can and must be reduced. A state administration sensitive to the problem can make great studies in that direction. I intend to conduct that type of administration.

INTERNATIONAL DAY OF BREAD OBSERVED IN THE UNITED STATES

Mr. DOLE. Mr. President, in accordance with a resolution of Congress, today has been proclaimed the "Day of Bread" my President Nixon. This day has been reserved to pay special tribute to the great benefits our way of life receives from wheat and the products and industries associated with it.

We Americans are the best nourished people in the world, and our high nutritional standards are in no small measure due to the great abundance and appeal of wheat-based food.

From that day when man first discovered tiny heads of edible grain in wild grasses, to the day he learned to cultivate the grain and then develop a variety of strains for different food purposes, wheat has played an increasingly important role.

Fields of the ripe, golden grain represent a way of life for the almost one billion consumers as well as the growers.

The Day of Bread in the United States is part of an international Day of Bread and Harvest Festival Week in observance of the economic, cultural, and nutritional importance of bread in the lives of people in every part of the world.

Wheat, the raw material of bread, provides more nourishment for more people than any other staple. Kansans are proud of their longstanding role as providers of wheat for the needs of America and the entire world.

I urge Senators to join with me in recognizing wheat and its importance to the people of the world.

SENATOR ELLENDER'S SERVICE CITED

Mr. TALMADGE. Mr. President, one of the most respected newsmen in the Nation's Capital is Edgar Allen Poe, who has represented the New Orleans Times-Picayune here for many years. He is one of the most senior correspondents in Washington. He writes with balance and insight and is a credit to New Orleans and the entire South.

Recently, Mr. Poe devoted a column to the outstanding service to the Nation of our colleague Senator ALLEN J. ELLENDER. I agree with much of what he has written concerning Senator ELLENDER and believe that this body is indeed fortunate to have the services of Louisiana's senior Senator.

I ask unanimous consent that the "Capital Panorama" column written by Mr. Poe and published in the New Orleans Times-Picayune of October 19 be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CAPITAL PANORAMA: SENATOR'S SERVICE TO NATION CITED

(By Edgar Poe)

WASHINGTON.—Sen. Allen J. Ellender, who came to the Senate in 1937 after serving as speaker of the Louisiana House of Representatives in the Huey P. Long era, has served longer in the Senate than any of his colleagues except ailing Sen. Richard A. Russell of Georgia.

Furthermore, Sen. Ellender, who is in good health at the age of 79, and is as active now as the day he first came to Washington to take office, does not have any intention at this time to step aside when his present term expires in 1972.

"I want to continue to serve the people of my state and country as long as the people of Louisiana will permit me to do so, and as long as I am capable," he said a few days ago at his office.

The Louisianian, who has made extensive tours abroad, including five trips to the Soviet Union, reiterated that there can be no world peace until the suspicion of fear between the United States and Russia is dispelled.

To point up Ellender's philosophy concerning our foreign policy and the Soviet Union, Sen. George McGovern, D.-S.D., said recently in a statement inserted in the Congressional Record:

"Sen. Ellender believes that much of our difficulty with the Soviet Union stems from the failure on our part to understand their legitimate fears of a rearmed Germany, the NATO bloc, and the ring of military bases with which we have surrounded Russia for the past 20 years."

HAS ADMIRATION

Sen. McGovern, a Democratic presidential aspirant in 1968, described the Louisianian as "one of the most remarkable and indeed one of the wisest men to serve in the Senate . . . Sen. Ellender and I have some differences of opinion in certain areas, but I have come to have a profound admiration for many of his perceptions and insights in the all-important field of American foreign policy and national security."

The South Dakotan said he is "tremendously impressed with his (Ellender's) early, acute perception of the weaknesses and dangers in our foreign policy, especially in our relationships to the Soviet Union and Southeast Asia. As early as 1955, Sen. Ellender saw clearly the self-defeating nature of much of the cold war rhetoric and policy involving the Soviet Union." Continuing, McGovern said:

"As he put it in one of his early (travel) reports to the Senate: 'It seems to me we have as much to fear from ignorance, prejudice, selfishness and bias in our own nation as we have from a similar condition on the part of the Russian leadership.'"

McGovern in pointing to Ellender's visit to Vietnam in 1956, and his observations in a report submitted to the Senate, said the war in Vietnam is perhaps the most regrettable overseas involvement in our national history.

VIEWS PULLOUT

In Sen. Ellender's report of his trip to Vietnam, the Lousianian said, among other things, that in Saigon that year, there were many dissidents who did not like President Diem's tactics. Ellender reported that boiling discontent threatened to erupt at any moment. He added:

"Some feel that we should send American troops here. I would not do so under any circumstances."

Reflecting on the report, Sen. Ellender now says that the United States cannot afford to arbitrarily pull out of South Vietnam.

"We simply cannot wash out of Vietnam all of the blood of our men that has been spilled there," he said. "It would greatly affect our future in Southeast Asia. I have only one criticism, once we got so deeply involved, and that is we should have gone all-out to win the war from the very beginning. The fear of China becoming involved kept us from going all out. The situation that developed was made to order for the Chinese."

CELEBRATION OF JAPANESE CENTENNIAL

Mr. HATFIELD. Mr. President, this year marks the 100th anniversary of the first immigration to this country of persons of Japanese ancestry. This group has made outstanding contributions to America's progress since their arrival here. In Oregon, we have been fortunate to have such individuals as Ray T. Yasui serving on the Hood River Board of Education and Roy Hirai serving on the State's potato commission.

It is with contributions such as these in mind that I ask unanimous consent to have printed in the RECORD a brief history of the Japanese in Hood River, Oreg., as we celebrate the centennial anniversary of the first Japanese immigration to the United States.

There being no objection the history was ordered to be printed in the RECORD as follows:

A BRIEF HISTORY OF THE JAPANESE IN HOOD RIVER, OREG.

One hundred years ago the first Japanese immigrants came to the United States and settled what is now called the "Wakamatsu Colony" in California. The colony did not prosper as some of the settlers died and others, discouraged, returned to their homeland. The failure of this group kept immigration from Japan at a relatively low level for decades to come.

By the 1890's a handful of hardy pioneers were again headed for our shores leaving the hardships they faced at home for unknown opportunities. Thus did the first Japanese come to Hood River valley.

They came, a few at first then hundreds strong, to a strange land where people spoke a strange tongue, to seek work and build new lives. They stayed on to learn the work of the sawmills and railroads and helped to clear land of timber and brush.

They worked and saved and by about 1910 a few of the 7–800 then working here had enough to buy some land of their own. Working from dawn to dusk they cleared and planted the land to fruit trees and strawberries.

After many lonesome years some went to Japan to find wives while others got "mail order picture brides". But all settled down here, in the land of their choice, to raise their families.

As the years rolled by, anti-oriental sentiment increased until in 1924 Congress passed the Oriental Exclusion Act and many states followed this act with an Alien Land Law that prevented immigrants that could not gain citizenship from owning land.

To circumvent this unfair law, which was in recent years declared unconstitutional,

many bought land in the names of their minor sons and daughters.

They continued to work and save and buy land until they owned more than a thousand acres of farmland at the onset of World War II. The beginning of the war brought on a strong wave of anti-Japanese sentiment and in May 1942 the Japanese were forced to evacuate to detention camps, leaving behind their hard won lands, some never to return.

Of the over 500 Japanese that lived in Hood River valley prior to World War II, barely half returned after the war. Those that had previously leased their farms or had them partially paid for did not, in most cases, return. They scattered across the country and started life anew.

In 1952 Congress passed the Walter-McCarran Act. One of its provisions granted the right of citizenship to orientals for the first time since 1924. The issei, first generation Japanese immigrants, who had helped build this land and sent their sons off to fight for it, flocked to the Immigration offices and applied for their United States citizenship which had so long been denied them.

Today there are some 400 Japanese in the valley, but only a few of the pioneer immigrants still live, the youngest in their seventies and the oldest in the nineties. Their children and grandchildren carry on and now own and operate over 2500 acres of orchard or nearly 20 per cent of all orchard land in the valley.

They are rightfully proud of their achievements, but they are prouder still of their sons and daughters to whom they stressed, over and over, the importance of an education. They count amongst their children, doctors, lawyers, engineers, scientists, teachers, nurses and dentists. This to them is their biggest contribution to America, the land of their choice.

RURAL PRESS PERFORMS A SERVICE

Mr. BURDICK. Mr. President, long before the revulsion at worldwide tyranny prompted our development of the atomic bomb; long before the challenging beeps of the Russian Sputnik prodded us to place the first man on the moon; and long before the threat of an immense population explosion cast an awesome specter of famine across the world, America had a fundamental concept of government that has been providential to say the least. It can be stated as simply as, "only an informed republic is a strong republic." Our freedom of speech and freedom of the press are necessary corollaries to this concept. They have permitted our citizens to raise the alarm; they have permitted our government to respond to crisis.

In many ways, the promise of these United States has been fulfilled. As a nation of free men, we have grown and prospered beyond our founders' greatest dreams. High among our great accomplishments is the development of our agricultural science. As a matter of fact, it has been reported that before a hungry world, agriculture is our greatest success story.

For what, gentlemen, is more basic to national existence than food? As if heeding the Biblical admonition, we have built our granaries large and strong and filled them in our bountiful years. The essential building block in our national granary is research without which we could not have provided our present population of 200 million, nor the projected 300 million by the year 2000.

We have achieved a $50 billion agricultural industry because the Congress of the United States has made possible from the early days of this Nation an inexpensive means of encouraging the flow of scientific and technical farm data from the laboratory to the land. This is the secret of our success. The lack of this service in many foreign nations has contributed to the underdevelopment of their agricultural economies, and the high cost of food to their citizens.

Do we need more proof? The average American citizen spends a lower percent of his disposable income for food and fiber than any other person residing in foreign countries. We, in America, spend 16½ percent of our disposable income for food; in England it amounts to 26 percent; in France 31 percent; in Italy 35 percent; and in Russia 45 percent. In the very underdeveloped nations of the world, families must spend their entire income, often meager and inadequate, just to keep body and soul together.

Agricultural productivity in America, according to the U.S. Department of Agriculture is rising twice as fast that of industrial productivity. As such, it is a major deterrent to inflation. Our American farmers are producing over 20 percent more produce on 6 percent fewer acres than in 1957–59. In 1968, our American farms exported $6.3 billions in produce abroad. This included $4.7 billion commercial sales and $1.6 billion in food aid. It is estimated that our farm exports earned more than $5 billion worth of dollar exchange for that same year.

It seems to me that we can ill afford to permit farmers income to remain about one-half that of a skilled industrial worker, nor in a broader sense can we afford the great migration of our rural citizens to the cities. The day is coming when we shall need every farm and every skilled farmworker we can possibly assemble. Can we afford to lose 421,000 persons annually, which is the reported net decline in farm population between April 1967 and April 1968? I believe one of the major problems facing this Nation is to provide incentives to keep our people on the farms, pursuing their skills with the great knowledge and advice this Nation is able to provide. Above all, our farmers must share fully in our prosperity.

The U.S. Department of Agriculture has estimated that had farm prices kept pace with food prices for the 20-year period preceding 1966, the American people would have spent $104 billion for food in 1966 instead of $91 billion. Here is a real measure of farm productivity: The American consumer saved $13 billion in 1 year.

Earlier this year the U.S. Department of Agriculture stated that without many of the pesticides, herbicides, and fertilizers which we are presently using, we could scarcely provide adequate quantities of food and fibers on our current acreages for more than 40 percent of our population. Both the editorial and advertising content of farm magazines have supplied this technical information.

I could cite many more examples of our farming successes but I believe I have alluded to a sufficient number to relate the progress to the services of our agricultural magazine.

We must never fault the farmer for his abundance. We may be pleading for it in a few, short years. We should work on the farmer's behalf for greater rewards for the service he is rendering this Nation. Out across the Prairie States, the farmer, in survey after survey, has designated the farm magazine as a principal source of technical information. I believe we run a serious risk in this Nation if we take any action which will tend to impair the role of the farm magazine in our agricultural economy.

I am sure Senators are well aware that the circulation of these publications has declined by approximately 30 million copies a year since 1956. This is attributed, in part, to the decline of rural population and also, I am convinced, to rising costs of publication. The farmer and his family can ill afford rising costs for the elements that go into his production of food and fiber.

My late father, Representative Usher L. Burdick, served as a Member of the House of Representatives for many years. I have been told how he supported the farm papers and would on occasion carry copies of farm magazines onto the floor of the House, praise their value, and acknowledge their great source of vital information. I was brought up in the great farming State of North Dakota on the principle that reading was indispensable, and I can speak firsthand about the great scientific knowledge made available to the constituents of my State in our local and farm papers. Every piece of farm information from the weather to the latest farm technology is needed where agriculture is the backbone of a State such as mine.

As a member of the Committee on Post Office and Civil Service, I supported the action of the House in 1967 when it granted certain exemptions on advertising content to agricultural magazines in the first and second postal zones. As must have been recognized, the facts indicated that we had gone too far in the unequal adjustments on the pound advertising rates in these zones. Now, as I understand it, the administration's proposal of a three-tenths cent surcharge on copies of second class mail will completely wipe out the concession granted these publications in 1967. The new proposal already exempts within-county circulation. I urge a further exemption for magazines devoted to the building of our agricultural science.

Since farm magazines comprise about 1 percent of total second class mail volume and only one-tenth of 1 percent of the overall mail volume, I believe we should give very careful attention to their continued service to the farm people of the United States and take great precaution that they shall not be put out of business.

As we are faced with a world population explosion estimated to reach 6 billion persons by the year 2000, and a domestic explosion estimated to reach 300 million in the United States at the same time, Congress should carefully examine the vital role of the agricultural maga-

zine. I believe that our research barely stands on the threshold of domestic and worldwide production requirements.

Our backlog of sciences is dwindling, we are told. There are some that believe we are using it up faster than we are developing it. We dare not foresake the role of research in this vital industry, and more importantly, we should not impair its flow to the land.

Finally, I believe Senators will agree that there is great precedent in American history for the exemption I have proposed here today, I am informed that early in the 19th century postmasters were permitted to enclose money for agricultural magazine subscriptions, free of postage. Our forefathers recognized the need, and a vital publishing industry was nurtured in an environment of rural free delivery, free-in-county, low within-county rates and a combined editorial and advertising rate of 1.5 cents per pound for many years. If there is one factor that has contributed to the greatness of our agricultural industry, I believe it has been the wisdom of Congress in recognizing the value of these publications, and making their wide availability possible.

In 1879, the Congress established the second-class category, which provided among other things, that the publication "is originated and published for the dissemination of information of a public character, or devoted to literature, the sciences, arts, or a special industry"; agricultural publications have most certainly fulfilled their obligation in response to this privilege.

There has been much discussion in recent months about taking the U.S. Post Office Department out of the Cabinet and making it a government corporation. I support the best possible mail service, but at the same time I want to preserve its public service role. I would oppose changes in the postal system without strong evidence that there would be no reduction in service or unwarranted increase in costs, particularly in rural areas.

Public Law 87–793, the Postal Service and Federal Employees Salary Act of 1962, provides that 10 percent of the gross cost of operation of third-class post offices and the star route system and 20 percent of the gross cost of the operation of fourth-class post offices and rural routes shall be set aside as public services. This is in the national as well as the rural interest. Whatever form our postal operations take, I urge that rural delivery be protected, even if we must expand the present public service categories to benefit all rural mail. This, of course, would include the farm magazines.

Farm magazines have helped to build an industry second to none in the world. Let us recognize their service. Let us encourage their continued usefulness. Let us grant them these concessions before it is too late.

SOCIAL SECURITY BENEFITS FOR NONRETIREES

Mr. WILLIAMS of New Jersey. Mr. President, Congress is entering into a new phase in its examination of social security. The time has come for careful analysis of the system—its benefits, its costs, and its potential impact in the lives of millions of Americans.

Part of this careful, detailed study of social security must be a reintroduction to the features of the system that are sometimes overlooked. We cannot amend and improve social security until and unless we know, completely and without confusion, just what the system now contains.

To help clear up the record on social security, U.S. News & World Report for September 29, 1969, recently published a summary of benefits to those other than retirees. Under the general editorial heading "News You Can Use in Your Personal Planning," the article makes a timely addition to our dialog on social security.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEWS YOU CAN USE IN YOUR PERSONAL PLANNING

A widely overlooked fact about Social Security is that it not only provides income at retirement, but also gives family protection at all ages.

Social Security. Of 25 million Americans receiving cash payments under the system, 1 out of 4 is under age 60 and 1 out of 8 under 18.

Through Social Security contributions now, a young worker is building up insurance for his family that could pay off as much as $100,000 in benefits if he should become disabled or die before his children are grown.

Payments to young. Here are some types of benefit that are payable under Social Security before retirement age:

Three million young widows and children are receiving benefits based on earnings of deceased workers. The average is $245 a month, the maximum $434.

About 1.3 million disabled workers under 65, and 1 million dependents, are getting payments averaging $235 a month. The maximum is $434.

Some 500,000 students who are children of deceased, disabled or retired workers will receive 490 million dollars in benefits this year. These are young people who would have had payments cut off at age 18 but can continue to get them until age 22 as students. The average is nearly $1,000 a year.

Overlooked changes. Although monthly Social Security benefits have been paid for the past 29 years, many people still are unaware of changes that provide payments in early and middle years. For example, a worker disabled before age 24 needs only a year and a half of covered employment in the preceding three years to qualify. Children of a working mother who dies or becomes disabled are eligible for payments no matter how much the father earns.

Guide available. Young people can find out how the system affects them from a booklet available from any Social Security office. The title is "Social Security for Young Families," 35–B. It is free.

PUBLIC HOUSING UNITS FOR SPRINGFIELD, ILL.

Mr. PERCY. Mr. President, since the late 1930's, our public housing program has been considered the traditional vehicle for providing housing for families with insufficient income to afford to rent on the private market. The main advantage of this program is that since the Federal Government contributes a portion of the operating costs of public housing projects, the rentals for space in the projects may be set at a low price. Thus, families with even very low incomes are able to live in public housing projects.

In my home State of Illinois, a grant was recently approved by the Department of Housing and Urban Development which will provide for the immediate construction of 76 regular family public housing units. The prospect of a decent living environment is now a reality to many Springfield residents who were previously confined to a less desirable place. It was deeply gratifying for me to read a letter from Mayor Howarth of Springfield, Ill., expressing his appreciation for the grant. I ask unanimous consent that his letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

CITY OF SPRINGFIELD, ILL.,
October 3, 1969.

Re: 76 General Public Housing Units for Springfield, Illinois, HUD No. Ill–4–5, $1,560,426.

Hon. CHARLES PERCY,
U.S. Senator,
Washington, D.C.

DEAR SENATOR: Please convey to your colleagues and to the personnel of HUD, and your associates, the deep appreciation of the Springfield community for the prompt and efficient approval of the above project resulting in prompt construction of 76 units of regular family public housing under the turnkey method, with 3, 4, and 5 bedroom apartments in 38 units.

This represents the first new general public housing units in Springfield in 30 years, and is the best news I have received during my 11 years as Mayor.

Springfield is not a poor community. It is a prosperous, wealthy Capital of the State of Illinois, with less than the average number of so-called "slum areas" for a community of our size. Yet, a recent survey, published last May by the Springfield Chapter League of Women Voters, states that the median family income in our City is only $6,523 per year. This median is acquired by including the 26 per cent of all Springfield families who earn less than $5,000.00 per year.

Applying a rule of thumb adopted by the banking fraternity limiting one to the purchase of a house costing no more than 2½ times his annual earnings, the report finds that the "average" Springfield family is not financially able to purchase and maintain a house costing more than $16,500; and thus, the League concludes that if Springfield builders and developers had constructed homes selling in the bracket of $15,000–$16,000—an additional 33 per cent of the community would be in the market to purchase a home; but, the League reports that the records show in the decade 1958–1968, 56 Springfield subdivisions with a total of 5,312 homes have been developed for residential purposes; but only 2 subdivisions containing some 70 lots even contemplate homes in this price bracket, *and in the 10 year period only 2 new homes in that price range have been built in all of Springfield.*

Thus, with our expanding population, and with no new public housing, it is most apparent that families in our bottom income brackets, have been forced into inadequate improper ghetto-type buildings; and of course, as we comply with the Federal workable programs, and strictly enforce proper

housing codes we drive these families from pillar to port, sharpening their frustrations and planting the seeds of violence.

As the League of Women Voters reminded us in the aforesaid report:

"The importance of housing cannot be overemphasized. To the individual, housing is important because it affects his health, his well-being, and his ability to function effectively in society. To the community and to society, it is important because the area in which there is the most deteriorated, dilapidated, over-crowded and is sub-standard housing coincides with the areas of the greatest crime, disease, and discontent".

Thus, duplex style public housing for the larger families are absolutely essential in America and the turnkey method makes it profitable for private industry to seek out the land, develop and construct the building.

Very truly yours,

NELSON HOWARTH,
Mayor.

IMPORTANCE OF ARMS LIMITATION NEGOTIATIONS

Mr. MONDALE. Mr. President, the distinguished junior Senator from Maine (Mr. MUSKIE) made a thoughtful speech last week in New York on the importance of arms limitation negotiations. To promote the likelihood of this objective, Senator MUSKIE urged a moratorium on American development of the multiple independently targetable vehicles, the so-called MIRV's.

Senator MUSKIE's proposal is a constructive addition to the national dialog about the ways to achieve peace, at home and around the world. I commend Senator MUSKIE's remarks to the Senate and ask unanimous consent that they be printed in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR EDMUND S. MUSKIE

In paying tribute to Meyer Weisgal and the Weizmann Institute, we are honoring the spirit of Israel: courage in the face of danger, tenacity under continuing pressure, and humanitarian concern in spite of the demands of war.

Israel is more than a patch of real estate in the Middle East. It is a dream come true and a challenge to all those who believe in freedom and the rights of man. It deserves our continuing support in the preservation of its freedom and independence.

In one of his last speeches at the first session of Knesset in Jerusalem in February, 1949, Dr. Chaim Weizmann said:

"Let us build a new bridge between science and the spirit of man. Where there is no vision the people perish. We have seen what science leads to when it is not inspired by moral vision . . . All my life I have tried to make science and research the basis of our national endeavor, but I have always known fully well that there are values higher than science. The only values that offer healing for the ills of humanity are the supreme values of justice and righteousness, peace and love."

The Institute which bears Dr. Weizmann's name is a testament to his wisdom and vision. Amidst a virtually continuous period of war and near war, the Institute has devoted its energies and resources to the betterment of life for all mankind. Yet, while the Institute applies science to improve the human condition, too much of the world seems preoccupied with harnessing technology to develop newer and more destructive weapons.

Since the end of World War II the United State and the Soviet Union have engaged in competition to develop more powerful armaments.

No one questions that—under present circumstances—military power is an essential part of our security system; but there is a point where preoccupation with purely military strength may diminish rather than increase our security. I believe we are at that point.

We are already involved in a new cycle of an ever more costly and perilous competition for nuclear superiority. At the same time, we and the Soviet Union have within our grasp a way to restrain this competition and to reassert a saner ordering of our national priorities.

We rationalized development of a MIRV system as a response to a limited Soviet ABM system and its possible expansion. The Soviets, in turn, started development of a MIRV system to insure parity in intercontinental missile systems for themselves. We moved to develop an ABM system in response to the Soviet moves to develop and deploy MIRVs. And so the arms race continues, unrelated to the real security of either nation.

While the development of MIRV will not alter the strategic stalemate between the Soviet Union and the United States, it can make it less and less possible to reach a nuclear arms control agreement.

At the present time, we and the Soviet Union can, through our own surveillance systems, tell with great accuracy the number of missile launchers the other has in place. But we cannot detect the number of warheads fitted inside a single missile. Thus, if MIRV missiles—with their multiple warheads—are deployed, it will be virtually impossible to achieve genuine arms control arrangement without detailed on-site inspection rights.

If we can achieve a ban on testing and deployment of such multiple reentry missiles, both nations, on their own, could police the testing of such missiles. Halting the final testing of such missiles is, therefore, crucial to reaching a self-enforcing agreement with the Soviets to bar their deployment.

Early last summer Senator Brooke, supported by myself and forty other Senators, proposed that a mutual moratorium on MIRV testing and deployment be negotiated with the Soviets as soon as possible. At the time of the Brooke proposal, it appeared that after a series of delays by both powers, the Soviets and the United States were about ready to commence such talks. The talks have not begun, and no dates have been fixed.

A strategic stalemate exists between the United States and the Soviet Union today. Neither nation can launch an attack on the other without bringing on its own destruction. Neither nation can realistically hope to break this stalemate by developing a new generation of nuclear weapons. Each nation has the capacity to match any weapons developed by the other. Both sides tend to react to the potentialities as well as the actualities of action. It is precisely this cycle of action and reaction which fuels the arms race.

In spite of this fact, the public has been allowed—even encouraged—to believe that somehow there is safety in ever growing weapons strength and that it still means something to be ahead numerically in nuclear weapons.

These are assumptions which must be challenged if we are to slow down the arms race, contribute to a reduction in international tension and apply our resources to the restoration of our society.

We have a unique opportunity to slow the arms competition. The strategic stalemate and the costs of further weapons development make an agreement restraining the arms race attractive and in the self-interest of the United States and the Soviet Union alike.

If we fail to seize this opportunity, we can, in fact, jeopardize our national security. The diversion of resources from human needs to unnecessary weapons development is a tragic waste. At the same time, as weapons grow more complex and numerous, it becomes ever more difficult to establish adequate safeguards against the risk that such weapons may be unleashed by accident or miscalculation. The question is whether we are taking the initiatives we might take to reduce the pressures for new weapons development and avoid these consequences. Unfortunately, forces are now in motion which can undermine our chances for achieving a nuclear arms control agreement with the Soviets. The decision to proceed with the deployment of the ABM was a setback, but ever more serious is the fact that both the United States and the Soviet Union are rapidly developing the capacity to deploy multiple independently targetable re-entry vehicles—so called MIRV—missiles which can carry several warheads and launch them at separate targets. The MIRV–ABM development is a classic example of arms escalation which results in less, rather than more, national security.

There is some evidence that the Russians are not anxious to talk about substantive armaments control agreements with the United States until they have resolved their border dispute with Communist China. We should not let such delays prevent us from acting to keep MIRV missile development from jeopardizing chances of reaching an arms limitation agreement.

Let the United States unilaterally postpone the testing of all our multiple reentry missiles for a period of six months, announcing that we will not begin testing thereafter unless the Soviet Union initiates such tests.

It should be clearly understood that such a suspension in MIRV testing is not proposed as a step toward unilateral disarmament. It is not proposed as a unilateral commitment never to test MIRV. It is proposed as a meaningful step to stimulate mutual efforts by the United States and the Soviet Union to control the escalation of nuclear weapons systems before it is too late.

If the Soviet Union ignores our gesture and goes forward with testing their multiple reentry missiles, or if they expand the scope of their ABM system, we can promptly resume our own MIRV program. Since the time needed to complete our development of the MIRV is far less than it would take the Soviets to construct a massive ABM system, and since a six-month moratorium would not provide significant lead-time for the Soviets, a moratorium on testing our multiple reentry missiles would not involve any appreciable risk to our security.

Ralph Waldo Emerson observed over a hundred years ago: "Every act, every thought, every cause is bipolar, and in the act is contained the counteract. If I strike, I am struck. If I chase, I am pursued. If I push, I am resisted."

As in the case of the Nuclear Test Ban Treaty, the road to peace may require the United States to take the first step on its own. Hopefully, the Soviets would, in response to our action, act with similar restraint. If they did respond, and the two countries moved into the strategic arms limitation talks, the question of the MIRV and ABM systems could be taken up in the context of mutual efforts to reduce the level of terror.

To reverse Emerson's thought: "If we lead, the Soviets may follow," recognizing that the interests of their own people are served if man can be pulled back even one step from the brink of nuclear confrontation.

In this Twentieth Century the United States and the Soviet Union must break through the terrible cycle of distrust which breeds distrust, of action which produces reaction, of new weapons which beget newer weapons.

The overriding reality of our time is the interdependence of the human condition. Man has wrested from nature the power to make this earth an uninhabitable wasteland or to make it a fertile planet.

History demonstrates that conflict and hostility between nations is not immutable. Accommodation and compromise are possible. Our problems are man-made and can be solved by the imagination and wisdom of man.

I am not suggesting that national rivalry and hostility can be ended in our lifetime. At this moment it would be utopian to hope for the end of all conflict with the Soviet Union. However, we can realistically seek to remove some of the danger from the conflict when, to do so, is in the self-interest of each.

As Adlai Stevenson once wisely counselled: "We must never fear to negotiate with the Soviet Union, for to close the door to the conference room is to open a door to war."

The time has come to embrace a broader vision of the route to peace.

Let us look beyond our missiles and military alliances and make the pursuit of arms control and reduction in the size of national military forces the heart of our national security objectives.

Let this nation demonstrate not only prudent concern for its military defense but also leadership in moving the world away from the infamy of war.

GREAT SALT LAKE OIL SHALE AMENDMENTS AID TO MAJOR INDUSTRIES

Mr. BENNETT. Mr. President, I applaud the action taken a few days ago by the Committee on Finance in approving depletion allowances for oil shale and minerals in the Great Salt Lake. This is farsighted action indeed, and I express the appreciation of my State as well as my own to the committee.

It is no secret that in our highly industrialized economy we have a pressing need to find new sources of oil, minerals, and other raw materials. While I am not an alarmist, I wish to point out to the Senate that many sources of foreign oil are in a very questionable status at this time. It behooves us as a nation therefore to develop all of the potential oil reserves available to use within our own borders. It has been estimated that the oil shale deposits in the intermountain area of Utah, Colorado and Wyoming represent one of the greatest oil reserves in the world. Yet it is of no value unless it can be developed and a way found ultimately to market the oil. The Finance Committee action has taken a major step in that direction. It gives to the oil shale developers an equitable tax position in relationship to other industries which are constantly in search of new oil resources. It represents in this case a 15% depletion rate for oil extracted from shale. If accepted by the Senate—and I urge that it be adopted—then the developers of this vast resource can go to work now to meet the demands that are increasing yearly and which will reach staggering proportions by the year 2000.

Let us not kid ourselves about the oil shale reserves. Without a depletion allowance, we cannot expect the industries involved to assume the tremendous economic responsibilities and risks involved. The allowances will also be an indication that Congress is willing to proceed henceforth with the necessary research and development to perfect the necessary extraction processes. If we can orbit the moon and experience in our living rooms the miracle of man walking on the lunar surface, I am very confident that the oil extraction process can be perfected.

I should also point out the tremendous economic development that this would bring to the States in the Intermountain West. In many ways they are geographically isolated, and oil shale and mineral developments will give to them a sound economic base.

I also urge the Senate to accept the Finance Committee amendment which I offered, allowing a 10- to 23-percent depletion allowance for various minerals extracted from inland saline lakes. For many years we in Utah looked upon the Great Salt Lake as a dormant body of water. But we now know it contains a vast mineral supply which must be extracted and developed, and it will go far in meeting the heavy demands of chlorine, sodium, magnesium, lithium, bromine, silicone, boron, potassium, and calcium. There is no question that the minerals in the Great Salt Lake are a depletable source; consequently, they must be treated as such. I call upon the Senate, when the bill comes before it, to be farsighted and to accept the amendments which I have offered and which the committee has wisely accepted.

I ask unanimous consent that an editorial entitled "Fair Tax Treatment," published in the Salt Lake Tribune of October 25, 1969, be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FAIR TAX TREATMENT

As the Senate Finance Committee works on depletion allowances for various extractive industries in the tax reform bill, it took the wise step of approving an amendment offered by Sen. Wallace F. Bennett of Utah to apply depletion allowances extracted from the waters of Great Salt Lake. These would include chlorine, sodium, magnesium, potassium, calcium, lithium, bromine, boron and silicon.

Under an Internal Revenue Service ruling, the waters of the lake are considered a nondepletable ore body. The decision is debatable. For while, in a sense, the lake is "renewed" by runoff waters bringing in minerals from the shores, the history of the lake indicates it is a shrinking body that will eventually disappear. It is also obvious that the minerals in the lake are a "body of ore," though not, perhaps, in the usual definition of the term.

The Senate has already made a number of changes in the tax reform bill as passed by the House. This week, for example, it voted to cut the oil depletion allowance to 23 percent. (The present figure is 27½ percent; the House figure, 20 percent.) The committee also approved, without change, a House section designed to provide an incentive for finding ways of extracting oil from shale by granting a depletion allowance based on the value of the oil recovered, instead of the shale. This means a substantial increase in the dollar value of the incentive. Utah, with its vast deposits of oil shale, should benefit materially from the long-range effects of the provision.

However, development of an oil shale industry is still some years away while development of a mineral extractive industry on the shores of the Great Salt Lake is already well under way. And this industry, in order to be fully competitive, should be given tax treatment similar to those industries which extract minerals from the earth.

When the House Ways and Means Committee began work on the tax reform bill in early 1969, the goal was final passage by the end of the year. The goal probably can't be met. First, the Senate Finance Committee must complete its version of the legislation. Then the bill goes to the Senate floor where numerous amendments are likely to be offered and approved. Finally, after differences between House and Senate measures are adjusted in conference committee, the bill must be approved by both chambers. As a consequence, there is no way now of predicting just what it will be like in its final form.

But this much is certain: An amendment made in Senate committee and retained by vote during consideration on the floor has an excellent chance of being retained. That is why the Senate Finance Committee did well to include the Utah senator's farsighted amendment. Committee approval at this time will go a long way toward assuring fair tax treatment for the new extractive industry on Great Salt Lake.

NOMINATION OF JUDGE CLEMENT F. HAYNSWORTH, JR., TO THE SUPREME COURT

Mr. BURDICK. Mr. President, before the Senator from Montana, (Mr. METCALF) left to represent the U.S. Senate as a delegate at an International Conference of Legislators, he asked that I place in the RECORD an editorial together with the result of a poll of the New York University Law School faculty regarding Judge Clement Haynsworth's nomination to the Supreme Court. If Senator METCALF were able to be here, he would have made this request himself.

Mr. President, I ask unanimous consent that the editorial and the article, both of which appeared in the Commentator of October 15, the student newspaper of the New York University Law Center, be printed in the RECORD. The article explains why 73 percent of the faculty is firmly opposed to Senate confirmation of the nomination of Judge Haynsworth.

There being no objection, the article and the editorial were ordered to be printed in the RECORD, as follows:

[From the Commentator, Oct. 15, 1969]

INSENSITIVITY

Last November President-elect Nixon promised the country that the theme of his Administration was going to be: "Bring Us Together." The emptiness of that promise has never been more dramatically revealed than in the ill-advised nomination of Judge Clement Haynsworth to the U.S. Supreme Court.

Contrary to the protestations of Haynsworth's supporters, the confrontation now brewing in the Senate is not essentially a question of liberals versus conservatives. Even Senator Barry Goldwater is having second thoughts about supporting Haynsworth since receiving stacks of mail from con-

stituents Goldwater describes as "strict constitutionalists who write: 'Isn't there somebody else?' "

Neither is the Haynsworth controversy a question of Democrats versus Republicans. As Senator Robert Griffin, the assistant Republican leader, said last week, "The overriding consideration is public confidence in the Supreme Court as an institution."

As Haynsworth supporters try desperately to close ranks behind their candidate, they seem to have lost sight of the real issue in the case. Despite all the damaging evidence that has been uncovered, no one has ever accused Haynsworth of being dishonest. Nor has anyone called for his impeachment and removal from the Fourth Circuit Court of Appeals.

But what has been revealed by Haynsworth's actions in *Darlington, Brunswick, et al.*, is the portrait of a man curiously insensitive to the fundamental of judicial ethics, or sensitivity far too great for a nominee to the Supreme Court. This is the determining factor in Haynsworth's case and not the man's mediocre record as a jurist.

It is not suggested that when the nomination was made President Nixon had any knowledge of the many questionable areas in Haynsworth's background. On the contrary, the entire Haynsworth affair has the unmistakable imprint of being another blunder by Attorney General John Mitchell and his advisors. But the President's intransigence in the face of revelation after revelation only gives further credance to Nixon's so-called "Southern strategy." According to this theory, Nixon hopes to get key Southern support for the 1970 congressional elections and the 1972 presidential race in return for certain "favors" to Southern legislators such as the recent school integration slowdown.

The broad discretion of a President in the selection of ambassadors, cabinet members and federal judges is unquestioned. But it is frightening to think that appointments to the country's highest tribunal have been relegated to the level of political horse-trading between the President and people like Senator Strom Thurmond and his cronies.

During a meeting last week at the home of J. Edgar Hoover, Nixon was apparently convinced by Mitchell that opponents of the nomination are motivated by nothing more than political animosity. As if to confirm the fact that the "old" Richard Nixon is still with us, Republican Senators are now facing threats of political reprisal (e.g., holding up federally funded projects, etc.) unless they vote for confirmation.

Despite this, however, it is reliably estimated that as many as 50 Senators now plan to vote against confirmation. But even if Haynsworth were to squeak through the Senate, his victory would be a hollow one and a tragic blow for the Court.

If the President really wants to "bring us together," restore public confidence in the Supreme Court, and prevent a bloody showdown in the Senate, his only alternative is to immediately withdraw the nomination of Clement Haynsworth and nominate someone truly worthy of the Supreme Court seat formerly held by Justices Brandeis, Cardozo, Frankfurter and Goldberg.

[From the Commentator, Oct. 15, 1969]

THREE-QUARTERS OF FACULTY OPPOSED TO HAYNSWORTH

(By Neal Arluck)

Seventy-three percent of the Law School faculty opposes Senate confirmation of Judge Clement Haynsworth's nomination to the Supreme Court, according to a poll taken by the Commentator last week. An equal percentage believes that Haynsworth's actions in the Brunswick case were "improper."

Questionnaires on various aspects of the Haynsworth nomination were distributed to the 50 members of the full faculty. Thirty-seven questionnaires were returned.

To the question, "Do you think the Senate should ratify the nomination of Judge Haynsworth for the Supreme Court?", 27 professors answered 'No,' eight answered 'Yes,' and two were undecided.

For purposes of analyzing the gross results, faculty members were asked to indicate their political affiliation. A break down on political lines surprisingly revealed that the vote against Haynsworth by Republicans was 7–1. Democrats voted 'No' by a margin of 15–5, and Independents voted 5–2 against confirmation.

Another interesting result was uncovered when the figures were broken down according to years of service on the faculty. Of the six professors on the faculty for more than twenty years, not one voted in favor of Haynsworth.

Of the eight professors supporting confirmation, several had serious reservations about the nominee. "I don't like Haynsworth's philosophy or his wheeling and dealing," wrote one respondent, "but it would be dangerous to disqualify a man on this basis. It would defeat a liberal also. We lost this one when we lost the election."

Another said, "I believe the Senate should ratify unless there are very substantial reasons for a refusal. While I would not select or support Haynsworth from any point of view, I don't know any facts which disqualify him." "Unfortunately, mediocrity is not a basis for judicial disqualification," said another proponent of confirmation.

Out of 37 participants in the poll, only one professor had anything really favorable to say about the nominee. Referring to Haynsworth's purchase of stock in the Brunswick Corporation after voting for a decision in the company's favor but before the decision was made public, one faculty member wrote, "I assume that Judge Haynsworth bought the stock with his own money—not mine, and certainly not yours. I also assume that the stock purchase, then in the future, could not or at least did not affect the Judge's decision made before the purchase. Perhaps I should add that I think the Haynsworth nomination to the Supreme Court has been the best one offered by a president since the appointment of Justice Robert H. Jackson."

The 27 opponents of Haynsworth's confirmation were far more firm in their convictions than the eight supporters. The following were some of their comments:

"I can accept conservatism in business areas, even in the criminal law area perhaps, but not in the civil rights area. The stakes are too high and the consequences too disastrous!"

"He is a 'wee mon.' "

"My chief objection is that he was making speculative investments when he should have been concentrating on judicial and scholarly matters. Furthermore, it is no longer enough to have an able and ethical judge, we must have the best available on a comparative basis."

"The public image of a member of the United States Supreme Court is extremely important. A Justice of that court should be completely above suspicion. His background should look right as well as be right."

Another question on the poll asked whether Haynsworth's actions in the Brunswick case were "improper." Twenty-seven thought they were. Only four voted 'No,' and six were undecided.

But the 27 respondents who voted 'Yes' were not identical with the 27 who opposed confirmation. From the latter group, 21 called Haynsworth's actions in Brunswick "improper." Two thought they weren't and four were uncertain.

Of the eight proponents of confirmation, five agreed that Haynsworth's actions were improper. Only one thought they were proper and two were uncertain.

"Haynsworth's behavior in the Darlington Mills case," wrote one professor, "was in my opinion clearly unethical and much more objectionable than his role in Brunswick.

Another question in the poll asked whether the Senate should "consider the judicial philosophy of a nominee in addition to his ethical background." Twenty-seven professors thought judicial philosophy should be considered. Six thought it shouldn't and four were undecided.

Thirteen faculty members responded to a question soliciting the names of candidates to fill the Supreme Court seat vacated by Abe Fortas.

The most popular was Judge Friendly of the Second Circuit Court of Appeals who received five recommendations. Paul Freund and Judge Traynor of California each received three.

Judges Fuld and Schaeffer were each cited twice, as was Bernard Segal.

NAB JOB-TRAINING PROGRAM

Mr. PERCY. Mr. President, the effort to eradicate poverty in our country necessitates the cooperation of both the Government and the private sector of our economy. The two, in concert, can develop and finance programs aimed at making all of our citizens contributing members of our society.

The National Alliance of Businessmen—NAB—and the Federal Government, largely through Outreach, have been working together for the past year on an NAB program to train the hard-core unemployed. Through this program, 229,679 previously unemployed men and women have received job training and been placed in jobs. Of these men and women, 54 percent have remained at work—a retention rate which approximates that for the working force as a whole.

On September 8, 1969, Newsweek published an article on the excellent work NAB has been doing through their training and employment program. I ask unanimous consent that the article be printed in the RECORD following my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Newsweek, Sept. 8, 1969]

HOW TO HIRE THE HARD-CORE

When the National Alliance of Businessmen (NAB) launched its widely heralded effort to provide jobs for the hard-core unemployed early last year, there were scoffers who suggested that NAB would endure about as long as yesterday's headlines. Indeed, the group's formation did have some of the earmarks of one of those government-industry love-ins that all too often produce little, or nothing in the way of meaningful results; President Johnson summoned 500 of the nation's top businessmen to a dinner meeting in Washington, spelled out some ambitious goals, tapped Henry Ford II to head the operation—then left NAB pretty much on its own.

Yet NAB has confounded its critics by starting up fast—and actually gaining momentum. Its original goal was the placement of 100,000 workers by June 30 of this year. But that goal was reached before the end of 1968, and in an updated tally released last week. NAB reported that it has so far placed

a total of 229,679 men and women—white, black, red and yellow—from the nation's urban slums and rural poverty pockets. More important, of those hired, 124,935 are still on the job—a retention rate of 54 per cent. That is just about the rate for the nation's white- and blue-collar work force as a whole.

MIND OPENERS

To achieve these results, both employer and employee have had to change. The typical hard-core unemployed lives below the official poverty level of $3,553 a year for a nonfarm family of four; he is a high-school dropout with no skills and no regular job for at least eighteen months. As often as not, he has a police record. "Employers are a lot more open minded than they used to be," says Paul W. Kayser, vice president for industrial relations of Pepsi Co., Inc., who is now serving as NAB president. "Until recently, most of these people wouldn't have been permitted past the gatekeeper."

For his part, the worker has to be convinced that somebody actually wants him. "Often," Kayser said, "they will be offered a job and won't show up simply because they are terrified of interviews. So what you have to do is arrange not only the interview but the means to get them to it."

To handle this chore, NAB has enlisted members of the government's Outreach program who seek out job candidates in ghetto bars and tenement buildings and then help them through the employment procedure. The Ford Motor Co., for one, has set up inner-city hiring halls in an effort to bring the job opportunity to the worker, while other companies ask longtime employees to shepherd new recruits through the first difficult months on the job.

Aside from the sheer numbers hired, perhaps the most encouraging aspect of the NAB program is the effort made at upgrading workers through on-the-job traning. Even as Negroes in Chicago, Pittsburgh and other cities were demonstrating last week in an effort to gain more work in the building trades (page 34), NAB, with help from the Federal government, was expanding its in-plant, on-the-job training program to assist the hard-core.

During the present fiscal year, the government has set aside $420 million—by far the biggest slice of Federal manpower training funds—to finance programs at the 18,500 companies now participating in the NAB program. The average training grant is $3,000 per worker for an eighteen-month course. But in some cases the government will finance up to $5,000 in training. As one example, the Ford Motor Co. has hired some 2,800 workers at its inner-city employment centers at an average starting wage of $3.45 an hour. Already, "hundreds" of the new employees have moved up to higher-paying jobs through normal competition for better jobs. Currently, there are some 60,000 workers involved in training programs at NAB member plants and that number is certain to grow. Among other reasons, President Nixon's proposed new welfare program provides for an additional 150,000 job-training slots, many of which will presumably be in plants that are part of the NAB program.

Challenge: As far as most NAB leaders are concerned, the key to long-range success is training. As Donald M. Kendall, Pepsi Co. Inc., president and NAB chairman, explained last week: "Say it takes a company $1,000 to train a regular employee; well, it might cost them $2,000 to train one of the hard-core unemployed. The government puts up the additional $1,000, but in one large area we studied, the government got its money back within 21 months [because of the savings in welfare costs, unemployment compensation and the sudden contribution of payroll taxes.] That's not a bad investment for anyone."

For all of their progress over the past nineteen months, NAB leaders still face a challenge of stunning proportions. For one thing, most of the participation has been by big employers in big cities and the thousands of ten- and twenty-man shops that might be able to use an extra hand aren't sufficiently involved. "The little fellow just doesn't know how to go at it," says Chrysler chairman Lynn Townsend, who is NAB's vice chairman. Currently, NAB is working on a plan under which smaller companies can join in a consortium that would operate much like a large employer.

No one knows better than NAB that a great deal of work remains to be done. Estimates are that there are still 1 million to 2 million hard-core unemployed who haven't been reached by NAB. The health of the program also depends upon the continued health of the economy. As one Labor Department administrator observed: "If the economy takes a nose dive, this program is going to go to hell."

Still, for men like Pepsi Co., Kendall, the effort is well worth the risk of disappointment. "The response has been marvelous by both business and the unemployed," he summed up last week. "In fact, I never would have dreamt of the response we would get when I first took over the job. It's been the most rewarding experience I have ever had."

DUMP THE KOOKS

Mr. FANNIN. Mr. President, just a little over a week ago Mr. Jenkin Lloyd Jones, distinguished publisher and writer and president of the Chamber of Commerce of the United States, made an outstanding speech before the National Newspaper Association in Denver, Colo.

Mr. Jones is an articulate man. When he speaks, the sparks crackle and smoke curls from the edges of his target.

He has taken dead aim on one of the most pressing problems of our times, the problem of pollution. Not water pollution or environmental pollution, but that kind of pollution which is the most insidious of all—mind pollution. He speaks of the polluted airwaves in the Nation, taken over by the kooks and the programs designed to shock. He points to the magazine stands covered with filth that formerly was sold illegally in back rooms by shabby merchants. He speaks of the "cluck-smack" school of journalism which clucks its tongue over the sordid events which it reports in lip-smacking detail.

Mr. Jones puts the spotlight squarely on the problem of America in professing one thing and performing another, and calls it "new" morality.

Most important, he speaks to those who are in charge of a large segment of our public media and says:

A mark of sophistication is to know when you are being used. And, gentlemen, we are being used.

Mr. Jones has valid points to make in our troubled times. I ask unanimous consent that his speech be printed in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

LET'S DE-KOOKIFY THE MEDIA

(By Jenkin Lloyd Jones, president, Chamber of Commerce of the United States)

This evening I would like to touch on the Golden Age of Kookery in America and the responsibility that may be charged against the printed and electronic press, the motion picture and the stage.

Let me define kookery. It is that measure of departure from traditional codes of behavior that cannot be kissed off as a mere change of fashion or a search for new truths. Kookery is that mode of behavior in which hedonism (which is Greek for doing whatever you please) produces a confused and chaotic society.

Kookery is the effort to portray riot as a means of redressing wrongs, and plain bad manners as some sort of social action. It is the attempt to tell a generation that casual sex or mind-blowing drugs represent a bold effort to sweep away old shibboleths and to seek honesty and revelation.

In short, kookery is a revolt against self-discipline. It is a reaction against civilization. Our campuses are rocked by the irreducible demands of the ignorant and the violent. The fundamental civil right of citizens to walk their streets in safety has been repealed.

In Chicago we not only saw a direct assault upon the police, planned, detailed and boasted of by the New Left months before the Democratic convention, but now we are seeing a direct effort in the same city to intimidate the court for daring to react against this assault.

Mayor John Lindsay's "Fun City" is in shambles. In Philadelphia last month two high school football teams were led into buses and driven to unannounced stadiums where they played before no spectators. To do otherwise, school officials feared, would insure a riot. So much for the City of Brotherly Love.

We are drowning our kids in filth.

You can examine the files of the old Police Gazette of the 1870's and '80's where America's gee-whiz journalism was born.

You can read the dime novels of the Ned Buntline school of literature in which desperados were exposed and, in a measure, canonized in the same literary operation, if you could call it literary.

You can run through the microfilms of the Hearst and early Pulitzer press at the turn of the century when the term, "yellow journalism," was born.

You can follow the pungent spoor of Bernarr MacFaddenism, and the lurid love nest tales in the old Sunday supplements, and the heavy-breathing marathon-length embraces in the Theda Bara movies that brought the Hays Office into being.

And having examined all that was worse in the taste of times past I believe you will find nothing like the rain of scatology in which America stands today, and nothing like the elaborate rationalizations for misbehavior which our swingers are boldly advancing.

I think it is the boldness of the rationalization which is the essential difference.

We have always had users of drugs, but this is the first time we've heard the claim that swallowing L.S.D., inhaling pot and popping with heroin are the roads to holy insight.

The art of thievery and looting is as old as man, but this is the first time people who clean out liquor stores have claimed kinship to the patriots who hurled the tea into Boston harbor.

All this has been described as the "New Morality." The "New Morality" is based on something else called "situational ethics." Situational ethics simply means that ethical behavior is changeable according to the situation. And by situation one means the conditions of the moment that govern the self-interest of the individual.

This is, of course, the road to social chaos, and we are well on it. We have seen our marching preachers claim that law is not to be changed by orderly process, but is simply

to be defied. We have seen our drop-outs sniff at the "squares" who work, although they do not hesitate to eat sandwiches made from wheat raised by the guy who got out of bed in Nebraska at 5 a.m.

We have seen our permissive courts—and particularly the Supreme Court of the United States—strip the classic definitions of pornography down to the bone and then boil the bones.

Of more immediate interest to the American family is the growing philosophy spreading through the high school corridors that anything you can get away with is okay. A society that is based on anything you can get away with and that, at the same time, seeks to weaken laws, water down moral restraints, and generally enlarge the get-away area is heading back to the cave.

In an article last year in The Intercollegiate Review, Dr. Will Herberg said:

"To violate moral standards while at the same time acknowledging their authority is one thing; to lose all sense of the moral claim, to repudiate all moral authority is something far more serious. It is this loss of moral sense, I would suggest to you, that constitutes the real challenge in our time."

How did we get this way?

The reasons, of course, are complex. But, perhaps, for one thing we got over-worried about frustration. A frustration is something you want and can't have—at least not right now.

Human character is built by overcoming frustration. The boy wants a bicycle. There are two ways he can get it lawfully—shake the dough out of Dad or mow enough lawns to raise the cash. The father may properly choose to exercise his beneficence, although give-aways don't exercise the muscles of self-reliance and self-respect.

But if the boy fails to obtain the gift and chooses not to work for the prize he has more devious alternatives. He may steal the bicycle directly, or he may break into enough cigarette machines to make the purchase. Thus, he passes into the field of anti-social behavior.

Psychiatrists, generally, seem to agree that a general characteristic of most juvenile delinquents is a low frustration-tolerance. They cannot stand to be thwarted. They cannot plan toward a desirable objective. They can only smash and grab and insulate themselves from reality by great blankets of self-justification and self-pity.

Many of these are the children of parents who remember well the privations and insecurities of the Great Depression and who have determined to give them all the "advantages." And they have been given all the advantages except an appreciation of the labor and devotion it takes to make a workable society.

Since babyhood they have heard the announcer urge them to "be the first kid on your block" with the new gizmo. All the power of advertising persuasion has been devoted to making them expect instant satisfaction. And so we have what calls itself the "New Generation."

Can we wonder too much that when it appears to them that Society has handed them less than a perfect world their reaction is either to drop out or bum down?

In our effort to eliminate a little healthy frustration at an age where it would build patience, tolerance and an appreciation of the attainable we may have condemned these kids to the worst frustration of all. Self-doubt, anger and unease are the endemic diseases of hippiedom.

Still, the human animal has changed very little. A strong tide of wistful idealism flows beneath turbulent waves of self-indulgence.

Last year I had a free hour in San Francisco, so I went out to the corner of Haight and Ashbury to see the animals. There I picked up several copies of the underground press, including something called the Berkeley Barb. And in the classified section, among all the ads of deviates, lesbians, sadists and masochists I came across the following from a post office box in Daly City:

"Wanted, attractive girl for uninhibited weekend fun at beach house by member of the male gender. I'm Caucasian, clean-cut, 25 and shy. Hope you don't normally answer ads like this."

I didn't know whether this ad was funny or tragic. The eternal male making the immoral proposition to what he hopes is a fairly moral girl. But I think in a way it expresses the dichotomy of the moment—young people with considerable idealism trying to find fulfillment in sleazy ways. It isn't going to work.

There is nothing new, of course, about the New Morality. One would have to cut a lot of history classes to imagine that humankind had not attempted to find happiness in utter animalism. Or that they would not attempt to rationalize misbehavior by claiming lofty, even spiritual motives.

The temple prostitutes of Astarte 3,500 years ago expressed a philosophy which Playboy seems to have just rediscovered. The hashish-maddened Thugs of India went through elaborate religious rites before they set forth to rob and strangle travelers.

But none of these noble experiments produced workable societies. Nations that wallowed in corruption found commercial strength hard to achieve, for you can't build bankable credits where bribery is the norm and graft and short-weight the custom. And where morals standards were abysmal there occurred, paradoxically, an emasculation of the male, for irresponsibility produces the incompetence to cope and it leads to the matriarchy which is the chief social headache of America's current ghetto societies.

Some people never recovered. Much of our foreign aid has sunk without a trace in social systems that cannot organize themselves for any degree of success. Other civilizations, more happily, eventually became nauseated and went through puritan renaissances, some of them carried to ridiculous extremes.

The popular view of the moralist is that of a dour bluenose who doesn't want people to have fun. There are, indeed, such people. But the best excuse for morality is a pragmatic excuse. Proper and reasonable morals produce a productive society in which the fruits of energy are protected and the seed of creativity are watered.

Our word "morals" came from the old Latin, "moralis," simply meaning a way of life. And our Greek word, "ethics," is defined by Webster as the ideal end of human action.

It is a human fact that man generally operates a considerable distance below his ideals. Where his ideals are low, his behavior will be lower still. And the jam we are in today is in large measure caused by the fact that in recent years our mass communications and entertainment media have publicized deviation for our traditional moral standards to the point where impressionable youth imagines that deviation is the norm.

Consider the mass circulation magazines, faced with ever rising costs, battered by TV and rendered pensive by the recent demise of the Saturday Evening Post. The circulation struggle is a bitter one, and shock sells copies.

The average issue of one leading woman's magazine now sounds like a clinical study of psychopathia sexualis. In how many slickly-printed and beautifully-written publications during the past two years have you read intriguing articles on the wonders of psychedelia?

One national magazine recently ran an admiring piece on three avant garde playwrights—one described as "a master of meaningless dialogue," another as "wallowing in filth, but writing like an angel," and a third as preaching that "up might as well be down, right might as well be wrong."

Thousands of books are being written in America each year. But have you analyzed the book reviews in the publications from which librarians draw many of their purchase ideas? How many excellently-written books with thoughtful and constructive themes are utterly ignored while the splashes go to the sensational, the odd-ball and damn-America schools? Check this out as you go through the book review sections.

We have seen the vast amount of publicity which any unmarried and defiantly cohabiting movie couple is guaranteed. There is money in blatant misbehavior.

And deviates who were once furtive are now open and in danger of becoming evangelical. The twisted have compulsion to twist others and recruitment is most effective and most devastating among the young. Thus, tolerance for the homosexual and the lesbian does not, as many liberals imagine, mean simply sympathetic understanding for those who many be hooked on a distressing aberration. It means, in addition, increasingly effective efforts to pervert adolescents of low sophistication and malleable habits.

A man is wise to learn from his enemies. Enemies can be good teachers. And the United States has, as its most implacable and tireless enemy, the communist theoreticians of Eastern Europe and Asia. However much Moscow and Peking may battle with each other over geopolitics, they are united in the hope and belief that western civilization will destroy itself.

Some first-time visitors to Russia are amazed at the enforced puritanism of the stage and literature. They are confused because most left-wing organizations in the United States are the preachers of the utmost liberatarianism and move quickly to the aid of purveyors of filth, practitioners of immorality and inciters to riot.

But there is no confusion at all in the mind of the dedicated communist. The quickest way to destroy what you consider a rotten civilization is to make it as rotten as possible. You give aid and comfort to the worst that is in it, counting on weakness and pruriency to rot it from within. You have to chop down a healthy tree, but a rotten one is a pushover.

Television entertainment is a new phenomenon in the world, and television entertainment that must be sustained by commercial advertising is a phenomenon of relatively few countries in which television is privately-owned.

Advertisers are attracted by head-counts and head-counts mean ratings. It is difficult to produce great literature, but easy to produce violence. Violence is action, which has particular attraction for the young.

As a result we in America have subjected an entire generation already to an almost unrelieved diet of shoot-'em-ups. In a single afternoon a child may see 50 people pistoled, strangled, stabbed, burnt, crushed and eliminated in even more exotic ways.

For a while, some psychiatrists expressed the hope that these vicarious murders would sublimate inner aggressions. But the water level of youthful violence has risen like a tidal bore. The report issued three weeks ago by the President's Commission on the Causes and Prevention of Violence stated flatly that much of the frightening savagery in the streets is a direct result of electronic mayhem, ground out in the quest for advertising profits.

The motion picture industry, dismayed at the inroads of television, discovered that it could lure back the teen-age crowd with great gobs of sex. With thousands of movie houses busy each evening pouring gasoline on the smoldering fires of normal, staminate youth the results were predictable. Why should we be surprised?

And now the movies that were designed to halt the inroads of television are beginning to appear on television. So now we have made the full circle.

But it is the stage that has sunk to the lowest depth. The muse has had her throat cut and the bare-bottom age is on us.

Where in New York today can you find a theater that would inspire your formative son and daughter with a sense of heroism and self-sacrifice and human triumph? No wonder Dave Merrick, the theatrical producer, said this summer that he was leaving for California until the filth clouds blow over. Let's hope he doesn't die in California.

I think it's time when the proprietors of the press, the publishers of popular magazines, the lords of television, the monguls of the screen and the producers of the stage looked upon the social wreckage around them and faced up to their own culpability.

We should have had about enough of cluck-smack journalism, the journalism that clucks piously over social misbehavior, portrays it in all its lip-smacking detail, and waits for the circulation figures to soar.

I think it's time that the great television tycoons and advertisers weighed the business of pulling sales figures up by pulling Young America down.

I see these gold-plated characters swaggering around the charity balls or rising at the banquets to mouth tired cliches about their concern for the disadvantaged and downtrodden.

But if, in their struggle for wealth and power, they help lower the quality of life in America I believe they have something to answer for.

I believe the TV commentator who fills his broadcasts with film clips of loud-mouthed revolutionaries demanding race warfare is not entirely guiltless of blood in the streets. Nor is his boss.

I believe the reporter who ignores the distinguished speaker invited to the university platform and who occupies himself with interviewing the storm troopers who tried to take over the stage is not entirely guiltless of a breakdown of the teaching system. Nor is his boss.

Let 20,000 patriotic Americans march down Fifth Avenue. Let 400,000 citizens cheer them from the curbs. And let 100 bearded Marxists try to block the march somewhere uptown. What happens? NBC, CBS and ABC and all the news reporters and photographers rush to the spot and give the impression that all New York erupted in fury that someone would dare show the flag.

Is this telling it like it is? Or is this a sucker game? The technique is calculated, polished and being used with increasing frequency. Isn't it time there was a statute of limitations on our stupidity?

I didn't often agree with LBJ, but I was right with him when he asked in bewilderment, "Why all this poor-mouthing of America?"

This goes far beyond the effort to improve and perfect our imperfect institutions. This is an effort to paralyze the nation with confusion and self-doubt. And it has been working far too well.

Gentlemen: we who run newspapers or radio or TV stations can sell things. Our ability to sell things keeps us eating.

We can sell soap, and we can sell misbehavior. We can sell automobiles, and we can sell treason. We can sell breakfast food, and we can sell addiction. We can sell ready-to-wear, and we can sell sex.

If we focus our cameras on and turn over our front pages to those whose aim is the destruction of the social responsibility that gives a people morale and dignity and the power to react against subversion—then, goodbye America!

If we permit the institution of a free press to be used by those who can hardly wait for the day when a free press will not be permitted, then we participate in our own execution.

If, in our quest for readers and viewers, we ignore all that has been right with our ideals and traditions and zero in on the cesspools and the pustules of our society then how can we blame our youth for wanting to blast it level.

Editing, gentlemen, as you all know, is selection. It is not merely the emphasis of that which is truly significant, but it is the emphasis of constructive and reasonable thoughts that point the way toward real solutions of real problems.

If in 1776 reports from Philadelphia had ignored the Continental Congress and covered only the busy bawdy houses we'd never have had a country. And if all the decent, honest citizens doing decent, honest and courageous things get less show from us than the screamers and boppers we'll lose that country.

Editors and publishers are supposed to be sophisticated. A mark of sophistication is to know when you are being used.

And, gentlemen, we're being used!

TOWARD MORE ADEQUATE SOCIAL SECURITY—III

Mr. WILLIAMS of New Jersey. Mr. President, I have begun a campaign to place in the CONGRESSIONAL RECORD as much evidence as I can about the need for upward revision of social security benefits.

One of my reasons for doing so is that I believe that the social security proposals offered by the administration on September 30 are inadequate and misdirected.

Another reason is that the Special Committee on Aging, on which I serve as chairman, is conducting a far-reaching study entitled "Economics of Aging: Toward a Full Share in Abundance." From hearings conducted in Washington, D.C., and the field, we have already gathered ample evidence about the deepening retirement income crisis in the Nation.

Recently, for example, at hearings in Bergen County, N.J., the committee heard from elderly residents of communities generally regarded as comfortable, if not affluent. From the elderly themselves, we heard testimony about what it means to live on fixed incomes in municipalities where all costs keep going up perhaps even more rapidly than elsewhere.

I ask unanimous consent to have printed in the RECORD two excellent articles published in the Hackensack, N.J., Record. I think they vividly recount the problems faced by millions of Americans who find that poverty or near poverty among the elderly can cause intense suffering wherever it strikes, whether in the central city or the nearby suburb.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

EXPENSES OF AGED SKY HIGH

(By Roger Beirne)

Living costs for the elderly are rising more rapidly than living costs in general—and there is no end in sight.

Major factors contributing to the deteriorating economic status of elderly residents in Bergen County are likely to intensify in scope, according to a specialist in economic problems of the aging.

"The outlook for the elderly is dismal on at least three fronts. Housing and medical costs will continue to rise, as will local taxes," said the specialist, Dr. Gladys Ellenbogen, professor of economics at Montclair State College and a Hasbrouck Heights resident.

Housing and medical costs take a significant part of the older resident's spent dollar. At the same time, he fares poorly in the competition for the tax dollar in Bergen where school enrollment figures, for example, are ever on the rise. According to the economist, factors that make Bergen an affluent area—increasing population and high and rising family incomes—create exceptional economic pressures on older residents.

TWO PROPOSALS

In her talk at Senate special Committee hearing on "Economics of Aging" at Bergen Mall yesterday, Dr. Ellenbogen proposed, among other policies for relief for the elderly:

1. Special savings accounts in which interest earned on savings would not be taxed until withdrawn—at the lower rate of the nonearning years of later life.

2. Allow the employe's share of a contributory pension to be an itemized deduction from his adjusted gross income.

"My suggestions do not call for government spending—rather for less government income," the economist said.

Other policy suggestions considered by the committee—with which she is in agreement—include higher property tax exemptions, rent supplements, more extensive health protection and higher Social Security benefits.

Of her two suggestions, the economist, who calls for an eye-to-eye battle with the problems of the elderly today, said such measures would permit all to help plan for older age with their own money.

"Pensions should be portable," she also said. "As it is now each time we leave a job and start a new one, pension costs for the employe and the employer rise. Pensions should vest after a short number of years. With vesting and portability we should always be 21."

In her analysis, Dr. Ellenbogen said:

"The cost of living in the New York-Northeastern United States—that's us—has increased more in the last 10 years than in any other part of the country.

"So that we have had in New Jersey over the last 10 years, as contrasted with the rest of the country, proportionately more people; more people over 65, more school-age residents and the steepest rise in the cost of living anywhere in the United States."

Why the problems for the elderly will intensify, she said, that those costs on which the 65 and older spend their income—housing, medical care, and services—are rising more rapidly than living costs in general.

"There is no reason to expect the climb to slow down—on the contrary they will continue to rise sharply," she said. "If I may inject a cynical note—the only prices the administration has been successful in forcing down are stock market prices. I'm not sure I appreciate their anti-inflation efforts along these lines.

". . . In New York-Northeastern New Jersey, medical costs in the past 10 years have soared 63 per cent—this is as of June of this year—they've probably risen more in the last six weeks."

The increase in population 65 years and over spreads the problem of generally rising prices and upward pressures on local taxes, on real estate costs and on prices of goods and services. The area's rate of growth of population 65 years and over is increasing at a rate of 50 per cent greater than that of the nation as a whole. By their ever increasing numbers, the older residents become more identifiable in their common defenselessness against economic pressures.

"In Bergen County there are 15,984 homes

on which the 65 or over taxpayers claim the $80 deduction on their property tax bill," Dr. Ellenbogen has reported in a paper on "The Economics of Aging in Bergen County." Since the homeowner's income must be $5,000 or less to qualify for this deduction, close to 8,000 homes and probably more have owners with $5,000 or less income. This is about 8 per cent of all nonmultiple residential properties in the county.

In nonpoverty metropolitan areas such as Bergen, according to the economist, nearly one out of every three elderly families is below the poverty level, whereas when the family head is, for example, in the age group of 55–64 the likelihood of falling into poverty classification is only one out of ten.

Commenting on medical care in her talk, she said:

"The increase in our population (Bergen) is largely in the younger and older groups, where medical care is more often sought than in other age groups . . . The demand for medical care has increased and will continue to increase faster than the supply of trained personnel and the supply of hospitals and nursing homes and medical schools. Therefore the price of medical care will continue to rise.

"We do not want instant medical education. We cannot have it. Nor can we instantly build medical schools or hospitals."

On rising housing costs in Bergen, she said:

"As a resident of one of the 70 communities I personally favor the one-family house and voted against apartments in my town. As an economist, I must admit, however, the cost of a dwelling unit will be higher if an acre is used for four single family homes than for 40 apartments. More than half of Bergen's 70 communities do not permit multiple dwellings.

"Older people seeking to sell their homes frequently find themselves priced out of both the smaller home market and the apartment. They are then faced with the rising cost of maintenance."

Costs of services will not stop rising. "Technological advantages cannot always be applied . . . We will continue to need more teachers and more policemen and others rendering services," Dr. Ellenbogen said.

AT 79, A HOUSE IS A HARDSHIP

(By Robert Armbruster)

Mrs. Anna P. Lucchesi was not afraid to tell Sen. Harrison A. Williams, Jr., D-N.J., her age.

She's 79. She also had quite a story to tell.

The Park Ridge resident, a widow since 1956, said she and her late husband bought their two-bedroom bungalow in Park Ridge in 1935 for $4,200. She recalls that her property tax was $98 in 1936.

This year her expected income is $1,958. Her property tax is $746. She also has to pay a $260 sewer assessment.

ATTACHED TO HOME

"I love my home so dearly," said Mrs. Lucchesi, one of approximately 20 speakers at the U.S. Senate Special Committee hearing on the "Economics of Aging." "It has so many memories. It's a comfortable home, easy to take care of. I'd be very upset (about having to sell it.)"

Mrs. Lucchesi, who earned $45 a week at a part-time job until she was 75, said her property tax jumped from $98 in 1936 to $129 in 1946, $182 in 1956, $462 in 1966, to $746 this year.

She noted that she also spends about $180 a year for medication, leaving her with slightly less than $800 for food, clothing, heat, and all other living expenses.

Mrs. Lucchesi was one of many speakers who told Sen. Williams at the hearing yesterday at Bergen Mall auditorium, Paramus, of the huge expense to senior citizens of property taxes, housing costs and medical expenses. Approximately 350 persons, including many public officials, attended the hearing.

SEEKS MORE BENEFITS

Sen. Williams told the press that armed with testimony he and other members of the committee have taken at hearings throughout the nation, he intends to introduce a bill that will increase Social Security payments to the elderly. After this action at the next session of Congress, he said, "We would hope to do the realistic job of making the payments in the future according to a cost-of-living escalating schedule, so we won't have to change the figures annually.

John Terhune, 78, of Park Ridge, described as desperate the plight of many elderly homeowners. "The property tax has now reached the point of confiscation," he declared.

Mrs. Mildred Krasnow, director of the Bergen County Office on Aging, also told Williams and the approximately 350 persons at the hearing:

"We must find a way to take the tax burden off the property owner."

Other speakers noted the small number of apartments available to senior citizens. One man called for ceilings on rent.

Ralph Van Syckle, Tenafly welfare director, said in his town, regarded as financially well-to-do, senior citizens are also afraid they will have to give up their homes.

"They do not want to move out of Tenafly," he said. "Because of their pride they told me they did not want to receive public assistance of any kind. Most aged have pride and do not want to be on relief roles."

He suggested the name "Old Age Assistance" be changed to "Old Age Pensions".

SLUM CONDITIONS

John Perry, director of the Englewood Neighborhood Center, suggested a federal Department on Aging, noted the special problems of the elderly in slum areas.

"Senior citizens living in slum areas are paying in excess of the worth of their rentals with little or no services," he said. "Premises are unkempt, overcrowded firetraps, unfit for human habitation. We should have more residences for senior citizens, and should establish discount centers for the aged."

He also advocated abolition by businesses and industry of mandatory retirement ages.

Irving Steinberg, president of the Golden Age Club of the Hackensack YMHA, called for low-cost public transportation for senior citizens.

"Between 9 and 4 we would like to get low-cost transportation," he said. "At that time, buses are running empty."

The senator replied he hopes this will come about in New Jersey. "Throughout the country there are enlightened bus companies that are reducing fares," Williams commented.

Other panel members included Rep. Henry Helstoski, D-N.J.; Freeholder William J. Dorgan; and State Senators Willard B. Knowlton and Joseph C. Woodcock, Jr.

TOWARD MORE ADEQUATE SOCIAL SECURITY—IV

Mr. WILLIAMS of New Jersey. Mr. President, many millions of elderly Americans are living on incomes that support neither comfort nor even basic needs.

For that reason, it is vital that Congress enact legislation which will raise overall social security benefits and will also raise minimum benefits to levels worthy of a great Nation.

For that reason, too, I am placing in the RECORD letters, statements, and other exhibits which show how intense the needs of our elders are.

The Special Committee on Aging—now conducting a study of the "Economics of Aging: Toward a Full Share in Abundance"—is systematically gathering information in Washington and in the field on all aspects of the retirement income crisis.

At one hearing held recently in New Jersey, the committee received direct evidence to the economic pressures upon the elderly in a county where large numbers of retirees had gathered in recent years. Many of them had saved for years for security in old age; many were willing to work even yet, if they could find jobs. They were not poor, but, on the other hand, they were not secure.

The Atlantic City Press provided a good account of the problems expressed at that hearing. I ask unanimous consent that the article be printed in the RECORD as one more argument for appropriate congressional action on social security at the earliest possible date.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SENIOR CITIZENS' INCOMES "STUCK," SENATE UNIT TOLD

(By Jack Weigand)

CAPE MAY.—Senior citizens with "stuck" incomes are caught in the tentacles of rising costs, it was disclosed Friday at a hearing conducted here by the U.S. Senate Special Committee on Aging.

Some hoped-for solutions to the problems of senior citizens included fewer limitations on social security benefits, more diversified Medicare and Medicaid benefits, more low cost housing and adequate transportation facilities for the elderly.

"Our purpose," committee chairman Sen. Harrison A. Williams, (D-N.Y.) said, "is to learn first hand about the pressures upon the elderly in a community and county in which large numbers of persons have come for retirement."

Retirees have planned carefully for their later years and even the most careful plans can be disrupted by change and rising cost, he said.

"The best and most practical testimony comes from the people directly affected by government policy and actions," the senator said.

"Today we are in a county where many persons have come from elsewhere to retire in an area where 18 per cent of the population is more than 65 years of age."

The first of four panels to testify was made up of retired citizens who had either been born in Cape May County or had migrated here from other more populated areas.

One of the citizens who had retired to Cape May from the coal regions of Pennsylvania, Al Morgan, discussed the limitations of employment income on the retiree collecting federal pensions or social security.

"Using myself as an example, he said, "I had to turn down a position on a Department of Aging TV program because it would reduce my veteran's pension to a point where it would cost me money to work."

Wages and prices are continually on the rise and as wages go up so does the price of commodities and "the senior citizen with a fixed income is stuck," Morgan said. "Even the seven per cent increase in social security has been eaten up with taxation and prices," he said.

"The aged must live on a fixed income in a period of inflation," John Edmunds, another of the panel of retirees, said.

"How can the aged with an income fixed to low-cost living adjust themselves to an era of inflation when the city seeks to keep

pace with other cities, and when schools strive to meet their requirements," he asked.

Some of the advantages in retiring in a seashore area were cited by Walter Measday.

A seashore community such as Cape May has a relatively moderate climate that makes fuel bills more modest. The clothing worn is more informal and less expensive. There is recreation in the form of fishing, bathing and boating or if you like gardening or bird watching, they're at your doorstep.

Even in a period of high building costs, you can build or buy a home for less than in a metropolitan area. Taxes are lower and temporary jobs during the summer months are available for older persons to supplement their income.

"On the other hand, there are disadvantages such as lack of permanent year-round employment and limited shopping facilities unless you own an automobile," Measday said.

After hearing the testimony of the first panel, Sen. Williams said, "I feel the population on retirees in Cape May will rise after the recommendation of this panel."

Some of the things being done to help the aged in Cape May were outlined by Mrs. Anne Zahora, executive director of the Cape May office on Aging.

"With the cooperation of the local merchants, we make discount purchasing cards available for the senior citizen which have been of great help especially in prescription needs," she said.

A monthly news letter for retirees, an information booth manned by the elderly on a voluntary basis, a local TV show aimed at the senior citizen, plus an informational and referral service for the retiree were some of the other services she outlined.

The second panel to testify before the senator consisted of city and county government officials led off by city manager Jack Needles who outlined some of the advantages retired persons offer a community.

"It has been our experience that these people bring with them a great deal of talent, vitality and clearness of thought in the approach to municipal matters, Needles said.

The experience and knowledge of the retiree leads to more comprehensive planning and insight in many of the cities important committees such as the planning board, the recreation committee and the mayor's advisory committee, he added.

Present legislation is inadequate by not providing the older person with the economic ability to integrate and participate in the community, Needles said.

"People living on fixed incomes become victims of the very programs that are intended to help them," David Heacock, director of Cape May Urban Renewal, said.

In federal assistance programs such as urban renewal, a plan of community improvement forces property owners to maintain their properties to comply with building and housing code requirements forcing debts upon the elderly to comply with the law, he added.

"A major problem is locating low cost housing near convenient shopping and other facilities within easy reach of senior citizens, Heacock said.

One of the solutions offered by Needles was to create state or regional agencies to assist local governments lacking expertise in developing housing projects for the elderly.

Once again the problem of transportation was brought to light by Jack Buchanan, director of the Cape May County Food Stamp Program.

"Many older persons have had to drop out of the program because they were unable to find transportation to get their food stamps," he said.

Although the program has proven to be highly worthwhile, Buchanan cited "pride" as one reason there are not more people involved in it.

First to speak on the third panel was Ruben R. Blane, district manager of the Social Security Administration of Atlantic and Cape May Counties.

"The state lists three resort areas as surplus labor areas during post-season with an employment rate far above the state average," he said.

However, Cape May and Atlantic counties ranked first and second of all the counties in the state with families having income of less than $3,000, Blane said, because of the large amount of retirees.

"As of the end of 1968, monthly benefits at the rate of more than $14 million, were being paid to residents of Cape May County, while those in Atlantic County added up to almost $34 million annually," he added.

One out of every five in Cape May County and one out of every six residents in Atlantic County receive social security benefits, Blane said.

"Like other parts of the social security program, medicare has become an accepted part of American life, contributing greatly to the health and security of our 35,000 older citizens in Cape May and Atlantic counties," he said.

The fundamental dilemma is the need for more medical care than the average younger person. The retiree's fixed income is much lower and they can't afford to pay the premium costs now charged for care, Blane added.

"Our older people are getting about 20 per cent more hospital care than they received before medicare, thus extending their lives," he said. "Still the increase in medical care costs are rising and we're giving this our primary attention," he said.

Restrictions under the present medicare law actually keep the most needy persons from receiving aid when they need it most, Mrs. Ann Magee, director of The Jersey Cape Visiting Homemakers Service, said.

"If a case is decided to be terminal, there are no benefits for unskilled assistance as is available with our agency," she said.

The need for better communications between the physician and the home health agency, the discontinuation of care payments before the person is completely recovered and the attitude of some professionals that if a patient appears successful, he should pay for his own care, were other problems outlined for the committee.

A panel of "green thumb" workers also spoke before the committee, reiterating the problems of the aged as they have encountered them.

The Department of Labor-sponsored group is now working in 15 states, including 10 counties of New Jersey employing 143 men, the oldest of which is 95.

TOWARD MORE ADEQUATE SOCIAL SECURITY—V

Mr. WILLIAMS of New Jersey. Mr. President, the evidence mounts every day on the need for more adequate social security benefits.

As I have said on these pages within recent days, Congress should act at the earliest possible date to raise minimum benefits and to make a really substantial across-the-board increase. The 10 percent general increase proposed by President Nixon is inadequate, unrealistic, and off-target. It fails, for example, to raise the $55 minimum benefit to a higher level before adding the 10-percent increase.

The Special Committee on Aging has already issued reports indicating that more than 7 million older Americans live in poverty or near-poverty. It has reprinted data showing that 50 percent of elderly single people living alone have incomes of less than $1,480, and one-fourth have $1,000 or less. Also, the committee has tried to emphasize that economic insecurity among the elderly should be of concern to all generations.

The national statistics on need among the elderly are worthy of considerable concern, but the problem is even more severe in certain geographical regions.

The New York Times of October 23, for example, contains a front-page story which declared that a retired couple in the New York City area needs to spend 11 percent more than retired couples in other cities to maintain a moderate standard of living. I ask unanimous consent that the Times article and statistical tables be printed in the RECORD. I commend the sponsors of the rally described in that story including the National Council of Senior Citizens. The elders of New York City provided moving, personal testimony about the daily struggle they face in attempting to pay for daily necessities.

I also point out, as emphatically as I can, that the problems described in the New York Times are not limited to the central urban areas. Recently, the Special Committee on Aging conducted a hearing in Bergen County, N.J., just across the Hudson River from upper Manhattan. There we heard about the economic pressures upon the elderly in suburban areas. Elderly individuals who had lived for decades in a community were finding out that rising real estate taxes and other costs are causing widespread despair and desperation.

For that hearing, the committee was fortunate in having a working paper prepared by Dr. Gladys Ellenbogen, professor of economics at Montclair State College. She, too, discussed the high cost-of-living in the New York City-Northern New Jersey metropolitan area, and she provided the following report on the outlook for the elderly in Bergen County:

Briefly, the outlook is dismal on at least three fronts: housing and medical costs will continue to rise and local taxes will rise. Any help for the elderly can only come from levels of government above the municipal level. With the exception of greater property tax deductions for the elderly, which is a matter for the New Jersey legislature, other help must come from the Federal government through raising social security and through greater income tax relief.

Housing costs will continue to rise because of the intensified demand for housing in Bergen County and because of the slow rate of growth of housing units. For the first quarter of 1969 the total authorized dwelling units in Bergen County amounted to 469, a sharp decrease from the 1,447 in the first three months of 1968 or the 1,000 units of the first three months of 1967. This failure to keep up with past years cannot be attributed to tight money because many counties in the State sharply increased their authorized dwelling units in the first three months of 1969 over previous years.

Medical costs will continue to rise because of the inadequate supply relative to the demand for medical services. Even if an extensive health insurance program were to be enacted at the Federal government level there can be no instant increase in the number of trained professional personnel nor can there be an instant increase in the number of health care facilities such as hospitals and nursing homes.

Local taxes will continue to rise because of increasing school enrollments and because a rising population, regardless of age, requires more municipal services such as sewage disposal, police and fire protection and construction and maintenance of local streets. The costs of municipal government necessary to administer large population densities have risen and will continue to rise.

In suburbs and in the central city, the circumstances may vary, but the end result is the same: the majority of elderly in our Nation live in economic insecurity, and their problem is worsening. The case is clear for raising social security benefits as the first step in a really comprehensive effort to change the situation for today's elderly and all the elderly of the future.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

[From the New York Times, Oct. 23, 1969]

RETIRED COUPLES IN CITY FIND LIVING MORE COSTLY

A retired couple in the New York City area needs to spend 11 per cent more than retired couples in other major cities to maintain a moderate standard of living.

The regional office of the United States Bureau of Labor Statistics issued a survey yesterday that showed that for retired couples, keeping up with the Joneses means keeping a close watch on every dollar.

To maintain what people generally consider a moderate standard of living, a retired couple here needs $4,407 a year, $398 a year more than they needed in 1967, according to the Federal agency.

The statistics had real meaning yesterday for more than 4,000 old people who gathered at a Manhattan Center rally to protest what one speaker called "the Scylla and Charybdis of a fixed income and rising prices."

Wearing blue and white "senior power" buttons, the old people made it clear that they felt the survey's budget for a low standard of living—$2,947—was very low indeed.

David Landinberg, an 82-year-old great-grandfather who keeps house for himself and his wife, who is ill, said: "Everytime I go to the supermarket the prices are higher. We haven't been to a movie in years, except once in a while to Radio City. The prices are still reasonable there."

Philip Berman, a 76-year-old retired insurance salesman, noted, "You gotta cut here, cut there, and finally decide that you're going to make do."

He and his wife live primarily on his $188-a-month Social Security check, which provides in a year less than the low-income budget compiled by the Bureau of Labor Statistics.

Mr. Berman noted, "Entertainment is completely out for us now. My wife and I have cut all the way back on clothing."

The budget estimates, which reflect prices in the spring of this year, are supposed to reflect a reasonable manner of living, not mere subsistence.

FOOD AND HOUSING HIGH

The average couple was described as a husband, age 65 or over, and his wife, who are self-supporting, living alone, enjoying fairly good health, receiving hospital and medical care protection under Medicare, and occupying a five-room or six-room mortgage-free house or a two-or-three-room rented apartment.

The couple also possesses an "average inventory of clothing, home furnishings, major durables and other equipment," according to the report.

The survey said that if the couple wanted to maintain a higher than moderate standard of living, which might include using air-conditioning, perhaps a car, and more paid services, a total of $6,623 a year would be needed in the New York area.

The higher figure is about $800 a year more than in the national urban average. But Boston requires a budget of $6,761 to maintain a similar standard.

The biggest cost items for retired couples were, as expected, food and housing. The lower standard budget allowed only $34 a year for transportation for the couple.

The biggest cheers at the older people's rally came for a bill introduced in the House of Representatives yesterday by Representative Jacob H. Gilbert, Bronx Democrat, which would raise the minimum Social Security payment from $55 a month to $90 by 1970 and to $120 by 1972.

President Nixon recently proposed a 10 per cent increase in Social Security benefits and noted that the average retired couple now receives $2,040 a year in benefits and is allowed to earn another $1,600 without any loss of benefits.

Mayor Lindsay was the only one of the three mayoral candidates to accept an invitation from the sponsoring organizations to address the gathering. He cited what he said were his achievements on behalf of the elderly, noting the half-fare subway and bus fare, rent rollbacks and increased police protection.

COSTS FOR RETIRED ARE UP SHARPLY

A chart compiled by the U.S. Bureau of Labor Statistics showing the annual cost of consumer goods for retired couples at 3 standards of living in the New York area and urban areas as a whole

	New York area cost			Urban U.S. cost		
	1969	1967	Percent rise	1969	1967	Percent rise
Lower budget:						
Total family costs	$2,947	$2,683	9.8	$2,777	$2,556	7.9
Food	919	845	8.8	851	789	7.6

TAX REFORM ACT OF 1969: REVENUE GAIN AND LOSS

Mr. HART. Mr. President, the House-approved version of the Tax Reform Act of 1969, according to a report prepared by the staffs of the Joint Committee on Internal Revenue Taxation and the Committee on Finance, grants $9.273 billion in tax relief while picking up $6.855 billion in new revenue from loophole closings. These figures are for 1979, when all provisions of the bill would be in effect.

In other words, the House-approved bill would mean a reduction in Federal revenues of $2.418 billion in 1979.

It is my view that the Tax Reform Act should balance or come close to balancing revenue lost through tax relief with revenue gained through loophole closings, and that tax relief should flow primarily to middle- and low-income families.

Looking ahead, I can see no lessening in demands on the Federal dollar.

If we are to solve the housing shortage, establish some sort of revenue-sharing program with State and local governments, clean the air and water, eradicate hunger and malnutrition, rejuvenate our cities, we should not act at this time to reduce Federal revenues.

Because of existing loopholes, we can grant tax relief where it is needed most and still pick up even new revenue to offset that loss.

It seemed to me that it might be useful to summarize the daily actions of the Finance Committee as they affect the balance between tax relief and tax reform.

The figures, which may well be on the conservative side, have been developed by the AFL–CIO.

My intent in publicizing these figures is not to endorse or oppose any particular section of the bill, but merely to note any increases or decreases in the revenue lost which result if the House bill became law.

The figures are listed by the date the Finance Committee made public its actions on a particular section of the House bill. These figures indicate that as of October 24, actions by the Committee on Finance would reduce Federal revenues by $455 million more than the House-approved bill.

I ask unanimous consent that the table be printed in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

COMPARISON OF HOUSE, ADMINISTRATION, AND SENATE FINANCE TAX-REFORM PROPOSALS

Provision	House bill	Administration proposal	Senate action	Revenue difference between House and Senate when provisions fully effective (millions)
Oct. 9: Municipal bonds	Subsidize interest for municipality issuing taxable bonds. Interest income would be included in LTP and allocation of deduction. Revenue gain, $80,000,000.	Delete subsidy. Deleted bonds from LTP, kept in allocation. Revenue gain, $45,000,000.	Deleted subsidy proposal. Deleted inclusion of interest in LTP and allocation. Revenue gain, $0.	−$80
Oct. 10:				
50 percent maximum tax on earned income.	Reduce maximum tax on earned income to 50-percent rate. Revenue loss, −$100,000,000.	Support House bill. Revenue loss, −$100,000,000.	Delete provision	+100
Gasoline-tax deduction	No provision	Eliminate deductibility. Revenue gain $390,000,000.	No provision	
Capital gains holding period	Extend from 6 months to 1 year. Revenue gain, $150,000,000.	Retain present law 6-month holding period. Revenue gain, $0.	Retain present law 6-month holding period. Revenue gain, $0.	−150
Deferred compensation	Tax deferred compensation when received at rate equivalent to rate in year earned. Revenue gain, $25,000,000.	Deleted House provision. Revenue gain, $0	Deleted House provision. Revenue gain, $0	−25
Investment tax credit	Repeal with some exceptions and amortization liberalizations. Revenue gain, $2,800,000,000.	Supported House with some exceptions. Revenue gain, $3,100,000,000.	Accepted House with exception for railroad rolling stock. Revenue gain, $3,100,000,000.	0
Oct. 13:				
Charitable contributions	Increase deduction limit to 50 percent. Revenue loss, −$30,000,000.	Support with some changes. Revenue loss, −$30,000,000.	Accepted House bill plus administration modifications. Revenue loss, −$30,000,000.	
Unlimited charitable-contribution deduction.	Repeal with a 5-year phaseout rule. Revenue gain, $50,000,000.	House plan. Revenue gain, $50,000,000	House plan with some exceptions in phaseout. Revenue gain, slightly less than $50,000,000.	(1)
Oct. 14:				
Income averaging	Extend income averaging to capital gains, wagering, and gift income; and liberalize rate. Revenue loss, $300,000,000.	Supported House. Revenue loss, $300,000,000	Delete capital gains, wagering, and gift income from income eligible for averaging. Retain House rate liberalization. Revenue loss, $110,000,000.	+$190
Moving expenses	Liberalize moving-expense deduction. Revenue loss, $100,000,000.	Supported House. Revenue loss, $100,000,000	Accepted House. Added self-employed. Revenue loss, $110,000,000.	−10
Interest deductions	Limit deduction of interest on funds borrowed to carry investments. Revenue gain, $20,000,000.	Delete. Revenue gain, $0	Put over	
Oct. 15:				
Accumulation trusts	Tax trust income as if earned by beneficiaries. Revenue gain, $70,000,000.	Support House. Revenue gain, $70,000,000	Accepted and slightly strengthened. Revenue gain, $80,000,000.	+10
Foreign tax credits	Limit income-tax credits for foreign osses and trim tax advantages of foreign royalties. Revenue gain, $65,000,000.	Support House with change in treatment of foreign royalties. Revenue gain, $50,000,000.	Delete House provision	−65
Multiple corporations	Limit corporations to one $25,000 surtax exemption—8-year transition. Revenue gain, $235,000,000.	Supported House. Revenue gain, $235,000,000	Strengthened phaseout and weakened effective date. Revenue gain, $235,000,000.	0
Conglomerates	Deny interest deduction in certain corporate merger activities. Revenue gain, $70,000,000.	Support House. Revenue gain, $70,000,000	Put over	
Oct. 16:				
Surtax	5 percent surtax to June 30, 1970. Revenue gain, $3,100,000,000.	Accepted House. Revenue gain, $3,100,000,000	Accepted House. Revenue gain, $3,100,000,000	0
Financial institutions	Limit bad-debt deduction; tax gain on sale of securities as income, not capital gains; limit tax exemption of foreign depositors. Revenue gai $460,000,000.	Support House bill with some changes. Revenue gain, $410,000,000.	Substantially weakened House-placed limitations on bad-debt deduction and certain transition rules. Revenue gain, $210,000,000.	−250
Oct. 17: Farm losses	Limit tax advantages of certain farm losses, through the establishment of excess-deduction account; tighten depreciation recapture rules, capital-gains provisions applying to livestock, and hobby-loss provisions. Revenue gain, $20,000,000.	Strengthen House bill so that EDA rules apply to taxpayers with nonfarm income of $25,000—House uses $50,000. Revenue gain, $50,000,000.	Adopted substitute provision which would disallow 50 percent of excess deduction. Weakened livestock, capital-gains, and hobby-loss provisions. Revenue gain, $20,000,000.	0
Oct. 20: Real estate	Limit double depreciation to new housing. Other real estate limited to 150 percent, and used property to straight line. Allow 5-year amortization for rehabilitation on low-cost housing and provide full recapture upon sale of property. Revenue gain, $1,005,000,000.	Supports House bill but suggests more favorable recapture provisions on residential housing and certain federally assisted projects. Revenue gain, $1,005,000,000.	Accepted House bill with administration suggestions and other minor changes. Revenue gain, $980,000,000.	−25
Oct. 21:				
Capital gains maximum tax—individuals.	Eliminate 25 percent maximum. Revenue gain $360,000,000.	Eliminate maximum tax only for persons with large amounts of capital gains. Revenue gain, $300,000,000.	Deny maximum to those with other preferred income over $10,000 and married couples with capital gains of over $140,000. Revenue gain, $300,000,000.	−60
Capital gains maximum tax—corporations.	Raise alternative rate from the present 25 percent to 30 percent. Revenue gain $175,000,000.	Supports House. Revenue gain, $175,000,000	Accepted House. Reveune gain, $175,000,000	0
Oct. 23: Percentage depletion	Reduce depletion to 20 percent for gas and oil and comparable reductions in depletion for other minerals. Revenue gain, $400,000,000.	Accept House proposal. Revenue gain, $400,000,000.	Reduce depletion to 23 percent for oil and gas; retain present rates for other mineral industries. Raise present law 50 percent of earnings ceiling on depletion to 65 percent for firms with $3,000,000 or less in revenue. Revenue gain, $155,000,000.	−245
Oct. 24: Limit on tax preferences and allocation of deductions.	Provide a minimum tax and require deduction be allocated between taxable and nontaxable income. (Corporations not included.) Revenue gain, $545,000,000.	Supported House—recommended some changes in items considered as preferred income. Revenue gain, $540,000,000.	Adopted alternate proposal to tax preferred income of individuals and corporations at 5 percent after first $30,000. Revenue gain, $700,000,000.	+155
Other actions to Oct. 24	Revenue gain, $400,000,000	Revenue gain, $400,000,000	Revenue gain, $400,000,000	0
Total				−455

[1] Slight loss.

TAX POLICY AND TAX REFORM

Mr. KENNEDY. Mr. President, at the end of September, Prof. Stanley S. Surrey of the Harvard Law School delivered a major address on Federal tax and fiscal policy before the 62d annual conference of the National Tax Association, which was meeting in Boston. As Members of the Senate are aware, Professor Surrey is one of the most eminent authorities on tax law and tax policy in the Nation, having served for 8 years with distinction as Assistant Secretary of the Treasury under President Kennedy and President Johnson.

In his address, Professor Surrey discusses at length the current trend in Congress and the Nation toward tax equity and tax reform, and he notes the favorable atmosphere that now exists for the cause of tax justice. Most important, he emphasizes that, at bottom, the struggle for tax reform is a moral struggle, and that it would be immoral for us to continue the existing inequities of our Federal income tax laws.

Professor Surrey also deals with several other important aspects of tax philosophy, including the role of tax incentives, the concept of the "tax expenditures budget," and their relation to the major new incentives adopted in the

House tax reform bill in the areas of pollution control, housing, and transportation. In addition, in the final portion of his address, he discusses a number of other issues of tax policy, such as the negative income tax, social security financing, the use of tax policy for economic stabilization, and the value-added tax.

Mr. President, I believe that Professor Surrey's comprehensive address will be of interest to all of us concerned with tax reform and future developments in Federal tax policy and philosophy. I therefore ask unanimous consent that the address be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FEDERAL TAX AND FISCAL POLICY—SOME ASPECTS OF FUTURE DEVELOPMENTS

(By Stanley S. Surrey, Harvard Law School)

The subject we are discussing today has much of the elements of a topic entitled "The Federal Tax System Twenty-Five Years From Now—What Will it Look Like." It would be interesting to place this discussion back twenty-five years—just about the end of World War II—and reflect on what would have been said at that time on such a topic. We could thus compare what were the principles, policies and predictions then set forth with where we are today. I have not engaged in that research. But some brief thinking about 1969 compared with 1945 does give us a few points of perspective.

The main features of the Federal tax system appear to change very slowly in peacetime. The public finance specialist who left the U.S. in 1945 and returned in 1969 would not feel much of a handicap in getting the sense of the present system and renewing his viewpoints and criticisms. He would have seen a persistent current of changes pushed in the post-World War II period by various industry groups, investors and executives seeking to increase their tax benefits and in the process to weaken the equity of the tax system. He also would have seen, in what we hope will always be the swing of this particular pendulum, a persistent current moving the other way in the last decade. He would have sensed increased awareness of the relationship between the tax system and fiscal policy as respects tax changes for economic stabilization purposes and for sustained economic growth. The traditional wisdom of the economists became the new economics of the tax policy marketplace, even perhaps as the economists were embarking on an assessment of that traditional wisdom. He would have to note the rise to significant importance of the payroll tax in response to the expansion of Social Security and allied benefits, and set this down as a major development. Alongside this change, was a decline in the importance of excise taxes at the Federal level. Finally, he would not find a marked difference in the legislative process by which we go about achieving changes in tax policy in the United States.

Of course, a lawyer or accountant or tax executive who took such a twenty-five year sabbatical would by no means be in the same position when he returned. All could well be bewilderment and confusion to him, for the pace of change in the operational and technical detail of the Code has been quite marked. The currents of change in these areas do leave the Code more and more complex as they pass by. Hence, tax planning and thus business and estate planning are far more difficult today from the tax standpoint, as well also as from other standpoints.

With this retrospective glance, should we venture to say anything about what the tax system of the United States will look like twenty-five years or even fifteen years in the future. Will the process of change be as slow as in the past or will there be a rapid pace of significant developments that can materially alter the tax landscape. I see no sense in engaging in prophecy along that line. Rather, I prefer to discuss some current—very current—trends that may extend into the future and then consider some possible new developments.

SOME CURRENT TRENDS THAT MAY CONTINUE

Tax equity

We are presently witnessing a concentration in Congressional tax activities on the equity or fairness of the Federal income tax. Such a concentration while long overdue is the culmination of persistent efforts on the part of the Executive Branch, primarily the Treasury Department, in the last eight years to stress the criterion of tax fairness and to call attention to the weaknesses of the present system. Those efforts have been materially assisted by academic economists and lawyers holding the same view, both in their writings and in the advice they have given to the Treasury Department as consultants. Studies in depth in various critical areas, notably those under the auspices of the Brookings Institution, have been a part of this academic activity. These Treasury efforts and academic activities have had an effect upon a small but articulate group of publicists, notably in the Washington press corps. They in turn have done a remarkable job in educating the public about these matters and in heightening the clarity and perception with which the content and course of tax legislation have been reported. A Congressional tax staff more attuned to the realities of current tax problems and having a broader base of knowledge and reference has been a part of this chance in attitude. Also, within the organized legal profession there has been a growing realization of the need for improvement, with a small group of lawyers, many of them "Treasury Department graduates," in the forefront of this trend.

The need for stabilization purposes to increase Federal income taxes through the adoption of the 10% surcharge, and now its extension, have been a significant catalytic agent for tax reform. In this sense, we see once again the working of the view that in periods of war do we find the major movements in tax policy.

The need for stabilization purposes to increase Federal income taxes through the adoption of the 10% surcharge, and now its extension, have been a significant catalytic agent for tax reform. In this sense, we see once again the working of the view that in periods of war do we find the major movements in tax policy.

How deep is this Congressional emphasis on tax fairness and the desire for structural improvement in the tax system? And how sustained will it be—is it for example strong enough to carry the current tax bill to a successful conclusion? Clearly the emphasis in the Ways and Means Committee and in the House was much stronger than many had assumed. Congressmen who had taken little interest in reform proposals a few years back, or had opposed them, were now strongly urging those same proposals. But tax reform is a bitter struggle, and pressures against it are intense and often mutually reinforcing. In this area real success obviously comes more readily with strong Presidential and Treasury Department leadership working with a determined and influential group within the Congress and having—and developing—strong support from public opinion. Only rarely in our tax history do all these factors moving in their various orbits suddenly come into the proper supportive positions relative to each other. We can only hope that the remaining months of 1969 and thereafter will mark such an alignment, and that the factor of Executive Branch leadership will be present to unite with the other factors.

One further word on tax fairness and the current bill. The present struggle for tax reform is essentially a moral one. It is totally immoral for us as a nation to continue the inequities of our Federal income tax. It is immoral to place income tax burdens on those in poverty or close to it. It is immoral to have an efficient withholding system for wages and salaries that inexorably collects the tax liabilities of the little fellow and the moderately well off salaried person and then to tolerate the wholesale escape from their tax liabilities that characterizes our high-income recipients as a class. It is immoral to condone tax rules under which investment counselling houses and tax consultants operate a national supermarket in pre-packaged tax shelters.

I believe that many in the Congress and a large part of public opinion do recognize the profoundly moral implications of the current stress on tax fairness. Let us hope so. In this recognition can lie the strength and continuance of such an attitude. For an enduring principle of tax policy must be a strong, consistent emphasis on tax fairness.

Tax incentives

I believe we are also presently witnessing a widening understanding of the problems of tax incentives—the problems involved in the use of the tax system to provide Governmental financial assistance rather than furnishing that assistance through direct expenditures. Much of the reform in the House Bill involves the cutting back of existing tax incentives, some long in our tax system.

The publication in the Report of Treasury Secretary Fowler for Fiscal Year 1968 of a Tax Expenditure Budget and the updating of that Budget by Secretary Barr in testimony before the Joint Economic Committee in January, 1969—examples of the type of leadership a Treasury Secretary must take if the tax system is to be improved—for the first time enables us to gain some awareness of the magnitude and direction of the assistance that is granted through the tax system. There is much for public finance and expenditure economists to study here, for one suspects a very significant wastage and misallocation of resources. There are about $45 billion of tax expenditures that have scarcely been analyzed. There is also the basic undercutting of the fairness of the tax system that occurs when tax incentives are used, for each tax incentive offered to meet a national problem, real or supposed, means that the progressive income tax has to be set aside pro tanto. Individuals are made wealthy through the tax benefits of those incentives without subjecting the financial assistance so obtained to the moderating influence that a progressive income tax is designed to apply to the financial rewards of risk taking and enterprise in our society.

There is much to be learned and taught regarding tax incentives. Their strong defense by those who benefit from them has an ironic quality which many of those beneficiaries do not recognize. They claim to be stressing the wisdom of giving private enterprise free play without Government influence when in reality they are stressing private enterprise *plus* Government financial assistance. At the same time that some legislators are engaged in difficult struggles to draw back on existing incentives, other legislators—and the Treasury Department—are, at a single, almost casual stroke, adding new incentives. Without any study at all, the Ways and Means Committee commits the Government to an expenditure of nearly a half billion dollars for pollution control facilities installed by industry. Without any study at all, the Treasury Department induces the Committee to commit the Government to an expenditure of over $300 million in the rehabilitation of rental housing. Neither action is taken with any regard to overall priorities in the pollution control and

housing areas. There are other examples in this current tax bill—the seven-year amortization for railroad cars in the House Bill and the Treasury proposed exemption of 5% of the gross income of financial institutions from certain loans. There is something wondrous in a process in which efforts are being made to have some of the long-time residents in our tax incentive shelters either move out or change to less luxurious quarters while at the same time new residents are welcomed without any check on their credentials. Once in, of course, the new residents will certainly work to create an imposing credentials to embroider a "Don't Disturb" sign on their quarters—just as the present residents are fashioning urgent national policies and incentive needs to support tax policies originally adopted without any thought at all along such lines but instead for limited technical tax considerations of administrative convenience and the like.

We thus have much more to think about and work on in this tax incentive and tax expenditure area. But here also the thought and work are vitally necessary both to an improved tax system for the future and to a more rational Government expenditure policy. We must find appropriate mechanisms to transfer to direct expenditure programs the funds now involved in the present tax expenditure programs to the extent Government assistance is considered still to be appropriate. We must seek to understand and overcome a legislative psychology that will refuse to vote direct appropriations for carefully structured programs but accept without hesitation tax expenditures in the same area for programs having no structure or study at all.

All of this has major meaning for the future interrelationship of the Federal tax system with our social and urban problems. We must know more than we do about how that system contributes to those problems, for example in its effects or non-effects on the distribution of income in this country. We must know more than we do about all the proposals to involve that system, generally through tax incentives and tax credits, in the solutions to those problems. Whatever heading we apply to classify these matters, be it tax incentives or tax expenditures or the relation of the Federal tax system to urban and social problems, these matters should occupy major attention in the period ahead.

Simplification and complexity

There are aspects of tax simplification in the current tax revision. These are largely found in the proposal to increase the standard deduction and as a by-product of an increase in the minimum standard reduction. Also, here and there a technical structural change, such as in the averaging provision, will work for reduced complexity. But in many a specialized area the revision will presumably produce some added complications or substitute one form of complexity for another. Much of this is inevitable, given the complexity of so much else in our society and the necessarily wide impact of a Federal tax structure. I would go slow indeed in urging that worry about such complexity take precedence over worry about unfairness and lack of equity. For I doubt we have ever seen any group reject a tax benefit on the grounds of its complexity. Rather that argument is reserved for use when a change is proposed to reduce a present benefit.

Further, the basic question is not so much complexity itself as that of the effective management of complexity. Here the task is one of making complexities understandable, of efficiently providing answers to questions that grow out of complexity—provided the questions relate to genuine business activities and not to tax avoidance probings of just how far can some provision be exploited by taxpayers—and of preventing complexities from being improperly exploited by the Government. This is a task that modern tax administration must face and on which it must constantly work to maintain as much coherence and order as possible.

SOME POSSIBLE NEW DEVELOPMENTS

Let me turn now to consider what may be some major new developments in our Federal Tax System.

Negative income tax and the positive tax system

The years ahead are quite likely to see the development of some combination of an extensive Federal welfare expenditure system with our present positive income tax structure. Presumably this linkage of negative and positive tax systems will develop slowly and experimentally. Our public finance and welfare specialists have been working at this and their ideas are gaining an acceptance with a rapidity that is quite marked. The President's proposals in this area are an example. The report of the Heineman Commission on Income Maintenance should considerably advance the discussion. The current emphasis on relieving the very poor—those below the poverty level—from income tax burdens and alleviating the burden on low-income families above that level—is another force shaping the contours of the structure that is developing.

A factor that may make for more expeditious legislative analysis and thought about this subject is that both the welfare component and the positive tax component wall within the jurisdiction of the same Committees of the Congress—the revenue Committees. These Committees will have to deal with the subject of increased welfare payments and because of their jurisdiction will be able to consider both traditional approaches and new approaches such as the negative income tax or its family income variant in the President's plan, or the family or children's allowance payments under other plans.

Social security financing

The development of an integrated "welfare expenditure—positive income tax" system is likely to be accompanied by changes in the payroll tax financing of the Social Security system. Now that the payroll tax has grown to its present significant position, we are beginning to look more critically at the mechanism itself. Recent studies at the Brookings Institution are an illustration. Thus, the imposition of the payroll tax on the first dollar of earnings is in sharp contrast to efforts to relieve those in or close to poverty of their income tax burdens. The confinement of the payroll tax to wages and salaries, the upper limit on its application, and its flat rate are at odds with our emphasis on the progressive rate structure and total income concept of the individual income tax. The incidence of the two taxes is also markedly different. Developments are very difficult to predict, for an entrenched tax has great resistance to change.

It may also be that more attention to this area will lead to a reconsideration of the treatment of the aged under the income tax. A very large amount of financial assistance, about $2½ billion, is channeled to the aged through income tax preferences. No HEW administrator in his right mind would ever devise a program of direct assistance that would parallel the effects of the tax expenditure assistance.

Tax policy—and economic stabilization and growth

There undoubtedly will be significant developments in the relationship of tax policy to economic stabilization and growth. We are gaining experience in both the economics and the politics of using tax policy for stabilization and growth purposes. But obtaining a net gain in experience comes hard, for the politics often intrudes on the economics. Thus the political attitudes surrounding the investment credit, or more significantly its repeal, have made it difficult to think about that device as a useful tool for stabilization and growth purposes. This in turn could lead to thinking about far less efficient and less desirable approaches, such as depreciation policy. Informed, careful study of all such devices is appropriate but we should not put limits on such a study that would automatically exclude the investment credit from its scope. And also we should not resort to tax devices for economic stabilization and growth that are so interwoven with the fabric of the regular tax structure—and hence take on the protective coloration of the terminology and technicality that characterize that structure—so that only the keepers of the temple know which provisions owe their origin to economic stabilization or growth and which to the proper measurement of net income. The investment credit has no such camouflage and hence lends itself to straight-forward consideration of its purposes and effects in different economic climates. On the other hand, one suspects that the use of depreciation policy for stabilization or growth purposes would have a highly effective camouflage cover, and that this aspect in turn heightens its appeal for some.

Alongside our substantive experimentation with tax changes for stabilization policy, we are garnering experiences on the Congressional consideration of the legislation involving those changes. The economics have generally chided—perhaps severely criticized is more accurate—the Congress for its dilatory consideration of this legislation, notably the adoption of the 10% surcharge and now its extension. But this criticism does not give proper weight to the issues that caused the delay. In 1967–1968, the issue was that of expenditure policy, and for many behind that issue was the war itself. In 1969 the issue is that of tax reform. Henry Wallich has criticized those in Congress who link the surcharge extension with tax reform and he seeks "to build a wall between reform and tax rate change." (Newsweek, Aug. 11, 1969, p. 57). But in both instances those pressing these issues lacked confidence in their ever getting a real opportunity to have their basic objectives considered and met.

A Congressman assured of a real legislative and executive effort to achieve tax reforms might be willing to build that wall. But if he suspects, because of prior experience, that the wall is being built to keep tax reform from ever being favorably considered, he can well ask who really is responsible for the delays in considering rate changes.

Hence, the question is not only how to achieve prompt consideration of rate changes for stabilization purposes, but how also to achieve prompt and effective consideration of those matters so closely linked to the rate changes. And, when as in 1967–1968 the Legislature and Executive may hold different views on the accompanying issue, their expenditure policy, the question is how to achieve a rapid resolution of those differences. Tax matters are among the most sensitive in our legislative halls. Economists seeking to achieve legislative processes more suitable to the timetable required for appropriate stabilization policies must in their thinking realistically consider these complex political problems.

Perhaps we can assign to this category of tax policy and economic growth the questions surrounding the introduction of a value added tax in the United States, for this matter has relevance to the proper balance between encouragement to, or burden on if the other side of the coin is preferred, investment compared with consumption. But wherever we assign the matter, apparently the subject of the value added tax will be with us. Unfortunately, we are likely to enter into that subject with a large amount of confusion, rhetoric, and dissembling. Partly this

is due to the way the tax developed and spread in Western Europe. There the basic question was what to do about existing high level excise taxes on consumption structured in the unsatisfactory form of turnover taxes. The step to a value added tax was perhaps a natural transition, for it led to a more efficient and economically neutral tax that still had the probably necessary political strength of appearing to tax all the productive and commercial sectors as did the turnover taxes.

The question in the United States is a different one. We have no general Federal tax on consumption. We have, however, in effect a national sales tax of the retail type in the cumulative geographical coverage of the various state taxes. The rate level of this composite tax is approaching 5%. Where do we want to go from here? If we are to have a unitary national tax on consumption, the immediate questions would seem to center around the use of the retail form in view of our state and local experiences. In this light, the questions would be such as: Do we want a Federal tax on consumption; if so, given our state and local experiences with the retail tax, what is the best form and structure of a retail tax; if we have such a Federal tax, how do we coordinate it with state and local taxes to achieve at least the benefits of efficiency in administration and uniformity of rules; do we want a Federal tax of this character even if it raises no revenue for the Federal Government but achieves more uniformity and coordination as respects the existing state and local levels while at the same time allocating the revenues collected to those governmental units.

Such questions do not even raise the issue of a value added tax. (I am assuming we are still a long way from exploring progressive expenditure taxation). It would seem we would come to that issue only if one were to assert and prove that the value added method of imposing a final tax on consumption by non-business consumers is clearly superior to the retail method of achieving that result. In a real sense the Europeans, because of their history, never got to that question. They are beginning to consider it, however, as they recognize that all the steps in the value added tax process lead to that result. They are thus beginning to raise the question of why they need the two-way stream of tax payments by manufacturers and wholesalers to the Government and credits and refunds back if the only end purpose is to build up an accounting or documentary dossier on the retailers.

Consequently, it is to be hoped if we are to explore a national consumption tax in the United States, and especially the value added tax, we do so in a manner that makes the functions and effects of a value added tax much clearer to the business community and the general public than have most of the discussions to date.

Coordination with States and localities

We may see a movement to achieve better coordination of Federal and state, and perhaps city, tax structures where they overlap. There is considerable room for increased efficiency in the administration of the income tax in the United States through in various ways integrating the application of Federal, State and city income taxes. Some states are leading the way through meshing the state tax itself or the state income tax base with the Federal system. In time we may come to "piggy-back" arrangements which would reduce the administrative machinery. We may also make further progress in coordinated auditing and compliance activities under the income tax. In turn, these coordinated enforcement activities could include the administration of taxes that have a linkage to factors involved in the determination of the income tax, such as sales taxes on gross sales.

The developments with respect to proposals for Federal revenue sharing will have an impact in this area. Adoption by the Congress of a direct revenue sharing system or the approach of a credit for state taxes presumably could move the coordination along more rapidly. Certainly the expenditure of Federal funds in this way can be accompanied by urgings for greater coordination. But even if Federal expenditure policy is not to encompass such blanket revenue sharing devices, still we should be developing much closer coordination in administration.

THE PROCESS OF FORMULATING TAX POLICY

The various topics mentioned above are illustrative of some developments that may occur in the Federal tax system. Perhaps they may not occur. But others will. It may be helpful to give some consideration to aspects of the process by which tax policy and changes in policy are formulated. For whatever the particular substantive development involved, that process will apply.

There is a vital need for more analysis and study of the issues of tax policy. Too often problems get pushed to the forefront of the legislative process without an adequate background of study to help shape their resolution. All involved—the Treasury, the Congressional staff, the Committee members—are forced to grapple with the problems without the benefit of prior careful analysis and data gathering. The results often reflect the lack of background. This situation can become especially acute as we pass beyond the present tax stage of tax reform, for in this process we will be using up the stockpile of research that has been accumulating over the previous years. The task is to replenish that stockpile by commencing studies on the subjects that we can anticipate will occupy the legislative stage a few years in the future. At the same time research should proceed in areas of importance that will otherwise lie dormant, neglected without the exposure such research provides.

Fortunately we are at the threshold of a promising period of study in the tax field. The new research tools—computer technology, econometric analysis, cost-benefit analysis and the like—are being used more and more in the analysis of tax policy problems. These techniques should assist us in moving the debates away from the still all too prevalent level of unproven self-serving declarations and cliches that characterize many tax policy discussions today.

Analysis and research by academicians and others is not enough however. There is the problem of communicating the results of that research to policy-makers in the executive and legislative branches. Too often decisions are taken in those places that, largely out of ignorance of its existence, belies the amount of knowledge that available research and study could in fact provide.

Essentially it would seem that the channels of communication must lie in alert and well-informed staffs in both the Treasury and the Congress. These staffs must have far more time and funds to engage in research studies themselves, to commission through contract arrangements studies by outside institutions and individuals and to coordinate those studies with research work originating elsewhere. The funds spent in this country on research in tax policy matters are pitifully small compared with the complexity and importance of the issues involved.

The work of these staffs must be supplemented by a wide-ranging and vigorous use of consultants, themselves familiar with the current state of research and study. It is then the task of these staffs and consultants to keep the policy-makers conversant with the knowledge that is relevant to their policy decisions. This is by no means an easy task to accomplish, be the policy matters in the Executive Branch or the Congress.

Some of our Congressional Committees are performing a useful role in bridging the communications gap. The Joint Economic Committee is an outstanding example. But even here there lies the next step of making the legislative committees really familiar with the information so developed. The Ways and Means Committee has at times successfully used hearings involving panels of consultants chosen to develop a subject matter in a coordinated manner and more should be done along this line.

Careful studies will aid in selecting the issues that should be considered by the Congress. Legislative struggles in the tax field are difficult and time consuming. They should, therefore, be made to serve a purpose and the battlegrounds intelligently chosen so that the time and effort is not wasted on side shows or blind alleys. We should try to formulate a target path for the development of the tax system and then to see that the main legislative efforts stay reasonably within that path.

This is not to say that academic or similar analytical wisdom always provides the appropriate solution. All that goes under the rubric of political considerations broadly applied will necessarily temper the final choice. Indeed, there now is unfolding in Canada in the Government's consideration of the Carter Commission Report an illustration of the nature of the political response that may be made to tax recommendations shaped primarily by rigorous, economic analysis. But the point remains that a prerequisite to wise political decisions is the availability of careful, objective analysis of the issues involved and the communication of that knowledge to the political groups in a form they can utilize and comprehend.

Finally, I would add the task of communicating the knowledge to the general public, and here also in a form and manner that permits adequate comprehension. We need for this processs publicists interested in tax matters who can work with the academicians and others engaged in the basic analysis.

If we can adequately meet these demands of analysis and communication in the years ahead, then whatever the tax policy questions that arise we can be far more confident that the answers will provide us with an equitable tax system responsive to the needs of the times.

CONCLUSION OF MORNING BUSINESS

The PRESIDING OFFICER. Is there further morning business? If not, morning business is closed.

RETIREMENT OF JUSTICES AND JUDGES OF THE UNITED STATES

Mr. PROXMIRE. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of the unfinished business.

The PRESIDING OFFICER. The bill will be stated by title for the information of the Senate.

The ASSISTANT LEGISLATIVE CLERK. A bill (S. 1508) to improve judicial machinery by amending provisions of law relating to the retirement of justices and judges of the United States.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill.

ORDER OF BUSINESS

Mr. PROXMIRE. Mr. President, I ask unanimous consent that, notwithstanding the relevancy rule, I be allowed to proceed for 30 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

PRESIDENT NIXON'S BLUE RIBBON DEFENSE PANEL

Mr. PROXMIRE. Mr. President, the need for a top level review of the procurement and management policies of the Defense Department has long been apparent. Widespread reports of fantastic cost overruns have angered taxpayers throughout the United States. The billion dollar overruns on the C–5A alone are reason enough for a top-to-bottom review. Added to such examples of waste has a pronounced loss of public confidence in the Pentagon, so pronounced that even the Defense Department has publicly viewed it with alarm.

It was this concern that led to the formation of a special blue-ribbon defense panel to study the procurement and management practices of the Pentagon on June 30, 1969. In a joint announcement, President Nixon and Secretary Laird expressed their urgent hope that the panel would "restore public confidence and credibility in the Department of Defense."

Shortly thereafter, Mr. Gilbert W. Fitzhugh, chairman of the board of Metropolitan Life Insurance Co., was selected to head up the panel. As I have already disclosed, Metropolitan Life has outstanding loans to 24 top defense contractors valued at almost $1.4 billion. Despite this fact, Secretary Laird confidently assured the Nation that "under Mr. Fitzhugh's leadership the Panel will view the Department of Defense with a fresh, objective, and uninvolved perspective."

Although Mr. Fitzhugh resigned his positions with Singer Corp. and Consolidated Edison, he chose to remain as chairman of the board of directors of the Metropolitan Life Insurance Co., which of the three, has by far the largest defense interests. Commenting last night on the obvious conflict-of-interest charges, Fitzhugh pleaded that the panel be judged not on its membership, but on its work. Referring to the questionable ability of the panel to turn out an objective report, he stated:

> I honestly think we will come up with something productive and objective. If we don't we deserve to get clobbered.

This is one Senator who will remember those words. We will be waiting for Mr. Fitzhugh's report.

Credibility was what the President and Secretary Laird were seeking to restore. At the time of Mr. Fitzhugh's appointment they were determined that the full membership would reflect this concern for objectivity and detachment from Pentagon influence. What I did not know at that time was that the Pentagon had very different ideas from mine as to who would best serve its objective of restoring credibility to the Defense Department. I thought "uninvolved" which was the term Secretary Laird used, meant independent of Pentagon influence.

The extent of the reversal in attitude reflected in the actual appointments was astonishing. The New York Times reported the announcement by saying:

> Companies that do business with the Pentagon were heavily represented in the group.

It seemed that the selection of Mr. Fitzhugh as chairman had set the pattern for the selection of the other members.

Gilbert W. Fitzhugh, prior to his appointment as chairman, was chairman of the board of the Metropolitan Life Insurance Co. and a member of the board of directors of the Singer Co. and Consolidated Edison. As I disclosed in an earlier statement, Metropolitan Life holds $34,000,783 worth of common stock in 24 of the 100 largest defense contractors. The company also has outstanding loans to 24 of these same top 100 defense contractors totaling $1,325,000,000. Mr. Fitzhugh has resigned his positions with the Singer and Consolidated Edison companies, but continues as chairman of Metropolitan Life Insurance Co.

What has not been disclosed yet is that, of the 15 Panel members selected, eight of the members, representing a majority of the Panel membership, still hold official positions with 12 different companies which have a combined total of over $815 million in defense contracts. Not only this, but a number of these members have held high-ranking military or civilian positions in the Defense Department before joining defense industries.

Heading the list of members with close Pentagon associations is Robert C. Jackson, chairman of the board of Ryan Aeronautical Co., the 23d largest defense contractor with defense business totaling almost 300 million—$293,158,000 Almost 70 percent of Ryan Aeronautical's business is with the Pentagon—68.8 percent. Not only does the company which Jackson heads have very important contracts with the Pentagon, but Jackson himself is a member of several Defense-related organizations. He is a member of the Aerospace Manufacturer's Council, the public relations arm of the Aerospace Industries Association which represents the entire industry before the Government and the public. He is a member of the Defense Orientation Conference Association, a group of top-flight business and professional leaders who receive regular briefings on Pentagon activity. Jackson also holds memberships in the Air Force Association, the Navy League, and the Army Aviation Association—all of which are heavy supporters of Pentagon policies.

The second Panel member is George Champion, an outstanding supporter of Pentagon activity, who is a director of the Traveler's Insurance Co., which has loans and stock interests in defense industries totaling almost $200 million—$199,093,963. Champion is director of the International Paper Co., which holds $665,000 worth of defense contracts and American Smelting and Mining Co. which does $448,000 worth of defense business. In addition, Champion holds positions with the Chase Manhattan Bank of which I understand he was chairman of the board, the Chase International Investment Corp., the Standard Bank, and the Standard Finance and Development Corp.—all companies which undoubtedly rely upon defense holdings for a considerable part of their business.

Following Champion is Lewis Franklin Powell, Jr., whose Richmond law firm, Hunton, Williams, Gay, Powell and Bibson, represents Newport News Shipbuilding and Drydock Co., the 34th largest defense contractor, with $181,309,000 worth of defense contracts. Almost 60 percent of the company's business is with the Pentagon—59.1 percent. Powell is also a director of the Chesapeake and Potomac Telephone Co., which holds over $13 million in defense contracts. Formerly an Air Force intelligence officer, Powell is now a colonel in the Air Force Reserve.

A fourth member is Ruben F. Mettler, who has very close professional and business ties with the Pentagon and the defense industry. He is presently executive vice president and director of TRW Inc., which holds $127,467,000 in defense contracts and ranks 52d on the top 100 list. Mettler is also industry vice chairman of the Defense Industry Advisory Council, a group of representatives from top defense contractors which meets several times a year to discuss procurement problems with Deputy Secretary of Defense David Packard. Mettler left Hughes Aircraft, another giant defense contractor, in 1954 to become a special consultant to the Assistant Secretary of Defense. He then went to TRW in 1955. Between 1958 and 1968 TRW rose from 89th to 52d on the top 100 list of defense contractors. On a separate list of contractors doing research and development for the Government, TRW stood 17th out of the top 100 R. & D. contractors in 1968.

Another member is Wilfred J. McNeil, presently director and advisor of the Fairchild-Hiller Corp., which has $121,-259,000 in defense contracts, the 56th largest defense contractor in the Nation. Almost one-half of Fairchild-Hiller's business is with the Pentagon. Before coming to Fairchild-Hiller, McNeil served as a Pentagon employee for 16 years from 1941 to 1957. By the time he left the Pentagon in 1957 he had attained the position of Assistant Secretary of Defense and Comptroller. He is presently a member of the Navy League, a group of retired naval officers, and a member of the Army-Navy Club. In short, McNeil's entire life, both professional and social, revolves largely around Pentagon related organizations.

William Blackie, also a member of the panel, is chairman of the board of the Caterpillar Tractor Co., which holds $42,753,000 in defense contracts. One-fourth of the company's business is with the Defense Department. He is also a director of the Shell Oil Co., which holds another $32,754,000 in defense contracts.

Another member, William P. Clements Jr., is chairman of the board of governors of Southern Methodist University which holds $735,000 in defense contracts. Clements is also director of Fidelity Union Life Insurance Co., which has loans and stock interests in Defense industries totaling $7.6 million. In addition, he is chairman of SEDCO, Inc., which holds another $93,000 in defense contracts. The defense holdings of the

First National Bank of Dallas, of which Clements is a director, are not public.

At the bottom of the list, and rounding out the majority of the panel is John Maurice Fluke, president of John Fluke Manufacturing Co., which holds $1,472,000 worth of defense contracts.

To put these eight men in perspective, a quick profile of their defense-related interests shows that each man through his company associations, on the average, has interests of over $100 million apiece in either defense contracts or defense industry holdings. One man, George Champion, has interests in defense business of over $300 million. Two of these eight members also hold official positions with insurance companies which have loans to defense industries and stock interests in defense industries which total over $200 million. In short, these eight members have a combined total of over $1 billion worth of interests in defense contracts and defense industries—$1,021,902,963.

Even this figure, however, is dwarfed by Chairman Fitzhugh's interests alone in the Metropolitan Life Insurance Co. He is the man appointed by the President to be chairman of this independent panel to make an objective and critical evaluation of the Pentagon. The company holds over $34 million worth of common stock in defense industries, and has outstanding loans to 24 top defense contractors totaling over $1.3 billion. In short, these eight members along with Chairman Fitzhugh have a combined total of over $2.3 billion worth of interests in defense business or holdings.

What is more, four out of the eight are presently or have in the past been members of business and social organizations with close Pentagon ties. One of them, Robert Jackson, holds memberships in three armed services organizations and in the Defense Orientation Conference Association. Another, Ruben Mettler, is a former special consultant to Assistant Secretary of Defense and is now industry vice chairman of the Defense Industry Advisory Council. One reached the position of Assistant Secretary of Defense. Two others, Lewis F. Powell and Wilfred McNeil, presently hold memberships in armed services clubs or are part of the Armed Forces Reserves.

(At this point Mr. HOLLAND took the chair as Presiding Officer.)

Mr. PROXMIRE. Mr. President, in short, these are eight—nine including Fitzhugh—of the 15 Panel members who, according to Secretary Laird, are expected to view the Department of Defense with a fresh objective, and uninvolved perspective. These are the men who are charged by the President with restoring confidence and credibility in the Pentagon. These are the eight men who will be asked to view critically possibly their own companies and recommend changes in procurement policies. In short, these are the eight men remaining open so far as their functions on this panel are concerned who may be faced with recommending changes which may hurt their own interests. Unfortunately, these eight men remain open to serious questions of a direct conflict of interest.

OTHER SEVEN PANEL MEMBERS

Mr. President, but what of the other seven Panel members? Will they be able to bring the "fresh, objective, and uninvolved perspective" to the Panel's work which the Secretary is counting on? Will they be able to balance the eight-man majority, even if they cannot outvote them?

Although the remaining seven Panel members are not plagued by direct personal interests in defense business, a number of them lack the needed knowledge of defense procurement practices to counterbalance the long experience in these matters which the eight-man majority brings to the Panel. Four of the remaining seven members have almost no experience which will prepare them to challenge the interests of the eight defense contractors represented on the Panel.

Hobart Durbin Lewis is president of the Reader's Digest, and a close friend of President Nixon. Martha Elizabeth Peterson is a career personnel dean and presently serves as president of Barnard College. Claude "Buddy" Young—he was a great star at the University of Illinois and played professional football with distinction—is a former professional football halfback and public relations man for beer companies. Leona Pouncey Thurman is a gifted female lawyer from Kansas.

A women's dean, a football player, a female lawyer, and a magazine president—all undoubtedly competent in their respective fields, but do they have the necessary "clout" when it comes to challenging the views on military procurement practices of the eight Panel members who have spent their entire lifetimes, in most cases, in the defense business?

As the end of the list we find only three Panel members who are not plagued by conflicts of interest, and who may be capable of balancing some of the influence of the eight defense contractors. Dr. Marvin L. Goldberger is a competent physicist with extensive experience in test and evaluation work. Dr. George Joseph Stigler is a well-known conservative economist who has extensive experience in budgeting matters. Joseph Lane Kirkland is presently secretary-treasurer of the AFL–CIO. He will bring to the Panel valuable knowledge regarding management practices. But we have a Panel which is really heavily weighted on the side of—if not a whitewash—then a very sympathetic and gentle treatment of Pentagon practices which have shocked the Nation and which call for a strong, vigorous, independent, and critical review.

We do not have men such as John Gardner, Admiral Rickover, former Senator from Illinois, Paul Douglas, or any other men of that kind who would have given this Panel the kind of distinction, independence, objectivity, and broad perspective which a Panel of this kind should have.

(At this point Mr. BURDICK took the chair as Presiding Officer.)

STAFFING OF THE PANEL

Mr. PROXMIRE. Mr. President, unfortunately, membership of the Panel is not the only or even the chief roadblock to an objective review of the Pentagon. Contracting and staffing procedures set up by the Panel have virtually insured that the final report will give present policy a resounding vote of confidence—possibly with minor reservations.

As we all know—especially in this body—staffing is the key to the success of any organization. If the staff is biased toward its work, this bias must be reflected in the final product. Hence, the least that might have been expected of the administration, after its thorough packing job of the Panel with Pentagon supporters, is that they would have chosen an administrative officer capable of objective criticism of the Pentagon.

I am sorry to report that such is not the case. The Panel's top staff man is not an outside critic, but a Pentagon official. He is J. Fred Buzhardt, a graduate of the U.S. Military Academy, who is presently special assistant to Assistant Secretary of Defense Robert Froehlke. In Froehlke's own words, Buzhardt is "my man Friday."

Mr. President, just roll that around on your tongue, "my man Friday." The man who will head the staff, who will be expected to make an independent evaluation, uninvolved, of Pentagon policy, is characterized by Assistant Secretary of Defense Robert Froehlke, who is very close to Secretary of Defense Laird, who has been a very close friend throughout Laird's congressional career, he is Laird's man in the Pentagon, Froehlke says that Buzhardt is "my man Friday." Buzhardt is supposed to be the man to head the staff of this Panel.

Despite this close relationship to a high Pentagon official, Buzhardt is to serve as chief administrative officer for the very Panel which is studying, among other things, the activities of his regular boss. Buzhardt thus, by every definition of his two roles, has a conflicting set of loyalties. I am unwilling to speculate as to whom he owes his first allegiance; his paycheck, however, will continue to come from the Pentagon.

From the Pentagon's point of view, Buzhardt will be, at the very least, a useful source of feedback information as to the planned activities of the Panel. At best, he could quietly "guide" the Panel around those areas where the Pentagon is particularly vulnerable to criticism. In other words, Buzhardt's presence may help to guarantee the Pentagon that only the "right" questions are asked, that only the "right" areas are investigated by the Panel. Unfortunately, this is precisely the kind of advice this Panel does not need.

What is more, the Pentagon, in an effort to be "cooperative," is loaning additional staff to the Panel. These staff members will remain on the Department of Defense payroll during their stint with the Panel. Although the Pentagon staff on loan consists primarily of clerical and security support, it is indicative of the unusual degree of cooperation the Pentagon has been willing to extend to the work of the Panel, which is supposed to critically evaluate the procurement practices of the Pentagon—practices that has shocked and aroused the Nation and that concern Congress very deeply, on which we certainly need and should have independent criticism.

STANFORD RESEARCH INSTITUTE TO PLAY KEY ROLE

The problem of what areas of the Pentagon will be studied is even more serious than staffing, however. The Panel has negotiated a broad research contract with the Stanford Research Institute which calls for the institute to recommend to the Panel study areas and potential research institutions to carry out the studies. Stanford will do some of the research work itself, and also will negotiate the contracts for the Panel with other institutions. This is particularly crucial because the character of the institutions which do studies for the Panel will affect the results. To understand the full significance of this sweeping grant of authority to the Stanford Research Institute, a brief review of the recent activities of the Stanford group is necessary.

For many years the Stanford Research Institute has been very dependent on the Government, particularly the Defense Department, for the vast bulk of its research work. According to an article published in the November 1966 issue of Fortune magazine:

> The proportion of Stanford Research Institute's revenues derived from government contracts (including subcontracts) rose from 50% in 1955 to 75% in 1960.

Last year Stanford Research Institute performed projects for the Government valued at over $27 million dollars. One of its more highly publicized contracts was an almost $2.5 million dollar grant to do research and development on proving the feasibility of the ABM missile system. Even the institute's own staff members have become concerned that the organization "was becoming an appendage of the Government."

But the connection to the Pentagon runs even deeper than sheer economic dependence. Deputy Secretary of Defense, David Packard, served as a member of the institute's executive committee, the steering group for the organization, from 1958 to January of 1969, when he assumed his present position. Exactly what role Packard had, if any, in the decision to employ the Stanford Research Institute as the Panel's chief advisory and contracting agency is unknown. What is known, however, is that a number of the board members of the institute are outstanding supporters of the Pentagon. Two board members are currently serving as directors of the American Ordinance Association, a group of arms manufacturers and military personnel which advises the Pentagon on the industrial and military preparedness of the United States. Other directors of the institute have been supporters and have contributed to such groups as the Americans for Constitutional Action, the Christian Anti-Communist Crusade, for America, and other similar groups. These directors serve as advisors on research efforts, publication, and staff commitments, as well as the hiring and firing of staff members. In view of the institute's advisory role in the work of the Panel, the influence of these directors may be substantial.

The inescapable impression one gets from all of this is that the Panel is caught in the embrace of the very individuals it is supposed to evaluate and constructively criticize. The Pentagon is being so cooperative that the Panel may find it very difficult to criticize those who have been "so helpful." Any objective criticism which comes out of the Panel's work will, in all likelihood, be mere "window dressing"—designed to hide the areas of glaring inefficiency untouched by the Panel in its study.

Once the administration's shining brainchild as the cure for lack of confidence in the Pentagon, the Panel will have only contributed to a further erosion of this confidence. The Panel has become another creature of the Pentagon, a product of the in-house management tactics for which the Defense Department is famous and which have doomed so many previous studies.

I have seen all this happen before. The script has become all too familiar. The final report will be carefully noted and highly publicized a few weeks, only to be relegated to the shelf once its publicity value for the Pentagon has been exhausted. Any minor recommendations for change will be quickly accepted as "very valuable" by Pentagon officials and then promptly forgotten after the initial flurry of activity. The Panel is at best a sham, at worst an indication of how powerful the Pentagon has actually become—so powerful that it is able to control those who would criticize it.

The actual reason for the formation of the Panel should now be clear. Not intended to make a complete investigation of the Pentagon, the Panel was created merely to allay criticism at a time when Pentagon procurement policies were coming under increasingly heavy fire from Congress and the American public. The Panel was intended to become a kind of escape valve for the Pentagon which would absorb criticism and allow a catharsis of emotion on the part of its critics. Having gotten their gripes off their chests, the critics would, according to the Secretary's strategy, be content to let the Pentagon resume "business as usual."

For Congress, however, the Panel should drive home some important lessons. Most importantly, it proves once again that only Congress has the necessary independence to objectively criticize the Defense Department. The Pentagon cannot be relied upon to police itself. Conversely, Congress cannot rely upon those who are dependent on the Pentagon to put the goose which lays the golden eggs on a diet. Congress must undertake its own studies, conduct its own investigations, and establish its own auditing procedures if unbiased results are to be obtained. These are the harsh lessons which the Panel would ultimately provide. Ironically, if these lessons are heeded, the Panel could be successful in a way never anticipated by those who created it.

Mr. PROXMIRE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

Mr. THURMOND. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

PANAMA TREATY TALKS

Mr. THURMOND. Mr. President, according to reports in the press of the Republic of Panama, it appears that the United States and the Republic of Panama may be on the verge of reopening treaty talks. I am very distressed to hear these reports, and I am sure that many Members of this body would be disappointed if these reports have substance.

Two years ago, the Johnson administration negotiated three new treaties with the Republic of Panama with regard to the present Panama Canal, a proposed sea-level canal, and our military obligations to Panama. The content of these treaties was so outrageous an uproar was set off both in the House and the Senate since these treaties amounted to a dangerous cession of our lands and rights in the Canal Zone. In the intervening time, the situation in Panama has deteriorated. The constitutional government of Panama has been superseded by the revolutionary junta after a tumultuous election. Although the junta succeeded in restoring order, there is grave doubt as to how long such order may be reasonably expected to persist. Indeed one might question the value of a treaty with any kind of provisional government.

The reopening of the Panama Canal Treaty in the present state of world affairs would be the worst possible thing for both Panama and the United States. And yet that is apparently what is being done. According to the article in the Panama Star & Herald, the U.S. State Department let it be known through indirect sources that it would be receptive to a move by Panama to reactivate the negotiations. Accordingly, last month Panama appointed three advisers to their treaty team. The three advisers are well known in this country, and it is doubtful that they would come up with anything particularly new in the way of treaty proposals.

I have said many times that I believe that our best course in the Canal Zone is to stand upon our unquestioned treaty rights and the sovereignty which we have exercised there over the years. The present canal is perfectly adequate for future needs if we follow the modernization plan which I have introduced in S. 2228. No new treaties are needed and we have ample authority to protect our investment and our obligation to keep the canal open.

What we do in Panama will have a profound effect upon our whole Latin American policy. In recent months, we have shown a pattern of acquiescence to revolutionary trends in Latin America. It is a destructive pattern which feeds upon itself. The more we give in, the more radical elements demand. We must stand our ground in Panama to fulfill our pledge to the world to maintain a Panama Canal for the benefit of all.

If our policy is to succeed, it can do so only by changing U.S. foreign policy from one of weak acquiescence to one of strength.

Everywhere the greatest single deterrent to liberty, Soviet power, has by sheer audacity and nerve increased its dominance in Asia, Africa, South America, and Europe. The Soviets are particularly

interested in strategic and military key points, such as the Suez Canal and the Arab crescent of the Mediterranean, the latest example being Libya. The Panama Canal is similarly of key strategic importance.

In the course of these assaults, we have too often tamely submitted to a surrender of our treaty rights and privileges and we have lost the support and friendship of our free nation allies; and weaker nations, in complete disregard of billions of dollars of foreign aid furnished them by the United States, have come into Soviet influence. Moreover, we seem to learn nothing from the tragic experiences of the past, but continue to follow the policies of disaster that have brought the world into a state of crisis of the first magnitude.

Those of us in the Congress who oppose the surrender of our rights, power and authority over the U.S.-owned Canal Zone territory and Panama Canal are in no way motivated by a feeling of hostility to Panama or its people. However, we do know that if and when our authority over the canal is liquidated, Panama would not be benefited thereby.

Mr. President, I ask unanimous consent that the article entitled "Panama Names Treaty Team" published in the Panama Star & Herald of September 9, 1969, be printed in the RECORD at the conclusion of my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Panama (R.P.) Star & Herald, Sept. 9, 1969]

PANAMA NAMES TREATY TEAM—REINTENSIFICATION OF TALKS LOOMS

The Foreign Ministry announced yesterday the appointment of three advisors "for matters pertaining to the conduct of relations between the Republic of Panama and the United States of America."

The announcement, made by Foreign Minister Nander A. Pitty, was regarded as the first step towards the reintensification of negotiations with the United States on the treaty drafts on the Panama Canal pending since 1967.

The advisors are Drs. Galileo Solis, Ignacio Molino and Hernan Porras. All three are lawyers and the first two are former foreign ministers.

Official sources said Panama has made no direct request for the resumption of negotiations because its position is that negotiations never has been suspended. Nevertheless, the appointments announced yesterday were linked to a statement last Thursday by the U.S. Department of State that it would be "receptive" to any move by Panama to activate the discussion of the pending drafts.

In any case, it is known that the Foreign Ministry for the past several months has been studying the appointment of a negotiating team. Shortly after the present revolutionary government came into power last October, Dr. Roberto Aleman—who was a member of the commission that wrote the pending drafts—was appointed Ambassador in Washington and negotiator.

According to the decree announced yesterday, the new advisors "will have as the immediate task, together with other officials that may be designated by the Minister of Foreign Relations the revaluation of all matters relative to interoceanic waterways affecting the Republic of Panama."

The advisors are well versed in Panama-United States relations. Dr. Solis was Minister of Foreign Relations in 1964 at the time of the clashes between Panamanians and U.S. military forces in the Canal Zone, which were sparked by the issue of the display of the Panamanian flag in the Canal Zone and which paved the way for the negotiations. He was Minister of Foreign Relations when the treaty talks began. A top-notch attorney, he also was Minister of Foreign Relations in the cabinet of ex-President Arnulfo Arias.

Molino has been Foreign Minister and a member of the National Council of Foreign Relations on various occasions. He also is a prominent attorney and heads the law firm with which the incumbent Foreign Minister was associated before being appointed Minister.

Porras, now holding a post with the United Nations' Educational Scientific and Cultural Organization, is a lawyer and economist and has been closely linked also with affairs relating to Panama-United States relations.

Foreign Minister Pitty also announced that Panama has obtained counseling assistance on treaty matters from the UN's Economic Commission for Latin America (CEPAL) and that Engineer Ricardo Arosemena, a Panamanian on the staff of CEPAL for several years, has been designated as advisor.

The pending treaty drafts deal with the present Panama Canal, with a United States option for the construction of a sea-level waterway across Panama, and with the defense of the neutrality of the inter-oceanic waterway.

The treaty drafts, announced in mid-1967 on the eve of Panama's political campaign, set off an intense national debate here with heavy political overtones. The opposition forced the administration of then President Marco A. Robels to shelve the drafts. The approach of the United States' own political campaign, plus strong opposition voices raised by U.S. nationalist elements, also contributed to the shelving of the treaty drafts.

The announcement of the first firm step by Panama towards activating the treaty discussions was interpreted also as a change of policy by the revolutionary government, which in its early months had indicated it would not raise the treaty matter until the national situation became more clearly defined. The fact that it has decided to tackle a matter of such national importance was regarded as an indication that it considers its position as sufficiently strengthened.

Observers noted the difference in the official designation of the negotiators. They are "advisers to the National Executive Branch, assigned to the Ministry of Foreign Relations."

Mr. HRUSKA. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. HRUSKA. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

RETIREMENT OF JUSTICES AND JUDGES OF THE UNITED STATES

The Senate resumed the consideration of the bill (S. 1508) to improve judicial machinery by amending provisions of law relating to the retirement of Justices and judges of the United States.

Mr. HRUSKA. Mr. President, with regard to the pending business—to wit, S. 1508—I ask unanimous consent that the committee amendment be agreed to and that the bill as thus amended be regarded for purposes of amendment as original text.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Nebraska? The Chair hears none, and it is so ordered.

Mr. HRUSKA. Mr. President, the chairman of the Subcommittee on Improvements in Judicial Machinery of the Committee on the Judiciary, the Senator from Maryland (Mr. TYDINGS), is absent on account of official business. He has requested that the consideration and disposition of S. 1508 proceed. He also requested that I make such presentation as he would make normally under these circumstances. I am the ranking minority member of the subcommittee, and I am happy to respond and to comply with the request of Senator TYDINGS.

Mr. President, under present provisions of law, Federal judges may retire from regular active service at age 70 after 10 years of service or at age 65 after 15 years of service. This retirement policy does not give full recognition to the increasing number of judges who are appointed to the Federal bench at a relatively young age. Consequently, many Federal judges will serve more than 20 years before they become eligible, under present law, for full-time retirement and senior judge status.

S. 1508 is designated to improve the present retirement system by enabling judges to go on senior judge status after 20 years of service regardless of age. S. 1508 will thus serve to make the Federal bench more attractive to younger, more vigorous men. Moreover, it will serve also to increase available judicial manpower.

Each time a judge accepts senior judge status and retires, leaving regular active service, a vacancy occurs on his court, a vacancy that can be filled by the appointment of a new regular active service judge. The judge on senior status may continue to perform such judicial duties as he is willing and able to undertake. Almost without exception, those judges who take senior status continue to carry a substantial workload. The "retirement" of a judge thus means a bonus of increased manpower to the retired judge's court, increased manpower that can help alleviate existing backlogs and avoid future ones. Both the retired judge and his newly appointed successor can be employed in the disposing of the business of the court, where before only one could be so employed.

In fact, few aspects of the Federal judicial system have been more beneficial to the country than those which enable judges to retire from active service, and, yet, continue to perform such judicial duties as they are willing and able to undertake. Without the work of the present senior judges, our Federal judicial system would be overwhelmed by its caseload. By providing for retirement after 20 years of service regardless of age, those judges who could take senior judge status under the amendment would be under 65 and fully able to continue to carry a full workload. It is difficult to disagree with the following statement by Albert Branson Maris, himself a great senior judge:

One of the great benefits of the federal judicial retirement system is that retired senior judges are available for especially assigned judicial duty and can contribute a very large amount of time to judicial work, thus greatly benefiting the system by assisting in those areas where the caseloads are heaviest. As retired judges get older, of course, they become less able to make this contribution, but judges approaching age seventy are more vigorous and able, and to facilitate their retirement will be to add very substantially to judicial manpower in places where it is badly needed.

Mr. President, this briefly describes the background and the reasons for the bill. It is my hope that there will be prompt consideration and approval of the bill by this body.

Mr. WILLIAMS of Delaware. Mr. President, will the Senator yield?

Mr. HRUSKA. I yield.

Mr. WILLIAMS of Delaware. It is my understanding that one of the arguments in support of this bill is that additional judges are needed and that by putting these judges into retirement status they could be called upon to help handle the extra duties of the court. Is my understanding correct?

Mr. HRUSKA. That is one of the features, yes. The need for additional judge manpower has existed for a long time.

Mr. WILLIAMS of Delaware. I wonder why we do not hit that problem affirmatively. If they need judges they should get them by direct action. Does not the Senator agree that one of the big problems with the courts today is that many judges are past the ages of 75 or 80, are too old to serve, and are not doing the job?

I wonder if this proposal should not be accompanied by a mandatory retirement age by which we could eliminate from the courts those judges who obviously cannot perform the duties at this time.

Merely granting an early retirement for the younger men will not solve the problem.

Mr. HRUSKA. The Senator from Delaware does point to a problem which is a real issue and which should be duly considered. We have from time to time considered it in the committee. I do feel, however, that if it is to be considered, it should be on the basis of committee hearings, upon briefs, and upon consideration by the judicial conference. If it would be the desire of the Senator from Delaware to propose such an amendment, I certainly would be very happy to attend to such hearings and to canvass the problem very thoroughly.

Mr. WILLIAMS of Delaware. I certainly shall follow that through, but I wonder whether action on this bill should not be a part of the whole package. Would it not be better to defer this matter and take care of it all at one time?

I am not unmindful of the fact that earlier this year we raised the value of the retirement benefits of the judges by approximately $10,000 to $12,500 per year. As the Senator knows, judges retire at full pay as of the date of their separation. Earlier this year the salary of these judges was raised from $30,000 to $42,500. Under this bill it would mean that they could now retire at age 60 or less than 60 after 20 years of service. I think there would be one or two approximately 58 years of age. I wonder whether it is advisable to retire a member of the court at the age of 58 at a pension of $42,500 when judges close to 80 years of age are serving on the same court. Are we not approaching this matter backward?

Mr. HRUSKA. The Senator started out with the question as to whether it would be well to have a provision included in the bill calling for mandatory retirement at a given age—70 or 75 or before. That proposition, as I suggested earlier, has been before the committee and the subcommittee on various occasions. No one who has had any exposure to this problem and who has studied it and who has considered it again and again has seen fit to add it to this bill. Therefore, the answer to the first part of the Senator's question and his observations is "no." At this time it would not be considered necessary, nor would it be considered desirable, to have it as a part of this bill. If the Senator wants it to be considered, a proposal along that line would be very fine. But again I say that, under those circumstances, inasmuch as it involves a very fundamental proposition in our judicial structure, going back to 1789 and the adoption of the Constitution, we should not consider it on the floor of the Senate superficially and out of hand because a certain objective is desirable.

Mr. WILLIAMS of Delaware. Were hearings held on the bill?

Mr. HRUSKA. Yes; we had hearings on previous occasions. We have not had hearings this year on the bill.

Mr. WILLIAMS of Delaware. That is my understanding.

Mr. HRUSKA. The printed report on the bill is very complete.

Mr. WILLIAMS of Delaware. We are dealing with a bill on which no hearings have been held.

If it is possible to get such an amendment before the Senate would the Senator think kindly toward it? Would the Senator be willing to include a provision providing for a mandatory retirement age for these judges to be effective at some projected time in the future if not effective today? I think this is a major weakness in our court system.

Mr. HRUSKA. It may be a weakness in our court system. The Senator would be entirely within his prerogative to suggest it as an amendment. I would say it would be ill-advised to do so now for the reasons I have already advanced.

It would be a fundamental change in our judicial structure. Because the reasons for such a provision might be advantageous is not enough. It should be explored in depth, including constitutional considerations.

Mr. WILLIAMS of Delaware. Would the Senator go along with a proposal to delay action on this bill until we can get all of it considered together?

Mr. HRUSKA. No. I am not in a position to do that. The entire matter has been considered, and this is the sum total of the recommendations made by the Subcommittee on Improvements in Judicial Machinery of the Committee on the Judiciary.

Mr. WILLIAMS of Delaware. Would the Senator as a member of the committee be in a position to give us assurances that we could have hearings and perhaps favorable consideration of such a proposal if we bring that matter to the attention of the committee?

Mr. HRUSKA. I certainly would. As far as I might have anything to say about scheduling of such a hearing, I would be happy to see that that occurs. The Committee on the Judiciary would study such a proposal. There would be an explanation of the underlying considerations. I would pledge diligent and expeditious hearings on such a proposal, as the schedule permits.

Mr. WILLIAMS of Delaware. I thank the Senator. I personally question the wisdom of passing the bill at this time, and I shall not support it in its present form, as a separate measure. However, recognizing the facts of life, I expect the best I can achieve at this time is to have the assurances of the Senator that we can get hearings and consideration on the proposal to establish a mandatory retirement age for members of the judiciary.

That action is the only real solution to one of the major problems confronting our courts.

Mr. HRUSKA. The filing of any such proposal and a reference to the committee will certainly receive my sympathetic and active consideration.

Mr. WILLIAMS of Delaware. I thank the Senator.

Mr. AIKEN. Mr. President, will the Senator yield?

Mr. HRUSKA. I yield.

Mr. AIKEN. How many Federal judges under the age of 65 have held office for 20 years or more? Are the 15 judges who are listed in the report the only ones?

Mr. HRUSKA. As near as we know, and we have gone to the records of the Judicial Conference, the judges named on page 4 of the report are the only ones.

Mr. AIKEN. There would be more that are now Federal judges that would be able to retire earlier. Is that right?

Mr. HRUSKA. Yes, as time goes on. These would disappear and others would be added.

Mr. AIKEN. What would be the increased cost of retirement?

Mr. HRUSKA. There is no way to estimate the increased cost because this bill is permissive. It is enabling. We do not know how many of these judges will take advantage of the bill and retire sooner. We know it is uncertain how many will do so because even under the present system whereby retirement can be achieved with 15 years' service at age 65 or 10 years' service at age 70, not all of those eligible under either of those provisions take advantage of them.

Mr. AIKEN. If after retiring they are called upon to serve, is there any requirement that they respond?

Mr. HRUSKA. There is nothing mandatory about it. They can indicate the extent to which they wish to participate. Only in this way can there be a maximum of retirement in due time so as to make

room at the bottom of the seniority ladder for those who are put in their places.

Mr. AIKEN. Any Federal judge who had 19 years' service would be eligible for retirement in 1 year. Is that right?

Mr. HRUSKA. The Senator is correct.

Mr. AIKEN. I thank the Senator.

Mr. YOUNG of Ohio. Mr. President, in my opinion this is a bad bill. In my judgment it should not be enacted into law. I know I am not alone in expressing that view. The distinguished junior Senator from Alabama (Mr. ALLEN), one of the new Members of the Senate who came to the Senate this year, and certainly one of the highly respected Members of this body, informed me yesterday that he regretted very much he would be necessarily absent today from the Senate on public business, but that if he were present he would speak out against the bill and would vote against it. He told me if the bill should come up today I would be free to express his views.

Speaking for myself, Mr. President, it seems to me that I recall the statement made by a very distinguished majority leader of this body, former Senator Scott Lucas of Illinois, who was a lawyer, which he made at one time in a speech in the Senate. He said that there are not 500 lawyers in the United States, regardless of their incomes, who would not be glad to accept appointment to be a U.S. district judge if the position were offered.

I have a feeling of reverence toward the judiciary. Unfortunately, the ambition of my youth and young manhood, to follow my father's footsteps and be a judge, cannot be realized. My father, Judge Stephen M. Young, of Ohio, was a trial judge for many, many years in our court of highest original jurisdiction. I always wanted to be a judge. Instead, I became a chief criminal prosecuting lawyer—in Cuyahoga County. Then, I practiced for many years as a trial lawyer. I have appeared in U.S. district courts on many occasions.

My last appearance in a U.S. district court was recently in Boston when I made the trip from Washington to Boston to testify as a witness to the good character and splendid reputation in my community of Cleveland, Ohio, of Dr. Benjamin Spock, who has been my personal friend through the years. That particular case was tried before a judge who at the present time is 84 years of age. It appeared to me that this particular judge was very stern and tyrannical, which is not, really, a new experience for me in a Federal court.

The pending bill provides for the retirement of U.S. judges following 20 years of service, irrespective of age. I am grateful to the distinguished Senator from Nebraska (Mr. HRUSKA), who is managing the pending bill, for his help in having my candidate for the last United States judge appointed in the northern district of Ohio, processed through his subcommittee and the Judiciary Committee. I owe that debt to my colleague from Nebraska for his approval of Judge Thomas Lambros, who is 38 years of age, just recently appointed on the bench. He will be a fine judge.

Incidentally, I am proud to say, Judge Thomas Lambros is the first judge of direct Greek descent to be appointed to a U.S. court, to my knowledge. He was a judge of the court of common pleas in Ashtabula County in my State, probably receiving a salary of $16,000 at the most when, through the kindness and generosity of the Senator from Nebraska (Mr. HRUSKA) and other members on the Committee on the Judiciary, he was unanimously approved by that committee following his nomination by President Johnson.

This young man, like other U.S. district judges, receives a salary of $40,000 a year. Judges in the U.S. Circuit Courts of Appeals receive salaries of $42,500 each per year. In addition to that, following their retirement at the age of 70, if they have served for 10 years on the Federal bench, or at age 65, if they have served 15 years on the Federal bench, district and circuit court judges retire at full salary as long as they live. This, no matter whether they return to private practice or go into business. As someone said of a judge whose nomination is now pending before the Senate, he might well be qualified to take a high executive position in a brokerage house and enjoy a salary of $100,000 a year following his retirement. He would still receive his entire judicial salary as long as he lived.

Mr. President, as you know, this month and every month thereafter, 8 percent of the salary of every Member of Congress will be deducted for the congressional retirement fund. There are no deductions made whatever from the salaries of any Federal judges.

The bill provides retirement with full pay for life for judges and Supreme Court Justices with 20 years of service, regardless of age. Supposedly, this will serve to make the Federal judiciary more attractive to younger men.

Those of us who have served in the Senate know that there is no necessity for legislation to attract capable lawyers if and when a vacancy occurs in a U.S. judgeship in their respective States. The fact is that it is well known that whenever there is a vacancy on the Federal bench, many, sometimes hundreds, of competent lawyers seek the appointment. There are at most but a few hundred lawyers in our Nation who if offered an appointment to the Federal bench, would not accept.

As a result of the last election, however, that problem will no longer be presented to me. However, it will be a problem for my distinguished colleague, the junior Senator from Ohio (Mr. SAXBE), who is my personal friend and a very fine Senator. I am certain that as long as there is a Republican President in the White House, my colleague, Mr. SAXBE, and other Senators of the Grand Old Party of which I am not a member, whenever they have Federal judicial vacancies in their respective States, will find that there are plenty of capable and outstanding lawyers who will apply.

Thus, there is no necessity to pass this bill just to try to attract capable men to apply for these positions.

Why give a U.S. judge a bonus, or a sort of bribe, to retire from active service, yet allow him to continue to perform such judicial duties as he is willing and able to undertake, merely to place someone else on the judicial payroll?

This is a stopgap measure. It is claimed it will lessen the overload on Federal district and circuit court judges. Well, I am not impressed by that alleged overload or heavy burden on the Federal judges of this country. I suspect that in most States—I know it is the situation in my State—from June until September their courts are on vacation, other than for routine matters, such as sentencing prisoners who plead guilty and other routine matters, while we in Congress are here on the job working month after month and having 8 percent of our salary deducted for retirement benefits. Yet, not 1 cent is being deducted from the salaries of these judges.

It is said that if this bill is enacted into law, it will cost taxpayers at least $1.5 million additional money during the next 2 years.

Mr. President, judges of Federal district courts and circuit courts of appeal, and Justices of the Supreme Court of the United States, all are presently provided with the most liberal retirement plan in the entire world. Under existing law, they may retire at full pay for life at the age of 70 after 10 years of service; at the age of 65, after 15 years of service. Unlike Members of Congress, they will not have paid, while they were on active service as judges, 1 cent toward any retirement fund.

We have increased the salaries of district court judges to $40,000 a year, circuit courts of appeal judges to $42,500 a year, and, Justices of our Supreme Court, from $39,500 a year to $60,000.

Mr. President, as a lawyer and as a citizen who holds in the highest respect and admiration the judges of our courts, I have no fault whatever to find with that salary scale. However, I do say that no one can assert that the Federal judiciary is underpaid.

The pending bill would entitle them to retire after 20 years of service at their full pay, regardless of age. So my personal friend, Judge Tom Lambros, of the northern district of Ohio, should he wish to retire when he attains the age of 58, could retire at that comparatively early age. His judge's salary would be paid him as long as he lives. In addition, he could enjoy his income from the practice of law, should he then desire to return to private practice.

I am not one of those who consider that a man who is 70 years old is necessarily an old man. I know lawyers, and men in all walks of life who are in their fifties who are older in every respect than other men who are 70. Men and women do not grow old simply by living a certain number of years. People grow old by abandoning their enthusiasm, deserting their ideals, giving up their zest for life, and enjoying no more an appetite for adventure. Instead of yearning for retirement, this desire for an active, vigorous life, and the wish and ability to work hard and look forward with hope and not fear, often exists in men and women of 70 or more. Sometimes, it is altogether missing and lacking in men of 30 or 40.

I am one who, at the age of 80, is not

even thinking of retiring from active life. The way of life of many, many people in this country is to work hard. They have worked hard all of their lives, and they know of no other way. That is an excellent thing. That is my way of life.

I think the bill being considered today—and it will probably be passed in the Senate—is just another unfortunate placing of emphasis on youth.

After all, it is a very unfortunate thing for this country, it seems to me—and I have said this recently—that the very first social security system in the entire world, announced in 1889 by Otto von Bismarck, the chancellor of the German Empire, fixed, for the first time, the retirement age at 65. Unfortunately, in 1935, when we in the Congress enacted the social security law—and I must take part of the blame for it for the reason that I was in the other body and I voted for it—we set age 65 as the retirement age, following Bismarck's program. I regard our social security law as the greatest piece of domestic legislation for the welfare of our country ever enacted into law.

Unfortunately, however, in our country, many industries, huge corporations, have followed that precedent and arbitrarily fixed the age of retirement at 65. Yet, the life expectancy of men and women, not only in Germany, but in the United States, has more than doubled from 1889 to this good hour.

Unfortunately, we have adhered to that age. Not only have we adhered to it, but it seems prevalent throughout the country that now, more than ever before, emphasis is placed upon bringing forward young people and perhaps discarding older people.

Instead of yearning for retirement, a great many men and women—and I am sure many of our Federal judges—who are in their sixties want to continue their active, vigorous lives and to continue in the important public positions in which they are knowledgeable and respected.

What I have said in the past, I will repeat here. I am looking at Bill Gold's column in the Washington Post, written back on October 13, 1965, when, he quoted me as saying:

> To be sure, years may wrinkle the skin. But to lose enthusiasm wrinkles the soul and deadens the brain.
>
> Doubt, self-distress, fear, lassitude—these are the long years that bow the head and turn the spirit of hope toward dust.

Of course, one is as young as his faith. As long as we look forward, we hope for better things.

I have been president of two bar associations in my State of Ohio. I seriously doubt if there is one lawyer between the age of 30 and 60 in the entire State of Ohio, which has a population of 10,600,000 persons, who would refuse a nomination to the Federal judiciary under the present retirement plan. He does not require this legislation to encourage him.

Proponents of the pending bill also assert—and there may be some validity to the claim—that it will serve to increase available judiciary manpower by encouraging judges to retire and accept senior judge status, leaving vacancies that can be filled by new regular active service judges.

The fact is that there are Federal judges in practically every State of the Union who have reached retirement age and could have retired years ago who remain active on the bench.

It is not just in Boston that an 84-year-old judge is holding forth and trying case after case, day after day. That is the situation in many States. That is the situation in a trial proceeding in a Federal court in the State of Illinois, where the judge is in his midseventies.

In my own State of Ohio there are U.S. judges who have been on the bench 20 years or longer and who have attained the age of 70. They have not accepted senior status.

Why should these judges be nudged into retiring when they are perfectly satisfied with their present status, and are rendering real and needful public service to the country?

Furthermore, the fact that judge may retire and take senior status does not assure that he will do so. The pending bill offers no further guarantee whatever that in the future these judges would retire and take senior status.

If there is a need for additional United States district judges and judges of the Circuit Courts of Appeals, then let the Committee on the Judiciary hold hearings, and let them present to the Senate, so that we may debate and vote upon it, legislation to provide additional judgeships. Let us not go through the back door in a surreptitious and hurried manner, without public hearings, and without any protracted debate as is the situation at the present time.

What is the hurry? Why are we in such a rush to force our taxpayers to underwrite this additional burden? It is just something else that will cost taxpayers additional money. Senators might say it is only a small amount, perhaps a million dollars, if that is a small amount. I was born and reared in Puckerbrush Township, Huron County, Ohio, and a million dollars means a lot of money to me. This is certainly not a necessary bill. I assert that it will provide a virtual giveaway of taxpayers' money to accomplish a doubtful result.

I believe that citizens generally desire that Federal judges have a retirement program that assures their independence from financial pressures. However, under the present law, they may retire if they have attained the age of 70 and have served 10 years on the Federal bench or the age of 65, after having served 15 years on the bench. They certainly do have a retirement program which should enable them to get along, when they are assured, as long as they live, an income of $40,000 a year, for the district judges and $42,500 for circuit court of appeals judges, with not 1 cent deducted for any retirement program. The retirement program for Congressmen is very modest, as compared to the payment of their full salaries of $40,000 or $42,500 per year for retired Federal judges.

In my opinion, the members of the Judiciary Committee have come forth with an overly generous and, in fact, outrageously liberal retirement proposal in this bill. I think it is an entirely unnecessary bill. It is a bad legislative proposal which should be considered and debated for some hours and days in the Senate, instead of being heard briefly this afternoon.

Having studied the bill and the committee report, and after thorough consideration, I think that at the present time, in this grim period when we are blowing up into smoke $2½ billion every month, month after month, on our involvement in a civil insurrection in Vietnam, this is not the time to overindulge the Federal judiciary of our country. Therefore I must report that in good conscience I cannot and shall not vote in favor of the passage of the pending proposal.

Mr. ELLENDER. Mr. President, I should like to ask the Senator from Nebraska a few questions about the bill.

As I understand it, the only language that is added to this bill is to make it possible for a judge to retire after 20 years of continuous service. Is that correct?

Mr. HRUSKA. Yes; regardless of age.

Mr. ELLENDER. And he receives the same amount of retirement as one who has served 30 years?

Mr. HRUSKA. That is right.

Mr. ELLENDER. Mr. President, I wish to be recorded as voting against this measure, and I hope we will have a rollcall vote on it.

Mr. HRUSKA. Mr. President, just by way of summary, I should like to say that the rationale for retirement of Federal judges is an issue that was decided a long time ago. It was thoroughly considered, thoroughly debated, and adopted. It has been the national policy of this country for a very long time; and it has proved its worth through the years since its adoption.

The instant bill is a refinement, beneficial in nature, of the fundamental principle involved in the present judicial retirement law. I urge that the bill be approved in the form in which it is now before the Senate.

Mr. ELLENDER. Mr. President, has the Senator any idea as to the additional cost to the Treasury should the bill be enacted?

Mr. HRUSKA. It is difficult to compute the cost, Mr. President, for this reason: This is an enabling act. The act is permissive in character. A judge does not have to retire after 20 years of service on the Federal bench. He may do so, and continue service by accepting cases. The immediate impact of his retirement is that it opens a place on the regular bench for another judge, though the majority of those who have been eligible for retirement under the present law stay in service and are called upon for their services. So it is difficult, because of that fact, to compute the cost.

Mr. ELLENDER. Does the Senator feel that the passage of this bill will result in a need for fewer judges?

Mr. HRUSKA. No. As a matter of fact, the need for additional judge power has been repeatedly demonstrated. This will add to the judge power. In addition to the judges who will be appointed to take

the places of the retirees, there will be the additional services rendered by the retirees themselves.

Mr. ELLENDER. Mr. President, the enactment of this bill will add further costs to our Treasury. How much no one can tell and I do not believe that it should be enacted without further debate and more information.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. MATHIAS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

The bill is open to further amendment. If there be no further amendment to be proposed, the question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading and was read the third time.

UNANIMOUS-CONSENT AGREEMENT

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the vote on the passage of the pending bill occur at 12:15 p.m. tomorrow and that rule XII be waived.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Montana? The Chair hears none, and it is so ordered.

The unanimous-consent agreement, subsequently reduced to writing, reads as follows:

Ordered, That the Senate proceed to vote on final passage of the bill S. 1508, to improve judicial machinery, etc., at 12:15 o'clock p.m. on Wednesday, October 29, 1969.

Mr. HOLLAND. Mr. President, during discussion and debate on the pending bill, S. 1508, I have been somewhat disturbed by some of the points made. I think my own disturbance has been pretty well removed by reference to the body of the United States Code, and perhaps this will be true in the case of other Members of the Senate.

I therefore ask unanimous consent to have printed in the RECORD the whole of section 371, chapter 17, title 28 of the United States Code.

There being no objection, section 371, chapter 17 of title 28 of the United States Code was ordered to be printed in the RECORD, as follows:

§ 371. Resignation or retirement for age.

(a) Any justice or judge of the United States appointed to hold office during good behavior who resigns after attaining the age of seventy years and after serving at least ten years continuously or otherwise shall, during the remainder of his lifetime continue to receive the salary which he was receiving when he resigned.

(b) Any justice or judge of the United States appointed to hold office during good behavior may retain his office but retire from regular active service after attaining the age of seventy years and after serving at least ten years continuously or otherwise, or after attaining the age of sixty-five years and after serving at least fifteen years continuously or otherwise. He shall, during the remainder of his lifetime, continue to receive the salary of the office. The President shall appoint, by and with the advice and consent of the Senate, a successor to a justice or judge who retires. (June 25, 1948, ch. 646, 62 Stat. 903; Oct. 31, 1951, ch. 655, § 39, 65 Stat. 724; Feb. 10, 1954, ch. 6, § 4(a), 68 Stat. 12.)

Mr. HOLLAND. Mr. President, careful consideration of that section will show quite clearly that the part which relates to resignation, subsection (a), is not at all affected by the pending bill.

The part of section 371 which is affected by the pending bill is subsection (b), which relates entirely to retirement. It is quite clear, at least to me, that a retired judge, under subsection (b), continues to be a judge and may be called upon for any service for which he is available, and is still a judge who has retained his office.

The words "retained his office" are the key words in that subsection (b) relating to retirement.

I might add that since a retired judge continues to be a judge, he is, of course, subject to the prohibitions of the Federal code relating to Federal judges.

I ask unanimous consent that section 454 of said chapter 17 of title 28 of the United States Code be printed in the RECORD at this point.

There being no objection, the section was ordered to be printed in the RECORD, as follows:

§ 454. Practice of law by justices and judges.

Any justice or judge under the authority of the United States who engages in the practice of law is guilty of a high misdemeanor. (June 25, 1948, ch. 646, 62 Stat. 908.)

LEGISLATIVE HISTORY

Reviser's note.—Based on title 28, U.S.C., § 373 (Mar. 3, 1911, ch. 231, § 258, 36 Stat. 1090).

Changes in phraseology were made.

Clerks to justices not to practice, see rule 7, Appendix to this title.

Mr. HOLLAND. Mr. President, this section makes it clear that any justice or judge appointed under the authority of the United States who engages in the practice of law is guilty of a high misdemeanor—meaning of course, that he may be removed, upon impeachment proceedings, and there may be other penalties, but that he may not engage in the practice of law.

The reason why this became a matter of concern to me, at least, is that it was argued by one Senator in the course of the debate that a district judge retiring at an early age, after 20 years of service—supposing, for instance, he had been appointed at 35 and retired at 55—might reenter the practice of law and at the same time retain his full pay. As I read this section, that is not so at all. If he retired at 55, he would remain as judge, would be subject to the prohibition against the practice of law, and would be available for assignment to such cases as he was able to handle; and in no sense could he return to the active practice of law, though he would have retired at what I now regard to be the early age of 55.

I ask my distinguished friend who is handling this matter, the Senator from Nebraska (Mr. HRUSKA), if he agrees with the conclusion I have reached from reading those two sections of the code.

Mr. HRUSKA. Mr. President, the Senator from Nebraska is grateful for the supplementation and clarification of the debate held this afternoon by the quotation of those parts of the statutes which the Senator from Florida put in the RECORD. We had conferred informally about it and reached an agreement that that is the proper interpretation of the sections put into the RECORD.

Mr. HOLLAND. I thank my distinguished friend.

EULOGIES FOR THE LATE SENATOR DIRKSEN

Mr. MANSFIELD. Mr. President, for the information of the Senate, immediately upon the conclusion of the vote on the pending business tomorrow, the Senate will deliver its tributes and eulogies to our beloved late minority leader, Mr. Dirksen, of Illinois.

ORDER FOR ADJOURNMENT

Mr. MANSFIELD. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in adjournment until 12 o'clock noon tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask uanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

AMENDING SECTION 4 OF THE REVISED ORGANIC ACT OF THE VIRGIN ISLANDS RELATING TO VOTING AGE

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the pending business be laid aside temporarily and that the Senate turn to the consideration of Calendar No. 494, S. 2314.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Montana?

There being no objection, the Senate proceeded to consider the bill (S. 2314) to amend section 4 of the Revised Organic Act of the Virgin Islands relating to voting age which had been reported from the Committee on Interior and Insular Affairs, with amendments on page 1, line 9, after the word "Islands" strike out "at an age lower than that prescribed in subsection (a) of this section," and insert "at an age not lower than eighteen years of age,"; and on page 2, line 2, after the word "approve" strike out "a reduction in such voting age"; so as to make the bill read:

S. 2314

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 4 of the Revised Organic Act of the Virgin Islands (68 Stat. 497) is amended (1) by inserting "(a)" immediately after "SEC. 4."; and (2) by adding at the end thereof the following new subsection:

"(b) The legislature shall have authority to enact legislation establishing the voting age for residents of the Virgin Islands at an age not lower than eighteen years of age, if

a majority of the qualified voters in the Virgin Islands approve in a referendum election held for that purpose."

The amendments were agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–497), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE

The purpose of S. 2314 is to amend the Revised Organic Act of the Virgin Islands to authorize the legislature of the Virgin Islands to lower the voting age to an age less than 21 years if the majority of the voters in the Virgin Islands approve a reduction in such voting age in a referendum election held for that purpose.

NEED

Section 4 of the Revised Organic Act of the Virgin Islands now prescribes that the franchise shall be vested in residents of the Virgin Islands who are citizens of the United States and who are 21 years of age or over.

Since enactment of the Revised Organic Act of 1954, the legislative power and authority of the Virgin Islands has been vested in a unicameral legislature with authority over "all rightful subjects of legislation" not inconsistent with the laws of the United States made applicable to the Virgin Islands. The legislature of the Virgin Islands has exercised this authority in a proper manner and in the tradition of free legislatures everywhere. By legislation enacted in 1968 (Public Law 90–496), the people of the Virgin Islands will elect their own Governor in November 1970. Enactment of S. 2314 would provide another significant step in the direction of local self-government for the Virgin Islands.

PUBLIC HEALTH CIGARETTE SMOKING ACT OF 1969

Mr. MOSS. Mr. President, last week Health, Education, and Welfare's Secretary Finch banned cyclamates and products using cyclamates. The basis of studies showing that cyclamates can cause cancer in rats and laboratory animals when injected with doses approximating 50 times normal human consumption. Secretary Finch is to be highly commended for moving firmly, and for moving without insisting upon a pile of corpses to prove beyond doubt that cyclamates can cause cancer in humans.

Ironically cyclamates were initially discovered almost by accident as a chemical byproduct of tobacco smoke.

And what a contrast there has been between Secretary Finch's ban on cyclamates and our chronic failure to face up to the hazards of smoking. We know only that cyclamates cause damage to animals in large doses. Yet, there is overwhelming evidence that cigarettes kill hundreds of thousands of people. Cigarette smoke contains several substances which are recognized as carcinogenic to man.

In contrast, too, is the reactions of the industries involved. The cyclamate manufacturers moved not to court nor to Congress to overturn the FDA action, but moved instead to accommodate the judgments of the Government by shifting production to other sweeteners. The cigarette manufacturers by contrast refused to face the facts about smoking and obtained the support of Congress in forestalling any meaningful regulatory action over cigarette advertising.

Did the TV industry protest that the curtailment of cyclamate advertising would work a hardship on them? Of course not. Yet representatives of the broadcasters are insisting upon continuing cigarette advertising for 4 years, even though the cigarette companies themselves are at last willing to terminate broadcast advertising in 1 year.

Nor did the House of Representatives move to stop the FDA from banning cyclamates. Yet, the House has this year acted again to ban the Federal Trade Commission from requiring warnings in cigarette advertisements for 6 years.

I think it is high time we applied the same firm standards of responsibility to cigarettes that we are willing to apply to foods and drugs.

On Thursday the Senate Commerce Committee meets to consider H.R. 6543, the so-called Public Health Cigarette Smoking Act of 1969. I ask unanimous consent that a letter and proposed amendments I have sent to the members of the committee seeking to strengthen the legislation to make it responsive to the facts about smoking and the judgments of the medical community to be printed at this point in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

U.S. SENATE,
Washington, D.C., October 24, 1969.

Hon. WARREN G. MAGNUSON,
U.S. Senate,
Washington, D.C.

DEAR SENATOR: The full Commerce Committee is scheduled to consider H.R. 6543, the House passed "Public Health Cigarette Smoking Act of 1969," on October 30th and, if necessary, October 31st.

The cigarette industry, as you know, has now agreed to withdraw all broadcast advertising of cigarettes by September 1970, upon the condition that it be granted immunity from the antitrust laws for this purpose.

Concerned public health organizations have welcomed the cigarette industry's decision, but they—and the broadcast industry—strenuously object that the public interest will not be served if the cigarette companies are permitted to divert their massive TV and radio advertising budgets into massive, "no holds barred" print advertising.

Yet, the House passed bill would tie the hands of the FTC by prohibiting it from requiring cautionary warnings in advertising if it concludes that future cigarette advertising practices necessitate such warnings.

The Federal Trade Commission testified before our Committee that it would not now attempt to require any warnings in print advertising; instead, it would defer any such action at least until after June 30, 1970, so that it might monitor the withdrawal of cigarette advertising from radio and television and future cigarette advertising practices in non-broadcast media.

So that the cigarette industry can effect its withdrawal from radio and TV by September 1970, and so that the public will be adequately protected against excesses by cigarette advertisers in other media, I will propose the amendments to the House bill which are shown in the attached print. They will accomplish the following objectives.

(1) Grant antitrust exemption, as approved by the Justice Department, (see attached letter from Assistant Attorney General McLaren) to cigarette advertising in any media. This amendment would not only permit the scheduled withdrawal from broadcast advertising, but it would allow the cigarette companies to agree upon an equitable formula to limit the volume of cigarette advertising in print media.

(2) Remove the House passed six year preemption of FTC authority to require warning in cigarette advertising, while preserving without time limitation the House ban on conflicting or nonuniform state or local regulation of cigarette advertising.

The House passed bill continues the requirement for reports by the Department of Health, Education and Welfare with respect to current information on the Health consequences of smoking and by the Federal Trade Commission with respect to the effectiveness of cigarette labeling and current practices and methods of cigarette advertising and promotion.

I will propose that the date of the first FTC report be moved up to July 1, 1970 and that the committee report direct the FTC to include in its survey:

"(1) the effectiveness of cigarette labeling; (2) the implementation of the cigarette industry's pledge to withdraw from cigarette advertising; (3) the volume and effectiveness of public service smoking education campaigns in broadcast and non-broadcast media; (4) the performance of the cigarette industry in avoiding advertisements with particular appeal to young people; (5) the utilization by the cigarette industry of print advertising for the non-deceptive promotion of cigarettes which are low in tar, nicotine, and hazardous gases; (6) an analysis of public opinion polls and other relevant information indicating the extent to which the American public, especially young people, have been made fully aware of the hazards of smoking; (7) a discussion of the action, if any, which the Commission proposes to take to restrict cigarette advertising; and (8) such recommendations for additional legislation as the Commission may deem appropriate."

I very much hope that I shall have your support when the Committee considers these amendments. If you or any member of your staff have any questions relating to them, please call me or contact Mike Pertschuk or Bill Meserve of the Committee staff.

Kindest regards.

Sincerely,

FRANK E. MOSS,
U.S. Senator.

H.R. 6543

(Stricken matter enclosed in brackets, new matter printed in italic)

An act to extend public health protection with respect to cigarette smoking and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Public Health Cigarette Smoking Act of 1969."

SEC. 2. Sections 2 through 10 of Public Law 89–92 (15 U.S.C. 1331–1338) are amended to read as follows:

"DECLARATION OF POLICY

"SEC. 2. It is the policy of the Congress, and the purpose of this Act, to establish a comprehensive Federal program to deal with cigarette labeling and advertising with respect to any relationship between smoking and health, whereby—

"(1 the public may be adequately informed that cigarette smoking may be hazardous to health by inclusion of a warning to that effect on each package of cigarettes; and

"(2) commerce and the national economy may be (A) protected to the maximum extent consistent with this declared policy and (B) not impeded by diverse, nonuniform, and confusing cigarette labeling and advertising regulations with respect to any relationship between smoking and health.

"DEFINITIONS

"SEC. 3. As used in this Act—

"(1) The term 'cigarette' means—

"(A) any roll of tobacco wrapped in paper or in any substance not containing tobacco, and

"(B) any roll of tobacco wrapped in any substance containing tobacco which, because of its appearance, the type of tobacco used in the filler, or its packaging and labeling, is likely to be offered to, or purchased by, consumers as a cigarette described in subparagraph (A).

"(2) The term 'commerce' means (A) commerce between any State, the District of Columbia, the Commonwealth of Puerto Rico, Guam, the Virgin Islands, American Samoa, Wake Island, Midway Islands, Kingman Reef, or Johnston Island and any place outside thereof; (B) commerce between points in any State, the District of Columbia, the Commonwealth of Puerto Rico, Guam, the Virgin Islands, American Samoa, Wake Island, Midway Islands, Kingman Reef, or Johnston Island, but through any place outside thereof; or (C) commerce wholly within the District of Columbia, Guam, the Virgin Islands, American Samoa, Wake Island, Midway Islands, Kingman Reef, or Johnston Island.

"(3) The term 'United States', when used in a geographical sense, includes the several States, the District of Columbia, the Commonwealth of Puerto Rico, Guam, the Virgin Islands, American Samoa, Wake Island, Midway Islands, Kingman Reef, and Johnston Island. *The term 'State' includes any political division of any State.*

"(4) The term 'package' means a pack, box, carton, or container of any kind in which cigarettes are offered for sale, sold, or otherwise distributed to consumers.

"(5) The term 'person' means an individual, partnership, corporation, or any other business or legal entity.

"(6) The term 'sale or distribution' includes sampling or any other distribution not for sale.

"LABELING

"SEC. 4. It shall be unlawful for any person to manufacture, import, or package for sale or distribution within the United States any cigarettes the package of which fails to bear the following statement: 'Warning: The Surgeon General Has Determined That Cigarette Smoking Is Dangerous to Your Health and May Cause Lung Cancer or Other Diseases.' Such statement shall be located in a conspicuous place on every cigarette package and shall appear in conspicuous and legible type in contrast by typography, layout, or color with other printed matter on the package.

"PREEMPTION

"SEC. 5. (a) No statement relating to smoking and health, other than the statement required by section 4 of this Act, shall be required on any cigarette package.

["(b) No statement relating to smoking and health shall be required in the advertising of any cigarettes the packages of which are labeled in conformity with the provisions of this Act.]

"(b) *No other requirement or prohibition based on smoking and health shall be imposed by any State statute or regulation with respect to the advertising or promotion of any cigarettes the packages of which are labeled in conformity with the provisions of this Act.*

["(c) Except as is otherwise provided in subsections (a) and (b), nothing in this Act shall be constructed to limit, restrict, expand, or otherwise affect the authority of the Federal Trade Commission with respect to unfair or deceptive acts or practices in the advertising of cigarettes, nor to affirm or deny the Federal Trade Commission's holding that it has the authority to issue trade regulation rules or to require an affirmative statement in any cigarette advertisement.]

"Antitrust Exemption

"Sec. 6. The antitrust laws of the United States, as defined in section 1 of the Act of October 15, 1914 (38 Stat. 730; 15 U.S.C. 12) and the Federal Trade Commission Act, as amended (38 Stat. 719; 15 U.S.C. 44), and state anti-trust laws, shall not apply to any joint agreement by or among persons engaged in the manufacture or sale of cigarettes to refrain from or to restrict the advertising of cigarettes; provided, however, that any such joint agreement shall apply equally to all persons engaged in the medium of communications to which such agreement is applicable.

"Reports

"'Sec. 7(a) [(d)(1)] The Secretary of Health, Education, and Welfare shall transmit a report to the Congress not later than [eighteen months after the effective date of this Act, and] *January 1, 1971, and* annually thereafter, concerning (A) current information on the health consequences of smoking and (B) such recommendations for legislation as he may deem appropriate.

"[(2)] *(b)* The Federal Trade Commission shall transmit a [report to the Congress not later than eighteen months after the effective date of this Act, and annually thereafter, con-] *report to the Congress not later than July 1, 1970 and annually thereafter, con*cerning (A) the effectiveness of cigarette labeling, (B) current practices and methods of cigarette advertising and promotion, and (C) such recommendations for legislation as it may deem appropriate.

"Criminal Penalty

"SEC. [6.] *8.* Any person who violates the provisions of this Act shall be guilty of a misdemeanor and shall on conviction thereof be subject to a fine of not more than $10,000.

"INJUNCTION PROCEEDINGS

"SEC. [7.] [10.] 9. The several district courts of the United States are invested with jurisdiction, for cause shown, to prevent and restrain violations of this Act upon the application of the Attorney General of the United States acting through the several United States attorneys in their several districts.

"CIGARETTES FOR EXPORT

"SEC. [8.] [11.] 10. Packages of cigarettes manufactured, imported, or packaged (1) for export from the United States or (2) for delivery to a vessel or aircraft, as supplies, for consumption beyond the jurisdiction of the internal revenue laws of the United States shall be exempt from the requirements of this Act, but such exemptions shall not apply to cigarettes manufactured, imported, or packaged for sale or distribution to members or units of the Armed Forces of the United States located outside of the United States.

"SEPARABILITY

"SEC. [9.] [12.] 11. If any provision of this Act or the application thereof to any person or circumstances is held invalid, the other provisions of this Act and the application of such provision to other persons or circumstances shall not be affected thereby.

["Termination of provisions affecting regulation of advertising

["SEC. 10. The provisions of this Act which affect the regulation of advertising shall terminate on July 1, 1975, but such termination shall not be construed as limiting, expanding, or otherwise affecting the jurisdiction or authority which the Federal Trade Commission or any other Federal agency had prior to the date of enactment of this Act."

[SEC. 3. The amendment made by this Act shall take effect on July 1, 1969.]

Effective date

Sec. 3. Section 5 of the amendment made by this Act shall take effect as of July 1, 1969. All other provisions of the amendment made by this Act shall take effect on January 1, 1970.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. KENNEDY. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

S. 3090—INTRODUCTION OF A BILL TO AUTHORIZE ADDITIONAL FUNDS FOR THE MINUTEMAN NATIONAL HISTORICAL PARK

Mr. KENNEDY. Mr. President, I introduce, for appropriate reference, a bill to allow the completion of the land acquisition program for the Minuteman National Historical Park, and for other purposes.

I ask unanimous consent that the bill be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. KENNEDY. The Minuteman Historical Park, which preserves the sites of the first battle of the American Revolution, was created by act of Congress in 1959.

It embraces portions of the route traversed by the British at the outset of the Revolutionary War; and it includes sites in Lexington, Lincoln, and Concord, Mass., which were defended by the Minutemen during those opening days of hostility.

The events that took place at that time include the momentous ride of Paul Revere and William Dawes, the proposed arrest of John Hancock and Samuel Adams, the capture of the colonial military stores at Concord, and the routing of the first British military expedition from Boston to Concord.

The significance of this area is familiar to all Americans. It was on Lexington Green and at Concord Bridge that the first shots were fired and the first blood spilled for the cause of American independence, inspiring Ralph Waldo Emerson to write:

By the rude bridge that arched the flood,
Their flag to April's breeze unfurled,
Here once the embattled farmers stood,
And fired the shot heard round the world.

No one of us would wish to lose any of this area and, in fact, we in Congress have expressed our intent to preserve these sites for present and future Americans.

The act passed in 1959 authorized the acquisition of 750 acres of land in two units: One a continuous stretch of 4 miles of road and roadside properties in the towns of Lexington, Lincoln, and Concord, containing 557 acres; and the other consisting of about 155 acres encompassing the celebrated North Bridge in Concord and its adjoining area.

In the past 9 years, the National Park Service has acquired all but 125 acres of the approved land. Currently 8 acres in Lexington, 52 in Lincoln, and 65 in Con-

cord remain to be acquired. A recent estimate by the Department of the Interior indicates the cost of acquisition of these lands to be 5.9 millions of dollars.

Mr. President, in 6 years we will celebrate the 200th anniversary of the independence of this Nation.

The war that won that independence began on the site of the Minuteman National Park.

Since 1964, over 2 milion people have visited the park; this number will increase as we approach our bicentennial year. Certainly it would be appropriate to authorize the funds necessary to fulfill the original intent of Congress as soon as possible.

Early authorization will ensure adequate site development by 1976.

The bill I introduce today also gives discretion to the Secretary of the Interior to alter the boundaries of the park in light of the recent relocation of Highway 2 by the Commonwealth of Massachusetts. Such discretion would permit the Secretary to increase the authorized acreage of the park, but only in realining the southern boundary to make it consistent with the highway relocation.

The battle fought at Lexington and Concord on April 19, 1775, and the memory of the Minutemen who defended the Colonies' right to independence, are matters of incalculable import in the history of the Western World.

I ask Congress to give its support to this bill which completes a program authorized by the Congress in 1959 and preserves for all time and for all men a fitting memorial marking a new dawn of freedom and the creation of a nation of free men.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 3090) to amend the act of September 21, 1959 (73 Stat. 590) to increase the authorization for the Minuteman National Historical Park, and for other purposes, introduced by Mr. KENNEDY, was received, read twice by its title, referred to the Committee on Interior and Insular Affairs, and ordered to be printed in the RECORD, as follows:

S. 3090

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 6 of the Act entitled "An Act to provide for the establishment of Minute Man Historical Park in Massachusetts, and for other purposes", approved September 21, 1959 (73 Stat. 590; Public Law 86–321) is amended (1) by striking out "$8,000,000" and inserting in lieu thereof "$13,900,000" and (2) by striking out "$5,000,000" and inserting in lieu thereof "$10,900,000."

SEC. 2. Section 1 of the Act entitled "An Act to provide for the establishment of Minute Man Historical Park in Massachusetts, and for other purposes", approved September 21, 1959 (73 Stat. 590; Public Law 86–321) is amended by adding two subsections, as follows:

"(b) Notwithstanding the description set forth in subsection (a) of this section, if the Secretary should determine that the relocation of Highway 2 by the Commonwealth of Massachusetts makes it desirable to establish new boundaries in common with, contiguous or adjacent to the proposed right-of-way for that highway, he is authorized to relocate such boundaries accordingly, and shall give notice thereof by publication of a map or other suitable description in the Federal Register: *Provided,* That any net acreage increase by reason of boundary revision and land exchanges with the Commonwealth shall not be included in calculations of acreage in regard to the limitation set forth in subsection (a) of this section, but shall be in addition thereto.

"(c) Any lands acquired as a result of the relocation of boundaries provided for in subsection (b), shall, upon their acquisition, become a part of Minute Man National Historical Park, and subject to all laws, rules, and regulations applicable thereto."

ORDER OF BUSINESS

The PRESIDING OFFICER. What is the will of the Senate?

Mr. KENNEDY. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. KENNEDY. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. PACKWOOD in the chair). Without objection, it is so ordered.

SENATE JOINT RESOLUTION 163—INTRODUCTION OF SENATE JOINT RESOLUTION AUTHORIZING INCREASED FUNDING FOR U.S. OFFICE OF EDUCATION PROGRAMS

Mr. MONTOYA. Mr. President, I introduce on behalf of myself and Mr. PELL, Mr. RANDOLPH, Mr. JAVITS, Mr. BAYH, Mr. BURDICK, Mr. CANNON, Mr. CHURCH, Mr. COOK, Mr. CRANSTON, Mr. EAGLETON, Mr. GOODELL, Mr. GORE, Mr. GRAVEL, Mr. HARRIS, Mr. HART, Mr. HARTKE, Mr. HUGHES, Mr. KENNEDY, Mr. MATHIAS, Mr. MCGOVERN, Mr. MCINTYRE, Mr. METCALF, Mr. MONDALE, Mr. MOSS, Mr. NELSON, Mr. PASTORE, Mr. RIBICOFF, Mr. SCHWEIKER, Mr. SPONG, Mr. WILLIAMS of New Jersey, Mr. YARBOROUGH, Mr. ALLEN, Mr. DODD, and Mr. TOWER, a joint resolution which increases permissible funding levels for all programs under the U.S. Office of Education to the level set by H.R. 13111, the fiscal year 1970 appropriation bill for the Department of Labor and the Department of Health, Education, and Welfare, instead of that set by either the much reduced amount in the President's budget request or the fiscal year 1969 appropriations.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD a tabulation showing a summary of fiscal year 1969 authorizations and appropriations for the Office of Education as well as action thus far on the fiscal year 1970 Office of Education appropriations.

There being no objection, the tabulation was ordered to be printed in the RECORD, as follows:

SUMMARY OF FISCAL YEAR 1970 HISTORY

	Fiscal year 1969		Fiscal year 1970						
	Authorization [1]	Appropriation [2,3]	Authorization [1]	Estimate to Department	Department estimate to Budget Bureau	Johnson budget	Nixon amendments	House committee allowance	House allowanc
Elementary and secondary education	$3,249,059,274	$1,475,993,000	$3,612,054,470	$1,553,855,000	$1,558,327,000	$1,525,876,000	$1,415,393,000	$1,470,338,000	$1,761,591,000

SUMMARY OF FISCAL YEAR 1970 HISTORY—FOOTNOTES

[1] Includes advance of $1,010,814,300 appropriated in the 1969 Labor-HEW Appropriation Act.
[2] House did not consider $9,825,000 for Indian children not yet authorized.
[3] House did not consider $230,000 for Indian children not yet authorized.
[4] Includes supervision which is funded under title V, ESEA.
[5] Indefinite.
[6] For new awards plus continuous cost.
[7] $25,000,000 authorized from fiscal year 1959 through duration of act.
[8] Includes $49,991,000 for George Barden and supplemental acts.
[9] Specific authorization represents amounts only for technical assistants to carry out functions of National Advisory Council.
[10] Authorization included under grants to States, pt. B, Vocational Education Act of 1963.
[11] Included under research and training appropriation.
[12] Excludes $1,100,000 which is included under research and training appropriation.
[13] Includes library research which is shown under research and training.
[14] House did not consider $60,000 for Indian children not yet authorized.
[15] General education combines these prior year activities: General education research, demonstration and development, library improvement research, and educational media research.
[16] $100,000,000 authorized over a 5-year period through fiscal year 1970.

Mr. MONTOYA. Mr. President, a glance at the tabulation will show that the amounts in the House-passed H.R. 13111 are $1 billion, $25 million over the budget request and approximately $600,000 over the fiscal year 1969 appropriation. The resolution we are introducing today would permit the Office of Education to expend funds at the greater level in H.R. 13111 until Congress completes action on the appropriation bill.

As you know, Mr. President, Congress has not yet completed action on fiscal year 1970 appropriations for programs in the U.S. Office of Education. As I pointed out on September 10 when I sponsored a joint resolution (S.J. Res. 148) providing similar school aid relief to federally impacted areas, the unavoidable delay in appropriations causes much uncertainty and many difficulties for education agencies which must function for several months not knowing the total amount of funds with which they have to operate. The continuing resolution presently in effect authorizes the Department of Health, Education, and Welfare, among other agencies, to expend funds at last year's rate or the President's fiscal year 1970 budget request, whichever is the lesser. A review of the above tabulation will show that this is simply not adequate.

The House-passed H.R. 13111 provides, as I have stated, for education programs, funds of more than $1 billion over the President's budget request. I feel confident that the Senate will uphold, and even increase, the amounts voted by the House. In light of the nearly assured action of Congress to amend the President's budget request, the present continuing resolution represents the imposition of an unnecessary hardship on federally funded education programs. This interim funding procedure is creating havoc with most school budgets and is particularly harmful to school programs involving vocational education, education for the handicapped, aid for educationally deprived children, aid to federally impacted areas, and direct loans for college students. We in Congress must not penalize the schools for our own unavoidable procedural inefficiencies.

If we do not enact this joint resolution promptly, Mr. President, we will, in fact, be penalizing our schools and our Nation's children. Unless we act now, schools will necessarily be forced to make drastic cuts in services, personnel, equipment, materials, and other vital areas. This will have the resultant effect of a poor quality education. Let us demonstrate our commitment to quality education by enacting this resolution and freeing the necessary funds for all education programs.

The resolution we are proposing is identical with one introduced in the other body, cosponsored by 227 Members of the House. Debate on that will be occurring today. I am hopeful that that measure will be adopted by the House today. By evincing our strong support for the measure now being introduced, we can assure our colleagues in the House of our collective support for meeting the educational needs of our children and schools thus enabling them to avoid any specious argument to the contrary which may be offered by those who have not assessed the depth of our commitment.

I am very pleased to state that the resolution, which has strong bipartisan support, is one which can command the allegiance of all Senators of both parties. I wish to thank my colleague, the Senator from Rhode Island (Mr. PELL), chairman of the Education Subcommittee, and and my colleague, the Senator from West Virginia (Mr. RANDOLPH), senior member of the Committee on Labor and Public Welfare, and my colleague, the Senator from New York (Mr. JAVITS), ranking Republican member of the full committee, for joining with me at this time in presenting this resolution to the Senate on our behalf and on behalf of all those who have joined us in cosponsoring this measure.

Mr. President, this measure affects every State in the Nation and it affects every program administered by the U.S. Office of Education. Some programs would be assisted more than others, some States more than others. But in the final analysis, all States and thus children and scholars throughout the Nation will benefit if this measure is enacted.

Mr. President, a State-by-State breakdown of the various levels of funding involved may be found in the CONGRESSIONAL RECORD of October 21, 1969, at pages 30711–30768. All States will benefit in the end. Quality education will be enhanced.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD the text of the joint resolution.

The PRESIDING OFFICER. The joint resolution will be received and appropriately referred; and, without objection, the joint resolution will be printed in the RECORD.

The joint resolution (S.J. Res. 163) to supplement the joint resolution making continuing appropriations for the fiscal year 1970 in order to provide for carrying out programs and projects, and for payments to State educational agencies and local educational agencies, institutions of higher education, and other educational agencies and organizations, based upon appropriation levels as provided in H.R. 13111 which passed the House of Representatives July 31, 1969, and entitled "An Act making appropriations for the Departments of Labor, and Health, Education, and Welfare, and related agencies, for the fiscal year ending June 30, 1970, and for other purposes," introduced by Mr. MONTOYA (for himself and other Senators), was received, read twice by its title, referred to the Committee on Appropriations, and ordered to be printed in the RECORD, as follows:

S.J. RES. 163

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding the provisions of section 101(b) and section 101(d) of the joint resolution entitled "Joint resolution making continuing appropriations for the fiscal year 1970, and for other purposes," approved June 30, 1969 (83 Stat. 38), in addition to the sums appropriated by such joint resolution, such additional sums are appropriated out of any money in the Treasury not otherwise appropriated, and out of applicable corporate or other revenues, receipts, and funds, for the Department of Health, Education, and Welfare for the fiscal year 1970, as may be necessary for carrying out programs and projects and for making payments to State and local educational agencies, institutions of higher education, and other educational agencies and organizations, of the amounts to which they would be entitled for the fiscal year 1970 pursuant to the provisions of those paragraphs captioned "Office of Education" in

the bill, H.R. 13111, which passed the House of Representatives on July 31, 1969, entitled "An Act making appropriations for the Departments of Labor, and Health, Education, and Welfare, and related agencies, for the fiscal year ending June 30, 1970, and for other purposes."

Mr. PELL. Mr. President, I should like to take this opportunity to commend the junior Senator from New Mexico (Mr. MONTOYA) for taking the leadership role in seeking to meaningfully fund our current education programs. And I am pleased to join with him as a cosponsor.

It appears to me that both the Senate and the House have spoken most clearly on the subject of support for education. Early in this session, we, by record vote, exempted education programs from the budget limitation. In August we voted to increase the authorization for the Federal higher education student assistance programs. On the House side, concern for education was clearly demonstrated with the passage of H.R. 13111 at a level far in excess of the requested figure.

I hope that the administration and the Appropriations Committee will take note of what I believe to be the mood of the Senate in full support of education programs. Funding of ongoing projects at last year's level only retards the fine work of the local educational agencies not only in the present school year, but also in the next, for intelligent planning cannot be carried on when the funding level is so uncertain.

In today's Washington Post there appears an editorial which speaks of the need to give education a top priority. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Post, Oct. 28, 1969]

EDUCATION—"THE KEY TO SURVIVAL"

"Jefferson knew that the destiny of America was inseparable from education—that in the fulfillment of the promise of this new nation education would be the key . . . Education, long the key to opportunity and fulfillment, is today also the key to survival." So said Richard Nixon just a year ago when he was a candidate for the presidency. And he went on to pledge that "my administration will be second to none in its concern for education."

There has been no discernible movement to redeem that pledge. Indeed, in the fierce competition for attention and for federal funds in a period when economy is an administration watchword, education has been treated as a pesky poor relation. The President has come forward with a dramatic new welfare proposal; but he has displayed only indifference to the urgent educational needs set forth by a distinguished urban education task force. He has proposed immense expenditures for a new maritime program designed to "replace the drift and neglect of recent years and restore this country to a proud position in the shipping lanes of the world"; but when the House of Representatives during the summer enlarged by a billion dollars the meager appropriation he requested for federal aid to education, he opposed the increase and threatened not to spend it if the Senate should endorse the House action.

The President and his Secretary of Health, Education and Welfare persuaded one of the ablest and most thoughtful educators in the country, Dr. James E. Allen Jr., to leave the New York State superintendency of education and come to Washington as U.S. Commissioner of Education. But Dr. Allen has been accorded scant influence since he came here, as though the administration desired a symbol of excellence rather than a promoter of it.

This country, a pioneer in mass public education, is now second to many of the countries of Europe in literacy, the most elementary index to educational attainment. Calling last month for a campaign to eradicate illiteracy in America, Commissioner Allen pointed to the shameful fact that in large city school systems in this country up to half of the students read below expectation and that about half of the unemployed youth between the ages of 16 and 21 in this country are functionally illiterate.

"Drift and neglect" have been much more—and much more seriously—the portion of the public schools in this country than of the merchant marine. For nearly half a century on one pretext or another—two world wars, two Asian interventions, a depression, an inflation—the public schools of this country have been allowed to sink further and further in arrears of the demands made upon them. School construction has not kept pace with a growing school population; the number and the caliber of teachers—and of the counselors and equipment required to complement the teachers—have lagged increasingly behind the known needs of school children.

The management of public schools is, and should be, a local responsibility. But the long neglect of the school system can be repaired only through a dramatic program of federal financial aid; the resources are simply not now available at the local level. More important still, the drive and innovation and planning for a revitalization of the public schools must come on a nationwide basis.

With the need for federal aid so urgent and so great, it is a tragedy to hear from within the administration phlegmatic talk about concentrating on research instead of on action. It is true, of course, that intensive study of educational needs and aims must continue constantly. But the schools themselves—and the children whose childhood opportunities for education can never recur—cannot now wait upon research. There are plenty of pressing and indubitably constructive uses for the billion dollars of additional money a concerned Congress wants to apply to public education. There is plenty of knowledge in the U.S. Commissioner's office to put that money effectively to work at once.

Mr. HART. Mr. President, I am pleased to cosponsor the resolution introduced by the Senator from New Mexico (Mr. MONTOYA) which would authorize Federal aid-to-education programs be funded at the level approved by the House of Representatives when it passed H.R. 13111 on July 31.

To review the situation briefly the House added about $1.042 billion to the administration's budget request for the Office of Education.

The Senate has not yet acted on the bill, and, as I understand the situation, may not do so for several more weeks.

Because the appropriation bill for the Office of Education has not been enacted for this fiscal year, funds for education programs are made available through a continuing resolution.

Under the terms of the existing resolution, which expires October 31, these important education and library programs are funded at the level of the administration's budget request or the level of the appropriation for fiscal year 1969, whichever is lower.

The Senate is then faced with two questions on education appropriations.

When H.R. 13111 comes to the floor, the Senate should at least match the House figure.

However, to cover the interim period before the Senate takes action on the bill, we should approve Senator MONTOYA's resolution to provide funding at the level of the House-passed bill.

I shall put the case in terms of what is at stake for my State of Michigan.

Michigan's allocation under H.R. 13111 is $105,102,536; under the Nixon budget, $76,521,291.

That is a difference of about $28.5 million, a difference Michigan can ill afford. And I suspect the situation is the same in most other States.

Let me cite just one program, aid to school districts affected by Federal employment—Public Law 874—to pinpoint the effect the Nixon budget has on local school budgets. I chose this program because the Office of Education supplied me with figures listing the cutback in Public Law 874 funds by Michigan congressional districts.

These are the overall figures: $650 million needed to honor full entitlements, and $187 million requested in President Nixon's budget.

Basically, impacted aid goes to schools having three categories of pupils:

First, students whose parents work for the Federal Government and live on Federal property and who go to federally operated schools.

Second, students whose parents work for the Federal Government and live on Federal property, but who go to local public schools.

Third, students whose parents either live on Federal property or work for the Federal Government and who go to local public schools.

It is my understanding the President Nixon's budget eliminates assistance for schools with pupils in the third category.

Mr. President, while many school districts have great need for their full share of this program, this particular cut hits hardest at some of those districts which need the money most—districts in our cities.

The reason is clear. While many city residents may work for the Federal Government, there are few Federal housing reservations within big cities.

For example, under full entitlement Detroit public schools would receive $856,000; under the proposed budget, nothing.

However, let me emphasize the effect of the reduction is not limited to Detroit. The following are the figures by congressional district:

District	Full entitlement	Nixon entitlement
2d	$96,000	$8,000
3d	683,000	105,000
8th	49,000	4,000
9th	67,000	6,000
10th	816,000	500,000
11th	1,946,000	1,200,000
12th	1,115,000	400,000
15th	67,000	0
16th	19,000	10,000

In all fairness, this is not the first administration to seek cutbacks in the Public Law 874 program, and many persons feel that these funds could be spent in a more equitable way.

My point is, however, that as long as the program remains on the books we

should expect school districts hard-pressed to find funds to budget for their full entitlement. To deny that full entitlement greatly complicates the task of drawing up realistic and adequate school budgets at the local level.

Further complicating the situation for local school boards is a refusal by administrations to spend what Congress appropriates.

President Nixon already has announced that he will not spend any funds in excess of this request for the Office of Education.

Mr. President, the administration should spend what Congress appropriates. Otherwise the administration will in effect be ignoring the proper role of Congress in setting national spending priorities.

The case for spending what the House approved is stated clearly in the editorial in today's edition of the Washington Post which the Senator from Rhode Island (Mr. PELL) inserted in the RECORD earlier.

Mr. KENNEDY. Mr. President, as a cosponsor of Senate Joint Resolution 163 I cannot stress enough the importance of this interim measure to assure adequate funding of education programs and to assure that the ultimate will of the Senate is carried out in this regard.

Presently education programs are provided Federal funds only to the level prescribed in the administration's revised budget estimates of April or the 1969 appropriation level, whichever is lower. This provision results in there being no Federal funds available for operating library programs in the elementary, secondary, and higher education areas, the matching grant equipment programs of title III, NDEA; and title VI of the Higher Education Act; guidance counseling, and testing provisions of title V, NDEA, and no payments for category "(b)" pupils under Public Law 874, the impact aid legislation. Grants to local educational agencies under title I of ESEA must operate below the budget estimates level for fiscal year 1970. Cutbacks in vocational education must be made at this time because the 1969 funding level does not permit implementation of the 1968 set-asides simultaneously with the continuation of ongoing programs. Drastic cutbacks are required for many other programs in the field of higher education.

The problem is that back in June, when Congress passed the general continuing resolution for all Federal programs for which appropriations had not then been passed, the House had not yet acted on educational appropriations. Therefore the only specific guide we had for education in fiscal 1970 was the administration's budget request. Subsequently, however, the House passed H.R. 13111, which calls for an increase of more than $1 billion over the administration's budget request. The Senate has not yet acted on H.R. 13111, but there is every indication that the Senate will approve even more than the House-passed figure.

In this situation, it is unrealistic to restrict education expenditures to the outdated figure in the initial budget request. Senate Joint Resolution 163 would correct the situation by directing the Office of Education to spend at the level approved in H.R. 13111, pending final action by Congress on education appropriations.

There is no need to detail the overwhelming need for the resolution. In my own State of Massachusetts, the administration budget estimate was $52,123,484, whereas under the House-passed appropriation bill Massachusetts would receive $78,861,707. The holding back of funds has caused uncertainty, confusion, and serious harm to many successful programs and projects which have developed over the years. If funds are frozen out much longer, the damage will be irreversible. For educators must have a realistic basis for planning. The problem is similar in every State in the Union.

Passage of Senate Joint Resolution 163 will give educational administrators assurance that spending will be at least as high as the House-passed level. It will enable them to plan and conduct programs in the most efficient and effective fashion for the rest of the school year.

The Senate has long shown its commitment to education, and I have no doubt whatsoever that we will continue this commitment when we finally act on H.R. 13111. Earlier this year, the Senate voted to exempt education expenditures from the budget ceiling. In August, we voted increased authorizations for student financial assistance programs. As the sponsor of the student assistance amendment, I feel strongly that we must take steps to assure that our intent is not thwarted by the needless and unresponsive freezing of funds. The House-passed appropriations bill, for example, increases NDEA loans from $193.4 million in the administration's budget request to $229 million. Numerous other programs were increased. But funds have not been released.

H.R. 13111, as passed by the House, is a good base to build on here in the Senate. Adoption of Senate Joint Resolution 163 will show that the Senate is willing and determined to work its will on education programs. It will save many projects from withering from lack of funds—funds which Congress surely desires and intends to appropriate.

I urge swift passage of the resolution.

EDUCATION NEEDS FUNDING, NOT PLATITUDES

Mr. CHURCH. Mr. President, today I am happy to join as a cosponsor with the distinguished Senator from New Mexico (Mr. MONTOYA) of Senate Joint Resolution 163 which would allow the funding of education programs at the level authorized by the House of Representatives in H.R. 13111, rather than at last year's budget levels or at the level of the President's budget, whichever is lower, as is the present case.

If our resolution is passed, the administration will be given the opportunity to free more than $1 billion for America's education programs. The breakdown of the increases which will be authorized is described on the attached chart which I ask to be inserted at this point in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

	Fiscal year 1969		Fiscal year 1970						
	Authorization [1]	Appropriation [2][3]	Authorization [1]	Estimate to Department	Department estimate to Budget Bureau	Johnson budget	Nixon amendments	House committee allowance	House allowance
Elementary and secondary education	$3,249,059,274	$1,475,993,000	$3,612,054,470	$1,553,855,000	$1,558,327,000	$1,525,876,000	$1,415,393,000	$1,470,338,000	$1,761,591,000
School assistance in federally affected areas	640,112,000	521,253,000	729,941,000	458,502,000	315,167,000	315,167,000	202,167,000	202,167,000	600,167,000
Education professions development	352,500,000	95,000,000	445,000,000	146,500,000	116,500,000	105,000,000	95,000,000	95,000,000	95,000,000

Mr. CHURCH. Mr. President, $398 million of the increase is for the federally-impacted areas school program which is of tremendous importance to my State of Idaho, which is over 60 percent federally owned.

The impacted areas program is by no means the only program that will be aided if this proposal is enacted. Education programs across the board will benefit.

In recent years, the people of our country have become increasingly aware of the importance of education to our Nation. Concerned citizens and educators from throughout the United States have joined this year in a nonpartisan effort to achieve full funding for all our Nation's education programs. I welcome their efforts and support their goals.

It does us no good to speak of the right of all Americans to read, or the right of all American children to attend a properly equipped school with properly trained teachers if we do not work to make the visions of the phrasemakers a reality in our classrooms.

I have received numerous telegrams and letters from Idaho urging my support for this resolution. Its effect upon planning and implementing education programs in my State would be significant. I ask unanimous consent that a breakdown of the effect of this resolution, if passed, on my State of Idaho, be included at this point in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

OBLIGATIONS IN THE STATE OF IDAHO

Program	Actual, 1968	Estimate, 1969	Estimate, 1970	Nixon estimate, 1970	House passed appropriation bill
OFFICE OF EDUCATION					
Elementary and secondary education:					
Assistance for educationally deprived children (ESEA I):					
Basic grants	$3,095,753	$2,945,733	$3,006,605	$3,006,605	$3,488,547
State administrative expenses	150,000	150,000	150,000	150,000	
Grants to States for school library materials (ESEA II)	360,311	180,728	151,813	0	180,068
Supplementary educational centers and services (ESEA III)	831,000	858,909	887,072	689,438	855,370
Strengthening State departments of education (ESEA V):					
Grants to States	217,211	283,917	278,803	278,803	278,803
Grants for special projects				0	0
Acquisition of equipment and minor remodeling (NDEA III):					
Grants to States	360,587	358,140		0	356,734
Loans to nonprofit private schools		3,048		0	0
State administration	10,000	13,333		0	13,333
Guidance, counseling, and testing (NDEA V)	94,436	64,750	50,000	0	64,139
Subtotal, elementary and secondary education	5,119,298	4,858,558	4,524,293	4,403,649	5,236,994
School assistance in federally affected areas:					
Maintenance and operations (Public Law 81-874)	2,551,000	2,656,000	1,507,000	1,044,000	3,225,000
Construction (Public Law 81-815)		138,100		0	0
Subtotal, SAFA	2,551,000	2,794,100	1,507,000	1,044,000	3,225,000
Education professions development:					
Preschool, elementary, and secondary:					
Grants to States (EPDA B-2)		135,012	152,981	152,981	152,981
Training programs (EPDA, pts. C and D)	142,113			0	0
Subtotal, education professions development	142,113	135,012	152,981	152,981	152,981
Teachers Corps				0	0
Higher education:

Mr. CHURCH. Mr. President, in the last decade we have experienced a knowledge explosion of overwhelming proportions. Never has the need for capable teachers been so great. Never have the requirements for updated texts, new lab equipment, special audiovisual aids and modern facilities been so demanding.

To meet the demands that our age places on the minds of our children, we must provide them with the best possible education. Quality education does not come by simply paying it lipservice; it can only come with a massive commitment of public will and funds to achieve that goal. I strongly support this resolution and urge my colleagues to do the same.

Beyond urging the Congress to act favorably on this proposal, I strongly urge the President to implement it upon its passage. It will do education in our Nation no good if, upon passage of this authorization, the President refuses to allow the Department of Health, Education, and Welfare to distribute the funds as he has threatened to do. Such an action on the part of the Executive would totally frustrate the expressed will of the Congress in regard to the expenditure of public funds. Not only would such an act be of questionable constitutionality, but it would have long-term effects upon our educational system which would be impossible to assess.

The Congress and the Executive must work together to assure the continued growth of America's public school system. The passage and implementation of this resolution will aid greatly in achieving that goal.

THE CRISIS IN OUR SKIES—AMENDMENT 138 TO S. 2437

Mr. BOGGS. Mr. President, I rise today to address my distinguished colleagues concerning the crisis in our skies and to solicit their support for my proposed amendment, No. 138 to S. 2437, the Aviation Facilities Expansion Act of 1969.

President Richard M. Nixon, in an address on October 3, 1968, pointed to many of the problems in modern aviation—the lack of planning that has resulted in overtaxed facilities, inconvenience and delay for millions of travelers, and enormous costs to commercial aviation.

The President said:

> These problems are not the result of unforeseen developments.
>
> The strains which vibrant economic growth would place on our existing air transport system were pointed out by expert studies years ago.

Rather than allow this long-term problem to continue to grow, we must now seize upon the opportunity to rectify the situation. A nation that possesses the best aviation system in the world should not allow it to stagnate in confusion and inadequate facilities.

S. 2437, sponsored by my distinguished colleagues, Mr. MAGNUSON and Mr. CORTON, provides for a method of expansion of aviation facilities. This fine legislation also requires establishment of a National Airport System plan which would set forth the type and cost of airport development envisioned as necessary over a 10-year period.

I have proposed an amendment that would accomplish not only a survey of the needs of airports, but of the entire aviation industry. This amendment would require the President to establish a broad-based commission, drawing its membership from State and local government, from business, and from professional aviation associations. Its function would be to determine a long-range plan for aviation and make allowance for orderly and progressive expansion. Its recommendations would be for the consideration of the Secretary of Transportation and the Congress.

There can be little doubt that aviation is in need of coordinated long-range planning. Let us review the present status of the industry and how it arrived at this point.

When the President made his policy statement on air transportation, he noted that in the past 7 years the number of passengers carried by our scheduled airlines increased from 58 to 130 million. During the same period, our general aviation fleet increased from 69,000 to 112,000; and with aviation becoming an attractive recreation, more than 600,000 Americans have pilots' licenses now, and the number is increasing daily.

This remarkable increase has not been matched by solutions to the problems it has caused. In the past, emergency and temporary answers have been found. But now is the time for action—action to accommodate the long-term demands on the system.

Perhaps the problem with air transportation that is most evident to the individual American is the delay that often is involved. Many of my distinguished colleagues, I am certain, have encountered delays that have equaled their time in the air.

The Federal Aviation Administration has sought to combat travel delays, and it is pleasing to note that some progress is being made. But we have no guarantees that there will be no resurgence.

Air traffic controllers are well aware of the dilemma in our skies. In order to deliver travelers to their destinations on or near schedule, they frequently have had to bend regulations.

Recently, the crisis climaxed. To demonstrate the magnitude of the problem, controllers decided to operate "according to the book." The result was extreme delays and even flight cancellations. They went one step farther when a walkout was staged, further congesting the terminals and irritating travelers who otherwise might have flown into a congested, and by now, dangerously overtaxed airport.

Local officials are concerned also because of a lack of guidelines for future development of the regional airport concept. Land for airports is becoming scarce and our hopes for expansion of the system may be determined by land availability in 15 or 20 years. We must be prepared to meet these demands—not in 10 or 15 years—but now. Innovation demands preparation.

The amendment would require that initial planning efforts be completed in 1 year. Hopefully, the Senate will pass this bill by the end of this session and the President will appoint a body that will submit its report by January 1, 1971.

Can the objective of obtaining national air system guidelines be achieved through the existing provisions of S. 2437 without establishment of a special commission? I do not believe so for several reasons, and that is the reason I have offered my amendment.

First, as the bill presently states, the Secretary of Transportation is to prepare and continually update a "national airport system plan," and in the process, to consult "to the extent feasible" with other Federal agencies.

I believe, however, the cooperation of the directly concerned agencies can be obtained far better through joint service on a commission than through discretionary consultation by a single department.

Second, air system guidelines must deal not only with airports but with aircraft, air routes, air traffic control and ground access. Here again, the bill directs the Secretary of Transportation to consult "to the extent feasible with air carriers, aircraft manufacturers, and others in the aviation industry."

Any basic air system decisions, however, have vast economic implications for all sectors of the industry. Such decisions should be made with built-in industry participation.

Third, the bill directs the Secretary to consult with State and regional planning agencies and airport operators. Here again, the judgment of area representatives should be carefully incorporated in these decisions.

Fourth, because of the broad impact of air system decisions on the Federal Government, the air industry and the Nation's major communities, decisions should reflect the judgment of key figures from each of these sectors.

Commissions often produce fat reports and thin results. This amendment incorporates the Commission securely into the procedure for national air system planning by its inclusion in a bill that provides funding for the facilities of the future.

With the imminent prospect of sizable Federal airports and airways' support, the uncertainties concerning future aviation markets and the broad community concerns about new and expanded airports and access, the key ingredients for reaching general agreement on the optimum form of the future air system are present now.

Such agreement can best be achieved by a commission—directed to prepare general guidelines for the coordinated development of airports, aircraft, airways, air service, and ground access.

Mr. President, I urge my colleagues on the Committee on Commerce to consider this amendment to S. 2437 very carefully. Its potential benefit to the aviation industry cannot truly be measured. But it is a beginning to a solution of a problem that distresses all Americans.

Mr. President, I ask unanimous consent to have printed in the RECORD a copy of my amendment No. 138 for the information of Senators.

There being no objection, amendment No. 138 was ordered to be printed in the RECORD, as follows:

AMENDMENT NO. 138

On page 10, lines 21 and 22, strike out "within two years of the date of enactment of this Act" and insert in lieu thereof "prior to January 1, 1971".

On page 10, line 24, after "The plan" insert "shall be prepared and revised with the advice of the Aviation Advisory Commission established pursuant to subsection (d) and".

On page 15, between lines 2 and 3 insert the following:

"AVIATION ADVISORY COMMISSION

"(d) (1) The President, with the advice of the Secretary, shall appoint an Aviation Advisory Commission consisting of members representing the Departments of Transportation, Defense, the Interior, and Housing and Urban Development, the Civil Aeronautics Board, the National Aeronautics and Space Administration, the Air Transport Association of America, the Aerospace Industries Association of America, Airport Operators Council International, the Association of American Railroads, the American Transit Association, the American Automobile Association, the American Trucking Association, the Aircraft Owners and Pilots Association, the Airline Pilots Association, several major metropolitan areas, and the fields of conservation and community development. The President shall also appoint a Chairman for such Commission with the necessary qualifications to lead such Commission in effectively carrying out its functions.

"(2) Such Commission shall—

"(A) advise the Secretary in the preparation and revision of the national air system plan pursuant to subsection (a);

"(B) prepare a long-range national air system plan for at least the year 1980 or the foreseeable needs of the Nation thereafter giving consideration to airport location and size, surrounding land use, terminal arrangements, ground access, airspace use, air traffic control, airline route structure and administrative arrangements, aircraft design, environmental effects, effect on urban areas, and costs of carrying out the plan;

"(C) report an initial such plan to the President and the Congress prior to January 1, 1971, and make any necessary revisions in such plan thereafter and report such revisions to the President and the Congress; and

"(D) make such investigations and studies as are necessary to carry out its functions.

"(3) Members of such Commission who are not regular full-time employees of the United States, shall, while serving on the business of the Commission, be entitled to receive compensation at rates fixed by the Secretary of Transportation, but not exceeding $100 per day, including traveltime; and, while so serving away from their homes or regular places of business, members may be allowed travel expenses, including per diem in lieu of subsistence, as authorized by section 5703 of title 5 of the United States Code for persons in the Government service employed intermittently.

"(4) The Secretary shall engage such technical assistance as may be required to carry out the functions of such Commission, and the Secretary shall, in addition, make available to the Commission such secretarial, clerical, and other assistance and such pertinent data prepared by the Department of Transportation as the Commission may require to carry out its functions.

"(5) In carrying out its functions pursuant to this subsection, such Commission may utilize the services and facilities of any agency of the Federal Government, in accordance with agreements between the Secretary of Transportation and the head of such agency."

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. HRUSKA. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

THE NOMINATION OF CLEMENT F. HAYNSWORTH TO BE AN ASSOCIATE JUSTICE OF THE SUPREME COURT

Mr. HRUSKA. Mr. President, yesterday the American Trial Lawyers Association announced the results of a poll regarding the issue of the confirmation of the nomination of Judge Haynsworth. It is to that subject that I should like to address a few remarks.

First of all, to set the general background, I ask unanimous consent to have printed in the RECORD at the conclusion of my remarks a news account of that poll as published in the Washington Post for October 27, 1969.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. HRUSKA. Mr. President, the American Trial Lawyers Association is a very fine professional group. It has a membership of some 24,000 lawyers. They are primarily trial lawyers in plaintiffs' cases and personal injury cases, though not exclusively. They can be defendants' attorneys as well. A great many of them are defense counsel in criminal cases, though there are likewise, I understand, some who are prosecutors. The organization serves a good, constructive purpose. It is helpful in providing programs, seminars and meetings at which workshops are conducted, and lectures and demonstrations employed as a means of instruction. The end product, of course, is supposed to be a lawyer who is better equipped to handle his work as a trial lawyer.

As organizations for members of the bar go, they are a relatively young organization, and do not have the same broad scope in their activities or their purposes that the American Bar Association, for example, has. I would presume—though I do not know what the actual facts are regarding the origin of the American Trial Lawyers Association—that it was felt that by forming a special organization of this kind, they could better serve their purpose of improving their capabilities as trial lawyers by forming an organization of their own,

rather than attaching themselves to some organization already in existence.

Mr. President, when the announcement was made, some time ago, that the American Trial Lawyers Association was contemplating a poll of its members, it was suggested that such a poll, in order to be of real use and benefit, would have to be what we know as a scientific poll, one which would not be just a popularity contest for a given group, but one qualified by a certain degree of standardization, which could meet certain qualifying tests. This was a general statement, made in a friendly way. The suggestion was made that any poll, to be of scientific value and to merit more than cursory attention, would have to be a true sampling of a cross section of trial lawyers; and, of course, that would take some study, because one could not, at random, pick a list of 1,000 or 1,500 lawyers from a membership of 24,000; it would have to be a demonstrably true sampling.

Second, there should be some assurance that those lawyers from that membership roll who are called upon to participate in that poll would have read and familiarized themselves in more than casual fashion with a reliable record of the case. There is a need to respect the requirement that the best evidence should be used; and of course the best evidence, in this instance, would be the published hearings of the Committee on the Judiciary. It is a document which is quite imposing in size, containing about 750 printed pages.

I do not contend, nor do I suggest, that everyone must have read every page in that book in order to be reasonably familiar with the issues and the evidence in the case of Judge Haynsworth. However, certainly the principal witnesses' statements, the briefs and reports of the various witnesses who submitted statements, and certainly the pertinent exhibits contained in these hearings, should be considered and should be reasonably fresh in the thinking of anyone responding to a poll of this kind.

Then, there is a third requirement. In order to be meaningful and useful, those registering opposition to the confirmation of Judge Haynsworth should spell out whether that opposition is based on questions about his philosophy or his ability, or specific doubts about his ethical standards. Those questioning Judge Haynsworth's honesty or ethical position should make that fact clear and specific.

Those three tests can reasonably be applied to such a poll, and I think we might expect that there would be compliance with those tests. Perhaps there are other requirements also; but, in order for the questionnaire to be more than a mere popularity poll, at least these tests ought to be applied.

What are the facts in regard to the poll that was taken? A letter was sent by Leon L. Wolfstone, president, to some 1,204 members of the American Trial Lawyers Association; 715 of them replied, and, according to the reports made and the accounts in the press, 73.2 percent believed that the nomination should be either withdrawn or rejected by the Senate.

What is the basis of the questionnaire which was sent out and the request that was made by the president of those 1,200-odd members of the association?

This poll was conducted on the basis of a letter dated October 15, 1969, addressed to "Dear ATL member," and signed by Leon L. Wolfstone, president. I ask unanimous consent, Mr. President, that the entire letter, together with the ballot attached to the lower part of the same page, be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 2.)

Mr. HRUSKA. One interesting fact is that the letter bears the date October 15. The final paragraph reads—and it is in capital letters:

> Your response must be received in Cambridge, Massachusetts, no later than Wednesday, October 22, 1969. Kindly send it to us via airmail.

Mr. President, assuming that the mailing occurred on October 15, it is reasonable to assume that it was not delivered, in any instance, sooner than October 16, and very likely a little bit later than that, particularly if the poll was conducted on a nationwide basis with some regard for geography.

Mr. President, inasmuch as the hearings of the committee were not generally distributed, and other official material was not readily available, it would be reasonable to expect that, upon receipt of this questionnaire, the careful lawyer, if he wanted to get the best evidence in the case, would direct an inquiry to the Committee on the Judiciary, asking for a copy of the hearings or some summary of them, or that he would direct his attention anywhere else he might obtain reliable information.

If he did that, it would hardly seem that the request for such additional information would arrive at the Washington office of the committee, or at the White House, much before the time that receipt of a reply was necessary pursuant to this questionnaire letter, October 22.

The Judiciary Committee staff reports to me that they received one request for the hearings from a lawyer who identified himself as a member of the American Trial Lawyers Association. About 12 requests were received from other lawyers, and three copies were furnished to the American Trial Lawyers Association directly.

So there would not seem to be any great urgent demand, for the members to equip themselves with copies of the hearings. Nevertheless, 715 of them presumably did respond to the questionnaires, with the results that I have already suggested.

It is interesting to observe that the 15th of October this year was on a Wednesday. Between Wednesday the 15th and Wednesday the 22d, there was a weekend. Normally, most professional activity is suspended or cut back during a weekend.

So I would suggest that even on the face of this questionnaire, it hardly would comply with those tests which were generally discussed already in my remarks and which commonsense would dictate. However, there is something even more significant about this questionnaire, and that is the language contained in the two full paragraphs of the letter. They read:

> Although I stated that I would inform you that the full text of the Senate Judiciary Committee hearings on this appointment will be available through the committee and that the position of the White House is available through its legal counsel, some people have informed me that they have endeavored to obtain this information, but without success.
>
> If you experience such difficulty, I respectfully suggest that you respond to this poll basing your response upon—

And, I should like to emphasize this—

> basing your response upon an objective analysis of the information disseminated through the communications media.

The second to the last paragraph then calls for the response not later than October 22. That is a sad commentary upon the operation of an organization that has concerned itself with the major issue of fair trial and free press. There is concern for the rights of defendants because of the tendency for the press, in the exercise of its freedom, to publish information without the total context or sometimes inaccurately or prematurely. Sometimes the information is prejudicial or without foundation or for some other reason inadmissible. There is the collateral problem that great care must be exercised by prosecutors and judges and other officers of the court in disclosing information that would be harmful to the rights of the defendant.

In other words, the problem is that somehow or another, the bias, the prejudice, the untimeliness, or the unfairness of newspaper accounts, whether deliberate or due to a shortage of space, prevents the entire story being told and all of the details being set out.

Whatever the shortcomings are, here we find an association of lawyers being asked to base their judgment and give a decision in the poll on the basis of an objective analysis of the information disseminated through the communications media.

This Chamber has heard a number of expositions on the inaccuracies in the printed record itself. Presumably, that would be reflected in many of the accounts which have been disseminated through the communications media. Perhaps it is in the nature of things that the media cannot, as I have already suggested, give the full copy and cannot give a full explanation of the background, and that, therefore, it cannot be held to strict accountability in that way.

Yet, many of us believe that there has been distortion and there has been emphasis on erroneous information and conclusions during the course of dissemination through the communications media. That has been documented by Senator COOK, myself and others and it will be further documented as we go along.

It seems to me that the tests that commonsense which must apply to a poll in order for it to be a useful reflection of professional judgment have not been met in this case. And I say this in all kind-

liness. After all it was notable and even laudable that the association was, concerned enough to try to ascertain the opinion of its members. However, I submit with due respect that it was not done in a way that would lend great value to the end result.

Mr. President, as far as I know, this is the first time that the American Trial Lawyers have attempted to evaluate nominations to the Federal bench, whether district, circuit or Supreme Court.

If they have done it before, it has not come to my attention.

There is a further fact that is, I think, quite significant. No special interest in the nomination of Judge Haynsworth was shown by the American Trial Lawyers Association until after the hearings had been printed. No official of the association requested to appear at the hearings and testify for the record. No witness from the association has submitted himself to questioning as to the foundation for the organization's opinion, or its validity or its reasonableness.

I grant that every citizen has a right to petition. Every member of the Republic, whether he is a voter or not, has a right to write and say, "I have canvassed a certain group, and here is what they think about Haynsworth or the United Nations or the tariff," or whatever it might be.

However, the right to petition is not at issue here. We want to know what value can be attached to a poll of this kind. In this regard, I should like to call attention to the fashion in which the role of the American Bar Association has developed through the decades with reference to processing and making recommendations of nominations for the Federal judiciary. Their experience goes back a long time. The association is one of the most eminent and oldest and largest and is most diversified in its membership.

As I recall there are as many as 200,000 persons admitted to practice law in the United States. And roughly 140,000 of them belong to the American Bar Association. That does not mean that a recommendation of the American Bar Association represents the thinking of 140,000 people. It does not mean that at all.

On the other hand, the association has developed through these years methods and procedures which allow the Committee on the Federal Judiciary of the American Bar Association to produce a report that would be considered commonsense and that would be considered professional in character.

Mr. President, I ask unanimous consent that there be printed in the RECORD at the conclusion of my remarks the testimony before the Judiciary Committee of former Federal judge, former Deputy Attorney General of the United States, Lawrence E. Walsh, an eminent member of the American bar. He is also chairman of the Committee on Federal Judiciary.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 3.)

Mr. HRUSKA. Mr. President, this testimony developed in detail what the procedures are of the committee and of the bar association in arriving at its recommendations in regard to the nomination.

I submit that it is a great contrast with the simple taking of a poll without sufficient and assured knowledge on all of the issues at hand.

Again I want to say that I make these remarks with all kindliness toward the American Trial Lawyers Association. I believe that they did make a sincere effort to make some contribution to the dialog. But I also submit, most respectfully, that the effort did not produce anything that will be of great benefit to the evaluation of the issues which are before us. We must examine these issues one by one and evaluate the various witnesses and documents. Some of the most eminent legal authorities in this field have testified during those hearings—scholars and judges, as well as practitioners.

I do believe that is the way to review the evidence, and delineate the issues in a fashion that will allow the Senate to make a final decision in this matter.

Earlier in this statement, reference was made to the trial lawyers demand for documents, such as the hearings or any other documents from the Committee on the Judiciary. I have received information from Mr. Clark Mollenhoff, in the White House, indicating that no copies of his materials were requested by any lawyer identifying himself as a member of the American Trial Lawyers Association. In addition neither the junior Senator from Kentucky nor I received a single request for the memoranda we prepared on the question of Judge Haynsworth's ethics, civil rights, or labor decisions records.

Mr. President, it is hoped that my analysis of the American Trial Lawyers poll, as well-intentioned as the poll might be, will serve aid in its evaluation by my colleagues.

Mr. BYRD of West Virginia. Mr. President, will the Senator yield?

Mr. HRUSKA. I am happy to yield to the distinguished Senator from West Virginia.

Mr. BYRD of West Virginia. Did I correctly understand the able Senator to say that the American Trial Lawyers Association had not conducted such a poll in connection with previous nominees?

Mr. HRUSKA. So far as my recollection goes, I might inform the Senator from West Virginia that I recall no similar interest in such an event. If there is record of one, I would cheerfully acknowledge it. I might say, further, that I have been serving on the Committee on the Judiciary since 1958.

Mr. BYRD of West Virginia. Did I also correctly understand the able Senator to say that the American Trial Lawyers Association had not appeared before the Judiciary Committee during the hearings, as witnesses for or against the nominee?

Mr. HRUSKA. The Senator from West Virginia is correct in his recollection. That is what the Senator from Nebraska stated.

Mr. BYRD of West Virginia. Did I further correctly understand the able Senator to say that, in response to the questionnaire, 715 replies had been received?

Mr. HRUSKA. Out of 1,200 letters sent out, according to news accounts, including one that was placed in the RECORD a short time ago. That is true; that is the report.

Mr. BYRD of West Virginia. I thank the Senator.

EXHIBIT 1

[From the Washington Post, Oct. 27, 1969]

NOMINATION OF HAYNSWORTH OPPOSED BY TRIAL LAWYERS

(By Spencer Rich)

The embattled Supreme Court nomination of Judge Clement F. Haynsworth Jr. received a new blow yesterday when the American Trial Lawyers Association asked that the nomination be withdrawn or disapproved by the Senate.

The action, taken by the group's board of governors after a study of the Senate Judiciary Committee hearing record and White House documents, followed a poll of ATLA members in which 73 per cent of the 715 persons who responded indicated they favored disapproval or withdrawal of the nomination.

Sen. Marlow Cook (R-Ky.), a leading Haynsworth supporter, discounted the poll results, saying, "That's making a popularity contest of a Supreme Court nomination."

ATLA President Leon Wolfstone said in a telephone interview from Boston that the board's decision was not based solely on the poll but was taken by a vote of the executive committee after extensive discussions Saturday night of the whole hearing record of the Senate Judiciary Committee and related documents.

Wolfstone said the 55 board members present voted by at least two-to-one against Haynsworth after examining charges that Haynsworth, a federal appeals judge for the Fourth Circuit, had ruled on cases in which he had links through stockholdings to companies involved in the litigation.

"The Vend-A-Matic case and Judge Haynsworth's purchase of Brunswick Corp. stock while Brunswick litigation was still before him was disturbing to some and probably to many members of the board," said Wolfstone, though he declined to discuss in detail the reasons for the board's "overwhelming" vote against Haynsworth. (Judge Haynsworth participated in a ruling in the Darlington case while Vend-A-Matic, a company in which he owned a substantial interest, had business with a Darlington subsidiary.)

Wolfstone said the board had adopted a resolution ascribing its recommendations—which it is forwarding to the White House and each member of the Senate—to "belief that public uncertainty in the ethical conduct of any nominee to the U.S. Supreme Court affects public confidence in the integrity of our judicial system."

The board said it was "persuaded upon the record of the hearings before the Senate Judiciary Committee that Judge Haynsworth has failed to demonstrate that sensitivity to the high standards of conduct required and expected of nominees of the U.S. Supreme Court."

Senator Cook said he was "shocked that they would consider a poll as a way to select a Justice of the Supreme Court. None of them read the record, most heard only one side and based their responses to the poll on newspaper accounts."

Cook said he suspected the poll was decisive in determining the board's position.

Wolfstone said at least half the 55 board members who voted had read the entire record and that others had read large excerpts.

The ATLA has about 24,000 members, only one-fifth as many as the much larger and much better established American Bar As-

sociation. Wolfstone announced that a poll would be taken of ATLA after the ABA's Federal Judiciary Committee, in reaffirming an earlier endorsement of Haynsworth, split 8 to 4 on Oct. 12.

"We felt that a committee of 12 whose views were no longer unanimous was not a fair, adequate representation of a cross-section of the lawyers of America," Wolfstone said.

The poll was sent out to 1204 ATLA members, some former officers and other members chosen at random. Of the 715 responses, only 91 favored approval of Haynsworth, while 524 favored disapproval or withdrawal.

In New York, meanwhile the National Bar Association, consisting of 2400 Negro lawyers, reaffirmed its opposition to Haynsworth.

The Haynsworth nomination is expected to come before the Senate in about two weeks, after Judiciary Committee reports are drafted. The committee approved the nomination by a 10-to-7 vote, but the Senate at present appears evenly split.

President Nixon has said that after consideration of the charges against Haynsworth, he is confident the judge is qualified and suitable. The President has indicated he is determined to press for Senate confirmation.

Opposition to Haynsworth in the Senate is led by Sen. Birch Bayh (D-Ind). Much of the key lobbying against him is being done by labor unions. All the judges of Haynsworth's own court, plus a block of former ABA presidents as well as the ABA Federal Judiciary Committee, have endorsed Haynsworth.

EXHIBIT 2

AMERICAN TRIAL LAWYERS ASSOCIATION,
Cambridge, Mass., October 15, 1969.

DEAR ATL MEMBER: Pursuant to a vote taken in a telephonic conference of the Executive Committee, I sent telegrams to the White House and every member of the United States Senate "firmly cautioning (them) against prematurely approving" the appointment and confirmation of Clement F. Haynsworth, Jr., to the Supreme Court of the United States "until and unless all available information is fully and fairly considered and properly evaluated."

I stated that there may have been approval "by a few individual members of this Bar Association," but that our Bar Association "has not yet evaluated or taken a position upon either his appointment or his confirmation".

I pointed out that the American Trial Lawyers Association lauds and approves without reservation the basic concept "that membership of the Supreme Court should be composed of men of unquestionable scholarly ability, and who also have demonstrated they are unquestionably discreet and sensitive in all matters that might undermine public confidence in the integrity of the Supreme Court and its membership, consistent with the need of an independent judiciary".

I further stated that since our Bar Association consists of a "large segment of the knowledgeable trial lawyers of America . . . representing the interest of the public . . ." that I would poll approximately 1,000 members—such as yourself—to obtain their opinions as to whether:

1. The Nomination should be approved;
2. The Nomination should be disapproved; or
3. The nomination should be withdrawn.

The poll will be unsigned and confidential.

Although I stated that I would inform you that the full text of the Senate Judiciary Hearings on this appointment will be available through that committee and that the position of the White House is available through its legal counsel, some people have informed me that they have endeavored to obtain this information but without success. If you too experience such difficulty, I respectfully suggest that you respond to this poll, basing your response upon an objective analysis of the information disseminated through the communications media.

An immediate reply and prompt return of your opinion is urgent since our poll must be completed and evaluated before the Board meets next week. Hence, *Your response must be received in Cambridge, Massachusetts no later than Wednesday, October 22, 1969.* Kindly send it to us via Air Mail.

Your anticipated prompt consideration of this matter is appreciated.

Sincerely,

LEON L. WOLFSTONE,
President.

Please detach! Mail now to:

President Leon L. Wolfstone, American Trial Lawyers Association, 20 Garden Street, Cambridge, Massachusetts 02138.

1. The Nomination should be approved ☐.
2. The Nomination should be disapproved ☐.
3. The Nomination should be withdrawn ☐.

EXHIBIT 3

Our Committee was established many years ago and for the past 18 years it has at the request of the President of the United States or the Chairman of the Senate Judiciary Committee, reviewed the professional qualifications of persons under consideration for appointment to the United States Judiciary. It consists of twelve members appointed by the President of the Association, one from each circuit, and a Chairman appointed at large.

At the request of Chairman Eastland, we have examined into the professional qualifications of Chief Judge Clement F. Haynsworth. Our investigation has consisted of interviews with his judicial colleagues, interviews with a cross-section of district judges and lawyers practicing in the Fourth Circuit and an interview with Judge Haynsworth himself.

These interviews were conducted by Norman P. Ramsey of Baltimore, the Committee member of the Fourth Circuit and his partner, David R. Owen. I also made certain inquiries of my own. The members of the bar from whom comments were received included lawyers from each state in the Circuit and lawyers having different specialties. For example some customarily represent plaintiffs in personal injury cases. Others represent defendants. Two were deans of law schools. Two represent labor unions. One specializes in admiralty work for shipowners, another represents seamen and longshoremen. Two are outstanding Negro lawyers. Others include a past president of the American Bar Association and three members of the Council of the American Law Institute. A sincere effort was made to get candid reports from a representative sample of the bar.

All of the persons interviewed regarding Judge Haynsworth expressed confidence in his integrity, his intellectual honesty, his judicial temperament and his professional ability. A few regretted the appointment because of differences with Judge Haynsworth's ideological point of view, preferring someone less conservative. None of these gentlemen, however, expressed any doubts as to Judge Haynsworth's intellectual integrity or his capability as a jurist.

A survey of Judge Haynsworth's opinions confirmed the views expressed by those interviewed as to the professional quality of his work. As is its practice, the Committee does not express either agreement or disagreement as to the various points of view contained in Judge Haynsworth's opinions.

On September 5, our Committee met in New York to receive these reports and evaluate Judge Haynsworth's qualifications. The members of the Committee were unanimously of the opinion that Judge Haynsworth was highly acceptable from the viewpoint of professional qualification.

The Committee also considered the suggestion which has been circulated that Judge Haynsworth had, on one occasion, failed to disqualify himself in a case in which he was alleged to have had a conflict of interest. Our examination into that case (*Darlington Manufacturing Company* v. *NLRB*, 325 F. 2d 682) satisfied us that there was no conflict of interest and that Judge Haynsworth acted properly in sitting as a judge participating in its decision.

Briefly stated, Judge Haynsworth held a one-seventh interest in Carolina Vend-A-Matic Company, an automatic vending machine company which had installed machines in a substantial number of industrial plants in South Carolina. Among the plants which it serviced were three of twenty-seven owned in whole or in part by the Deering-Milliken Company which was a party to the proceeding before Judge Haynsworth's court. The annual gross revenues from the sales in the Deering-Milliken plants were less than 3% of the total sales of Carolina Vend-A-Matic. The plant involved in the case before the court was not one serviced by Carolina Vend-A-Matic. Judge Haynsworth had no interest, direct or indirect, in the outcome of the case before his court. There was no basis for any claim of disqualification and it was his duty to sit as a member of his court.

Having found no impropriety in his conduct, and being unanimously of the opinion that Judge Haynsworth is qualified professionally, our Committee has authorized me to express these views in support of his nomination as Associate Justice of the Supreme Court of the United States.

RETIREMENT OF JUSTICES AND JUDGES OF THE UNITED STATES

The Senate resumed the consideration of the bill (S. 1508) to improve Judicial machinery by amending provisions of law relating to the retirement of justices and judges of the United States.

Mr. ELLENDER. Mr. President, will the Senator from Nebraska answer a few questions in respect to S. 1508?

Mr. HRUSKA. Surely.

Mr. ELLENDER. I have just consulted with the clerk of the committee, and I am informed that no specific hearings were held on this bill. A series of bills were filed, to replace S. 1506 which was a comprehensive bill pertaining to various aspects of the judiciary. Is that correct?

Mr. HRUSKA. I cannot verify the number, but I am sure that if the clerk informed the Senator to that effect, that is accurate information.

Mr. ELLENDER. He stated that there were no specific hearings on the pending bill but that there was some testimony on this matter in the overall bill, S. 1506.

Mr. HRUSKA. That is probably the case.

Mr. ELLENDER. Why is not the pending bill considered together with the overall bill? What was the idea of rushing it?

Mr. HRUSKA. I do not know that it was a matter of rushing. After all, the overall bill was much more comprehensive—perhaps more controversial. I do not recall all its provisions.

An aspect of this case was selected because of its impact upon an area that was considered more vital and perhaps more pressing than other phases of the subject. It does have a direct impact

upon the greater likelihood of injecting into the Federal judiciary younger, more vigorous judges who would find a career on the bench attractive under the provisions created by this bill, who would not be attracted and who would not go into the Federal judiciary as a career if the bill is not approved. That is the objective and that is the hope of the Judiciary Committee. We believe that we have reasonable basis for thinking that it might have that result.

Mr. ELLENDER. Since the judge is appointed for life and the judicial retirement system is noncontributory——

Mr. HRUSKA. He is appointed to serve during good behavior.

Mr. ELLENDER. Well, for life.

Mr. HRUSKA. In practice, it is for life. The Senator is correct.

Mr. ELLENDER. The Senator from Nebraska has said that the purpose is to attract younger judges. If a young judge is appointed and he retires at age 50, is he still subject to being called to sit on cases, as directed by his superiors?

Mr. HRUSKA. That point was covered in a colloquy earlier today, when the Senator from Florida, who is interested in the same point, had inserted in the RECORD that part of section 371 of title 28 which makes provision for retirement of a judge now after 10 years of service and reaching age 70, or 15 years of service and reaching age 65. In that case, he remains a judge, and he remains qualified to accept assignments from the Judicial Conference or the Administrative Office, as the case may be. That is correct.

Mr. ELLENDER. Under existing law, has the retiree the opportunity to refuse to sit if he so desires?

Mr. HRUSKA. Yes; he has.

Mr. ELLENDER. So that it is possible for a lawyer, let us say, at the age of 25 to be appointed as a Federal district judge and then serve, say, 4, 5, or 6 years on that court, then be appointed to the circuit court of appeals and then the Supreme Court; and so long as he serves continuously for 20 years on the judiciary, irrespective of what court it is, he is entitled to retire with full pay and not be forced to serve unless he desires to do so.

Mr. HRUSKA. That is correct.

On the other hand, in order to complete the record, Mr. President, I think it would be presuming too much upon the good sense, the human nature, the tradition, and the history of the Senate to confirm a man at the age of 25 for such an important post, to serve for virtually a lifetime. It would be unlikely that the Attorney General would report a person of such an age to the President of the United States for nomination to that post. I thought I would mention that in connection with the subject, although I understand what the Senator is driving at. It could be an age of 35 or 40.

Mr. ELLENDER. It is entirely possible for that to happen.

Mr. HRUSKA. It is possible.

Mr. ELLENDER. There is no prohibition.

Mr. HRUSKA. There is no prohibition. It could happen. If he is appointed at 21, I imagine that, under that statute, he could retire at 41.

Mr. ELLENDER. There should be rules and regulations to prevent that. In my own State one cannot be a candidate for judge unless he has served as an attorney for at least 5 years.

Mr. HRUSKA. Yes.

Mr. ELLENDER. That is why I mentioned the age of 25. After that age, he can serve as a district judge. He can be elected, of course, and retire.

But in this case I find it strange that this bill was taken out of the main bill that was introduced and considered and presented to the Senate.

Mr. HRUSKA. There are the hearings on S. 1506. In addition, it should be pointed out that in previous sessions we have considered this matter specifically on this point, as well as the general policy of judicial retirement. That is a policy that has been considered over a long period of time and proven to be something good for the judicial system and the country.

Mr. ELLENDER. Does the Senator mean for young lawyers to retire?

Mr. HRUSKA. No; the general policy of judicial retirement.

Mr. ELLENDER. Yes.

Mr. HRUSKA. The rationale for the system we have is considered to be good and sound for the system and the country. This bill, S. 1503, is a refinement of that general system.

Mr. ELLENDER. Mr. President, I am grateful to the Senator for answering the few questions I have asked. I tried to get the hearings so that I could look into the matter further but I understand the hearings have not been printed and that they are not available. I also learned recently that the Judicial Conference will be meeting on Friday and Saturday and this matter of judicial retirement may be discussed at this meeting. That is why I have asked these questions.

Mr. HRUSKA. I am glad to have been able to respond to the Senator.

PROGRAM FOR TOMORROW

Mr. BYRD of West Virginia. Mr. President, as a reminder to Senators, tomorrow the Senate will vote by rollcall, at 12:15 p.m. on S. 1508, a bill to improve judicial machinery by amending provisions of law relating to the retirement of justices and judges of the United States.

The unanimous consent request by the able majority leader also provided for time to be set aside immediately following that rollcall vote for the delivery of eulogies to the late beloved minority leader, Everett McKinley Dirksen, a Senator from the State of Illinois.

ADJOURNMENT

Mr. BYRD of West Virginia. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in adjournment until 12 o'clock meridian tomorrow.

The motion was agreed to; and (at 4 o'clock and 12 minutes) the Senate adjourned until tomorrow, Wednesday, October 29, 1969, at 12 o'clock meridian.

NOMINATIONS

Executive nominations received by the Senate October 28, 1969:

IN THE COAST GUARD

The following-named regular officers of the Coast Guard for promotion to the grade of captain:

Thomas W. Wolfe	Frederick W. Folger
Frank E. Parker	John V. Caffrey
Norman P. Ensrud	John E. Wesler
James T. Clune	William R. Fearn
Charles B. Hathaway	Charles L. Blaha
Leroy Reinburg, Jr.	Sydney M. Shuman
Walter C. Ochman	William T. Adams 2d
Maxwell S. Charleston	Arne J. Soreng
Paul W. Tifft, Jr.	William H. Stewart
Roger F. Erdmann	Charles E. Larkin, Jr.
Donald F. Hall	Henry A. Gretella
John S. Lipuscek	William S. Schwob
Alfred E. Hampton	Anthony F. Fugaro
Christy R. Mathewson	Benedict L. Stabile
Walter Folger	

IN THE ARMY

The following-named persons for appointment in the Regular Army of the United States, in the grades specified under the provisions of title 10, United States Code, sections 3283 through 3294 and 3311:

To be Major

Brantley, Thomas J., xxx-xx-xxxx
Cobb, James B., xxx-xx-xxxx

To be Captain

Bilberry, Ralph W. E. J., xxx-xx-xxxx
Cook, Rollie D., xxx-xx-xxxx
Conrad, Donald W., Jr., xxx-xx-xxxx
Coulter, Wayne E., xxx-xx-xxxx
Duggan, Lawrence W., xxx-xx-xxxx
Dupont, Robert H., xxx-xx-xxxx
Edmonds, Warren B., xxx-xx-xxxx
Egersdorfer, Rudolph H., xxx-xx-xxxx
Foutz, Vernon E., xxx-xx-xxxx
Geurin, John A., xxx-xx-xxxx
Gregg, William R., xxx-xx-xxxx
Grimes, Paul T., Jr., xxx-xx-xxxx
Harrington, Arnold D., xxx-xx-xxxx
Higginbotham, James L., xxx-xx-xxxx
Hodges, Benjamin F., Jr., xxx-xx-xxxx
Hollwedel, George C., xxx-xx-xxxx
Hopkins, John A., xxx-xx-xxxx
House, Homer C., xxx-xx-xxxx
Hurt, Henley H., Jr., xxx-xx-xxxx
Kimura, David Y., xxx-xx-xxxx
Kimzey, Guy S., xxx-xx-xxxx
Kinne, Theodore L., xxx-xx-xxxx
Lane, Bishop L., xxx-xx-xxxx
Lively, Edmund P., xxx-xx-xxxx
McKenzie, Robert C., xxx-xx-xxxx
Mills, William G., xxx-xx-xxxx
Myers, Lilburn L., xxx-xx-xxxx
Nation, James R., xxx-xx-xxxx
Noyes, Peter M., xxx-xx-xxxx
Pope, Richard L., xxx-xx-xxxx
Pugmire, James H., xxx-xx-xxxx
Ramos, Richard J., Jr., xxx-xx-xxxx
Samuels, Claude C., xxx-xx-xxxx
Schneider, Wyatt L., xxx-xx-xxxx
Shirley, Frank R., xxx-xx-xxxx
Smeltzer, Paul N., xxx-xx-xxxx
Warren, Billy J., xxx-xx-xxxx
Wilson, Richard A., xxx-xx-xxxx
Wolf, Harrison, xxx-xx-xxxx
Woods, Lawrence R., xxx-xx-xxxx
Young, Robert A., xxx-xx-xxxx

To be first lieutenant

Aljets, John W., xxx-xx-xxxx
Angel, Phillip N., xxx-xx-xxxx
Arlauskas, Joseph, xxx-xx-xxxx
Barnes, Brice H., xxx-xx-xxxx
Barthmus, Winfried, xxx-xx-xxxx
Baumgartner, Glenn W., xxx-xx-xxxx
Beaver, John W., xxx-xx-xxxx
Becker, Loren L., xxx-xx-xxxx
Blieberger, Anton G., xxx-xx-xxxx
Bonner, Robert E., xxx-xx-xxxx
Bouault, Louis L., xxx-xx-xxxx
Brauch, Gilbert M. F. J., xxx-xx-xxxx
Bresser, Richard C., xxx-xx-xxxx

Buhmann, William G., Jr., xxx-xx-xxxx
Burke, Gerald W., xxx-xx-xxxx
Burnsteel, Harvey L., xxx-xx-xxxx
Busbee, Walter L., xxx-xx-xxxx
Butler, Eulous S., Jr., xxx-xx-xxxx
Cannon, Robert W., xxx-xx-xxxx
Cembor, William G., xxx-xx-xxxx
Chadderdon, Robert N., xxx-xx-xxxx
Chastain, William M., xxx-xx-xxxx
Chippi, Michael J., xxx-xx-xxxx
Coldren, Lawrence E., xxx-xx-xxxx
Combs, Dudley D., xxx-xx-xxxx

CONFIRMATIONS

Executive nominations confirmed by the Senate October 28, 1969:

U.S. ARMY

The Army National Guard of the United States officers named herein for promotion as Reserve commissioned officers of the Army, under provisions of title 10, United States Code, sections 593(a) and 3392:

To be major general

Brig. Gen. Ross Ayers, O378526, General of the line.

To be brigadier general

Col. Jackson Bogle, O461234, Adjutant General's Corps.

HOUSE OF REPRESENTATIVES—*Tuesday, October 28, 1969*

The House met at 12 o'clock noon.

The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

All the paths of the Lord are mercy and truth unto such as keep His covenant and His testimonies.—Psalm 25: 10.

Eternal Spirit, we pause with bowed heads at the opening of another day, lifting our spirits unto Thee, unto whom all hearts are open and all desires known. Teach us so to pray that Thy presence becomes real to us, that we endeavor more earnestly to do Thy will and to walk in Thy paths of peace.

We come disturbed by the problems of this period, burdened by many anxieties, tempted to feel our labor is in vain, and wondering what the future holds for us and for our Nation. We pray for ourselves in these trying times that we may not add to the divisions that divide us by giving way to petty prejudices but by our dedication to Thee and our devotion to our country may increase our unity by an ever-widening spirit of good will.

Give us strength to walk in Thy way, to travel in Thy truth, and to live in Thy light.

We pray in the spirit of Him whose life is the light of men. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE PRESIDENT

A message in writing from the President of the United States was communicated to the House by Mr. Leonard, one of his secretaries.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Arrington, one of its clerks, announced that the Senate agrees to the amendment of the House to a bill of the Senate of the following title:

S. 210. An act to declare that certain federally owned lands are held by the United States in trust for the Indians of the Pueblo of Laguna.

The message also announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the House to the bill (S. 1689) entitled "An act to amend the Federal Hazardous Substances Act to protect children from toys and other articles intended for use by children which are hazardous due to the presence of electrical, mechanical, or thermal hazards, and for other purposes."

The message also announced that the Senate had passed with an amendment in which the concurrence of the House is requested, a bill of the House of the the following title:

H.R. 11959. An act to amend chapters 31, 34, and 35 of title 38, United States Code, in order to increase the rates of vocational rehabilitation, educational assistance and special training allowance paid to eligible veterans and persons under such chapters.

The message also announced that the Senate had passed bills of the following titles, in which the concurrence of the House is requested:

S. 1. An act to provide for uniform and equitable treatment of persons displaced

from their homes, businesses, or farms by Federal and federally assisted programs and to establish uniform and equitable land acquisition policies for Federal and federally assisted programs; and

S. 11. An act to reinforce the federal system by strengthening the personnel resources of State and local governments, to improve intergovernmental cooperation in the administration of grant-in-aid programs, to provide grants for improvement of State and local personnel administration, to authorize Federal assistance in training State and local employees, to provide grants to State and local governments for training of their employees, to authorize interstate compacts for personnel and training activities, to facilitate the temporary assignment of personnel between the Federal Government, and State and local governments, and for other purposes.

SALUTE TO THE EMPLOYEES OF WARNER ROBINS AIR FORCE BASE

(Mr. BRINKLEY asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BRINKLEY. Mr. Speaker, I would like to take this opportunity to honor the employees of Warner Robins Air Materiel Area—WRAMA—located at Warner Robins, Ga., on the fifth anniversary of their zero defects program.

On November 4, 1964, the Air Force zero defects program was introduced to WRAMA. The basic principle of this program was, and still is, to motivate employees to "do their job right the first time." The military and civilian employees, representing all 50 States, accepted the challenge and responded with pride, dedication, skill, and effort. Their response represents a tremendous contribution to the success of our Nation's defense effort.

This pride, dedication, skill, and effort toward the success of our national defense are worthy of recognition by this body and the citizens of this country.

I WANT PEACE

(Mr. JACOBS asked and was given permission to address the House for 1 minute.)

Mr. JACOBS. Mr. Speaker, on yesterday I inserted in the CONGRESSIONAL RECORD a speech made by the father of a Member of the other body, the Honorable Herbert C. Pell. I repeat just a very short personal note that Congressman Pell back in the middle 1940's made in a speech here. He said:

(I know how easy it is for an ignorant politician to yell "Communist" when he is at a loss for an answer or desirous of covering himself with a smoke screen. That is why I write this personal note. I should be among the first to be destroyed by communism. I am nearly 70 and have never been in business. I have lived all my life on invested property as did my father and mother and my grandparents and most of my great-grandparents before me. Economically I represent everything to which communism is hostile. I am one of the comparatively few Americans every one of whose ancestors became a citizen of the United States on July 4, 1776. I have always loved and enjoyed liberty. Since the day of my first effort in politics I have worked for personal freedom for all. I have lived in totalitarian countries and loath what I saw there. I know that a Communist government will inevitably degenerate into a totalitarian autocracy which is the opposite and the implacable enemy of everything I have enjoyed, of every material policy that has served me, of everything I have respected and of everything I have loved.)

I am for peace. I am for minding our own business. I am particularly opposed to a policy which boils down to an effort to impose American ideas and customs on other nations.

I am for defending my Nation, not wasting American lives and treasure on crusades that do not relate to our security. Opposing this kind of government waste is hardly un-American.

SUPREME COURT TO DEAL WITH THE CONSTITUTIONALITY OF THE 1968 LAW PASSED BY CONGRESS RELATIVE TO THE MAILING OF OBSCENE ADVERTISING TO POSTAL PATRONS

(Mr. EDWARDS of Alabama asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. EDWARDS of Alabama. Mr. Speaker, when the Supreme Court reconvenes following its 2-week recess, one of the cases on the docket will deal with the constitutionality of the 1968 law passed by Congress permitting the postal patron to halt the mailing of obscene advertising to his home by simply telling the post office to halt the deliveries.

The large bulk-rate mailers of these pornographic materials are kicking up a fuss under the guise that their freedom of speech and press are being violated. The publishers and mailing-list brokers argue that the law will cripple them financially by making mass mailings too expensive. They also argue that the Post Office officials, already weighted down with massive amounts of work, will be unduly overburdened with the added chore of enforcing this particular law.

Well, Mr. Speaker, after wringing out the crying towel, a few facts come through loud and clear. These villainous purveyors of smut not only seek to take advantage of the Government-subsidized third-class mail rates to market their perverted wares, but they want a constitutional guarantee that they will suffer no inconvenience.

Hopefully the Supreme Court will at least permit the individual to maintain his home as his last bastion of privacy. No one wants their children to be psychologically assaulted by these sexually oriented solicitations that are generally samples of the products they push.

I hope that one of the many bills now in committee designed to further curtail this type of vile behavior will be passed by Congress this year. The Supreme Court under Chief Justice Warren has left little that can be salvaged in this area. I hope that the innocence of little children and the privacy of one's home will not go by the board.

CHICKENS COMING HOME TO ROOST ON DEFENSE CUTS

(Mr. BROWN of Ohio asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BROWN of Ohio. Mr. Speaker, yesterday the Secretary of Defense announced reduction of the missions or closing of the facilities at 307 of the Nation's military bases throughout the country and overseas to some $609 million per year. Secretary Laird said the cutbacks would mean abolishment of some 37,800 military positions and an additional 27,000 civilian jobs.

Monday's announcement was a follow-up to the August 21 order by the Secretary to slash $3 billion from defense and military spending that would include a reduction of strength in the military services by 220,000 men and women.

Before that first announcement many in both Houses of Congress had been very critical of the Nation's defense costs, and after the order was published, these same Members applauded the move while it was still general and nonspecific. I was glad to see fat pared from the Federal budget, while at the same time noting with concern the Defense Secretary's warning that American defenses would be less prepared for emergencies, something about which we should all be concerned in the months and years ahead.

So, this morning I was surprised to hear and read the reaction by those who have been telling us for some time that we need to cut back military spending and manpower at even higher rates—now that they know the specifics of where some of those cuts in military bases and operations are to be made, particularly when they find the cuts must be made in the geographic areas they represent.

It seems the doves who had been cooing for military spending reductions are squawking like wounded eagles now that their chickens are coming home to roost.

REPORTS OF SECRETARY OF DEFENSE AND SECRETARY OF TRANSPORTATION, RELATING TO AWARDS FOR SUGGESTIONS, INVENTIONS, AND SCIENTIFIC ACHIEVEMENTS—MESSAGE FROM THE PRESIDENT

The SPEAKER laid before the House the following message from the President of the United States; which was read, and, together with accompanying papers, referred to the Committee on Armed Services:

To the Congress of the United States:

Forwarded herewith in accordance with the provisions of 10 U.S.C. 1124 are reports of the Secretary of Defense and the Secretary of Transportation on awards made during the first six months of 1969 to members of the Armed Forces for suggestions, inventions, and scientific achievements.

The last previous report on the military awards program covered the calendar year 1968. Following the present six-

month report, future annual reports will be submitted on a fiscal year basis. This will increase efficiency by facilitating the compilation of the report in conjunction with the Incentive Awards Program report which departments and agencies submit annually to the Civil Service Commission.

Participation by military personnel in the cash awards program was authorized by the Congress in September 1965. The success of the program in motivating military personnel to seek and suggest ways of reducing costs and improving efficiency is shown by the steadily increasing participation and the notable growth in measurable first-year benefits from adopted suggestions.

Tangible benefits from suggestions submitted by Department of Defense and Coast Guard military personnel that were adopted during the period from January 1 through June 30, 1969 totalled over $57,000,000. This figure, if projected for the entire year, would substantially exceed the total for calendar year 1968. Tangible first-year benefits derived from the suggestions of military personnel in the relatively short period since the program went into effect have now reached a total of more than $272,000,000.

130,861 suggestions were submitted by military personnel during the reporting period, and 20,757 were adopted. Cash awards totalling $924,742 were paid for these adopted suggestions, based not only on the tangible benefits cited above but also on many additional benefits and improvements of an intangible nature.

A substantial majority of the cash awards paid went to enlisted personnel at Grade E–6 and below. The size of the cash awards varied from the minimum of $15 to several awards in excess of $1,000.

Brief descriptions of some of the more noteworthy contributions made by military personnel through the suggestion program during the first six months of 1969 are contained in the attached reports of the Secretary of Defense and the Secretary of Transportation.

RICHARD NIXON.

THE WHITE HOUSE, *October 28, 1969.*

EULOGIES ON DWIGHT DAVID EISENHOWER

Mr. DENT. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the concurrent resolution (H. Con. Res. 368) providing for the printing of copies of the eulogies on Dwight David Eisenhower, with a Senate amendment thereto, and concur in the Senate amendment.

The Clerk read the title of the concurrent resolution.

The Clerk read the Senate amendment, as follows:

Page 2, line 3, strike out "and thirty" and insert "three hundred".

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania (Dr. DENT)?

There was no objection.

The Senate amendment was concurred in.

A motion to reconsider was laid on the table.

OPPOSITION TO APPOINTMENT OF JUDGE HAYNSWORTH

(Mr. THOMPSON of Georgia asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. THOMPSON of Georgia. Mr. Speaker, I noted in the news reports of October 27, 1969, that the American Trial Lawyers Association has announced the result of the poll of 1,200 of their approximately 25,000 members which was announced as placing a majority in opposition to the nomination of Judge Haynsworth for the U.S. Supreme Court.

Being an attorney myself, I am very much aware of this fine organization and of the pleas that cases should not be tried in the newspaper, but that a decision should be reached only after the ascertaining of all facts in an orderly, legal manner.

Yesterday I wrote Mr. Wolfstone, president of ATLA, and asked whether in taking his poll he was guilty of the very procedure which lawyers had criticized for so long; namely, that of forming an opinion only upon newspaper accounts or whether or not a brief, both pro and con, furnished to these distinguished attorneys in order that they could make a decision based on concrete facts and information.

It would seem to me, Mr. Speaker, that the ATLA should be one organization to insist upon complete facts and information before an expression of public opinion is given. I would be interested in Mr. Wolfstone's reply, for I think it would have an obvious bearing on the validity of the poll.

CALL OF THE HOUSE

Mr. DICKINSON. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. ALBERT. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 246]

Ashbrook	Dawson	McEwen
Ashley	Diggs	Mann
Baring	Edwards, Calif.	Monagan
Bell, Calif.	Fallon	Moss
Brock	Fascell	Nix
Brown, Calif.	Gettys	O'Konski
Burton, Utah	Gilbert	O'Neill, Mass.
Byrne, Pa.	Haley	Pepper
Cahill	Halpern	Philbin
Cederberg	Harsha	Pirnie
Celler	Hull	Powell
Clark	Jarman	Sandman
Clay	King	Symington
Colmer	Kirwan	Teague, Calif.
Culver	Kluczynski	Udall
Cunningham	Long, La.	Whalley
Daddario	McCarthy	Wydler
Davis, Wis.	McClory	

The SPEAKER. On this rollcall 378 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

CONTINUING APPROPRIATIONS, 1970

Mr. MAHON. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the joint resolution (H.J. Res. 966) making further continuing appropriations for the fiscal year 1970, and for other purposes; and pending that motion, Mr. Speaker, I ask unanimous consent that general debate be limited to 2 hours, the time to be equally divided and controlled by the gentleman from Ohio (Mr. Bow) and myself.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

The SPEAKER. The question is on the motion offered by the gentleman from Texas.

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the joint resolution (H.J. Res. 966), with Mr. MILLS in the chair.

The Clerk read the title of the joint resolution.

By unanimous consent, the first reading of the joint resoution was dispensed with.

The CHAIRMAN. Under the unanimous-consent agreement, the gentleman from Texas (Mr. MAHON) will be recognized for 1 hour, and the gentleman from Ohio (Mr. Bow) will be recognized for 1 hour.

The Chair recognizes the gentleman from Texas.

Mr. MAHON. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, we have before us today a continuing resolution in order that as of Friday night the Government of the United States may continue to function, otherwise it would come to a grinding halt because funds would not be available for most departments and agencies. Only the Interior, Treasury, and Post Office Departments and a handful of independent agencies have had their appropriations for fiscal year 1970 finally enacted. The others are dependent on the pending resolution.

In view of time factors in continuing resolutions, it is traditional that they are made as noncontroversial as possible because they have to be passed in a hurry, and they must be acceptable both to this body and to the Senate. So the substance of the resolution which we have before us is simple and to the point, and is in keeping with former resolutions except for this fact: that the last continuing resolution was passed in late June, some 4 months ago, so 4 months having elapsed, we have had to take into account those 4 months, and we provide that the guidelines for the Government for the month of November will be based on the situation as it exists on November 1, not as it existed on July 1.

CRITICISM OF CONGRESS

Mr. Chairman, the guns of opposition and criticism have been leveled at the Congress. Attempts are being made in

all quarters and in all corners of the land to downgrade the Congress of the United States. These guns of criticism have to some considerable extent been leveled at the Committee on Appropriations of which, by reason of the indulgence of my people and the rule of seniority, I am the chairman.

I do not want to see the Committee on Appropriations discredited. Like other Members in this House, I do not want to be humiliated, or have the feeling myself, or have others feel, that I have failed to do my job, or that the 51 members of the Committee on Appropriations have failed to do their job.

During this session of the Congress, I would say to the critics, the House of Representatives under the leadership of the Committee on Appropriations has passed 13 appropriation bills and resolutions—13—and that is a reasonably big output. It involves some $54 billion. I will agree that only two of the annual bills for fiscal 1970 have been enacted into law, but several factors were involved.

I think I would be willing to put the record of the Committee on Appropriations alongside of the records of other committees of the Congress.

Now, we could have passed all of the appropriation bills, and I measure my words, we could have passed all the appropriation bills had we been authorized to do so. But we have not been able to pass them because of the lack of authorizations.

For example, the Committee on Foreign Affairs has labored long and hard on the foreign aid bill. But even though we are on the threshold of the 11th month of the calendar year, the committee has not been able to bring a bill to the House for the authorization of foreign aid. As an aside I would say, some hope that they never will. But nevertheless we do have a responsibility in this field. And we cannot within the rules report the foreign aid appropriation bill under the circumstances; we are marking time.

Let us take another bill—the transportation appropriation bill. In connection with that bill, there are some authorizations that are not yet finalized in connection with mass transportation, highway safety, and the airport program. The request of the President—and the President has been late, and understandably, in sending down during his first year of tenure, his recommendations on various bills and his budget estimates.

The Committee on Appropriations received the budget request of the President on the controversial supersonic transport aircraft for $93 million only on October 9. That is also considered in connection with the transportation bill.

But please do not feel that the Committee on Appropriations is derelict in trying to move forward.

Let us take the defense appropriation bill. We will be ridiculed by critics because we have not passed a defense bill. In the area of national defense we have not told the President, Secretary of Defense, and the Joint Chiefs of Staff, and other officials, how much money they can use. But remember, again, the Committee on Appropriations, and I say it in all charity and good will, and I recognize the authorizing committee has worked diligently and effectively, but here we stand on the threshold of the 11th month of the calendar year and we have no final authorization for the key area of defense spending.

But, of course, the members of the Committee on Armed Services have had many problems to wrestle with and much legislative business to attend to—but there again you must understand why we have not been able to pass these appropriations. There again you must understand that when the President writes a letter—and he has written one to me today in which he has said, in effect, "I am working on my new budget and I would like to know what we are going to have for the current fiscal year so I can plan for the next fiscal year."

Mr. Nixon has to take his due share of the blame. The budget came down late, reports to committee have often been slow in being delivered to committees, and, of course, the new President needs some time to get underway. But I would say of the Congress and of the Executive that there is enough blame to go around to all the committees and to the legislative and executive branches.

I mention another appropriation bill—in the field of military construction, we cannot move on that because of the lack of authorization.

The District of Columbia bill is another one that is hanging fire. I believe early action on the revenue bill for the District will enable the committee to bring that appropriation bill in shortly.

But the five regular appropriation bills that remain to be passed remain so because we have not had authorization.

The facts which I recite are not understood by the public. The media has not made the situation clear. It would seem that at least the Washington newspapers would do a better job of reporting the facts. I would like for it to be known that despite some errors and delays that we of the appropriations committee have done about all we reasonably could.

THE PENDING CONTINUING RESOLUTION

What do we do in the proposed resolution? We say that the departments can spend at the level of last year's level or at the level of the House-passed bill, and if the House has not passed the bill, then they could spend at the level of the budget for last year, whichever is lower.

The continuing resolution covers a wide area, and if Members want to understand it better, because I cannot go into every aspect of it, I refer Members to the first insertion in the Extensions of Remarks of the RECORD of today, which deals with the situation. I call attention to page 31649 of the October 27 RECORD.

It so develops that while the pending continuing resolution applies to much of the whole government—as it must in the interest of stability and orderly operations—and applies on a consistent and uniform basis in line with well-established concepts, it produces a somewhat unique result in respect to education items in the Department of Health, Education, and Welfare bill. As a result of the fact that the Labor-HEW bill had not been passed by the House on July 1 when the previous resolution took effect, the authorized spending level during the last 4 months has been on the basis of last year's appropriation or the budget, whichever is lower. But the House, especially in the Joelson amendment, considerably increased education programs above the budget and above last year's level. Under the pending resolution, the rate beginning November 1 will be the lower of last year's level or the level of the House for this year in the HEW bill.

The result is to increase the authorized rate for education programs by $600 million beginning November 1, as compared to the authorized rate that has obtained for the last 4 months. This takes care, generally, of the impacted-aid requirement of the various schools which were contained in the so-called Joelson amendment. It takes care of many other items, as you will see if you look at the memorandum which we have at the committee table and in the Extensions of Remarks of yesterday's RECORD, on page 31649.

I would like to point out that we have tried to keep the continuing resolution simple. We have not made an appropriation bill out of it. Everybody in this House is sufficiently sophisticated to know that a continuing resolution is not an appropriation bill. It merely provides that the Government can run on the lowest applicable figure until action is taken on the regular appropriations. That is all it is supposed to do. That is what the resolution that we have does.

I should also say that on the five bills yet to pass the House, the ground rules remain unchanged from the resolution now in effect—that is, the lower of last year's rate on the budget estimate.

Then on the bills that are pending between the House and the Senate, having passed the House, items have to be settled between the House and the Senate in the regular appropriation bills. And this is the way it ought to be done. The ground rules in those instances are the amount in the bill unless there is a difference between the two Houses, in which event the lower of the two obtains.

It has been found since the beginning of time that a degree of orderliness is necessary for effective action, and we particularly have to have order with regard to this matter in the Congress to have effective action. That is what the pending resolution provides.

Mr. JONAS. Mr. Chairman, will the gentleman yield?

Mr. MAHON. I yield to the gentleman from North Carolina.

Mr. JONAS. Mr. Chairman, before the distinguished gentleman gets too far away from the point he has just been making, I think it would be well for the RECORD right here to show that the appropriation bill for the Departments of Labor and Health, Education, and Welfare cleared the House of Representatives on July 31, 1969. That is nearly 3 months ago.

Mr. MAHON. Yes, but let us be fair in this and point out we had a summer

recess for the first time, so actually in working time the other body has had about 2 months. As I say, there is room to share criticism as to the delay.

Mr. JONAS. Mr. Chairman, will the gentleman yield further?

Mr. MAHON. I yield to the gentleman from North Carolina.

Mr. JONAS. I do not think it is necessary to point any fingers at anybody. Just let the RECORD show the House of Representatives cleared this bill and sent it to the other body on July 31, 1969.

Mr. MAHON. Let the RECORD show I conferred with committee members of the other body yesterday and was told it is expected the Labor-HEW appropriation bill will be reported out in about 2 weeks. This means the other body will work its will on the House-passed version.

In checking the records this morning I find that with one exception, in each of the last 10 years the other body has raised the total of HEW appropriations as passed by the House. So, if we can go on past history, those interested in the Joelson amendment, I think, could assume that the other body would probably accept the Joelson amendment, and may even possibly add on some additional funds.

The question here arises: Are we in favor of the orderly processes in working between the House and Senate, or are we in favor of different procedures which could lead to chaos and great difficulty? We got into a confrontation between the bodies in 1962, which delayed action for months.

We got into a prolonged confrontation with the other body in 1967 on a continuing resolution, which brought on a great deal of delay. We do not want to hurt the cause of education or injure the image of this Congress or delay action during the last 2 months of this year by getting into an unwise and possibly damaging confrontation with the other body.

If the other body passes a given bill and sends it to this body, and this body takes a long time to act upon it or does not act upon it at all, it is not up to the other body to lecture this body on what we should do about bills sent to us. That is clear, is it not? I do not want any part of that, and I would not accept it, and the Members would not accept it. But by the same token, when we do our duty and pass on bills, good or bad as they may be, and send those bills to the other body, since it is a proud and autonomous body—just as this is a proud and autonomous body—we cannot ram down their throats without change, without the appropriate committees considering those bills, the measures which we have passed.

So it would be the height of arrogance and impropriety for us to try to write an appropriation bill here and say to the other body, "You take it or you leave it, and you have only until Friday midnight to do it." That is not the way to get the big bulk of the business of this session of Congress done, which must be done in the last 2 months of this year. That is not the way to get it done. Do Members not understand that? It is perfectly plain.

Those who wish to serve the cause of education—and the educational lobby is a very excellent lobby, it is in a very good cause, and it is probably among the most potent lobbies in the country—have seemed to believe that if we do not sandbag the other body and make it take the bill which we have already passed and which is before it and which Members are supposed to report in about 2 weeks, something will be lost. If we do sandbag the other body—and we would probably not get away with it—if we tie this Congress up, and if we have payless paydays as we have on occasion had in the past, the whole Congress, the whole country, will have lost.

I would say of my friends in education from my own State, and from the districts of other Members forgive them, for they know not what they do. If they will leave it to their elected Representatives to decide what is the best strategy to get for them what they want, they will come a great deal nearer getting it than by asking us to dance to the tune of those who do not run for election and who are not elected and who do not have a vote in this body and who do not work with these matters every day.

So I am hoping that the House will go along with this continuing resolution as passed by our committee. I conferred with Members of the other body. Our resolution as drawn would go through instantly—almost instantly, in my opinion.

Then I hope we can begin to move on all these other authorization and appropriation bills, moving the appropriation bills in a reasonable time after the authorization bills have been enacted.

We cannot afford to let this Congress go down as a Congress which failed to do its job—as a Congress which dawdled. We have done a lot of productive work thus far in the session, but the proof of the pudding will be what we do during the 11th and 12th months of the year. That is the period of time when we can really wrap this session up and do a great job for the American people. We can then go before the voters next year, Democrats and Republicans, and tell them we have not failed, but in a workmanlike and orderly way we have done our duty for the American people.

Mr. EVINS of Tennessee. Mr. Chairman, will the gentleman yield?

Mr. MAHON. I yield to the distinguished gentleman from Tennessee.

Mr. EVINS of Tennessee. The gentleman is proposing a continuing resolution to allow the departments and agencies to continue until the action on the appropriation bills is completed. Eight bills for 1970 have passed the House; five are yet to pass the House.

If those who want to authorize more money will try to get the Senate to pass those bills, then in those areas where the House has increased the appropriations the departments will have those funds; is that correct?

Mr. MAHON. I believe the gentleman is right.

It does not behoove the other body to ask us to dance to their tune, and we would not do it. It does not behoove this body to ask the other body to dance to our tune, and they would not do it.

There is a certain degree of orderliness which many, many decades have built into our system. We have to stay with it, and, of course, improve it if we want to be effective.

But we do not want to throw a monkey wrench into the machinery, and produce chaos. We could do that today.

Mr. EVINS of Tennessee. I want to associate myself with the remarks of the gentleman and urge the House to adopt this continuing resolution.

Mr. MAHON. I thank the gentleman.

Mr. Chairman, I would hope that my remarks are clear. I would be glad to respond, if any Member wishes to ask a question of me in regard to the pending resolution. I believe we will be on sound ground with this resolution.

I do not believe we can deny the other body the right to act on its bills, any more than it can deny us the right to act on bills before us.

The gentleman from California (Mr. COHELAN) asked me to yield, and I am glad to yield to him at this time.

Mr. COHELAN. I thank the gentleman for yielding.

I wonder if the gentleman would comment on the question of whether or not we are going to get a bill in 2 weeks' time. Would the gentleman be willing to agree that there is some disagreement as to whether that is going to come to pass?

Is it not true, Mr. Chairman, that there are some very informed people who advise us—at least, who advise me; and I happen to believe what they are telling me—that it is very unlikely, because of the scheduling of witnesses and the programing of action in the other body, that we will get a bill back here until some time in December? I believe we heard one suggestion it would go into January.

Mr. MAHON. Let me answer the question, and then I will yield further.

Mr. COHELAN. Yes.

Mr. MAHON. The question is, can I assure the gentleman what the other body will do? I cannot even assure the gentleman what this body will do. Of course I cannot. The gentleman knows that.

All I can say is I have been told by the highest authorities in the other body, the people who deal most directly with it, that they expect to report the HEW bill in about 2 weeks.

But I am not going to be a party to a sandbagging operation, which might cause a great difficulty in cooperation as we try to close up the work of this session.

Mr. COHELAN. The gentleman is aware, is he not, that there is a very substantial group of Senators who are supporting the principle that will be inherent in the amendment I will offer at the appropriate time?

Mr. MAHON. Let us stop there.

I am not aware that a large part of the other body—and we must be parliamentary—is supporting the unorthodox procedure of sandbagging the Senate through forcing the Members to accept an appropriation of over $900 million which they have not yet considered.

No, I would not; and, if I may have the gentleman's attention, I do not doubt that the other body will approve or probably support the Joelson amendment and increase the funds provided. That is an

entirely different matter. If Members there wish to do it, they can do it in the regular bill. But I do not think the other body wants to permit us to call the tune while they dance on this sort of an unorthodox approach to the problem.

Mr. COHELAN. If the gentleman will yield further, I would like to say that I regret very much that I am in the position of having to challenge my chairman, but unfortunately we are in disagreement. I hope that the chairman at this point, before he leaves his basic remarks, will tell the House exactly what is at issue. The gentleman from California does not enjoy the role he is playing. There must be some strong motive for his concern. It so happens that the issue revolves around $733 million plus, and they involve two—at least two and more—very critical categories, as the gentleman will agree, I am sure, involving title I, which is the aid to education for disadvantaged children and vocational education. As I will point out to you in my own remarks, these are critical.

Mr. MAHON. If the gentleman will point that out, I will yield him time, but the gentleman asked me what is at issue.

Mr. COHELAN. Yes.

Mr. MAHON. What is at issue is the principle of good government; a principle of orderly procedure; a principle of comity; a principle of effectiveness in government. That is what is before us. The issue is whether or not we should proceed in an orderly way which has the best opportunity of bringing about a successful end product or whether we shall try to make out of the continuing resolution, which should be enacted into law by Friday, an appropriation bill in order to provide funds for certain educational purposes, which many Members of the House and the Senate—and probably a majority of them—would support when presented to them under the orderly processes of government. So that is what is at issue. It is a principle deeply rooted in the procedures of the House, and I must say that without orderly procedures we cannot effectively legislate.

Mr. SMITH of Iowa. Mr. Chairman, will the gentleman yield?

Mr. MAHON. I yield to the gentleman from Iowa.

Mr. SMITH of Iowa. The chairman knows that I am for more money for title I in this bill. I think they are short-changing them in the bill, but, as a matter of fact, that money is not going to be distributed in November, anyway, and whether we made the increase in the appropriations through this continuing resolution or the bill that comes out of the Senate will not make 5 hours of difference in the time that it is distributed to the States. Is that not correct?

Mr. MAHON. The gentleman is eminently correct. For those who understand it, I think you would vote for the continuing resolution without amending it, but if you vote to amend it, why not put in the money and say, "Well, we passed the Joelson amendment, so let us repass it, and let us repass the antipollution provision for $600 million, and let us repass other programs that have been before us, and let us make the other body take them all in one lump regardless of what the situation over there is and what the deadline is." The deadline is Friday night, October 31. This is the height of irresponsibility, in my judgment.

Mr. COHELAN. Mr. Chairman, will the gentleman yield for one further question?

Mr. MAHON. For a question I will yield.

Mr. COHELAN. The chairman is aware, is he not, that there are 227 Members of this body that have in the hopper a resolution calling for the amendment I am offering today? Two hundred and twenty-seven Members.

Mr. MAHON. We are aware that supporters of the proposed amendment have announced from day to day, "We have certain people committed." Well, of course, they are committed. And they have introduced resolutions. This is no problem. They have shown that they are in favor of the higher figure for education which was passed by the House, and this figure they will likely be able to acquire when the other body takes action in the regular way on the Labor-HEW appropriation bill, and, there is nothing inconsistent about the members who introduced resolutions calling for fuller and greater amount which no doubt will be forthcoming within a month or less than that, also supporting the pending resolution.

Mr. JONAS. Mr. Chairman, will the gentleman yield?

Mr. MAHON. I yield to the gentleman from North Carolina.

Mr. JONAS. Is it not correct that many of those who put those resolutions in did so under a different set of circumstances?

Mr. MAHON. Of course.

Mr. JONAS. And before the Appropriations Committee came out with this continuing resolution, and that only occurred last Thursday?

Is it not true that about one-half billion dollars of additional money will be available for spending under the resolution than under the previous resolution which will expire on the last day of October?

Mr. MAHON. Yes; we are operating in an entirely different atmosphere and in an entirely different state of facts. And, when Members expressing their desire to hold to the higher figures, if they will look in the Extensions of Remarks of the RECORD at page 31649 of this morning's RECORD, they will find where the money goes. Further, if they are interested in impacted areas they will note that an additional $319 million, will be available not because of any special treatment but because of the resolution which places it above the minimum level in the President's budget, a total of $506 million. You will get more for libraries and more for NDEA and more for most all of these programs which I am sure that a great majority of the Members support.

Mr. GERALD R. FORD. Mr. Chairman, will the gentleman yield?

Mr. MAHON. I yield to the gentleman from Michigan.

Mr. GERALD R. FORD. Let me say, Mr. Chairman, that I wholeheartedly and unequivocally support the position taken by the distinguished gentleman from Texas, the chairman of the Committee on Appropriations.

Now, he has alluded to but not specifically said that because of the problem that might arise between the House and the other body, we might have a roadblock in the completion of affirmative action on the continuing resolution prior to midnight, October 31.

Mr. MAHON. We not only might, I think we would have.

Mr. GERALD R. FORD. I did not want to put words in the mouth of the distinguished chairman of the great Committee on Appropriations, but he has certainly hinted that this might be a probability. I just urge people who want to upset the decision of the Committee on Appropriations, that if they do, they will have the principal blame if there is no continuing resolution approved by the Congress by October 31, which means, of course, there will not be any authority or any pay for most members of the executive branch, civilian or military, or compensation for Members of the legislative branch, nor will there be any funds available for the payment of services to those suppliers of the Federal Government.

I just hope they will take that into consideration.

Mr. MAHON. I thank the gentleman from Michigan.

Mr. ALBERT. Mr. Chairman, will the gentleman yield?

Mr. MAHON. I yield to the gentleman from Oklahoma.

Mr. ALBERT. Mr. Chairman, I appreciate the gentleman yielding. The gentleman is of course one of the ablest chairmen of the House, one of our most beloved and distinguished Members. He is making a very eloquent statement in behalf of orderly procedure. The gentleman and I have discussed this many times, this very issue.

Does there ever come a time, may I ask my friend, when the House can assert itself by a continuing resolution, which carries with it much more compulsion than a regular bill, on an issue on which the House has emphatically expressed itself?

In other words, if the other body never passes the HEW bill, does there ever come a time when the House might use this device as a means of trying to get this issue finally resolved?

Mr. MAHON. As I see it, I believe there is enough blame to pass around among the two Houses. I am sure the other body will act, and will act within the next few weeks, so that there is no real problem here. And blackmail is not a very effective procedure.

Mr. ALBERT. Does the gentleman call it blackmail—and I have tried all the way through to support the gentleman—but does the gentleman call it blackmail to insist that a program, the funding of which should be made before September 1, should at least be made before January 1?

Mr. MAHON. No. I would not say that is blackmail. We passed our bill on July 31.

Mr. ALBERT. That is right.

Mr. MAHON. And next year, if I can get the support of this House, and if the

authorizations are available, I believe I can see to it that the education bill is passed by April 1, and I will try to persuade the other body to do likewise, and then the schools would know in advance what the situation is. This is highly desirable.

Mr. ALBERT. Would the gentleman have the same viewpoint that he has now 30 days from now if a continuing resolution were again to be presented on this same subject?

Mr. MAHON. If we keep the November 30 date in this resolution there would have to be another continuing resolution in late November, and I would hope that by that time——

Mr. ALBERT. Would the gentleman have the same view with regard to this item? Because there are certain areas that are not well funded in the continuing resolution such as title I, ESEA, NDEA student loans, vocational education, and others—would the gentleman feel that 30 days from now the House would be in a better position to insist by a continuing resolution if no action has been forthcoming by the other body?

Mr. MAHON. I would say the principle is the same, and right is right, but I do not anticipate that issue arising because I believe that the other body will act within the month.

But does my able leader, who is supporting me in this plea to the House, feel that the other body should be able to compel us, for example, to take action on a particular bill, regardless of Committee considerations? I do not think so.

Mr. ALBERT. The gentleman knows that in many instances the other body has gone so far as to put completely irrelevant material on House bills which some Members of the House have considered to be an effrontery. But we have a very important issue at stake here, and that is the House's commitment, long since expressed, by a 2 to 1 vote, for better funding, and more prompt funding of Federal aid to various educational activities.

That as well as orderly procedure is also a principle which demands our attention, as I see it. I want to support the gentleman, the gentleman knows that—but I do not want it said that this Congress is using procedures which many may think are archaic procedures to defeat the cause of education in the United States.

Mr. MAHON. Let me say, if the gentleman will permit me, that there is no effort to defeat the cause of education. That issue is not now before the House. But let me also say this. The school year is well underway. This is almost November. Schools cannot now hire teachers for this semester. They can spend money on some other programs, but they cannot hire teachers for the first semester. They will not want to use them until the next semester begins, and that will be about February.

It was very important to have this money before September first, and it should have been available by July. But now, a couple of weeks does not make the difference it would have made earlier in the year because the time when they could have used certain funds effectively is past.

But they will be able to use all of the funds finally appropriated for impacted aid in the regular Labor-HEW bill. Incidently, last year 50 percent of the money appropriated for assistance to impacted school districts was not actually paid until several months after the end of the fiscal year.

These funds are not generally paid in full at the beginning of the school year. What school districts wants is the assurance that the funds will be made available. They certainly have that assurance because everybody knows that the House is not going to back down in its determination to provide funds under the Joelson amendment, and everybody knows that the other body is in all likelihood going to increase appropriations for education rather than reduce them, if they are not goaded by our actions into doing something otherwise.

So I think we have nothing to fear but fear itself. If we will just stick to our knitting and have Monday, Tuesday, Wednesday, Thursday, and Friday sessions for most of the next 2 months we can come out of this Congress with the colors flying and make a good report to the folks when we go home at Christmastime.

Mr. ALBERT. The gentleman has stated the case with his usual eloquence and force. I am very happy the gentleman has said that he will try to get a bill out before April 1. What disturbs me is the long delay which educator after educator has told me has caused him all kinds of trouble while waiting for the Congress to act. Of course, while November is not a lot later than July, it is a little bit earlier than December and December is a little earlier than January.

I hope the gentleman will help to get this thing over before it is necessary to ask for another continuing appropriation.

Mr. MAHON. I will certainly help in any way that I can.

Mr. ALBERT. I thank the gentleman.

Mr. MAHON. Let me say this. We have had advance funding for some of these programs. But you know what the truth is, we cannot now do this for next year because while the House has passed an authorization bill, it has not been passed by the other body. So we cannot provide advance funding.

While the Committee on Appropriations gets the heat, the legislative committees must realize that if they want a bill early next year on education, if they will give us the authorization, I can guarantee that the Committee on Appropriations—and I have spoken to the members of the committee—will pass it. And if we can get the other body to move, we can give our education people the notice that they deserve.

Mr. LANDRUM. Mr. Chairman, will the gentleman yield?

Mr. MAHON. I yield to the gentleman.

Mr. LANDRUM. What is the difference, please, between the amount of money in the continuing resolution for education and the appropriation bill which the House passed and sent over to the other body on July 31?

Mr. MAHON. About $700 million.

Mr. LANDRUM. This is $700 million under the appropriation bill?

Mr. MAHON. Yes. The committee resolution is about $310 million above the budget for the entire Office of Education, and is about $600 million above the rate that is presently authorized. These figures are totals, of course. But we have passed the regular annual appropriation bill and sent it to the other body and they will take action on it.

If Members will please turn to the Extensions of Remarks in the RECORD which is on page 31649 of yesterday's RECORD, they will find this information presented in some detail.

Mr. LANDRUM. Mr. Chairman, will the gentleman yield further?

Mr. MAHON. I yield to the gentleman.

Mr. LANDRUM. How much more money is in this continuing resolution for impacted aid than there is in the appropriation bill that the House passed on July 31?

Mr. MAHON. $319 million.

Mr. LANDRUM. There is $319 million more in this resolution?

Mr. MAHON. There is $319 million more in this resolution, bringing the total up to $506 million, which is the appropriation level of last year. There is no doubt that will be increased.

Mr. LANDRUM. Will the gentleman yield further for one question?

Mr. MAHON. I yield to the gentleman.

Mr. LANDRUM. Why is there more money in this continuing resolution for impacted aid at this stage of the game than it was to have in it July 1?

Mr. MAHON. Now let us look at the situation very carefully here. On July 1 the resolution provided that if the bill for fiscal year 1970 had not been passed, the various agencies of government would operate at the level of last year's appropriation or the budget whichever was lower.

In this instance the budget of President Nixon was the lowest figure so we operated on the basis of the budget of President Nixon.

But the House did act on the 31st of July on the Labor-HEW bill. Under the resolution now before us, the program will operate at the level of last year's appropriation or the level provided in the House passed bill—whichever is lower. Last year's level is lower but it is $319 million more than the budget. We no longer take into account the budget figure in determining the operating level.

Mr. LANDRUM. In the event the other body should not act favorably upon the appropriation bill which the House sent over to them, and particularly not act favorably upon the section dealing with title I, on vocational education, would that have an effect on the continuing program under title I of vocational education? Would not vocational education be bankrupted in that situation?

Mr. MAHON. You see, we will go to conference with the other body. The gentleman from Pennsylvania (Mr. FLOOD) is no poor advocate.

Mr. LANDRUM. I agree with the distinguished chairman on that point.

Mr. MAHON. I do not think there is a problem there.

Mr. LANDRUM. My concern, Mr. Chairman, as I am sure it is the concern of many others, is that we do nothing here to retard the growth and develop-

ment needed in the field of vocational education. What I fear is that the continuing resolution as reported by the distinguished chairman and his able committee is about to do something that would bankrupt the vocational education program.

Mr. MAHON. I do not think there is the slightest doubt about the continuance of the vocational education program. I think this House is strongly in favor of that program, and I expect the other body is, also. We will know in 2 weeks, if we can rely upon the information which we have. So I think the safer course is to follow the rule of reason and a good procedure which has stood the test of time.

Mr. JONAS. Mr. Chairman, will the gentleman yield?

Mr. MAHON. I yield to the gentleman from North Carolina.

Mr. JONAS. A point that has not been mentioned which will more or less answer the question of the gentleman from Georgia, and it is that the continuing resolution that is before the House today is not a permanent continuing resolution.

Mr. MAHON. It will last for just 1 month, as we have reported it.

Mr. JONAS. It will have to be reviewed, reconsidered, renewed and new action taken at the end of November. Is that not true?

Mr. MAHON. That is correct.

Mr. JONAS. So how could any program go bankrupt in one month when they are authorized by the committee resolution to continue spending at last year's level?

Mr. MAHON. I conferred with the gentleman from Oklahoma (Mr. ALBERT) the majority leader, and it was upon his recommendation that we made it for the 1 month. We realize that this is a short period of time with Thanksgiving coming; nevertheless, the end of the year is approaching, too. So I would think under all the circumstances you can support with confidence the resolution that is before you.

COMMITTTEE REPORT AND RELATED FACT SHEET ON THE CONTINUING RESOLUTION

Mr. Chairman, under leave granted, and in order that the RECORD will contain in one place a more precise and connected explanation of the proposal of the committee on appropriations, I include pertinent excerpts from the committee report of Thursday last, and a related fact sheet which also appeared in this morning's RECORD.

From the report of the committee.

PURPOSE OF THE RESOLUTION

This resolution is to supply funds to continue, after October 31, 1969, those governmental functions and activities for which the applicable annual appropriation acts for the current fiscal year 1970 are not signed into law by October 31.

The joint resolution, as reported, takes the place of the one under which virtually all of the Government has operated since last July 1, the beginning of the current fiscal year (Public Law 91–33, approved June 30, 1969), and which by its terms expires on October 31.

Only two of the 13 regular annual appropriation bills for fiscal 1970 have been sent to the President. The Treasury-Post Office appropriation bill was signed into law on September 29. The Interior appropriation bill was cleared to the President on October 15. Thus prompt enactment of another resolution is essential to avoid interruption of authority and funds for on-going programs and activities pending final determinations on their budgets.

TIME PERIOD OF THE RESOLUTION

The resolution would become effective the day after the current one expires; namely, on November 1, and continue for not more than 30 days; the terminal date is November 30. By its terms the resolution—and this is standard to continuing resolutions—ceases to apply to programs and activities as and when the applicable regular bills in which they are funded or otherwise disposed of are enacted into law, and in any event expires altogether on November 30. Anything shorter than this would be unrealistic in view of the present unknowns surrounding finalization of legislative action on some of the annual authorization and appropriation bills.

THRUST OF THE RESOLUTION

Consistent with the proposition that continuing resolutions are designed to serve basically as stopgap measures to tide matters over for relatively short periods of time pending finalization of the regular bills for the year, extensions of continuing resolutions in the past have almost always been in the simple form of extending the expiration date, leaving the provisions of the original resolution otherwise unchanged from what they had been from the beginning of the fiscal year. They were not originally intended to serve more or less indefinitely as the basis for operations long after the bills that were pending when the continuing resolution went into effect on July 1 had moved significantly through the legislative process.

The interpretation of the continuing resolution is determined by the legislative status of a particular bill on July 1. The July 1 rate remains in effect until the bill becomes law. The rates used to determine the amounts temporarily appropriated for operations differ, depending upon where a bill is on July 1, and remain applicable to the programs and activities until the particular regular bill becomes law.

A third of the fiscal year has now passed, and since July 1, five more of the annual bills have been voted on by the House—additional to the three the House had passed before July 1. Four of those eight have also cleared the other body, and two of the four have cleared Congress; the other two are pending in conference. The remaining five of the 13 regular annual bills remain in the same position they occupied on July 1—in the House Committee on Appropriations; four of them depend significantly on authorization bills that have not been legislatively finalized.

To accommodate to this significantly changed situation, a modification of the continuing resolution in relation to the practice of previous years is now deemed appropriate. Therefore, the accompanying resolution provides, in substance, that the position of each bill on November 1 would substitute for the position of each such bill on July 1. In many programs and activities this will make no difference in the rate of operations; in others it will, depending on what amount one or both Houses have voted for them.

SPECIFIC FEATURES OF THE RESOLUTION

1. As to programs and activities in bills not passed by the House by October 31, the rate for operations is one not in excess of the fiscal 1969 rate or the rate provided in the 1970 budget estimate, whichever is lower, and under the more restrictive authority. *This is identical to the concept under the existing resolution with respect to bills that had not passed the House by last June 30.*

In other words, the same ground rules now in effect would continue to apply to the following bills: Transportation; Defense; District of Columbia; Military Construction; and Foreign Assistance; plus some of the items listed separately in section 101(b) of the existing resolution that have not yet been incorporated in a bill already voted on.

2. As to programs and activities in bills passed by both Houses but not signed into law by October 31, the rate for operations with respect to items not in disagreement between the two Houses would be the amount in the bill. *This is identical to the concept under the existing resolution for any bills that may have passed both Houses by June 30.*

For such items not in disagreement in any bills that had passed the House but not the Senate by June 30, the rate for operations switches from the lower of the fiscal 1969 rate or the House rate to the amount in the bill. *The 1969 rate would no longer enter into the picture.*

For such items in both versions of a bill but in differing amounts, the rate for operations would be the lower of the two amounts. *This is identical to the concept under the existing resolution for any bills that may have passed both Houses by June 30.*

For such items in differing amounts in a bill that had passed the House but not the Senate by June 30, the rate for operations switches from the lower of the fiscal 1969 rate or the House rate to the House or Senate rate, whichever is lower. *The 1969 rate would no longer enter into the picture.*

As to items included in only one version of a bill, the fiscal 1969 rate for operations or the one House rate, whichever is lower, would apply. Allowing for a special provision with respect to Senate items traditionally omitted from the legislative bill in the House, *this is identical to the concept under the existing resolution.*

As of today, these provisions would apply to the following bills: Agriculture and Legislative.

3. As to programs and activities in bills passed by the House but not the Senate by October 31, the rate for operations would be the fiscal 1969 rate or the House rate, whichever is lower. *This is identical to the concept under the existing resolution for the three bills that had passed the House by June 30.* This would be a switch from the lower of the fiscal 1969 rate or the fiscal 1970 budget estimate rate for operations. *The 1970 budget estimate rate would no longer enter into the picture.*

As of today, this would apply to the following bills: Labor-HEW; Independent Offices-HUD; State-Justice-Commerce-Judiciary; and Public Works-AEC.

PROVISIONS GENERALLY APPLICABLE

The accompanying resolution repeats a number of provisions that have become standardized in continuing resolutions over the years. Specifically:

Section 105 makes it clear that the resolution does not augment the appropriation made for a given item in the regular 1970 bills, as follows:

Expenditures made pursuant to this joint resolution shall be charged to the applicable appropriation, fund, or authorization whenever a bill in which such applicable appropriation, fund, or authorization is contained is enacted into law.

Section 102 provides that the resolution ceases to apply to an agency or activity concurrent with approval by the President of an applicable appropriation bill in which provision for such agency or activity is made. Thus the scope of the continuing resolution constricts as each bill is enacted; the resolution will be wholly inoperative after the last bill for 1970 is approved, or November 30, 1969, whichever first occurs.

Section 104 is self-explanatory.

Section 106 forbids the use of funds provided in the joint resolution to initiate any

new project or activity or to resume any which was not being conducted in fiscal 1969.

Section 103 also follows the stereotyped form of previous continuing resolutions in waiving the time periods set forth in 31 U.S.C. 665(d)(2) for the submission and approval of papers on the apportionments of funds. This in nowise waives the basic requirement in the law for the apportionment of funds over the year by the Director of the Bureau of the Budget, but merely dispenses with considerable paperwork that as a practical matter cannot be usefully applied to temporary appropriation provisions.

Section 107 repeats section 107 of the existing resolution, authorizing deficiency apportionments for 1970 to the extent necessary to meet statutory pay increases not specifically provided in the individual 1970 budgets or appropriations. This refers generally to the pay raises granted primarily by or pursuant to Public Laws 90–206 and 90–207, generally effective last July 1. The line-item budgets for 1970 did not make specific allowance for these added costs; only a 1-line amount was included in the overall budget totals.

EXPENDITURE CEILING PROVISION

Title IV of the Second Supplemental Appropriation Act, 1969, sets an overall ceiling on budget outlays (expenditures and net lending) for fiscal 1970 at a beginning figure $1 billion below the President's April 15 Budget Review projection. The ceiling is adjustable, depending on congressional actions or inactions on the budget, and to a limited extent depending on overruns in certain so-called uncontrollable items not requiring annual legislative appropriation action.

The accompanying resolution, in section 103, repeats the provision in section 103 of the existing resolution making clear the intent that interim operations under the continuing resolution shall in nowise contravene the provisions of such title IV.

The fact sheet which I prepared and released on the 27th follows:

(NOTE.—*For impacted aid and other education programs, see items 10 and 11.*)

COMMITTEE CONTINUING RESOLUTION—FACT SHEET (H.J. RES. 966)

A. THE PURPOSES OF CONTINUING RESOLUTIONS

1. *Continuing resolutions are not appropriation bills* in the usual sense. They do not make *additional* appropriations. They merely make interim advances that are chargeable against whatever amounts the two Houses of Congress finally appropriate in the regular annual bills.

2. *Continuing resolutions are nothing but interim, stop-gap measures* necessary to keep government functions operating on a rationally minimum basis between July 1 and enactment of the regular authorization and appropriation bills. They are designed to preserve the integrity and options of the regular authorization and appropriations processes in the committees and in both Houses.

3. *Continuing resolutions were never designed and never intended to* "get ahead of the regular order", i.e., to resolve weighty, substantive, legislative or appropriation issues outside the framework of the regular bills. (If they were so used, a Pandora's box of disruptive and disorderly actions could well result.)

4. *Continuing resolutions have always been designed to avoid controversy so as to secure prompt enactment,* else they would jeopardize orderly processes and orderly continuation of essential governmental functions.

5. *Continuing resolutions are thus a growth, born of long—and successful—experience.* They have become standardized in their concepts and specific provisions. They apply universally, and consistently, to all departments and agencies. The basic concept over the years is this:

Legislative status of an appropriation bill when continuing resolution becomes effective:	Continuing resolution funding level is always:
When neither House has acted	The budget estimate or last year's level, whichever is lower.
When passed House but not Senate	Last year's level or House level, whichever is lower.
When passed both House and Senate	The action of the two Houses; or if in disagreement, the lower of the two.

B. THE COMMITTEE RESOLUTION (H.J. RES. 966)

6. *The committee resolution* follows the *basic concepts* of past resolutions. It is a 30-day resolution—for November only.

7. *The committee resolution* makes a change in the *application* of the concept and thus in the *effect* on some operations, by taking account of congressional actions on appropriation bills since *July 1* when the current resolution went into effect.

8. *The Committee resolution* makes no change at all in 6 of the regular bills; they occupy the same position they did on July 1. It will have some limited effect on the Agriculture and Legislative bills which have moved to the conference stage, and on the Labor-HEW, State-Justice-Commerce, and Public Works bills which have moved to the Senate since July 1.

9. *The committee resolution, replacing the existing resolution effective November 1st, will produce* little or no change in authorized rates of interim spending levels for many programs and activities. But it will permit *significant changes in a handful of items in the Department of HEW, especially in Hill-Burton hospital grants (about $100 million more) and in certain education programs (about $600 million more).*

C. EFFECT OF COMMITTEE RESOLUTION ON EDUCATION PROGRAMS

10. *The committee resolution adds about $600 million* to the authorized spending level for education programs, *as shown on the attached table.* $319 million additional is for impacted area school aid (P.L. 874).

11. For schools in Federally impacted areas, the committee resolution would authorize funds at the fiscal 1967 level for both categories "A" and "B"; a total of $506,000,000—some $319,000,000 *above* the currently authorized rate. There would be no special restrictions with regard to "category B".

Payments are made periodically during the fiscal year but the final payments are not usually made until late September or October, i.e., *after* the fiscal year for which they are appropriated. Thus an increase in these funds at this time would have no practical effect different from that of providing them when the regular HEW bill is enacted.

EFFECT OF CONTINUING RESOLUTION ON EDUCATION PROGRAMS

[1] Effective July 1, Public Law 91–33.
[2] Effective Nov. 1, H.J. Res. 966.
[3] Joelson amendment items.
[4] Sec. 101(d) of the present continuing resolution made special provision for continuing State administrative activities only. Under the committee version, funds for both State administration and program grants would become available effective Nov. 1.

Mr. BOW. Mr. Chairman, I yield myself whatever time I may consume.

The CHAIRMAN. The gentleman from Ohio is recognized.

(Mr. BOW asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. BOW. Mr. Chairman, today for the first time in all of my years here and for the first time, I believe, in the history of appropriations continuing resolutions, the House is breaking new ground and innovating for expediency's sake alone.

Instead of following its historical concept of providing for interim operation of the Government at the lowest of several levels until all appropriation bills are enacted, the House is today changing the groundrules so as to make available more than $600 million of obligational authority for education which would not be available otherwise until we have completed action on the Labor-Health, Education, and Welfare appropriation bill.

In all prior continuing resolutions, we have followed a responsible policy and have provided obligational authority at the program level of obligation for the preceding fiscal year, the budget for the current year, the House action on a bill or the Senate action, whichever was lowest. That is precisely what we did last June 30 when Public Law 91–33 was approved. At that time we froze the incurring of obligations based upon the situation existing on last July 1.

Now, the Appropriations Committee proposes to abandon the usual date of July 1 and substitute therefor November 1, even though Congress has completed action on only two of the regular appropriation bills for fiscal 1970. The resolution will be effective through November 30.

This simply means that the committee proposes to ignore both the Johnson budget for fiscal 1970 and President Nixon's revisions thereof. As a consequence, it would make available for immediate obligation most of the funds provided by the so-called Joelson amendment to H.R. 13111, the Labor-HEW appropriation bill which passed the House last July 31.

Since the committee's action is nothing more than a transparent attempt to appease education's professional lobbyists, it is unwarranted and may come back to haunt us in another day.

The responsibility for Congress' delay in sending H.R. 13111 to the President does not rest with the House because the bill has been languishing in the other body for 3 months and, at present, there is no clear indication as to when the other body will act.

So, I say to you we should be considering today a simple continuation of Public Law 91–33, which would place the responsibility for delay squarely on the shoulders of the other body.

Mr. Chairman, I am sure no one here has forgotten that in the second supplemental appropriation bill for 1969, H.R. 11400 which became Public Law 91–47, Congress imposed upon the President an expenditure ceiling for fiscal 1970 of $191.9 billion. That was $1 billion less than the $192.9 billion the President said would be spent in fiscal 1970. But by its action today, the House is proposing additional obligational authority for education of more than $600 million, which if obligated by the administration now, will raise for the time being $300 million the $191.9 billion expenditure ceiling which Congress itself imposed upon the President.

Of course you can argue, and rightfully so, that Congress also provided in Public Law 91–47 that the ceiling was flexible and could rise or fall based upon action or inaction by Congress on the budget for 1970. Nevertheless, I cannot help but wonder, did Congress really mean it when it imposed an expenditure ceiling of $191.9 billion or was it engaging in semantics for politics sake alone. If it were a political gesture, I might say the language in Public Law 91–47 was clever indeed and the language in this joint resolution, House Joint Resolution 966, is no different in that respect. And I, for one, can see no need to be facile for expediency's sake. If we did not mean what we said and did with respect to our own imposed expenditure ceiling, why did we bother to go through the motion?

As recently as last October 17, just 10 days ago, in his speech on the rising cost of living and his efforts to curb the inflationary spiral, President Nixon said:

> Step One was to cut Federal spending, which more than anything else was pushing your prices up. We cut proposed Federal spending by more than seven billion dollars. We have taken it out of defense, we are cutting back on construction projects, we are squeezing it out of many other departmental budgets. We have been selective in these cuts, recognizing urgent national and social needs, but hardly anything has escaped some reduction.

He also issued a call which said in part:

> I call for your support in our policy of holding down Federal spending so that we are able to continue setting an example with a responsible budget for fiscal 1971.

Mr. Chairman, let me detail some of the pending potential congressional increases to fiscal 1970 budget outlays with which the President must deal if and when they become public law:

[In millions]

Description	Increase over request	
	Authority	Outlays
Appropriation bills:		
Agriculture and related agencies, as passed by Senate (July 7, 1969), excluding administration's amended increase of $270,000,000 for food stamps	$405	$313
House bill (May 27, 1969)	(−161)	(+173)
Labor-HEW, as passed by House (July 31, 1969) increase mainly for education	1,078	+539
Public works and AEC, as passed by House (Oct. 8, 1969), increase mainly water pollution grants	301	16
Other legislation:		
H.R. 13000: Raises Federal civilian and military pay effective Oct. 1, 1969 for Post Office and Jan. 1, 1970 for remainder; full year cost in 1971 about $4,300,000,000. Passed by House Oct. 14, 1969; 1970 cost will be	1,550	1,550
Social security benefits:		
Proposal to make effective January 1970 instead of March 1970 as recommended		465
Proposal to raise benefits by 15 percent (instead of 10 percent as recommended) and make effective January 1970; in addition to amount immediately above		580
H.R. 11959: GI bill for veterans education assistance, as passed by House Aug. 4, 1969	400	400
S. 2547: Food stamp amendments, as passed by Senate Sept. 24, 1969	640	600
Other legislation—Continued		
H.R. 11651: School lunch amendments for child nutrition, as passed by House July 21, 1969		$100
H.R. 13194 and S. 2721: Increases authorization for national defense education loans, work-study grants, and educational opportunity grants. Passed by Senate Sept. 16, 1969; passed by House Sept. 15, 1969; in conference	$333	239
H.R. 514 and S. 2218: Expands impacted area education aid for public housing children. Passed by House Apr. 23, 1969; Senate has held hearings	230	115
Potential nonenactment of recommendations to reduce spending:		
Postal rate increase (H.R. 10877): Original proposal for July 1 effective date would save $591,000,000; it is still possible to make a Jan. 1 effective date and save about	300	300
Farmers Home Administration: Proposal to permit certain operating loans and to provide that certain insured loans to public bodies could be sold as taxable instruments; this could save		292
Veterans' Administration (H.R. 11703): Proposal to permit sale of direct loans at more than a 2-percentage point discount could cut outlays by		128
Total, all items above	5,237	5,637

If the President is to abide with his own expenditure ceiling of $192.9 billion, and he has said repeatedly that he will, I hope he will refuse to obligate the additional education funds provided by this joint resolution until such time as all appropriation bills for fiscal 1970 have been approved by both House and Senate. To do otherwise would force the administration to alter its program of priorities to provide for all the needs of our Government and would force some other area of Federal spending to absorb this increase in obligations for education.

Mr. Chairman, I am a realist. I know full well there is no deterring the House from approving this resolution today. As a matter of fact, we will be fortunate indeed if we can hold to what the committee has recommended. There are forces at work here today who would increase the obligational authority for education, not by $600 million but by the $900 million addition provided by the so-called Joelson amendment. Thus, Mr. Chairman, I may reluctantly support the committee's recommendation because the Government must continue to operate, in an orderly fashion I hope, until all fiscal 1970 appropriation bills are approved.

Mr. Chairman, at this time I have no requests for time. If the gentleman from Illinois (Mr. PUCINSKI) would like to have me yield for a question to the chairman, I would be glad to do so. It seems to me that we have had adequate debate on the subject. But if there is some clarification the gentleman would like, I would be glad to yield to him.

Mr. PUCINSKI. I thank the gentleman.

Apropos the question raised by the gentleman from Georgia (Mr. LANDRUM) is it not a fact that in the 1968 Vocational Education Amendment we wrote in a mandatory 15-percent set-aside of State grants for disadvantaged communities, a 10-percent set-aside for handicapped, and a 15-percent set-aside for post secondary education? In other words, 40 percent of State grants now must be set aside for these three specific categories. The question I would like the gentleman from Ohio to answer is as follows——

Mr. BOW. Will the gentleman direct his question to the chairman of the full committee. He is present and will answer the question.

Mr. PUCINSKI. Mr. Chairman, will the gentleman yield?

Mr. BOW. Yes; I yield.

Mr. PUCINSKI. I wonder if we could have the attention of the chairman of the committee. The gentleman from Ohio has suggested that I propound my question to the chairman of the committee. He has been kind enough to yield this time for the gentleman to answer. The question I raise is apropos the question

raised by the gentleman from Georgia (Mr. LANDRUM) as to how we are affecting vocational education programs in the States. If we do not have additional money right now, they will have to cut back in assisting vocational education programs because of the mandatory set-aside that the Congress wrote into the authorization of 15 percent for disadvantaged, 10 percent for handicapped, and 15 percent for post secondary.

That means 40 percent of the money that was available for ongoing programs in 1968 and 1969 is not available to a State vocational education director in 1970, because we have passed a law here in which we have taken that 40 percent away and earmarked it for a specific use, and unless they get this additional money that we voted in the Joelson amendment, these State vocational education directors will have to cut back existing ongoing programs.

The question asked by the gentleman from Georgia (Mr. LANDRUM) was correct and in order. I wish some member of the committee would explain that to me.

Mr. MAHON. Mr. Chairman, in vocational education, we will proceed under the proposed continuing resolution, on the basis of the lower of either last year's appropriation or the House figure in the 1970 Labor-HEW bill handled by the gentleman from Pennsylvania (Mr. FLOOD). Last year's level was $248 million, and that is the level at which we will proceed, I was told.

The Labor-HEW appropriation bill will probably be handled in 2 or 3 weeks by the other body. There seems to be no appropriate, parliamentary and effective way to determine this issue except in the course of considering the regular Labor-HEW bill, which, as I indicated we have reason to hope will be in the next few weeks.

Mr. PUCINSKI. Mr. Chairman, the gentleman knows I have the highest respect for him. I do not intend here to be disrespectful. But I happen to be the chairman of the subcommittee that handled the vocational education bill last year. I think this House ought to know we wrote into the authorization a provision that is no longer debatable, and that is the law of the land, and that is the State educational directors must as of July 1 of this year take 40 percent of the State grant and set it aside and use it for three categorically earmarked purposes. Unless there is more money put into that State grant, the director must start phasing out existing ongoing vocational programs.

That is why we are supporting the gentleman from California and addressing ourselves to that, so the directors will not have to start phasing out ongoing time-tested programs in the State programs.

Mr. MAHON. Mr. Chairman, the gentleman is talking about certain provisions of the law which were not in the appropriation bills. I would say the other body, which is holding hearings on the educational programs, will act upon the proposals which have been sent over there in our HEW appropriation bill.

Mr. OTTINGER. Mr. Chairman, will the gentleman yield for a question to the chairman, if I may have the chairman's ear?

Mr. BOW. I yield to the gentleman from New York.

Mr. OTTINGER. Mr. Chairman, we are asked to support the gentleman's continuing appropriation on the ground that this is the most orderly procedure. Yet it strikes me this is the most disorderly kind of procedure, to require the schools to be in a position where they cannot plan. This applies not only to education, but also to R. & D. programs and to health programs.

I wonder if the chairman in the future would support the proposal for a change in the fiscal year to correspond with the calendar year, so each year we will not have these problems when there are uncertainties as to what the educational programs will get, so they will know by July 1 the levels of the programs.

Mr. BOW. Mr. Chairman, I would be glad to respond to that. I happen to be one of those who has asked that there be a complete study of the proposal to change the fiscal year, but I am not yet convinced that changing the fiscal year will change our situation of not having authorizations or appropriation bills back from the other body.

I am much more inclined to believe, as the Chairman said earlier in the debate today, that with respect to appropriations for education, when we commence next year, as soon as we reconvene, we should start to work on the appropriation bill for education and for the schools, so we might have it out by April or sooner, or a few days after that.

That would be a separate item from this whole HEW appropriation bill. In that way we could pass on it here early in April or early in May and send it over to the other body. That would give the schools an opportunity to do their planning.

I am not sure by changing the fiscal year we will be able to do that, because we probably would have the same delays which confront us now.

Further, I would say to the gentleman with respect to the overall picture I am very much opposed to operating this Government under continuing resolutions. I believe it is a great mistake. I point out that right now the Bureau of the Budget is up against a deadline in preparing the budget for next year. Here they are looking at us, with only continuing resolutions, with no idea what the appropriations this year are going to be, and they are now in the process of building next year's budget.

I would say I am in favor perhaps of attempting this—which might be a good idea for the chairman to give consideration to; and I am sure he is—that the Appropriations Committee set up a schedule, bring out all of the appropriation bills by the end of June. If they involve things which are not authorized, we can bring in the bills and let some Member make a point of order against the unauthorized items, and then they will have to wait for authorization.

It seems to me we have gotten ourselves in a very strange position here, with all the unapproved authorizations, to a point that our committee cannot act. Most of our hearings are finished. The Appropriations Committee is ready to report out its bills and to act on them, but they are delayed because of a lack of authorization.

Mr. MAHON. Mr. Chairman, will the gentleman yield?

Mr. BOW. I am glad to yield to my chairman.

Mr. MAHON. I should like for the gentleman to consider this: What would happen if, when the chairmen of the legislative committees meet next January and when the Appropriations Committee meets next January the chairman announced, "Well, ladies and gentlemen, we have changed the fiscal year now and you do not have to get your bills out until December 31"?

The Appropriations Committee has processed 13 bills and resolutions this session. Seven of them have been enacted. Had we not been working against a July 1 fiscal year I doubt we would have done as well.

Can one not imagine the consternation and chaos that would come about if we tried to pass many if not all of the authorizing and appropriation bills in the very latter part of the calendar year—perhaps in the last several weeks of the year? It would be chaos on top of chaos.

It would be piling Pelion on the top of Ossa.

It would be utterly absurd and unthinkable.

Mr. JONAS. Mr. Chairman, will the gentleman yield?

Mr. BOW. I am glad to yield to the gentleman from North Carolina.

Mr. JONAS. I should like to add this general comment to the question of the gentleman from New York. He seems to believe that it would help the school systems if we changed over to a calendar year basis.

I do not rule out the possibility of doing that. I have not taken a position on it. If it can be shown it is a good idea to go to a calendar year basis, I certainly have no disposition against it.

I would remind the gentleman, however, if we make that conversion we are not going to help the school systems, because they do not operate on a calendar year basis. They operate on a semester basis, which is closer to a fiscal year basis than a calendar year basis.

Mr. MAHON. Mr. Chairman, will the gentleman yield?

Mr. BOW. I yield to the gentleman from Texas.

Mr. MAHON. I believe it might be well to point out that if Congress meets in January and we have a whole year, 12 months, before the new fiscal year begins on the following January 1, I would shudder to think of how many supplementary appropriation bills and other spending measures that might well confront us?

What the Congress needs probably is a change in work habits to the end that we would set an objective and accomplish that objective.

We can do that, and in my opinion we are moving toward the time when we will do that.

Mr. PERKINS. Mr. Chairman, will the gentleman yield to me?

Mr. BOW. I will be delighted to yield to my friend from Kentucky.

Mr. PERKINS. I certainly want to agree with the gentleman from Georgia that if we follow the pattern cut in this resolution, we are going to bankrupt vocational education. Only last year we tripled the authorization for vocational education and yet, this continuing resolution provides the same amount as last year—$248,216,000. Just as the gentleman from Illinois has stated, 40 percent of the funds have already been earmarked by the new legislation, and this will cut back every vocational education program in every local school district in America. For all intents and purposes, it will bankrupt vocational education if it is permitted to stand. In the Joelson amendment we had a balanced package. There is no balance in the committee resolution. There is nothing for the ghetto student or the poor rural student. In fact, because of inflation, title I will be severely handicapped if we fail to provide the additional $278 million.

Mr. BOW. I must decline to yield further to the gentleman from Kentucky, because I must conserve some of my time. But I might say further to the gentleman that as I recall the Johnson level it was $248 million. I notice that the Nixon amount was $279 million. So Mr. Nixon has tried to give you $30 million more for vocational education than you had in the previous Johnson administration.

Mr. FLOOD. Mr. Chairman, will the gentleman yield at that point?

Mr. BOW. I yield to the gentleman from Pennsylvania.

Mr. FLOOD. My beloved and distinguished friend is wrong for the first time since he has been in this House.

It is at the last year's level in this continuing resolution. What he says is completely without foundation.

Mr. PERKINS. I say to the distinguished gentleman from Pennsylvania that I am not wrong in principle.

Mr. BOW. Mr. Chairman, I do not yield further to the gentleman from Kentucky, but I would be delighted to yield to the gentleman from Pennsylvania if he desires to explain the situation.

Mr. FLOOD. I thank the gentleman. I think I will wait to speak under the 5-minute rule. Of course, I will oppose the amendment that I understand is to be introduced, and at that time I will repeat just what I said.

Mr. BOW. I appreciate the gentleman's statement.

Mr. Chairman, I yield back the balance of my time.

The CHAIRMAN. The gentleman has consumed 16 minutes.

Mr. MAHON. Mr. Chairman, I yield 5 minutes to the gentleman from California (Mr. COHELAN).

Mr. COHELAN. Mr. Chairman, now I know how David felt.

This matter has become an issue way out of proportion to what I originally intended.

I have already indicated in my colloquy with the chairman that it is my purpose this afternoon to narrow the issue and stick to the point. What we are talking about is very simple. We are talking about a difference between this continuing resolution and what this House did on July 31 in passing an appropriations bill which increased the amount for education by almost $1 billion over the administration request.

When you take a look at House Joint Resolution 966 we can say, with great credit, to our committee, that the Committee on Appropriations has come up with a very interesting continuing resolution. It funds, for example, the impacted aid program at the 1969 level, but significantly it leaves a shortage of $78 million in that impacted aid which has a great deal of appeal in this body; $273 million is cut from title I by House Joint Resolution 966. This is a very substantial amount, and in fact more than is recommended for vocational education.

Mr. Chairman, what I want to do at the appropriate time is merely to amend this continuing resolution so it reflects the funds passed by this House. This amendment would restore the $273 million to title I for example.

Why all of this controversy over the proposed amendment? In my district we are in deep trouble with the educational system. We desperately need titles I and II funds. The administrators and school officials from all over this country—and they are here today—tell a story that is pretty hard to ignore. They have been mortgaging and juggling their funds, and doing everything possible to keep some of these programs alive. This is all because of the lack of funds.

The chairman of the Appropriations Committee has stated that there is plenty of blame to share. I agree but I believe that this House should act in a positive manner on an issue which involves $649 million.

Let me point out this: If you want to find out what it is going to do for all of you, I would like the Members to turn to page 31654 and the following pages where there is an extended tabulation by the Office of Education showing what this amendment is going to do State by State and title by title. You have the 1968 figures, you have the 1969 figures. You have the Johnson budget and you have the Nixon budget, and you have the House appropriated level. By looking at these tables each Member will see programs in his State are vitally affected by the proposed cut.

Unfortunately, our chairman has put this on the basis of comity. This is something I do not agree with. I have my own reasons for believing that there is ample support for this bill in the Senate, and I will even predict that when the Senate finally gets to it they will probably surpass what we did when we expressed our will on July 31.

Mr. EVINS of Tennessee. Mr. Chairman, will the gentleman yield?

Mr. COHELAN. I shall be glad to yield to the gentleman from Tennessee.

Mr. EVINS of Tennessee. The gentleman from California is a very important member of the Committee on Appropriations. However, the real solution to this problem is to get the Senate to act on the bill; is that not right?

Mr. COHELAN. Why, of course, I agree with that. But I believe there is absolutely no reason why this House cannot express its will, particularly when the matter is so urgent.

Let us talk about the fundamental issue. Let us take vocational education. It was increased above the administration recommendation by our Committee on Appropriations. The administration asked for a mere $279 million—Mr. FLOOD's subcommittee provided $357 million short of the figure approved in Then on this floor we raised it to $488 million.

This continuing resolution will permit vocational education to be funded only at the rate of $248 million, while my amendment will add the $240 million difference. Why did we increase these amounts on the floor? Was there not a demonstrable need them? Is there not the same need now?

The CHAIRMAN. The time of the gentleman from California has expired.

Mr. COHELAN. Mr. Chairman, will the gentleman yield me 2 additional minutes?

Mr. MAHON. Mr. Chairman, I yield 2 additional minutes to the gentleman from California (Mr. COHELAN).

Mr. COHELAN. Mr. Chairman, I thank the gentleman for the extra time.

Getting back to vocational aid, the difference is $240 million. Why did we increase the amount? We all know it was to avoid the disastrous cuts which would result from the authorizing committee language.

Mr. PUCINSKI already has referred to the vocational educational amendments of 1968 which restructured the program, and in so doing made it mandatory for us to increase appropriations if we were to avoid cutting back on some of the programs.

We have already discussed the impacted aid which is in the list I will provide for the RECORD—and it has already been placed in the RECORD by the chairman.

What about title I? In 1969 we appropriated $1.1 billion, and the House's floor action raised it to $1.3, a difference of $273,848,000. I mention the Carey amendment for handicapped children in passing which was increased by $20 million.

And what about NDEA loans and the higher education, the student loans were increased to $229 million from $193 million available in 1969, a difference of $35 million.

Mr. Chairman, this House has expressed itself and we are now asked to go back. Must we submit to the vagaries of what can happen between now and December? I think not.

I most emphatically disagree with the chairman that the Senate will pass the bill in 2 weeks. I pray that he is correct. I would like nothing better if the other body could pass on this bill in a couple of weeks. But the best advice I can get does not support the assertion of the chairman. The Members of the other body advised me that we will be lucky to get this bill out by December, and I have even had one person say it would go to January before we have a final bill.

Mr. PETTIS. Mr. Chairman, I wish to express my complete support of the remarks of my colleague, the gentleman

from California (Mr. COHELAN), in respect to the continuing resolution on funding for the Office of Education on a monthly basis until such time as a final appropriation bill is passed. I am deeply concerned, like many fellow members here, that the resolution reported by the Appropriations Committee last week leaves the Office of Education some $649 million plus. That was in committee. the House-passed bill and currently log-jammed in the other body.

Most of our colleagues will recall, I am certain, that I was one of the principal advocates for increased educational funds when the bill was before us earlier. And I want to reiterate my support today, particularly for the vitally important provision of aid for federally impacted areas. Any tampering with impact aid would impose an intolerable burden on taxpayers in local communities and the military families who live in them. As the representative of a district which includes five military bases, I know what this program means in California's San Bernardino County. Last year this program provided about $4.5 million to San Bernardino County and I am absolutely certain that the national research firm which is currently studying and evaluating the impact area aid program can attest that the money was needed and used wisely to obtain maximum benefits. There is nothing more important that we can do for our country than to provide a quality education for every American.

Mr. MAHON. Mr. Chairman, I yield 5 minutes to the gentleman from Florida (Mr. SIKES).

Mr. SIKES. Mr. Chairman, it may be that the House does not recognize the exact import of the situation which confronts us. The principle of additional support for education has been established, and very definitely so. We are not enacting an appropriation bill. The House has already passed such a bill, and it is over in the Senate. We are not enacting legislation on Federal aid to education; the House has passed these measures also.

The measure before us is nothing more than a continuing resolution, not a vehicle for making additional appropriations. Whatever funding level is voted today is only an interim advance which is chargeable against the amount the two Houses of Congress finally appropriates in the annual funding bill which is now pending in the Senate. What happens here today does not change the appropriation level.

The pending committee resolution is a 30-day resolution for the month of November. It would insure—please note this—it would insure an adequate spending level for educational programs, including impacted area school aid, and these funds would be significantly above the currently authorized rate.

The distinguished gentleman from Texas (Mr. MAHON) has prepared a fact sheet which is on the majority desk, and which tells us very clearly what this discussion is all about If you have not seen it, I urge that you do so. It shows that the continuing resolution adds about $600 million to the authorized spending level for educational programs. $319 million additional is for impacted area school aid.

In schools in federally impacted areas the continuing resolution would authorize funds at the fiscal 1969 level for both categories A and B, a total of $506 million, $319 million above the currently authorized rate.

There would be no special restriction with regard to category B.

Now, to increase the funds in the House at this time, as will be proposed, would have no direct effect different from that of providing such funds from the regular HEW appropriation bill as enacted.

An increase now would not insure a higher level of spending for the fiscal year. But to defeat the committee resolution could produce very considerable confusion between the two bodies of the Congress. We are simply trying, by the regular procedure of a continuing resolution to avoid controversy and to encourage the promptest possible enactment of the pending appropriation bill. We support orderly findings of needed education programs; we should not confuse it by amendments to a continuing resolution.

That is why I take the floor to urge support for the distinguished gentleman from Texas, the chairman of the Committee on Appropriations (Mr. MAHON), in his efforts here today.

I feel that the continuing resolution should be approved and that all amendments should be defeated.

Mr. BOW. Mr. Chairman, I yield 5 minutes to the gentleman from Connecticut (Mr. GIAIMO).

Mr. BARRETT. Mr. Chairman, will the gentleman yield?

Mr. GIAIMO. I yield to the gentleman.

Mr. BARRETT. Mr. Chairman, I rise in support of the amendment to House Joint Resolution 966, to be offered by the gentleman from California (Mr. COHELAN).

Mr. Chairman, during the last week of July, the House considered and acted upon H.R. 13111, making appropriations for fiscal year 1970, for the Departments of Labor and Health, Education, and Welfare and related agencies. At that time, the House wisely worked its will and added approximately $1 billion in much-needed funds for a number of vital programs of the Office of Education. Since the Senate has not yet completed action on the HEW appropriations, funds are provided by House Joint Resolution 966 on a formula that essentially funds Office of Education programs at 1969 levels. Funding these vital programs at the 1969 levels would not only perpetrate an injustice and do disservice to education in this country, but would serve to confuse and confound the Federal effort to aid education.

Mr. Chairman, the adoption of the amendment is particularly vital at this time. We are nearing the end of October. The 1969–70 school year is well underway. State and local communities must have some idea of what to expect in Federal assistance for education programs. The House acted responsibly in July and the adoption of the amendment will affirm that action and that the House is committed to fully fund the Federal programs in aid of education.

I most strongly urge my colleagues to support this amendment.

Mr. GIAIMO. Mr. Chairman, I take this time to speak in opposition to the proposed amendment of the gentleman from California (Mr. COHELAN).

We have heard a great deal of discussion today about the great needs for our educational budget. I do not think the needs are in question. I do not think they are in doubt. I supported the Joelson amendment which embodied the educational package which increased by $1,200 million the request in the appropriation bill for the Department of Health, Education, and Labor when it was before us in July.

I think it was proper to do so. I think we are in a very real crisis insofar as the needs of our educational institutions are concerned.

We have heard a great deal of discussion today about the fact that we need more money. But I would like to ask one question, why is this proposal being put before us in this body? How many times do we have to act in this area?

We have acted. We have listened to the recommendations of the educational groups and their lobbyists. We did increase the amounts of money. Now we are being asked to do something, which I suggest should not be our function as Members of the Congress. We are being asked at this point to become lobbyists with the other body which forms the Congress, to pressure it into action. I submit this is wrong.

This is not an educational issue at this point. This is a constitutional issue now—whether or not we are bicameral in nature in this country and whether or not we should usurp the prerogatives of the other body to work its will.

Even assuming that this amendment carried—and even assuming that there was a majority for it in the other body—what would we have gained at that point—not 1 red cent in additional money until the orderly process of Government works its will; namely, action by the President of the United States and the Bureau of the Budget.

So I submit that we are playing a game here—or rather we are being asked to play a game—that we are being asked to become a lever against the other body to speed it up.

I would further suggest that all of these lobbyists and all of those who have written to us and have sent telegrams to us, would do better if they would go and put out the fire of delay where the fire exists. That is in the other body—not in this body which has already acted and has already enacted an adequate appropriation in regard to the needs of education.

Mr. PUCINSKI. Mr. Chairman, will the gentleman yield?

Mr. GIAIMO. I yield to the gentleman from Illinois.

Is there any question in the gentleman's mind that if the other body should accept the Cohelan amendment, it would be perfectly legal and operable before the 1st of November?

Mr. GIAIMO. There is a very serious question in my mind. Each body should do its work according to orderly process. This means that we do our work. We get

out our appropriations. Then let the will of the people pressure or persuade, if you will, the other body to speed up its actions properly so that it gets their bill to the floor and gets the appropriation enacted. But that is not what we are trying to do here.

Mr. PUCINSKI. Mr. Chairman, will the gentleman yield further?

Mr. GIAIMO. I yield to the gentleman from Illinois.

Mr. PUCINSKI. Does the gentleman honestly believe that the other body can conclude their hearings on the appropriation bill and take the necessary action, through the committee and through the floor action, before midnight Friday? Does the gentleman really believe that?

Mr. GIAIMO. I have enough work trying to figure out what this body must do, let alone trying to figure out what the schedule of the other body should be. And I would suggest that the gentleman would have the same problem I have.

Mr. COHELAN. Mr. Chairman, will the gentleman yield?

Mr. GIAIMO. I yield to the gentleman from California.

Mr. COHELAN. I thank the gentleman for yielding. It is very unusual that we are in an adversary situation.

Mr. GIAIMO. It can happen.

Mr. COHELAN. The gentleman would not seriously argue that the Senate is going to turn this proposal down, is he?

Mr. GIAIMO. I have no way of knowing what the other body will do. But I do think it is not within your function or mine to tell the other body how it should conduct its business.

Mr. COHELAN. I will say to the gentleman, if he will yield further, that I am a legislator, a Congressman of the United State, and as a legislator it is my business to do everything I can to help the legislation get through.

Mr. GIAIMO. Exactly. But within the rules of orderly process.

Mr. COHELAN. If the gentleman would permit me, I would like to announce for his benefit that the distinguished Senator from New Mexico——

The CHAIRMAN. The time of the gentleman from Connecticut has expired.

Mr. BOW. I yield the gentleman from Connecticut 3 additional minutes.

Mr. COHELAN. Mr. Chairman, will the gentleman yield?

Mr. GIAIMO. I yield to the gentleman from California.

Mr. COHELAN. I thank the gentleman. I just received this message from the Senator from New Mexico (Mr. MONTOYA). He has notified me that there are now 30 senatorial cosponsors of an identical joint resolution, and before 3 o'clock they expect to have 50 Senators as cosponsors.

Mr. GIAIMO. That does not affect the principle. The principle is that this body has acted, and orderly process calls for us to allow the other body to act and work its will.

Mrs. GREEN of Oregon. Mr. Chairman, will the gentleman yield?

Mr. GIAIMO. I yield to the gentlewoman from Oregon.

Mrs. GREEN of Oregon. I would like to ask the gentleman in the well this question. It is my understanding that the House has acted on the education authorization and appropriation. The House has not acted on the war on poverty measure, on the OEO program. We have not even authorized the funds for OEO. It is my understanding that the Senate has authorized OEO funds and has expanded and added certain programs to the measure.

My question is this: if we follow the procedure recommended by the gentleman from California, would it not be possible for the Senate to amend the Cohelan resolution and put in an exact amount for the war on poverty and say, "We have authorized this money for the war on poverty. You have refused even to get the bill out of the committee and we as the Senate body are demanding that you accept our legislation without any chance to debate it in the House or to express your will"?

Mr. GIAIMO. The gentlewoman brings up a very good point. What you say is absolutely so. What we are doing here is beginning a dangerous innovation and a dangerous precedent. Right now it is this body trying to pressure the other one. When you do this, I suggest that you are changing the basic structure of how Congress operates and works. And I see no good reason to change it in that regard.

Mr. YATES. Mr. Chairman, will the gentleman yield?

Mr. GIAIMO. I yield to the gentleman from Illinois.

Mr. YATES. What is the passage of legislation by one House, when it comes up to the other body, but a pressure on the other body to pass that legislation? What happens, for example, when the Senate adds a rider to a tax bill and sends it over to the House? Is it anything but pressure on this House to consider that legislation and see whether or not it ought to be passed? This is not a pressurization of the Senate, apart from any other type of pressure.

Mr. GIAIMO. Of course it is pressure on the Senate.

Mr. YATES. Let me finish. On the contrary, it is one more——

Mr. GIAIMO. Of course it is pressure and nothing else. Why on earth are we discussing this today when we have already passed these dollar amounts Mr. COHELAN wants except for the fact that we want to pressure the other body?

Mr. YATES. Of course, the other side sought to be pressured——

The CHAIRMAN. The time of the gentleman from Connecticut has expired.

Mr. BOW. Mr. Chairman, I yield the gentleman an additional minute.

Mr. JONAS. Mr. Chairman, will the gentleman yield?

Mr. GIAIMO. I yield to the gentleman from North Carolina.

Mr. JONAS. Mr. Chairman, the gentleman from Connecticut has made a very fine statement. I associate myself with his remarks. In addition to the very fine points he has made, I think it should be added that we will be engaging in an exercise of futility if we adopt the Cohelan amendment, because it will be out of date when the Senate does act on the regular appropriation bill, because whatever money is spent under this continuing authorization will be charged up to the department against whatever finally is appropriated by both branches of the Congress and signed into law by the President. Is that not true?

Mr. GIAIMO. It is absolutely correct.

Mr. QUIE. Mr. Chairman, will the gentleman yield?

Mr. GIAIMO. I yield to the gentleman from Minnesota.

Mr. QUIE. Mr. Chairman, I just want to make certain we do not get confused with authorization and appropriation. With respect to the comments of the gentlewoman from Oregon about the OEO bill, I would point out we passed an appropriation bill for education, and we would like to see the continuing resolution at that level. The Senate has not appropriated any money for OEO. That is an authorization. So this is not analogous.

Mr. GIAIMO. I thank the gentleman for his contribution.

Mrs. GREEN of Oregon. Mr. Chairman, will the gentleman yield?

Mr. BOW. Mr. Chairman, I yield 5 minutes to the gentlewoman from Oregon.

Mrs. GREEN of Oregon. Mr. Chairman, in spite of the statement by my friend and colleague from Minnesota, the chairman of the committee does advise me the Senate could amend the Cohelan resolution and put in the amount that they decide the OEO should have regardless of the inaction by the House. I just do not believe either body should use this means to try to impose its will on the other body.

And while we wax eloquent about the inaction in the Senate in appropriating funds for the Office of Education, let us "look inward" also and recognize that the House has neither authorized nor appropriated funds for the Office of Economic Opportunity.

I suggest that the Members of this House would not like it if the Senate uses the Cohelan approach and amends the resolution to use the figure they decide would be appropriate for OEO.

Mr. MAHON. Mr. Chairman, will the gentlewoman yield?

Mrs. GREEN of Oregon. I yield to the gentleman from Texas.

Mr. MAHON. Of course the other body will have to act on this continuing resolution. If the House includes one special item, they could include another. They could handle virtually the whole Government in one continuing resolution.

Mrs. GREEN of Oregon. Mr. Chairman, I want to speak to another point that is of growing concern to me as a Member of this body. First of all, may I say that I think we must have a much larger amount of money for education in this country if we want quality and equality of opportunity. But I am concerned about the educational-industrial complex in the United States that is increasing in size and strength. The military budget has $80 billion in it. In the United States today at the Federal and the State and the local levels we are spending about $60 billion on education. It is true that the defense comes only from Federal funds, and the $60 billion on education comes from Federal and State and local funds. However, more and more private corporations have come into existence to take advantage of lucrative

grants and contracts both from OE and OEO. Some of the prime defense contractors are spinning off new companies, new corporations to get OE or OEO contracts. I would invite Members of this House to read an article that is in Hard Times, which is not noted for its conservative outlook, with editors such as Kopkind and Ralph Nader.

In the October 13–20 issue of Hard Times there is an article called "Games That Poor People Play." It is a story of the profitmaking institutions that are looting the war on poverty of the funds that were intended to go to the poor. I will ask unanimous consent to include it at the end of my remarks on this bill, because what is being said about OEO also can be applied to Office of Education contracts. I think this body and the other body both ought to take a look at the industrial-educational complex that is growing up in the United States.

Senator PROXMIRE made a speech which was quoted in this morning's paper:

Senator William Proxmire charged that blue-ribbon committee appointed to make a top-to-bottom review of Pentagon management policies was a "sham," dominated by defense industry representatives with more than $1 billion in business at stake.

In a Senate speech, Proxmire said eight of the panel's 15 members—a majority—had interests in firms doing a substantial business with the government.

May I suggest that OEO and OE management polices need to be reviewed—the mushroom growth of private corporations with OE contracts, the thousands of consultants being hired. How many of the lobby groups represented in this coalition lobby have a substantial business with the Government and/or are backed by the other private groups that have a very substantial business with the Government.

Just this morning, while discussing another matter with GAO, they told me there are now 9,000 consultants on the list for the Office of Education under the "payroll system" of having consultants, and in addition to that there are 1,172 active contracts that the Office of Education has—in many of these are subcontracts—and in countless numbers, consultants are used at $75 or $100 a day.

Then we have a system where if they have purchase orders of less than $2,500 consultants are hired in another way. Under "payroll purchases" we are purchasing consultants.

I would say, I believe we have literally thousands of people who are receiving all or a substantial part of their income from OE and OEO programs. Many of them haven't seen the inside of a classroom for years.

What do the things I have just said have to do with respect to this debate today?

I want less of the money to go to dust-gathering reports, research, studies, documents—and more to go into the classrooms. I want them to go for teachers salaries. I want them to go to reduce the ratio of students to teachers. And I want them to improve the quality of education.

I do not want to see us enact legislation that allows others who are going to make a profit to siphon off the funds. We will never improve the quality of education in this country if we are going to build up an industrial-education complex and be unwilling to examine the consequences.

May I say this, finally: I believe legislation "by lobby" is not the way we should legislate. I have the greatest respect for many of the organizations that are in this coalition on education, and I supported the Joelson amendment because I believe we ought to have more money for schools, but I am concerned about this latest development.

I have a list of all of the groups in this lobby coalition. May I suggest that at least 26 of the 54—there may be 60—have contracts or grants with the Offiice of Education or the Office of Economic Opportunity, or both, and that many of them have contracts or grants of well over $100,000. Some pass the million dollar amount. Of course it is to their interest to lobby for more Federal dollars.

We finance the educational labs. We have 15 of them in the country. One of them on this list is completely funded by the Federal Government. The Center for Urban Education in New York—a fully funded educational laboratory under the Federal cooperative research program—is one of the lobby groups lobbying for the Joelson amendment. So are 11 other federally funded educational laboratories. Of course they want more money.

They have a personal stake in the size of the appropriation. Lots of these private non-profit corporations and the profit-making corporations do.

The CHAIRMAN. The time of the gentlewoman from Oregon has expired.

Mr. BOW. Mr. Chairman, I yield the gentlewoman 5 additional minutes.

Mrs. GREEN of Oregon. I thank the gentleman from Ohio.

Mr. Chairman, in 1967 the very dedicated and able representative of the NEA warned about the dangers of this trend in contracting with private profit-making corporations. He told my subcommittee:

The Commissioner is authorized at several points in this bill to contract with profit-making agencies for carrying out projects ranging from improving the qualifications of persons who are serving or preparing to serve in education programs in the public elementary and secondary schools to hiring public relations firms to recruit persons into the field of education.

Mr. Lumley said:

Madam Chairman, this constant effort on the part of the Office of Education to secure authority for the Commissioner to bypass the public and private non-profit education agencies and deal with profit-makers is, in our opinion, the most dangerous proposal ever to come before the Congress.

I repeat: he warned this is "the most dangerous proposal ever to come before the Congress."

Mr. Lumley continued:

Of even more danger, however, is the potentiality for federal control and direction of the entire education effort of this country, in direct violation of the American tradition of state control of public education. If the permission to contract with profit-making agencies is granted, nothing prohibits the Office of Education to hire persons to accomplish objectives, to conduct slanted "research," and to conduct well financed Madison Avenue type promotion campaigns to achieve purposes which the publication education sector, and the ethical private non-profit institutions would never consider becoming involved in. This seems to us not only a totally unnecessary practice, but indeed a frightening one.

This type of activity, that is contracts with profit-making agencies, was first proposed as an amendment to the Cooperative Research Act (Title IV ESEA) in 1966. We objected at that time. HEW spokesmen claimed that the purpose of providing authority in the Cooperative Research Act to contract with private profit-making agencies to train research personnel was necessary because such training was not available from non-profit sources. The emphasis was on need for skilled workers and researchers in the use of computers. Perhaps there is some validity to that argument, although we believed then, as we do now, that direct contracts between the USOE and profit-making agencies are inherently wrong that the objective of increasing the supply of computer experts could be achieved by *subcontracts* between nonprofit agencies receiving federal grants and the computer training agencies. In addition, we questioned the practicality of training such researchers in a situation isolated from the education community.

We lost that argument but not our concern.

Now, however, in H.R. 6232, the original USOE justification (for training research personnel) has been discarded. Virtually blanket authority is sought for the Commissioner to enter into contracts with profit-making agencies for conducting experimental and pilot projects in continuing education and community services (Sec. 107, page 6); talent search projects (Sec. 403, page 13); attracting qualified persons to the field of education (Sec. 504, page 51); and providing preservice and inservice training for elementary and secondary teachers, including pre-school, adult and vocational teachers, etc. (Sec. 532, page 59). The latter is the most astonishing of all.

We find it incredible that the Administration would propose that the Commissioner be granted such authority! May I make it perfectly clear that we are not criticizing the incumbent. Nor are we opposing the involvement of the profit-making sector of our society in the educational enterprise. We believe that situations can arise where it is economical and efficient for public and non-profit educational agencies (school boards or school districts or universities) to contract with industries such as the computer or electronics industry, to provide specialized training or develop machinery for specific parts of a research or demonstration project. Our strenuous objection is to the proposal that the USOE be authorized a contract *directly* with profit-making agencies, with no involvement of the public and non-profit educational sector, in such a manner as to achieve whatever objectives the USOE may unilaterally determine.

The provision for advisory councils, which are appointed by the Commissioner, in no way lessens the danger—indeed could enhance it. Carried to extremes, a Commissioner could appoint a council which he knows would advise him to concentrate on contracts with profit making agencies and to use the majority or all of the funds available under the pertinent sections to by-pass completely the public and other nonprofit agencies.

USOE spokesmen compare this requested authority to that in the health and defense fields. Neither area is comparable to edu-

cation. National defense is exclusively a federal concern and is not carried on by the states. Health research by industry, such as that which resulted in the discovery of antibiotics, was carried on long before the National Institutes of Health was developed. On the other hand, public education has traditionally been provided by the states and nonprofit institutions. There is no federal education operation—and no reason to develop one. The role of the federal government in education must be confined to that of channelling funds to the public and other nonprofit education agencies and institutions to meet the objectives defined by the Congress as representatives of the people.

Research, demonstration projects, inservice education, and information dissemination about worthwhile developments in education should be carried on, not by the Office of Education, but by schools, state education departments and institutions of higher education with funds provided through the Office of Education for the purposes which the grantees identify as most appropriate. Violation of this principle places a Commissioner in a position where he can contract with any person or group of his choice (and he can undoubtedly find a profit-making agency which can be hired, for a price, to do almost anything he may ask) to develop programs which *he* wants the nation to follow. This is federal control of the most objectionable sort; and we urge the Committee to reject this proposal every time it is made, for the sake of placing authority for American education where it belongs—with the state and local governments and nonprofit institutions.

Mr. Chairman, I agreed with Mr. Lumley then; I agree with him now. Congress needs to review this, to have a full discussion about it. In addition, Mr. Chairman, we have a provision on page 118, paragraph 1913, title 18 of the Criminal Code that says:

No part of the money appropriated by any enactment of Congress shall in the absence of express authorization by Congress be used directly or indirectly to pay for any personal service, advertisement, telegram, telephone, letter, printed or written matter, or other device, intended or designed to influence in any manner a Member of Congress, to favor or oppose, by vote or otherwise, any legislation or appropriation by Congress, whether before or after the introduction of any bill or resolution proposing such legislation or appropriation; but this shall not prevent officers or employees of the United States or of its departments or agencies from communicating to Members of Congress on the requests of any Member or to Congress, through the proper official channels, requests for legislation or appropriations which they deem necessary for the efficient conduct of the public business.

Whoever, being an officer or employee of the United States or of any department or agency thereof, violates or attempts to violate this section, shall be fined not more than $500 or imprisoned not more than one year, or both; and after notice and hearing by the superior officer vested with the power of removing him, shall be removed from office or employment. (June 25, 1948, c. 645, 62 Stat. 792.)

Mr. BOW. Mr. Chairman, will the gentlewoman yield?

Mrs. GREEN of Oregon. I yield to the gentleman from Ohio.

Mr. BOW. May I suggest that is in title 18 of the Criminal Code.

Mrs. GREEN of Oregon. The gentleman is correct. I am not making a statement that—dollar for dollar—the actual funds that were given in the contracts and grants to any one of these 54 or 60 lobbying groups, those specific dollars, went for lobbying activities, but I am suggesting that there may be a conflict of interest when they have money from the Federal Government for particular purposes and they spend time and money lobbying for a bill that is of direct interest to their own financial well-being. Which funds were used for what? How much did the federally financed educational labs contribute to the lobby effort?

Some of the lobby groups represented do have as their primary concern—the quality of education for boys and girls. In other instances, corporations with OE and OEO contracts are no different than Defense contractors. They are interested in the size of the contract and the profit to be made. As I see it, there is an inherent danger if we allow decisions to be made in this House—on the educational priorities of this Nation—by the pressures of lobby groups that have a personal financial stake in the outcome.

If we do this, we will not have a carefully thought out national policy that will meet the long-range needs of boys and girls.

So far as I am concerned, I believe we ought to make our judgment on what is good legislation and how we are going to work with the other body in achieving that objective.

I join the distinguished chairman of the committee, the gentleman from Texas (Mr. MAHON), who has expressed concern about the lateness with which we authorize and appropriate funds. I would say to representatives of true educational lobby groups in this Chamber today, I am concerned about it.

For a long time I have wanted advance funding, because if we can let the school boards and the colleges know a year in advance how many dollars they are going to get they will spend those dollars more wisely, and the young people of this country will be the beneficiary and the country will be the beneficiary, because school people will not waste dollars by getting them late in the year and saying, "We have to spend them by such and such a time." But 2 days notice for a 30-day appropriation would not help one bit.

Mr. FLOOD. Mr. Chairman, will the gentlewoman yield?

Mrs. GREEN of Oregon. I am delighted to yield to the gentleman from Pennsylvania.

Mr. FLOOD. I want to say this, in connection with what the gentlewoman says. I propose next year—it can be done legally and by parliamentary procedure—to bring in as early as possible a separate bill on education, before the regular Labor-HEW bill, a separate bill to avoid all these problems.

Mrs. GREEN of Oregon. I will say to the gentleman that I truly hope this will be done and I commend him for his longtime leadership in trying to make possible good educational opportunities for all of our young people. If I may suggest it, those educational groups who are sincerely interested about the quality of education in this country and the equality of educational opportunity could better spend their time in working for advanced funding for all educational programs in all of the years ahead rather than to spend thousands of dollars bringing people to Washington, paying for CONGRESSIONAL RECORD reprints, and so forth, for a bill that will last for a possible 30 or 60 days. When I see all of the crocodile tears that are being shed today about the sad plight of "the boys and girls in my district" and "the lack of funds for the schools" I wonder if they really believe that a 30-day resolution is going to affect the quality of education by one iota. A stranger to the educational scene might almost be persuaded that the level of funding for these next 30 days would determine the quality of education in each district for the next 30 years. What a mockery of the legislative process. I approve of the increase in appropriations for most of the education bills made by the House and because I believe the Senate will stay true to form and approve even higher amounts.

And so, I feel confident that for this entire fiscal year the level of funding will be much higher than looked possible 6 months ago. This is important but the proponents of this amendment cannot really believe that the continuing 30-day resolution is going to provide any guarantee to school boards or colleges of the level of funding that they can expect for the year. Let us be realistic. Budgets are made, teachers are hired, programs are developed, and other decisions are made by school boards and colleges no later than late summer. Does anybody seriously suggest that the level of funding in a 30-day resolution will persuade school boards or college presidents to hire new teachers for the month of November? Or buy new equipment to be used for the next 30 days? Or to make student financial assistance loans that are to run over a 15-year period? How ridiculous.

However, Mr. Chairman, my deep concern—and this is something which goes beyond today's discussion—my concern, my hope is that the authorizing committees and the appropriating committees really will take a good look at what we are doing in building up a tremendous lobby across the country that has little or nothing to do with the quality of education in any classroom.

As with the lobby for the Pentagon, thousands and thousands of peoples' jobs are at stake, corporation profits are at stake—and hardware is to be manufactured and sold. With hundreds of millions available through OE and OEO—anybody who has a bright idea or even a half of a bright idea can come down here and get funded. We are building up a lobby in this country that will make it impossible for us to exercise our best judgment as to what ought to be done in terms of quality education. If we allow special interest groups to prevail, we may someday wake up to find a dislocated and disjointed policy that represents neither the considered judgment of educational leaders—nor the needs of the country. Dr. John Fisher, President of Teachers' College at Columbia University, put it well when he once said:

Education for modern world can't be simply a matter of special emphasis at a special time. It must be undertaken and viewed as a comprehensive complex, broad undertaking.

So, today, although I support the level of funding as embodied in the Joelson amendment—or even higher on vocational education—and I think advance funding one of the most important things we can do legislatively, I am supporting the distinguished Committee on Appropriations in the action they have taken for an orderly procedure so that there can be a discussion in the conference committee—free of lobby groups, I hope—of those programs of highest priority and those of least actual benefit to boys and girls not for the next 30 days, but for the next 12 or 24 months or the next 5 years.

Mr. Chariman, I will ask unanimous consent to include the article to which I referred in the October 13 issue of Hard Times. It is called Games Poor People Play:

GAMES POOR PEOPLE PLAY

(By Frances Lang)

Probably the most enduring monument to the War on Poverty is the creation of a poverty industry. There are more than 100 companies in Washington, D.C., alone which specialize in consulting, studying and evaluating the poor and the programs which serve them. They run in size from five- or six-man outfits to large organizations such as the American Institutes for Research or Stanford Research Institute. While these firms are often ridiculed in the newspapers and viewed with disdain by government bureaucrats, the companies flourish.

In many instances the companies are imitative of New Deal institutions. High-minded reformers joined the Kennedy or Johnson administrations determined to wipe out poverty, only to end running companies whose profits are dependent on the existence of the poor. Sometimes the poverty firms are merely holding operations for out-of-office politicians. In a more fundamental sense, however, the emergence of the industry reflects efforts made over the past decade to construct a sort of poverty technology, a way or ways for manipulating human behavior. In this instance the governing idea has always been to boost the ghetto poor up into jobs and hence into the "middle class." So far these efforts haven't come to much. The lines of poverty in the United States have deepened and hardened, if anything. But still the search for the technology, financed by the government, continues.

While the poverty companies are nominally expected to maintain a discreet distance from the federal agencies with which they do business, the personnel are drawn together by professional bonds, and in the end, interests of the companies and the government seem nearly identical. The transition from poverty program to poverty company seems natural. When Bertrand Harding left his post as acting OEO director earlier this year, he simply moved down the street to Fry Consultants, a poverty combine. As deputy director of VISTA, Leo Kramer was charged with recruiting and selecting VISTA workers. Now, as head of Leo Kramer, Inc., he receives VISTA funds to run his own VISTA program for Mexican-Americans. Earlier this year, Leveo Sanchez resigned his job as OEO director for the mid-Atlantic region and now heads a consulting company with OEO contracts in the mid-Atlantic region. As manpower administrator in the Labor Department, Stanley Ruttenberg gave Phoenix, Arizona $3.5 million in job training funds two years ago. The city fathers of Phoenix recently hired Stanley Ruttenberg Associates, headed by the former administrator, to evaluate the project. Ruttenberg also acts in an advisory capacity to the Watts Labor Action Committee. As manpower administrator, he awarded the Watts group $2 million for a youth program earlier in January.

Last spring there was a flurry of protest within OEO when RAND, the Air Force think tank, sought a remedial education contract from the OEO's research office. OEO employees were bitter over what they believed to be favored treatment given RAND. OEO's research office was established in 1964, and the first director, Joseph Kershaw, came from RAND. His successor, Robert Levine, also was a RAND man. While he ran the research office, Levine handed out two contracts worth $600,000 to RAND. They were "sole source" contracts which meant other companies could not bid for the work. One OEO official who didn't want RAND to get the contracts remembers protesting to Levine. Levine pointed out RAND's superior technical prowess then arranged a meeting between the disgruntled official and RAND experts. Both the contracts vent through under Levine, but the remedial education project was squashed.

Black poverty companies are not numerous, and black capitalists bitterly assail discriminatory policies at OEO which prevent them from breaking into the market. Even so there are exceptions to the rule. Mark Battle left the National Urban League to become head of the Bureau of Work Training Programs in the Labor Department under LBJ. There he shoveled $9 million in job projects back to the Urban League. Battle quit Labor along with the other Democrats this year, and then surfaced as head of Mark Battle Associates, a consulting company which advises the Urban League on economic development.

Sometimes the studies undertaken by poverty companies are baffling. For instance, the Transcentury Foundation, a branch of Transcentury Corp., (begun by ex-Peace Corps deputy director Warren Wiggins) is in the midst of an evaluation of different sorts of youth programs for the Justice Department. Eventually Transcentury plans to create a "typology" of such programs. The foundation believes a typology will be helpful to future groups of youths who want to start their own uplift projects. Transcentury divides youth programs according to a number of categories: evolutionary vs. revolutionary; rational vs. irrational; incremental vs. simultaneous, and pro- or anti-confrontation.

Last summer Transcentury made another survey of youth programs for OEO. The survey was called "Not Our Thing." To do the job, Transcentury hired black people to interview the ghetto residents, while the company personnel asked for opinions from the establishment. In general the black youngsters who were queried said they thought the youth programs were con jobs, aimed at averting riots and they seemed more militant than ever before. Transcentury never sought to come to grips with the basic problems which the study revealed. Rather, the company suggested programmatic changes which had the effect of helping the government oppress more effectively.

On some occasions it almost seems as if poverty programs have been set up so that the poverty companies can loot them. Take the case of the Peoples Involvement Corporation (PIC), a Washington, D.C., development corporation, financed with OEO money. PIC is one of fourteen development corporations sponsored by OEO. The original idea was to encourage ghetto residents to form a company in which they would hold stock. The company could then enter into various business operations which would employ the ghetto residents—such things as running restaurants, cleaning establishments and construction companies. PIC someday plans to operate a printing press. At the moment, however, PIC has a small staff and operates one neighborhood center where people come and then are routinely referred to other governmental agencies. Although PIC is not of any real value to poor people living in Washington, it has been immensely profitable to some of the poverty companies. When it was funded by the government, OEO also paid OSTI (The Organization for Social and Technical Innovation) of Cambridge, Mass., to advise Peoples Involvement Corp., along with four other new development corporations. OSTI was given a contract to help the new enterprises devise future plans, set up elections and generally organize themselves into effective units. But OSTI's consultants rarely showed up at PIC and they inevitably had to fly out of town to make their next appointment just as the discussion was getting down to brass tacks. Finally, OSTI sent a long tape recording of its ideas to OEO. The Peoples Involvement Corporation never received the tape. If PIC didn't get much help from OSTI, it got no help at all from Heliodyne, a firm which had a $125,000 OEO contract to assist neighborhood groups find out about the people coming to the service centers, that is, find out who the people were, where they came from, and what they wanted.

Heliodyne didn't show up at PIC until one month before its contract expired. It then suggested using special application forms, and asking people questions such as where do you come from, do you want medical help, and so on. In the end Heliodyne asked PIC to help write conclusions to the report and they were sent along to OEO. After OSTI and Heliodyne finished with PIC, Harbridge House, another Cambridge firm, entered the picture. Harbridge House specializes in Navy procurement problems. It gained fame during the Korean war for figuring out ways to help the Navy purchase more efficiently. Having set up a system for the Navy, Harbridge House then turned around and hired out to the shipping companies which were selling to the Navy. Recently Harbridge House decided to diversify and plunged into poverty. It is supposed to be helping PIC set up a printing plant. So far, however, nobody has called at PIC's office.

The consultants usually shuttle back and forth between business and government with some regularity, playing off contacts in one place against those in another. One grows giddy trying to follow the deals. For instance, Robert Freeman worked at the State Department in the 1950s, then quit and began insurance companies in Africa. He soon tired of this, and sold the companies to the Nigerian and Ghanaian governments. Back in the US, Freeman joined with Robert Cole, a former AID official, in setting up a consulting business. Utilizing Freeman's knowledge of the insurance business and Cole's AID contacts, the company prospered on an AID contract which called for them to make insurance surveys in Africa with an eye to persuading Americans to invest in the business there. At that point, Freeman and Cole branched into the poverty business. They were employed by CBS, the Ford Foundation and Mobil Oil to scout likely looking blacks who could be hired as executives. Last years Freeman quit the company, and Cole picked up Leveo Sanchez, OEO's mid-Atlantic regional director, as a replacement. Sanchez, who had also worked in AID, brought some Latin American business, along with poverty contracts. But Cole and Sanchez didn't get on, and not long ago, the two split up. Cole now runs his own consulting company, and Sanchez directs two poverty firms.

J. Sterling Livingston, a Harvard business professor, is among the sharpest and most successful operators in the poverty business. Livingston's speciality is purchasing ramshackle companies and building them up. Since the Second World War the professor has owned half a dozen such firms and his activities range all the way from helping the Navy buy ship parts to the manufacture of industrial diamonds. Lately, Livingston has been intrigued with the possibilities in education and poverty, and he tacked to-

gether Sterling Institute, a mini-conglomerate with offices in Boston, New York, and Washington. The institute consists of various centers; they operate pretty much on their own, making films, advising banks how to train tellers, etc. Some of the centers were begun from scratch, while others are rebuilt shells of companies. One of the shells Livingston picked up was that of a moribund firm called Human Resources Development Co., begun by David D. McClelland, the Harvard psychologist and motivation expert. This was a clever move, for Livingston was in effect buying McClelland, his graduate students, and proteges in the university community. The company was renamed the Behavioral Science Center. Its work ranges from developing motivational leadership courses for fraternity boys to helping the Navy chaplain "make the transition from his role as pastor to a manager and supervisor." The Center developed the motivational comic book which the Labor Department distributed among poor blacks. The leading character in the comics, a chocolate sport, is invariably pictured standing in the street, surrounded by shattered glass and overflowing garbage cans and yelling at his freaky pals nodding in the doorways. "Power is green, Baby," he implores. On the back side of the comic is an employment application form made in the shape of a dollar bill.

Last year Sterling Institute won a $200,000 contract to train poverty workers in the Delmarva Peninsula, a stretch of backward country in Delaware, Maryland and Virginia. Livingston wanted to do research in the area, but OEO officials said that would not look proper, and if he wanted to do research, it must be done under the "guise" of training. Since Sterling didn't know anything about Delmarva, and was scarcely in a position to train people to do anything, the company decided to give the prospective poverty workers a dose of McClelland's motivational stuff. First, Sterling showed the poverty workers how to sensitize themselves. They tossed rings onto stakes from different distances in an effort to discover whether or not they set unrealistic goals for themselves. Then, they played the popular disarmament game where the workers choose up sides and sit in different rooms and simulate attacking one another. Eventually the teams "disarm" as they come to understand that this is the only way they can win. The game is meant to recreate the bargaining situation that exists between poor people and the local government, where each side has something the other wants. Or, as a Sterling employee puts it, "The power structure may be willing to give something to avoid having the city burned."

After a go at the games the poverty workers learned what might be made to happen in their territory by feeding information into a computer simulation called "Charlie." The training program is just now coming to a conclusion, and while it is unclear what, if anything, will happen to the poor in Delmarva, Sterling is doing well indeed, having already secured contracts to repeat the training in North Carolina, Kentucky and West Virginia. Sterling also has a contract in Pennsylvania where it will move into communities giving people psychological tests, and in this way, having spotted the leaders, instruct them how to motivate the masses to follow them out of poverty.

"Sensitivity training," as this sort of instruction is often called, has been adopted by other companies as well. The Human Development Institute, a subsidiary of Bell and Howell, devised a training kit for the National Alliance of Businessmen, and is now also trying to peddle it to poverty groups. The kit contains material to help managers deal with poor black people in a more understanding way. For example, there are black and white masks. In one skit a black masked man plays he is coming to work late. He is confronted by his supervisor who is wearing a white mask. In this way, white employees get to feel what it is like to be a black man. In another exercise foremen pair off. One foreman closes his eyes and he is led around by the other foreman for 10 minutes, enough time for him to see how entirely dependent a new employee must feel. Jerome Berlin, who heads the Institute, explained why the kit was made this way: "All of us were hurting with the racial problem. We felt we needed to get at it in some way, that it was tearing the fabric of our culture. . . . I don't think social consciousness has to conflict with making a profit—The two parallel each other. . . . In fact, I believe any real contribution to our social environment has a right to profit." Bell and Howell's chairman, Peter G. Peterson, goes further: "I not only see nothing wrong with industry's profiting from social ills, but I think it's the best way to cure them. It puts a strong incentive, the profit motive, behind the cure."

Not everyone is so enthusiastic about McClelland's motivational methods, and those who shy away from this blunt method may prefer the "operant psychology" pioneered by B. F. Skinner and his followers. Motivation Training Specialists, of Baltimore, is attempting to condition slum youngsters in this manner with OEO funds. The idea is that the consequences of a person's actions determine whether or not these actions are repeated. The poor behave in certain "nonadaptive" ways because they have learned to expect certain rewards for such behavior. So to upgrade the lives of the poor, it is important to teach them new behavior patterns. Motivation Training Specialists will soon begin a 21-day training scheme for high school dropouts. The teenagers will be isolated in a "Utopian community" for three weeks. There they will receive points for suitable behavior, such as completing a lesson, and on collecting enough points, they qualify for a reward: a movie, cigarettes or candy. Last winter Motivation Training Specialists ran a residential training session for 24 members of the West Central West Virginia Community Action Agency. The members, many of them poor, began by playing games as they arrived at the campsite. One group was required to negotiate to obtain mattresses to put on the beds. Another group was separated and the members were asked to negotiate a reunion. And a third group was dumped onto the roadway before reaching the campsite. They had to negotiate entrance to the camp. Jerome Breslaw, of the Motivation Training staff later explained the purpose of the games: "In order to emerge from a state of physical deprivation—analogous to that experienced by the poor—the training team members had to organize themselves into units which could effect changes in their environment through negotiations with each other and with management." While it may have seemed to the untrained observer that poor people were being asked to simulate being poor people, Breslaw maintained that was not the case. "No simulation situations were provided," he said. "In fact, simulation and role playing were excluded from the training design . . . that which arose, arose naturally."

Mr. BOW. Mr. Chairman, I yield 2 minutes to the gentleman from Iowa (Mr. SCHERLE).

Mr. SCHERLE. Mr. Chairman, I thank the gentleman from Ohio (Mr. Bow) for yielding this time to me.

The gentlewoman from Oregon (Mrs. GREEN) raised a point that interests all Members of Congress. This question concerns the appropriate hearings before the Committee on Poverty. If my distinguished chairman of the Committee on Education and Labor, the gentleman from Kentucky (Mr. PERKINS) would answer a question, I would like to pose one at this time.

Mr. PERKINS. Go ahead.

Mr. SCHERLE. My question concerns the appropriate hearings before the Committee on Education and Labor. Since this continuing resolution will be passed today our Committee on Poverty will have 30 days before we have to mark up this bill. Would it be possible to have hearings and bring in the chief executives of our States, a State attorney general, and State auditors who have written and requested that they be given an opportunity to be heard in the full committee?

Mr. PERKINS. I hope that the gentleman will give me 1 minute to respond. It is the intention of the chairman of the committee and the membership, to proceed diligently with the markup. Because of the mine safety bill and the interest of the committee members in the Cohelan amendment, we will not be able to reconvene the committee until next Wednesday, which is a week from tomorrow, for the purpose of completing the markup of the Economic Opportunity Act extension.

Mr. SCHERLE. Does this mean that the chairman refuses to have hearings——

Mr. PERKINS. We have held the most comprehensive hearings on the Economic Opportunity Act that have ever been held.

Mr. SCHERLE. Mr. Chairman, I decline to yield any further.

Mr. Chairman, there have been hearings but they were primarily on the Job Corps. All testimony has been presented by administrative officials of the OEO who have talked about the OEO period. Naturally all testimony was favorable. There was not one single witness invited to testify against OEO or anyone outside the "establishment."

Mr. PERKINS. Mr. Chairman, will the gentleman let me answer his question?

Mr. SCHERLE. We have only heard one side of the coin and I think we should hear both sides.

The CHAIRMAN. The time of the gentleman from Iowa has expired.

Mr. BOW. Mr. Chairman, I yield to the gentleman 1 additional minute.

Mr. SCHERLE. Mr. Chairman, my question has been answered. The chairman has refused to hold hearings. The chairman has decided that next week the bill will be marked up without any additional hearings. It is reprehensible for this committee to mark up a bill that will cost the taxpayers of this country over $2 billion a year and not give the chief executives, the State attorneys general, and the poor people who want to discuss this program and make recommendations and suggestions an opportunity to be heard. Restricting the right of duly authorized people to testify before a committee on legislation that they will administer and enforce is a denial of basic American principles.

Mr. Chairman, I yield back the balance of my time.

The CHAIRMAN. The time of the gentleman from Iowa has again expired.

Mr. PERKINS. Mr. Chairman, will the gentleman from Ohio yield to me 1 minute?

Mr. PRICE of Illinois. Mr. Chairman, I strongly support the amendment adding $649,094,000 to the figure approved by the House Appropriations Committee for Office of Education programs. If the amendment is adopted to the pending continuing resolution and the Senate concurs in our action, the Office of Education and more importantly our schools at all levels will benefit immediately by the over $1 billion we added to the Department of Health, Education, and Welfare appropriations bill on July 31.

Congressional intent is clear in this case. We evidenced our concern then about the Nixon administration's education budget and adopted the Joelson amendment adding the $1.042 billion to the various education programs facing severe crippling by the administration's recommendations. As a cosponsor of the resolution providing for the immediate release of the additional money we voted in approving the Joelson amendment, I earnestly recommend approval of the pending amendment.

The impact of our action today can be measured in part by the following comparative breakdown of funds the State of Illinois would receive for education and library programs during the current fiscal year under the Nixon budget as contained in the committee recommendation and under the earlier House-passed appropriations bill as contained in the pending amendment. As you will note, the State of Illinois would receive an additional $14 million for elementary and secondary education activities if we adopt this amendment; otherwise, the State would receive $54 million for the current fiscal year which is $7 million below what was available last fiscal year and $14 million below fiscal year 1968.

In terms of all education programs, the State of Illinois would receive $36 million less under the Nixon administration; under the House-passed bill, provided we adopt the pending amendment, the State of Illinois would receive $131,126,164 for its programs.

OBLIGATIONS IN THE STATE OF ILLINOIS

Program	Actual, 1968	Estimate, 1969	Estimate, 1970	Nixon estimate, 1970	House-passed appropriation bill
OFFICE OF EDUCATION					
Elementary and secondary education:					
Assistance for educationally deprived children (ESEA I):					
Basic grants	$47,565,775	$44,407,826	$46,788,843	$46,788,843	$54,513,049
State administrative expenses	474,998	444,130	467,888	467,888	0
Grants to States for school library materials (ESEA II)	5,337,276	2,681,475	2,252,460	0	2,672,463
Supplementary educational centers and services (ESEA III)	9,382,000	8,223,590	8,648,036	5,650,541	8,251,199
Strengthening State departments of education (ESEA V):					
Grants to States	1,013,556	1,056,099	1,130,757	1,130,757	1,130,757
Grants for special projects				0	0
Acquisition of equipment and minor remodeling (NDEA III):					
Grants to States	3,056,642	3,085,357		0	3,157,687
Loans to nonprofit private schools		181,753		0	0
State administration	102,071	99,990		0	100,742
Guidance, counseling, and testing (NDEA V)	1,283,562	894,406	622,243	0	901,171
Subtotal, elementary and secondary education	68,215,880	61,074,626	59,910,227	54,038,029	68,727,068
School assistance in federally affected areas:					
Maintenance and operations (Public Law 81-874)	12,220,000	12,724,000	7,217,000	4,280,000	14,805,000
Construction (Public Law 81-815)	97,094	934,000		0	0
Subtotal, SAFA	12,317,094	13,658,000	7,217,000	4,280,000	14,805,000
Education professions development:					
Preschool elementary, and secondary:					
Grants to States (EPDA B-2)		619,473	886,082	886,082	886,082
Training programs (EPDA, pts. C and D)	3,468,409			0	0
Subtotal, education professions development	3,468,409	619,473	886,082	886,082	886,082
Teacher Corps	1,109,679	1,067,674		0	0
Higher education:					
Program assistance:					
Strengthening developing institutions (HEA III)	1,068,000			0	0
Colleges of agriculture and the mechanic arts (Bankhead-Jones)	389,618	385,726	389,721	389,721	389,721
Undergraduate instructional equipment and other resources (HEA VI-A)	641,295	627,907		0	0
Construction:					
Public community colleges and technical institutes (HEFA I, sec. 103)	2,776,977	3,299,943	1,706,263	1,706,263	1,706,263
Other undergraduate facilities (HEFA I, sec. 104)	10,439,144	6,640,145	4,430,960	0	1,688,339
Graduate facilities (HEFA II)	1,500,000			0	0
State administration and planning (HEFA I, sec. 105)	244,312	215,020	215,020	215,020	215,020
Student aid:					
Educational opportunity grants (HEA IV-A)	6,429,725	770,306	3,707,326	3,707,326	2,730,279
Direct loans (NDEA II)	9,192,661	9,603,647	7,628,040	7,628,040	10,931,945
Insured loans:					
Advances for reserve funds	92,355	642,626		0	0
Interest payments	(1)			0	0
Work-study programs (HEA IV-C)	5,129,105	6,321,681	6,622,714	6,624,079	6,624,079
Special programs for disadvantaged students: Talent search	255,380			0	0
Personnel development:

I think the answer is evident as to what is the proper course of action We must adopt the pending amendment; otherwise, we are deluding ourselves and temporizing with a vitally important sector of our national well-being. This amendment is not inflationary because we will receive untold benefits in terms of national output in years to come. We are not funding a short-lived proposition; rather we are underwriting vitally essential education programs.

Mr. Chairman, I strongly favor the approval of the amendment.

Mr. DANIELS of New Jersey. Mr. Chairman, I rise in support of the amendment offered by my distinguished colleague the gentleman from California (Mr. COHELAN). I do so in the same spirit and with the same urgency with which I supported the Joelson amendment, which I was also pleased to cosponsor.

The education programs which we have passed and developed are some of the most crucial and fortunately successful programs we have undertaken. They have immensely increased the gross education product of this Nation.

In the first year of operation, title I of ESEA provided $987 million in benefits for 8.3 million children. The Higher Education Facilities Act, which went into operation in 1963 has helped more than 1,300 colleges and universities construct and renovate classrooms, libraries, laboratories, and administrative buildings.

By the end of this past year, a quarter of a million undergradute students were working part time on Government-connected programs to help meet their college expenses. Since 1958, NDEA and the Higher Education Act of 1965 have provided more than $1¼ billion worth of loans to aid more than 2 million college students. Since the fall of 1963, more than 200,000 student borrowers have applied for partial cancellation of their loans under a provision allowing debt-forgiveness for those who became teachers.

There are other impressive statistics: For every 100 pupils in the fifth grade in January 1960, 72 graduated from high school in 1967. This 72-percent graduation rate compares with 62 percent in 1967; 51 percent in 1950; 46 percent in 1940. Thus, within a single generation—1940–67—the proportion of fifth-grade pupils who continue their education through high school has risen by more than one-half. Carrying the same analysis on to college, we know that of every 100 pupils in fifth grade in January of 1960, 40 entered college in fall of 1967, and 20 are likely to receive their college degrees in 1971. The 40 entering freshmen contrast favorably, if that word is strong enough, with only 16 just prior to World War II and the 20 probable college graduates contrast favorably with the number of seven who graduated during the early 1940's.

What these figures tell us is that the average American boy in the fifth grade 10 years ago had nearly twice the chance his father had to graduate from high school—and 2½ times the chance to enter college, with three times the chance to earn a college degree.

Some of my colleagues today favor "holding back a little." They argue that we have spent so much money on education over the past 15 years that we can afford to "relax" a little and coast on the record. If not specious, this argument is certainly dangerous. If anything was proven by the Sputnik scare, and the spending that followed it, it was the danger of letting educational programs slip behind current discoveries and innovations in the sciences and the arts.

We have come a long way and we have dramatically increased our mutual investment in our common tomorrow. If we have to "hold back a little" now, we will be risking great harm. We will be starting a movement that will keep rolling, despite our later efforts. We shall create a snowball effect that will do great and lasting harm to America's single most vital resource—the stock of educated and productive people.

Many of my colleagues are often too anxious to vote for defense spending at the expense of education requirements. I would remind them that, without an educated people, no country is capable of defending itself. A nation whose children grow up incapable of learning to use—as well as not use—nuclear weapons, intercontinental ballistic missiles or orbiting intelligence satellites, is not capable of defending itself. There can be no relaxation in providing for education—not even for a month—if we are to maximize the progress and defense of this country. And it is that task which we are supposed to be about.

In my home State of New Jersey, the difference between the 1969 level of spending and the amount provided in H.R. 13111 is $9,286,472. For the month of November, I am told, if we fail to continue appropriations on the basis of H.R. 13111, the loss to New Jersey will be $774,000.

This House has made certain promises upon which the States and local educational agencies relied and acted. Our failure to act in accord with those promises is a breach of faith not only with the States, but more important, with the children who depend on an education and our support.

Mr. HICKS. Mr. Chairman, it appears that the struggle to secure adequate funding for education this fiscal year is far from over. I take this opportunity to acknowledge the support being voiced from my district for the Cohelan amendment to House Joint Resolution 966. Both by telegram and letter educational leaders in Washington State are expressing to me how urgently necessary this measure is. Programs funded through House passage of H.R. 13111 earlier this year are considered vital to continued educational development in my State and district. Furthermore, grave concern is expressed over the great loss of education funds should House Joint Resolution 966 pass unamended.

It is my understanding that the committee's resolution falls markedly short of the funding provided in the House-passed bill and that critical programs may be left underfunded. Three areas that would be particularly affected in

my State are assistance to federally impacted areas, grants to States for library construction and supplies, and vocational education. It appears that only through passage of the Cohelan amendment will these and other vital educational programs be rescued from severe malnutrition that conceivably could result in possible permanent crippling of one or more of them.

Passage of the Cohelan amendment will have tremendous immediate impact on education in my State. It will mean that the House-passed funds will be immediately available to the Office of Education. This means an increase of approximately $2.5 million over the committee's funding level for Washington State which is a whopping $19 million above the level requested by President Nixon. The table below extracted from figures compiled by the Emergency Committee for Full Funding of Educational Programs which were published in the CONGRESSIONAL RECORD on October 21 by Senator HART, is an example of the significant impact of the Cohelan amendment on my State of Washington. Only those programs in which there is a significant difference in the funding level proposed are listed—the figures for the 1969 estimate are approximately equal to the committee resolution:

OBLIGATIONS IN THE STATE OF WASHINGTON

	Estimate, 1969	Nixon budget, 1970	House-passed appropriations bill
1. Elementary and secondary education	$16,923,454	$14,229,543	$18,961,408
2. School assistance in federally affected areas	15,446,500	5,277,000	15,522,000
3. Direct student loans (NDEA II)	4,056,316	3,221,874	4,617,352
4. Vocational education	3,610,797	4,236,278	6,286,899
5. Libraries and community services	1,468,317	897,558	1,329,694

Mr. ADDABBO. Mr. Chairman, I rise in support of the Cohelan amendment which I cosponsored. The point has been made many times that education is a vital and continuing need which must be fulfilled if a society is to remain at the forefront with its achievements in science, art, industry and other fields.

The House of Representatives has realized that educational needs must be met today. The children in grade school now will not benefit from an educational appropriation to library resources or to guidance and counseling made 5 years from now.

With the passage of H.R. 13111 in July of this year, the House made clear its intention that education should share more equally with other departments in the funding of its programs. The House bill added over $1 billion to the Nixon budget request for 1970 in the field of education.

Until the Senate takes up the Labor-HEW appropriations bill for fiscal 1970, funds have to be released for the continuing programs administered by local educational agencies, State departments of education, institutions of higher education, and special vocational, adult, and other educational organizations. These programs are helping to meet some of the critical needs facing education today. At this time, however, many of these programs are operating with the funds provided by the administration's 1970 budget or at the 1969 appropriations level, whichever is lower.

Administrators are finding that some very useful and needed programs have to operate on a drastically reduced budget. This problem exists for such vitally important programs as aid for educationally deprived children, special assistance to federally affected areas, the Teachers Corps, funds for higher education facilities and several student aid programs, as well as funds for libraries and community services, education for the handicapped, and vocational education programs.

Mr. Chairman, today we hope to pass a continuing resolution amended with the increased funds for programs and projects urgently required by the academic community.

Mr. FRASER. Mr. Chairman, I rise to support the Cohelan amendment to House Joint Resolution 966.

Last summer we recognized the need for increased education funding by adding a billion dollars for education to the HEW appropriations bill. But 3 months have gone by and none of that extra billion has reached our schools, colleges, and libraries.

Because the HEW appropriation for fiscal 1970 is still pending, schools are in the awkward position of not knowing how much Federal support they will receive for programs already in operation. Under the continuing resolution now in effect, funding for some programs has been temporarily suspended while funding for other programs has been reduced considerably below last year's level. In my district, the Minneapolis Board of Education is now receiving only $146 in Federal aid for each eligible title I child, as compared to last year's level of $162 per child. The board of education hopes to receive additional title I aid but the board is not sure if and when this additional aid will be available.

Unless the Minneapolis Board of Education receives its share of the extra billion very soon, these extra funds would not be of much use during the current school year. New programs have been designed and are waiting to be implemented once the increased allocations are available. Prompt approval by Congress and by the President of an amended continuing resolution means that new funds could be allocated to local school systems during the first quarter of 1970. But if we postpone allocation of additional funds until after the fiscal 1970 HEW bill has been approved, the school year will have passed us by.

Mr. VANIK. Mr. Chairman, as one of the signers of the House joint resolution to fund the programs of the Office of Education at levels passed by the House this last July 31, I rise in strong support of the amendment to House Joint Resolution 966, calling for continuing funding of Office of Education programs at $2,810,858,000—the appropriation level approved by the House this summer.

The continuing resolution presently before the House, would continue Office of Education funds at their 1969 levels, nearly $650 million below the amount approved by the House earlier this year.

This extra amount of money is desperately needed by America's school systems and college students. Yet it is nearly the beginning of November—the third month of the 9-month school year. America's schools and colleges must start to utilize these extra funds as soon as possible if they are to use them to best advantage. The need for increased, definite allocations is particularly acute on the college level, as schools across the country begin to make decisions on second semester or second quarter student assistance.

Earlier this fall, I polled all the colleges and universities in my home State of Ohio and found that most of them had received only half the student aid assistance they requested and needed. Many of the college administrators noted that students, even seniors, had been forced to drop out of school because of lack of financing.

At too many schools, all financial aid money had been exhausted to meet first semester needs and none was available for the coming semester. Without the increased allocations provided by the amendment to this continuing resolution, thousands and thousands of students will soon be notified that there is no aid available to them. Thousands will be forced to drop out.

There is not a school district in Ohio that is not directly and dramatically affected by this legislation. Our Nation has no greater priority than an investment of this dimension in the young of our country.

I strongly support the amendment and urge its passage.

Mr. WYMAN. Mr. Chairman, it is important that today's action on the so-called Cohelan amendment be understood for what it is—a square rejection of the concept of the continuing resolution. In this case the House passed the Joelson amendment some time ago, increasing the funds appropriated for education by nearly a billion dollars above the amount recommended by the House Appropriations Committee as well as both the Johnson and Nixon administrations. This bill went over to the Senate where it now languishes.

In the meantime the Department of Health, Education, and Welfare must have funds with which to operate, as must other departments and agencies of the Federal Government that have not yet had their appropriations enacted. The idea of a continuing resolution is to continue these Departments and Agencies at the spending level of the 1969 fiscal year or that recommended by the Bureau of the Budget, whichever is lower.

For the House to send a continuing resolution to the Senate with spending for a particular Department—in this in-

stance HEW—earmarked at the level the House passed is patently objectionable to the other body. They have not yet acted. They may or may not fund HEW at this level. It is for them, in their discretion, to decide.

There is no question but that should the Senate raise HEW appropriations to this level there will be no problem, but this may not be the case. In the meantime we must wait and see, and spending ought not to be authorized as an interim measure at a level that has not yet been agreed upon between the two legislative branches of the Government. This is so regardless of how politically expedient it may be to present oneself as being an advocate for higher appropriations for education.

Mr. BRINKLEY. Mr. Chairman, the orderliness of House Journal Resolution 966 seems to me to be subject to the same objections raised to the Cohelan amendment. Did not fiscal 1970 begin on July 1, 1969, and is not this very resolution a device employed to correct a deficiency?

Recriminations are out of order.

Mr. PHILBIN. Mr. Chairman, some time ago I cosponsored a joint resolution funding education at levels approved by the House. Since the Appropriations Committee has not reported a bill to appropriate funds in this resolution I will strongly support the amendment I sponsored now offered by my valued friend from California, Mr. JEFFERY COHELAN, to include the funds that are so urgently needed at this time to assist funding of programs for educationally deprived children, impact aids, student aid grants, vocational education, basic grants, and funds for the handicapped and other needed programs. I believe that these funds are necessary now.

I realize that the Appropriations Committee is extremely busy at this time, but I feel that this matter is of such importance to the educational structure of my State and the entire country that I must continue to support and urge this amendment, as I have done so vigorously since it was proposed.

I hope and believe that it will pass and thus make available substantial funds in the amount of about $649 million that are badly needed to shore up the shaky financial foundation of our American educational structure, particularly in its highly merited compassionate efforts for those who cannot always help themselves, but need special training.

An overwhelming number of House Members are determined to see to it that all necessary educational authorizations are adequately and promptly funded by the House and, I trust, by the other body as well, and soon be signed by the President.

I intend to strive as hard as I can to realize these ends, and am confident that the House will do its part in this instance to help our children, who so urgently need the benefits these funds will provide.

Mr. MAHON. Mr. Chairman, I have no further requests for time.

Mr. BOW. Mr. Chairman, I have no further requests for time.

The CHAIRMAN. There being no further requests for time, the Clerk will read.

The Clerk read as follows:

H.J. RES. 966

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the following sums are appropriated out of any money in the Treasury not otherwise appropriated, and out of applicable corporate or other revenues, receipts, and funds, for the several departments, agencies, corporations, and other organizational units of the Government for the fiscal year 1970, namely:

SEC. 101. (a) Such amounts as may be necessary for continuing projects or activities which were conducted in the fiscal year 1969 and are listed in this subsection at a rate for operations not in excess of the fiscal year 1969 rate or the rate provided for in the budget estimate, whichever is lower, and under the more restrictive authority—

activities for which provision was made in the Department of Defense Appropriation Act, 1969;

activities for which provision was made in the District of Columbia Appropriation Act, 1969;

activities for which provision was made in the Foreign Assistance and Related Agencies Appropriation Act, 1969;

activities for which provision was made in the Military Construction Appropriation Act, 1969;

activities for which provision was made in the Department of Transportation Appropriation Act, 1969;

activities (except for the National Council on Indian Opportunity) for which provision was made under section 307 of the Independent Offices and Department of Housing and Urban Development Appropriation Act, 1969;

activities of the Civil Aeronautics Board;

activities of the Interstate Commerce Commission;

activities under the Foreign Military Credit Sales Act; and

activities of the Office of Economic Opportunity and "Development of Programs for the Aging" for which provision was made in the Departments of Labor, and Health, Education, and Welfare Appropriation Act, 1969.

(b) (1) Such amounts as may be necessary for continuing projects or activities (not otherwise specifically provided for in this joint resolution) which were conducted in the fiscal year 1969 and for which appropriations, funds, or other authority would be available in the following Appropriation Acts for the fiscal year 1970:

Department of Agriculture and Related Agencies Appropriation Act;

Independent Offices and Department of Housing and Urban Development Appropriation Act;

Departments of State, Justice, and Commerce, the Judiciary, and Related Agencies Appropriation Act;

Legislative Branch Appropriation Act;

Public Works for Water, Pollution Control, and Power Development and Atomic Energy Commission Appropriation Act; and

Departments of Labor, and Health, Education, and Welfare Appropriation Act; *Provided:* That not to exceed $8,100,000 shall be available from the appropriation for the fiscal year 1970, granted under the heading "Elementary and secondary educational activities" in the Departments of Labor, and Health, Education, and Welfare Appropriation Act, 1969, for use by the Department of the Interior under section 103(a)(1)(A) of the Elementary and Secondary Education Act of 1965, as amended.

(2) Appropriations made by this subsection shall be available to the extent and in the manner which would be provided by the pertinent appropriation Act.

(3) Whenever the amount which would be made available or the authority which would be granted under an Act listed in this subsection as passed by the House is different from that which would be available or granted under such Act as passed by the Senate, the pertinent project or activity shall be continued under the lesser amount or the more restrictive authority.

(4) Whenever an Act listed in this subsection has been passed by only one House or where an item is included in only one version of an Act as passed by both Houses, the pertinent project or activity shall be continued under the appropriation, fund, or authority granted by the one House, but at a rate for operations not exceeding the fiscal year 1969 rate or the rate permitted by the action of the one House, whichever is lower: *Provided,* That projects or activities for which disbursements are made by the Secretary of the Senate, and Senate items under the Architect of the Capitol, shall continue at the rate, to the extent, and in the manner permitted by the action of the one House: *Provided further,* That no provision which is included in an appropriation Act enumerated in this subsection but which was not included in the applicable Appropriation Act for 1969, and which by its terms is applicable to more than one appropriation, fund, or authority shall be applicable to any appropriation, fund, or authority provided in this joint resolution unless such provision shall have been included in identical form in such bill as enacted by both the House and Senate.

AMENDMENT OFFERED BY MR. COHELAN

Mr. COHELAN. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. COHELAN: Page 4, line 22, after "lower:'", insert the following:

"*Provided,* That in the case of activities for which appropriations would be available to the Office of Education under the Act making appropriations for the Departments of Labor, and Health, Education and Welfare for the fiscal year 1970, as passed by the House, the amount available for each such activity shall be the amount provided therefor by the House action."

Mr. MAHON. Mr. Chairman, I reserve a point of order on the amendment.

The CHAIRMAN. The gentleman from Texas reserves a point of order.

Mr. BOW. Mr. Chairman, I reserve a point of order also.

The CHAIRMAN. The gentleman from Ohio reserves a point of order.

Mr. COHELAN. Mr. Chairman, we have pretty well exhausted the discussion. My amendment, I believe, is well known to this body at this point. It is very simple. It merely adds $733 million to the pending joint resolution—House Joint Resolution 966—and instead of eliminating title I and vocational education and handicapped children, and a couple of other categories, it allows the Office of Education to operate the funding level which passed the House by an overwhelming majority last July.

Moreover, this amendment will make effective the joint resolution cosponsored by 227 Members which is now pending in this House. This amendment will again give the House of Representatives an opportunity to show to the country that we feel education is at least as important as another $1 billion of unbudgeted funds in the defense budget.

Mr. BOW. Mr. Chairman, will the gentleman yield for just one question?

Mr. COHELAN. I will be glad to yield to the gentleman from Ohio.

Mr. BOW. Mr. Chairman, I would ask the gentleman if there is a possibility of getting a copy of the amnedment offered by the gentleman from California? There has been none given to anybody, and I

would like very much to see the amendment.

Mr. COHELAN. Yes. The gentleman from Illinois has some on the table. He will see that the gentleman receives one.

Mr. BOW. I thank the gentleman.

Mr. COHELAN. I want to say, Mr. Chairman, that in spite of any implication by the gentlewoman from Oregon about the distinguished schoolmen who are in the city of Washington now, on the basis of my own understanding and my own beliefs and on the basis of the actual situation in my own district we, in terms of quality education and in terms of the end product, have absolutely nothing to quarrel about. If there are improprieties or abuses in other programs, indeed they should be examined, but let us keep our eye on the ball here.

All that this amendment does, in spite of the conversation, is permit us to operate at the funding levels of the House on title I. That is the real issue here. Even those who have spoken in opposition, on some other substantive basis, or on some procedural basis, have supported this resolution and apparently support the purpose of this funding.

Lest any of you feel our action may offend the other body—I can assert from the floor of this House that about 3 o'clock this afternoon there will be a resolution filed in the other body which I am led to understand by the Senator from New Mexico will include about 50 Senators.

The filing of such a resolution is a clear indication by the Senate that our actions today will in no way be offensive to that body.

When we return to the House, I will ask to insert a table which will in summary form show the actual dollar difference.

I think we have pretty well exhausted that discussion. I do not think there is any real argument about the actual amounts allocated in the various categories.

As I indicated, if you will look at page 31654 and look up your own State, you will find out exactly what is going to happen in terms of title I, vocational education, aid to the handicapped, and all of the other categories.

Mr. Chairman, this has been a very unhappy exercise for me. But it seems to me it is a desperately needed action. On the basis of what we have been telling the country about the needs of education, it seems to me we can, with great persuasion and authority, adopt the amendment that we are talking of to insure that the deprived and the disadvantaged children in this country are adequately educated. We have talked of the industrial complex and now we have a new hyphenated organization—the educational complex. Indeed there may be one and I hope we will investigate it. But good glory, we are talking about kids. In my own district we are in desperate circumstances.

If you wonder what I am doing this for, it is because I am desperately concerned about education in my district. As I told the members of my own Committee on Appropriations, in my district in Oakland, Calif., 60 percent of the schoolchildren in that school district are black. There are enormous internal problems and indeed we need that money.

The CHAIRMAN. The time of the gentleman from California has expired.

Mr. OTTINGER. Mr. Chairman, I ask unanimous consent that the gentleman may proceed for 5 additional minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. YATES. Mr. Chairman, will the gentleman yield?

Mr. COHELAN. I yield to the gentleman from Illinois.

Mr. YATES. Much has been made of the fact that the gentleman's amendment contravenes so-called orderly procedure. Is it not true that the so-called orderly procedures to which the various speakers have alluded have resulted in very chaotic procedures so far as the States and school districts are concerned?

The States and school districts have to make up their budgets. They have their commitments, they have to take financial positions ahead of time. The failure of the Congress to act on this year's bill has made their decisions most difficult. Will the Senate accept the Joelson amendment with its increased funds? At what levels shall they budget their programs? Talk about orderly procedure. What about the school districts and the States which may be reduced to a chaotic because of the failure of the Congress to act in time.

Mr. COHELAN. The gentleman is quite correct. This again is one of the reasons. Why do we go through this exercise? Why are these highly responsible school officials pushing for this legislation and the particular items and as has been indicated by the distinguished gentlewoman from Oregon. They have budget problems and many of their school districts are in hock in relation to their budgets. They have their budgets mortgaged against the idea that these funds are going to be forthcoming.

It is incumbent upon us to reinforce this belief and assure that these funds will be available for the work that must be done in the great urban areas.

Mrs. CHISHOLM. Mr. Chairman, will the gentleman yield?

Mr. COHELAN. I yield to the gentlewoman.

Mrs. CHISHOLM. Mr. Chairman, I rise in support of the amendment.

We have heard a good deal this afternoon about all kinds of complexes. But I do think we have to recognize the fact whether we want to face it or not, that government is carried on through the pressures of all kinds of lobbying groups in our Nation at the local, State, and Federal level.

But let us not stick our heads like ostriches in the sand. The important thing is to recognize the situation here in July when this body appropriated a certain amount of money to help certain groups in this society to move out in the mainstream of American society. But we stand here this afternoon trying to do a job while waiting for the expression of the will of the other body.

There is just one observation I want to make and that is this: In terms of the other body, there is a sense of urgency that moves in this House, I feel, that does not operate in the other body, because of the fact that one-third of the membership of that body is elected every 6 years, and perhaps it is not as important to move as quickly. We have to assume our responsibility in this House and do that which is necessary to make sure that these funds are not cut back. Remember one thing. Whether we accept it or not, government is moved by the pressures that are put upon it by lobbying groups. Some of us want to ignore this basic fact in American government and not recognize these facts that exist. The one thing that is regrettable is that there is no citizens' or peoples' lobby.

Mr. SCHEUER. Mr. Chairman, will the gentleman yield?

Mr. COHELAN I yield to the gentleman from New York.

Mr. SCHEUER. Mr. Chairman, at this point I think that it is absolutely essential that we understand that. Education agencies across the Nation, whether they be colleges and universities or whether they be elementary and secondary schools or preschool programs, must program the entire academic year activities now at the level of funding provided for at this time.

This means that if we fail to approve the Cohelan amendment we will be requiring school districts to conduct activities at an annual rate of the full impact of the difference between the House-passed appropriations bill and the 1969 funding level. In the case of elementary and secondary education benefiting from title I, this amounts to 20 percent of the entire program. It represents 50 percent of the entire program in the case of vocational education and 20 percent of the National Defense Education Act students loan support for students.

Every day that we delay providing educational agencies with the funds that the House has already considered necessary in the passage of the regular Labor-HEW appropriations bill, we are shutting the classroom door to students in one fashion or another. In the case of the vocational education student it means that many will remain on the waiting lists who are now seeking admission into area vocational and technical schools.

It means that many students in preschool programs under title I will not be able to be enrolled because there simply will not be funds enough to provide the space and the instructors for them.

It means that many of our elementary school pupils will not have the instructional materials and the teaching specialists they need right now to overcome deficiencies in their reading skills.

Mr. Chairman, schools must operate on a plan-ahead basis and we cannot open that closed special classroom and we cannot provide now the vocational training that is needed by many students until this Congress acts in the fashion proposed in the House-passed appropriation bill or the Cohelan amendment to the continuing resolution.

Is not the urgency motivating us this afternoon the desire to enable our school officials to plan ahead for the Nation's special education needs?

Mr. COHELAN. The gentleman is quite

correct. In some school districts it is worse than in others. Unfortunately, in my own school district we have reached a crisis in education, and it is no credit to my community that we have been unable to pass a bond issue. Still one of the most important instruments in support of the system in my district is title I, and title I would operate as we intend if we were to include the funds available in the continuing resolution until we get action by the Senate.

Mr. STEIGER of Wisconsin. Mr. Chairman, will the gentleman yield?

Mr. COHELAN. I yield to the gentleman from Wisconsin.

Mr. STEIGER of Wisconsin. This points up the title I problem. May I say to the gentleman that I have very serious reservations about the efficacy of the Cohelan amendment. First, we provided for forward funding of programs under the Elementary and Secondary Education Act. Last year the Appropriations Committee provided 90 percent of the funds for fiscal year 1970 that we provided in fiscal year 1969.

Second, the joint resolution itself provides for an identical level of funding.

Third, let us not confuse the issue. Title I of ESEA is not helpful to those school districts looking for extra money from the Federal Government. It is specifically categorical grant program money aimed at the disadvantaged. It does not pay for teachers' salaries. It will not build buildings. It seems to me it will not help the school districts that you are concerned with.

The CHAIRMAN. The Chair notes that a point of order is pending.

Mr. MAHON. Mr. Chairman, I have now had an opportunity to read the gentleman's amendment, and I withdraw my point of order.

Mr. BOW. Mr. Chairman, I renew the point of order.

The CHAIRMAN. The gentleman will state his point of order.

Mr. BOW. The amendment provides for activities for which appropriations would be available for the Office of Education under the act making appropriations for the Departments of Labor, and Health, Education, and Welfare for fiscal 1970, as passed by the House. Now, there is no act making appropriations for the Departments of Labor, and Health, Education, and Welfare. Since there is no act, this becomes an action of this House in making an appropriation to the Department when no act has been passed by the Congress.

The CHAIRMAN. Does the gentleman from California desire to be heard on the point of order?

Mr. COHELAN. Mr. Chairman, I submit that the amendment was carefully drafted, and to the very best of my knowledge, it is a proper amendment. I urge that it be so recognized.

The CHAIRMAN. The Chair is ready to rule. The gentleman from California offered an amendment to page 4, line 22, of the bill, to which the gentleman from Ohio made a point of order. The gentleman from Ohio in making his point of order has not pointed out to the Chair any rule of the House that the amendment violates. The point raised by the gentleman from Ohio is not one for the Chair to pass on, but presumably is one for the committee itself to pass on. The Chair does not sustain the point of order.

Mr. JONAS. Mr. Chairman, I move to strike the last three words.

Mr. Chairman, let me, if I can, with all due respect to my friend the gentleman from California, and those who support his amendment, bring this issue back into its proper perspective. The gentleman from California made a very fine argument in support of an appropriation bill. But we have already crossed that bridge. We crossed it last July 31. The gentleman's argument does not apply to this continuing resolution.

Mr. Chairman, the continuing resolution lasts only 1 month. How much can we do for education in 1 month? The resolution has to be superseded by something else at the end of November. They cannot even crank up downtown in 1 month. There have to be Budget Bureau allocations, and departmental plans to make. The month will have expired before they can move effectively onto this.

Whatever we do in the continuing resolution, it is intended to be only a stopgap interim proposition and not an appropriation bill. Whatever action we take on this continuing resolution today will be superseded and made out of date and completely worthless whenever the other body completes action on the appropriation bill that we have already passed and when it clears conference and is signed into law.

I think we ought to discuss this continuing resolution for what it is. It is not an appropriation bill. Yet, when we are debating it, it is as if we were debating the cause of education. That has nothing to do with it. We take care of that aspect of this problem properly in an appropriation bill, not in a continuing resolution.

Mr. COHELAN. Mr. Chairman, will the gentleman yield?

Mr. JONAS. I yield to the gentleman from California.

Mr. COHELAN. Mr. Chairman, of course, I must respectfully disagree with my distinguished colleague from North Carolina. In the first place, I am most pleased with the committee resolution in some respects—for example, on impacted aid. Impacted aid under the former continuing resolution was zero funded, and by the very excellent action of our Appropriations Committee, we have changed that, and that is most salutary in my judgment.

Mr. JONAS. Mr. Chairman, if the gentleman will allow me to break in, I thought the gentleman was going to ask me a question. The gentleman from California has had his 5 minutes, and he made some very excellent arguments in favor of education. I concur in his view. The gentleman has told us repeatedly that he is distressed with conditions in his district, and yet, with all respect, the gentleman then tells us his people will not even vote for a bond issue to support their own schools.

I am concerned about education, too, but that condition ought to be remedied in an appropriation bill and not in a stopgap resolution intended merely to tide the Government over, to keep it operating for 30 days, after which we will have to do it all over again.

Mr. MICHEL. Mr. Chairman, will the gentleman yield?

Mr. JONAS. I yield to the gentleman from Illinois.

Mr. MICHEL. Mr. Chairman, the gentleman makes an issue about the 30 days. I think the point ought to be made in connection with the sine die adjournment, that to the chairman's credit, he cast the deciding vote for 30 days, which to me indicates the good faith of the chairman when he says he is putting all due pressure on the other body to get them to act.

Mr. BOW. Mr. Chairman, will the gentleman yield?

Mr. JONAS. I yield to the gentleman from Ohio.

Mr. BOW. Mr. Chairman, in view of what the gentleman has said, the motion to recommit will be the amendment I offered in committee to extend the date to the 5 days subsequent to sine die adjournment.

Mr. MAHON. I should like to confirm what has been said. At the request of the distinguished majority leader, the gentleman from Oklahoma (Mr. ALBERT), with whom I conferred extensively, it was decided it would be more acceptable to the House to make the date November 30. In support of the position of the gentleman, I did that, trying to work with the leadership of the House in doing an orderly job.

Mr. JONAS. The gentleman would agree with me that what we are talking about here today is a 30-day stopgap continuing resolution to keep the Government from closing down.

Mr. MAHON. Yes; to keep most of the Government from being in a position where funds could not be obligated. I refer to the Veterans' Administration, NASA, the Labor Department, HEW, the public works programs, housing, and many, many others.

Mr. FLOOD. Mr. Chairman, I rise in opposition to the amendment.

I believe everybody will be delighted to know I hope I will not take the 5 minutes. I believe we have almost exhausted this subject. Part of what I was going to say is just about what my friend the gentleman from North Carolina (Mr. JONAS) said.

I happen to be the chairman of the Appropriations Subcommittee for Health, Education, and Welfare. The chief reason why I say this now is: Do you know who is going to preside at the conference with the Senate on the appropriation bill for HEW? It will be the gentleman from Pennsylvania with the mustache and he voted for the Joelson amendment.

I do not like going to a conference with the Senate, to chair that conference and to be confronted by Senators sitting across that table with this amendment of the gentleman from California, which many of them will consider an affront.

My friend's heart bleeds for his school kids. Well, now, so does mine; for his kids as well as my own. But what is going to happen in 30 days? As the gentlewoman from Oregon indicated and as the gentleman from North Carolina (Mr. JONAS) said, they will not get 5 cents

more in the next 30 days, even if we did this with mirrors. Not 5 cents more will his kids get under his amendment.

Mr. Chairman, this amendment simply asks us to vote a second time on the Joelson amendment. Why? The Joelson amendment is still very definitely a part of the Labor-HEW appropriation bill.

On July 31 I voted for the Joelson amendment to the Labor-HEW appropriation bill. I was for it then and I am for it now. Furthermore, if I were a betting man I would wager that at least as much as provided in the Joelson amendment will be provided in the final Labor-HEW Appropriation Act. But, Mr. Chairman, we have a responsibility to legislate in a responsible manner and it seems to me that one of our responsibilities is to treat the Senate as the coequal legislative body that it is. I do not like the fact that the Labor-HEW appropriation bill has not been passed yet. There are many things that are or are not done by the other body that irritate me. But, Mr. Chairman, we live in a glass house and I for one am not in favor of any stone throwing. If it is right that we try to force the other body to take our figures for education why is it not just as right for us to try to force them to take our figures for public health, the Departments of Housing and Urban Development, State, Justice, Commerce, and all of the agencies for which appropriation bills have passed the House but not the Senate? Why the timidity? If we are going to dictate to the other body let us do it in the grand manner. If this were a conference—sure, I would insist on the House position to the extent possible. But this is a continuing resolution, a holding action to keep the Government in operation for the next 30 days—just 30 days. And we, at this point, insist on the House position on the appropriations for fiscal year 1970? I never heard of such a thing before and, Mr. Chairman, with all due respect, you never did either.

Now let us get practical about this. Mr. Chairman, what have your Members been interested in most—what has really been bothering them about the continuing resolution that expires October 31? You know, and I know, and they know, and their constituents know—aid to schools in federally impacted areas. Here are the simple facts on that: Last year, fiscal year 1969, the appropriation was $506 million with no restrictions on category "B". Category "B" had its claim on these funds on a par with category "A." The budget cut out category "B" and included $187 million for category "A," and the current continuing resolution—the one that expires October 31—provides for funding on that basis. The committee's recommended resolution for November would provide $506 million, exactly the same amount of funds under exactly the same ground rules as for 1969.

Now here is something that is very important. It is true that the amendment that has been offered would authorize expenditures at the rate of the House-passed bill, or $585 million—$79 million more than the resolution reported out by the Committee on Appropriations. For practical purposes, what does this mean? All of us, Mr. Chairman, who know how this program operates—and most of us, from necessity, do—know that this money is not paid out in a lump sum early in the fiscal year. It is parceled out during the year as the reports come in from the schools and are verified by the Department. The final payments are not made until well after the end of the school year and after the end of the fiscal year—usually September or October. So what is the practical difference, Mr. Chairman, whether the Department gets another $79 million of spending authority now, or in December, or in January, or in February—and even such an abject pessimist as I, will predict that the Labor-HEW bill will clear Congress by then.

Mr. Chairman, this amendment is devoid of merit and certainly should be defeated.

Mr. GERALD R. FORD. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, for the benefit of all Members, but particularly for the benefit of the Members on our side of the aisle, I believe it is appropriate to indicate that the President of the United States supports the action of the House Committee on Appropriations.

I might add that the Secretary of Health, Education, and Walfare is likewise in favor of the action of the Committee on Appropriations.

I believe this decision on the part of the President coincides with his overall decision that the Federal Government in fiscal year 1970 should not spend more than $192.9 billion.

I think this support by the President for this action of the Committee on Appropriations coincides with a decision not to make any allocation over a budgeted amount on budgeted items until every appropriation bill has been passed by the Congress and signed into law. So may I say in support of the comments made by my dear friend from Pennsylvania that the approval of this resolution is an act of total futility, if you add on the Cohelan amendment. You will not get one more penny for all of those schoolchildren in the city of Oakland, Calif. Your speech here, my dear friend from California, may look good in the newspapers, but it will not help one school child in the city of Oakland, Calif.

Now let me make one other observation. I have in my hand here the legislation which the Congress passed earlier this year including in title IV a limitation on fiscal year 1970 budget outlays. If I can read the figures correctly, this Congress in that legislation, approved by the President on July 22, 1969, limited expenditures to $191.9 billion. Now, how ridiculous can we look on the one hand putting a limitation of $1 billion less than what the President recommended and telling him on the other hand through a series of other actions to increase expenditures.

Let me make one other observation. I was shocked to hear the figures and the facts recited by the distinguished gentlewoman from Oregon. I have been sitting here listening to some of my dear friends lambaste and criticize the military-industrial complex. It has gotten almost asinine. Be that as it may, I did not know we had a built-in federally subsidized professional education lobby. According to the distinguished gentlewoman from Oregon, it exists now.

Now, what do I think ought to be done? I hope that the Committee on Education and Labor undertakes a thorough investigation to see how many of these organizations—50 of them or whatever number it is—are being paid by the Federal Government and how much they are being paid. If the Committee on Education and Labor under the distinguished gentleman from Kentucky will not do it, then I hope that the Committee on Appropriations will undertake such an investigation. If the Congress will not do it, then I think the Secretary of Health, Education, and Welfare ought to undertake such an investigation. I think this lobby ought to be exposed for what it is.

The charges made by the distinguished gentlewoman from Oregon are astounding. They are shocking. I believe we are going through an exercise in futility—an absolute exercise in futility here. If you think for one minute that the responsible people in the other body are going to bow down and kowtow to a decision made by this body forcing them to accept the figures that we put in, why, how ridiculous can you be. The net result is there is going to be a slowdown in the progress of this continuing resolution, and it may not even get to the floor of the other body. However, if it does—if it does—I cannot imagine for 1 minute that the President of the United States will sign this into law. And what is the impact of this irresponsible action which I think we may be about to undertake? I do not think that the President of the United State will sign this continuing resolution, and then what will be the consequence? The consequence is that after midnight October 31 there will not be a penny available for the compensation of 3 million-plus civilian employees or the compensation of 3,600,000 military personnel, and, incidentally, for the operation of the Congress.

And, there will not be one penny available to pay thousands of suppliers of the numerous departments and agencies of the Federal Government.

If you want to be faced with that situation, then act irresponsibly and support the Cohelan amendment.

The CHAIRMAN. The time of the gentleman from Michigan has expired.

Mr. PERKINS. Mr. Chairman, I move to strike the requisite number of words.

First, Mr. Chairman, I wish to respond to the gentleman from Iowa (Mr. SCHERLE). As long as I have been chairman of the Committee on Education and Labor there has never been a member of the committee denied the opportunity to bring any witness before the committee in any hearing that I have conducted.

Mr. Chairman, the hearings on legislation to extend the Economic Opportunity Act were concluded on June 9. After we mark up the extension bill—which I hope will be completed next week—the distinguished gentleman from Iowa can bring in as many Governors and attorneys general before the com-

mittee as he likes. If they have constructive suggestions, then the bill may be amended when it comes to the floor.

Mr. PUCINSKI. Mr. Chairman, will the gentleman yield?

Mr. PERKINS. Let me proceed.

Mr. Chairman, the debate here today is so reminiscent of our debate earlier this year on the Labor-HEW appropriations bill, the Joelson amendment, and the various substitutes for it. At that time, we met head on the issue of whether we were going to provide increases only for certain programs or whether we were going to have a balanced approach and also provide increases to assist in the education of poor urban children and those in the rural areas.

Mr. Chairman, we resolve that debate, through adoption of the Joelson amendment, which said that we would have a balanced approach, and that we would do something to meet all the pressing needs in education whether for the ghetto schoolchildren and the schoolchildren in the poor rural areas of this country, or for others. Let us resolve the same issue today in the same manner by approving the amendment of the gentleman from California.

The continuous resolution, in its present form, does not provide for a balanced approach. No benefits accrue to title I or vocational education.

Without the gentleman's amendment, title I of ESEA will be funded at a level which is $273,848,000 less than what we approved on July 31. That is, Mr. Chairman, 20 percent less than what we have said should be expended for the education of disadvantaged young boys and girls.

Under the continuing resolution, title I would be funded at a level which is less than provided for the program in 1968, less than the amount provided in the original committee bill, and less than both the Johnson and Nixon budgets for fiscal year 1970.

I ask you then, Mr. Chairman, under this continuing resolution, who reaps the benefits from our action on the Joelson amendment. Clearly it is not those children in urban ghettos and in isolated rural areas. They receive not 1 cent above what was appropriated last year—a woefully inadequate amount even then.

Let us not forget the rationale for our action then. For title I, in fiscal year 1968 we had an appropriation of $1,191,000,000. It is suggested, under the continuing resolution, that we continue the operation of the program at a level less than that. Yet at the same time, we know that since 1968, we have had more than 10 percent inflation, and that we have added groups of migrant children and handicapped children that must be supported fully. Today, Mr. Chairman, school districts are getting partially paid for 7,200,000 children, while they are serving more than 9,000,000. Mr. Chairman, the children who need our help more than any other group are the very children this continuing resolution fails to recognize.

Failure to allow funding of vocational education at the level of H.R. 13111 will fall hardest also on the disadvantaged. The Joelson amendment provided $40,000,000 for vocational education programs for persons who have academic, socioeconomic or other handicaps which prevent them from succeeding in the regular vocational education programs. H.R. 13111 provides that this program be funded at the full authorization, whereas the continuing resolution before us now fails to provide for the implementation of the program. Equally disturbing is that the resolution before us fails to carry out even the intent of the original committee appropriations bill which provided a $100,000,000 increase over the 1968 level in recognition that increased funds were necessary to maintain programs at even last year's level.

As we approach the third month of the academic year, Mr. Chairman, we cannot tolerate a continuing curtailment in traditional vocational education programs, which this resolution recommends.

Is it the impact aid students who benefit from the committee resolution? No, Mr. Chairman, they receive $78,941,000 less than this House voted to provide them when we passed H.R. 13111, making appropriations for the current fiscal year.

What are the implications of the continuing resolution for college students who are in desperate need of NDEA loans to meet spiraling tuition charges?

Mr. Chairman, our action here today will be of critical importance to the NDEA loan program. It is in November and early December that student aid officers allocate funds for loans to be used in financing the second semester. But at this critical time, the continuing resolution suggests that institutions operate their program at last year's level. May I remind my colleagues that even last year, the appropriation amounted to only 77 percent of the panel-approved requests of colleges and universities. This year, because institutional requests reflect sharp increases in tuition, and increases in enrollment, the $190 million level represents less than 70 percent of the panel-approved requests.

Mr. Chairman, it is imperative, as I have said, that institutions be advised at this time of what will be available for the student loan program. To wait until final passage of the Labor-HEW appropriations bill to allow the program to operate at a level which is still far below what institutions need—actually less than 60 percent of their total requests—may, in my judgment, be the critical ingredient for thousands of students who will be making decisions on whether to continue in college through the second semester. Over 50,000 students will be affected by our decision here today—since the difference between the continuing resolution and the amendment of the gentleman from California is the difference between 50,000 additional students obtaining loans or being refused. Some 16,000 of these students are students in business and technical schools who cannot participate in the loan program unless appropriations exceed $190,000,000.

Mr. Chairman, it is said that the continuing resolution before us represents an increase for education programs. Perhaps it does, but it offers very little for those who are in greatest need—the title I student—the disadvantaged youngster who needs special vocational education training—and the young girl studying to be a secretary whose chances for a second semester depend on an NDEA loan.

Mr. Chairman, we did what was proper in July when we approved a proposal which provided for a balanced increase in Federal support of education. We said then that we did not want education programs to get along on as little as possible. Let us not today, through approval of the continuing resolution without amendment, retreat from the bold plan we launched several months ago through passage of the Joelson amendment.

Mr. MEEDS. Mr. Chairman, will the gentleman yield?

Mr. PERKINS. Yes, I yield to the gentleman from Washington.

Mr. MEEDS. Mr. Chairman, I appreciate the distinguished chairman of the Committee on Education yielding to me at this time and what he has said with reference to vocational education.

Mr. Chairman, when the distinguished minority leader spoke and said that this would not mean a cent to the school across this Nation, if the gentleman will permit, I have been on the telephone talking with the president of one of the community colleges located in my district. I have asked him what this resolution means to him in hard dollars and cents. It means $27,400 in hard dollars and cents. It means a program in police science, a program in aircraft technology, and the apprenticeship program in every community college. That is what it means to the students throughout the Nation.

Mr. PERKINS. The gentleman is correct. The same thing holds true in every school system throughout America.

The Cohelan amendment increases vocational education from $248 million to $488 million, and that is what we agreed to on July 31.

Mr. ALBERT. Mr. Chairman, will the gentleman yield?

Mr. PERKINS. I yield to our distinguished majority leader.

Mr. ALBERT. Mr. Chairman, I appreciate the gentleman yielding. I know that most of the educators of the country want this amendment passed. I know that we ought to fund this matter as soon as possible. I have talked to the distinguished chairman of this committee time and time again about this matter. Reluctantly he did promise and did make a commitment that he would try to make this a 1-month matter, and he would try to lift the education appropriation for fiscal 1971 to the House before April 1, 1970.

In view of that fact, so far as I am concerned, I am going to support the committee now even though I am for the principle of the amendment and I am for implementing the Joelson-Cohelan amendment as soon as possible. But I would like to add one other thing while I have the floor: I am not persuaded by any number of lobbyists coming here on any issue, although I respect the right of

distinguished educators to come here and talk to their constituents. Much less am I persuaded by a threat of the minority leader or anybody else, that the President will not sign this bill.

Mr. PERKINS. I want to say that I concur in that latter statement.

Mr. MAHON. Mr. Chairman, will the gentleman yield?

Mr. PERKINS. I yield to the distinguished Chairman.

Mr. MAHON. Another thing I think we should bear in mind appears on page 6 of the pending committee resolution. The matter that will fix the amount available will be the final HEW appropriation bill, as shown by section 105:

SEC. 105. Expenditures made pursuant to this joint resolution shall be charged to the applicable appropriation, fund, or authorization whenever a bill in which such applicable appropriation, fund, or authorization is contained is enacted into law.

It is the appropriation bill which ultimately sets the amount of funds available, not the continuing resolution. This continuing resolution is a temporary matter, merely making advances against the appropriations in the regular appropriation bills.

The CHAIRMAN pro tempore (Mr. ULLMAN). The time of the gentleman from Kentucky has expired.

Mr. CONTE. Mr. Chairman, I move to strike the requisite number of words.

Mr. CONTE. Mr. Chairman, I joined with 265 of my colleagues in an important resolution; the resolution calling for the funding of educational programs at the level that this body had approved—I repeat—at the level we had approved after long and serious debate here in the House.

We are talking about the backbone of this great Nation, our system of public education, a system which has contributed so greatly in making us what we are, and which should not and must not be shortchanged—but that is just what seems to be happening today.

Under the bill that we approved earlier this year we called for $2.8 billion for the Office of Education. The distinguished Committee on Appropriations, on which I sit, called for $2.1 billion. The difference between those two figures and the actual amount of loss to our public education system is $650 million.

Now, President Nixon—and a lot has been said about what he might do—has called education the key to survival. And yet this country is now second to many of the countries of Europe in literacy. Moreover, Commissioner of Education James Allen has noted that about half the unemployed youth between the ages of 16 and 21 in this country are functionally illiterate. We must not allow this trend to continue.

This great body has recognized the need for action once before this year, and I see no reason why we should not act again in the name of education and for the future of our country.

Therefore, Mr. Chairman, I join my distinguished colleague, the gentleman from California (Mr. COHELAN), in his amendment to House Joint Resolution 966. This amendment would bring the funding for the Office of Education up to $2.8 billion, the level set already by this body. I urge my colleagues to vote yes on this amendment.

I would like to clear the air on some of the arguments made by my distinguished Chairman, the gentleman from Texas (Mr. MAHON). He made a very stirring speech, and I really regret that I must oppose him on the issue. But in his speech for orderly procedure, he said this did not amount to anything more than blackmailing the Senate. Well, if this amounts to putting a little bit of a fire under the feet of the other body, I am all for it.

I would like to remind the gentleman from Texas that last year when this House adopted my amendment providing for a $20,000 limitation on farm subsidies, by a vote of 230 to 160, and it went over to the other body, they struck out that limitation. Then that bill went to conference, and they took the papers from the conference in a most unorderly procedure, and brought the papers over to the Senate so we could not get a crack at it here in the House of Representatives. I did not hear a word from the gentleman from Texas. What was that? If that was not blackmail, I do not know what it was.

They took out my amendment so that we never had an opportunity to look it over again.

Now we are supposed to plead and to cry and to weep for the other body. If I can get the other body to move on the HEW appropriation bill today, I am going to do it.

Then they talk about blackmail. My minority leader, a man whom I have supported and will continue to support, and who is one of the greatest men in this body, says if this bill goes down to the President with the Cohelan amendment, it could be vetoed—and what happens to the rest of the continuing resolution? Is that blackmail?

I hope my colleagues will see the wisdom of supporting the Cohelan amendment.

Mr. PUCINSKI. Mr. Chairman, will the gentleman yield?

Mr. CONTE. I yield to the gentleman briefly.

Mr. PUCINSKI. Is it not a fact that we had the same kind of straitjacket placed on us with reference to the consideration of the surtax, which came to this House hours before it expired. It came from the Senate and we had to vote on it in the same way. Where was the consideration for orderly procedure then and where were the rights of the House Members then?

Mr. CONTE. That is exactly right.

I just want to make one more observation. I was disappointed in the majority leader. He made a very telling case here today in his colloquy with the chairman of the Committee on Appropriations. He had me convinced that we were on the right track, but later he backed down. I was very disappointed that he did this.

Mr. YATES. Mr. Chairman, I rise in support of the amendment.

Mr. Chairman, I would like to address myself to my distinguished friend, the minority leader, whose remarks surprised me. I am shocked that he considers this amendment an exercise in futility. I am shocked that he would characterize this administration as an antieducation administration. He said that if the Congress passed this bill, it will be vetoed by the President of the United States.

Mr. GERALD R. FORD. Mr. Chairman, will the gentleman yield?

Mr. YEATS. I yield to the gentleman.

Mr. GERALD R. FORD. I implied I would urge a veto and that I could not imagine him approving the proposal with the Cohelan amendment.

Mr. YATES. According to the press he has announced that if Congress passed a bill containing the funds itemized in the Joelson amendment, he would not spend those funds. He has already made that clear in the press. I do not know how the gentleman from Michigan can characterize it except as an antieducation position.

Mr. GERALD R. FORD. Mr. Chairman, will the gentleman yield?

Mr. YATES. Let me finish my one point just as the gentleman asked me to wait until he had finished his point.

I was visited, Mr. Chairman, yesterday, by 30 students of Northwestern University Medical School. They cannot get any loans. There is no money available. Only $15 million was made available in the budget.

The President's budget for the year 1968 contained $26 million for the Health Professions Development Act. There were in that year 217 medical schools and 64,000 students.

The President's budget for the year 1969 contains $26 million for the Health Professions Development Act. In that year there were 231 medical schools and 69,000 students.

This year there are 243 medical schools and 75,000 students and the administration has cut the budget to $15 million. This Nation needs many more doctors. There are more students in the schools and yet the budget is cut. The students cannot get loans from the banks at reasonable rates of interest. Where can they turn for help? This administration and not the Congress cut almost 50 percent of the amount that was available last year.

Mr. STEIGER of Wisconsin. Mr. Chairman, will the gentleman yield?

Mr. YATES. I yield to the gentleman.

Mr. STEIGER of Wisconsin. Is it not correct that the continuing resolution, as it is before us today, sets forth the amount authorized to be spent is $20,000,000? Let us not go into a sleight-of-hand operation on the figures.

But the amount available in this continuing resolution—and I was visited by the same students—ends up to be $20 million. The budget request and the carryover results in a final figure of $20 million.

Mr. YATES. Which is still $6 million below what the budget was last year, and it does not negate what I said about what the budget recommended.

Mr. STEIGER of Wisconsin. It is $5 million above what you just got through saying, I say to the gentleman from Illinois.

Mr. YATES. Let us look at the record. I said that the Bureau of the Budget had

recommended $15 million this year. That is a fact. You have only to take a look at the budget, and you will see I am correct. And I say this indicates an anti-education position on the part of the administration.

Mr. HAYS. Mr. Chairman, will the gentleman yield?

Mr. YATES. I yield to the gentleman from Ohio.

Mr. HAYS. I would like to comment on the minority leader's statement about the President vetoing this, or that he might veto it. I do not think he would dare, because there are those who have said it would close the Government down, and what if he closed the Government down and the people found out they could get along without it?

Mr. YATES. I thank the gentleman for his statement.

Mr. CAREY. Mr. Chairman, will the gentleman yield?

Mr. YATES. I yield to the gentleman from New York.

Mr. CAREY. I asked the gentleman to yield because he has put his finger on a point that I think is the same argument that can be made in terms of conditions in our medical schools. The New York medical schools, and many other medical schools in New York State and in all States, are in desperate shape. They face a serious shortage of funds. They face a severe shortage of funds. They do not know what they are going to do about the intake of more students.

Mr. Chairman, I sat in this Chamber and listened while the distinguished gentleman from South Carolina (Mr. RIVERS) told us again and again that the Russians had a manned bomber and that we needed another manned bomber, and that we need a new generation of the SCRAM, the CRAP, or whatever they have, we have to have one, too.

Let me remind the House at this time that the Russians this year will educate 36,000 doctors in their medical schools, and we hope to achieve a maximum level of 8,000. If we do not put the money in this bill, we will fall below that figure. I urge that if we are going to follow the Russians in anything, that we follow them in our education of future doctors.

Mr. YATES. I thank the gentleman. I suggest the minority leader is completely wrong when he says that the amendment offered by the gentleman from California is a futile gesture. On the contrary, I think it is meaningful. It is tangible. It is significant. It will demonstrate clearly that the House of Representatives is determined that funds will be made available to the children of this country to enable them to get a decent education. Approval of the Cohelan resolution today will be a victory for the cause of education in this country.

Mr. MAHON. Mr. Chairman, I ask unanimous consent that all debate on the joint resolution and all amendments thereto close in 15 minutes.

The CHAIRMAN. The Chair advises the gentleman that we have not yet read the remaining section of the resolution.

Mr. MAHON. Mr. Chairman, I ask unanimous consent that all debate on the pending amendment and any amendments thereto close in 15 minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

Mr. BRADEMAS. Mr. Chairman, I object.

Mr. MAHON. Mr. Chairman, I ask unanimous consent that all debate on the pending amendment and all amendments thereto to section 101 close in 20 minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

Mr. BRADEMAS. Mr. Chairman, I object.

The CHAIRMAN. The gentleman from Indiana objects.

MOTION OFFERED BY MR. MAHON

Mr. MAHON. Mr. Chairman, I move that all debate on the pending amendment and all amendments thereto conclude in 25 minutes.

The CHAIRMAN. The question is on the motion offered by the gentleman from Texas.

The motion was agreed to.

The CHAIRMAN. The Chair recognizes the gentleman from Georgia (Mr. LANDRUM).

(By unanimous consent, Mr. GIAIMO and Mr. MAHON yielded their time to Mr. LANDRUM.)

Mr. LANDRUM. Mr. Chairman, I take this time to ask two or perhaps three questions of the chairman of the committee.

Mr. FLOOD. Mr. Chairman, will the gentleman yield?

Mr. LANDRUM. I yield to the gentleman from Pennsylvania.

Mr. FLOOD. Mr. Chairman, as the gentleman from Georgia knows, I am not a damned Yankee I am just a Yankee. I think all of us on both sides ought to keep in mind that there are many complex and difficult problems that we may well have to grapple with in the conference with the other body on the regular HEW appropriation bill, not the least of which could be the Whitten amendment. Members who are favorably disposed to vote for the Cohelan amendment ought to consider whether they might be poisoning the water and increasing the difficulties of the House conferees.

Mr. LANDRUM. Mr. Chairman, I ask the distinguished chairman of the Committee on Appropriations these questions. Is it true, Mr. Chairman, that the bill which the House sent to the Senate on July 31 contained an appropriation of $489 million for vocational education?

Mr. MAHON. The gentleman from Georgia is correct.

Mr. LANDRUM. Is it true the level of operation for vocational education for the last four months has been at the level of $248 million?

Mr. MAHON. The gentleman is correct. The guidelines of the continuing resolution in effect during that period set funding for vocational education at last year's level, which was $248 million.

Mr. LANDRUM. When the Senate passes the appropriation bill which the House sent there on July 31, and if the Senate accepts the House figure we will have the $489 million?

Mr. MAHON. If the Senate approves that figure, yes.

Mr. LANDRUM. If the Cohelan amendment should be adopted, and if the Senate should accept it, then we would still just have the $489 million? Is that correct, that we would have that amount for vocational education?

Mr. MAHON. The gentleman is correct.

Mr. LANDRUM. Mr. Chairman, I do not have to apologize or to explain to anyone my support for vocational education. I said to the gentleman from California (Mr. COHELAN) previously that I would support his amendment, but I believe, after listening to all the arguments and hearing all sides, vocational education and this Nation and this House of Representatives will be better served if we go ahead and support the chairman of the committee, particularly in view of the fact that these figures will be the same, and more particularly in view of the fact the chairman has said to us he is going to try to hold this continuing resolution to 30 days. There is nothing to be gained by taking the risks involved here. Vocational education has nothing to gain here on such a 30-day operation. The solution is for the Senate to pass the appropriation bill we sent over there last July 31.

The CHAIRMAN. The Chair recognizes the gentleman from Michigan (Mr. O'HARA).

Mr. O'HARA. Mr. Chairman, I would like to ask the Chairman of the Committee if there is some mistake. Did the gentleman say the level of funding for vocational education would be $489 million whether or not the Cohelan amendment were agreed to, and does the gentleman wish to reconsider that answer?

Mr. MAHON. Mr. Chairman, I think there must have been a failure to understand. I understood the question to be, if the other body approved the Labor-HEW bill we sent to it, which does provide $489 million, would that be the figure? I said yes, it would be $489 million for the year.

Then the question was asked, if we adopt the Cohelan amendment, would that increase the $489 million by any amount, and I said no, it would not.

Mr. O'HARA. But in terms of the continuing resolution, the Cohelan amendment provides an additional $241 million for vocational education. Is that not correct?

Mr. MAHON. The Cohelan amendment is merely a restatement of the Joelson amendment.

Mr. O'HARA. Exactly, and in terms of dollars, it is $241 million more than the continuing resolution.

The CHAIRMAN. The Chair recognizes the gentleman from Illinois (Mr. PUCINSKI).

(By unanimous consent, Mr. SCHEUER yielded his time to Mr. PUCINSKI.)

Mr. PUCINSKI. Mr. Chairman, I rise in support of the Cohelan amendment. There are less than 81 hours between now and midnight Friday. If both Chambers do not act by midnight Friday, everything will come to a standstill in education in America.

Our distinguished minority leader has his crisis reversed. It is only if we fail to adopt the Cohelan amendment, which we have every reason to believe will be accepted by the other body, because the

other body cannot possibly conclude its hearings and go the normal route by Friday midnight, that we will face the crisis he speaks of. If we fail to approve the Cohelan amendment today we are going to see a crisis in education throughout the Nation. Vocational education courses will be phased out beginning Monday, and many other programs will have to be dropped. Remember, you have restructured the entire vocational program last year and unless the additional funds provided on the Cohelan amendment are approved, these schools are now going in their fifth month under a continuing resolution. They are in the fifth month of the new fiscal year. They have been living on borrowed time. They have been borrowing money. They have been stretching money. But they cannot go any further.

So I am telling this House, you gentlemen can take the responsibility for failing to provide the money that was overwhelmingly approved in this House when the appropriation was before this body. You are going to see a crisis in American education, because every one of these school districts is now way into the fiscal year.

The Senate has had more than ample time to work on this matter. They have been dragging their feet on public hearings. They have not completed their public hearings.

I will tell you this: You go along with the Cohelan amendment and we will have a good bill here by midnight Friday. We have every reason to believe the Senate will take this amendment as is and our school systems can proceed in an orderly manner to fulfill their obligation.

The CHAIRMAN. The Chair recognizes the gentleman from Indiana (Mr. BRADEMAS).

(By unanimous consent, Messrs. WILLIAM D. FORD, HOWARD, ECKHARDT, and COHELAN yielded their time to Mr. BRADEMAS.)

Mr. BRADEMAS. Mr. Chairman, I want to make two or three points about the matter before us.

First of all, I want respectfully to suggest that the distinguished minority leader may not be correct when he suggests that President Nixon would veto this bill. In saying this, I want to remind the Members of this House that on the 23d of October 1968, just 1 year ago, Mr. Nixon, then a candidate for the Presidency, said:

> When we talk about cutting the expense of Government—either Federal, State, or local—the one area we cannot shortchange is education. . . .

I have absolutely no doubt, Mr. Chairman, that if we send the Cohelan amendment over to the other body, the other body will take it and send it to the President, and that the President will respect the fact that the overwhelming majority of both Republicans and Democrats in this House, the more popularly elected body of our National Legislature, have gone on record as saying that "We think education is important."

We have heard a good deal today about the integrity of the appropriations process. I believe in that integrity, but I also believe in the integrity of the elected Members of the U.S. House of Representatives.

I must say, Mr. Chairman, I am getting a little resentful of the attitude taken by some Members of this body. They in effect say to those of us who do not sit in the Appropriations Committee, "Who do you think you are? You are just an elected Member of the House, that is all. Who do you think you are?"

I want to remind Members that in July of this year, by a vote of 293 to 120, the Members of the U.S. House of Representatives went on record as saying, "Mr. President, we think education is very important."

I am somewhat distressed, therefore, that the great Committee on Appropriations and its distinguished chairman did not apparently indicate they had any respect for the integrity that other Members of the House bring to the U.S. House of Representatives.

I can count; 293 to 120 tells me something.

Look at the press gallery here. They have been writing articles about the fact that there is something new going on this year in the Congress of the United States. For Congress is at long last becoming responsive to the concerns and priorities of the American people. And the American people are telling us, their elected Representatives in Congress, "We think education is important."

Mr. Chairman, I hope that we can respond to their concerns and their priorities. I hope we can say "yes" to the American people. I hope that having voted 2 to 1 in July for education, we are not going to hide behind a little parliamentary maneuvering that the public does not really understand and turn our backs on that commitment.

And I do not believe, Mr. Chairman, that we are going to turn our backs on that commitment.

I was proud of the vote for the Joelson amendment last summer and of the fact that it was a bipartisan vote.

I was proud that a majority of my colleagues on the minority side voted with the majority of us on the majority side, for education.

I was proud that a majority of the Members of the House delegation of the distinguished minority leader's party from his own State voted in support of the Joelson amendment.

I was proud that on a key teller vote, the distinguished chairman of the Republican National Committee, the gentleman from Maryland (Mr. MORTON) for whom I have very great regard, although he did not stay with us on the rollcall vote, walked through the aisle to vote for the Joelson amendment and we saw him. I take my hat off to him, although I understand some of his problems.

Mr. Chairman, I think that the vote on the Joelson amendment last summer is a commitment and is a solid commitment that we gave in this House—a commitment to better education for our country.

Mr. Chairman, there are going to be a lot of people watching us today. It is not just money for education which is involved here but, much more important, it is the integrity of this body that is at stake. The issue today is in large measure whether or not we have any respect for ourselves and any respect for our own consciences and for the integrity of this House.

For the House is saying, Mr. Chairman, I reiterate, that education is important, and I must say that I believe, and I predict to you, that if we send this bill to the President of the United States, he will sign it.

Mr. Chairman, I want to say one final word to my friend, the distinguished minority leader. He said, I believe, that if we pass the Cohelan amendment, we in Congress will not get our paychecks. Well, let me tell you something. If we do not pass the Cohelan amendment, we do not deserve to have our paychecks.

The CHAIRMAN. The Chair recognizes the gentleman from Illinois (Mr. MICHEL).

(By unanimous consent, Mr. STEIGER of Wisconsin yielded his time to Mr. MICHEL.)

Mr. MICHEL. Mr. Chairman, I think we are all aware when the House acted on our regular appropriation bill there was a decided feeling that some of our figures should have been raised for some very popular education and library programs: Supplementary education centers, library resources, guidance, counseling, and testing, equipment and minor remodeling, and so forth. In the current continuing resolution these programs are hurt whereas under the provisions of this new resolution, the one we are considering today, the problem is alleviated somewhat. As a matter of fact, to the extent that it would be altered by the Cohelan amendment.

For example, in supplementary education there is $165 million in the new continuing resolution as against $116 million in the current resolution. We have $50 million for library resources—Title II, ESEA—as against nothing in the current resolution.

These are the same spending levels as called for in the so-called Joelson amendment. There is an increase of $17 million for guidance, counseling, and testing in title V of the NDEA, and for equipment and minor remodeling in title III of NDEA we have an increase of $79 million. This is provided for in the new continuing resolution.

In higher education facilities construction grants item that go to undergraduate facilities there is $33 million in the Cohelan amendment, and we provide the same in the resolution. The same thing applies with respect to library assistance: $41 million in services and $9 million for construction. Mr. Chairman, the terms of this new resolution are different than the one under which we are operating and does provide some relief.

And while the gentleman from Illinois (Mr. YATES) is on his feet, may I correct what he said relative to medical students and health manpower under the Nixon budget, there was a budget request and there were funds appropriated for 1,000 new additional medical students this year over that which the prior administration requested. This is in addition to

the normal increase of 600 provided in the last Johnson budget.

So far as total health manpower is concerned the record will show the 1969 figures at $172,086,000 as against the Nixon budget request of $218,021,000 which incidentally our committee provided for in our regular bill.

Mr. Chairman, I had intended earlier to make several observations with respect to why we do find ourselves in this kind of situation today and it is all a matter of timing.

Reference has been made earlier to the problem of the authorizing committees failing to get their work done in time for our Appropriations Committee to act, but I would say that the more critical problem is getting the House and Senate working together on appropriations.

Whether we are here or not in the next Congress, the work of this body will go on and the country will go on.

Whether an administration swings from extreme right to extreme left or vice versa there is actually no more difference than 5 percent up or down in what must be appropriated to keep the Government going. In other words, we know essentially what we have to do and the most productive legislative Congress in history would not make, as I said before, a 5-percent difference up or down in what needs to be appropriated.

Now, we in the House Appropriations Committee have done our work. Our HEW Subcommittee held hearings from February through May—a period of 4 months and of course our bill passed the House 1 month into the new fiscal year.

I have said it before and I will say it again: I see no excuse whatever, for the other body going better than 3 months into the new fiscal year before even scheduling hearings on our bill. I do not happen to think that it is necessary for the House to complete action before the other body begins consideration of similar legislation, and our Constitution only requires that this be done in the case of tax bills which must originate in the House.

I submit, Mr. Chairman, that we do a very thorough job in our House hearings and to say the least, it is rather discouraging to have the other body fold under pressure time and time again and follow the path of least resistance when appropriating for these admittedly very popular programs. Only one-third of the other body comes up for election every 2 years, and it is much easier for 33 Members to try outdoing one another for public favor but it is much more impractical for the same kind of situation to prevail in a House with 435 Members.

Mr. Chairman, notwithstanding my having said this, I respect the tradition of comity between the Houses and would like to see the other body act on our bill in a normal, routine, businesslike manner and there is surely some argument that adoption of the Cohelan amendment would for all practical purposes alter this relationship. I do support the resolution with a reservation with respect to vocational rehabilitation, for there is no question but that this item is the weakest point in our continuing resolution. As a matter of fact, our subcommittee raised the budget figure by over $100 million to $357 million, for that is what would be required to keep all our ongoing programs operating without a cutback and still comply with the amendments written into the law in 1968.

Thirty days more, however, is not going to mean death for the program, and reluctantly I will go along with our chairman and ranking Members' position with the understanding that I be permitted to alter my support for any further continuing resolution if conditions have not improved in this 30-day period.

The CHAIRMAN. The Chair recognizes the gentleman from Rhode Island (Mr. ST GERMAIN).

Mr. ST GERMAIN. Mr. Chairman, I associate myself with the remarks of the gentleman from Indiana and the other gentlemen who are proponents of the Cohelan amendment.

The CHAIRMAN. The Chair recognizes the gentleman from California (Mr. HANNA).

(By unanimous consent, Mr. SISK yielded his time to Mr. HANNA.)

Mr. HANNA. Mr. Chairman, I would like to say that I support this amendment. In my own mind this amendment represents a small leaf in a very important book. This book records the continuing commitment we have made to education.

The administration and the Members of this House have to go on record to the effect that they are for protecting the quality of education as strongly as they are for protecting the security of America. For if our energies and treasure are expended in an endless quest for absolute military security we will undoubtedly find that we have sacrificed those precise qualities which we sought to preserve. The history of man is rife with examples of civilizations unsuccessfully sacrificing all for military security while they crumbled and decayed from within.

Mr. Chairman, I think the people who send us to this Congress expect that we, the Members of this House, will be concerned about the internal strength and character of this country. That strength is based upon the quality of America, and certainly one of the important components of our quality is education. Unfortunately it is these qualities of domestic strength that this House has not been as strongly committed to as it has the defense and security of the country. It is these qualities of inner strength and conviction that demonstrate the ultimate worth of a culture, and not fortunately, its military complex.

I might suggest, Mr. Chairman, that it is time for us to reevaluate our basis for action and remember that every country has had to face up to the fact that if it has not kept up the inner quality and strength of its people that in the final analysis it cannot protect itself from the outside.

The President, during his campaign, declared:

Jefferson knew that the destiny of America was inseparable from education—that in the fulfillment of the promise of this new nation education would be the key . . . education, long the key to opportunity and fulfillment, is today also the key to survival.

So, Mr. Chairman, I support the amendment.

The CHAIRMAN. The Chair recognizes the gentleman from New Jersey (Mr. PATTEN).

Mr. PATTEN. Mr. Chairman, on July 31, this body took a dramatic step forward in terms of our legislative responsibilities in the field of education. On that date, the full House worked its will, debating and substantially amending the education appropriations measure on the floor of the House. On that date, we took a step toward putting up the funds required to keep the promises we had made in our authorizing legislation.

What we did last July was to vote our convictions, putting aside considerations of loyalty to party, committee, or State delegation. This bipartisan effort resulted in restoring more than $1 billion of educational funds which had been cut by the Johnson and Nixon budgetmakers last winter.

In sum, Mr. Chairman, we overwhelmingly passed H.R. 13111. And in so doing, we told our friends and constituents in education, our teachers, our students and their parents, that we supported them and their programs. We told them that we believed that the American dream of a relevant and meaningful education for every citizen is so fundamental a national goal and priority that we would pay it more than mere lipservice.

But today, Mr. Chairman, our schools are almost midway into the first semester of the academic year, and they have not seen a penny of the increased funds we voted to appropriate last July. And if we approve the formula for continuing appropriations for the U.S. Office of Education contained in the committee resolution now before us, our schools will not see a penny of these funds at all this semester.

To avoid such an eventuality, more than a majority of the House has sponsored resolutions which would keep continuing appropriations for education to the dollar amounts contained in H.R. 13111. I am sure the whole House recognizes, as these 230 sponsors have, that the issues which moved the House to pass H.R. 13111 have not faded; and, in fact, the budgetary problems of the schools are heightened by the uncertainties of funding once the school year has begun.

Accordingly, Mr. Chairman, I see no justification whatever for this body to retreat for a month or two from the funding levels it agreed to in H.R. 13111. I shall, therefore, support the principles incorporated into the resolutions which I and other Members have cosponsored, and vote for the Cohelan amendment offered by the gentleman from California (Mr. COHELAN).

Mr. BOLAND. Mr. Chairman, will the gentleman yield?

Mr. PATTEN. I yield to the gentleman from Massachusetts.

Mr. BOLAND. Mr. Chairman, I want to express my support for the amendment offered by Congressman COHELAN—the amendment seeking to maintain fiscal 1970 spending within the Office of Education at the level established by the House in the appropriations bill passed a few

months ago. The spending level sought in House Joint Resolution 966, a level essentially the same as that for fiscal 1969, would be woefully inadequate for the Nation's school systems. Such a meager—indeed, niggardly—spending level would virtually halt Office of Education programs within the field of vocational education and within several fields of academic education as well.

It is plain, Mr. Chairman, that amply funded education programs are among the most pressing needs of American society. Indeed, the very future of the United States hinges on the quality of educational programs within our schools. To jeopardize those schools in the name of "economy"—false economy of the most errant kind—would be senseless.

Let me cite just a few examples of the gaps between fiscal 1969 spending levels and those authorized by the House in H.R. 13111. Vocational education programs—the programs that hold out hope to the Nation's disadvantaged children—would suffer budget cuts totaling almost 50 percent under the formula sought in House Joint Resolution 966. The program offering financial aid to "federally impacted" school systems would lose nearly $80 million—a sum that school administrators throughout the United States consider critical to the program's success in fiscal 1970. And programs of student aid, as just one further example, face a budget cut of more than $113 million.

The Senate, when it eventually acts on the fiscal 1970 appropriations bill for HEW, is expected to fund Office of Education programs even more liberally than the House did in enacting H.R. 13111. I know many of my colleagues join me in the hope that this expectation bears fruit. In the meantime, however, we in the House must at least live up to the commitment we made this summer in our own action on HEW appropriations.

I strongly urge the passage of Mr. COHELAN's proposed amendment.

The CHAIRMAN. The Chair recognizes the gentleman from New York (Mr. OTTINGER).

Mr. OTTINGER. Mr. Chairman, I want to congratulate my friend from California, Mr. COHELAN, for his ingenuity in devising this method for obtaining vitally needed money for our Nation's schools. I think his amendment is splendid and deserves our full support.

Opponents have said it will not be effective. I strongly disagree. If the amendment is passed in the other body and signed by the President, the schools will be able to receive moneys at the rate of $1.2 billion more than they may receive at present. This will be a tremendous boon to them.

I do not believe for a minute that the Senate or President will fail to act on this measure. The Senate, already contemplating an even higher appropriation, but unable to arrange for its consideration for several months, is very likely to act favorably; at the very least, it will expedite consideration of its own measure. If the President receives the bill representing such overwhelming sentiment in the Congress and the country, I doubt very much that he will veto it—and, if he does, I believe his veto will be overridden.

To those who derogate the effectiveness of the Cohelan amendment I would ask how they would devise a more effective measure for getting the educational funds so badly needed into the schools before too much of the school year goes by to use it effectively. As I see it, this is the sole means available to expedite these funds.

The distinguished minority leader has said in opposition that passing this amendment would destroy the $192.5 billion expenditure limitation we passed earlier this year. I would remind my colleagues, however, that we passed the ceiling subject to any increases or decreases in appropriations we might subsequently pass.

If we succeed in passing this amendment today, it will be an unprecedented victory. It will have great significance in opening a new avenue for expression of the will of this body over its Appropriations Committee. And it will have great significance in showing our determination to reorder our national priorities.

At long last, this body is exerting itself to change our national priorities. The increase we mandated in education through the Joelson amendment, the effectuation of that change through the Cohelan amendment today, the $600 million appropriation we mandated in the water pollution appropriation—each of these actions demonstrated our determination to spend a greater proportion of our resources in areas of high national importance.

The consequence of these increases in vital areas is that the President, if he is determined—as I think he should be—to hold the line on overall governmental expenditures, will have to make cuts in less vital areas. That this message is getting through to the administration is best illustrated, I think, by the recent announcement by our Secretary of Defense that he is going to redefine our national security requirements for maintenance of military forces necessary to fight 1½ wars at any one time instead of 2½ wars as has been our previous policy. This will permit a tremendous reduction in marginal military expenditures, accomplishing exactly the kind of priorities readjustment that I and many of my colleagues feel is so important to our future.

I hope the President will go further to reexamine his ABM, SST, agricultural subsidies, and other similar decisions to spend vast sums in areas of marginal utility or, in my opinion, adverse consequence.

The lessons of today's actions should be extended even further, however, to the many other Government programs that are held in a state of suspended uncertainty because of our failure to act upon authorizations and appropriations before June 30, the end of our fiscal year.

In recent years, it has become the rule rather than the exception to fail to pass most appropriations by July 1. Our business is simply too complex to permit our meeting this early deadline.

As a result, many departments of Government, private agencies that depend on Government programs, businesses that produce for the Government, school officials, Governors of States and mayors of cities, foreign agencies administering AID projects, all have the gravest difficulties planning their activities.

I am sure it costs the Government millions of dollars to pay for the slowdown and start-up costs of the many agencies that have to readjust their programs to fit our fiscal philandering.

For the future, I strongly recommend we consider changing our fiscal year to 12 months rather than 6 months in which to pass all our authorization and appropriation bills, a much more realistic time in view of the current complexity of our business.

The chairman of the Appropriations Committee asks us to defeat the Cohelan amendment in the name of preserving the orderly processes of this body. Is it, indeed, orderly process to fail to pass educational appropriations more than 2 months after schools dependent upon them have been in session? Is it orderly to pass continuing resolutions requiring school systems throughout the Nation to fire teachers and curtail programs when the House has already passed an appropriation permitting a substantial increase? I submit that this is the height of disorderly process—that we will reflect far more credit on the processes of this body if we give the schools the funds we have committed to them rather than to further disrupt their planning and operations.

I strongly urge adoption of the Cohelan amendment.

The CHAIRMAN. The Chair recognizes the gentleman from California (Mr. CORMAN).

Mr. CORMAN. Mr. Chairman, the equities of the matter have been adequately discussed. However, I was rather distressed with reference to two arguments. I thought I heard the ultimate when the minority leader indicated that if I voted for the Cohelan amendment I might not receive my October paycheck. I am sure that that would displease my creditors more than it would me. But, then when I heard that the greatly sanctified "Whitten amendment" might be at issue here, I thought we had reached an awfully low point in this committee.

When it is suggested further that this Nation is threatened by an "industrial-education" complex—a complex composed of those who have the interests of children at heart, then we have reached an even lower point in this debate.

I would remind my colleagues on the floor today that the complex of interests which urgently sought our support for the Cohelan amendment, and who now hope for its passage, did so on behalf of the multitudes of young people who have every right to be dissatisfied with decaying school systems, overcrowded colleges and underfunded research.

Mr. Chairman, I support the Cohelan amendment.

Mr. GILBERT. Mr. Chairman, will the gentleman yield?

Mr. CORMAN. I yield to the gentleman from New York.

Mr. GILBERT. Mr. Chairman, I rise in support of the Cohelan amendment to the continuing appropriations resolu-

tion for fiscal 1970. I am one of the cosponsors of the Cohelan amendment to fund the Office of Education at the $2.8 billion level approved by the House of Representatives last July.

Mr. Chairman, this is a critical time of financial need for the improvement of educational opportunity and the quality of education, not only in my State of New York, but throughout the country. Our highest priority should be given to the support of education. I strongly urge my colleagues to join me in support of the Cohelan amendment so that important and critical programs will not be left unfunded.

The CHAIRMAN. The Chair recognizes the gentleman from New York (Mr. KOCH).

Mr. KOCH. Mr. Chairman, I rise in support of the Cohelan amendment. I wish to commend and congratulate our colleague for carrying on the fight so successfully waged by our former colleague, Charles Joelson.

This House not long ago voted to add to the appropriations for education approximately $1 billion over the amount proposed by the Appropriations Committee. As a result of the fact that the Senate has not acted on the bill, schools now entering their third month will be faced with a situation where they will have to cut back existing school programs unless the continuing resolution permits the expenditures not at last year's rate or the modest increase recommended by the Appropriations Committee but at the rate which this House endorsed on July 30 when the Joelson amendment to the Labor-HEW appropriations bill was passed by a vote of 293 to 120.

I hope that we in this House will not be intimidated by the threat voiced by the distinguished minority leader to the effect that President Nixon may veto this bill. These threats have been made before and this House should never submit to them.

Some of those who are opposing the Cohelan amendment on grounds of economy did not hesitate to add more than a billion dollars to the defense budget and oppose any reduction of wasteful projects in that budget. Day after day, we in this House witness the twisted priorities of the Nixon administration begin given effect. At least in this most important area of education. Let the voice of this House state loud and clear that ours is a solid commitment to better education for the children of our country.

The CHAIRMAN. The Chair recognizes the gentleman from Minnesota (Mr. QUIE).

Mr. QUIE. Mr. Chairman, it is a real temptation to support the committee's resolution because it provides $79 million less for impacted aid than does the Cohelan amendment. I see that the committee resolution increases many of the titles of the act that had been cut down by the budget. Titles III and V–A of NDEA and titles II and III of ESEA will be funded at the same level as the Cohelan amendment. But even with that, and the arguments that have been made, I am still going to vote for the Cohelan amendment.

The reason is that vocational education was seriously hurt by this continuing resolution; it was under Public Law 91–33, and it would be under this resolution.

I see this continuing resolution provides $248 million for vocational education. The administration asked for $279 million. But a $100 million increase is necessary just for vocational education to put basic grants at the level they were last year, because of the amendments approved in the 1968 act.

Vocational education needs this additional money now.

The CHAIRMAN. The time of the gentleman from Minnesota has expired.

The Chair recognizes the gentleman from Missouri (Mr. RANDALL).

Mr. RANDALL. Mr. Chairman, I support the Cohelan amendment because along with many other Members of this body I was a cosponsor of a continuing resolution which called for ratification of the Joelson amendment.

Today we seem to be in about the same place we were the latter part of July, when the Joelson amendment was made a part of H.R. 13111.

Arguments have been advanced today that if we want to do the orderly thing, we will support the Appropriations Committee and try to defeat this amendment whose purpose is to restore sorely needed funds for education. We are told, moreover, what we do here today may not be concurred in by the other body. Finally, we listened to the minority leader who seemed to indicate that the President would not be happy with us if we passed the Cohelan amendment, and could be so unhappy that if the funds were appropriated they might not be used.

Well, Mr. Chairman, the House of Representatives should act, rather than react. We should not chart our course in anticipation of what the other body might do or react to what may be indicated they intend to do or not do. The truth is they have done nothing on this subject since we passed H.R. 13111 in July. Their inaction should not be an example for us to follow. Similarly, whatever the Chief Executive does is his choice and option. The House of Representatives should not react to guesses or surmises what the President might do.

About 1 year ago, during the campaign, Mr. Nixon said repeatedly that funds for education deserve the highest priority. It would be unfair to charge that there is a difference between candidate Nixon and President Nixon. I have every reason to believe that he will expend the moneys appropriated for education, and I will continue to believe that until his actions prove otherwise.

Essentially we are right back where we were before the adoption of the Joelson amendment, that is whether each of us is willing to stand up to be counted as for the proposition that money spent for education is the very best investment that can be made in the future of America. At the time of the Joelson amendment we said an authorization bill amounted to a commitment, and that to fail to appropriate sufficiently meant we were reneging on a promise we had made and shattering an image we had created.

Mr. Chairman, the issue is even clearer today because when we acted in July we redeemed ourselves of the commitment. We provided funds for education. True, as of now, no appropriation bill has been enacted into law. We must have a continuing resolution because we are without an appropriation bill. But today if we become inconsistent and do a right-about-face on the Cohelan amendment which is the October edition of the Joelson amendment, then we do worse than renege. We raise doubts about the integrity of this body.

All we are talking about today is the same thing we were discussing the latter part of July, and that is the fact that there is nothing in the entire field of human endeavor more important than education when all is said and done, we are spending for the education of our youth, which is our most important resource.

If I may make reference once again to our President, when he was a candidate just a year ago he said:

> Jefferson knew that the destiny of America was inseparable from education—that in the fulfillment of the promise of this new nation education would be the key . . . Education, long the key to opportunity and fulfillment, is today also the key to survival.

According to today's edition of the morning paper published in Washington, those were the words Mr. Nixon used a year ago when he was a candidate. According to that same source, he went on to pledge that—

> My administration will be second to none in its concern for education.

I just cannot believe that those who quote the President that he will not spend the money if appropriated are right. I believe he will redeem the pledge that he made 1 year ago. Once again, let me repeat that this House should not react to what the President may do or not react to what the other body may do. We should be consistent, keep faith with what we did in July, and demonstrate the integrity of this body by passing the Cohelan amendment.

The CHAIRMAN. The Chair recognizes the gentleman from Missouri (Mr. BURLISON).

Mr. BURLISON of Missouri. Mr. Chairman, I have heard the debate, all of it, and I have felt that there is one important point that has not been mentioned, and I arise at this time in order to raise that point. I do so by asking the rhetorical question of what would happen if the Cohelan amendment became law, and then the Senate failed to adopt the Joelson amendment?

I say that would produce utter chaos for the educators in this country.

I further want to say, Mr. Chairman, that I voted for the Joelson amendment to H.R. 13111. I am voting against the Cohelan amendment. I think my vote for the Joelson amendment was the more responsible one at that time, and that my vote against the Cohelan amendment is the more responsible one now.

The CHAIRMAN. The Chair recognizes the gentleman from Montana (Mr. MELCHER).

CONGRESS IS TARDY TO SCHOOL

Mr. MELCHER. Mr. Chairman, two groups are not impressed by Congress' orderly process when it results in slowness, delay, and dilly-dallying in getting

bills processed and finally passed. One of those groups are the taxpayers when failure to act promptly and effectively ups the costs for local taxpayers. The other group that is not impressed is the schoolchildren and the schools. The school bells rang in late August and early September, and from that time right up until now, Congress has been marked "tardy."

Mr. Chairman, much of the "taxpayers revolt" which we know to be simmering and brewing in this Nation today is a consequence of rapidly increasing local property taxes.

Education, which is now largely dependent on local taxes, is almost always the first to be diminished and deprived when local taxes become excessive. This leads to the loss of elections to authorize essential bond issues and special levies for the schools.

When the Federal Government refuses to pay its share of education costs—and this is the cruel reality right now—the rising costs of education have to be made up at the local and State levels, or our children's education suffers accordingly.

In the State of Montana, the Federal Government paid $15.5 million of our educational costs last year. This year, it was proposed to cut even this inadequate Federal share by $3 million instead of increasing it at least enough to cover growth requirements to say nothing of putting it up to what the Federal partner ought to be paying.

It was proposed that the greatest tax collector of them all, Uncle Sam, cheat on his already inadequate disbursals to the schools for the children of the Nation.

I am proud of the fact that the House of Representatives voted to help more on the cost of education in all the States when it approved the Joelson amendment to the education bill. It is apparent the Senate will accept this, and possibly add even more. But we are continuing to let Uncle Sam cheat the schools by disbursing funds on the basis of a repudiated budget proposal.

We have the opportunity here today to make sure that the old 3-way partnership basis of educational support—Federal, State, and local—is quickly restored back toward its former basis and Uncle Sam again starts paying a somewhat fairer share.

The distress of high tax burdens—especially at the local levels which must make up whatever costs the other partners do not bear—can only be lessened and fairly distributed by spreading school costs equitably among all types of taxpayers and levels of government.

We have a long way to go to spread those costs equitably among all the partners, but approval of the amendment offered to the continuing resolution will at least start us in the right direction.

The CHAIRMAN. The Chair recognizes the gentlewoman from Oregon (Mrs. GREEN.)

Mrs. GREEN of Oregon. Mr. Chairman, the debate today has been based on the contention that what we do on the 30-day continuing resolution is going to affect the quality of education in every school in the United States for the entire year and for all the years to come. This just is not making sense. We cannot do in 30 days what needs to be done in education.

The question is the orderly procedure. Certainly a vote to support the committee is not a rejection of the appropriation bill level of spending with the Joelson amendment, because the Committee on Appropriations of the House will go to conference with the committee from the other body on appropriations, and if my observations are correct the Senate is going to appropriate a larger sum than the House has. They have always done so. So that the minimum that we would have on a continuing basis over 12 months, or over 2 years, the minimum would be the House figure.

So I am urging support of the committee.

The CHAIRMAN. The Chair recognizes the gentleman from Iowa (Mr. SMITH).

Mr. SMITH of Iowa. Mr. Chairman, most of the talk this afternoon has been directed at trying to prove what nobody has denied, and that is that education needs money.

There has also been an attempt to assume that adopting the Cohelan amendment will get them that money, and that just simply is not so. For example, the Oakland school today does not get a check each week from the Federal Government for title I or any of these other programs; they may get two or three checks a year and the department is not going to make a final allocation based upon a continuing resolution.

Oakland will not receive an additional check just because we pass the Cohelan amendment. It simply does not work that way. They are not going to get 10 cents additional. Besides, the difference between the amount in the regular continuing resolution and the Cohelan amendment is less than 1 percent of the local district's school budget and could not be as meaningful as alleged to have it 30 days sooner.

We prefunded 90 percent of the money last year and the principal attention should now be on getting the Senate to enact the bill we passed last July so we will know how much we are going to go above the administration's budget request.

The CHAIRMAN. The Chair recognizes the gentleman from North Carolina (Mr. JONAS).

Mr. JONAS. Mr. Chairman, neither school districts nor educational institutions are going to get any money under the Cohelan amendment. The only possible way that they will get any money over and above what they had last year is if the bill the House passed on July 31 is enacted into law.

The gentleman from California says that he has about 50 Members of the other body signed up to support the Cohelan approach.

Let me respectfully suggest to him that if they will turn their guns on their colleagues in the other body and get that body to act on the appropriation bill that has been sitting over there since the first of August—that would be the best way to get additional funds for education. We are just engaging in an exercise in futility if we adopt the Cohelan amendment to the committee action. This should be obvious when I remind you that the continuing resolution, whether it remains in its original form or is modified by the Cohelan amendment, will expire on November 30, 1969. It will not be effective after that date, whereas if all of you who support the Cohelan amendment, in this House and also in the other body, would spend your energy trying to persuade the other body to expedite action on the House-passed bill, much more could be accomplished for the cause of education.

Mr. PRICE of Texas. Mr. Chairman, I commend the gentleman from California (Mr. COHELAN) on his introduction of a joint resolution to fund the Office of Education at 1970 levels, and to make the funds available immediately. I, along with 265 other House Members cosponsored this resolution originally, and I urge the rest of my colleagues to support the proposal.

I believe, and I know that the other sponsors of this nonpartisan effort feel likewise, that the educational needs of our Nation cannot be deferred pending full congressional approval of the HEW appropriations bill for fiscal year 1970. As you will recall, in the latter part of last July, the House passed the HEW appropriations bill. Regrettably, the Senate has not completed action on the measure. As a consequence, the continuing appropriations resolution being considered today funds the Office of Education at 1969 levels, rather than at the higher level approved by the House last July.

In my view, the extra money called for the gentleman's amendment is desperately needed to enable our national educational system to keep pace with the social and technological changes in society. In school districts throughout the Nation, students do not partake of the increases in the accumulated knowledge of our times; neither do they benefit from technological advancements in the art of teaching.

Our Nation's young need the type of quality education that can enable them to successfully compete in a world that in this past year has witnessed Americans set foot on the moon, and heard reports of the activities of three Russian spacecraft locked together in orbit far above the earth. Our youth must also successfully compete in a world that will grow significantly smaller with the advent of the supersonic transport, for international air travel will become the reality for millions of people that it has been in the past for only a privileged few.

It is fundamental that the ability of our youth to succeed in today's fast-paced world depends, in substantial measure, on the quality of education they receive. Attainment of this quality can only be approached if students have access to well-stocked adequate library facilities, and can benefit from new technical teaching aids such as overhead slide projectors and other modern school equipment.

Books and equipment cost money, money that at the present time simply is not available for education purposes.

This is why the passage of this amendment is so vitally needed.

In perspective, Mr. Chairman, not only does the gentleman's amendment provide much needed funds for our educational system, it also affirms the sense of the Congress that the education of our young is truly one of our highest national priorities. In my opinion, this affirmation is one that Congress needs to make at this time.

Mr. MINSHALL. Mr. Chairman, I strongly favor the Cohelan amendment to assure our Nation's educators and schoolchildren that the pledge we made in July when we restored more than $1 billion in educational funds was not an empty gesture.

The Cohelan amendment would bring funds in the continuing resolution to that amount by adding $649 million.

Our school systems are on the edge of chaos because of the unprecedented delay by this Congress in approving appropriation bills. We have a commitment to the schools of this country which we must honor if they are to fulfill their academic obligations. If the amendment is not adopted vocational education and several other areas of education will grind to a halt.

The House must take the initiative in adding these badly needed funds to the resolution before us. Amply funded education programs are among the most urgent requirements in America today. We must not jeopardize them because of a legislative logjam on Capitol Hill. On July 29, 293 of us—and I was one who responded with an emphatic "aye"—voted for the Joelson amendment. Let us abide by that decision, let us reaffirm our determination to do all that we can to bring about a standard of excellence in our school systems, by supporting the Cohelan amendment today.

The CHAIRMAN. All time for debate on the amendment and all amendments thereto has expired.

The question is on the amendment offered by the gentleman from California (Mr. COHELAN).

Mr. COHELAN. Mr. Chairman, I demand tellers.

Tellers were ordered, and the Chairman appointed as tellers Mr. COHELAN and Mr. MAHON.

The Committee divided, and the tellers reported that there were—ayes 177, noes 124.

So the amendment was agreed to.

Mr. MINISH. Mr. Chairman, as a cosponsor of House Joint Resolution 924, I am pleased to note the passage of the Cohelan amendment to House Joint Resolution 966. Both my resolution and Mr. COHELAN's amendment provide that the U.S. Office of Education be permitted to spend during fiscal year 1970 at the level of the House-passed HEW appropriation bill.

In his budget for the current fiscal year, the President proposed a $400 million cut in education funds below last year's appropriation. Wisely, the House on July 31 increased education money by approximately $1 billion over the administration's paltry request. The Senate has yet to consider the House measure and is unlikely to act for a number of weeks. In the meantime, we are already almost 2 months into the current academic year and school systems and school children the country over are experiencing great difficulty in maintaining many worthwhile programs at adequate levels.

Among the important programs which will benefit if the spending level contained in the House-passed education bill prevails are library assistance, guidance and counseling services, vocational education, school equipment, higher education construction, NDEA student loan programs, and title I of the Elementary and Secondary Education Act. In my own State of New Jersey passage of the Cohelan amendment will result in an increase of almost $10 million in education funds over the committee resolution, and an increase of more than $25 million over the administration's request.

Mr. Chairman, the President has indicated his intention not to spend any education funds appropriated by Congress above his budget request. This disregard for the will of the Congress and the welfare of American children must not go unanswered. In order to meet our critical educational needs, it is essential that the progressive education stance of the House as expressed on July 31, and as reiterated today, be promptly confirmed by the Senate.

The Federal Government has committed itself to the development of excellence in education. Lack of leadership on the part of the present administration is no reason to abandon this vital commitment. The Congress must continue to assert itself in support of education.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

SEC. 102. Appropriations and funds made available and authority granted pursuant to this joint resolution shall remain available until (a) enactment into law of an appropriation for any project or activity provided for in this joint resolution, or (b) enactment of the applicable appropriation Act by both Houses without any provision for such project or activity, or (c) November 30, 1969, whichever first occurs.

Mr. BOW. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, if I may have the attention of the Members, I would like to explain what the motion to recommit will be. The motion to recommit is one which was in the committee, and was defeated by a tie vote. It will be to recommit with instructions to report the bill back to the House changing the date from "November 30, 1969" and inserting therefor "5 days subsequent to the sine die adjournment of the first session of the 91st Congress".

Mr. Chairman, we have gone through a long session here today, on this continuing resolution, with a great deal of debate and controversy, but everyone admits we will probably have to come back with another resolution if we make it November 30.

Under this amendment, whatever we vote out here today will continue until the sine die adjournment. The reason I have used the "5 days subsequent to sine die adjournment" is to give the President the opportunity to sign bills before this continuing resolution expires.

Mr. Chairman, we have had these continuing resolutions time and time again, and we have had to come in and debate them. I believe many of us will be saying Merry Christmas to each other here before we adjourn, and I would hope the committee would support this motion so we can take care of other necessary business. We have set aside some very important business today, and we have taken almost the whole day to debate this continuing resolution. If we make this a resolution to continue to sine die adjournment, it will not be necessary for us to come in and interrupt other important legislation. We ought to be working here day and night and Saturdays and finish this session of Congress. I just cannot see any reason why we should continue to have to bring in continuing resolutions when we know the one we are passing today will not be sufficient, and we will have to bring in another.

Mr. Chairman, I urge the House to adopt this motion to recommit, so the continuing resolution will go until 5 days subsequent to the sine die adjournment.

Mr. MAHON. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I feel committed to oppose the change in the date for the expiration of the continuing resolution. I believe we ought to stay by the November 30 date. This would tend to give the House and the other body a continuous awareness of the necessity of moving as rapidly as possible, on the various authorization and appropriation bills. Congress has a very considerable backlog of necessary work to attend to.

Moreover, Mr. Chairman, the other body has not acted on this continuing resolution, and the other body may very well accept the continuing resolution as proposed by the Committee on Appropriations.

While there are few who appreciate the agony of a controversy on a continuing resolution on which continued operation of much of the Government depends, it is a healthy exercise, in that we discuss the status of the fiscal affairs of the Government and the necessity for dispatching the important business of the Government.

Mr. ALBERT. Mr. Chairman, will the gentleman yield?

Mr. MAHON. I yield to my friend, the distinguished majority leader.

Mr. ALBERT. Mr. Chairman, I urge that the House not adopt the motion to recommit.

Here are my reasons: We have no assurance, if this matter goes to conference and comes back, that it will not come back without the Cohelan amendment stricken out but with a time limitation that will carry us on past adjournment.

What we want is to get, as soon as possible—what all of those of you who voted for the Cohelan amendment wanted—is implementation of the Joelson amendment, which is identical to the Cohelan amendment.

But if the other body were to insist or agree to go with the House on an extension beyond 30 days but at the same time refuse to go with the House on the Cohelan amendment, those Members who supported the Cohelan amendment would be defeating the very purposes of their action.

I trust that the motion to recommit will be defeated.

Mr. MAHON. Mr. Chairman, I hope that when the motion comes on recommital we will not change the date. I realize there are good arguments for tieing the expiration of the resolution to the sine die adjournment date, or 5 days thereafter. But this question of the amendment just adopted is not over. We do not know what the other body may do. The House has worked its will and shown its preference for the reenactment of the so-called Joelson amendment. For the time being, we have to abide with this position. It will be up to the other body to work its will as we have worked ours.

Mr. SISK. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, without getting into the merits or demerits of the action the House has just taken, I believe we have had a demonstration this afternoon of the chaos we are gradually getting ourselves into under present procedures.

As chairman of the Legislative Reorganization Committee I merely wish to say that we hope to have for the Members a copy of our proposed legislation within the next few days. We are proposing some changes in connection with the fiscal year.

I recognize this is somewhat controversial, but we have already held the hearings in which we have heard from the Administration, the Bureau of the Budget, in which they have come out very strongly in support of a change to a calendar year.

I recognize that there are some Members of this House who have other ideas. I am merely taking a few months of time to invite any who have strong feelings on this matter to make those views known to our committee.

I know the distinguished gentleman from Texas (Mr. MAHON) will be appearing, I assume shortly, before our committee to express certain views.

I should like to say in fairness to the Appropriations Committee, the distinguished chairman, the gentleman from Texas (Mr. MAHON) and the distinguished ranking minority member, the gentleman from Ohio (Mr. BOW), and all members of that great committee, that inherent in what we are proposing is no criticism of the Appropriations Committee per se. We recognize in many instances the great problem has been that authorizations have simply not proceeded in line with the needs in order for the Appropriations Committee to know exactly what would be authorized.

I might say that the committee has under consideration some language changes in the rule which would set some deadline at some point at which legislative committees would have to have completed their work in connection with the authorizing legislation or automatically set into motion a procedure whereby the Appropriations Committee could proceed without being subject to a point of order to appropriate for ongoing programs.

These are all matters that I think are terribly necessary if we are going to improve the procedures which are so essential if we are to do our work. I simply felt that it was timely to call this to the House's attention because of the demonstration this afternoon of the difficulty which we run into primarily because of the procedures, which are geting worse and worse as time goes on.

Mr. ICHORD. Mr. Chairman, will the gentleman yield?

Mr. SISK. I yield to the gentleman from Missouri.

Mr. ICHORD. Mr. Chairman, I generally concur in the idea of going to appropriations on a calendar year basis, but would it not be a little awkward in this field, I ask the gentleman from California, insofar as appropriations for school purposes are concerned, in that the schools generally start in September and go until June?

Mr. SISK. Let me say to my good friend from Missouri we recognize this cannot be done overnight. In fact, the proposal outlined by the Bureau of the Budget representing the administration position would call for about a 4-year period of changeover. Of course, we recognize a good many of the States today are on a fiscal year which is different from that of the Federal Government. In others there are some that are still on a calendar year basis. Of course, the point is that they would have to gear their operations and get them in line as far as Federal grants and Federal programs are concerned. For example, it was suggested that if the State goes on a fiscal year basis, the funds made available to the States on a variety of programs, education or otherwise, might be used within their fiscal year and would give them an additional 6 months leadtime. As I say, we are simply considering various approaches. As I said, my point at this moment is that we have seen a demonstration today where we need to do something in this area. Maybe this is not the answer, but our committee would welcome the advice of any Member on the subject.

Mr. OTTINGER. Mr. Chairman, will the gentleman yield?

Mr. SISK. I yield to the gentleman from New York.

Mr. OTTINGER. Mr. Chairman, I wish to congratulate the gentleman. We have seen time and time again over a good many years that it was difficult to get the authorizations and appropriations completed by the end of the fiscal year. In this particular example that we have here dealing with education, this is only one of a great many where the Government and the agencies that had to deal with these programs cannot plan specifically.

Mr. SISK. I thank the gentleman.

Mr. QUIE. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I heard the colloquy in opposition to the gentleman from Ohio's explanation of his motion to recommit. It is beyond me why anybody who supported the Cohelan amendment would be opposed to the motion to recommit. Since the Cohelan amendment carried on the teller vote, I guess that there is not any question but that it would carry on a record vote. That means we have put this behind us now and we might as well have the continuing resolution until after we adjourn. If the other body influences our conferees so they do not accept the Cohelan amendment or something close to it, all we have to do is reject the conference report and they will go back again. I want to indicate my support of the motion to recommit as explained by the gentleman from Ohio. If the Cohelan amendment had not been adopted, I would have taken a different point of view, but now it is to our advantage to extend the continuing resolution till 5 days after adjournment.

Mr. COHELAN. Mr. Chairman, will the gentleman yield?

Mr. QUIE. I yield to the gentleman from California.

Mr. COHELAN. I thank the gentleman for yielding.

Mr. Chairman, I would like to say to the Committee of the Whole House on the State of the Union that when this matter came up in the Appropriations Committee—the full committee—I voted to sustain the 30-day item contained in the bill. I think there have been some very good arguments advanced here this afternoon on both sides of the question, but I still hold to the idea that we should stick to the 30 day item, I believe on the basis of the arguments I advanced, that this will encourage the other body to act expeditiously.

Mr. QUIE. I can understand a member of the Appropriations Committee wanting to get along as best he can with the chairman of that committee.

Mr. THOMPSON of New Jersey. Mr. Chairman, will the gentleman yield?

Mr. QUIE. I yield to the gentleman from New Jersey.

Mr. THOMPSON of New Jersey. I, personally, am persuaded that the logic of your argument should prevail and that the sensible procedure that we should follow at this point is to vote for the motion to recommit with the instructions by the gentleman from Ohio, whom I am glad is sitting down because I would not want him to fall down otherwise. I am persuaded and before I talk myself out of it, I thank the gentleman for yielding.

The CHAIRMAN. The time of the gentleman from Minnesota has expired.

The Clerk will read.

The Clerk read as follows:

SEC. 103. Appropriations and funds made available or authority granted pursuant to this joint resolution may be used without regard to the time limitations for submission and approval of apportionments set forth in subsection (d) (2) of section 3679 of the Revised Statutes, as amended, but nothing herein shall be construed to waive any other provision of law governing the apportionment of funds or to permit the use, including the expenditure, of appropriations, funds, or authority in any manner which would contravene the provisions of title IV of the Second Supplemental Appropriation Act, 1969.

SEC. 104. Appropriations made and authority granted pursuant to this joint resolution shall cover all obligations or expenditures incurred for any project or activity during the period for which funds or authority for such project or activity are available under this joint resolution.

SEC. 105. Expenditures made pursuant to this joint resolution shall be charged to the applicable appropriation, fund, or authorization whenever a bill in which such applicable appropriation, fund, or authorization is contained is enacted into law.

SEC. 106. No appropriation or fund made available or authority granted pursuant to

this joint resolution shall be used to initiate or resume any project or activity which was not being conducted during the fiscal year 1969.

SEC. 107. Any appropriation for the fiscal year 1970 required to be apportioned pursuant to section 3679 of the Revised Statutes, as amended, may be apportioned on a basis indicating the need (to the extent any such increases cannot be absorbed within available appropriations) for a supplemental or deficiency estimate of appropriation to the extent necessary to permit payment of pay increases granted pursuant to law to civilian officers and employees and to active and retired military personnel. Each such appropriation shall otherwise be subject to the requirements of section 3679, Revised Statutes, as amended.

SEC. 108. This joint resolution shall take effect November 1, 1969.

Mr. MAHON. Mr. Chairman, I move that the Committee do now rise and report the joint resolution back to the House with an amendment, with the recommendation that the amendment be agreed to and that the joint resolution as amended do pass.

The motion was agreed to.

Accordingly the Committee rose; and the Speaker having resumed the chair (Mr. MILLS), Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the joint resolution (H.J. Res. 966) making further continuing appropriations for the fiscal year 1970, and for other purposes, had directed him to report the joint resolution back to the House with an amendment, with the recommendation that the amendment be agreed to and that the joint resolution as amended do pass.

Mr. MAHON. Mr. Speaker, I move the previous question on the joint resolution and the amendment thereto to final passage.

The previous question was ordered.

The SPEAKER. The question is on the amendment.

The question was taken; and the Speaker announced that the ayes appeared to have it.

Mr. KYL. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were refused.

Mr. KYL. Mr. Speaker, I demand tellers.

Tellers were refused.

So the amendment was agreed to.

The SPEAKER. The question is on the engrossment and third reading of the joint resolution.

The joint resolution was ordered to be engrossed and read a third time, and was read the third time.

MOTION TO RECOMMIT OFFERED BY MR. BOW

Mr. BOW. Mr. Speaker, I offer a motion to recommit.

The SPEAKER. Is the gentleman opposed to the joint resolution?

Mr. BOW. I am, Mr. Speaker.

The SPEAKER. The Clerk will report the motion to recommit.

The Clerk read as follows:

Mr. Bow moves to recommit H.J. Res. 966 to the Committee on Appropriations with instructions to report the same back to the House forthwith, with the following amendment: On page 5, line 16, strike out "November 30, 1969" and insert in lieu thereof "five days subsequent to the sine-die adjournment of the first session of the 91st Congress."

Mr. MAHON. Mr. Speaker, I move the previous question on the motion to recommit.

The previous question was ordered.

The SPEAKER. The question is on the motion to recommit.

The question was taken; and on a division (demanded by Mr. Bow), there were—ayes 137, noes 116.

So the motion to recommit was agreed to.

Mr. MAHON. Mr. Speaker, pursuant to the instructions of the House in the motion to recommit, I report back the joint resolution (H.J. Res. 966) with an amendment.

The SPEAKER. The Clerk will report the amendment.

The Clerk read as follows:

On page 5, line 16, strike out "November 30, 1969" and insert in lieu thereof "five days subsequent to the sine-die adjournment of the first session of the 91st Congress".

The SPEAKER. The question is on the amendment.

The amendment was agreed to.

The SPEAKER. The question is on the engrossment and third reading of the joint resolution.

The joint resolution was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the joint resolution.

The joint resolution was passed.

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. MAHON. Mr. Speaker, I ask unanimous consent that all Members of the House may have 5 legislative days in which to revise and extend their remarks in the body of the RECORD in connection with the consideration of the House Joint Resolution 966.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

FEDERAL COAL MINE HEALTH AND SAFETY ACT OF 1969

Mr. PERKINS. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill (H.R. 13950) to provide for the protection of the health and safety of persons working in the coal mining industry of the United States, and for other purposes.

The SPEAKER. The question is on the motion offered by the gentleman from Kentucky.

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill H.R. 13950, with Mr. STEED in the chair.

The CHAIRMAN. When the Committee rose on yesterday, the Clerk had read through section 1, ending on page 1, line 4. If there are no amendments to that section, the Clerk will read.

The Clerk read as follows:

DECLARATION OF PURPOSE

SEC. 2. Congress declares that—

(a) the first priority and concern of all in the coal mining industry must be the health and safety of its most precious resource—the miner;

(b) the occupationally caused death, illness, or injury of a miner causes grief and suffering, and is a serious impediment to the future growth of this industry;

(c) there is an urgent need to provide more effective means and measures for improving the working conditions and practices in the Nation's coal mines in order to prevent death and serious physical harm, and in order to control the cause of occupational diseases originating in such mines;

(d) the existence of unsafe and unhealthful conditions and practices in such mines cannot be tolerated;

(e) the operators of such mines with the assistance of the miners have the primary responsibility to prevent the existence of such conditions and practices in such mines;

(f) the disruption of production and the loss of income to operators and miners as a result of a coal mine accident or occupationally caused disease unduly impedes and burdens commerce; and

(g) it is the purpose of this Act to provide for the establishment of mandatory health and safety standards and to require that the operators and the miners comply with such standards in carrying out their responsibilities.

DEFINITIONS

SEC. 3. For the purpose of this Act, the term—

(a) "Secretary" means the Secretary of the Interior;

(b) "commerce" means trade, traffic, commerce, transportation, or communication among the several States, or between a place in a State and any place outside thereof, or within the District of Columbia or a possession of the United States, or between points in the same State but through a point outside thereof;

(c) "State" includes a State of the United States, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, American Samoa, Guam, and the Trust Territory of the Pacific Islands;

(d) "operator" means any owner, lessee, or other person who operates, controls, or supervises a coal mine;

(e) "agent" means any person charged with responsibility for the operation of all or part of a coal mine or the supervision of the employees in a coal mine;

(f) "person" means any individual, partnership, association, corporation, firm, subsidiary of a corporation, or other organization;

(g) "miner" means any individual working in a coal mine;

(h) "coal mine" means an area of land and all structures, facilities, machinery, tools, equipment, shafts, slopes, tunnels, excavations, and other property, real or personal, placed upon, under, or above the surface of such land by any person, used or to be used in, or resulting from, the work of extracting in such area bituminous coal, lignite, or anthracite from its natural deposits in the earth by any means or method, and the work of preparing the coal so extracted, and includes custom coal preparation facilities;

(i) "work of preparing the coal" means the breaking, crushing, sizing, cleaning, washing, drying, mixing, storing, and loading of bituminous coal, lignite, or anthracite, and such other work of preparing such coal as is usually done by the operator of the coal mine;

(j) "imminent danger" means the existence of any condition or practice in a coal mine which could reasonably be expected to cause death or serious physical harm before such condition or practice can be abated;

(k) "accident" includes a mine explosion,

mine ignition, mine fire, or mine inundation, or injury to, or death of any person;

(l) "inspection" means the period beginning when an authorized representative of the Secretary first enters a coal mine and ending when he leaves the coal mine during or after the coal-producing shift in which he entered; and

(m) "Board" means the Federal Coal Mine Health and Safety Board of Review established by this Act.

MINES SUBJECT TO ACT

SEC. 4. Each coal mine, the products of which enter commerce, or the operations or products of which affect commerce, shall be subject to this Act, and each operator of such mine and every person working in such mine shall comply with the provisions of this Act and the applicable regulations of the Secretary promulgated under this Act.

TITLE I—GENERAL

HEALTH AND SAFETY STANDARDS; REVIEW

SEC. 101. (a) The Secretary shall, in accordance with the procedures set forth in this section, develop, promulgate, and revise, as may be appropriate, mandatory safety standards for the protection of life and the prevention of injuries in a coal mine, and shall, in accordance with the procedures set forth in this section, promulgate the mandatory health standards transmitted to him by the Secretary of Health, Education, and Welfare. No mandatory health or safety standard promulgated under this title shall reduce the protection afforded miners below that afforded by the standards contained in titles II and III of this Act.

(b) In the development of such mandatory safety standards, the Secretary shall consult with the Board, other interested Federal agencies, representatives of States, appropriate representatives of the coal mine operators and miners, other interested persons and organizations, and such advisory committees as he may appoint. In addition to the attainment of the highest degree of safety protection for the miner, other considerations shall be the latest available scientific data in the field, the technical feasibility of the standards, and experience gained under this and other safety statutes.

(c) The Secretary of Health, Education, and Welfare shall, in accordance with the procedures set forth in this section, develop and revise, as may be appropriate, mandatory health standards for the protection of life and the prevention of occupational diseases of coal miners. Such development and revision shall be based upon research, demonstrations, experiments, and such other information as may be appropriate. In the development of mandatory health standards, the Secretary of Health, Education, and Welfare may consult with appropriate representatives of the operators and miners, other interested persons, the States, advisory committees, and, where appropriate, foreign countries. Mandatory health standards which the Secretary of Health, Education, and Welfare develops or revises shall be transmitted to the Secretary, and shall thereupon be published by the Secretary as proposed mandatory health standards.

(d) The Secretary shall publish proposed mandatory health and safety standards in the Federal Register and shall afford interested persons a period of not less than thirty days after publication to submit written data or comments. In the case of mandatory safety standards, except as provided in subsection (e) of this section, the Secretary may, upon the expiration of such period and after consideration of all relevant matter presented, promulgate such standards with such modifications as he may deem appropriate. In the case of mandatory health standards, except as provided in subsection (e) of this section, the Secretary of Health, Education, and Welfare may, upon the expiration of such period and after consideration of all relevant matter presented to the Secretary and transmitted to the Secretary of Health, Education, and Welfare, direct the Secretary to promulgate such standards with such modifications as the Secretary of Health, Education, and Welfare may deem appropriate and the Secretary shall thereupon promulgate such standards.

(e) On or before the last day of any period fixed for the submission of written data or comments under subsection (d) of this section, any interested person may file with the Secretary written objections to a proposed standard, stating the grounds therefore and requesting a public hearing by the Board on such objections. As soon as practicable after the period for filing such objections has expired, the Secretary shall publish in the Federal Register a notice specifying the proposed standards to which objections have been filed and a hearing requested, and shall refer such standards and objections to the Board for review in accordance with subsection (f) of this section.

(f) Promptly after any matter is referred to the Board by the Secretary under subsection (e) of this section, the Board shall issue notice of and hold a public hearing for the purpose of receiving relevant evidence. Within sixty days after completion of the hearing, the Board shall issue a report to the Secretary setting forth findings of fact on such matter and appropriate recommendations thereon and shall make such report public. Upon receipt of such report, in the case of mandatory safety standards, the Secretary may, upon consideration of the Board's findings of fact and recommendations, promulgate the mandatory safety standards with such modifications as he deems appropriate. Upon receipt of such report, in the case of mandatory health standards, the Secretary shall transmit such report to the Secretary of Health, Education, and Welfare who may, upon consideration of the Board's findings of fact and recommendations, direct the Secretary to promulgate the mandatory health standards with such modifications as the Secretary of Health, Education, and Welfare deems appropriate and the Secretary shall thereupon promulgate the mandatory health standards. In any instance in which either Secretary does not adopt the Board's recommendations, he shall publish his reasons therefor.

(g) Any mandatory standard promulgated under this section shall be effective upon publication in the Federal Register unless the Secretary specifies a later date.

(h) Proposed mandatory safety standards for surface coal mines shall be developed and published by the Secretary not later than twelve months after the enactment of this Act.

ADVISORY COMMITTEES

SEC. 102. (a) The Secretary may appoint one or more advisory committees to advise him in carrying out the provisions of this Act. The Secretary shall designate the chairman of each such committee.

(b) Advisory committee members, other than employees of Federal, State, or local governments, shall be, for each day (including travel time) during which they are performing committee business, entitled to receive compensation at rates fixed by the Secretary but not in excess of the maximum rate of pay for grade GS–18 as provided in the General Schedule under section 5332 of title 5 of the United States Code, and shall, notwithstanding the limitations of sections 5703 and 5704 of title 5 of the United States Code, be fully reimbursed for travel, subsistence, and related expenses.

INSPECTIONS AND INVESTIGATIONS

SEC. 103. (a) Authorized representatives of the Secretary shall make frequent inspections and investigations in coal mines each year for the purposes of (1) obtaining, utilizing, and disseminating information relating to health and safety conditions, the causes of accidents, and the causes of diseases and physical impairments originating in such mines, (2) gathering information with respect to health and safety standards, (3) determining whether an imminent danger exists in a coal mine, and (4) determining whether or not there is compliance with the mandatory health and safety standards or with any notice or order issued under this tile. In carrying out the requirements of clauses (3) and (4) of this subsection, no advance notice of an inspection shall be provided the operator of a mine. In carrying out the requirements of clauses (3) and (4) of this subsection in each underground coal mine, such representatives shall make inspections of the entire mine at least four times a year.

(b)(1) For the purpose of making any inspection or investigation under this Act, the Secretary or any authorized representative of the Secretary shall have a right of entry to, upon, or through any coal mine.

(2) The provisions of this Act relating to inspections, investigations, and records shall be available to the Secretary of Health, Education, and Welfare to enable him to carry out his functions and responsibilities under this Act.

(c) For the purpose of carrying out his responsibilities under this Act, including the enforcement thereof, the Secretary may by agreement utilize with or without reimbursement the services, personnel, and facilities of any Federal agency.

(d) For the purpose of making any investigation of any accident or other occurrence relating to health or safety in a coal mine, the Secretary may, after notice, hold public hearings, and may sign and issue subpenas for the attendance and testimony of witnesses and the production of relevant papers, books, and documents, and administer oaths. Witnesses summoned shall be paid the same fees and mileage that are paid witnesses in the courts of the United States. In case of contumacy or refusal to obey a subpena served upon any person under this section, the district court of the United States for any district in which such person is found or resides or transacts business, upon application by the United States and after notice to such person, shall have jurisdiction to issue an order requiring such person to appear and give testimony before the Secretary or to appear and produce documents before the Secretary or both, and any failure to obey such order of the court may be punished by such court as a contempt thereof.

(e) In the event of any accident occurring in a coal mine, the operator shall notify the Secretary thereof and shall take appropriate measures to prevent, to the greatest extent possible, the destruction of any evidence which would assist in investigating the cause or causes thereof. In the event of any accident occurring in a coal mine where rescue and recovery work is necessary, the Secretary or an authorized representative of the Secretary shall take whatever action he deems appropriate to protect the life of any person, and he may, if he deems it appropriate, supervise and direct the rescue and recovery activity in such mine.

(f) In the event of any accident occurring in a coal mine, an authorized representative of the Secretary, when present, may issue such orders as he deems appropriate to insure the safety of any person in the coal mine, and the operator of such mine shall obtain the approval of such representative, in consultation with appropriate State representatives, when feasible, of any plan to recover any person in the mine or to recover the mine or to return affected areas of the mine to normal.

(g) If a miner or an authorized representative, if any, of the miners believes that a violation of a mandatory health or

safety standard exists, or an imminent danger exists, in a mine, he may notify the Secretary or his authorized representative of such violation or danger. Upon receipt of such notification the Secretary or his authorized representative may make a special investigation to determine if such violation or danger exists.

(h) At the commencement of any inspection of a coal mine by an authorized representative of the Secretary, the authorized representative, if any, of the miners at the mine at the time of such inspection shall be given an opportunity to accompany the authorized representative of the Secretary on such inspection.

FINDINGS, NOTICES, AND ORDERS

SEC. 104. (a) If, upon any inspection of a coal mine, an authorized representative of the Secretary finds that an imminent danger exists, such representative shall determine the area throughout which such danger exists, and thereupon shall issue forthwith an order requiring the operator of the mine or his agent to cause immediately all persons, except those referred to in subsection (d) of this section, to be withdrawn from, and to be prohibited from entering, such area until an authorized representative of the Secretary determines that such imminent danger no longer exists.

(b) If, upon any inspection of a coal mine, an authorized representative of the Secretary finds that there has been a violation of any mandatory health or safety standard but the violation has not created an imminent danger, he shall issue a notice fixing a reasonable time for the abatement of the violation. If, upon the expiration of the period of time as originally fixed or subsequently extended, an authorized representative of the Secretary finds that the violation has not been totally abated, and if he also finds that the period of time should not be further extended, he shall find the extent of the area affected by the violation and shall promptly issue an order requiring the operator of such mine or his agent to cause immediately all persons, except those referred to in subsection (d) of this section, to be withdrawn from, and to be prohibited from entering, such area until an authorized representative of the Secretary determines that the violation has been abated.

(c)(1) If, upon the inspection of a coal mine, an authorized representative of the Secretary finds that any mandatory health or safety standard is being violated, and if he also finds that, while the conditions created by such violation do not cause imminent danger, such violation is of such nature as could significantly and substantially constribute to the cause or effect of a mine accident, and if he finds such violation to be caused by an unwarrantable failure of such operator to comply with such mandatory health and safety standards, he shall include such finding in the notice given to the operator under subsection (b) of this section. Within ninety days of the time such notice was given to such operator, the Secretary shall cause such mine to be reinspected to determine if any similar such violation exists in such mine. Such reinspection shall be in addition to any special inspection required under subsection (b) of this section, or section 105. If, during any special inspection relating to such violation or during such reinspection, a representative of the Secretary finds such similar violation does exist, and if he finds such violation to be caused by an unwarrantable failure of such operator to comply with the provisions of the mandatory health or safety standards, he shall forthwith issue an order requiring the operator to cause all persons in the area affected by such violation, except those persons referred to in subsection (d) of this section, to be withdrawn from, and to be debarred from entering, such area until an authorized representative of the Secretary determines that such violation has been abated.

(2) If a withdrawal order with respect to any area in a mine has been issued pursuant to paragraph (1) of this subsection, thereafter a withdrawal order shall promptly be issued by a duly authorized representative of the Secretary who finds upon any following inspection the existence in such mine of violations similar to those that resulted in the issuance of the withdrawal order under paragraph (1) of this subsection until such time as an inspection of such mine discloses no similar violations. Following an inspection of such mine which discloses no similar violations, the provisions of paragraph (1) of this subsection shall again be applicable to that mine.

(d) The following persons shall not be required to be withdrawn from, or prohibited from entering, any area of the coal mine subject to an order issued under this section;

(1) any person whose presence in such area is necessary, in the judgment of the operator, to eliminate the condition described in the order;

(2) any public official whose official duties require him to enter such area;

(3) any representative of the employees of such mine who is, in the judgment of the operator, qualified to make coal mine examinations or who is accompanied by such a person and whose presence in such area is necessary for the investigation of the conditions described in the order; and

(4) any consultant to any of the foregoing.

(e) Notices and orders issued pursuant to this section shall contain a detailed description of the conditions or practices which cause and constitute an imminent danger or a violation of any mandatory health or safety standard and, where appropriate, a description of the area of the coal mine from which persons must be withdrawn and prohibited from entering.

(f) Each notice or order issued under this section shall be given promptly to the operator of the coal mine or his agent by an authorized representative of the Secretary issuing such notice or order, and all such notices and orders shall be in writing and shall be signed by such representative.

(g) A notice or order issued pursuant to this section may be modified or terminated by an authorized representative of the Secretary.

(h)(1) If, upon any inspection of a coal mine, an authorized representative of the Secretary finds (A) that conditions exist therein which have not yet resulted in an imminent danger, (B) that such conditions cannot be effectively abated through the use of existing technology, and (C) that reasonable assurance cannot be provided that the continuance of mining operations under such conditions will not result in an imminent danger, he shall determine the area throughout which such conditions exist, and thereupon issue a notice to the operator of the mine or his agent of such conditions, and shall file a copy thereof, incorporating his findings therein, with the Secretary and with the representative of the miners of such mine, if any. Upon receipt of such copy, the Secretary shall cause such further investigation to be made as he deems appropriate, including an opportunity for the operator or a representative of the miners, if any, to present information relating to such notice.

(2) Upon the conclusion of such investigation and an opportunity for a hearing upon request by any interested party, the Secretary shall make findings of fact, and shall require that either the notice issued under this subsection be canceled, or that an order be issued by such authorized representative of the Secretary requiring the operator to cause all persons in the area affected, except those persons referred to in subsection (d) of this section, to be withdrawn from, and be prohibited from entering, such area until the Secretary, after a hearing affording all interested persons an opportunity to present their views, determines that such conditions have been abated.

(i) If, based upon samples taken and analyzed and recorded pursuant to section 202 (a) of this Act, the applicable health standard established under section 202(b) of this Act is exceeded and thereby violated, the Secretary or his authorized representative shall find a reasonable period of time within which to take corrective action to reduce the average concentration of respirable dust to the miners in the area of the mine in which such standard was exceeded, and shall issue a notice fixing a reasonable time for the abatement of the violation. During such time, the operator of such mine shall cause samples described in section 202 (a) of this Act to be taken of the affected area during each production shift. If, upon the expiration of the period of time as originally fixed or subsequently extended, the Secretary or his authorized representative finds, based upon such samples or upon an inspection, that the violation has not been totally abated, he shall issue a new notice of violation if he finds that such period of time should be further extended. If he finds that such period of time should not be further extended, he shall find the extent of the area affected by the violation and shall promptly issue an order requiring the operator of such mine or his agent to cause immediately all persons, except those referred to in subsection (d) of this section, to be withdrawn from, and to be prohibited from entering, such area until the Secretary or his authorized representative determines through such test procedures conducted in such area as he may require, including production and sampling, that the violation has been abated.

REVIEW BY THE SECRETARY

SEC. 105. (a) An operator notified of an order issued pursuant to section 104 of this title, or any representative of miners in any mine affected by such order or any modification or termination of such order pursuant to section 104(g), may apply to the Secretary for review of the order within thirty days of receipt thereof or within thirty days of its modification or termination. The operator shall send a copy of such application to the representative, if any, of persons working in the affected mine. Upon receipt of such application, the Secretary shall cause such investigation to be made as he deems appropriate. Such investigation shall provide an opportunity for a hearing, at the request of the applicant or a representative of persons working in such mine, to enable the applicant and the representatives of persons working in such mine to present information relating to the issuance and continuance of such order.

(b) Upon receiving the report of such investigation, the Secretary shall make findings of fact, and (1), in the case of an order issued under subsection (a) of section 104 of this title, he shall find whether or not the imminent danger as set out in the order existed at the time of issuance of the order and whether or not the imminent danger existed at the time of the investigation, and (2), in the case of an order issued under subsection (b), (c), or (i) of section 104 of this title, he shall find whether or not there was a violation of any mandatory health or safety standard as described in the order and whether or not such violation had been abated at the time of such investigation, and upon making such findings he shall issue a written decision vacating, affirming, modifying, or terminating the order complained of and incorporate his findings therein.

(c) In view of the urgent need for prompt decision of matters submitted to the Secretary under this section, all actions which the Secretary takes under this section shall be taken as promptly as practicable, consistent with the adequate consideration of the issues involved.

(d) Pending completion of the investigation required by this section, the applicant may file with the Secretary a written request that the Secretary grant temporary relief from any other issued under section 104 of this title, together with a detailed statement giving reasons for granting such relief. The Secretary may issue a decision granting such relief, under such conditions as he may prescribe, only after a hearing in which all parties are given an opportunity to be heard.

FEDERAL COAL MINE HEALTH AND SAFETY BOARD OF REVIEW

SEC. 106. (a) The Federal Coal Mine Health and Safety Board of Review is hereby established. For the purpose of carrying out its functions under sections 107 and 111 of this title, the Board shall be composed of five members, hereafter referred to as "regular members", who shall be appointed by the President, by and with the advice and consent of the Senate.

(b) For the sole purpose of carrying out the review functions set forth in section 101, and for carrying out the provisions of sections 401 and 412 of this Act and matters related thereto, there shall be included on the Board three additional members, hereafter referred to as "additional members", appointed by the President by and with the advice and consent of the Senate, at least one of whom shall have a public health background and the others of whom shall have a background, either by reason of previous training, education, or experience, in coal-mining technology. All additional members shall not have had any interest in, or connections with, the coal-mining industry for at least one year prior to their appointment.

(c) The terms of office of all members of the Board shall be five years, except that (1) the members of the Federal Coal Mine Safety Board of Review established under the Federal Coal Mine Safety Act, as amended, who are in office on the effective date of this Act, shall be regular members of the Board established by this title and their terms shall expire on the dates originally fixed for their expiration, and (2) a vacancy caused by the death, resignation, or removal of such a member prior to the expiration of the term for which he was appointed shall be filled only for the remainder of such unexpired term. A member of the Board may be removed by the President for inefficiency, neglect of duty, or malfeasance in office.

(d) Members of the Board shall be, for each day (including traveltime) during which they are engaged in the business of the Board, entitled to receive compensation at the maximum rate of pay for grade GS–18 as provided in the General Schedule under section 5332 of title 5 of the United States Code, and shall, notwithstanding the limitations of section 5703 and 5704 of title 5 of the United States Code, be fully reimbursed for travel, subsistence, and related expenses.

(e) The regular members of the Board shall consist of one person who by reason of previous training and experience may reasonably be said to represent the viewpoint of operators employing fourteen or fewer employees, one person who by reason of previous training and experience may reasonably be said to represent the viewpoint of operators employing fifteen or more employees, one person who by reason of previous training and experience may reasonably be said to represent the viewpoint of miners in mines employing fourteen or fewer employees, one person who by reason of previous training and experience may reasonably be said to represent the viewpoint of miners in mines employing fifteen or more employees, and one person drawn from the public generally, who shall be Chairman of the Board. The Chairman shall not, within five years from his appointment as a member of the Board, have had a pecuniary interest in, or have been regularly employed or engaged in, the mining of coal, or have regularly represented either coal mine operators or coal mine workers, or have been an officer or employee of the Department of the Interior. Similarly, while he is Chairman of the Board, he shall not have a pecuniary interest in, or be employed or engaged in, the mining of coal, or represent either coal mine operators or coal mine workers, or be an officer or employee of the Department of the Interior.

(f) The principal office of the Board shall be in the District of Columbia. Whenever the Board deems that the convenience of the public or of the parties may be promoted, or delay or expense may be minimized, it may hold hearings or conduct other proceedings at any other place. At the request of the operator of a mine involved in a hearing or proceeding before the Board, or of a representative of miners employed in such a mine, the Board may hold such hearings or conduct such proceedings on an application filed under section 107 of this title at the county seat of the county in which such mine is located or at any place mutually agreed to by the Chairman of the Board and such operator or representative. The Board shall have an official seal which shall be judicially noticed and which shall be preserved in the custody of the Secretary of the Board.

(g) The Board shall, without regard to the civil service laws, appoint and prescribe the duties of the Secretary of the Board and such legal counsel as it deems necessary. Subject to the civil service laws, the Board shall appoint such other employees as it deems necessary in exercising its powers and duties. The compensation of all employees appointed by the Board shall be fixed in accordance with chapter 53 of title 5, United States Code.

(h) For the purpose of carrying out its functions under sections 107 and 111 of this title, official action can be taken only on the affirmative vote of at least three regular members, except that, in any official action involving mines in which no more than fourteen individuals are regularly employed underground, the participation of the small mine operators' representative and small mine workers' representative shall be required, and in any official action involving mines in which more than fourteen individuals are regularly employed underground the participation of the large mine operators' representative and large mine workers' representative shall be required; but a special panel composed of one or more regular members, upon order of the Board, shall conduct any hearing provided for in sections 107 and 111 of this title and submit the transcript of such hearing to the entire Board for its action thereon. Such transcript shall be made available to the parties prior to any final action of the Board. An opportunity to appear before the Board or such panel shall be afforded the parties prior to any final action and the Board may afford the parties an opportunity to submit additional evidence as may be required for a full and true disclosure of the facts.

(i) Every official act of the Board shall be entered of record, and its hearings and records thereof shall be open to the public. The Board shall not make or cause to be made any inspection of a coal mine for the purpose of determining any pending application.

(j) The Board is authorized to make such rules as are necessary for the orderly transaction of its proceedings, which shall provide for adequate notice of hearings to all parties. The existing rules of the Federal Coal Mine Safety Board of Review shall constitute the rules of the Board until superseded or modified by the Board. For purposes of carrying out its functions under sections 107 and 111 of this title, three regular members of the Board shall constitute a quorum, and for carrying out its other functions, five members of the Board shall constitute a quorum.

(k) Any member of the Board may sign and issue subpenas for the attendance and testimony of witnesses and the production of relevant papers, books, and documents, and administer oaths. Witnesses summoned before the Board shall be paid the same fees and mileage that are paid witnesses in the courts of the United States.

(l) The Board may order testimony to be taken by deposition in any proceeding pending before it at any stage of such proceeding. Reasonable notice must first be given in writing by the party or his attorney of record, which notice shall state the name of the witness and the time and place of the taking of his deposition. Any person may be compelled to appear and depose, and to produce books, papers or documents, in the same manner as witnesses may be compelled to appear and testify and produce like documentary evidence before the Board, as provided in subsection (k) of this section. Witnesses whose depositions are taken under this subsection, and the persons taking such depositions, shall be entitled to the same fees as are paid for like services in the courts of the United States.

(m) In the case of contumacy by, or refusal to obey a subpena served upon, any person under this subsection, the Federal district court for any district in which such person is found or resides or transacts business, upon application by the United States, and after notice to such person and hearing, shall have jurisdiction to issue an order requiring such person to appear and give testimony before the Board or to appear and produce domuments before the Board, or both; and any failure to obey such order of the court may be punished by such court as a contempt thereof.

REVIEW BY BOARD

SEC. 107. (a) Within thirty days after receipt of an order made pursuant to subsection (a), (b), (c), (h), or (i) of section 104, an operator may apply to the Board for annulment or revision of such order without seeking its annulment or revision under section 105 of this title. Within thirty days after the receipt of a decision made by the Secretary pursuant to section 105 of this title, an operator may apply to the Board for a review of the decision.

(b) The operator shall be designated as the applicant in such proceeding, and the application filed by him shall recite the order or decision complained of and other facts sufficent to advise the Board and the Secretary of the nature of the proceeding. The Secretary shall be the respondent in such proceeding, and the applicant shall send a copy of such application by registered or certified mail to the respondent and to the representative, if any, of the persons working in the affected mine. Immediately upon the filing of such an application, the Board shall fix the time for a prompt hearing thereof. The Board shall permit any interested person to intervene in such proceedings.

(c)(1) If the application is made to the Board directly from an order issued under section 104 of this title, the Board shall not be bound by any previous findings of fact by any representative of the Secretary, the burden of proof shall be upon the respondent, and evidence relating to the making of the order complained of and other pertinent matters may be offered by the parties to the proceeding.

(2) If the application is made to the Board from a decision issued under section 105 of this title, the record and the decision of the Secretary shall be received in evidence and the findings of the Secretary included in the decision shall constitute a prima facie case for the issuance of the decision complained of and the burden of rebutting such prima facie case shall be upon the applicant, but either party may adduce additional evidence.

(d) Upon conclusion of the hearing, the Board shall find, with respect to the order or

decision, whether or not the alleged imminent danger, violation of a mandatory health or safety standard, or the condition described in section 104(h)(1) existed at the time of issuance of such order and whether or not such danger or such violation existed at the time of filing the application, and shall issue a written decision incorporating such finding therein and affirming, vacating, modifying, or terminating the order or decision issued under section 104 or 105 of this title.

(e) Each decision made by the Board shall show the date on which it is made, and shall bear the signatures of the members of the Board who concur therein. Upon issuance of a decision under this section, the Board shall cause a true copy thereof to be sent by registered or certified mail to all parties and their attorneys of record. The Board shall cause each decision to be entered on its official record, together with any written opinion prepared by any members in support of, or dissenting from, any such decision.

(f) Pending the hearing required by this section for review of an order or decision issued under section 104 or 105 of this title, the applicant before the Board may file with the Board a written request that the Board grant temporary relief from the order or decision, together with a detailed statement giving reasons for granting such relief. The Board may issue a decision granting such relief, under such conditions as it may prescribe, only after a hearing in which all parties are given an opportunity to be heard.

(g) In view of the urgent need for prompt decision of matters submitted to the Board under this section, all actions which the Board takes under this section shall be taken as promptly as practicable, consistent with adequate consideration of the issues involved.

JUDICIAL REVIEW

SEC. 108. (a) Any decision issued by the Board under section 107 of this title shall be subject to judicial review by the United States court of appeals for the circuit in which the affected mine is located, upon the filing in such court within thirty days from the date of such decision of a petition by the Secretary or by the operator aggrieved by the decision praying that the action of the Board be modified or set aside in whole or in part. A copy of the petition shall forthwith be sent by registered or certified mail to the other party and to the Board, and thereupon the Board shall certify and file in such court the record upon which the decision complained of was issued, as provided in section 2112, title 28, United States Code.

(b) The court shall hear such appeal on the record made before the Board. The findings of the Board, if supported by substantial evidence on the record considered as a whole, shall be conclusive. The court may affirm, vacate, or modify any decision or may remand the proceedings to the Board for such further action as it directs.

(c) Upon such conditions as may be required and to the extent necessary to prevent irreparable injury, the court may, after due notice to, and hearing of, the parties to the appeal, issue all necessary and appropriate process grant such other relief as may be appropriate pending final determination of the appeal.

(d) The judgment of the court shall be subject only to review by the Supreme Court of the United States upon certiorari or certification as provided in section 1254 of title 28, United States Code.

(e) The commencement of a proceeding under this section shall not, unless specifically ordered by the court, operate as a stay of the Board's decision.

POSTING OF NOTICES AND ORDERS

SEC. 109 (a) At each coal mine there shall be maintained an office with a conspicuous sign designating it as the office of the mine and a bulletin board at such office or at some conspicuous place near an entrance of the mine, in such manner that notices required by law or regulation to be posted on the mine bulletin board may be posted thereon, be easily visible to all persons desiring to read them, and be protected against damage by weather and against unauthorized removal. A copy of any notice or order required by this title to be given to an operator shall be delivered to the office of the affected mine, and a copy shall be immediately posted on the bulletin board of such mine by the operator or his agent.

(b) The Secretary shall cause a copy of any notice or order required by this title to be given to an operator to be mailed immediately to a duly designated representative of persons working in the affected mine, and to the public official or agency of the State charged with administering State laws, if any, relating to health or safety in such mine. Such notice or order shall be available for public inspection.

(c) In order to insure prompt compliance with any notice or order issued under section 104 of this title, the authorized representative of the Secretary may deliver such notice or order to an agent of the operator and such agent shall immediately take appropriate measures to insure compliance with such notice or order.

(d) Each operator of a coal mine shall file with the Secretary the name and address of such mine and the name and address of the person who controls or operates the mine. Any revisions in such names or addresses shall be promptly filed with the Secretary. Each operator of a coal mine shall designate a responsible official at such mine as the principal officer in charge of health and safety at such mine and such official shall receive a copy of any notice, order, or decision issued under this Act affecting such mine. In any case, where the coal mine is subject to the control of any person not directly involved in the daily operations of the coal mine, there shall be filed with the Secretary the name and address of such person and the name and address of a principal official of such person who shall have overall responsibility for the conduct of an effective health and safety program at any coal mine subject to the control of such person and such official shall receive a copy of any notice, order, or decision issued affecting any such mine. The mere designation of a health or safety official under this subsection shall not be construed as making such official subject to any penalty under this Act.

INJUNCTIONS

SEC. 110. The Secretary may request the Attorney General to institute a civil action for relief, including a permanent or temporary injunction, restraining order, or any other appropriate order, in the district court of the United States for the district in which a coal mine is located or in which the operator of such mine has his principal office, whenever such operator or his agent (a) violates or fails or refuses to comply with any order issued under section 104 of this title or decision issued under this title, or (b) interferes with, hinders, or delays the Secretary or his authorized representative in carrying out the provisions of this Act, or (c) refuses to admit such representative to the mine, or (d) refuses to permit the inspection of the mine, or an accident, injury, or occupational disease occurring in, or connected with, such mine, or (e) refuses to furnish any information or report requested by the Secretary, or (f) refuses to permit access to, and copying of, records. Each court shall have jurisdiction to provide such relief as may be appropriate: *Provided*, That no temporary restraining order shall be issued without notice unless the petition therefor alleges that substantial and irreparable injury to the miners in such mine will be unavoidable and such temporary restraining order shall be effective for no longer than seven days and will become void at the expiration of such period: *Provided further*, That any order issued under this section to enforce an order issued under section 104, unless set aside or modified prior thereto by the district court granting such injunctive relief, shall not be in effect after the completion or final termination of all proceedings for review of such order as provided in this title if such is determined on such review that such order was invalid.

PENALTIES

SEC. 111. (a) The operator of a coal mine in which a violation occurs of a mandatory health or safety standard or who violates any provision of this Act shall by order be assessed a civil penalty by the Secretary which penalty shall not be more than $10,000 for each such violation. Each occurrence of a violation of a mandatory health or safety standard may constitute a separate offense. In determining the amount of the penalty, the Secretary shall consider the operator's history of previous violations, the appropriateness of such penalty to the size of the business of the operator charged, the effect on the operator's ability to continue in business, the gravity of the violation, and the demonstrated good faith of the operator charged in attempting to achieve rapid compliance after notification of a violation. No penalty shall be assessed under this subsection pending the final termination, expiration, or completion of all proceedings, administrative or judicial, for review of an order or decision under this title.

(b) Upon written request made by an operator within thirty days after receipt of an order assessing a penalty under this section, the Board shall afford such operator an opportunity for a hearing and, in accordance with the request determine by decision whether or not a violation did occur or whether the amount of the penalty is warranted or should be compromised.

(c) Upon any failure of an operator to pay a penalty assessed under this section, the Secretary may request the Attorney General to institute a civil action in a district court of the United States for any district in which such person is found or resides or transacts business to collect the penalty, and such court shall have jurisdiction to hear and decide any such action.

(d) Whoever knowingly violates or fails or refuses to comply with any order issued under section 104(a) of this title or any final decision on any other order issued under this title shall, upon conviction, be punished by a fine of not more than $10,000, or by imprisonment for not more than six months, or by both, except that if the conviction is for a violation committed after the first conviction of such person, punishment shall be by a fine of not more than $20,000 or by imprisonment of not more than one year, or by both.

(e) Whenever a corporate operator violates a mandatory health or safety standard of this Act, or violates any provision of this Act, any director, officer, or agent of such corporation who authorized, ordered, or carried out such violation shall be subject to the provisions of subsection (a). Whenever a corporate operator knowingly violates or fails or refuses to comply with any order issued under section 104(a) of this title or any final decision or any other order issued under this title, any director, officer, or agent of such corporation who authorized, ordered, or carried out such violation, failure, or refusal shall be subject to the provisions of subsection (d).

(f) Whoever knowingly makes any false statements or representations in any application, records, reports, plans, or other documents filed or required to be maintained in accordance with this Act or any mandatory health or safety standard of this Act

or any order issued under this Act shall upon conviction, be punished by a fine of not more than $10,000, or by imprisonment for not more than six months, or both.

ENTITLEMENT OF MINERS

SEC. 112. (a) If a mine or portion of a mine is closed by an order issued under section 104, all miners working during the shift when such order was issued who are idled by such order shall be entitled to full compensation by the operator at their regular rates of pay for the period they are idled, but for not more than the balance of such shift. If such order is not terminated prior to the next working shift, all miners on that shift who are idled by such order shall be entitled to full compensation by the operator at their regular rates of pay for the period they are idled, but for not more than four hours of such shift. Whenever an operator violates or fails or refuses to comply with an order issued under section 104, all miners employed at the affected mine who would be withdrawn or prevented from entering such mine or portion thereof as a result of such order shall be entitled to full compensation by the operator at their regular rates of pay, in addition to pay received for work performed after such order was issued, for the period beginning when such order was issued and ending when such order is complied with, vacated, or terminated.

(b)(1) Compensation shall be paid under this subsection in respect of total disability of an individual from complicated pneumoconiosis which arose out of or in the course of his employment in a coal mine, and in respect of the death of any individual who, at the time of his death, was suffering from complicated pneumoconiosis which so arose. For purposes of this subsection, if an individual who is suffering or suffered from complicated pneumoconiosis was employed for ten years or more in a coal mine there shall be a rebuttable presumption that his complicated pneumoconiosis arose out of or in the course of such employment, but this sentence shall not be deemed to affect the applicability of the first sentence of this paragraph in the case of claims under this subsection on account of death or total disability of an individual when such individual has not worked for as much as ten years in a coal mine. For purposes of this subsection, any individual who suffers from complicated pneumoconiosis shall be deemed to be totally disabled.

(2)(A) Subject to the provisions of subparagraph (B), compensation shall be paid under this subsection as follows:

(i) In the case of total disability, the disabled individual shall be paid compensation during the disability at a rate equal to 50 per centum of the minimum monthly payment to which a Federal employee in grade GS-2, who is totally disabled is entitled at the time of payment under the provisions of Federal law relating to Federal employees' compensation (section 8112, title 5, United States Code).

(ii) In the case of death, compensation shall be paid to the widow at the rate the deceased individual would receive such compensation if he were totally disabled.

(iii) In the case of an individual entitled to compensation under clause (i) or (ii) of this subparagraph who has one or more dependents, his compensation shall be increased at the rate of 50 per centum of the compensation to which he is so entitled under clause (i) or (ii) of this subparagraph if such individual has one dependent, 75 per centum if such individual has two dependents, and 100 per centum if such individual has three dependents.

(B) Notwithstanding subparagraph (A), compensation under this paragraph shall be reduced by an amount equal to any payment which the payee receives under the workmen's compensation, unemployment compensation, or disability insurance laws of his State, and the amount by which such payment would be reduced on account of excess earnings under section 203 (b) through (l) of the Social Security Act if the amount paid were a benefit payable under section 202 of such Act.

(3)(A) The Secretary of Labor shall enter into agreements with the Governors of the States under which the State will receive and adjudicate claims under this subsection from any resident of the State and under which compensation will be paid as provided by this subsection from grants made to pay compensation under this subsection. Such Governor shall implement the agreement in such manner as he shall determine will best effectuate the provisions of this subsection. The Governor shall make such reports to the Secretary of Labor, subject to such verification, as may be necessary to assure that Federal grants under this subsection are used for their intended purpose.

(B) The Secretary of Labor shall make grants under this subsection to States with which he has an agreement under subparagraph (A) in the amount necessary to enable them to pay the compensation required by this subsection.

(4) If the Secretary of Labor is unable to enter into an agreement under paragraph (3), or if the Governor of the State requests him to do so, he shall make payments of compensation directly to residents of such State as required by this subsection. The administrative provisions for carrying out the Federal employees' compensation programs which are contained in sections 8121, 8122(b), and 8123 through 8135, title 5, United States Code, shall apply with respect to claims under this paragraph.

(5) No claim under this subsection shall be considered unless it is filed (1) within one year after the date an employed miner received the results of his first chest roentgenogram provided under section 203 of this Act, or, if he did not receive such a chest roentgenogram, the date he was first afforded an opportunity to do so under such section, or (2) in the case of any other claimant, within three years from the date of enactment of this Act, or, in the case of a claimant who is a widow, within one year after the death of her husband or within three years from the date of enactment of this Act, whichever is the later. Payment of compensation under this subsection shall commence with the date the claim is filed.

(6) No compensation shall be paid under this subsection to the residents of any State which, after the date of enactment of this Act, reduces the benefits payable to persons eligible to receive compensation under this subsection, under its State laws which are applicable to its general work force with regard to workmen's compensation, unemployment compensation, or disability insurance.

(7) For purposes of this subsection—

(A) The term "coal mine" includes only underground coal mines.

(B) The term "complicated pneumoconiosis" means an advanced stage of a chronic coal dust disease of the lung which (i) when diagnosed by chest roentgenogram, yields one or more large opacities (greater than one centimeter in diameter) and would be classified in category A, B, or C in the International Classification of Radiographs of the Pneumoconioses by the International Labor Organization, (ii) when diagnosed by biopsy or autopsy, yields massive lesions in the lung, (iii) when diagnosis is made by other means, would be a condition which could reasonably be expected to yield results described in clause (i) or (ii) if diagnosis had been made in a manner described in clause (i) or (ii).

(C) The term "dependent" means a wife or child who is a dependent as that term is defined for purposes of section 8110, title 5, United States Code.

(D) The term "widow" means the wife living with or dependent for support on the decedent at the time of his death, or living apart for reasonable cause or because of his desertion, who has not remarried.

REPORTS

SEC. 113. (a) All accidents, including unintentional roof falls (except in any abandoned panels or in areas which are inaccessible or unsafe for inspections), shall be investigated by the operator or his agent to determine the cause and the means of preventing a recurrence. Records of such accidents, roof falls, and investigations shall be kept and the information shall be made available to the Secretary or his authorized representative and the appropriate State agency. Such records shall be open for inspection by interested persons. Such records shall include man-hours worked and shall be reported for periods determined by the Secretary, but at least annually.

(b) Every operator of a coal mine and his agent shall (1) establish and maintain, in addition to such records as are specifically required by this Act, such records, and (2) make such reports and provide such information, as the Secretary may reasonably require from time to time to enable him to perform his functions under this Act. The Secretary is authorized to compile, analyze, and publish, either in summary or detailed form, such reports or information so obtained. Except to the extent otherwise specifically provided by this Act, all records information, reports, findings, notices, orders, or decisions required or issued pursuant to or under this Act may be published from time to time and released to any interested person, and shall be made available for public inspection.

Mr. PERKINS (during the reading). Mr. Chairman, I ask unanimous consent that title I be considered as read, printed in the RECORD, and open to amendment at any point. That is to line 12, page 44.

The CHAIRMAN. Is there objection to the request of the gentleman from Kentucky?

There was no objection.

AMENDMENTS OFFERED BY MR. PERKINS

Mr. PERKINS. Mr. Chairman, I offer amendments.

The Clerk read as follows:

Amendments offered by Mr. PERKINS: On page 5, strike out lines 5 and 6, and insert the following:

"(m) 'Panel' means the Interim Compliance Panel established by this Act."

On page 5, after line 13, insert the following:

"INTERIM COMPLIANCE PANEL

"SEC. 5. (a) There is hereby established the Interim Compliance Panel, which shall be composed of five members as follows:

"(1) Assistant Secretary of Labor for Labor Standards, Department of Labor, or his delegate;

"(2) Director of the Bureau of Standards, Department of Commerce, or his delegate;

"(3) Administrator of Consumer Protection and Environmental Health Service, Department of Health, Education, and Welfare, or his delegate;

"(4) Director of the Bureau of Mines, Department of the Interior, or his delegate; and

"(5) Director of the National Science Foundation, or his delegate.

"(b) Members of the Panel shall serve without compensation in addition to that received in their regular employment, but shall be entitled to reimbursement for travel, subsistence, and other necessary expenses incurred by them in the performance of duties vested in the Panel.

"(c) Notwithstanding any other provision of law, the Secretary of Health, Education,

and Welfare, Secretary of Commerce, the Secretary of Labor, and the Secretary of the Interior shall, upon request of the Panel, provide the Panel such personnel and other assistance as the Panel determines necessary to enable it to carry out its functions under this Act.

"(d) Three members of the Panel shall constitute a quorum for doing business. All decisions of the Panel shall be by majority vote. The chairman of the Panel shall be selected by the members from among the membership thereof.

"(e) The Panel is authorized to appoint as many hearing examiners as are necessary for proceedings required to be conducted in accordance with the provisions of this Act. The provisions applicable to hearing examiners appointed under section 3105 of title 5 of the United States Code shall be applicable to hearing examiners appointed pursuant to this subsection.

"(f)(1) It shall be the function of the Panel to carry out the duties imposed on it pursuant to sections 202 and 305 of this Act and to provide an opportunity for a hearing, after notice, at the request of an operator of the affected mine or the representative of the miners of such mine. Any operator or representative of miners aggrieved by a final decision of the Panel under this subsection may file a petition for review of such decision under section 106 of this Act. The provisions of this section shall terminate upon completion of the Panel's functions as set forth under sections 202 and 305 of this Act. Any hearing held pursuant to this subsection shall be of record and the Panel shall make findings of fact and shall issue a written decision incorporating its findings therein in accordance with section 554 of title 5 of the United States Code.

"(2) The Panel shall make an annual report, in writing, to the Secretary for transmittal by him to the Congress concerning the achievement of its purposes, and any other relevant information (including any recommendations) which it deems appropriate."

On page 6, line 4, strike "the Board, other".

On page 8, line 3, strike "by the Board".

On page 8, line 7, change the comma to a period and strike out all thereafter through the period on line 9.

On page 8, line 10, strike all through page 9, line 6, and substitute the following:

"(f) Promptly after any such notice is published in the Federal Register by the Secretary under subsection (e) of this section, the Secretary, in the case of mandatory safety standards, or the Secretary of Health, Education, and Welfare, in the case of mandatory health standards, shall issue notice of, and hold a public hearing for the purpose of receiving relevant evidence. Within sixty days after completion of the hearings, the Secretary who held the hearing shall make findings of fact which shall be public. In the case of mandatory safety standards, the Secretary may promulgate such standards with such modifications as he deems appropriate. In the case of mandatory health standards, the Secretary of Health, Education, and Welfare may direct the Secretary to promulgate the mandatory health standards with such modifications as the Secretary of Health, Education, and Welfare deems appropriate and the Secretary shall thereupon promulgate the mandatory health standards. In the event the Secretary or the Secretary of Health, Education, and Welfare determines that a proposed mandatory standard should not be promulgated or should be modified, he shall within a reasonable time publish his reasons for his determination."

On page 19, line 20, insert "(1)" after "(a)".

On page 20, after line 10, insert the following:

"(2) The operator and the representative of the miners shall be given written notice of the time and place of the hearing at least five days prior to the hearing. Any such hearing shall be of record and shall be subject to section 554 of title 5 of the United States Code."

Beginning with line 15 on page 21, strike out everything down through line 24 on page 27.

And remember the sections which follow accordingly.

Beginning with line 1 on page 28, strike out everything down through line 19 on page 30.

And remember the sections which follow accordingly.

Beginning with page 30, line 21, strike all through page 31, line 14, and substitute the following:

"SEC. 108. (a) Any decision issued by the Panel under section 5 or the Secretary under section 105 of this Act shall be subject to judicial review by the United States court of appeals for the circuit in which the affected mine is located, upon the filing in such court within thirty days from the date of such decision of a petition by the operator or a representative of the miners aggrieved by the decision praying that the decision be modified or set aside in whole or in part. A copy of the petition shall forthwith be sent by registered or certified mail to the other party and to the Secretary or the Panel as appropriate, and thereupon the Secretary or the Panel, as appropriate, shall certify and file in such court the record upon which the decision complained of was issued, as provided in section 2112, title 28, United States Code.

"(b) The Court shall hear such petition on the record made before the Secretary or the Panel, as appropriate. The findings of the Secretary or the Panel, as appropriate, if supported by substantial evidence on the record considered as a whole, shall be conclusive. The court may affirm, vacate, or modify any such decision or may remand the proceedings to the Secretary or the Panel, as appropriate, for such further action as it may direct."

On page 31, line 18, after "appeal" insert the following: "from a decision of the Secretary or the Panel, as appropriate, except a decision from an order issued under section 104(a) of this title,".

On page 32, line 2, strike out "Board's" and insert "Secretary's or Panel's".

On page 36, line 3, strike out "Board" and insert "Secretary".

On page 44, line 25, strike out "sections 105, 107, and 108 of".

On page 46, in lines 13 and 16, strike out "Secretary" and insert "Panel".

On page 47, in lines 5 and 8, strike out "Secretary" and insert "Panel".

On page 48, in lines 10 and 14, strike out "Board" and insert "Secretary of Health, Education, and Welfare".

On page 49, line 9, strike out ", the Board,".

On page 51, lines 22 and 23, strike "sections 105, 107, and 108 of".

On page 72, line 15, strike out "Secretary" and insert "Panel".

On page 72, lines 16 and 19, strike out "he" and insert "it".

On page 73, lines 8, 11, and 23, strike out "Secretary" and insert "Panel".

On page 73, lines 10 and 13, strike out "he" and insert "it".

On page 106, line 5, strike all through line 7, and substitute the following:

"SEC. 401. (a) The Secretary and the Secretary of Health, Education, and Welfare, as appropriate, shall conduct such studies, research, experiments, and demonstrations as may be appropriate."

On page 108, strike out lines 2, 3, 4, and 5 and insert the following: "tion (a), the Secretary shall distribute funds available to him under this section as equally as practicable between himself and the Secretary of Health, Education, and Welfare. Activities under this sec-".

On page 108, beginning in line 13, strike out "Such Secretaries shall consult and cooperate with the Board on specific projects and programs."

On page 108, line 24, strike out "Board" and insert "Secretary".

On page 109, in line 1, strike out "Board" and insert "Secretary", and strike out "it" and insert "him".

On page 109, line 2, after "sufficient" insert "for the Secretary of Health, Education, and Welfare".

On page 109, line 4, strike out "it" and insert "he".

On page 109, line 5, strike out "it" and insert "he".

On page 109, in line 7, strike out "Board" and insert "Secretary", and strike out "it" and insert "him".

On page 109, line 11, strike out "Board" and insert "Secretary".

On page 109, line 16, strike out "Board" and insert "Secretary".

On page 109, line 18, strike out "it" and insert "him and the Secretary of Health, Education, and Welfare".

On Page 109, line 20, strike out "Board" and insert "Secretary", and strike out "it" and insert "him and the Secretary of Health, Education, and Welfare".

On page 109, line 22, strike out "Board" and insert "Secretary".

On page 114, line 22, strike out "The" and insert "Except as otherwise provided in this Act, the".

On page 117, line 8, strike out "Board" and insert "Secretary".

On page 117, line 15, strike out "Board" and insert "Secretary".

On page 117, line 16, strike "its" and insert "his".

Mr. PERKINS (during the reading). Mr. Chairman, I ask unanimous consent that further reading of the amendments be dispensed with, that they be considered as read and printed in the RECORD, and that the amendments be considered en bloc, they are conforming amendments that run into other titles of the bill.

Mr. HALL. Mr. Chairman, I will be constrained to object to that unless there is some explanation about what at least the first amendment is and at least the constitution of the panel as read by the Clerk.

Mr. PERKINS. Mr. Chairman, I withdraw my unanimous-consent request. Let the Clerk read the amendments.

The CHAIRMAN. The Clerk will read.

The Clerk proceeded to read the amendments.

Mr. ERLENBORN (during the reading). Mr. Chairman, I ask unanimous consent that further reading of the amendments be dispensed with and that the amendments be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Illinois?

Mr. HALL. Mr. Chairman, reserving the right to object, I have had the chance now to see this particular amendment and I understand that it has been previously agreed to.

However, Mr. Chairman, I want to state that this damages the representative process when in this body we do as we did last week and have six amendments that are considered read and printed in the RECORD and accepted and passed without time for the individual Member to know the substance and with utterly no discussion.

In this case I believe it is all right, but I should like to serve notice that we cannot legislate and provide evidence of the House working its will under such tactics, so in the future I shall object unless there is either an explanation or the amendment is read.

Mr. Chairman, I withdraw my reservation.

The CHAIRMAN. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. KYL. Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count.

Sixty-eight Members are present, not a quorum. The Clerk will call the roll.

Mr. PERKINS. Mr. Chairman, I move that the Committee do now rise.

The motion was agreed to.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. STEED, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 13950) to provide for the protection of the health and safety of persons working in the coal mining industry of the United States, and for other purposes, had come to no resolution thereon.

PERMISSION FOR COMMITTEE ON THE JUDICIARY OR ANY SUBCOMMITTEE THEREOF TO SIT DURING GENERAL DEBATE TOMORROW

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the Committee on the Judiciary or any subcommittee thereof, may sit during general debate tomorrow.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

Mr. GERALD R. FORD. Mr. Speaker, reserving the right to object, and I do not intend to object, it is my understanding that this has been cleared with the ranking minority member and that two subcommittees will be considering legislation involving bail reform on the one hand and the judgeship bill on the other hand.

Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

A VIETNAM WIDOW WRITES ABOUT THE MORATORIUM

(Mr. RIVERS asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. RIVERS. Mr. Speaker, I think the Members of this House will be interested to know how one Vietnam war widow feels about the so-called "Day of Moratorium" which was conducted on October 15 and the "March of the Dead" on November 13 and 14. I am, therefore, including as part of my remarks a letter I received from Mrs. David P. Gibson. The letter speaks for itself and requires no further comment from me.

I sincerely urge all Members of the House to read this noble woman's letter:

LAMBERTVILLE, MICH.,
October 10, 1969.

Hon. L. MENDEL RIVERS,
Washington, D.C.

DEAR MR. RIVERS: I am writing to ask a favor. I understand that in the forthcoming anti-war October 15th "Day of Moratorium" and the November 13th–14th "March of the Dead" (to be held in Washington) that "these people," these pacifiers, these malcontents, these groups, and, yes, even some members of our Congress are going to carry on placards, are going to publicize, are going to have read into the Congressional Record the names of our soldiers killed in Vietnam. They are going to use these precious names to justify and support their position on Vietnam which ranges from rightful conscientious objection, to pacifism, to cowardice, to Communism, to treason, and even to support the Hanoi regime.

Well, I know an Infantryman who fought and died in Vietnam; he didn't fight because he was a warmonger or a hired assassin; he was fighting, and, yes, killing for the South Vietnamese people—he was fighting to protect them. He was killed a little over two years ago—and our soldiers are still desperately needed there. Only last week AP had a news photo of a Vietnamese family having to evacuate an area because our Marines were pulling out. No, the South Vietnamese are not yet ready to handle the war—maybe to really make them strong we might just have to win it for them.

This infantryman (one of the 40,000+ Vietnam war casualties), myself (his widow), and his six children feel a great love and sorrow for the families of South Vietnam. How could we leave the South Vietnamese people—if we would, *that* would be the tragedy of the Vietnam war.

I feel it is a terrible injustice to my husband and the cause he fought for (as a soldier, as an American, as a gentleman) that "these people" will carry his name, publicize his name, and have it read into the Congressional Record for purposes so contradictory to what he sincerely felt himself.

If there is a way that his name can be rescinded from "their" lists, I would appreciate your kind assistance. If not, may I say thank you for your magnanimous support of the United States soldier, his dependents, and his survivors.

With great admiration and kindest regards,

Sincerely,

MRS. DAVID P. GIBSON.
CATHERINE (8 years).
DAVID II (7 years).
ELIZABETH (7 years).
JOHN (6 years).
PETER (4 years).
JENNIFER (2 years).

On behalf of Capt. David P. Gibson. U.S. Infantry, April 8, 1967, An Lao, South Vietnam.

Read that letter. You may want to think about it.

RELEASE OF A "SUPPRESSED" REPORT

(Mr. HECHLER of West Virginia asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. HECHLER of West Virginia. Mr. Speaker, one of the real difficulties which advocates of stronger coal mine health and safety protection always confront is that the monopoly of facts is in the hands of a small, select group of people. In a colloquy yesterday, I pointed out that the Bureau of Mines down through the years has been production oriented in its approach to coal mine health and safety, rather than employee oriented. All of us—every Member of this body—is concerned with coal mine safety. Yet our effectiveness is limited by the monopoly on facts. I believe these facts should be made available.

This is why I was very concerned that a study recently completed by the Bureau of Mines on how to reduce the amount of coal dust at the face of a mine was being kept from congressional and public view. I think it is unconscionable while legislation to limit coal dust is being debated that factual information should be withheld. Accordingly, I sent a telegram to the President late yesterday afternoon respectfully requesting that the Bureau of Mines study be released for consideration by this House when it debates the coal mine health and safety bill. I am gratified to report that I received a telephone call from Bryce Harlow's office indicating the report would indeed be released.

What this report demonstrates is that by the use of high-speed power exhaust fans at the face of a coal mine, it is indeed possible to reduce sharply and dramatically the amount of coal dust. I believe this report proves that if anything the coal dust standards and goals, and the timetable for achieving them, is very modest. So I hope there will be no tears shed over technological possibility or economic feasibility and we get our eye back on the main ball of how to protect the health and safety of the individual worker as a top priority. Finally, I trust that we have no more cases of suppressing information needed directly by Congress in making its legislative decisions.

The report follows:

THE EFFECT OF VENTILATION ON RESPIRABLE COAL MINE DUST

Recent experiments by the Bureau of Mines have indicated that increasing the ventilation rate and controlling the air flow pattern across the face would result in lower concentrations of respirable dust. This concept was also in accordance with the theory of small dust particle behavior and air motion.

To demonstrate the effectiveness of control ventilation, high pressure axial flow fans have been used in three mines, the Pittsburgh, Sewickley, and Pocohontas Seams. By maintaining air velocities between 70 and 100 feet per minute across the coal face, it was demonstrated that significant reductions in the concentration of respirable dust could be attained. In the mine in the Pittsburgh Seam, the average dust concentration was reduced from 5.72 to 2.56 mg/m³ or a reduction of 65 percent. In the Sewickley Seam the mine had existing dust control procedures somewhat better than that normally encountered in coal mines. Here it was possible to reduce the dust concentration from 3.0 to 0.66 mg/m³ or a reduction of 78 percent. In the latter case, however, there had been some reduction in production between the baseline experiment and the control experiment. However, when a correction for production deficiencies is made, the dust concentration would still be less than 1 mg/m³.

In the Pocohontas Seam a dramatic reduction was not attained. This particular seam is very friable and dust control is known to be a difficult task. Additionally, the incom-

ing air was badly contaminated. However, under these adverse circumstances, it was possible to reduce the average dust concentration from 5.6 mg/m³ to 3.5 mg/m³.

Further studies are being planned and executed in other coal mines and the Bureau of Mines is purchasing an additional axial flow fan for experimental purposes.

Based on these limited studies, it would appear that it should be possible after further experience in mines using controlled ventilation, to reduce the respirable dust concentration to a value of 3 mg/m³ and, in time, in certain mines to an even lower value. These calculations were based on the production rate of the mines. In the case of the Pittsburgh Seam experiment, production was approximately 500 tons per shift. In the other two seams, the production rate was approximately 200 tons per shift. It has not been possible as yet to study the effect of increased production on dust concentrations while maintaining the desired air flow across the face.

It is evident that before the results summarized herein can be generally applied, it will be necessary to develop equipment not now available to the industry, permit industry time to set up production facilities to manufacture this equipment, and to assure its distribution throughout the industry. More important, time is required to develop skills on the part of operators of mining machines and similar equipment which they do not now possess. We have found that one of the most sensitive factors in attaining low dust levels is the skill and attitude of the machine operator. In short, the best known technology is not a match for a poorly operated machine.

AMERICAN WOMEN MADE HOSTAGE

(Mr. RARICK asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. RARICK. Mr. Speaker, last week the Communist Premier of North Vietnam sent a telegram to his "Dear American Friends" wishing them success in their fall offensive against the American people.

Today we learn from one of his "dear American friends," New York attorney William Kuntzler, that the wives, mothers, and relatives of prisoners of war must deal through known Communists and subversives here at home as intermediaries with the enemy to even learn whether or not their men are held captive in North Vietnam.

The wives, mothers, and relatives of those missing men have already been told by the Communist negotiators in Paris that they must compromise their loyalty by participating in demonstrations in order to be given any consideration.

It is preposterous to believe that the American people are going to sit back in silence and tolerate the women of our fighting men placed in so cruel a dilemma. In order to aid the men to whom they are devoted, these desperate women would be compelled to ransom them by becoming unwilling tools of enemy propaganda.

Not only are our men held by Hanoi as hostages, but because we have shamefully abandoned them there, we also find their wives and mothers made hostage to Hanoi's Fifth Column in our own country.

When treason prospers traitors become heroes.

How long, America, how long?

I ask that my speech include local news releases and the Washington Report prepared by the American Security Council which identifies, by name, known Communists and other subversives aiding Hanoi in the United States.

[From the Washington Post, Oct. 28, 1969]

HANOI SAID TO PROMISE POW DATA

(By A. D. Horne)

North Vietnam has promised to give an American antiwar group the names of all U.S. prisoners it holds, the chief defense counsel at the Chicago riot conspiracy trial announced yesterday.

Attorney William M. Kunstler of New York said the New Mobilization Committee to End the War in Vietnam would begin to receive the names and "possibly other pertinent information" about the prisoners as soon as it had set up an office and staff to pass them on to the prisoners' relatives.

Kunstler, who flew to Paris over the weekend for a meeting with a North Vietnamese delegate to the peace talks, said at a Chicago news conference that he also was promised "a regular flow of mail" from the prisoners.

This mail, Kunstler said in a telephone interview, would be routed to addresses by the Mobilization office. The handling of relatives' mail to the prisoners was not discussed in his 2-hour meeting with Xuan Oanh, he said.

Oanh, a middle-rank member of the Hanoi delegation, has handled many of its public contacts, including meetings this fall with more than 20 wives of U.S. prisoners. The wives were seeking word on whether their husbands were alive.

Kunstler said the North Vietnamese were insistent that anyone who did not want to get prisoners' names and other information publicly could get it privately.

The attorney said the Mobilization Committee would meet next week in Chicago to decide on the staffing and location of the new office, and that one of its leaders would then go to Paris "to start the flow" of information.

All names will be provided, Kunstler said Canh told him, "but maybe not at once."

David T. Dellinger, one of the Chicago defendants, said details of the new operation would be announced at a peace rally here on Nov. 15. Oanh had asked to see Dellinger and co-defendant Rennie Davis, but U.S. District Judge Julius J. Hoffman denied both men permission to leave the country and Kunstler went instead.

Dellinger called the North Vietnamese promise "a major friendly act," "a peace feeler" and "an attempt . . . to establish better relations with Washington."

The State Department reserved comment. Earlier in the day, the Defense Department had issued a statement calling it "indefensible" for North Vietnam to delay release of the prisoners' names.

The Pentagon lists 413 identified prisoners in North Vietnam; 918 others are carried as missing in Southeast Asia. About half the missing men are estimated to be prisoners in North Vietnam, making a total of 800 to 900 held there.

Both the State and Defense Departments repeatedly have urged Hanoi to make public a full list of men held, and to comply with the 1949 Geneva conventions to permit free flow of mail and inspections of prison camps by the International Committee of the Red Cross.

U.S. officials estimate that over the past five years letters have been received from only 110 of the prisoners, at a rate of two or three per year from those 110.

North Vietnamese spokesmen have denied any restrictions on the mail flow. However, Kunstler said the prisoners had been allowed to write only "on certain specified holidays," and that Oanh had promised a "much more regular flow of mail."

Kunstler said the information to be given the Mobilization might cover the prisoners' health.

U.S. officials noted that Oanh also had promised the prisoners' wives information about their husbands, but that no family had reported receiving any.

In Paris, where Ambassador Henry Cabot Lodge has raised the prisoner issue at several sessions of the peace talks, the U.S. delegation has been told that wives can write the North Vietnamese delegation for information.

The officials suggested that this new promise, made through the U.S. peace movement, was evidence that Hanoi was "feeling the heat" on the prisoner issue. But they indicated the administration would welcome any information on the prisoners, and would make no move to interfere.

Sen. ———, meanwhile said Congress should make clear to Hanoi that continued mistreatment of American prisoners can only produce "a stiffened U.S. attitude toward possible negotiations or withdrawals" from Vietnam. He urged Congress to endorse an International Red Cross resolution calling on all nations to abide by the Geneva Convention on the treatment of prisoners of war.

———

[From the Washington Report, Oct. 21, 1969]

MOBILIZATION FOR SURRENDER

(By William K. Lambie, Jr., administrative director)

As protests against the war in Vietnam rise across the country, Americans should become aware of the origins of these protests.

During the late Spring of 1969, a group of approximately 30 radical leaders of anti-war organizations issued a Call to a National Anti-War Conference to be held in Cleveland, Ohio, July 4–5, 1969. The Call was initiated for the most part by individuals associated with the National Mobilization Committee to End the War in Vietnam (MOBE), an organization which has functioned as a coalition for numerous anti-war groups operating throughout the country. Included among those persons who endorsed the Conference Call were such MOBE leaders as David Dellinger, Robert Greenblatt, Donald Kalish, Sidney Lens, Sidney Peck and Maxwell Primack.

Functioning as the lineal descendant of A. J. Muste's November 8 Mobilization Committee for Peace in Vietnam, MOBE has a three-year history involving violence and civil disobedience. MOBE sponsored the October 21–22, 1967 demonstrations in Washington, D.C., during which time repeated attempts were made to close down the Pentagon. It also jointly planned and executed the disruption of the 1968 Democratic Party National Convention held in Chicago, and sponsored the demonstrations in the Nation's Capital on January 18–20, 1969 in protest over the inauguration of President Nixon.

In a determined effort to revive and strengthen agitational protest activities against U.S. military involvement in Vietnam, MOBE-oriented initiators of the Cleveland Conference believed that a more extensive formation of MOBE was required in order to establish an effective anti-war program. According to the published Call, the purpose of the Conference was to "broaden and unify the anti-war forces in this country and to plan co-ordinated national anti-war actions for the fall." The Conference was hosted by a MOBE-affiliated organization called the Cleveland Area Peace Action Council (CAPAC), a coordinating body of several dozen anti-war groups in Cleveland, in cooperation with the University Circle Teach-In Committee at Case Western Reserve University. The meetings were held

during the entire two-day period at the University's Strosacker Auditorium. Publicity for the Conference was arranged by several organizations including the Student Mobilization Committee to End the War in Vietnam, a group dominated by the Trotskyist Socialist Workers Party.

The Conference was attended by approximately 900 persons, many of whom were delegates from anti-war groups comprising individuals identified in sworn testimony as Communists, well-known Communist sympathizers and radical pacifists in their leadership. Among the more notorious organizations represented at the Conference, in addition to MOBE and CAPAC, were the Communist Party, U.S.A., W.E.B. DuBois Clubs of America, National Lawyers Guild, Chicago Peace Council, Southern California Peace Action Council, Veterans for Peace in Vietnam, Socialist Workers Party, Young Socialist Alliance, Student Mobilization Committee to End the war in Vietnam, Youth Against War and Fascism, Fifth Avenue Vietnam Peace Parade Committee, Women's Strike for Peace, and the Students for a Democratic Society. There were also in attendance persons representing so-called "GI underground newspapers" wh[illegible]h are devoted to disseminating anti-war propaganda and to discrediting the U.S. Armed Forces.

A Steering Committee of about 20 to 30 members formed the ruling clique at the Conference. In effect, the Steering Committee was a self-appointed group composed mostly of Communists and radical pacifists with pro-Communist leanings who have participated in MOBE action projects in varying degrees. Members of the Steering Committee with Communist backgrounds included the following: Arnold Johnson, Public Relations Director and legislative representative of the Communist Party, U.S.A. (CPUSA); Irving Sarnoff, who has served as a member of the District Council, Southern California CPUSA; Sidney M. Peck, a former State Committeeman, Wisconsin CPUSA; Dorothy Hayes of the Chicago Branch, Women's International League For Peace and Freedom, who has been identified in sworn testimony in 1965 as a Communist Party member; Sidney Lens (Sidney Okun), leader of the now defunct Revolutionary Workers League; and Fred Halstead, 1968 presidential candidate of the Socialist Workers Party. Moreover, Steering Committee member David Dellinger, MOBE Chairman, declared in a May 1963 speech: "I am a commnuist, but I am not the Soviet-type communist."

The first day of activity was mainly devoted to speeches by MOBE officials and representatives of various groups. Among those who participated in the deliberations on July 4, 1969, were Jerry Gordon, Chairman, Cleveland Area Peace Action Council; Sidney Peck, MOBE Co-Chairman; Irving Sarnoff, Dellinger, LeRoy Wolins, leader of the Chicago branch, Veterans for Peace in Vietnam; Stewart Meacham, Peace Secretary, American Friends Service Committee; Mark W. Rudd, National Secretary, Students for a Democratic Society (SDS); Bill Ayers, SDS Education Secretary; Arnold Johnson, of the CPUSA; Jack Spiegel, once a Communist Party candidate for Congress in Illinois; David Hawk, Co-Coordinator, Vietnam Moratorium Committee; Douglas Dowd, New University Conference; and several persons representing Trotskyist organizations. In addition to Peck, Sarnoff, and Johnson, Wolins and Spiegel have been identified as members of the Communist Party.

There were a number of other individuals attending the Conference, in addition to those previously identified, who have been closely linked with activities of the Communist Party, U.S.A. or its front apparatuses. Some of these persons were Phil Bart, newly appointed Chairman, Ohio CPUSA; Jay Schaffner, W.E.B. DuBois Clubs of America; Charles Wilson of Chicago; Ishmael Flory, Afro-American Heritage Association; Gene Tournour, National Secretary, W.E.B. DuBois Clubs of America; and Sylvia Kushner, leader of the Chicago Peace Council.

The Conference was well represented by a number of functionaries of the Socialist Workers Party (SWP) and its youth arm, Young Socialist Alliance (YSA). It is noteworthy that the Conference itself was marked by periods of dissension. At the outset of the Conference, it became apparent that the majority of those in attendance were affiliated with numerous anti-war groups operating under the domination of the Trotskyist SWP or YSA.

There were two principal issues at the Conference which were vigorously debated with respect to the nature of Fall anti-war demonstrations. First, the SWP essentially held that a Fall anti-war action should comprise only a massive, legal as well as peaceful march on Washington, with the sole demand of immediate withdrawal of the U.S. Armed Forces from Vietnam. This proposal brought about a split in the Steering Committee; however, it was defeated. David Dellinger and Douglas Dowd presented the majority proposal which called for the Steering Committee's support of a "Washington action" project together with the endorsement of the scheduled "Chicago action" originally planned by SDS for September 27, 1969. Interestingly, the SDS project extended the "Washington action" demand beyond troop withdrawals and advocated civil disobedience as a necessary part of the demonstrations.

Secondly, the other main source of disagreement which occurred at the Conference involved a proposal by SDS National Secretary Mark Rudd to plan the Fall anti-war actions to center around the Marxist-Leninist theme of an "anti-imperialist struggle." The SDS proposal was disapproved by the majority of the delegates who took the position that the Fall demonstrations should concern only the issue of the Vietnam War.

During part of the second and final day of the Conference, the delegates and observers attended workshop sessions which were devoted to the following topics in connection with proposed demonstration tactics: "November Washington Action," "September Chicago Action," "September Washington Action," "August 17 Summer White House Action," "October 15th Vietnam Moratorium," "GI's and Vets," and "Third World."

The plenary session reconvened during the afternoon of July 5, 1969 at which time the Steering Committee introduced a "majority-minority" resolution for approval. The Communist-oriented Guardian of July 12, 1969 stated that the resolution was "vague" and gave "support" to "all factions and covered up all political differences. The resolution said next to nothing about the Chicago demonstration except that negotiations would be held. The unity resolution was accepted with little discussion." The Conference resolution agreed to endorse or assist in organizing a series of anti-Vietnam war action projects commencing during the month of August and terminating with the November 15, 1969 demonstration in Washington, D.C.

The Conference resolution specifically adopted the following actions:

(1) Support a mass march on President Nixon's Summer White House at San Clemente, California on August 17, 1969.

(2) Endorse an enlarged "reading of the war dead" demonstration in Washington, D.C. in early September 1969.

(3) Support plans of the Vietnam Moratorium Committee for a "moratorium on campuses" on October 15, 1969.

(4) Support the September 27, 1969 demonstration in Chicago sponsored by SDS in opposition to the Vietnam War and to protest the trial of "The Conspiracy" scheduled to commence on that day.

(5) Support a "broad mass legal" demonstration around the White House in Washington, D.C. on November 15, 1969 which will include a march and rally in other areas of the city. An associated demonstration will be planned for the same date on the West Coast.

The Conference agreed to form a bicameral organization to effectively launch the Chicago and Washington actions. Two Co-Chairmen and two project directors were designated to be responsible for the Chicago demonstration slated for September 27, 1969. They were: Sidney Lens and Douglas Dowd, Co-Chairmen; and Renard (Rennie) C. Davis and Sylvia Kushner, Project Directors. With respect to the Washington action scheduled for November 15, 1969, the Conference selected Sidney Peck and Stewart Meacham to administer that project: Fay Knopp and Abe Bloom were to be Project Directors. In an effort to develop both the Chicago and Washington actions in a related manner, David Dellinger was selected by the Cleveland Conference to be a liaison coordinator between both proposed demonstrations.

The Conference claimed that it selected a "new, broadly-based" National Steering Committee of approximately 30 individuals to "implement the program of action." Prior to the adjourning, the Steering Committee adopted a new name for the organization which was to be responsible for planning and directing the Fall demonstrations. It was designated the New Mobilization Committee To End the War in Vietnam. However, in actuality, the MOBE-oriented Steering Committee composed of key MOBE officials, simply decided to drop the name National Mobilization Committee and substitute a new but similar title. Therefore, the New MOBE succeeded the "old" National MOBE with the leadership of the latter remaining virtually intact. The New MOBE has characterized itself as a "new anti-war coalition" which will "carry forward the work of the old National Mobilization Committee" to "affect the inclusion of a wider social base among GI's, high school students, labor, clergy and third world communities." It simply added overt support from the Communist Party and Socialist Workers Party to create a "united front" approach.

Since the staging of the National Anti-War Conference in Cleveland in July 1969, New MOBE has increased the size of its Steering Committee. It has also instituted a number of organizational changes in planning for the Fall demonstrations. One such change brought about the withdrawal of New MOBE support for the SDS-sponsored Chicago action which was re-scheduled from September 27 to October 11, 1969. New MOBE re-scheduled its Chicago action to October 25, 1969. The reason for this change was the fact that New MOBE leadership felt apprehension over the SDS project which they deemed foolhardy and destined for a collision course with the Chicago Police Department. In effect, New MOBE viewed that its participation in such an "adventurous" project of outright confrontation would be detrimental to both New MOBE and the entire anti-war movement at this time.

An evaluation of the Conference by the Socialist Workers Party provided a revealing insight into the effectiveness of the Conference from a Communist viewpoint. The SWP declared: "The attendance at the conference, the serious political debate, the program mapped out and the spirited note on which the sessions ended offer every promise that the anti-war movement is on the road to one of the biggest things this country has ever seen."

The distinguished Senators and Congressmen, TV commentators, newsmen, columnists, professors and others who have described the Vietnam Moratorium as "responsible dissent" have, in fact, lent Moratorium whatever "responsibility" it has. In most cases, they have acted from the laudable desire for peace but without first check-

ing the facts. They have failed to ask the key question, "What kind of peace?"

North Vietnam's Prime Minister, Pham Van Dong, has no illusions. He knew precisely what he was saying when he addressed his letter in support of the Moratorium to his "Dear American Friends."

STUDENT MOBILIZATION COMMITTEE TO END THE WAR IN VIETNAM

(Mr. ICHORD asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ICHORD. Mr. Speaker, one of the most active organizations in behalf of the fall offensive which included the Vietnam moratorium, the November marches and strikes, and other demonstrations and disruptions which are planned has been the Student Mobilization Committee—SMC. SMC is the student counterpart of the New Mobilization Committee Against the War in Vietnam—MOBE. The New Mobilization Committee has substantially the same membership as the old mobilization committee which was headed by Dellinger, Hayden, and Davis. As would be expected, SMC is represented on the steering committee of MOBE in at least two instances. And it has apparently begun to fill the political vacuum on college and high school campuses this year left by the factional breakup of the Students for a Democratic Society.

An article entitled "Student Group Backs All War Protests" which appeared on page A–8 of the "Washington Post" of October 21, 1969, contained comments of SMC Executive Secretary Carol Lipman who estimated that more than 1,500 SMC chapters have already been established on campuses in all 50 States. According to this article, Lynn Glixon, SMC regional organizer, stated that SMC chapters are active on most of the major college campuses and at 45 high schools and junior high schools in the Washington, D.C. area. She further stated that organization has begun even in elementary schools and specifically mentioned that a SMC chapter is in the process of being formed at the Ben W. Church Elementary School in the District of Columbia.

The SMC has called for a "national student strike" on November 14, 1969, to "show there is massive student solidarity against the war." This action is planned as a buildup to a major antiwar demonstration planned for November 15, 1969, in Washington, D.C. Local colleges, universities, and high schools are being subjected to organizing campaigns and some school administrators have even provided time and space for meetings. These campaigns are centered on "freedom of speech and expression" and sold as an extension of the "public discontent" with the policies of the present administration toward the war in Vietnam.

Many students and their parents question the activities and motives of the SMC but find it difficult to combat the glib assertions of the organizers. Perhaps a look at the background of some of the principal SMC activists appearing locally would prove helpful. Carol Lipman and Danny Rosenshine from New York City and Don Gurewitz from Cleveland are presently in the Washington, D.C., area specifically to organize SMC activities.

Carol Lipman is national executive secretary of the SMC, which has its national headquarters in New York City. Local offices are maintained at 1029 Vermont Avenue NW. During 1968 she served as editor of Young Socialist, a monthly publication of the Young Socialist Alliance—YSA. The YSA is the youth affiliate of the Socialist Workers Party, a Trotskyist Communist splinter group which has been cited by the Attorney General as subversive. She has worked for YSA in Boston, Chicago, Detroit, and New York City before coming to Washington, D.C. Having held national officer positions with YSA, she would also be a member of the parent Socialist Workers Party—SWP. She is also a member of the steering committee of MOBE.

Danny Rosenshine has likewise been active for several years with YSA in Detroit, Cleveland, and New York City before coming to Washington, D.C. He presently serves on a full-time basis as YSA national organizer, having previously been national field secretary. He traveled to Cuba in 1960 with a group sponsored by the Fair Play for Cuba Committee. In 1962 he attended the Soviet-dominated eighth World Youth Festival in Helsinki, Finland, and subsequently toured the Soviet Union. In early 1969 he returned from spending several weeks in Cuba. The Militant, published by SWP, issue of March 21, 1969, carried an article captioned "Forty Campus Dates Set for Speaker on Cuba," listing speaking engagements arranged for Rosenshine. His speeches predictably praised the Cuban brand of communism as practiced under Fidel Castro and at the same time condemned the U.S. Government. In late 1968 he was on a speaking tour of New Jersey, New York, and Connecticut, also advertised in The Militant. His topic at that time was "From Student Revolt to Socialist Revolution."

Don Burewitz grew up in the Washington, D.C., area but has been residing in the Cleveland area attending school in recent years. He has been active in the antiwar movement, served as leader of the SMC in Cleveland, and also participated in the affairs of the YSA and SWP. In addition to serving as a national organizer for the SMC in its recruiting campaign in the Washington area, Gurewitz is also serving on the Washington Action Committee of the New Mobilization Committee To End the War in Vietnam, which is coordinating the demonstration scheduled for November 15, 1969, in Washington, D.C.

All prominent SMC leaders have a similar background of activities and membership in the YSA and SWP.

Lipman, Rosenshine, and Gurewitz have all written articles for The Militant and Young Socialist. Both Rosenshine and Lipman have served on the editorial board of Young Socialist. The September 1969 issue of "Young Socialist" contains a lengthy article entitled "YSA Program for the Campus Revolt," proclaimed a statement of the National Executive Committee of YSA. A poster-type counterfold contains a likeness of "Che" Guevarra and the slogan "Smash Capital Now." Other articles include "Where Is America Going?" by Ernest Mandel, a leading European Trotskyist revolutionary who spoke at dozens of U.S. college campuses on a tour last fall.

The June 27, 1969, issue of "The Militant" contains an article by Charles Bolduc, national chairman, YSA, entitled "Why Revolutionaries Belong in YSA." This article makes the point that YSA supports the Cuban revolution; the struggle for socialist democracy in Eastern Europe; the antiwar movement; the black liberation struggle and the revolutionary nature of revolution for socialism in the United States and other advanced capitalist countries.

The Militant regularly carries recruiting ads for YSA under such headings as "Fan the Flames of Discontent—Join YSA."

Consideration of the foregoing development raises several questions. Is SMC promoting political dissent and protest, or revolution? Is the action proposed and organized by SMC an affirmation of the political system of this Nation, or designed to further the aims and objectives of those who would destroy this Nation? Should the activities be condoned as legitimate expression of the attitudes of the youth of this country, or condemned as the workings of a disciplined cadre of revolutionaries seeking to deceive American youth? Is SMC, controlled as it obviously is by YSA, seeking merely to exercise freedom of political expression, or is SMC actually seeking to destroy the political system?

Students, parents, and faculty at our local schools should answer for themselves the above questions before endorsing or countenancing the activities of SMC.

SECRETARY OF DEFENSE FINDS TIME TO CONCERN HIMSELF WITH HEALTH CARE PROBLEMS

(Mr. MICHEL asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. MICHEL. Mr. Speaker, all of us in the Congress are well aware of the tremendous contributions to the concept of improved health care made by Secretary of Defense Laird while he served as the ranking Republican member of the Subcommittee on Appropriations for the Department of Health, Education, and Welfare.

While he has handled the awesome burdens of the Office of Secretary of Defense with the quality of excellence that characterized his service in the Congress, he still somehow finds time to concern himself with health care problems, as evidenced by his remarks on Sunday, October 26, at the Marshfield Clinic in Marshfield, Wis., and on Monday, October 27, at the dedication of the Marathon County Workshop for the Handicapped at Wausau, Wis.

In his address Secretary Laird pointed out that the Department of Defense is formulating a plan for opening up serv-

ice hospitals to maximize the opportunities to utilize in civilian life the valuable medcal skills possessed by many servcemen. He further states that the Department of Defense is cooperating with other agencies to make the helicopter a flying ambulance here in the United States as it is in Vietnam.

Mr. Speaker, the texts of Secretary Laird's remarks on these two occasions follow:

REMARKS OF HON. MELVIN R. LAIRD, SECRETARY OF DEFENSE, AT MARSHFIELD CLINIC, MARSHFIELD, WIS., OCTOBER 26, 1969

We who look on Marshfield as home are proud of this Clinic. Its development to its present size and scope gives eloquent testimony to the devotion and skill of the many people who have labored to make this clinic a medical facility that ranks with the best in the nation.

Because the Marshfield Clinic and St. Joseph's Hospital are so impressive, I was particularly eager to bring the nation's top health officer, Bob Finch, the Secretary of Health, Education, and Welfare, here today so that he might get a first-hand look at these facilities and hear the success story directly from those responsible for its operation. I wanted him to see that what I've been telling him about the Clinic is not an inflated claim of a hometown booster.

Bob Finch and I are here because we feel deeply the urgency of the problem of improving health care throughout the nation. Despite the miraculous advances that have been made in conquering disease, despite the fact that Americans enjoy a higher standard of medical care than the people of any other nation in the world, the nation faces serious problems in the field of health—particularly in the delivery of health services to people.

One of the greatest bottlenecks is the shortage of skilled personnel. There are not enough doctors, nurses, and other trained personnel to take care of today's needs, and the outlook for tomorrow is grimmer.

I feel the Defense Department can make an important contribution toward easing this problem. Some 30–35,000 military personnel who are qualified medical technicians or technologists—trained and experienced during their period of military services—re-enter civilian life each year. They include a vast galaxy of talent in 40 different skill categories as varied as a radio-isotope technician to a renal dialysis technician. By bringing together in some way these trained men and the jobs in civilian life in the field of health services for which they are qualified, I believe we can help to improve health care and avoid a waste of skill and training.

Consequently, I have directed the Assistant Secretary of Defense for Manpower, Roger Kelley, to develop a plan that will maximize the opportunities to utilize in civilian life the valuable medical skills possessed by many servicemen. I can assure you that we will move promptly to devise and implement this plan.

This is but one of several steps which the Defense Department is taking to make more widely available the special know-how that it possesses in the field of health care. We have a study under way called the New Generation of Military Hospitals which is designed to improve service and reduce cost in the operation of such institutions. The results of this study will, I believe, have an important impact on hospitals of the future, civilian as well as military, leading to better health facilities in the future for the entire nation.

We also plan to draw upon our battlefield experience in the use of helicopters for the speedy evacuation of the wounded to places where care is available. By use of the helicopter we have saved many from death and from disability in Vietnam. The same means of swift transfer of accident victims from the scene of the accident to medical facilities can reduce the accident toll here at home.

If present trends continue, more than 56,000 Americans are expected to be killed and two million to be injured on our highways this year. In remote and rural areas, the death rate is four times greater than in urban areas because of delay in administering emergency medical treatment and transporting victims to medical facilities. According to one authority, at least 25 per cent of the 170,000 Americans who will suffer permanent disability this year in highway accidents could escape disability if they had proper care shortly after their accidents.

In order to reduce the frightful toll of death and disability on the highway, we in the Department of Defense have joined with Bob Finch's Department of Health, Education, and Welfare and other Federal agencies to form a committee that is now studying means of making the helicopter a flying ambulance here at home as it is in Vietnam. We have great hopes for the potential benefits we can obtain from applying what we have learned in Vietnam to the medical emergency we face here at home.

Speaking of home, it is good to be back in Marshfield again. I congratulate all associated with the Marshfield Clinic and St. Joseph's Hospital for what you have accomplished. I shall continue to watch—and encourage—your progress in the important work you are doing.

REMARKS OF SECRETARY OF DEFENSE MELVIN R. LAIRD BEFORE THE DEDICATION OF THE MARATHON COUNTY WORKSHOP FOR THE HANDICAPPED, WAUSAU, WIS.

Those of us who have watched the growth of the Marathon County Workshop for the Handicapped since its beginnings five years ago have reason for special pride and satisfaction today.

Five years ago the only home the Workshop had from which to operate was a station wagon. Today we dedicate a building of 16,000 square feet as the new home in which the greatly expanded activities of the Workshop are to be carried on.

The Marathon County Workshop for the Handicapped has indeed come of age.

Physical facilities that men use for their activities take on a symbolic character. They become symbols of the qualities of mind and heart evidenced in the activities which take place within their walls.

This building which we dedicate will be a symbol of compassion, generosity, love, hope, and determination. For these are the qualities that will fill this structure as it is used as a place to learn and to work.

This building also symbolizes a great American tradition—the tradition of voluntary private action at the local level to help our neighbors. There is Federal money in these facilities—and I was happy to have been able to play some part as a member of Congress in securing the Federal funds that were made available to provide this new home for the Workshop. But what particularly pleases me is that today's dedication is one of the many concrete results of an amendment I was able to attach to an Appropriations bill back in 1964 which permitted private donations to be mingled with State funds in making up the State's share of the program. Two-thirds of the money that made this building possible was privately subscribed. That is a gratifying statistic to me because many people back in 1964 felt that the Laird Amendment would not produce the kind of results that I am proud today to see embodied in the Marathon County Workshop for the Handicapped. This Workshop was conceived, developed, and is being operated by private individuals, supported voluntarily by the people of this County acting in the American spirit of neighborliness.

One of the things that President Nixon is trying to encourage and expand is problem-solving by voluntary action at the local level. The Workshop is an example of this type of activity. We did not wait for Washington to get around to providing this facility for us. We did not leave the planning or its execution to an agency of the Federal Government. We who live in this section of Wisconsin saw some of our neighbors in need of help, and we acted to provide this help.

The great social and economic problems which plague our Nation will not be solved by Government alone. They will be solved only if the kind of privately-initiated and privately-directed cooperative effort on the local level, represented by the Marathon County Workshop for the Handicapped, is duplicated, magnified, and intensified from one end of the Nation to the other.

I want to pay tribute to Peter DeSantis and to all others who have made the Workshop the success it has become. I need not recount this success story in detail, but let me mention a fact that gives one measure of the Workshop's accomplishments. This Workshop has been the entrance chamber to productive lives for 160 people so far. The earning power of these people has increased from zero to $500,000. There is no adequate measure of the gain in confidence, satisfaction, and self-respect that this transformation has brought to these individuals.

The past accomplishments of the Workshop are, I am sure, going to be exceeded year after year. As we dedicate this building, we wish for all who deserve credit for bringing the Workshop from infancy to maturity long years of fruitful service in the future.

EUROPEANS VIEW SALT TALKS

(Mr. FINDLEY asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. FINDLEY. Mr. Speaker, our allies in Western Europe are not the least bit nervous over the strategic arms limitations talks scheduled to begin November 17 in Helsinki. They seem to be thoroughly confident their interests will be protected fully by U.S. negotiators.

The relaxed attitude was very evident during the just concluded sessions in Brussels of the North Atlantic Assembly, and it was in marked contrast with concern I had noted in sessions in earlier years.

For the first time German, Italian, and French parliamentarians seemed to be completely at ease discussing privately the forthcoming talks. In earlier years they had shown anxiety about the course of bilateral talks between the super powers. This was especially evident in the comments of German delegates who said they felt their government had not been treated with proper consideration during the negotiations by the Johnson administration leading to the Nuclear Nonproliferation Treaty. Italian, French, and British delegates had expressed similar concern.

In the North Atlantic Assembly just concluded a new confidence was clearly present. In my view this restoration of European confidence in U.S. negotiators stands as a significant achievement of the Nixon administration. It results from two main factors:

First. A series of NATO-wide private consultations held earlier this year in Brussels in preparation for the SALT talks. Our allies were impressed with the

thoroughness and candor of the three-part series of day-long discussions which were spaced over a period of several weeks.

This was a marked change from the SALT talk consultation plans made by the Johnson administration. I learned in Brussels that only a single 3-hour discussion had been tentatively scheduled.

Second. The caution with which the Nixon administration has discussed both publicly and privately the prospect of SALT talks. The rhetoric has been restrained with notes of optimism carefully balanced with caution.

These factors give substance the pledge President Nixon made during his February trip to Europe, during which he promised close consultation with our NATO allies on all matters vital to European security.

OCTOBER 28 DESIGNATED AS OFFICIAL "DAY OF BREAD"

(Mr. SEBELIUS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. SEBELIUS. Mr. Speaker, President Nixon has declared today, October 28, 1969, as an official "Day of Bread" and asked that all Americans join with other nations of the world in observing this occasion.

As the representative from the Nation's leading wheat-producing area, the "Big First" District of Kansas, I am pleased and honored to take part in these international ceremonies.

This important day is part of an international observance of Harvest Festival Week, a worldwide promotion of greater international cooperation and understanding with the Christian philosophy of breaking bread together as the underlying theme.

Wheat and wheat products, most commonly bread, are man's oldest crop and cultivated food. Wheat provides more nourishment for the peoples of the world than any other food; it is a basic staple for almost a billion people. Today, we express man's gratitude for this bounty and the annual harvest of farm and field. Americans have good reason to be thankful for this bounty—an abundance that has made possible a standard of living unrivaled in the history of the world.

However, I think it is even more significant that we observe this international theme of "breaking bread together" at this particular time because, as a nation, we are also seeking to achieve peace. Perhaps our greatest tool for peace is our willingness to share our abundance with those who are less fortunate.

The history of mankind has one main theme of concern—man's search for the "staff of life" and personal freedom. As we take part in these international activities today, let us do so with the knowledge that the bounty of the American wheat farmer not only provides the people of America with bread, but also is helping to fight the war against worldwide hunger. Let us hope these efforts might be continued and expanded. In satisfying man's search for the "staff of life," it may well be we can also end the search for world peace.

TIMES ATTACK ON SENATOR LONG UNINFORMED AND UNWARRANTED

(Mr. WAGGONNER asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. WAGGONNER. Mr. Speaker, the New York Times has as its motto, "all the news that's fit to print." But if an editorial blast in the October 24 issue at Louisiana Senator RUSSELL LONG is any example of their reason or logic, that slogan should be amended to read, "all the news that fits our point of view."

They sniped at Senator LONG for having worked to restore the 7½ percent cut the House unwisely made in the oil depletion allowance. The fact that the Senator's Finance Committee only restored part of the cut is referred to as "Senator LONG's defeat."

The Times, lacking any honor itself, refuses to believe anyone else can have any. To the writer of this editorial, it is inconceivable that Senator LONG has fought to restore the depletion allowance cut simply because his years of representing an oil-producing State have convinced him that the depletion allowance of 27½ percent is not a tax loophole but a legitimate deduction rightly due the oil industry.

The thought processes of the Times are as confused in this instance as they were when it tried to convince their readers that Fidel Castro was not a Communist, but a simple agrarian reformer.

Senator LONG represents Louisiana and he represents commonsense when he defends the oil depletion allowance. With these two as his constituents, he cannot go wrong.

ROGERS ASKS HOUSE ARMED FORCES COMMITTEE TO INVESTIGATE DEFENSE OF SOUTHEAST UNITED STATES

(Mr. ROGERS of Florida asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ROGERS of Florida. Mr. Speaker, I have been informed today that 12 EC-121 picket planes used to patrol the straits between Florida and Cuba are being deactivated.

Bluntly put, this means that south Florida and the southeastern part of the United States has no proper and effective defense against enemy invasion by air.

Not 1 month ago a Cuban Mig penetrated our defense system and landed at a military base. Two reasons were given: The plane flew so low that our radar did not pick it up except briefly, and then it was not identified; and second, because we had no picket plane in the air to act as visual support to the inadequate radar.

I wrote the chairman of the House Armed Services Committee and asked for an investigation into this obvious and serious breach in our national security. His reply was that he was aware of the situation and that the Armed Forces were aware of the situation.

Judging from the announcement from the Defense Department, concerning the cutbacks, the Pentagon does not fully understand the situation. Without picket planes in the air to supplement the radar system, Florida and the southeastern section of the United States are subject to penetration by low-flying aircraft almost at will.

I am concerned that the Armed Services Committee is willing to let the Cuban Mig incident pass by without an investigation. The incident is obvious proof that Florida and the southeast, although situated geographically only 90 miles from an unfriendly power, represents the weakest link in our national defense system.

I am again requesting the Armed Services Committee to investigate this situation.

The Defense Department is well aware that planes can fly under our radar into Florida. I cannot comprehend the apparent elimination of picket planes for Florida.

I have stated previously that industry has developed radar that is capable of tracking a Mig or a Mig-sized rocket at takeoff from Havana. The cost of installation of this radar would be approximately $3 million.

Unless this advanced radar is installed to replace the picket planes, I intend to personally appeal to the President. For without air surveillance supplementing our radar, or without an advanced radar system, the United States is not properly prepared to defend against an air invasion from the Caribbean or the Gulf of Mexico.

THE DESTRUCTION OF "AMERICA THE BEAUTIFUL"

(Mr. TIERNAN asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. TIERNAN. Mr. Speaker, the November 4, 1969, issue of Look magazine has several articles dealing with the destruction of "America the Beautiful."

One of the most poignant essays is entitled "Why Must They Die?" and was written by a 9-year-old girl, Lillie Leonard. Lillie tells of the senseless slaughter of baby seals in Canada and Alaska, the possible extinction of the bald eagle as a result of DDT, the hunting of polar bears from airplanes, the poaching of alligators, the poisoning of the kit fox, and again the result of DDT on brown pelicans.

Mr. Speaker, those of us in responsible positions have known that these things have been going on for years. But sometimes it takes the honesty and perception of a child's eye to truly see the horror and danger involved.

I urge all of my colleagues not only to read this article but to think about it. It is not a very pretty thought.

The article follows:

A LITTLE GIRL ASKS "WHY MUST THEY DIE?"
(By Lillie Leonard)

Every spring this happens in Canada and in Alaska also, when the seals are first born and the mothers are nursing them on the ice. One of the hunters has just killed a baby and the mother has come after him,

and he's pulled out a knife. Then he starts running. On the right, it's a picture of the baby seal that's just been killed and skinned and the mother is looking at it. At a museum, I saw some seal skins on the wall. But it sure is horrible to see the real baby killed and just lying on the ice. It would be good if the baby seals could swim because then they could get away and not many would be caught. This way is much too unfair. I know the mother feels sad, because what if a man came along and killed your baby and skinned it also and left it there for you to look at? When I first saw this picture, I thought it was the worst thing I had ever seen. I started to cry also, and my friend Becky cried too.

We talked about it should be illegal, and wished that the mothers would catch the hunters and bite them hard. But that is cruel, too, and there's enough of that in the world. Another bad thing about the world is that many, many animals are becoming extinct, and here are five of those animals on this page. [Photos not printed in RECORD.]

The bald eagle is becoming extinct mostly because of DDT. It lives near seas and bays and eats a lot of fish. Well, the DDT is used for spraying mosquitos and little bugs. It gets into the water and what happens is it gets into the plankton and the copepods eat the plankton and the small fish eat the copepods and the large fish eat the small fish and the eagle eats the large fish and, each time, the DDT is multiplied by 20. My friend Seth's father [ecologist Sterling Bunnell] explained this to me—how the bald eagle gets so much DDT. Once he gets it, the eagle is in for it. He may even go into convulsions. But the main problem is that the eggs break or won't hatch or the babies don't survive. I love that bird. It's my favorite one. Now, the polar bear is being wiped out because it has no place to hide when hunters come in airplanes. It's just another way of being unfair to animals.

I saw a stuffed polar bear at a car dealer's, and I don't think the man who shot it is anything brave—just another talk-a-lot car dealer. The alligator is my favorite animal, and it's becoming extinct because of poachers. I've seen on TV men poaching them, and it's a lot like the seals. Alligator skin is a fine thing for bags and shoes and purses. I want to tell everybody to stop buying alligator skin so the poaching will stop. The problem with the kit fox is that people put out poison mostly for rodents and also for coyotes, and the kit fox eats it because he is not a suspicious animal. He is a graceful, cute little fox who is very, very useful and who eats rodents. The poison is bad, and the animal may have to suffer 20 days before he dies. The brown pelican has mainly the same problem as the bald eagle, because its eggs are getting too thin and won't hatch. They aren't spraying DDT where the pelican lives but Seth's father says the whole ocean is getting polluted with DDT that comes from the farms on the rivers.

This is a warning to all life because it means the DDT will be soon killing many fish and birds and animals and people too. I wish somehow all this could stop, but I don't really think it will.

THE PRESIDENT'S NOVEMBER 3 ADDRESS

(Mr. FULTON of Tennessee asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. FULTON of Tennessee. Mr. Speaker, it is noted in this morning's Washington Post that President Nixon will, today and tomorrow, remove his coat as the Nation's leader and temporarily replace it with the mantle of leader of the Republican Party.

The President is to speak this evening in Virginia and again tomorrow in New Jersey in behalf of Republican gubernatorial candidates.

This activity on the part of the President is not only proper but desirable. The issues and problems which face the country should be discussed at appropriate times in constructive political terms before the people. These elections are an appropriate time and there is no better spokesman for his party and its candidates than President Nixon.

However, there should be no confusion as to when President Nixon or any President is speaking as a spokesman for a partisan point of view and when he speaks to the people as a Nation and as their President.

While no such confusion exists in connection with the President's political schedule over the next 2 days, there is a growing concern over the potential political implications of his upcoming November 3 address to the Nation on Vietnam.

As I stated on this floor last week, it seems to me that the timing of the President's talk is particularly inappropriate in view of the fact that the following day general elections are to be held in several States and Vietnam is an issue to a degree in almost every one of them.

This is no hastily announced address by the President caused by some late development of national importance such as the address to the Nation given by the late President Kennedy during the Cuban missile crisis.

Nor is it to outline some legislative program which had been earlier promised, such as the President's message on welfare reform.

The announcement of the November 3 talk came quickly upon the heels of the Vietnam moratorium which had such an impact on the Nation. This was more than 2 weeks ago.

It seems curious that November 3 was chosen at that time. Certainly, if the President feels he must report to the people or if he has information justifying the talk, then he had it when the date was chosen, and he could have well delivered his remarks by now.

When I first commented on the timing of the address last week, it was my expressed view that the choice of November 3 and the political implications which could be drawn from it were simply an oversight by the President's advisers.

If the talk is not rescheduled in the light of the political haze which now surrounds it, then whatever the President has to say is going to be measured, at least in part, by the political yardstick.

This, it seems to me, is most unfortunate. Partisanship is no substitute for statesmanship in the conduct of foreign affairs, and it would be tragic if the President's remarks are delivered in an atmosphere tainted with the suspicion of partisanship.

It is still not too late to reschedule the address, and I hope that the President will do so. The President has asked for nonpartisan support for his policy for bringing peace to Vietnam. I believe, therefore, that the people have a right to expect that in carrying out these policies the President would make every effort to avoid any possible hint of making the war an issue or instrument for political gain.

MERCHANT MARINE SPEECH

(Mr. SCHADEBERG asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. SCHADEBERG. Mr. Speaker, the President's program for revitalizing our merchant marine must not be lost in a fog of indecision or delay. Our merchant fleet has already dropped from first place on the high seas at the close of World War II down to sixth place.

It has become the American way—to let our merchant fleet go to pot with hulks rotting away, some mothballed and some just abandoned. No replacements worth mentioning have been made in years.

We need our merchant marine in time of peace, for shipping is an important part of a nation's total prosperity.

We need a strong merchant marine even more, for national defense security. Surely we have not forgotten what happened at the start of World War II, when we did not have a merchant fleet worthy of the name.

In case some of our younger colleagues do not know, we were so hard up for ships to move men and supplies we resorted to using old, wornout excursion ships as troop carriers and fishing trawlers and private yachts as escort vessels. We even sent our men out in these buckets on that sea-hell of a run to Murmansk and back.

Many didn't make it—not because they were sunk by U-boats, but because they were too old and slow—some were so top-heavy they just capsized.

Hog Island freighters of a sea-generation further back than World War II were pressed into service. Some of our ships at that time were so unseaworthy that the standing joke was:

We'll get there just as long as the worms or teredos in her bottom keep on holding hands so she'll stay together.

Thanks to the Liberty and Victory ships we built a merchant fleet in record time. But these vessels were never meant to last for years. They were only stopgap ships but they did their job, heroically and well—just like the men who made up the crews.

But they have long become obsolete. The United States again, following history's cycle, fell back so far as a merchant marine power is concerned. We now trail Great Britain, Japan, Russia, Liberia, and Norway—a sad sixth.

The cry has always been that cargoes can be shipped cheaper when not in vessels under the American flag. Cheaper, at the time, perhaps, but not in the long run. It is false economy to think that we can use foreign bottoms to ship our goods because in doing so we are sacrificing our merchant ships and merchant mariners.

And if the time comes again when we need a merchant fleet in a hurry, if we have another full scale war—and God help us if we do—we will not have the time to build a new merchant fleet again.

The Germans stopped at Dunkirk—and the Japanese did not follow up their first strike at Pearl Harbor. That gave us time, then. Precious little time it was, but it was time enough to build that remarkable fleet of Liberties, Victories, and the others—fast bottoms for fast work. With them we kept our freedom.

Now, the President has proposed that we take a gradual and sensible course in rebuilding our Merchant Marine. As he put it, to "replace the drift and neglect of recent years and restore this country to a proud position in the shipping lanes of the world."

Three-fourths of our merchant vessels are at least 20 years old and if things continue the way they are going, much of our present fleet will have to be scrapped.

Both Government and industry share the blame for this lag in shipping and both must now make an effort to correct it or we will all go down the drain, as far as shipping is concerned.

President Nixon's new program is a long-range one, to build 300 vessels in 10 years.

One of the first steps to cut down building costs, as suggested, would be to standardize design. That was done in earlier wars—as witness the Hog Islanders and the Liberties.

Another proposal is to pay subsidies to shipbuilders, rather than ship operators, as at present. That direct payment should encourage building by improving designs and in other ways minimizing costs.

In the matter of insurance the Federal Government would insure shipping policies in much the manner that GI loans are guaranteed.

The problem of wages for merchant marines can be met with a proposal suggested by the President.

The new approach is not to have the taxpayers pay the difference between what American sailors get and foreign merchant mariners get, but the Government would compare foreign wages with prevailing wage levels in several sectors of the American economy. Then a subsidy policy would be tied to this level and it is hoped this would reduce subsidy costs and promote further efficiencies.

Another important part of the program would eliminate the programs in which shipowners pay back the Government for shipbuilding subsidies. The new plan would end that. This money would go back into the Government coffers in the form of corporate taxes.

The administration has called on everyone involved, from labor leaders, minority groups, secretaries of chambers of commerce, shipbuilders, and ship operators—everyone concerned—to get to work and stop the scuttling of our merchant marine. Let Congress join them in a new area in maritime history; let us join them and the President of the United States in taking our rightful place on the ocean shipping lanes of the world: not in sixth place, but at the lead, in first place. We were there once.

The early wealth of this Nation was founded on sea commerce.

Our merchant fleet is now down to 950 ships and most of them are ready, or nearly ready for retirement. In strength, as I noted, we are sixth in the world—a notch under the Soviet Union and Russia has already embarked on a massive program to enlarge its merchant fleet.

American ships carried nearly 60 percent of this country's foreign trade right after World War II and now we have dropped to about 6 percent.

The leader of the Shipbuilders Council of America, Edwin Hood has been quoted as saying that—

> Precious time has been lost by previous Administrations to contend with the ever-accelerating obsolescence of the American Merchant Marine.

He said the shipbuilders would have little trouble meeting a schedule of building the programed 30 ships a year. That industry turned out 5,000 ships in a crash program during World War II, in 4 years.

Thus far there has been no objection from the major parties involved. Maritime leaders, naturally, are reported to be enthusiastic about the new program.

Union leaders are reported to have expressed pleasure about the desire to do something about the merchant marine situation.

I strongly urge our favorable action. The Congress already has evidenced a desire to help our merchant marine—shipbuilders and operators—and the unions are for it—the Lord knows we need it, so, as the old shipmaster used to say:

> Let's set the jib and get underway.

Let us follow President Nixon's leadership on the high seas without delay. Our security demands it, our commonsense knows it.

SPACE HOAX REVEALED—EUREKA STUDENT EXPOSES RUSSIANS

(Mr. DON H. CLAUSEN asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. DON H. CLAUSEN. Mr. Speaker, a 17-year-old student, Ronald Titus of Eureka, Calif., has discovered that a news photo issued by the Soviet Union to explain their triple-spaceship mission earlier this month is actually from an American space company's 1962 magazine advertisement.

To tell the story of this young man's studied observations and ultimate discovery, I am inserting in the RECORD at this point, a front-page story which appeared in the October 23 edition of the Eureka, Calif., Times-Standard.

Certainly, this young space enthusiast has proven once again that it is great to live in a country which has the courage and honesty to visually portray its space efforts on live television, regardless of the consequences, for the entire world to see.

The article follows:

[From the Times-Standard, Oct. 23, 1969]

EUREKA STUDENT EXPOSES RUSSIANS: SPACE HOAX REVEALED—ORBIT PHOTO FROM U.S. AD

There are going to be some red faces in the Russian space laboratories today, all because of 17-year-old Ronald Titus of Eureka.

Titus has exposed what must be the strangest event of all time in the Russian-U.S. space race.

The Eureka High School senior discovered that the drawing used by the Soviet Union to explain its three-spaceship orbit of last week is exactly the same drawing which appeared in a 1962 advertisement by a U.S. company, published in Scientific American magazine.

There is no question about it. The drawings are nearly identical, even to the shading. The Russians added some labels on the various components of the space spectacular, and for some reason eliminated part of the picture showing a scientist walking through a door inside their "space platform."

Other than that, the pictures are the same: perspective, shading, detail—everything.

IN SPACE AD

The original picture appeared on page 91 of the February, 1962 edition of Scientific American, a decidedly non-Communist publication. The advertisement is for the Sperry Co. of Great Neck, N.Y., and promotes the firm's Orbital Launch Operations.

Titus, who is interested in space happenings and saves all his newspapers dealing with them, spent noon hour of Oct. 21 glancing at this particular copy of Scientific American. He stopped at the Sperry ad, and thought it looked familiar, so he took the magazine home and compared it to page 1 of the Oct. 13 Times-Standard. Acting on the advice of teacher Ellis Williamson, he brought the evidence of his strange find into the newspaper office.

"I thought it was funny that the Russians would use a picture from an American company," Titus said. "I don't know how they got it, though, I doubt that they have special spies to get pictures from magazines."

PICTURE FROM TASS

The Russian photo was carried on the United Press International Unifax photo network when the Russians announced their triple-orbit event. It was supplied by Tass, the Russian news agency, according to UPI.

The Sperry ad in Scientific American was almost a preview of the mission. It said, in part, "Orbital Launch Operations will call for the highest system capabilities the nation can muster, in virtually every technology known.

"A space station must be orbited, piece by piece, with crews and their subsistence complex to assemble and man it—followed by a scientific laboratory that will become the launch facility in orbit, where the parts of the orbital launch vehicle then will be assembled."

According to Associated Press on Oct. 13, "The Yugoslav news agency Tanjug, known for its reliable informants in Moscow, reported a total of seven cosmonauts will construct a space platform that will be used as an orbiting laboratory and possibly as a launching pad for deep space probes . . . The informants also have hinted that a permanent platform in orbit would be visited periodically to check scientific instruments or to station a crew aboard for a time."

SOME QUESTIONS

Many questions could be asked about Titus' discovery. How did the Scientific American drawing make its way into Russian space files, to be pulled out seven years later? Why was the drawing used at all, unless the Russians believed the "coincidence" would go unnoticed? Does the Sperry Company have any inside knowledge?

Perhaps the most interesting question, however, is on the entire truth of the Russian space reports.

Were they really up there at all?

CONVERSION OF POST OFFICE DEPARTMENT INTO GOVERNMENT-OWNED CORPORATION

The SPEAKER. Under previous order of the House, the gentleman from Iowa (Mr. GROSS) is recognized for 10 minutes.

Mr. GROSS. Mr. Speaker, in my remarks on Monday, I warned that Members could expect a massive, well-financed propaganda campaign in support of conversion of the Post Office Department into a Government-owned corporation.

That campaign is now underway, led by the Citizens Committee for Postal Reform, Inc., with a bankroll of more than $180,000. Apparently the committee feels that with money and pressure, the decision of the House Post Office and Civil Service Committee rejecting the corporation idea can be reversed.

Sponsors of this lobbying group, of course, have every right to their opinion, but I am one member of the Post Office and Civil Service Committee who deeply resents the tactics they are using. Let me quote briefly from the committee's newsletter of October 23, 1969:

> The enemies of true postal reorganization have begun to trot out their piecemeal and inadequate Post Office Department bills under the banner of "total reform."

I challenge the author of that statement to step forward and accuse me to my face of being an "enemy of true postal reorganization" and interested only in "piecemeal and inadequate" reforms in the Post Office Department.

At another point in the committee's newsletter, certain remarks are attributed to the committee's cochairmen, former Postmaster General Lawrence F. O'Brien and former Senator Thruston B. Morton; remarks which represent a scurrilous attack against the gentleman from New York (Mr. DULSKI), the chairman of the House Post Office and Civil Service Committee. I quote from the newsletter:

> They (O'Brien and Morton) criticized a half-hearted measure (H.R. 4) sponsored by Congressman Thaddeus J. Dulski as "an example of pseudo-reform masquerading under the name of the genuine article."

This is completely inaccurate and uncalled for. Having participated in virtually every session of our committee in the consideration of postal reform legislation, starting in April, I can say without hesitation that no person in or out of Congress is more interested in postal reform than the gentleman from New York.

Both Mr. DULSKI and I seek meaningful postal reform, and I am pleased to report that our committee is making progress toward that goal, despite the vicious propaganda campaign being waged by the so-called citizens committee.

Moreover, the question immediately arises as to why former Postmaster General O'Brien did not seek postal reform legislation when he was Postmaster General. The record shows that he appointed a "task force" to study the subject in 1966. This "task force" reported to him early in 1967 and he immediately stamped a "confidential" label on the report.

Perhaps one of the reasons was that the report held that a basic reform should be to get the Post Office Department out of politics. Although he had ample time to put a meaningful reform bill before Congress, O'Brien, as Postmaster General, was apparently too busy giving political advice to President Johnson and immersing the Department in politics.

Now, with the greatest of ease, he has the effrontery to castigate those who are attempting to do what he left undone.

Reading on in the citizens committee's newsletter, we find this:

> It (H.R. 4) doesn't take the post office out of partisan politics.

In its present form, I can report that H.R. 4 does take the postal service out of partisan politics by reason of an amendment offered by me which the committee adopted.

Despite an unspent nest egg of $182,816.89 available to the citizens committee on October 1, the newsletter has the unmitigated gall to seek even more money from an unsuspecting public in an appeal under the heading "Dollars for Progress."

I urge citizens to reject this appeal, for dollars to a high-powered lobbying outfit will not buy good postal reform legislation. I also urge my colleagues to reject the pressures which will be applied as the result of the citizens committee's unfair propaganda tactics.

Then let us get on with the job of writing meaningful postal reform legislation.

CRIME: THE PROBLEM AND THE RESPONSE OF GOVERNMENT

The SPEAKER pro tempore (Mr. MATSUNAGA). Under a previous order of the House the gentleman from Alabama (Mr. EDWARDS) is recognized for 30 minutes.

(Mr. EDWARDS of Alabama asked and was given permission to revise and extend his remarks and to include extraneous matter.)

Mr. EDWARDS of Alabama. Mr. Speaker, the various governmental bodies—Federal, State, and local—are entrusted with one of the most basic responsibilities of government: to provide for the safety of the citizens. In recent years, due to various problems, and a lack of commitment on the part of the former administration, crime is rampant. In many areas the average citizen no longer feels safe to walk the streets, leave his property unattended, or even, at times, go to sleep. A vast array of safeguards and a constant vigilance must be maintained to feel at least moderately secure. Yet this is no guarantee that the individual will be free from harm or loss.

The crime problem has outstripped the resources available to the various governments to fight it. What is now needed is a national commitment to fight crime. On the national level a strong effort to curtail and eventually eliminate the growing menace of organized crime can only be initiated by forceful Federal action. On the State and local level, the very personal threat to the safety and security of every citizen and his property must be met by increased effectiveness of the local law enforcement officer and of the tools which he has available to fight crime. In many cases, assistance from the Federal Government in developing programs, establishing new procedures and tools, and correcting deficiencies in Federal law is urgently needed.

In 1967, I criticized the Johnson administration for failure to meet the crime problem head on. At that time I listed five areas in which the Government was remiss. They were:

First, the reduction of the activities of the Justice Department's Organized Crime and Racketeering Section;

Second, failure of the administration to reveal vital information regarding the activities of organized crime;

Third, Supreme Court decisions that made law enforcement more difficult, and failure of the Johnson administration to be concerned about this situation;

Fourth, failure of the Johnson administration to act on the National Crime Commission recommendations; and

Fifth, the attitude of the Johnson administration to sweep the whole problem under the rug in hopes that it might go away.

At the same time I made several recommendations that I felt would be major steps toward solving the crime problem. They were:

First, intensified operations of the Organized Crime and Racketeering Section of the Justice Department;

Second, improved collection and greater use of criminal intelligence by law enforcement offices around the country;

Third, establishment of a permanent joint congressional committee on organized crime to provide continuing congressional action in this area; the committee also would be charged with making recommendations to update and make uniform the Criminal Code;

Fourth, greater interest on the part of the Justice Department in actually enforcing the law; and

Fifth, use of wiretapping to the greatest advantage under existing guidelines and proper and strict controls.

Perhaps it would be useful to evaluate the actions of the Nixon administration to date in the light of my criticisms and recommendations as just outlined.

First, the Nixon administration has stepped up the activity of the Justice Department's Organized Crime and Racketeering Section in accordance with my recommendations in 1967, thus reversing the Johnson administration policy. But the Nixon administration has gone a step further. A special Federal-State racket squad was established in New York City, where five of the 23 Cosa Nostra families operate. In this highly-concentrated organized crime area, cooperation among Federal, State, and local officials is the only hope for overcoming the syndicate operations. In addition, the President has authorized the establishment of 20 Federal racketeering field offices across the Nation. This is the kind of national commitment needed to meet the vast threat of the organized crime syndicate on a nationwide basis.

Second, the Attorney General's office has begun a program through which State and local law enforcement personnel can exchange information on the

most effective tactics for fighting organized crime on the local level. In addition, a computerized organized crime intelligence system is being developed to house detailed information on the personalities and activities of organized crime nationally. It is hoped that this system will serve as a model for similar State intelligence banks.

Third, Attorney General Mitchell has said on numerous occasions that his Department will definitely enforce the law of the land. To cite just a few examples, Operation Intercept has been most successful in curtailing the inflow of dangerous drugs into the country, and the recent Federal, State, and local cooperative effort in the Washington area which resulted in the arrest of some 40 persons on narcotics charges is a hopeful sign of similar future results.

Fourth, the President has authorized the Attorney General to use wiretapping with proper safeguards to monitor the activities of organized racketeers. This will be an important tool in catching the higher-ups of the criminal world.

Of my five recommendations in 1967, four were within the realm of the Executive and President Nixon has acted favorably on these. He has shown a keen understanding of the crime problem and is putting this knowledge into action.

He has called crime the major domestic crisis and has indicated his every intention of doing something about it. But better than just a lot of words, he has taken what action he could under existing legislation and made substantial proposals to Congress to take even greater action against crime.

Now Congress must enact these proposals and provide the funds necessary to implement them in the fight against crime. At last we have had sound legislation proposed so that the spiraling crime rate can be stopped. Let us not let these important tools in the battle against crime go unused. Congress must act now and stop delaying this much needed legislation.

These efforts are primarily national in scope and directed against the nationally organized crime syndicates. What is being done and must be done about the so-called street crimes—the crimes that touch everybody in a personal way? To answer this, one must examine the root causes of such street crimes and the catalysts for continued growth and expansion of crime in this category. And it is here that the interrelation of organized crime and street crime can be seen.

Gambling and narcotics are the chief sources of income for the racketeers, and gambling and narcotics are the chief reasons for much of the current street crimes. Much of the serious crime—which is concentrated in the inner city and slum areas—is directly related to the criminal's desire and outright need for money. This may be the result of insufficient income to meet a family's needs or, as is more often the case, may be the result of a need for money to purchase drugs or pay gambling debts. Much of the money poured into welfare programs is funneled right out of the pockets of the poor and into the coffers of the underworld syndicates through numbers rackets, gambling houses, bookkeeping operations, narcotic sales, and loan sharking. The poor are the greatest victims of the organized crime racketeers and in turn have the highest incidence of criminal activity among their groups.

Thus in combination with our efforts to curtail and eliminate organized crime, this Nation must have a solid commitment to choke off the sources of income of the racketeer. And in so doing much of the street crime will also decrease.

Narcotics is perhaps the chief factor in the rise in robbery and theft. These crimes against property are frequently accompanied by crimes against the person such as assault and battery and rape. Once hooked on hard drugs such as heroin a drug addict must come up with $100 to $200 or $300 a day to feed his habit. Since the underworld fence will pay only about one-tenth to one-third of the value of the stolen goods, the drug addict must steal thousands of dollars worth of goods to buy his drug from the underworld narcotic salesman. On either end the crime syndicate bosses come out on top. And in any case, the loser is always the taxpayer who must pay the costs in increased law-enforcement activity and judicial proceedings, the insurance purchaser who faces rising rates, and the business operator who suffers declining profits.

Efforts in this area of street crime must be on a national level in some instances, but the greatest thrust must come from the State and local law enforcement agencies. On the national level the President has taken numerous steps to curtail the flow of drugs into the United States. The Departments of Justice and Health, Education, and Welfare have offered assistance to State and local law enforcement agencies and public and private organizations working on social improvement projects in hopes of eliminating the root causes of drug addiction and discontent on the part of the urban poor. Many State and local agencies are actively pursuing programs to aid the drug addict to kick his habit and eliminate the incidence of criminal repeaters.

On the national scene, the Nixon administration has put forth many legislative proposals to aid the local law-enforcement officer to perform his duties more effectively. Among them is furnishing technical assistance and financial help in training programs, Federal aid for State and local public information programs to alert the average citizen to ways he can aid the law enforcement officer, and fostering cooperation and coordination between States and between communities to avoid costly duplication of effort and expense.

This massive effort on the part of Federal, State, and local authorities is a step in the right direction and a start toward curtailing and eventually eliminating the crime problem. But this is not something that can be accomplished in 1 year or in one administration lifespan. It must be a national goal over many years on a level of magnitude equal or exceeding that given the space program. There can be no greater threat to a democracy than the lack of internal safety. And there can be no surer means of destroying our country than by failing to give a solid national commitment to the curtailing and eradication of crime in all forms.

Whether this national commitment is put into effect and whether it is successful depends on the Congress. Under the Democratic administration of recent years, the Congress, dominated by the same party, was loathe to get moving on the crime issue. Now the Republican administration has made sound proposals to put the brakes on the spiraling crime rate.

In the spirit of President Nixon's recent message to Congress, I would hope that Congress will go even further in the fight against crime. Not only should this Congress give prompt consideration to the many proposals to fight crime put forth by the Nixon administration, but Congress should also strengthen the law and fill the gaps created by various Supreme Court decisions that have tied the hands of the law-enforcement officer. Only Congress can act effectively and provide the long-range answers.

While we still may need a Joint Committee on Organized Crime, the Pepper committee is in fact filling some of the needs which prompted my original call of the joint committee. The Pepper committee is performing a useful service. But in the final analysis, we must untie the hand of the policeman so that he can apprehend the criminal. Our judicial system has made it rather tough on the policeman to do his job. The result is that criminals go free because of minor technicalities in procedure, or, often they are released on bail only to commit numerous crimes before ever coming to trial.

If there is to be improvement in our judicial criminal procedures, legislation must be enacted to speed up the time it takes to bring a criminal to trial. This may call for action on the Federal and State level to revamp outmoded criminal court procedures and to increase the number of judges trying cases. Much legislation has been introduced to bring about these reforms. But Congress must take action on these bills. They do not serve any purpose sitting in the file drawer of the committee.

The rise in crime can be stopped. The criminal can be eliminated. But the responsibility for such tasks is not one man's alone. Rather it calls for a concerted action on the part of the President, the Congress, the State, and local legislative bodies and every citizen interested in making the streets safe for his children. We must once again be able to feel secure in our homes and communities. These tasks are not insurmountable, but they require a national commitment on the part of each and every American. I urge the Congress to act now.

PERSONAL EXPLANATION

(Mr. LOWENSTEIN asked and was given permission to address the House for 1 minute.)

Mr. LOWENSTEIN. Mr. Speaker, on September 29 and for several hours on October 9, I was detained on official business and unable to be present on the

floor. I would like the RECORD to show that had I been present at those times I would have voted in favor of House Resolution 556, extending authority to set interest rates on mortgages to veterans; House Resolution 555, creating joint labor-management trust funds for scholarships and child care centers; and H.R. 7737, the Educational Television and Radio Amendments of 1969; and against the recommittal of H.R. 7737.

A TRIBUTE TO BOB HOPE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from California (Mr. HOSMER) is recognized for 20 minutes.

Mr. HOSMER. Mr. Speaker, America's most durable and beloved comedian, Bob Hope, will depart soon for his annual Christmas tour of American military bases around the world. This year, his journey will take him first to Europe and then to South Vietnam and the Far East.

But before he leaves, the people of the city of Long Beach and the State of California will pay tribute to this great American with a huge testimonial dinner on Thursday, November 13.

At the dinner, Bob will be presented with the "DELBA" Award, presented annually by the Downtown Long Beach Associates, one of the city's outstanding business organizations. The city itself, the State, and other national and local leaders will join in this tribute to California's favorite adopted son.

In the past, the DELBA award has gone to Danny Thomas, Jimmy Durante, John Wayne, and others—21 in all—who have made outstanding contributions through their talents to our way of life. When Bob Hope's name is added to the rolls of the winners, the DELBA award certainly will take on added significance.

The testimonial also will include keys to the city of Long Beach, which will be presented to Bob by Mayor Edwin Wade; a citation from the State legislature; and another, most unique tribute. The first suite in the new Queen Mary Hotel being constructed aboard that famous ship now permanently located in Long Beach Harbor will be named the "Bob Hope Suite." Subsequent suites will be named for Sir Winston Churchill, King Edward VIII, and others.

It is particularly fitting for Long Beach to repay some of the kindness which Bob has so generously showered on the city for so many years. Only three times since 1948 has Bob not gone overseas at Christmas time to entertain American servicemen. On those occasions—Christmas Day 1951, 1952, and 1953—he entertained patients at the Long Beach Veterans Hospital.

Bob certainly has reached the pinnacle of success in his profession. He now claims he only does the things he enjoys doing. Judging from that, I would say there apparently is nothing he doesn't like.

In addition to his annual Christmas trips, he is still shooting movies and television shows, doing benefits and college shows, sponsoring his famous Desert Charity Golf Classic and a variety of other pastimes. Perhaps a few clues to the tireless energy of this remarkable man can be found in the colorful history of his career.

He was born Leslie Townes Hope in Eltham, England, May 29, 1903, the fifth of a stonemason's seven sons. When he was four, his father, William Henry Hope, brought his family to Cleveland, Ohio. On December 20, 1920, by virtue of his father's naturalization, Bob—the name by which the world would later know him—and his six brothers also became U.S. citizens.

In Cleveland, Hope attended Fairmount Grammar and Junior High Schools and, later, during his years at East High, he worked as a delivery boy, a soda fountain clerk, a shoe salesman, and when he left high school he went to work for a motor car company. The following year he had earned enough money to take dancing lessons from a couple of local instructors and even took over the classes for one of his teachers in 1922.

Hope also tried amateur boxing under the name of Packy East and worked briefly as a newspaper reporter. His first professional stage appearance was in a Fatty Arbuckle show with George Byrne. It was a hastily put together dancing act just for Arbuckle's Cleveland appearance. But the famed Hollywood comedian liked it and was instrumental in getting them booked into a tabloid show, "Hurley's Jolly Follies." They danced, did comedy bits and Hope sang in the show's quartet and doubled on the saxophone.

After their second season with Hurley, Bob and Byrne broke in vaudeville in Detroit. Months later they were auditioned before an unusual panel of "judges" consisting of Eddie Dowling, Kate Smith, Ruby Keeler, Smith and Dale, and other established stars. They were so successful that they were signed for the show, "The Sidewalks of New York."

After "Sidewalks" closed, Hope and Byrne opened a new act in Newcastle, Ind. Opening night, Hope was asked to announce to the audience that a certain group would appear at the theater the following week. His introduction was so funny that when he had finished, he had a new act worked out. Shortly afterward, he and his partner split up, and Bob was a "single."

Through a friend he was booked into the Stratford Theater in Chicago for 3 days—and he stayed 6 months. Then followed more vaudeville until 1932 when he finally hit Broadway in "Ballyhoo." After that there was a succession of New York hits: "Roberta" in 1933, "Say When" in 1934, "Ziegfeld Follies" in 1935, and "Red, Hot, and Blue" in 1936.

Hope's radio career was launched when he was a guest on Rudy Vallee's Thursday night program, and in 1938 he became the star of his own radio show. Throughout the next 18 years, Hope performed in 1,145 radio programs for a variety of sponsors at NBC studios, at military bases around the country, and did many special broadcasts for the Armed Forces radio network.

On June 8, 1950, he signed a long-term television contract with NBC and made his TV debut Easter Sunday of that year. He has since starred in more than 225 television programs, in his own series of comedy specials, and as guest star on other variety shows.

During Bob's appearances in "Roberta" on Broadway, a friend introduced him to singer Dolores Reade, and soon after they were married. They have four adopted children: Linda, born in July 1939; Anthony—Tony—born in July 1940; Honorah—Nora—born in August 1946; and William Kelly Francis—Kelly—born in July 1946.

He did his first radio show for servicemen in March 1941, at March Field—Air Force Base—Calif. After that, with the exception of two shows he did at the NBC studios in Hollywood—when he could not leave home because of illness—he did his regular Pepsodent radio show at Army, Navy, and Marine bases until June 1948. Throughout the war and the Korean conflict, he traveled more than a million miles entertaining more than 10 million troops in every corner of the globe. He appeared at almost every military base in the United States and overseas, and at many he became an annual visitor.

Hope began what was to become a Christmas custom for the comedian in 1948 when he went to Berlin at the request of then Air Force Secretary STUART SYMINGTON to put on several shows for the GI's involved in the airlift. The following year Hope and a troop of Hollywood performers entertained GI's in Alaska. In successive years, he took entertainment troops to the Pacific in 1950, to England in 1954, to England and Iceland in 1955, back to Alaska in 1956, the Orient in 1957, Europe in 1958, Alaska again in 1959, the Caribbean, including Cuba's Guantanamo Base, in 1960, Newfoundland and Greenland in 1961, the Far East again in 1962, Europe and North Africa in 1963, and for the past five Christmases he and his troops have performed in war-torn South Vietnam, as well as Thailand, Guam and the Philippines.

He has received nearly 800 awards and citations for his humanitarian and professional efforts. Last year he became the first honorary member of Harvard's Hasty Pudding theatricals. He has also received the Herbert Hoover Memorial Award from the Boys Club of America and the B'nai B'rith "Man of the Year" award.

His awards also include the USO Gold Medal from President Johnson; the Congressional Gold Medal from the late President Kennedy; the Medal of Merit, presented in behalf of the U.S. Government by President Eisenhower; the Peabody Award; a special Oscar, an Emmy; Philadelphia's Poor Richard Award; innumerable plaques for war bond service from the Treasury Department; the top civilian awards given by all three services, Army, Navy and Air Force; and the Murray-Green AFL–CIO Award. He also received the highest honors the broadcasting industry's International Radio and Television Society and National Association of Broadcasters can bestow.

He has given four command performances for Britain's royal family, in December 1948, 1954; October 1962; and November 1967. He has been presented with nine honorary university degrees:

LL.D. from the University of Wyoming; doctor of humane letters from Georgetown University, Washington, D.C.; LL.D. from Quincy, Ill.; L.H.D. from Monmouth College, N.J.; L.H.D. from Whittier College, Calif.; L.H.D. from Pennsylvania Military College; LL.D. from Northwestern University, Evanston, Ill.; L.H.D. from Southern Methodist University, Texas; D.F.A. from Brown University, Providence, R.I.; and a L.H.D. from Ohio Dominican College, Columbus, Ohio.

Hope has written six books—"They've Got Me Covered," "I Never Left Home," "So This is Peace," "Have Tux, Will Travel," "I Owe Russia $1,200," and the most recent about his entertainment tours in Vietnam—"Five Women I Love."

Mr. Speaker, it is a personal pleasure for me to join with the many citizens of Long Beach, the State of California, and the Nation in paying tribute to Bob Hope for all he has done for our country and for each of us individually.

RIDDING THE NATION OF GOB PILES

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Pennsylvania (Mr. SAYLOR) is recognized for 15 minutes.

Mr. SAYLOR. Mr. Speaker, I am introducing today a bill, cosponsored by 24 of our colleagues, calling for an investigation and study into methods of utilizing wastes known as "gob" and "culm" resulting from the mining and processing of bituminous and anthracite coal.

Gob piles are common in every coal mining region of the United States and although there has been considerable study in my own State, it is in reality a national problem and deserves attention by the Federal agency created expressly to handle such coal related problems—the Office of Coal Research in the Department of the Interior.

These waste piles are made up largely of refuse coal; that is the residue after the cleaning process; rock; impurities such as slate, sulfur, pyrite; and debris common in the mining industry such as broken machinery, and just plain junk. It has been estimated that in the anthracite area alone more than 900,000 cubic yards of gob is piled over 12,000 acres of land. One bituminous State is known to have over 500 such piles with one giant mass that is 2 miles long, 5 stories high, and 100 feet wide.

It is obvious that as the demand rises for higher quality and cleaner coals, the refuse piles will grow proportionately. Something must be done now to prevent the environment surrounding our coal mining areas from being further polluted by this industrial waste.

The piles will not disappear without some study having been conducted as to the uses of their material content. Suggestions have been made already concerning potential uses as a fuel; however, taking advantage of this suggestion is limited by the availability of a market, by increasingly restrictive pollution regulations and by transportation charges which limit their movement. It has also been suggested that the material be utilized in the manufacture of brick and cinderblock; as cinder for winter snow and ice control; as a roadbuilding substance; as a chemical raw material; and for filling abandoned strip pits.

One source close to the mining industry has told me that as of now, there is no intrinsic value in the piles which would justify a commercial venture. I am not willing to give up quite so easily and for that reason, my colleagues and I are asking the Office of Coal Research to put its considerable talents into the problem to perhaps find a solution. Gob piles are a health, safety, and esthetic hazard. We believe that given proper attention we can begin to eliminate the blight from the surface of our land.

Mr. Speaker, those members from both sides of the aisle who have joined me in a drive to find ways to eliminate gob piles—include: FRANK M. CLARK, ROBERT J. CORBETT, JOHN H. DENT, DANIEL J. FLOOD, JAMES G. FULTON, JOSEPH M. GAYDOS, KENNETH J. GRAY, ALBERT W. JOHNSON, JAMES KEE, JOSEPH M. MCDADE, ROBERT H. MOLLOHAN, WILLIAM S. MOORHEAD, THOMAS E. MORGAN, ARNOLD OLSEN, CARL D. PERKINS, MELVIN PRICE, FRED B. ROONEY, GEORGE E. SHIPLEY, JOHN M. SLACK, HARLEY O. STAGGERS, FRANK A. STUBBLEFIELD, WILLIAM C. WAMPLER, J. IRVING WHALLEY, and GUS YATRON.

The sponsors would naturally welcome additional support and we therefore urge other Members to join us. I have been in touch with top UMWA officials and industry spokesmen and they are behind this effort; and my conservationist friends sense a genuine need for this legislation. I feel that additional support will come from other segments as the need for action comes into focus and is increasingly evident.

SPIRO SPEAKS

(Mr. HALL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. HALL. Mr. Speaker, I for one would like to "stand up and be counted," along with many other Americans, who wish to place themselves "four square" in the corner of the Vice President of the United States, SPIRO T. AGNEW.

This honorable man, who believes in "telling it like it is," has found, as have many others, that what he says, and how he is quoted, do not always "jibe," due perhaps to an individual hearing deficiency, or a deliberate attempt to raise doubts.

I think it is fair to ask, if the reference by the Vice President to the leaders of the so-called "moratorium" as "impudent snobs," was any more offensive than those same leaders' printed comments calling the President of the United States a "pig" and a "fascist"? I think not.

Those of us who have come to know Vice President AGNEW well, can attest to his integrity, his basic selflessness, his devotion to his country, and his unstinting desire to maintain in this Nation, every man's right to responsible freedom of speech, himself included.

In the current edition of Newsweek magazine, Stewart Alsop, sets down a most revealing and thought provoking interview with the Vice President. I recommend its reading to all.

The article follows:

[From Newsweek magazine, Nov. 3, 1969]

SPIRO SPEAKS

(By Stewart Alsop)

WASHINGTON.—What follows was excerpted from six double-spaced pages of notes on a talk last week with Vice President Spiro T. Agnew. It is an attempt to catch the flavor of the Vice President's manner of talking and thinking. The flavor seems worth trying to catch, and not only because Mr. Agnew is again in the news, with his famous speech about those "impudent snobs." There is another reason—the fact that Spiro T. Agnew could, quite conceivably, be President one day. There is a third reason, too.

Office in Old State, huge fireplace, gilded mirror, eagles on doorknobs, the works. Vice President reading blue-covered booklet with stars and seal, marked The President's Daily Briefing—the CIA intelligence summary. Face pink, healthy-looking, hand carefully manicured, French cuffs with gold cuff links, small, controlled smile. Talks easily with air of candor. Looks as though he'd been dieting. Rather Presidential-looking—a casting director would instantly choose Agnew over Nixon for role of Modern President.

He himself instantly brings up the subject of the "impudent snobs" speech:

"You know, there's a certain humor in the situation. They land on me for a few words out of context, but the other side can attack, and no matter what language they use, there's no criticism . . .

"Yes, I wrote the speech myself. I never submit my speeches to anyone. I did that speech on a Saturday, and there were not many people around . . . the trouble was, nobody paid any attention to what I really said . . .

"You have Ed Muskie asking why we won't stop testing MIRV's and Ed Brooke saying we're responsible for the strategic arms race. I was trying to answer that sort of thing . . . We've built no ICBM's since 1967, no nuclear submarines since 1965 . . . The Russians have 64 ABM's already, more than we'll have in 1974. They're building 100 ICBM's this year alone, and they're building nuclear submarines just as fast as they can. Yet you have these statesmen blaming *us* for the strategic-arms race. That's what I meant by masochism . . . I've seen dozens of editorials about my speech, and *not one line* about this subject.

"I suppose if you want to get a point across, you say it in exciting language, and then bland out everything else . . . Of course, if you use punchy language, you're automatically attacked for intemperance. But that risk is counterbalanced by the attention you get for what you say. If you can get your thought through to people, it can be worth the risk . . . If I had it to do again, I'd still deliver the speech just as I wrote it."

Agnew on the young:

"There is a fascination among young people with demonstrations as a means of communication. I have a theory about that. There is a direct relationship between the popularity of confrontation with young people, and the fact that they were brought up on television, not books. They're conditioned to action and emotion, not words. This is a perfectly natural thing—every day, they see action, violence, confrontation on television, and they are naturally more conditioned to action than logic. But there is a danger there.

"Young people who become involved, often for very salutary reasons, in a demonstration or confrontation, tend to become caught up in the event itself, emotionally, tend to be carried away by mob psychology . . . that is the danger . . ."

Agnew on his own generation gap:

"My 14-year-old daughter, Kim wanted to wear a black arm band to school, to demonstrate against the war. I told her I had no objections if she really understood the facts. So I took a lot of time to tell her how we got involved in Vietnam, and the situation there, and so on. She said, 'I understand what you're saying, but I don't agree.' So I explained the whole situation again, about the 1954 accord, and the 1962 accord, and she said, 'All right, but why not just get all of them out of there?' So I said, 'Kim, I have given you the arguments for not just getting out, and you just haven't given me a logical argument against it. So [here voice rises in parental authority] *there will be no black arm band and no participation in a demonstration.*'

"Well, there was the usual crisis, and I guess some mutual trauma, but after that, I think, I was nicer than usual to her, and she was nicer to me . . . I think kids keep pushing these days, to find authority, that they need authority at some point, and when they don't get it they're unhappy . . ."

Agnew on politics, George Wallace, and the South:

"I hope I'm still a politician, though some people might dispute it [small smile]. I've just come back from the South, and I'm sure now most of the people in the South don't want George Wallace. They didn't really want George Wallace in 1968, but they felt they had no alternative. They didn't really know who Nixon was—all they knew was that he was a professional politician who'd been around the track before. Now they've seen the President in action. I'm sure they feel more confidence with Nixon than with Wallace.

"I made a speech the other day in Jackson, Mississippi—2,400 people at a hundred a plate, the biggest political gathering in the state's history . . . In the South, the politicians have been caught in a cross fire, between George Wallace on the right, and Ed Muskie or George McGovern on the left. In 1968, they felt they had no place else to go but Wallace. But that's no longer true. Most people in the South, as elsewhere, want to be somewhere near the middle of the spectrum . . .

"We've made it clear that we will not support a racist policy . . . But there have been steps taken which the South understands and appreciates. Revenue sharing, for example . . . And we recognize the Supreme Court decision against artificial segregation, but we also recognize that the decision does *not* mean artificial integration . . . Wallace can't get off the ground now . . . I think the President can retain his support in the South, and I think he can retain his general support in the rest of the country . . ."

More talk about Vietnam, politics, and daughter Kim (who must be a strong character) which the Vice President puts off the record, and talk ends.

The third reason it is worth trying to understand the way Spiro T. Agnew talks and thinks is that he is a more formidable political figure than those who laugh at him realize. What he says may not be particularly original or profound. But he is formidable, all the same, because his style of speech and thought precisely mirrors the style of the "Middle Americans" who make up the great majority of the American electorate, and who will therefore elect the next President. After all, a lot of them have their Kims to worry about, too.

GEN. WILLIAM C. WESTMORELAND'S SUPERB ADDRESS: "STAND UP FOR FREEDOM"

(Mr. DORN asked and was given permission to extend his remarks at this point in the RECORD and to include an address by Gen. William C. Westmoreland.)

Mr. DORN. Mr. Speaker, Gen. William C. Westmoreland delivered an outstanding address in my hometown of Greenwood to the annual Kiwanis ladies' night banquet on Tuesday, October 21, on the Kiwanis International theme, "Stand Up for Freedom."

I commend to my colleagues in the Congress and to every citizen in our country General Westmoreland's timely and superb address on this occasion:

REMARKS BY GEN. W. C. WESTMORELAND

Ladies and Gentlemen, I am happy to be back among fellow Carolinians.

To me, you are home folks and this is home. I want you to know that what I learned here as a boy in my home, school, church, and boy scout troop has helped me wherever I have been and in whatever I have done since I left the Citadel to enter the Military Academy.

There is something fundamental about this place and its people that has been good for most of us. I want to return to this thought in a moment.

I am also pleased to be among Kiwanians tonight. I remember how proud my late father was to be a member of the Spartanburg Kiwanis Club. As for myself, I remember well my first speech in public. I was fifteen, and I spoke to the Kiwanis Club of Spartanburg. It must have been a mighty poor speech, for it has taken 40 years for a Piedmont Kiwanis Club to invite me back.

My father and mother, my school, church, and scout troop tried to teach me to be constructive, to be positive rather than negative, to build rather than tear down. Your club motto is "We Build". So I guess I have tried to be a Kiwanian in spirit during my life.

I would like to share with you tonight some thoughts brought to mind by your motto. I'd like to begin by saying that this spirit of building is vtial to the preservation of freedom in America and elsewhere in the world.

Our nation did not grow. It was built by people dedicated to building a new life in a new land. Always the goal has been self-determination and the right to be free.

The building blocks in our history are well known to us. It is significant in our consideration of them that, in large part, the builders of our country and protectors of our freedom have been young people.

Just the other day I was re-reading the story of the Declaration of Independence and the United States Constitution. As I read, the more interested I became. I suddenly remembered how young many of the signers of the Declaration of Independence were, particularly the South Carolinians. Both Lynch and Rutledge were in their late twenties. Heyward and Middleton were in their thirties.

I think it is good to pause and reflect on the words of the Declaration of Independence from time to time. In fact, all Americans should reread those eternal thoughts to rekindle their patriotic spirit. Time has not tarnished, instead has brightened those ideas, ideas that the rights of man, bestowed upon him by God, are supreme, that the government exists solely to secure those rights, and only through the consent of the governed.

The Declaration of Independence clearly implies that Freedom requires an obligation. Truly, freedom is not free. It requires individual effort and positive action. In addition, the Declaration of Independence does not guarantee happiness for all men. Nor does it say that man is guaranteed the right to happiness, but rather, he is guaranteed the right to pursue happiness. Happiness is not a gift. Instead, it is something to be sought by each individual. Through individual effort, collective progress occurs.

While reading further, I rediscovered that the most eager supporters of the Constitution were also young men, men such as Madison, McHenry, and Morris, all of whom were close to thirty-five. King and Hamilton were thirty-two and another well-known South Carolinian, Charles Pinckney, was only twenty-nine. Even though Pinckney lived later to disclaim the Constitution, he was initially one of its most staunch supporters.

They were responsible for framing a document unique in history—

A document which ends forever the need for revolution . . .

A living document which capitalizes on man's intellect and reasoning ability . . .

A document which provides orderly and peaceful means for national growth and progress . . .

A document which calls for political evolution, not revolution.

The men who wrote the Declaration of Independence and who drafted the Constitution have worthy successors today. Many of them have worn the uniform of our country.

We now have a new type of hero, our astronauts. We are proud of them and the many scientists, engineers and workers who have brought honor to our country by their spectacular exploits in space. Many in our space team are young men.

I think I know the youth of America as well as anyone, for I have served with so many of them. It may come as a surprise to some who have been following the reported exploits of young people the past few months to hear me stand up strongly for our young people, that is for most of them.

The ones I know best, of course, are the hundreds of thousands who have served and are now serving in Vietnam. These men have joined the people of the Republic of Vietnam to fight a war and at the same time build a nation where—as in our own—people may exercise the right to determine their own destiny. There they face an enemy with no respect for life or liberty, an enemy which will insure only one unalienable right—the right to pursue communism.

It is important to emphasize here that in Vietnam we are not tearing a country apart. We are building a nation. The way we go about it is easy to understand. As progress is made on the battlefield, there will be less for Americans to do on the battlefield. As the South Vietnamese grow stronger, we diminish our involvement in proportion. We call this "Vietnamization". We look forward to the day when Vietnamization will be total, but we dare not say now when that will be.

In my view, Vietnamization is well on its way. Already it has proved to be a sound and viable policy which deserves the support of the American people.

I am personally concerned by the continual protest against those who accept the responsibilities of leadership and who are doing their utmost to bring about an honorable peace. Just the other day, during the moratorium, I heard a young soldier in Vietnam being interviewed. When asked what he thought about it, he replied, "Well, I don't know . . . all of us out here from the general down to me are against war as such, but it seems to me that this thing helps the enemy more than it helps me."

Outbursts and derision should not be against our national policies, arrived at through constitutional means. In my opinion, if the demonstration of last Wednesday had been in support of our President, peace would be nearer at hand.

No one despises war more than the vast majority of moral military men who have seen it firsthand, who know its real tragedy and horror, who—like you—wish with all their hearts that war could be forever banned from the face of the earth. And yet, throughout recorded history, after every war, the soldier has been attacked. I recall so well Kipling's words:

"It's Tommy this, an' Tommy that, an'
'Chuck 'im out, the brute!'
But it's 'Savior of 'is country,' when
the guns begin to shoot."

Today it would seem that the words "patriotism", "the Defense Establishment", "law and order", "draft", "obedience", "responsibility" have become odious. Indeed, in the Free World, many misguided people advocate smashing our shields, calling in our lookouts, destroying our swords and quenching our watch fires. They advocate this while outside the bear and the tiger watch and wait.

Just recently I returned from Europe when I visited the United Kingdom. I spoke with some community leaders there who were puzzled, perplexed and confounded by the havoc and bloodshed in Ireland. They questioned, "Where did we go wrong? What have we done that citizens of the same country and of the same race, differing only in religion, should fight and destroy property and one another?" Had it not been for the forces of law and order—the British military and local police—Belfast may well have burned to the ground.

The Irish, whose love of joy, freedom and independence are known throughout the world, allowed hatred to cloud their reason. Yet this is a country where respect for individual liberty preceded by four centuries one of England's greatest contributions to mankind, the Magna Carta, out of which grew the individual's right to legal protection, to trial by jury and the right not to be deprived of liberty except by the law of the land.

Could this happen in the United States of America? I believe that it can. We have seen something like it in the smoke and fire of the long hot summer of 1968. Yes, the enemy got into the outskirts of Saigon, but in Washington our own citizens tried to destroy our capital city.

One of our leading periodicals said a couple of weeks ago that "These are revolutionary times" . . . that profound changes in existing institutions and customs are demanded. Now, not all revolutions are undesirable; not all revolutionaries are wicked. But it is up to us to sift out that which would threaten our way of life and deal with it according to the law of the land. No one can undertake this sifting-out process better than people like you—people dedicated to building rather than destroying, people who will not forget the first building blocks of our American democracy, the Declaration of Independence and the Constitution.

At the time of the last meeting of the Constitutional convention, Ben Franklin said that he consented to the Constitution because—and I quote—"I expect no better, and because I am not sure that it is not the best."

Time has not proven Franklin wrong. Alfred North Whitehead, the great English philosopher, more recently observed that there are only three times in the history of the Western world when statesmen consciously took hold of historic destinies: Periclean Athens, Rome under Augustus and the founding of the American Republic.

The American experiment must continue as the greatest moving force in the world. It must continue to be the example for the world of what freedom really means.

Ladies and gentlemen, if America is going to survive the ravages of time better than Athens and Rome, we as a people must look back to the foundations of Western heritage: the Judaeo-Christian ethic, the Magna Carta, the Declaration of Independence, our Constitution. We must not only reaffirm our beliefs, we must put them into practice.

According to General MacArthur, "religion and patriotism have always gone hand in hand, while atheism has invariably been accompanied by radicalism, communism, bolshevism and other enemies of free government." MacArthur's words ring as true today as they did 25 years ago.

When our forefathers put the Constitution together as a dynamic instrument, they were well aware that change is the vehicle to progress. But they also knew that change must be brought about in an orderly manner through reason and that it must be controlled and guided, guided largely by ethical and moral standards and fundamental principles. Without such guidelines change goes out of control and often results in retrogression rather than progression.

Today we are changing at such an accelerated rate that in many cases our pace has outrun our reason. We as a people experience difficulty in relating to the fundamentals of our way of life. Consequently, we face great problems, both as people among people and a nation among nations. Our biggest problems appear to involve young people who, as the pace quickens, are actually further away from America's traditional values than we were in our youth when the pace was slower.

And yet, as I visited Fort Gordon today and saw our fine young men under training, when I heard these young ladies from Lander College sing tonight and when I saw the boys and girls from your Key Club, I knew that they were like most of our youth, youth represented by young servicemen and women I have seen around the world, young Americans who know that freedom is not free, young Americans who know that freedom requires individual responsibility.

The problems which face us—young and old, both as individuals and collectively—must be met head-on.

Drugs and narcotics.
Permissiveness.
Glorification of Dissent.
Degradation of Patriotism.
Racial Problems.
Disregard for Law and Order.
Indifference.

And, those who choose to influence by intimidation or temptation.

If our standards of decency and morality are abandoned, then we will be in trouble. If the search for honesty, truth and justice ever becomes supplanted by material goals, our nation will be doomed.

Our form of government, with its checks and balances, permitted us to survive crises in the past. I am certain that we are resilient enough to survive this one.

However, we must conquer our problems by turning back to those fundamental principles guaranteeing life, liberty and the pursuit of happiness, those principles which Sophocles declared over twenty-four centuries ago as being "unchangeable, unwritten laws of heaven."

We as citizens, young and old, must exercise a collective sense of responsibility and consideration for others as well as self.

We must stand up and sound off for decency, patriotism, democracy and freedom. In short, we must put into practice the motto of Kiwanis—Stand up for Freedom.

INTERNATIONAL BANKERS—THE MONEY-CHANGERS MOLD HISTORY

(Mr. RARICK asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. RARICK. Mr. Speaker, the American people are becoming more and more concerned over the condition of their money.

Unfortunately, the U.S. currency left the control of the Congress many years ago to become but another pawn in the international control mechanism of the United Nations Organization. See U.N. Monetary and Financial Conference, Bretton Woods, N.H., 1944, which can be found in "International Conciliation," published by Carnegie Endowment for International Peace.

It is tragic that citizens of other countries have more control over the buying power of the U.S. dollar than the American citizens' elected officials to whom the Constitution entrusted this power. In fact, the international bankers are aware that they can influence national elections in any country by manipulations in the value of currency.

An interesting series of columns on money has appeared in the local Washington newspaper which I include as part of my remarks:

[From the Washington (D.C.) Evening Star, Oct. 20, 1969]

MONEY—A NEW EPOCH: CENTRAL BANKERS HOPE TO FIND A WAY TO MANAGE POLITICIANS

(By J. A. Livingston)

Late July and early August in Paris were sultry—enervating.

Americans longed for air conditioning.

Frenchmen who didn't have to cater to tourists, operate factories, take care of international trade, or run the government fled to the mountains or the seashore for their precious holidays.

Suspense, nervousness prevailed—especially among businessmen and bankers.

What would happen to the franc? Would its price be lowered?

Julien-Pierre Koscul, senior vice president for Europe of the First National City Bank of New York and a former official of the Bank of France, offered a unique theory.

Yes, he thought, the price of the franc would have to be lowered. "You know," he said, "if the franc is to be devalued, the ideal time is August when labor leaders are on vacation, when everybody influential is away, and no one expects it."

LEADING QUESTION

That gave me my leading question—to bankers, businessmen, government officials. "If devaluation were to come, would it be in August?"

Invariably, the answer was, "No, not till after the German elections. It takes time to prepare for devaluation."

On Friday, Aug. 8, President Georges Pompidou of France stumped the prophets. After the markets were closed, he announced an 11.1 percent devaluation of the franc.

He did not wait for Germany. He did not delay, hoping for a deal—franc down, mark up.

Pompidou wanted to call his own shots. He was versed in banking, economics and the guiles of speculators and businessmen. He had been an executive at the powerful banking house of Rothschild.

French monetary reserves—gold, foreign currencies and drawing power on the International Monetary Fund—were falling day by day. Hastily devised exchange controls couldn't stop normal business precautions.

French importers speeded up payments abroad. If the franc were reduced in price, they would have to pony up more francs to obtain the necessary marks, guilders, or dollars to meet their bills. In the case of German invoices, French purchasers stood to lose doubly, if the mark were raised in price.

On the opposite side of transactions, foreign purchasers of goods from France delayed paying. They waited for devaluation of the franc. Then they would make a foreign exchange profit.

Pompidou could not undo the rise in wages, costs and prices which had followed the May–June, 1968, riots and strikes in Paris. He could not make French industry more

efficient and competitive overnight. But at least he could stop the bleeding of French reserves.

He could make the price of the franc look "right"—tenable—to foreigners. He could improve sales of French goods abroad by devaluing the franc, thereby making it possible for French exporters to quote lower prices.

The decision, though a surprise, was an anticlimax. Therefore, it went off smoothly. Speculators, bankers, and business men had expected it. They merely mistimed it.

With equal suddenness, Chancellor Kurt Kiesinger of Germany, decided that the 25-cent mark, four to the dollar, was not "immer und ewig"—always and eternal.

UNCERTAINTY RECALLED

As finance ministers and governors of central banks met in Washington on Monday, Sept. 29, for the annual meeting of the International Monetary Fund, they were deeply concerned about the German elections: Who would come out on top—Kiesinger or Foreign Minister Willy Brandt?

If Brandt won, they had no doubt: That mark would be revalued. That is what they wanted.

But if Kiesinger won . . .

Foreign exchange markets decided the issue. Money flooded into Frankfurt. The Bundesbank was swamped with dollars it didn't want, couldn't handle.

Kiesinger reacted.

But instead of revaluing the mark—setting a definite price, as the French had done with the franc—he tore it loose from the dollar. The mark became a floating currency. This violated IMF rules. It annoyed the French. But it was accepted as an interim expedient.

"King Canute" economics had failed again. Politicians can delay doing what has to be done but they can not roll back economic tides forever.

The outstanding King Canute failure in postwar money management occurred in the United States. A date to remember is Dec. 5, 1965—a Sunday.

President Johnson was recovering from a gall bladder operation in Texas. That evening the Federal Reserve Board summoned reporters to announce that the discount rate had been raised to 4½ percent from 4 percent. The vote was four to three.

JOHNSON REGRETFUL

The next day Johnson said: "I regret, as do most Americans, any action that raises the cost of credit, particularly for homes, schools, hospitals and factories."

For months thereafter, Secretary of the Treasury Henry H. Fowler evinced displeasure. Why couldn't FRB chairman William McChesney Martin and the board, have waited until the President had sent his State-of-the-Union and budget message to Congress?

Martin had been chafing. Vietnam was absorbing more and more materials and manpower. The budget deficit was increasing. Inflationary forces were gathering momentum.

He long had urged a tax increase. But to no avail. A request to Congress to raise taxes would have invited full-scale debate on the Vietnam war. And higher taxes might slow economic growth—cause some unemployment. The President didn't want that.

In 1966, as the Federal Reserve kept credit tight, interest rates rose. Mortgage money dried up. Housing collapsed. The term mini-recession popped into the economic lingo.

But Martin had made his last stand. He and the Federal Reserve Board were prisoners of Vietnam escalation. Johnson did not ask Congress for a tax increase until the summer of 1967. Congress did not act until 1968.

DOLLAR CHEAPENED

Meanwhile, the Reserve Board became the cheapener of the dollar instead of its guardian. It provided the credit—the lending power—to finance enlarging budgetary deficits. No central bank can refuse to finance its government. And when it does, it adds to the money supply, extends purchasing power, and becomes an "engine of inflation."

The U.S. boom had undesirable side effects. U.S. imports rose much more sharply than exports. The U.S. balance-of-payments deteriorated. The richest nation in the world was compelled to pay its bills with dollar IOUs—deficit dollars.

Johnson could no longer say that the dollar is "as good as gold." Nor could Chairman Martin.

This brings us to an irony. Triumphantly, the members of the International Monetary Fund have created "paper gold"—Special Drawing Rights—as a substitute for and supplement to gold bullion. The SDRs are designed to buy time for and to perpetuate the Bretton Woods system. Yet, at the instant of triumph, central bankers are debating among themselves: Must the system be changed to be saved?

Three principles governed Bretton Woods.

First: The dollar would always be exchangeable for gold at $35 an ounce. Today, this is adhered to in theory, but not in practice. The unmortgaged U.S. gold stock is only about $10 billion.

Consequently central bankers hesitate to exchange dollars for gold. Were they to knock too often on the gold window of the Federal Reserve Bank of New York they would find it closed. They would have to accept the dollar.

A U.S. embargo on gold would topple the international monetary system. It would derange world trade. No responsible central banker or finance minister wants that. Paradox: Fear of disrupting the system keeps the system going!

Second: Prices of currencies would be fixed relative to the dollar and hence to one another. These firm relationships were the heart of the Bretton Woods system. If the prices of currencies bob up and down, so would prices of groceries and automobiles. Consumers wouldn't accept this. Businessmen wouldn't like it. Politicians couldn't survive the economic uncertainties such fluctuations would create.

Third: Though the parities, the prices of currencies were fixed, they were not immutable. If a country's competitive position changed for the worse, if it suffered a prolonged balance-of-payments deficit, the Bretton Woods articles proposed lowering the price of the currency. Conversely, if a country has a prolonged balance-of-payments surplus, an increase in the price of the currency was contemplated.

But such adjustments are a politician's nightmare.

The Government that devalues a currency confesses failure.

The government that raises the price of its currency cannot expect hometown hurrahs. Revaluation hurts exporters. It is likely to cause some unemployment.

Some central bankers have concluded that they must find a way to manage politicians. In that way, maybe they will be able to manage money.

By manipulating changes in exchange rates, they hope to lead presidents and prime ministers and legislators into economic policies which will achieve the best mix among four hard-to-reconcile objectives:

1. Economic growth; 2. Price stability; 3. High employment; 4. Balance-of-payment equilibrium.

STRUGGLE FOR POWER BY CENTRAL BANKERS

(By J. A. Livingston)

Have you ever observed that when people are troubled—at their wit's end—they want to talk?

This was impressed on me during my three-month tour of financial capitals this summer. The men who manage the world's money are not satisfied with the system. They are groping to change it. But they are not sure how.

Many government and central bank officials openly expressed misgivings. And for quotation! Something they had never done before!

They were anxious to let officials of other nations—and particularly of the United States—know that all has not worked as dreamed at Bretton Woods, N.H., 25 years ago.

Why the United States?

DOLLAR IS THE KEY

Erik Hoffmeyer, a former professor of economics who now heads the Danish National Bank, put it in three sentences: "Your country is the strongest in the world industrially. The dollar is the key currency. The United States must take the lead in any basic modification of the monetary system."

Hoffmeyer and two other central bankers already have declared that the Bretton Woods system is too rigid: Greater flexibility would foster world prosperity, enhance international trade, and reduce speculative assaults against weak currencies.

Hoffmeyer's associates in "modification" are Wolfgang Schmitz, president of the Austrian National Bank, and Guido Carli, governor of the Bank of Italy. They propose the "crawling peg," which can be defined as "flexiblity in small doses."

They reached their conclusions separately—independently. When I told Schmitz in Vienna and Carli in Rome that Hoffmeyer was of their mind, each seemed surprised. I had seen Hoffmeyer previously in Copenhagen.

Under the Bretton Woods formula, a central bank keeps the price of its currency stable. It limits deviations from parity to one per cent up or down. The range of a currency with a 50 cent parity would be 49½ cents to 50½ cents. Usually, central bankers confine fluctuations to less than that.

The crawling peg would add leeway—scope. The usual proposal is to let a currency's price rise or fall as much as 2 percent a year. A currency with a 50 cent parity could crawl up to 51 cents and down to 49 cents.

CONTEST OF POWER

The crawling peg, sometimes called the "dynamic peg," is more than a foreign exchange mechanism. It is a strategy in a contest of power—money managers versus politicians. Fluctuations in currencies, if wide enough, will cause fluctuations in prices in grocery stores. They'll change the level of employment in some industries.

Consequently, presidents, prime ministers, and parliaments cannot be indifferent to movements in the price of money.

By subtle changes in the price of money, central bankers hope to prod politicians into making "correct" budgetary decisions.

But all is not rah-rah for the "crawling peg."

At the American Bankers Association monetary conference in Copenhagen in June, an official of the International Monetary Fund described the "crawling peg" as a "can of worms. All other currencies will be crawling up and down on the dollar and you will never know which one will come out on top of the mess."

This official is not alone. But he may have to eat his unappetizing metaphor.

He reports to the 113 members and 20 executive directors of the IMF. He can influence their decisions. But he must find a consensus. And too often, the consensus is the United States! It has put up the most money—24 percent—and wields 21.6 percent of the votes.

Until this year, the U.S. "consensus" was Bretton Woods—nought else. Then, at the IMF annual meeting, Secretary of the Treasury David M. Kennedy said the United States

would consider new techniques to eliminate "unnecessary rigidities."

EVENTS RESHAPE TRENDS

Events—the fundamental weakness of the dollar—have reshaped the U.S. attitude. The dollar ties the Bretton Woods monetary system together. The prices of other currencies—their parities—are linked to the dollar.

When the mark was worth 25 cents and the franc 20 cents, their respective exchange rates were four and five to the dollar and 1 to 1¼ to one another.

When the franc was devalued to 18 cents or 5.6 to the dollar, and the mark remained at four to the dollar, the new mark-franc "rate" became 1 to 1.37.

After the German elections the mark was cut loose from any parity. Its exchange rate fluctuated vis-a-vis the dollar and other currencies. This breached the Bretton Woods principle of fixed parities. But it was accepted by IMF members as a necessary expedient.

Relative to the French franc, the Italian lira, the British pound, the dollar has been—and is—strong. But its strength is based on district. Frenchmen, Britons, Italians constantly fret: Will their currencies be devalued? The dollar is their refuge from fear.

When the Soviet army invaded Czechoslovakia, the dollar advanced in price. Europeans, nervous about war, rushed to dollars for sanctuary. Even Germans, notwithstanding preeminent strength of the mark at that time.

DOLLAR IOU'S USED

But the dollar has not been consistently strong relative to the Swiss franc, German mark, Netherland guilder. The United States has been meeting its debts with dollar IOUs. It has been running a chronic balance-of-payments deficit—an "intractable deficit," says Milton Gilbert, economist for the Bank for International Settlements.

Year after year U.S. foreign purchases of goods and services and capital expenditures have exceeded sales and income from abroad. The United States may be lean and thin in cartoonists' eyes, but to economists he resembles more and more John Bull. He is the rich man who consumes more than he can pay for.

The shocker is the U.S. trade balance. In 1964, U.S. exports exceeded imports by about $7 billion. This surplus has shrunk to about $1 billion. Edwin Stopper, head of the Swiss National Bank, thinks the shrinkage is due to "structural change."

In the postwar period, American companies built branch factories inside the Common Market's tariff wall. Initially, these subsidiaries imported machinery and supplies from the U.S. This boomed American exports.

But soon, the subsidiaries were obtaining supplies in Europe. Oops, a double reverse! American subsidiaries, which were importers of goods made in the U.S.A., began competing with American companies by selling goods to the U.S.A.

Exported American technology and know-how also contributed to the deterioration in the U.S. trade balance. Foreign companies—with modernized machinery and management techniques—have been able to undersell or outstyle U.S. companies. Witness the foreign car invasion, led by Volkswagen.

CHANGE NOTED

A decade ago, imports of manufactured goods by the U.S. came to about half of U.S. exports of manufactured goods. Today, manufactured imports have climbed to about 80 percent of U.S. manufactured exports. The U.S. industrial lead—its supremacy in manufacturing—is far from what it used to be.

Arthur F. Burns, counselor to President Nixon, is aware of this. The President, Secretary of the Treasury David M. Kennedy, and members of the Council of Economic Advisers are concerned with the implications: Perhaps the dollar is an overvalued currency. Perhaps, its parity—vis a vis—European currencies and the Japanese yen—is too high.

No one can know for sure. But the persistent deficit in the U.S. balance-of-payments—accentuated by the drop in the export surplus—leads to such an inference, if not conclusion.

And so the dollar—once the international strong boy—has become a question mark and source of worry.

Normally, if a currency is overvalued, if its price is too high, the remedy is specific: Reduce the price, lower its parity. But the medicine for the franc or the pound is not the medicine for the dollar. The dollar is unique.

In Frankfurt, Otmar Emminger, a director of the German Bundesbank, told me: "When a person says that the parity of the dollar must be changed, he really means that the parity of other currencies must be changed. The dollar doesn't move relative to other currencies. Other currencies move relative to it.

"A change in the price of gold to alter the parity of the dollar would only create more difficulties, more anxiety. If the U.S. Treasury boosted the price of gold by 5 percent, to reduce the parity of the dollar, people would begin to wonder: Will the gold price be increased again? That would renew speculation in gold. It would create instability."

Besides: An increase in the price of gold would lower the price of dollar in theory. But would it actually?

If other countries kept their currencies tied to the dollar, there'd be no dollar devaluation. This would merely reinforce the commonly accepted notion that the world is on a dollar standard, doesn't like it, and doesn't know what to do about it.

IS U.S. DOLLAR OVERPRICED AND HOW CAN IT BE LOWERED?

(By J. A. Livingston)

Guido Carli, governor of the Bank of Italy, makes no bones about what might undo the international monetary structure: The dollar.

For far too long the United States has been administering charity on the cuff. Carli puts this carefully, diplomatically. Economists will grasp his meaning. But to most persons, his phraseology will seem bureaucratic:

"We should inquire whether in time, the U.S.A. will be able to acquire, on the basis of the present exchange parity of the dollar surpluses of good and services of a size corresponding to the volume of its capital exports and unilateral transfers."

That translates into: Will the U.S. continue to pay its bills with deficit dollars—dollars the world already has in overabundance?

Carli recognizes that the United States has worldwide responsibilities—military, social, economic. These commitments result in large outflows of dollars—some by direct grants, some as loans.

Nations customarily pay for such outflows with goods and services—with surplus exports. But the United States has not been able to do so in recent years.

PROBLEMS OUTLINED

Hence Carli's misgivings: Is the dollar overpriced–

If so the problem is: How can its price be lowered?

Carli would use the "crawling peg."

But, as noted in yesterday's article, critics of the crawling peg fear the "can-of-worms effect." One currency, like the German mark, will crawl up. That tends to lower the dollar's price vis-a-vis the mark. It will improve the United States export position in trade with Germany.

But other currencies, the franc and the pound, for example, crawl down—in the scramble for exports. This impairs the U.S. balance of payments. And this has been the prevalent postwar tendency.

This downcrawl endangers the monetary system. It threatens the dollar, which is both the linchpin and the marriage broker in international trade.

The price of the dollar determines the price at which a German or French importer can afford to buy U.S. goods. Likewise, it fixes the price at which a German or French exporter can afford to lay down goods in the United States.

Economies drift apart—like people. The wage, price, and cost structures of nations rarely develop similarly.

Technical advances — improvements in plant and equipment—enable some nations to achieve big gains in efficiency.

COSTS OUT OF LINE

In some countries unions push up wages faster than in other countries. Costs get out of line.

And political preferences vary. Some governments foster expansion with budgetary deficits—inflation. Politicians let costs rise rather than boost taxes.

This happened in the United States from 1965 through 1968. In contrast, in Germany, government officials are inflation wary. Seared deep in the German ethos are the two mark wipe-out after World Wars I and II.

If a nation piles up balance-of-payments deficits—if it fails to meet its bills and losses gold or other reserves—then internal policies must be adjusted.

Consumption must be slowed down. Exports must be increased relative to imports. Prices must be prevented from rising as rapidly as prices in other countries.

Conversely, if a nation consistently runs a balance-of-payments surplus, as Germany, then it should pursue expansionist policies to increase its imports. If it doesn't, if it adds to its reserves year after year, it "gives away" manhours and materials. It swaps resources (goods and services) for gold and dollars IOUs. It deprives consumers of the fruits of their labor.

Consistent balance-of-payments surpluses are not necessarily an index of good management, good husbanding of resources. On the contrary!

President Charles de Gaulle followed such an austerity course to build up French gold resources. This deprivation, this holding back of income from the French people, sowed some of the discontent which led to the General's downfall.

When all else fails, when internal adjustments are too difficult, international marriage counselors advise: Change the price of the currency!

A country that has been losing reserves, cuts the price.

A country that has been gaining reserves, raises the price.

Let's go through the arithmetic of why.

Let's take France as an example, using round numbers. The French franc was devalued from about 20 cents to 18 cents. A French manufacturer who formerly sold an item in the U.S. for $1 (or five francs) now can sell it for 90 cents and still earn the same number of francs. Therefore French exports ought to increase.

And French imports will be likely to decrease. An American manufacturer who formerly charged $1 or 5 francs for an item laid down in Paris would now have to get 5.6 francs for it to earn a dollar. So the price would rise in France.

Revaluation reverses this process. It tends to boost export prices, hence decreases sales abroad. Simultaneously, it makes it possible for foreigners to sell goods at lower prices.

The founders of the Bretton Woods agreements foresaw that currencies might have to be revalued or devalued. But they did not reckon with political psychology.

Far too often and for far too long, govern-

ment officials are likely to procrastinate—put off hard-to-made financial decisions. Out of line economic distortions widen. Finally, a crisis change in the price of a currency is dictated—by the speculative rush of funds from money center to money center.

Therefore, some central bankers are leaning toward flexibility in small doses.

Jelle Zijlstra, president of the Netherlands Bank, and Otmar Emminger, of the German Bundesbank, have come out for a one-way crawling peg—up only. Let the IMF grant central banks authority to make minor revaluations.

Erick Hoffmeyer, chairman of the Danish National Bank, Wolfgang Schmitz, president of the Austrian National Bank, and Carli advocates a two-way movement. They know that heads of government will never give them authority to make big changes—5 percent or 10 percent. But minute changes—say 2 percent a year, or one-half of one percent per quarter—might be conceded.

FREE RATES FAVORED

Many economists, particularly those of the laissez-faire, free-market University of Chicago school, think this is tiddledy-winks. They advocate freely floating exchange rates. Let supply and demand determine the price of currencies.

The ebb and flow of imports and exports, the movement of tourists to and from a country, and the availability of income from capital will fix the price of nation's currency day to day. Such changes in price will, in turn, interact on trade, tourism, and capital flows. Market forces—not decisions of government officials—will raise and lower purchases and sales abroad.

But central bankers reject "let the market decide."

Hoffmeyer says "As a professor, I explored such a system. But could it work? Would government officials let it? Government officials consistently intervene in their own bond markets to influence the level of interest rates. "Is it likely they will give up control over the price of their currencies, which for big trading nations, determines the cost of living?"

Sir Maurice Parsons, deputy governor of the Bank of England, is convinced that floating exchange rates would have an adverse effect on world trade.

Businessmen with foreign bills to pay buy insurance against a change in the price of currency. This is called "forward cover." Thus, importers can know in advance what they will have to pay for the goods they buy and therefore the prices at which they can afford to sell.

This insurance—in periods of stability when there are no devaluation or revaluation scares—is usually slight. The central bank maintains the price of a currency—the fluctuation—within a 1 percent band. Therefore, the risk of loss is minimal.

"In a floating rate system," says Sir Maurice, "the cost of forward cover would rise significantly and might become intolerably high."

SPECULATORS FEARED

Why? Because there'd be no established bottom or top price for a currency—no 1 percent band. Sellers of insurance would increase their rates.

Advocates of floating rates argue, "No, this is banker talk."

Speculators would intervene on both sides of the market. And there are always buyers and sellers of currencies—businessmen who need marks or dollars and businessmen who have marks or dollars to sell.

Consequently, if economic conditions are stable, floating exchange rates will be stable. If economic conditions are unstable, then no exchange rates—fixed or unfixed—are stable. The free marketeers offer this clincher: Floating rates speed the process of adjustment, of regaining intermarital stability.

To Harold Lever, newly-named Minister of State in the Ministry of Technology and former financial secretary of the British Treasury, "This is seminar economics—fine in the classroom but not for the real world." And that's likely to be the case in any studies made in the IMF.

Modification of the Bretton Woods system will be a tortuous process. The men who "manage the world's" money are groping and divided.

They are not certain that greater exchange flexibility will give them influence over government decisions. Nor are they satisfied that the crawling peg will help to "price the dollar right" if it's overvalued.

Neither consensus, conviction, nor compromise is immediately probable.

But they do want and they are anxious to find some way to control the whiplash of money from nation to nation, as doubts and distrust surround currencies—sometimes the franc, sometimes the lira, sometimes the pound and even at times, the dollar.

THE EURODOLLAR LIES OUTSIDE AUTHORITY OF CENTRAL BANKS

(By J. A. Livingston)

It's not in Webster's Third New International (1961 edition) but you'll find it in the big Random House (1966) dictionary.

"When I'm asked about it, my eyes glaze over," says Herbert Stein, a member of President Nixon's Council of Economic Advisers and an expert on fiscal and monetary affairs.

The Soviet Union and the Eastern European satellites can claim credit for its origin.

British monetary restrictions gave it a great push forward.

In about a dozen years, it has swelled into an undirected force which whips across national boundaries beyond the administrative powers of the men designated by their governments to manage the world's money, men of the stature of William McChesney Martin Jr., chairman of the Federal Reserve Board; Karl Blessing, head of the German Bundesbank, which often has been in the center of its vortex; Guido Carli, ingenious and innovative governor of the Bank of Italy.

"VULNERABLE, VALUABLE"

Dr. Edwin Stopper, president of the Swiss National Bank, refers to it simultaneously as a "vulnerable sector of the monetary front," and a valuable source of liquidity on the "doorstep of central banks."

And Pierre Andre, chief of the foreign department of the National Bank of Belgium, spoke feelingly when he observed: "It has compromised the autonomy of central banks."

What is it? It's the Eurodollar.

It developed perchance. All nations which engage in international commerce maintain accounts in U.S. banks. And, as trade expands, their need for dollars increases. Why?

Because the dollar is the work money of the world. It pays bills in England, India, France, South America, Hong Kong, and even behind the Iron Curtain, where it is welcomed.

REDS SUSPICIOUS

But Iron Curtain officials are cautious and suspicious. Though they need dollars in case of emergency, they like to keep dollar balances in American banks at a minimum. In a diplomatic crisis, the United States government could stop payment of the funds.

Soviet officials found a circumvention. Instead of keeping large sums on deposit in U.S. banks, they maintained dollar deposits in British, French, or Swiss banks. A new twist! They didn't convert their dollars into British pounds or French francs or Swiss francs.

Thus were Eurodollars born.

Let's trace how this might come about. Suppose an American buys $1 million worth of pelts at the Leningrad auction. He pays by check on the Chase Manhattan Bank in New York. The Russian fur enterprise deposits the check in a dollar account, say, in Barclay's Bank, London. This increases the Barclay's balance at the Chase and it also puts the Soviet's million beyond American reach.

BECOMES A SCREEN

Barclay's becomes a screen between the United States and the Soviet government. The United States might block a Soviet deposit at the Chase or some other U.S. bank. But how could the Treasury or the Chase smell out Soviet funds among Barclay's deposits? Didn't the Roman Emperor Vespasian prove to his protesting son that "Money has no odor?"

To understand what the Eurodollar is, it's well to know what it isn't. If a Frenchman in Paris or the Volkswagen Co. in Germany has a deposit with the Morgan Guaranty Trust Co., of New York, these are not Euro-dollars. They are ordinary deposits in a U.S. bank, on which the Frenchman or Volkswagen can draw checks even as you and I draw checks against our deposits.

But suppose Volkswagen withdraws its dollar balance in Morgan and puts it in a dollar account at the Commerzbank of Germany. That creates a Euro-deposit. Volkswagen exchanges its right to draw on Morgan for a right to draw dollars on Commerzbank. Commerzbank, in turn, gains a deposit at Morgan which it can retain there or transfer to some other American bank.

NEVER LEAVE UNITED STATES

Now we come to what is wondrously complex, so complex that many bankers don't realize it: The dollars which create Eurodeposits, never leave the United States. They always remain as deposits here and even can belong to Americans. But a foreign bank is always the intermediary between the real owner of the deposit and the U.S. bank.

Moreover, as a Eurodeposit finances trade, investment, or speculation around the world, it moves from one foreign bank to another or from a foreign bank to a commercial borrower. On this "money-go-round," it can also shift from one U.S. bank to another. Thus, Eurodollars never leave the United States. They function in international limbo.

British necessity gave Eurodollars purpose. In late 1957 and early 1958, the Bank of England restricted the use of sterling by British banks in financing non-British export-import transactions. London bankers squirmed. Horrors! This was traditional business they couldn't afford to lose. Then, serendipity! British banks used Eurodollars to finance this trade!

ADVANTAGES FOUND

Eurodollars would have evolved without the Russians. Sometimes, foreign companies found it more advantageous to borrow dollars from banks than their own currencies—especially when interest rates in the United States were lower than in Europe. So they sought dollars.

European bankers soon discovered that, by taking Eurodollar deposits, they could lend such dollars at a profit. And wealthy Italians, Frenchmen, oil-rich Middle East sheiks, and others, including Americans, have kept dollar nest-eggs outside their own counrties. When banks in Zurich, Paris, or London bid for such deposits, they got them!

Money is money in all languages and nations. Soon Eurodeposits were made in currencies other than the dollar, notably the German mark (Euromark) and the Swiss franc (Eurofranc), and "Eurocurrency" and "Euromoney" joined Eurodollar in modern banking terminology. But dollars comprise 85 percent of Euromoney, hence the colloquial term "Eurodollar" to describe the entire market.

SHARE SHOOTS UP

In recent years, the dollar share has shot up like this:

Year:	*Size of Eurodollar Market* (billions)*
1964	$9.0
1965	11.5
1966	14.5
1967	17.5
1968	25.0
1969**	30.0

* Estimates for 1964 through 1968—Bank for International Settlements.

** Guesstimate as of August 31.

Okay! So how big is $30 billion? What is this $30 billion?

Think of an international poker game. The major players—the United States, Japan, West Germany, Great Britain, the Netherlands, Belgium, France, Italy and other nations—have stacks of chips in front of them. These are their monetary reserves—gold, foreign currencies including dollars, and drawing power on the international Monetary Fund.

The chips today amount to about $75 billion. The American stack is $16 billion, Germany's $10 billion, Japan's $3 billion, industrial Europe's about $30 billion.

The Eurodollar pool equals the chips of all the major countries in Europe! And any player can call on Eurodollar chips if he loses too many international pots.

IMPACT IS NOTED

If a nation has a balance-of-payments deficit, and its reserves run down, its interest rates are apt to rise. In contrast, interest rates in a country "in the chips" are apt to fall.

And since money, unlike water, flows up instead of down, Eurodollars are apt to flow from banks in "surplus" countries to banks in "deficit" countries. In this way the Eurodollar market is an economic equilibrator.

But it also can be a destabilizer. Instance: Belgium. During 1967 and 1968, the National Bank of Belgium made credit plentiful and cheap to stimulate domestic economic expansion. But President Nixon pursued a tight-money, high-interest rate policy in the United States.

Nixons object: To curb inflation.

American commercial banks were squeezed. They borrowed Eurodollars to meet demands of customers. Eurodollar interest rates climbed from 7 pecent to 10 percent and momentarily touched 13 percent. Whoosh! exit Belgium's control over its economic destiny.

"RENTED" THESE DOLLARS

Belgian bankers, businessmen and speculators converted Belgian francs into dollars outside Belgium in the Euromarket. Belgian banks even borrowed from the National Bank, converted the Belgian francs into dollars, and then "rented" these dollars in the Euromarket.

In a year, the foreign exchange holdings of Belgium shrank from $792 million to $358 million. Belgium had to draw on its reserves at the international Monetary Fund. Thus were chips drained from the main poker game in the Eurodollar pool.

Nor was Belgium alone in fighting New York's massive pull. Italian banks used capital, which might have stimulated Italian industry and trade, in the Euromarket. The governor of the Bank of Italy ordered Italian banks to withdraw $800 million from the Eurodollar market.

This isn't new, the coursing of capital from low- to high-interest centers. What is new is the mass involved, the ease with which the money moves, and the problems it visits on central bankers.

FORMERLY SUBJECT TO RULES

Prior to the Eurodollar market, if a Belgian wanted to put money in London, he converted Belgian francs into pounds; or if he wanted to put money in Paris, he converted Belgian francs into French francs.

His deposit was in the currency of the country in which it lodged, hence subject to the rules, regulations and decisions of that country. Moreover, the Belgian's ability to get pounds or francs initially was subject to the regulations of the National Bank of Belgium.

But Euromoney lies outside the compass of central bank authority, including that of the Federal Reserve System.

Fred H. Klopstock, manager of the international research department of the Federal Reserve Bank of New York, points out that central banks have "gone to great lengths to prevent banks and corporations" from using Eurodollars contrary to domestic monetary objectives.

MULTINATIONAL FIRMS

But: "The international economy is dominated by multinational corporations financed by banks whose networks of branches and affiliates stretch over several countries."

Consequently, controls are ineffective unless all nations have mutually reinforcing regulations which they apply with equal rigidity. And they don't.

Therefore, some central bankers don't think it's useful to try to impose controls. They realize that resourceful corporate treasurers and bankers will find escape routes.

Major American banks perfected Eurodollar artistry during the 1966–67 credit crunch. U.S. banks encouraged their foreign branches in London and elsewhere to bid for Eurodollars. Then the branches lent those dollars back to parent banks.

Some U.S. banks, lacking foreign branches, borrowed directly from European commercial banks. Total borrowings shot up from $1.7 billion in January 1966 to more than $4 billion by the end of the year.

EURODOLLAR MARKET HANDLES CHIPS IN WORLD POKER GAME

(By J. A. Livingston)

Jacques J. Polak, economic counselor to the International Monetary Fund told me: "There are no Eurodollar experts."

No wonder Jane Sneddon Little wrote in the May–June economic review of the Federal Reserve Bank of Boston that "the operations and impact of the Eurodollar market here and abroad are just beginning to be understood."

In London, the nerve center of the Euromarket—about 75 percent of the Eurodollar deposits are lodged there—I made it a point to visit branches of American banks.

At the larger, long-established institutions, such as Bankers Trust, Morgan Guaranty, and Chase Manhattan, the men in charge talked briskly, easily about the ins, outs and origins of the Euromarket.

But among smaller and newer American branch banks, a trading, buy-sell psychology prevails. Understanding is so limited that "Euromoney," a new magazine published in London, has invented "Herbie." He writes to "Dear Mom" in America that his boss is upset. The bank sent him to London to produce Eurodollars. Now the bank wants to know "Where are they?"

Then he asks Mom: "Why come to London to look for dollars? You might as well go to the U.S. to look for tea and muffins."

EURODOLLAR BACKGROUND

Not many bankers, Europeans or American, are aware that American Good Samaritanism helped to structure the Eurodollar market.

At the end of World War II, the United States had most of the international poker chips. In 1947, United States gold was at an all-time high—$24.7 billion. The rest of the western world had only $10 billion and was in desperate need of machinery and material to rehabilitate after the war.

The United States filled the buying power gap, the so-called "dollar gap," with Marshall aid, loans, and economic "outwardism." Americans were encouraged to travel and invest abroad and buy foreign goods. The U.S. government welcomed balance-of-payments deficits—the loss of chips—for about a dozen postwar years.

Good Samaritanism became an insidious habit.

U.S. losses in the international poker game persisted long after the dollar shortage ended. The U.S. pile of good chips slipped below $20 billion in 1959, below $15 billion in 1965 and then to $10 billion, excluding $1 billion transferrable to the International Monetary Fund under a repurchase agreement. The gold holdings of other nations rose to about $28 billion, reversing the relationship of 1947.

Result: The world had too many, instead of too few, dollars. Further result: European central bankers hesitated to swap surplus dollars for gold. This would displease the U.S. Treasury.

INGENUITY IS SAVIOR

Ingenuity came to the rescue! Central bankers "recycled" their winnings. They made it attractive for their commercial bankers to use surplus dollars in the Eurodollar market. This was done by offering protection against foreign exchange loss at low cost. This enabled the banks to lend the dollars to customers or other banks at a profit.

At times, the dollar holdings of the Bundesbank and the Bank of Italy approached or exceeded their gold holdings. Politicians might criticize: Why dollars—why not gold? By pumping dollars into commercial banks, the central banks did not expose their full dollar commitments.

At first, recycling supplied cheap dollars. During most of the Kennedy-Johnson years, a German of Italian or Dutch enterprise could borrow Eurodollars at rates below those at home and then convert the dollars into pounds or marks or lire—whatever currency was required.

Soon, the world grew accustomed to these dollars, couldn't get on without them, bid for more and more of them. The Euromarket thus became entrenched as a source of credit. Marius W. Holtrop, former head of the Netherlands Bank, complained: "The U.S. exports inflation."

The vagaries of the Eurodollar market—first it exports inflation to Europe then it exports high interest rates—causes central bankers to think and rethink: What risk, what danger, does this $30-billion-dollar pool of free-flowing funds entail?

The first fear was "multiple expansion" of loans. Banks might treat Eurodollar deposits as normal deposits and, as a group, create say, $5 in loans for every $1 deposited. This is considered safe in normal banking.

For example, if an American bank makes a loan, it writes up—creates—a deposit. The customer spends the deposit by writing checks. These checks are deposited by the recipients in banks. Some might even be redeposited in the customer's own bank. The money, the deposit, stays in the banking system. This permits banks to pyramid loans against deposits, because loans create deposits.

HOW IT WORKS

Euroloans don't obey these domestic rules. A Eurodeposit lent in London might be converted in marks in Frankfurt, guilders in Amsterdam, lire in Milan, or used as dollars in New York.

Moreover, if Eurodollars were used to purchase American securities from Americans who in turn deposited the proceeds in an American bank, the Eurodollars would disappear. The deposit would belong to an American resident and be lodged with an American bank.

Banks have been cautious in expanding Eurodeposits into loans. This doesn't mean, however, that double, triple and quadruple lending may not take place.

A London bank might lend to a German bank. The German bank might lend to an

Italian bank, which lends in turn to a London branch of an American bank. But these are not true loans—merely transfers of the same deposit from one bank to another at a higher rate of interest at each stage.

There is a second risk. In Amsterdam, the head of the foreign department of a major commercial bank said: "Europeans are very happy, but it is short-term happiness. Order books are full. Profits are high. But the fuel is short-term Eurodollar credits. I can't escape the feeling that we're on top of a volcano."

He was afraid that Eurodollar deposits, which are usually of one-, three-, or six-month duration, might be put to long-term use. Indeed, banking groups in London have used Eurodollar deposits to make five-, seven-, and ten-year loans.

At first, these term loans were made at a fixed interest rate—say 8½ percent. At the time, bankers might have been paying 7 percent for Eurodeposits. If interest rates turned down, as the bankers expected, profit margins would widen. Instead, interest rates rose! Today the income accounts of bankers who bet heavily on lower Eurorates don't make good reading.

Five- and seven-year term loans are still being made. But interest rates now are ratcheted. Every six months the interest charge will rise or fall with the going rate on the Euromarket.

Bankers, however, are still taking a risk. They have to be able to renew their deposits (reborrow Eurodollars) every three or six months. This worried the Amsterdam banker. Supply might change. The Eurodollar pool might contract. Then bankers depending on a continuing supply of Eurodeposits might be in trouble.

CATASTROPHE UNLIKELY

But such a catastrophe is unlikely. To be sure, a series of genuine U.S. balance-of-payments surpluses might draw funds out of the Eurodollar market. Also, Eurodollar holders might make massive investments in U.S. stocks or bonds. Then Eurodollar deposits would disappear.

But the flow of dollars to the U.S.—in such circumstances—would eliminate the need for U.S. government restrictions on corporate investing and bank lending abroad. Funds would be easier here. So U.S. banks would be able to put funds back into the Euromarket. At a profit, of course!

And, if money still were tight in the United States, the Bank for International Settlements, the Federal Reserve Bank, and other central banks could unite to supply the much-needed dollars. They've done this in the past.

There is a third danger. Some big Eurodollar user may be unable to meet obligations when due. Then confidence might congeal.

Holders of Eurodollars might run into U.S. Treasuries or other gilt-edged U.S. securities. The Euromarket, which today is so mobile that funds can be transferred hourly from bank to bank and place to place by cable or Telex with a confirmation by memorandum, would be frozen.

But the Euromarket would not be the cause. From ancient times, there have been weak links in the banker-borrower chain. Walter Bagehot observes in his great work, "Lombard Street," that the first instinct of bankers during a panic is to hoard. That is as counterproductive as crowding the aisles in a theater fire.

If Eurocredit reach panic tightness, central bankers would have only one choice: To loosen the Euromarket by putting funds back into it.

And what if the opposite happened? Suppose the flight from the dollar occurred. Suppose the Euromarket was inundated with dollars. In that case, declares Stopper, central banks would have to restore confidence by purchasing "large amounts of dollars."

BANKERS HOLD REINS

In Eurofinance as in domestic finance, the same basic rule applies: Central bankers are the ultimate reservoir of confidence—the last-resort buyers and sellers, users and lenders, of money.

There's an old saying: "Seven per cent Bank Rate will draw gold from the world, 10 per cent from the Moon." When the World was on the gold standard and London was the world's monetary center, the Bank of England could bring funds to London by making money tight and raising interest rates.

New York now pulls the money strings. By making money tight, the Federal Reserve sucks funds out of European central and commercial banks into the United States. And volatile Eurodollars expedite—speed—the process. But it is the same process.

However, there is this difference. The Eurodollar market is not directly subject to the regulatory power of the Bank of England, Federal Reserve System or other central banks. It is a market over which central bankers feel unsure of their mastery. That's why Stopper calls it a "vulnerable sector on the monetary front."

This drawback is also a virtue. The Eurodollar market is the international Lombard Street—the broadest free market for money in the world. It is a competitive, efficient market, in which money changes hands at tiny differentials in interest rate—sometimes as low as one-sixteenth of a per cent.

Day by day and month by month, the demand for Eurodollars registers the hopes and fears, the confidence and doubt, and the expansionary and recessive decisions of corporations, investors, speculators and bankers.

The Eurodollar market does this through the services it performs—not only in establishing interest rates, not only in putting chips in and taking chips out of the international poker game, but also in communicating to presidents, prime ministers, finance ministers and parliaments what money "thinks" about governments, economies, paper currencies, and particularly the dollar.

RISKING RECESSION VIEWED AS KEY TO STABLE CURRENCY

(By J. A. Livingston)

"To you, foreign trade is the icing on the cake. To us, it's bread and butter. You're insensitive to it. We pulsate with it."

The speaker, an official in a highly industrialized nation in Europe, asked not to be identified. Yet he spoke for every European finance minister and central banker.

He is worried, like the others, about the persistent failure of the United States to pay its foreign bills. Paradoxically, he is worried because the U.S. trade surplus, which reached a high of $7 billions in 1964, has fallen to about $1 billion annually.

U.S. imports have soared faster than U.S. exports. This has kept the European boom going.

But European central banks, notably the Bundesbank and the Bank of Italy, got stuffed with deficit dollars they have been forced to "play make-believe with." That's the phrase of Milton Gilbert, economist for the Bank for International Settlements.

Central bankers are practical men. They know they can't demand gold at $35 an ounce from the United States. The United States hasn't enough gold to pay up. No one wants an embargo—an "out to lunch" sign on the gold window at the Federal Reserve Bank of New York.

That would unhinge the Bretton Woods monetary system, the system which has muddled through the Berlin Airlift, the Korean war, major government and social shifts in Europe, and now Vietnam.

It is the system that has fostered a three-fold increase in world trade in 20 years. It can't be all bad.

To sustain the system, members of the International Monetary Fund voluntarily refrain from asking for U.S. gold. This preserves the fiction that the dollar is convertible into gold. And the members of the IMF have reinforced the fiction by creating $9.5 billions of paper gold over a three-year period. This will give the United States time to correct its balance-of-payments deficit.

But paper gold can be misused. The United States can overwhelm nations with paper gold even as with deficit dollars.

Participants in the plan are not obliged to accept more than twice their own allocations and the prospective U.S. allocation dwarfs that of other nations.

Alone, the U.S. can exhaust the combined obligation of Belgium, France, and Germany to accept SDRs. It can sop up 68 percent of the entire Common Market obligation.

Yes, the paper-gold obligation is reciprocal. The United States is required to accept other nation's paper gold up to twice its own allocation. But if the United States runs a trade balance deficit, it will be paying out, not taking in, paper gold.

Besides, nations can withdraw from the plan. And they will, if a French official's characterization is accurate. "It's a scheme to avoid the real problem—the dollar deficit."

UNITED STATES HOLDS REINS

Then he added: "Only Americans can tackle the problem. We can't discipline you. We tried. All Europe can't discipline you. We don't have the muscle."

What does that mean? Simply this: The U.S. accounts for 16 percent of world trade—far more than any other nation. If U.S. imports slump, the world feels it. The saying, "If the U.S. sneezes then Europe catches pneumonia!" isn't obsolete. Europeans tremble at the thought of a U.S. recession.

Yet, foreign commerce accounts for only 4 percent of the U.S. Gross National Product.

In contrast, in most industrialized countries, jobs depend on foreign commerce. Foreign trade accounts for 17 percent of the Gross National Product in Germany and the United Kingdom, 35 percent in Holland, 25 percent in Switzerland, 10 percent in Japan, and so on.

A bland sentence in the 1969 annual report of the Bank for International Settlements is aimed at the U.S. "No international monetary system will work properly unless countries are prepared to follow domestic policies that are compatible with the maintenance of external equilibrium."

Between the lines that means: If the U.S. balance of payments is in persistent disorder, the international monetary system will be in disorder. That's because the dollar is the world's work money and standard of value. It holds the system together.

And if the U.S. balance of payments is in equilibrium, almost any international monetary system will work. The United States then will have the economic and financial strength to extend credit to nations in deficit. Or it can deny credit.

POWER PLAY

The U.S. is powerful enough financially to discipline other nations. Other nations can discipline the U.S. only by converting dollars into gold. That they dare not do.

The dollar is still the world's most acceptable money. Especially in a social or political crisis.

When World War II ended, only the United States could supply war-ravaged nations with food, machinery, and materials to keep going and rebuild.

When Soviet troops marched into Czechoslovakia in August 1968, holders of French francs, British pounds, Italian lire, Dutch guilders, yes, even German marks, scurried into the dollar for political sanctuary. When

disorders arise anywhere in Europe, the dollar is the haven.

Experience warrants this. Only the dollar and the Swiss franc have not been devalued since Hitler marched into Poland. The French franc has depreciated more than 95 percent. The Hitler mark was virtually wiped out.

VERY GREAT WEALTH

The United States is very rich. Public and private U.S. investments abroad exceed $135 billion. They bring in gross annual income from profits, dividends and interest of $8 billion a year. Foreign investments in the U.S. of $81 billion earn about $3 billion. So the annual flowback to the U.S. is close to $5 billion annually. It has doubled since 1960.

Undoubtedly, earnings of American subsidiaries will increase. The rise in income will offset the devastating decline in the U.S. trade surplus. Over the years it will help to right the U.S. balance of payments. This is what the men who manage the world's money—both here and abroad are hoping for.

In the final analysis, money is as money does. And any holder of dollar knows that even if he can't turn in dollars for gold, he can get merchandise—plenty of it.

But money in the U.S. has been doing badly.

And if the dollar buys less and less year by year, it becomes a depreciating asset. The Bank for International Settlements alludes to this: "It seems likely that the monetary system will continue to operate under somewhat uncertain and unstable conditions. And one waits to see by experience if Gresham's Law will operate, and, if so, what bad money will drive out good—gold, dollars, or SDRs."

The inference is that gold will be the preferred asset. Central bankers will hold on to the metal. Does it not sell for $40 an ounce in the free market as against the $35 monetary price? They will be wary of dollars and U.S. paper gold. They will think of Vissering.

President Nixon not only must stop inflation, but he must roll back expectations of inflation. Jelle Zijlstra, president of the Netherlands Bank and a former prime minister, said to me: "The worst characteristic of prolonged inflation is that it tends to perpetuate itself. It becomes part of the industrial and social environment and thus governs people's behavior.

"Consequently, breaking the back of inflation is the major economic problem today—not only in the U.S. but in the world. My concern is that nations, because no one wants a deep recession as a cure for inflation, will start reflating before the expectation of inflation gets out of people's minds."

A high official in the Johnson administration, now a partner in a Wall street investment firm, surprised me by saying: "The Nixon administration isn't doing badly. It's doing what it has to do. There'll be an economic lull—a plateau. Maybe a year. Maybe two years. But no decline.

"That's how we're investing our own money. That's how we're advising our companies, our clients. We're not worried about the intervening plain. We see the green hill beyond."

He could have added "and the world."

Walter Bagehot's most quoted dictum is: "Money won't manage itself." Men have to manage money. To do so, they have to manage themselves.

Unless the United States stops the inflation spiral, nations will erect barriers—controls—against the dollar.

The world, which has prospered on liberalized trade and convertibles currencies will retrogress. Economic nationalism will revive high tariffs, import quotas, export subsidies, and monetary restrictions.

Central bankers don't want that. They will take more dollars if they have to. They will accept U.S. paper gold too. If only they can spy progress . . .

"We are a monetary community," says Edwin Stopper, president of the Swiss National Bank. "We can always find intermediate solutions in order to gain time for permanent solution."

And what is the permanent solution?

To use a hackneyed phrase, it's a "sound dollar"—a dollar that doesn't lose value in the shops month by month and year by year—a dollar which, when put in a U.S. savings bond, will be worth more after a year instead of less—a dollar which reflects a high national morality, which people can rely on and central bankers are willing to accept because they consider it as good as "paper gold" and gold bullion.

If inflation isn't stopped, bad money will drive out good. Central bankers will queue up for U.S. gold. Bretton Woods will break down. And paper gold will be paper.

Nixon has no choice: He has to find a "permanent solution" to "unstable and uncertain" monetary conditions. He has to make the dollar what it once was—as good as gold. He has to risk—a recession.

[From the Washington (D.C.) Post, Oct. 25, 1969]

BONN'S TOP TRADE PARTNERS VIEW REVALUATION WITH RELIEF

(By Jonathan C. Randal)

PARIS, October 24.—The revaluation of the mark was greeted with relief today by Germany's major trading partners.

Particularly cheered were the United States, Britain and France, whose deficit economies had counted on an upward revaluation of the mark to increase the competitiveness of their own products.

But in the arch-conservative world of international finance, such every day commercial interests were overshadowed by relief that a major world currency had abandoned the potentially contagious experiment with a floating exchange rate.

SMALL COUNTRIES DISSENT

The only dissent came in muffled form from such countries as Switzerland, Austria and the Netherlands, a sizable share of whose foreign trade is with Germany. All three issued statements denying they intended to follow Germany's lead and revalue their own currencies.

But observers suggested that these countries were prime targets for the hot money which has been bottled up in Germany pending revaluation and may seek new opportunities with the opening of trading Monday.

The lesson of the long D-mark crisis seemed to be that politicians cannot fool the marketplace forever.

Both former French President de Gaulle and former German Chancellor Kiesinger opposed changes in the parties of their respective currencies for political reasons. Both failed.

In the process, they weakened the economies of their countries—in France by playing out foreign reserves to defend the franc, in Germany, by allowing potentially inflationary conditions to grow.

BREATHING SPACE

On a more immediate level, the mark revaluation provided needed breathing space for the franc, the pound and, indirectly for the dollar.

France devalued the franc 12.5 per cent in August with a hope of revaluation of the mark in mind. Added to the French devaluation, the German devaluation of 8.5 percent gives France a theoretical trade advantage of 21 per cent on the German market.

As for Britain, which has achieved a trade balance surplus for the last two months, the mark revaluation should further encourage the trend by making British exports more competitive on third markets.

U.S. pleasure was conditioned by the relief provided the pound, which in recent years has tended to be the first line of defense for the dollar itself.

Monetary reformers were heartened by the triumph of common sense inherent in the revaluation and the lack of crisis which had accompanied the nearly month-long period when the mark's value was allowed to float.

Without claiming victory for the partisans of tinkering with traditional monetary policy, the experiment did represent a victory of innovation over conventional wisdom.

From other sources there were these reactions:

The U.S. Treasury issued this statement welcoming Bonn's decision: "Today's action by the German government should resolve in a constructive manner the principle cause of uncertainty that has existed in the exchange market."

The International Monetary Fund said: "The government of Germany has proposed and the IMF has concurred in a change in the par value of the Deutschmark to be effective Oct. 26, 1969, at 6 p.m. Washington time."

Revaluation of the mark is expected to boost the price of German cars and other products on the U.S. market. A spokesman for Volkswagen of America, Inc., told Dow Jones news service the revaluation "necessitates a review of our pricing and may mean an increase in the suggested retail list prices of our vehicles here."

In Japan, official sources expressed fears that the German action might force pressures for revaluation of the yen, currently 337 to the dollar.

GERMANY REVALUES CURRENCY: BRANDT CABINET BOOSTS MARK BY 8.5 PERCENT

(By Dan Morgan)

BONN, October 24.—The new Bonn government ended an 11-month guessing game tonight by ordering an 8.5 per cent revaluation upward of the German mark.

The rate, somewhat higher than expected either by economists or speculators, was described by Economics Minister Karl Schiller as "courageous but not adventurous", a "golden mean" intended to serve as the cornerstone for a stability program.

As of Sunday midnight, a dollar will buy 3.66 marks, instead of four. Looking at it another way, it will take 27.3224 cents instead of a quarter to buy a mark. Figured that way the parity change amounts to 9.28 per cent.

Those hardest hit by the revaluation are German farmers and certain export branches, but Schiller announced that discussions would begin Monday in the Common Market on compensating farmers, and the government would keep close tabs on industries which are unable to make the grade because of the move.

Its general effect is to make German export goods relatively more expensive on the world market and to reduce the incomes of farmers.

The announcement from Schiller ended months of frustration during which he and his fellow Social Democrats tried unsuccessfully to get the conservative Christian Democrats, just ousted from government, to accept revaluation.

In announcing the cabinet's decision tonight, Schiller threw the words of former Finance Minister Franz Josef Strauss back in his face. Strauss had opposed the action.

"Stability hurts," he said. "Stability demands sacrifices."

The other side of revaluation is its contribution toward breaking the runaway boom and insurgent inflation which caused economists and the Central Bank in Frankfurt to advocate the step for months.

The new rate was greater than that expected by speculators, who had been bidding around 3.70 at noon today. Since Sept. 29, when the mark was allowed to float freely without intervention by the Central Bank, the currency had gone from four to one to

about 3.725 on an average—which Schiller said was a "de facto revaluation of about 7.5 per cent."

The novel experiment of floating the currency—dreaded and condemned by many orthodox bankers and economists—actually worked quite well.

BANK'S INFLUENCE

The credit for this was given to the discreet action of the Central Bank, which moved in to buy marks, or to offer to buy them, at indicated prices. This exerted a stabilizing effect on the markets, without returning to the rigid support system. However, the Bundesbank stands to lose money on the deal since the dollars in its reserves will be worth 8.5 per cent less.

The measures announced today left both Bonn and the Bundesbank in Frankfurt free to impose further measures as they feel necessary, but Schiller emphasized that this was essentially a welcome turn towards a "market economy," which was aimed at getting away from monetary tinkering.

The type of measures to help farmers was also left open today by the cabinet, which met with Chancellor Willy Brandt at the helm and Bundesbank president Karl Blessing attending.

The priority for the cabinet today, other than fixing the new parity, was selling the measures to the Common Market Commission and making peace with that group after the recent row over farm prices.

The commission is angry because Bonn imposed tariffs on farm imports earlier in the month in clear violation of the Market's common agricultural pricing policy.

In the Common Market Monetary committee's acceptance is the problem of support for the German farmer. Conceivably the government could continue to impose the tariffs against Common Market wishes. But most informed observers thought that direct subsidies would be chosen.

Economics Ministry sources said each per cent of revaluation would mean a $50-million-a-year loss for farmers. Bonn has been hopeful that the European commission will aid in a three-year formula for offsetting the losses.

"GREEN DOLLAR" PROBLEM

The heart of the problem is the "green dollar"—the Common Market unit equal to a dollar with which European farmers are reimbursed. With revaluation, German farmers will receive less money for their products.

The debate within Germany is whether the revaluation is coming too late to stop inflation.

One respected economic council of elders in Bonn said this week that it definitely would not unless vigorous expansion policies were ordered, including an end to the Central Bank's restrictive money policies, which have pushed up interest rates.

One fear was that too steep a parity change would have repercussions on the Swiss franc and Dutch guilder, which could be the new targets of some of the $2.8 billion in speculative funds estimated to be invested in Germany at the moment.

With the mark rate settled, speculators might be tempted to bet on the revaluation of those solid members of the world currency family.

Foreign governments are hopeful that the mark change will reduce West Germany's mammoth trade surplus. However, other expert observers noted that by tradition German businessmen, always fearful of domestic recessions, hold on to their export markets at all costs—even at temporary sacrifices. Thus the foreign trade boom has not been even dented by the 4 per cent export tax applied last November as a temporary measure to curb the surplus.

FRENCH MINISTER PREDICTS EASING

PARIS, October 24.—Post devaluation austerity measures in France could be eased in the next few months, according to Finance Minister Valery Giscard d'Estaing.

He denounced speculation of a second French devaluation as "an outrage to intelligence" at a bankers' dinner here last night.

YUGOSLAVIA WELCOMES CAPITAL FROM WESTERN COUNTRIES: SOCIALIST NATION MAKES UNPRECEDENTED MOVE FOR FREE WORLD FUNDS

(By Jan Nugent)

Western capital, famous for following trade routes to unlikely places, will soon be financing projects in a Communist country in the hope of turning a neat profit.

The free world funds will be combined with Yugoslavian money to finance joint ventures in that country. The project will be the first official merger between private, foreign funds and Communist-owned capital in a Socialist state.

The vehicle for this unique experiment between East and West is a new investment company called International Investment Corporation for Yugoslavia.

Capital in the new company will be provided by 12 Yugoslav banks, a group of 38 European, American and Japanese financial institutions, and the World Bank's International Finance Corporation.

Although the banks plan to contribute a relatively modest total of $12 million, the project is precedent-setting in several respects.

For one thing, its acknowledged purpose is to solicit foreign private capital for investment in a Communist country.

For another, the resulting enterprises will be jointly managed by Yugoslavian and foreign officials. There will be a true equity partnership between foreign and Yugoslav interests, with both sharing any profits produced.

SOCIALIST MARKET ECONOMY

Although several of the Communist nations have mused aloud about such an experiment, Yugoslavia, the Socialist nation which has made the most liberal economic reform, made the first move.

The Yugoslavs call theirs a "Socialist market economy." Their companies compete and are owned by the employees—both laborers and management—who direct operations through a worker's council. Business enterprises needing money must borrow from banks, since the state no longer supplies funds for that purpose.

Anthony M. Solomon, former U.S. assistant secretary of State for economic affairs, will head the IICY. Zoran Zagar, a leading Yugoslav banker, will serve as executive vice president.

INVESTS OWN CAPITAL

The new company will develop potential joint ventures in Yugoslavia to interest foreign private enterprise, and also help Western companies wanting to share in a business concern there.

Solomon said IICY will identify and select projects, bring partners together, and assist in financial planning and arrangements.

It will also invest its own capital and borrow funds to extend loans to clients, underwrite capital requirements, issue stand-bys and provide guarantees.

The national groupings of banks sponsoring the new corporation were selected to ensure that no country wields disproportionate size or influence.

U.S. shareholders in IICY are: Chase Manhattan International Investment Corp., Girard International Investment Corp., Marine Midland International Corp., and Philadelphia International Investment Corp.

They have agreed in principle to supply a total of $1.5 million. The sponsoring Yugoslav banks will supply $3 million, United Kingdom financial institutions $1 million, Continental Europe $4 million and Japan $500,000. IFC has agreed to supply up to $2 million.

All projects assisted by IICY are to be of economic priority to Yugoslavia and profitable to shareholders, the IFC said.

"WE PERHAPS HAVE 10 YEARS LEFT," THANT SAYS

UNITED NATIONS—U.N. Secretary General U Thant, a self-proclaimed optimist, delivered yesterday the most pessimistic assessment of the state of mankind he has uttered in 7½ years as a world figure.

"I do not wish to seem overdramatic," he said in his calm Burmese singsong, "but I can only conclude from information available to me as secretary general that the members of the United Nations have perhaps 10 years left in which to subordinate their ancient quarrels and launch a global partnership to curb the arms race, to improve the human environment, to defuse the population explosion, and to supply the required momentum to world development efforts."

"If such a global partnership is not formed within the next decade," he continued somberly, "then I very much fear the problems I have mentioned will have reached such staggering proportions that they will be beyond our capacity to control."

The setting for this jeremiad was in strong contrast to its content. Thant faced a semicircle of establishment figures—including John D. Rockefeller III, and assorted bankers, diplomats and professors—in a mellow, oak-paneled conference room in the U.N. basement.

He was talking to an unofficial conference on the second U.N. development decade—an effort to raise the pace of investment, of the world during the 1970s.

Thant's basic theme was that mankind is posturing and wasting time while the world smolders rather than burns.

Candid as usual, Thant admitted that the U.N.'s first development decade, now nearing an end, had fallen short of providing living standards "compatible with minimum human dignity" in poor nations.

Economic specialists here believe the technical goal of the first decade, a 5 per cent rate of growth, may be achieved in the have-not lands. But they point out that its effect had been badly diluted by population growth, uneven distribution of capital and income, and retrenchment of investment policies in Moscow and Washington.

Thant in his speech blamed rich and poor countries alike for the shortcomings of the first development decade.

He accused the wealthy industrialized lands of the West—and of the Soviet bloc—of "faltering political will . . . in the field of international aid."

URBAN RENEWAL BUILDING NEW SLUMS

(Mr. ANNUNZIO asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. ANNUNZIO. Mr. Speaker, last week the House of Representatives completed action on the far-reaching housing and urban development bill. The Congress, with little direction from the administration, wrote its own $4.9 billion housing bill. It took cooperation on both sides of the aisle and I believe that we have written a bill which goes a long way in providing the needed programs and funds to aid our cities.

Unfortunately, there is a provision in this housing bill which will provide nothing but trouble for our cities which are attempting to renew their poor areas and provide the needed housing for low- and

moderate-income families. The so-called Weicker amendment would require that all urban renewal projects include as many low- and moderate-income family housing units as the area had before the renewal plan was begun.

As the distinguished gentleman from Ohio (Mr. ASHLEY) stated on the floor last week, this amendment will ruin and end the ambitious urban renewal programs as we know them. Mr. ASHLEY further stated that there are some 2,600 urban renewal projects in existence today and that not one-tenth of 1 percent of these projects would go forward if the Weicker amendment is put into effect. One of the important aspects of the urban renewal program in seeking to renew our cities is to reduce the high population density and provide recreational space and new park space. It is necessary to demolish some units and not replace them on a one-for-one basis.

At the present time we have on the statutes a provision which states that in an urban renewal plan at least 50 percent of the plan must provide housing for low- and moderate-income families. This amendment would insist upon a one-for-one replacement taking away the opportunity of lowering the densities of our poorer cities and providing no means of providing our inner city people with housing outside of the inner city. The sole intent of Mr. WEICKER'S amendment is to lock into the cities those people who are already living there, thus stifling attempts to ease the density and the despair that breed the troubles we are witnessing today. There is no human element in this amendment.

If this amendment stands, business will be excluded from urban renewal projects, there will be fewer parks, fewer recreational facilities, and no diverse economic or social mix. This amendment is shortsighted and vindictive.

I include an editorial that appeared in the Chicago Sun-Times yesterday on this matter following my remarks:

DON'T BUILD NEW SLUMS

It is true that urban renewal across the nation too often has meant "urban removal" for poor people. Although the law requires relocation assistance for families displaced by urban renewal, there seldom is enough housing to go around.

Still, we would advise Congress to view carefully a proposal which sailed through the House Thursday.

The proposal, an amendment to a $4.9 billion housing bill, would require that all urban renewal projects include as many low and moderate income housing units as the area had before renewal.

It is an attractive concept. But there is a danger. Such one-for-one rebuilding could mean substitution of a new high-density neighborhood for an old high-density neighborhood. The plumbing might be better, but the slum problems would largely remain.

Urban renewal, when it works right, is supposed to create a better balanced, more livable city for everyone, rich and poor alike. This means more revenue-producing business properties certainly, but it also means more parks, fewer homes per neighborhood, and a more diverse human mix. This goal should not be set aside in the interest of a short-range solution to the housing shortage.

There are other routes. For example, if Congress would just fund the Housing Act passed last year, private builders would have an incentive for putting up more low and middle income homes in both city and suburbs.

In fact, Rep. Lowell Weicker, Jr. (R.-Conn.), who sponsored the questionable amendment, said later he wouldn't object to spreading the housing around, just so it was built someplace. We believe Congress should work in that direction rather than try to replace old slums with new ones.

THE MARITIME PROGRAM

(Mr. ANNUNZIO asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. ANNUNZIO. Mr. Speaker, I am most happy to associate myself with Chairman GARMATZ' remarks regarding the new maritime program submitted to us for consideration. It is long overdue and I am hopeful that it will bring a solution to at least some of our more pressing problems.

The essential ingredient, of course, is money, but I am pleased to see that the administration is looking toward a reduction in both construction and operating differential subsidies. With respect to the latter, the experience of Sealand in operating across the Atlantic successfully without subsidy gives hope that this burden can be substantially reduced in the future in other areas, thus freeing funds for the construction of more ships.

The prospective reduction in the construction differential subsidy places a substantial responsibility on the shipyards to upgrade their facilities so that they may compete more successfully with foreign builders. I am confident that American experience in evolving production techniques will prove equally applicable here and that the prospect of continuing business will induce the yards to make the necessary large expenditures to reduce building costs.

The provision in the program for extension of tax deferment privileges to all ship operators is necessary to see that sufficient amounts of private funds are made available for shipbuilding to match Government expenditures. This particular privilege has all too long been limited to the subsidized lines, and the small unsubsidized companies that probably need it most have not been able to avail themselves of this assistance in accumulating funds for new ship construction, with the result that very few ships have been contructed by this group. I am confident that this provision alone will be most productive and in fact testimony before the committee at previous hearings has indicated that it will generate very substantial new funds, which in turn will be reflected in numbers of new vessels.

The emphasis on development of nuclear ships is most encourgaging, particularly in view of the fact that new types of container and barge ships demand very high horsepower engines which can be evolved more efficiently through the use of nuclear power. I feel that renewed emphasis on this particular type of propulsion will enable us to maintain our lead in the development of new types of ships. I should note, however, that the necessary legislation to achieve these ends has not as yet been submitted to the Congress and that it is too early to give unqualified endorsement to the program. I am confident however, that the administration will prepare the necessary legislation promptly and that the committee under Chairman GARMATZ will proceed immediately to its consideration.

MORRIS KAPLAN—EDITOR AND COMMUNITY LEADER

(Mr. ANNUNZIO asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. ANNUNZIO. Mr. Speaker, it is with a great deal of pleasure and delight that I rise today on the floor of the House of Representatives to pay tribute to Morris Kaplan, the outstanding editor and publisher of the Lawndale News and the West Side Times. These excellent weekly newspapers are produced at Mr. Kaplan's offices located at 3453 West 26th Street in the Seventh Congressional District of Illinois which I have the honor to represent.

Morris Kaplan has just completed 30 years of service as a publisher and editor of community newspapers in my community. The Lawndale News, and its sister newspaper the West Side Times circulate in the heart of Chicago and the Pilsen neighborhood which are both located in my congressional district.

Mr. Kaplan has been a highly regarded leader in our city of Chicago and in my community for over 30 years. During this span of service, through the medium of his newspapers, Morris Kaplan has impressed upon the people some of the civic responsibilities they must face in order to build a better community in which to rear and educate their children. He has been a fighter and a champion in seeking solutions to alleviate many of the problems that have confronted the people of my area.

At the annual meeting held recently in Chicago of the Lawndale-Crawford Historical Association, Mr. Kaplan was the principal speaker, and was honored for his many years of service to the community.

I want to call to the attention of my colleagues the speech he made on that occasion wherein he discussed his philosophy of community newspapers; the early history of community newspapers in towns and villages throughout America before the advent of the large city newspaper; the tremendous part played and the contribution made by these newspapers in the social, economic, and political life of the communities they serve; the many challenges these community newspapers faced; and the great pressures that exist which a community newspaper must meet in order to survive and to continue in operation.

Morris Kaplan has met all of these challenges, he continues to meet these challenges, and he is continuing to serve his community with dedication and devotion to the cause of the people.

I take this opportunity to congratulate him and to extend to him my best wishes for abundant good health and continued service to the people of our community.

Mr. Speaker, I would like to include at this point in the CONGRESSIONAL RECORD the text of Morris Kaplan's speech, which follows:

I think it is conceded now by thoughtful people that there is a place in the community for a neighborhood newspaper, but it remains for each publisher, each editor, to es-blish to the satisfaction of the community in which he publishes, that his paper deserves that place.

Some weeks after choosing as the title for my talk tonight, "The Place of the Neighborhood Newspaper in the Community," I sat down to think about what I was going to say. I searched back in my memory through the almost three decades of publishing a newspaper for the Lawndale community and remembered many a day when I had doubts about whether there was a place in this community for my neighborhood newspaper.

Those doubts, I am happy to say, have long since vanished. The response to the editorial and advertising policies which I introduced and maintained despite many kinds of pressure has been gratifying.

Neighborhood newspapers are a phenomenon of the 20th century. Previously there had been papers for small areas, generally villages or towns that were apart from a large city. They had their own governments, their own business districts, their own social life. All these were catered to by the weekly paper of old.

Then came the growth of metropolitan cities with their large daily newspapers. These papers paid little or no attention to what went on in the neighborhoods that made up the city, except when a major crime or fire attracted the city editor's attention. The metropolitan daily's impersonality was vastly different from the warm, human attention to the details of daily living in the community that characterized the village weekly. As the city grew it annexed areas that had been independent municipalities, and with the annexations came the village papers being published in them. These were actually the first neighborhood papers.

It was not until some years after the annexations that the first true neighborhood newspapers were founded in Chicago. Usually they started as shoppers financed by a group of stores in a small outlying shopping area. The merchants felt they could not afford to pay the high advertising rates of a daily paper that covered the entire city and suburbs. The shopping papers were composed almost completely of advertising. Occasionally there were small spaces left open because some merchant did not have his copy ready or decided he did not wish to cooperate in the venture. These open spaces were filled with household hints or recipes. In every instance, however, it was not long before the merchants publishing shopping papers found it an onerous task to handle all the details that go with the job—such as the rivalry for position in the paper, the difficulty in collecting for ads, the complaints about poor delivery. After a while the one or two merchants who had taken it upon themselves to manage the operation decided they were devoting too much time without compensation and without the gratitude of their fellow merchants—to an activity which took them away from their own businesses.

As failure of the project appeared imminent, some advertising man or small merchant who saw a greater chance for profit in operating the shopper than in continuing his own marginal business would step into the breach and take over the shopper. These were in most cases the first publishers of what eventually became neighborhood newspapers. They were not newspapermen, they had had no training in writing for or editing newspapers. Their interest was solely in selling advertising. But as these new publishers continued printing and delivering their ads—with a few recipes and household hints interspersed—they were asked by sewing circles and church groups to run little notices of meetings and activities. This led to a report on a wedding or birth, a vacation trip or a party—and before long the little items brought to the publisher by readers of his shopper started to crowd out the recipes.

The new publisher saw that this interest in what was going on in the neighborhood provided greater readership for his advertisers, better results, and the opportunity to sell more advertising. It was then he decided to employ a girl or boy fresh out of high school, who had perhaps worked on the high school newspaper, to handle these news items.

Thus was born today's newspaper.

As Morris Janowitz in his book, "The Community Press in an Urban Setting," says, "The community newspaper arose out of predominantly commercial requirements connected with the decentralization of the central business district, but which in turn have led the community newspaper to serve a wider range of unanticipated social, political and affectual needs."

Today there are still many neighborhood newspaper publishers whose sole interest is the advertising department, their training has been as salesmen or advertising copy writers. But there are a great many more publishers who came into the field as editors, with schooling in journalism schools or in the editorial departments of larger papers preceding their ventures into community journalism. And it is these latter men who have been responsible for transforming the onetime shopper into a newspaper comparable on its own level to any metropolitan journal.

I am happy to say that the Lawndale News, which circulates in Lawndale-Crawford, and its sister paper, the West Side Times, which circulates in the Heart of Chicago and Pilsen neighborhoods directly east, are of the newer breed—they are papers operated by a person whose principal interest has been the quality of the news content, because he was trained first as an editor.

After 43 years of editing and publishing neighborhood newspapers in Chicago and suburbs—and there are few others around today with a comparable record of longevity in the field—I take as great interest in and get as much satisfaction today from producing a good, readable newspaper as at any time in the past.

R. E. Park, in his book, "The Immigrant Press and Its Control," said "Very few publishers of the foreign-language press have learned to take the detached and impersonal attitude of the American newspaper man toward the contents of the paper they print. They do not quite accept the philosophy of the editor who said he was "willing to print anything that God would let happen."

Commenting on this statement, Janowitz says, "Park makes a remarkable observation on the attitude of the publisher toward his paper, an observation which suggests application to the community press."

However, this deep concern for the editorial columns has created its own problems that deserve a little discussion. I know of no newspaper or periodical which has been successful for any length of time without advertising. Those papers which have attempted to operate with circulation income as the sole source of revenue—thus hoping to eliminate the ever-present pressure of advertising dollars on editorial policy—have invariably failed. Some have given up quickly, others after a long struggle. Therefore, there is no question that advertising is the lifeblood of publishing. But to the publisher whose *only* interest has been the volume of advertising he could sell, the news columns are a necessary evil. He does not concern himself much with the professional competence of his editorial help, nor with the quality of their work as it appears in the columns of his paper.

Of one thing I have always been convinced: it is not necessary to write down to people to make oneself understood. There is no secret about the fact that the average educational level of this community's residents—as in any working class community—is considerably below the level of let's say Oak Park or Evanston, Beverly Hills or West Rogers Park. But this has never led me to use language in our news columns any different from that which I used when editing a paper in Berwyn, South Shore or Rogers Park. It is my belief people, without their realizing it, can be brought *up* to the level we establish, rather than our coming *down* to their level.

We take great pains to assure the accuracy of our news stories. I have made as many as half a dozen phone calls only to get a name spelled correctly or a correct address. In fact, only this morning I made four calls to establish the right address for a story. This does not mean we don't make mistakes, of course. We simply spend much time and effort in attempting to avoid them, even thought, in many instances, practically nobody would have known the difference.

Nearly everything we receive in our office is rewritten, most often to improve the writing and make it more concise and exact. We check many of the facts contained in this kind of material before using it. A common complaint made by persons sending in material for publication is that we have shortened it greatly and taken out all the little personal touches which they had put in. They don't seem to understand that much of what they put in the story is of no interest to anybody except their small circle of relatives and friends. We try to keep the paper interesting to *everybody* who reads it. Publishing what will appeal to only a few people is no way of doing that.

During my years as a publisher there have been many occasions when I have been forced to make a choice between catering to advertising pressure or following a course which I knew was in the best interests of my readers. I remember once some years ago that I was called in by one of my best advertisers and warned that if I persisted in publishing photographs picturing Negroes—who lived in an area about three blocks from this businessman's location—he would discontinue his advertising. At that time the area to which he referred was a so-called changing neighborhood, with Negroes and whites split about 50–50. Our paper circulated to every home—regardless of color or race. I tried to convince this man that we were reporting on the activities of our readers—from whom our advertisers expected to get business—and that it was in the advertisers' best interest for the paper's content to appeal to all its readers. He was adamant. It was his theory that publishing news about Negroes was tantamount to inviting them into the neighborhood, which he naturally opposed. Finally, I left after assuring him that I had no intention of changing my editorial policy, although I would regret very much losing his advertising as a result.

Several weeks later I received a phone call from the business man. Without referring to our last conversation, he asked whether I would come over to pick up an ad for the following week's paper. When I got to his offices, he greeted me with some colorful language I cannot repeat here, but he handed me the ad. Never again did he bring up the subject of editorial content, and he continued to advertise regularly in the paper until his death some years afterward. As an aside, now, many years later, the Negroes in that area still live three blocks away from that business—no closer.

This was an example of direct pressure by

an advertiser who threatens to cancel his own advertising. Sometimes they go further and threaten to talk to other advertisers and convince them not to use the paper also, I am happy to say that most of this is just talk. The publisher who will not knuckle under easily finds that these threats are not made effective.

There is another, somewhat more subtle kind of pressure, intended to change the publisher's thinking about a controversial subject. Some of those here may recall a few years ago when Negro children for the first time were transferred into one of the previously all-white elementary schools in South Lawndale. Several neighborhood groups, led by a man now dead, began a noisy campaign to get the order of the Board of Education rescinded, mounting a march on the Board's offices, holding inflammatory mass meetings—in short, doing all the things that groups of this kind criticize the Black militants for doing now.

Some of the people engaged in this campaign were advertisers and civic leaders who could be influential in swaying prospective advertisers to disassociate themselves from The Lawndale News. However, it was my belief that they were making a mistake in their tactics. The columns of The Lawndale News reflected this belief. I went to one of the mass meetings called for the purpose of organizing the march downtown on City Hall and the Board of Education. The district superintendent of schools had also been invited to this meeting. When he attempted to explain the problems confronting the Board of Education—overcrowding in some schools and underuse of facilities in other nearby schools—he was hooted down by the angry crowd that filled the hall. Speaker after speaker then followed, arousing the audience by emotional appeals to their passions, rather than their minds. The chairman asked me to come forward to the microphone, although I had not come with any intention of speaking. I wished only to observe, so that I could report accurately on the meeting.

My suggestion that the organizations sponsoring the mass meeting attempt to meet with representatives of the Board of Education to discuss in a quiet, rational manner the subject at issue and means for its solution, met with boos and catcalls, whistles and shouts of "go home". I was called a "nigger lover" and worse. The next day there began a whispering campaign among merchants on 26th street that I was a Communist and therefore my paper was sympathetic to the "communists and niggers" who were invading our schools. There were not very subtle references in the columns of the other paper in the neighborhood to my opposition to the "holy crusade" for which that paper was the voice.

The march on city hall took place. It had no effect. Finally, representatives of the protesting organizations sat down and talked to schools' officials and an agreement was made that was satisfactory to the community leaders. For awhile afterwards, representatives of The Lawndale News were kept from attending meetings of civic groups as punishment for our unwillingness to yield to the pressures by hot-headed partisans. Eventually this eased, although even today, years later, there is bias by some elements of the business community against The Lawndale News and its publisher.

The late Leo Lerner, a North Side Neighborhood newspaper publisher with whom I was once associated for a good many years, liked to tell a story which may have some relevance:

"An Austrian officer," Lerner said, "was talking with a captured Serbian peasant. The officer said, 'Why do you fight us . . . peaceful people?' 'We fight for bread,' replied the peasant. 'Why do you fight us?' 'We fight for honor,' said the officer. 'It is odd,' said the peasant, 'that each of us fights for that which he does not have.' "

There is a little history I would like to relate. For a great many years I wrote a signed editorial column headed "To the Point" that appeared in the left hand column on page one. In it I expressed my opinions on many subjects, some of local import, others having to do with national and international affairs. Because I am a person with strong convictions, some of these opinions were very controversial. I would get hot reactions from people with equally strong convictions who did not agree with me. Sometimes they would take the form of comments scrawled on the margin of the page torn out of the paper. Usually this type was unsigned, because it was scurrilous and even threatening, stooping to anti-Semitic and obscene vituperation. When we changed to the tabloid format and then started to publish twice weekly, the time that I could devote to the research and thought required in preparing and writing these columns became very limited. So I stopped writing the column. I could have taken other people's opinions and put my name on them—a practice indulged in by some editors—but I could see no point in this kind of dishonesty. You should know, by the way, that there are all kinds of organizations with their own axes to grind, from the National Manufacturers assn. to the National Red Cross, and from the privately owned Public Utilities concerns to the Republican or Democratic party, which send out editorials to the press, all ready to print, if the publisher is so inclined. Of course, he is not expected to reveal that the thoughts are not his own.

Some people have questioned why we do not endorse candidates for public office. I have a simple answer—it is because we do not know enough to make an honest choice. The large metropolitan newspapers, with their political editors who devote full time to people in office and those aspiring to office, have the facilities to learn the backgrounds of candidates and know a great deal about the records of those who have held office. They have myriads of reporters to run down the truth of adverse information. All this, when collated, can be used in determining endorsements prior to election day. I wish it were not so, but must admit that we do not have the same ability to gather information that would underpin an honest endorsement. There are neighborhood newspapers which have made a practice of endorsing candidates who buy large ads before elections. Or else they endorse cronies of the publisher. And there are neighborhood newspapers which, like the Chicago Tribune does, will endorse any candidate of the political party they favor. And there are also a very small handful of neighborhood newspapers in some other parts of Chicago with staffs large enough to get the information required to make an honest choice.

There's one function of the local paper that most people forget about until they decide to make use of it themselves. It's a sort of universal information agency. People call us at all hours of the day or night, Saturdays, Sundays and holidays, to ask us the answers to an amazing variety of questions. The reason I know they call us at night, on weekends and holidays is because I frequently am in our office at those hours and answer the phone. Because a paper like the Tribune or Sun-Times that publishes seven days a week and has people on hand in its offices at all hours is available on the phone whenever one thinks of it, people expect us to do the same.

Who is our state senator? What hours is the Field Museum open? Who should I call at City Hall to complain about garbage not being picked up? Can I get a copy of your paper from August 1951? It had a story about my son in it. Who was mayor of Chicago in 1912? These are a very small sample of the kinds of questions people expect us to answer on a moment's notice.

They come to us for auto license applications, to let friends know that a relative has died, for extra copies of the paper that reports on the birth of a new grandchild, so they can be sent to family friends all over the country. There is an almost never-ending stream of people coming into the office or calling on the phone to ask for aid of one or another kind. Sometimes we can offer advice on where to get the aid, or else we use the paper's columns as a means of getting the aid for them.

I would like to return to the question of the place of the neighborhood newspaper in the community.

1. The paper serves as a medium for the merchant, the man offering services, the person seeking to sell real or personal property, the firm seeking employees, or anyone with a commercial message of some kind—to reach within his trading area those who are the potential users of his goods or services. How well the paper performs that function is dependent on a number of factors. Is it well printed in legible type with attractive illustrations? Does it print and circulate in an efficient manner the maximum number of copies for the area served. Does it charge for that service a reasonable price, sufficient however to allow for funds with which to operate a good editorial department?

2. The paper serves also as a medium for civic, political, fraternal, religious, social, educational, athletic groups to reach the people in the community with news of their activities, and with requests that others join them in these activities.

3. The paper serves as a medium for readers to express their opinions on a multitude of subjects, including their reactions to what is being printed in the paper.

4. The paper also brings to the community more greatly detailed reports of events which may get a couple of lines or a paragraph in the metropolitan daily. It covers political news of local candidates or office holders, prints news of crime, fires and other events occurring within the paper's circulation area. Or else in which people lving in the area are involved.

5. The paper reports on the ongoing need for the community to maintain itself against the onslaughts of sloth, deterioration, carelessness and neglect that are common to inner city communities. It tells what is being done to meet that need. We have to help our readers to get the willpower to fight. We have to inspire our readers to deeds that require unusual efforts and sacrifice.

6. And finally, the neighborhood newspaper is a medium for the publisher and his editor—occasionally they are not one and the same—to express their opinions on any and every subject that interests them. And it must not be forgotten that opinions are not necessarily only what is printed as an editorial. The choice of news stories, their length and the prominence of the position in which they are placed are as much an opinion as is an editorial labeled as such.

May I say in closing that the place of the neighborhood newspaper in the community is that of a warm personal friend to the reader, a knowledgeable adviser to the politician and advertiser, and a source of livelihood and immense personal satisfaction to the publisher.

There will always be freedom of the press, so long as we publish a newspaper so fair and so good that our freedom will be automatically guaranteed by the local community of appreciative readers.

HELPING TO CLOSE THE GENERATION GAP

(Mr. GERALD R. FORD asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. GERALD R. FORD. Mr. Speaker,

as an example of what the Nixon administration is doing to help close the so-called generation gap and to listen to the sincere views of concerned young Americans I am pleased to place in the RECORD the text of an address given at Wisconsin State University yesterday by our friend and former colleague, Secretary of Defense Melvin R. Laird.

ADDRESS BY HON. MELVIN R. LAIRD, SECRETARY OF DEFENSE

GOOD MORNING, FELLOW STUDENTS: It is a pleasure and privilege for me as Secretary of Defense to have this opportunity to visit with you today. I am particularly pleased that the Secretary of Health, Education, and Welfare, Bob Finch, will be here to keynote the day's activities at our luncheon meeting.

I am even more pleased that Secretary Finch will join me in our General Session at 11:10 this morning when all of you will have an opportunity to exchange ideas through a question and answer period on the great issues of the day.

As you know, this is the third Youth Leadership Workshop that I have been privileged to co-sponsor with the Wisconsin State University at Stevens Point. As a Congressman, I had a deep and abiding interest in maintaining strong communication lines with the young people in my Congressional District. I found these conferences very beneficial to me in carrying out my responsibilities in Washington, because they gave me an insight into what young people were thinking, what was bothering them and what they thought we in Government might do about it. This Youth Leadership Workshop was only one of several activities that I engaged in as a Congressman to keep the communication lines open but I always considered it the highlight of my Congressional activities.

Now as Secretary of Defense I am even more interested, if that is possible, in keeping the lines of communication open and flowing. I do not believe that there is any reason for a communication gap or a generation gap between public officials and the young people of America. Since becoming Secretary of Defense I have had several opportunities to meet with young people in Washington and especially with the interns who were assigned to my own Department of Defense and to other parts of the Executive Branch. One of these meetings in particular involved a televised discussion with a group of approximately 40 students from throughout the Government last summer. I can tell you that their questions were some of the toughest I have faced as Secretary of Defense although I might revise my thinking after today's visit with you. The pleasures of the Secretary of Defense may be few and far between, but I can say categorically that today's activities in which I will have an opportunity to visit with all of you and to exchange ideas is one of the major highlights of my first year in this new job.

We hear a lot these days about dissent and much less about discussion. The free and open discussion that will mark our get-together today and the Workshop sessions that you will have with outstanding leaders from several walks of life constitute a reaffirmation of my belief that we do not have to have a communication gap or a generation gap in this country.

The President set the tone in his Inaugural Address when he said that "We cannot learn from one another until we stop shouting at one another—until we speak quietly enough so that our words can be heard as well as our voices."

What I want to do most of all today is to listen and to learn from your ideas and your comments. I also hope that in the dialogue we will have today that I will be able to contribute to a better understanding on your part of some of the policies we are pursuing in the Nixon Administration.

As the father of two sons and a daughter I am not without the benefit of some counsel on a continuing and sometimes persistent basis about the viewpoints of our young people on the critical issues that face all of us—the need for peace, the need for building a better America in our cities, in our suburbs and in our rural areas, the need to improve our environment and, in general, the need for finding and applying better ways to do things in America in the areas of health, education and welfare. Bob Finch will be talking to you, in his keynote address at lunch, about some of the approaches to solving our domestic problems that we hope the Nixon Administration will be able to implement both through favorable Congressional action and through Executive action. For now, let me simply say that several of the most pressing issues that face our country will be the subject of your workshop sessions this morning and this afternoon with the outstanding authorities who have come here to participate in this Youth Leadership Workshop. I would like to introduce them to you now:

Congressman Clement J. Zablocki (D. Wis.).

Mrs. Ruby G. Martin, Washington Research Project of the Southern Center for Studies in Public Policy.

Dr. William H. Meckling, Executive Director of the President's Commission on an all volunteer armed force.

Justice Bruce S. Beifuss of the Wisconsin Supreme Court.

Roland Evans, columnist.

Dr. Miller Upton, President of Beloit College.

As I turn the meeting over to the President of Wisconsin State University here at Stevens Point, Lee Dreyfus, let me leave you with a final thought. Two years ago at the Youth Leadership Workshop I told your predecessors that we in the older generation are not necessarily satisfied with what is going on in America. I said that we must give young people in the United States the same kind of opportunity that we who are in positions of responsibility have—that we must give young people an opportunity to be heard and to discuss the basic issues that are causing so much concern not only with one another but with the leaders of our country. That is what the Laird Youth Leadership Workshop was all about when I was your Congressman and that is what it is all about today. I hope that each of us will look upon this opportunity as a challenge to take a forward step together toward the achievement of a better understanding that can only come through better communication. That is the only viable way to a better America.

PROPOSED MORATORIUM ON TESTING OF THE MIRV MISSILE SYSTEM

(Mr. COHELAN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. COHELAN. Mr. Speaker, on July 2 of this year Congressman ANDERSON and myself introduced a resolution urging a moratorium on testing of the MIRV missile system. This resolution was introduced with 108 bipartisan cosponsors.

The advent of multiple warheads could open a whole new and potentially devastating phase in the arms race. A large number of Members in both Houses of Congress recognized this fact.

The ultimate key to U.S. disinvolvement with MIRV is, of course, an agreement with the Soviet Union on arms limitation. The resolution I introduced contemplated such limitations and called for prompt negotiations with the U.S.S.R. to reach agreement on limiting both offensive and defensive strategic weapons. In the interim, the resolution called for a halt in testing of MIRV so long as the Soviets do so.

I am extremely relieved to learn that a definite date has been agreed upon for strategic arms limitation. I am mindful that these negotiations could continue for a long time, and that the November 17 meeting in Helsinki is but the first tentative step toward fixing the breadth and subject matter of the SALT program.

Now that the talks are a reality MIRV testing must be halted. It may be months or even years before final agreement is reached on the disposition of the multitude of weapons systems in the United States and Soviet arsenals. During this time it is incumbent upon us to refrain from any actions inconsistent with the spirit of the arms limitation negotiations.

A resumption or continuation of MIRV flight tests would, during the pendency of the SALT negotiations, be a severe detriment to successful agreement.

Now more than ever it is vitally important that the MIRV moratorium resolution be heeded and observed.

The door to deescalation of the arms race has been opened. The United States must not, by any precipitous action, be the one to close it.

I enclose an editorial from the Washington Post of October 27, 1969:

THE SALT TALKS: A BEGINNING

It is good news that the United States and the Soviet Union have at long last agreed on a time and a place for the opening of the talks on limiting offensive and defensive strategic weapons. There was good news of another kind, as well, in Secretary Rogers' press conference remarks on the subject. For in an international negotiation of this kind, there is much ongoing internal negotiation to be accomplished too—negotiation *within* each government and among its separate competitive parts, each of which tries, quite naturally, to assert its particular interest and make that interest controlling in the government position as a whole. We surely have much to learn, in the prolonged and extremely difficult talks ahead, as to how the weight falls within the Administration's specially designated negotiating team and how that reflects the larger reality within the Administration itself. But for the moment there is much reassurance to be had from the fact that Secretary Rogers not only appeared as the President's spokesman on this question, but that he spoke with eminent good sense.

Mr. Rogers' remarks were low-key, easy-going, uncontentious, and above all practical. Unlike those who have conveniently forgotten the Administration's own six-month postponement of the talks in their eagerness to tax the Soviet Union with unconscionable delay, Secretary Rogers affably observed, "I'm not sure that it would help any to speculate on the reason for the delay since June. They probably wonder why we delayed from the time our Administration came into office until June—and we did it because we wanted to review the situation carefully. I think that they probably have problems of one kind or another and they have now decided to have the talks." He bashed no drums and clanged no cymbals concerning either the hopes or the fears that must necessarily attend such an exercise, pointing out that "we should not confuse the beginning of talks with success," and stressing that what we sought was a "limitation agreement [that is] mutually advantageous." His rationale for seeking such an agreement cut through a lot of misleading rhetoric on the alleged interconnection

or "linkage" of this problem with all other outstanding issues between the U.S. and the Soviet Union:

"We are not talking about detente, or anything else. We are talking about whether it makes sense for the two of us to continue to spend immense amounts of money for the next five, or ten, or fifteen years on strategic weapons and end up at the end of that time in the same relative position—or whether it would be wiser to use the money for some other purpose. . . . I think they are serious about it. You can always be wrong but at the moment I would say that their attitude is serious and that they intend to approach it in the same attitude we do."

Tone apart, two particular points of substance deserve comment. One is that the decision to hold a preliminary conference to set things in motion, while remaining flexible about its form and content, probably was wise; it would be good if whatever mutual procedural wrangling and wrestling might develop could be separated in some degree from the substantive talks that follow. The other is that, while declining to disclose any moves the U.S. might be expected to make in Helsinski, Secretary Rogers showed himself not inhospitable to the idea of working out a bilateral freeze or moratorium on MIRV tests in these preliminary sessions. Such an arrangement may or may not come to pass, but gaining control over the rapid development of these destabilizing weapons should surely rank high on the Administration's agenda. They are the weapons on which the clock is ticking.

EDUCATION—THE KEY TO SURVIVAL

(Mr. COHELAN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. COHELAN. Mr. Speaker, today this House will have the opportunity to vote on a continuing resolution for the Office of Education. I will offer an amendment to allow the Office of Education to expend funds at the previously House-passed levels. The urgency and necessity of the full funding for education programs is widely recognized both in this Chamber and the Nation at large. I was gratified to see that the Washington Post again took a strong editorial position favoring the full funding for education. The editorial points out that education has been treated as a pesky poor relation in the striving for limited resources.

It is interesting to note that the Nation which prides itself as being the most powerful and well endowed is now taking second place to many of the nations of Europe in education. The present administration is not unaware of the need for more expenditures in education. Indeed, a task force commissioned by the President himself recommended enormous increases in education. It seems to me that each Member should support the House-passed level as a modest but necessary contribution to a balanced and quality education.

[From the Washington Post, Oct. 28, 1969]

EDUCATION—"THE KEY TO SURVIVAL"

"Jefferson knew that the destiny of America was inseparable from education—that in the fulfillment of the promise of this new nation education would be the key . . . Education, long the key to opportunity and fulfillment, is today also the key to survival."

So said Richard Nixon just a year ago when he was a candidate for the presidency. And he went on to pledge that "my administration will be second to none in its concern for education."

There has been no discernible movement to redeem that pledge. Indeed, in the fierce competition for attention and for federal funds in a period when economy is an administration watchword, education has been treated as a pesky poor relation. The President has come forward with a dramatic new welfare proposal; but he has displayed only indifference to the urgent educational needs set forth by a distinguished urban education task force. He has proposed immense expenditures for a new maritime program designed to "replace the drift and neglect of recent years and restore this country to a proud position in the shipping lanes of the world"; but when the House of Representatives during the summer enlarged by a billion dollars the meager appropriation he requested for federal aid to education, he opposed the increase and threatened not to spend it if the Senate should endorse the House action.

The President and his Secretary of Health, Education and Welfare persuaded one of the ablest and most thoughtful educators in the country, Dr. James E. Allen Jr., to leave the New York State superintendency of education and come to Washington as U.S. Commissioner of Education. But Dr. Allen has been accorded scant influence since he came here, as though the administration desired a symbol of excellence rather than a promoter of it.

This country, a pioneer in mass public education, is now second to many of the countries of Europe in literacy, the most elementary index to educational attainment. Calling last month for a campaign to eradicate illiteracy in America, Commissioner Allen pointed to the shameful fact that in large city school systems in this country up to half of the students read below expectation and that about half of the unemployed youth between the ages of 16 and 21 in this country are functionally illiterate.

"Drift and neglect" have been much more—and much more seriously—the portion of the public schools in this country than of the merchant marine. For nearly half a century on one pretext or another—two world wars, two Asian interventions, a depression, an inflation—the public schools of this country have been allowed to sink further and further in arrears of the demands made upon them. School construction has not kept pace with a growing school population; the number and the caliber of teachers—and of the counselors and equipment required to complement the teachers—have lagged increasingly behind the known needs of school children.

The management of public schools is, and should be, a local responsibility. But the long neglect of the school system can be repaired only through a dramatic program of federal financial aid; the resources are simply not now available at the local level. More important still, the drive and innovation and planning for a revitalization of the public schools must come on a nationwide basis.

With the need for federal aid so urgent and so great. It is a tragedy to hear from within the administration phlegmatic talk about concentrating on research instead of on action. It is true, of course, that intensive study of educational needs and aims must continue constantly. But the schools themselves—and the children whose childhood opportunities for education can never recur—cannot now wait upon research. There are plenty of pressing and indubitably constructive uses for the billion dollars of additional money a concerned Congress wants to apply to public education. There is plenty of knowledge in the U.S. Commissioner's office to put that money effectively to work at once.

AMERICA'S COAT OF ARMS—AN OIL DERRICK RAMPANT ON A FIELD OF CASH

(Mr. PODELL asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. PODELL. Mr. Speaker, our hopes for tax reform of a substantial nature lie dead, done in by the Senate Finance Committee, acting at the behest of America's oil and gas industry. The House had cut both foreign and domestic depletion allowances from 27½ percent to 20 percent, the absolute minimum of reform. Many in this House, myself among them, grudgingly accepted such partial tax relief. We hoped to at least make a start in eroding accumulated oil industry tax privileges, simultaneously affording some aid to the average taxpayer. Now the Senate Finance Committee has voted to restore much of what the House cut, leaving both foreign and domestic depletion allowances at 23 percent. Such an act is unacceptable. I consider it a legislative miscarriage, boldly offered and blatantly delivered. Our attempts at tax reform have been treated as a joke. Now they are turned into a knife aimed at enlarging oil industry preference at public expense.

The Senate Finance Committee maintained depletion allowances for more than 100 other minerals intact, after the House cut most of them by a quarter. House depletion changes would have raised an added $400 million annually in taxes from extractive industries—mostly oil and gas. This has now been scaled down to $155 million, a cut of nearly two-thirds. Again all Americans will be forced to subsidize oil profits abroad and at home. This winter we shall all be made to pay double the going world price for every oil product. It can only be compared to picking the pocket of a person who has just been run over by a truck.

This, however, was still not enough. The depletion allowance permits oil and gas companies to deduct 27½ percent of gross income from earnings before computing taxes. They cannot, however, deduct more than 50 percent of pre-tax earnings. This provision was softened by permitting firms or individuals with gross oil or gas revenues of less than $3 million to use the depletion allowance for up to 65 percent of their earnings. This is public sanction of increased tax evasion by the rich with a vengeance.

Almost all so-called independent producers, who are not a part of worldwide integrated oil companies, will slide neatly under this new $3 million limitation. Compared to a major oil company, the individual who grosses up to $3 million annually from oil or gas is small potatoes. But compare him to the average taxpayer, and he is massive privilege, indeed, this, then, is the added privileged group aided by the Senate Finance Committee. These operators, many of whom are already millionaries, do everything from extracting oil from the ground to marketing it at retail prices. In effect, the public has been told to shut up or else worse will follow. It makes as much

sense as Mrs. Mao Tse Tung applying for D.A.R. membership.

The Senate even raised a similar 50 percent limitation to 70 percent for gold, silver and copper producers, who now receive a 15 percent depletion allowance. Under it poverty-stricken copper giants like Anaconda, Kennecott, Phelps-Dodge and American Smelting and Refining will save $10 to $25 million annually in taxes.

Here then we have the spectacle of a group of Senators, mainly from oil States, ignoring the outspoken will of the mass of our citizens. Our tax system is a masterpiece of inequities. The country has demanded reform, which the House attempted to give it, in part. Now the Senate Finance Committee has blatantly attempted to stifle and suppress what we have painfully managed to accomplish. I believe we are witnessing a deliberate attempt to destroy the entire tax reform bill.

The only historical comparison that can be drawn with this emerging abortion of a measure is the Hawley-Smoot Tariff. When need was greatest for swift tariff reductions, a privilege-oriented Congress produced the highest tariff schedules in American history up to that time. In this instance, demand for tax relief and erosion of accumulated oil tax privilege has been answered by a legislative nose-thumbing unmatched in modern times. The measure is becoming as festooned with amendments as a Christmas tree is with ornaments. A meaningful House-Senate conference will be impossible, almost guaranteeing no bill at all. To call this tax justice or relief is to try and pass off the Manhattan Telephone Directory as the Revised Statutes.

Soon now, this legislative abortion will be wrapped in shiny tinsel, passed by the Senate and sent back to the House with somber ceremony and howls of self-congratulation. It will be accompanied by a 2-minute ovation and 50 empty speeches, then sent to the House for decent burial. Mr. Speaker, a hard-hitting grocery advertisement would make more sense than this deliberate warping of the legislative process. This Congress, if it affixes its seal of approval to such a measure, will dissipate its diminishing share of national faith at an unprecedented rate. I shall vote against any compromise such as that already emerging from the Senate Finance Committee. I hope the majority of my colleagues will do the same. Yet this, of course, will accomplish the goals for which the oil and gas industry has been so ardently and expensively lobbying.

Nonetheless, in the moment of victory, they have sown the seeds of their eventual defeat. A time of complete reform and total reckoning with this industry cannot be much longer delayed, even by their massed billions. The public has at last been enlightened as to the extent and depth of how much the oil and gas industry has been getting away with at the expense of us all. No industry in the land has abused its power more or shown such corporate blindness. They can best be compared to steel moguls of the last century, or coal barons of Theodore Roosevelt's day.

During the Pullman strike, Mark Hanna was supposed to have said to George Pullman:

Pullman, any man who won't meet his workers at least part of the way is a damn fool.

Any industry which enjoys as much power and profits as the oil and gas industry does should have yielded to the commonsense call for at least some reform. This the oil industry, in its collective nonwisdom, has refused to do.

Mr. Speaker, dire fates are promised looters, dissenters, radicals, and effete intellectuals. Those who laugh at and ridicule legitimate requests of the people are presumably safe, and will be rendered testimonial dinners by the oil and gas industry.

THE NEWLY-CREATED GENERAL SERVICES PUBLIC ADVISORY COUNCIL

(Mr. BLACKBURN asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. BLACKBURN. Mr. Speaker, the newly-created General Services Public Advisory Council met for the first time late last week. This national Panel was created by Administrator Robert L. Kunzig to more fully involve the public in the affairs of the General Services Administration, the multibillion dollar agency that acts as the business manager of the Federal Government.

It pleases me greatly to note that one of the 16 members of the council is from Georgia. He is Mr. John T. Wiley of Decatur. He is the assistant vice president of Southern Bell Telephone & Telegraph Co.

Mr. Wiley is to be highly commended for donating his valuable time to the cause of good government. Of course, public service is nothing new for this gentleman. He is a member of the Atlanta Chamber of Commerce and has served as a director of Junior Achievement of Greater Atlanta, the United Fund, March of Dimes, and the American Heart Association. He is currently a director of the Georgia Agribusiness Council and is vice chairman of Governmental Department of the Georgia State Chamber of Commerce. Wiley is a member of the Atlanta Athletic Club, the Commerce Club, and the Gridiron Secret Society.

Mr. Wiley's vast experience will contribute much to the Council.

Mr. Speaker, it should also be noted that the creation of the General Services Public Advisory Council is another step in President Nixon's drive to make the Federal Government more responsive to the American people.

SALT TALKS AND MIRV

(Mr. ANDERSON of Illinois asked and was given permission to extend his remarks at this point in the RECORD, and to include extraneous material.)

Mr. ANDERSON of Illinois. Mr. Speaker, I am greatly encouraged by the announcement that the Soviet Union has finally accepted the American invitation to begin talks on the limitation of strategic weapons. It was announced this past weekend that preliminary talks will begin in Helsinski, Finland, on November 17, 1969.

This is especially good news to those of us in the Congress who have expressed grave concern over the delay in strategic arms limitation talks—SALT—and the growing possibility of a new escalation in the arms race. The fact is that today we and the Russians are roughly at parity in terms of nuclear weapons and that we are both capable of destroying each other several times over. It would be sheer folly for either country to devote huge sums to the production of new and more horrible weapons when these resources could instead be devoted to peaceful purposes. There is a real need in this country today to divert these funds into domestic programs—programs designed to meet the crises of our cities, schools, and environment. And I understand that the Soviet Union is faced with a very similar problem.

As one of the principal sponsors of a House resolution proposing a mutual moratorium on multiple warhead missile testing, I am hopeful that a mutual MIRV test freeze will be one of the first items of agreement at the preliminary discussions. Secretary Rogers has pointed out that the SALT talks could last for several years. Unfortunately, we do not have that kind of time if we are truly interested in halting the deployment of MIRV since our own test series will be completed by mid-1970. And once MIRV is deployable it will be virtually impossible to control by agreement due to the complex problems of inspection that would be involved. We would thus be off to the races again as we both embarked on a costly and dangerous new arms buildup. It has been variously estimated that MIRVing our own land- and sea-based missiles will cost between $10 and $20 billion.

But I think people are deceiving themselves if they look on MIRV as only an unnecessary expenditure that will ultimately leave us where we now are—at a plateau of relative balance and stability. Two factors are being overlooked in such an assessment. First, during the buildup there are bound to be asymmetrical moments when the balance of power will be upset and the risks of a nuclear exchange will, therefore, be greatly increased. And second, when both sides have MIRVed their missile force will still not have the stability which we enjoy today because there will be a distinct incentive for a nation to strike first with its MIRV force: since each MIRVed missile will in theory be capable of knocking out several missile silos, in time of crisis the edge will obviously be with the side which attacks first. While I realize that our own MIRV is not intended as a counterforce weapon, the fact remains that, with increased accuracy and yield, it has such a potential. And the Russians will be basing their judgments not on our intentions, but on our capabilities.

For these reasons, I think it would be mutually advantageous for both us and the Russians to call a halt to MIRV development while there is still time. A mutual MIRV test freeze, based on na-

tional means of verification, should be agreed to at the earliest possible date, and a formal agreement involving other means of inspection should be placed at the top of the SALT agenda. This proposal has the support of one-fourth of the House membership and nearly half of the Senate membership. It has been termed by President Nixon as "a very constructive proposal."

I think President Nixon has been wise in rejecting calls for a unilateral American halt in MIRV testing. Not only would this have been dangerous, but it would have encouraged the Russians to delay even further the commencement of SALT talks while they continued to develop their own MIRV system. The subject of arms limitation must be approached in a spirit of mutuality. Unilateral actions based on blind faith and trust would only generate distrust, fear and suspicion in the longrun and jeopardize the chances for a meaningful and mutual arms control agreement.

I am sure I am joined by many of my colleagues in this body in hoping that the administration will seek to halt the development of MIRV by proposing to the Russians that we both discontinue our testing immediately and work for an agreement to stop the "mad momentum" of the arms race.

At this point in the RECORD I include an editorial appearing in yesterday morning's Washington Post, entitled, "The SALT Talks: A Beginning." I am also including the transcript of the press conference with Secretary of State Rogers on the subject of SALT talks.

The materials follow:

[From the Washington Post, Oct. 27, 1969]

THE SALT TALKS: A BEGINNING

It is good news that the United States and the Soviet Union have at long last agreed on a time and a place for the opening of the talks on limiting offensive and defensive strategic weapons. There was good news of another kind, as well, in Secretary Rogers' press conference remarks on the subject. For in an international negotiation of this kind, there is much ongoing internal negotiation to be accomplished too—negotiation *within* each government and among its separate competitive parts, each of which tries, quite naturally, to assert its particular interest and make that interest controlling in the government position as a whole. We surely have much to learn, in the prolonged and extremely difficult talks ahead, as to how the weight falls within the Administration's specially designated negotiating team and how that reflects the larger reality within the Administration itself. But for the moment there is much reassurance to be had from the fact that Secretary Rogers not only appeared as the President's spokesman on this question, but that he spoke with eminent good sense.

Mr. Rogers' remarks were low-key, easy-going, uncontentious, and above all practical. Unlike those who have conveniently forgotten the Administration's own six-month postponement of the talks in their eagerness to tax the Soviet Union with unconscionable delay, Secretary Rogers affably observed, "I'm not sure that it would help any to speculate on the reason for the delay since June. They probably wonder why we delayed from the time our Administration came into office until June—and we did it because we wanted to review the situation carefully. I think that they probably have problems of one kind or another and they have now decided to have the talks." He bashed no drums and clanged no cymbals concerning either the hopes or the fears that must necessarily attend such an exercise, pointing out the "we should not confuse the beginning of talks with success," and stressing that what we sought was a "limitation agreement [that is] mutually advantageous." His rationale for seeking such an agreement cut through a lot of misleading rhetoric on the alleged interconnecting or "linkage" of this problem with all other outstanding issues between the U.S. and the Soviet Union:

"We are not talking about detente, or anything else. We are talking about whether it makes sense for the two of us to continue to spend immense amounts of money for the next five, or ten, or fifteen years on strategic weapons and end up at the end of that time in the same relative position—or whether it would be wiser to use the money for some other purpose. . . . I think they are serious about it. You can always be wrong but at the moment I would say that their attitude is serious and that they intend to approach it in the same attitude we do."

Tone apart, two particular points of substance deserve comment. One is that the decision to hold a preliminary conference to set things in motion, while remaining flexible about its form and content, probably was wise; it would be good if whatever mutual procedural wrangling and wrestling might develop could be separated in some degree from the substantive talks that follow. The other is that, while declining to disclose any moves the U.S. might be expected to make in Helsinki, Secretary Rogers showed himself not inhospitable to the idea of working out a bilateral freeze or moratorium on MIRV tests in these preliminary sessions. Such an arrangement may or may not come to pass but gaining control over the rapid development of these destabilizing weapons should surely rank high on the Administration's agenda. They are the weapons on which the clock is ticking.

SECRETARY ROGERS' NEWS CONFERENCE OF OCTOBER 25, 1969

Following is the State Department's release of Secretary of State William P. Rogers' News Conference, which is authorized for direct quotation:

Secretary ROGERS. Ladies and gentlemen, I thought that it might be helpful to get together with you in view of the announcement that was made in the White House at 11:00 o'clock, because I thought you might have some questions on this subject. I will do my best to give you the information that you would like to have.

Q. Mr. Secretary, could you amplify a little bit on what will be treated at the preliminary discussions?

And secondly, will you tell us if there's a possibility that President Nixon and the Soviet Premier, Mr. Kosygin, might formally open the second phase of serious negotiations on the substantive issues?

A. On the second part of the question, I think the answer is no, there is no present intention of any procedure of that kind, and I don't believe that it will happen.

As far as the preliminary talks themselves are concerned, we expect that they will be exploratory in nature. The purpose of the preliminary talks is to have a free discussion about how the negotiations can be conducted.

Now, we are approaching these talks very seriously. Certainly, it's as serious a matter as we have in our nation today, and I think that the Soviet Union's attitude is the same. Certainly they say that they are very serious about these talks.

So we want to discuss how we can best approach the talks in a serious, businesslike way that will be produtive.

Q. Mr. Secretary.

A. Yes.

Q. These talks have been put off time and time again. What do you think is different now about this time? Why did the Russians agree now?

A. Well, I don't know—and I'm not sure that it would help any to speculate on the reason for the delay since June. They probably wonder why we delayed from the time our Administration came into office until June—and we did it because we wanted to review the situation carefully.

I think that they probably have problems of one kind or another and they have now decided to have the talks.

Q. Mr. Secretary, on the question of MIRV, is it the intention of this Government to propose a freeze, a moratorium, or some other device to halt MIRV testing at the beginning of this conference so that substantive issues can be dealt with through a moratorium or a freeze?

A. Well, as President Nixon said in June, we are obviously considering the whole question of MIRV tests and possible moratorium on the tests; and that will be one of the subjects that will be considered when we start these talks.

I think that it's a complex situation. Now that the talks are scheduled to start on the 17th, why we will consider how we approach that subject.

We certainly don't intend to have any public discussion as we go along on each one of these issues. It's too serious a business. We're going to try as much as possible to conduct these negotiations in private.

Now, obviously, we'll keep our NATO Allies informed of the progress, and we'll keep Congress informed. But as much as possible, we want to do this in private and the Soviet Union indicates that that's their intention too.

Q. Mr. Secretary, I don't understand what you mean by saying you don't intend to have a public discussion because the issues are too serious.

A. Well, I mean, at each step of the negotiation, obviously, we will have a discussion. Eventually the public will know. But while we are talking we think it's better to do it in a private session; and we would hope that with some exceptions they will be private sessions.

Do I make myself clear?

Q. Yes.

But could I ask one more follow-up question?

A. But let me say on that point, Mr. Hightower, that as I said, we will keep Congress advised, and we will keep the appropriate committees fully advised of the general approach that our Government is taking. And we'll keep our allies advised.

But we don't want to have each one of these negotiating sessions a public session, because it's a very complex subject, and we think it's so serious that it should be conducted in a businesslike atmosphere. And when it's appropriate to advise the public, we will.

Q. So you expect some public information to come out from time to time. But the negotiations, as such, are to be private.

A. That's correct.

Q. Yes.

At what level do you plan to open the talks?

A. Well, we have our delegation, that we have already announced, that is prepared to go to Helsinki on the 17th. The Chairman of that is Ambassador Gerard Smith, the Alternate Chairman is Philip Farley, there's Paul Nitze, and General Allison, Llewellyn Thompson, and Dr. Harold Brown.

Q. Mr. Secretary, I'm not quite clear on whether there's going to be one meeting in Helsinki, or a series of meetings in Helsinki, that are ended by the ending of the preliminary talks—and then the beginning of the actual talks somewhere else? Or is it all going to run together?

A. Well, we can't predict it for certain. But I think it will run something like this:

We would expect that preliminary discus-

sions in Helsinki will run for several days, maybe a few weeks, and at that time a decision will be made about a permanent site. And also, decisions will be made about how best to conduct the permanent negotiations—how many should attend, how many should be private, and whether there should be an agenda or not have an agenda—those things.

In other words, the purpose of the preliminary talks is to work it out so that we are not arguing about details and we get right down to the business of serious negotiations when we get to the permanent talks.

Q. Mr. Secretary, is there any thought on our part of proposing some sort of limitation on anti-ballistic missiles? Or does it appear that the decision of both governments to proceed with limited deployment precludes this?

A. Mr. Scali, we are not going to discuss in advance, and hopefully not while the negotiations are being conducted, specific proposals that we are going to make.

I think I should say that the negotiations will include both offensive and defensive strategic weapons. And as you know, under NPT Treaty, we have an obligation to do that, and we are going to fulfill that obligation.

Chalmers?

Q. Could I clarify something—some of the answers you have given?

You are going to Helsinki to have a preliminary meeting of a few days to a few weeks. Now that is essentially to work out the techniques of how you have a longer range, more permanent meeting.

Does that mean that in the preliminary meeting there will be no possibility of discussing a substantive question such as the freeze of MIRV while we're having the permanent meeting?

A. No.

Q. That could happen at the Preliminary Meeting?

A. Yes, yes.

We are not going to exclude any subject from discussion at the preliminary meetings, and I don't want to be in any rigid position about how long these preliminary talks are going to last, or how we're going to discuss it. Our attitude is quite flexible.

And I think the Soviet Union's attitude is the same.

We're serious about this, and we want to conduct the negotiations in a businesslike manner, and we hope that we can avoid long arguments about the agenda, and which item will come first, and whether there's a limitation on what we can talk about, and so forth.

If we can have a more reasonable, flexible approach to negotiations, and if we can talk back and forth, and dot it with a serious intention in mind—then it's possible that these talks can be productive.

Q. Mr. Secretary, can you give us an idea —at least what you anticipate what the general course of things is apt to be—whether you want to—whether you prefer to start with existing weapons systems and then proceed to——

A. No. I don't want to get involved in how we're going to do it—which we're going to take up first, and so forth.

Q. Mr. Secretary, I don't think that Helsinki was our original preference, as far as the site is concerned. Do you have another preference for the permanent site of the talks?

A. Well, I'm glad you raised that question, because there has been some misunderstanding about it. And let me tell you exactly how it developed:

In my discussions with Ambassador Dobrynin in June, I think it was June 11th, I said that we were ready to have talks, and that we would be prepared to have talks within a month. And I listed these places as possible sites for the talks: Geneva, Vienna, and Helsinki.

Now we did suggest Helsinki, and when Ambassador Dobrynin responded the other day, he selected Helsinki, and that was one of the places that we had suggested.

We have left open the question of the final site, and he was willing to do that, because there are some problems of communication and availability of space and other things. It's possible that some other site would be better.

We look with favor on Vienna, for example, but we are not excluding the possibility of Helsinki as the final site.

But the reason I mentioned it that fully is we didn't have any argument about the site. Helsinki was a site that we proposed. Later on, we indicated we thought maybe Vienna would be better for the reasons I mentioned, but we had no dispute about the site.

Q. Mr. Secretary, can you give us a more clear definition of the term "strategic arms?" Does this include, for example, land based intermediate ballistic missiles?

A. No, I think I'll leave that to the negotiators. That's a subject that they will have to discuss when they get there.

Q. How does China's growing strategic power fit in, long range, with these negotiations with the Soviet Union? And the threat, presumably, to both countries?

A. Well I don't think, at the moment, they are relevant. They haven't progressed far enough, and I think if we can work out something that is constructive from the standpoint of the two superpowers that we can deal with China's problem later on.

Keep in mind that the word that was used was "curbing" in this release—"Limitation" or "curbing"—and even if we are successful at working out an agreement, both the Soviet Union and the United States are going to be way ahead of China for many years to come.

Q. Mr. Secretary, could you, for the benefit of the public, estimate how long you think these talks might take place?

A. No, I wouldn't want to do that.

I try to resist doing that. I noticed the other day in "Meet the Press" I made a mistake and did indicate that I thought that the answer that the Soviets would give us would be within two or three months.

So far, I've been batting pretty well, and I'm not going to make any further predictions.

Q. Mr. Secretary, who do you expect will lead the Soviet Delegation? And have you any indication either from reading the Soviet press, or in any other way, what their attitude is toward things like a MIRV moratorium, or an ABM—

A. We do not know who is going to head their Delegation. At one time it was thought that Mr. Kuznetsov would be the Chairman, but I think that he's in China now, in negotiations there, so we're not sure. And Ambassador Dobrynin did not tell me.

He did say that he thought their delegation probably would be about the same size as ours, five or six.

Q. What mechanism will be used for consulting the NATO Allies? Will they be contacted individually, or collectively?

A. Well, I think it depends, of course, upon what the consultation consists of.

I would think, generally speaking, we'll do it through the NATO organization in Brussels, but not necessarily. I don't want to be confined to that as a possibility.

In our discussions here—notification of our NATO Allies that the talks were going to start—we notified the Ambassadors in Washington.

Q. Mr. Secretary, there is bound to be speculation that the beginning of these talks may have a larger meaning. Do you think that this might be the beginning of an era of negotiations?

A. Well, let me see if I can answer your question: I think this is an important step that is consistent with the President's policy of an era of negotiation, and it could be a very important negotiation. It's possible it's one of the most important negotiations our country has been involved in. And certainly, it could be one of the most important that we ever undertook with the Soviet Union.

On the other hand, we should not confuse the beginning of the talks with success of the talks, necessarily—there is quite a difference.

These talks could be abortive, they could be fruitless, or they could be highly successful in terms of mankind. And those things will be determined by the talks, themselves.

So whereas we are pleased that the Soviet Union has agreed to have these talks—we think it is a good step—we also have to be quite conscious of the fact that the mere start of the talks, themselves, is not what counts. What counts, is how successful they are.

Q. Mr. Secretary, if these talks are successful, could they lead to a form of nuclear parity between the United States and the Soviet Union?

A. Well, words like "parity" I think are apt to be confusing.

What we hope that we can do is negotiate an arms limitation agreement which will keep us in the same relative position that we are now—and which can be verified.

Now in order to accomplish the first part of that formula, we have to be sure that the limitation agreement is mutually advantageous, that neither side gets an advantage because of the agreement.

Secondly, we have to be sure that the agreement can be verified, because if it can't and one side can cheat, then it certainly is not a viable agreement.

Now these things are very difficult matters to handle, and I don't think anybody should be confused about the fact that they are difficult. They are complex, there's mutual suspicion, the subject matter itself is very involved, and so we have to proceed with the hope that we can achieve some success—but with the full realization that it's not going to be easy.

Q. Mr. Secretary, it's almost exactly a year ago today, I believe, that Nixon, then a candidate, gave a speech in which he said he would approach such negotiations only on the grounds that the United States would be negotiating from a position of superiority.

Now, at this point does the Administration feel that it's going into these talks in a position of superiority, or rough equality, or however you want to characterize it—with the Soviet Union?

A. Well I don't, as you know, I think he's used the term "sufficiency" and I think that we feel now that this is an appropriate time to enter these discussions and enter them seriously, with the hope that we can arrive at an agreement that will be mutually advantageous. And I don't want to characterize what we think. We think this is the right time to do it, and I think the Soviet Union does, too.

Q. Will you take a question on Lebanon?

A. I'll take it—[Laughter.] No, I'm sorry, I don't want to get involved in anything else this morning.

Q. By "agreement" as the objective, are you speaking of the treaty that would be submitted to the Senate for ratification?

A. Well, I think that if we have an agreement, a very confidential agreement, we are thinking in terms of the treaty. Yes. And I think that that is the most likely outcome, assuming we reach an agreement.

On the other hand, I wouldn't want to be frozen in that position, because it's possible that we would want to have some kind of an agreement of a limited nature, that would not require a treaty.

But in any event, I want to make it clear that if we did something other than by way of treaty, that we would keep Congress con-

stantly advised, and consult with them, and be sure that it met with their approval, and we would keep our allies advised.

In other words, I think the chances are that the agreement would be in treaty form; but I wouldn't want to necessarily be frozen in that position.

Q. Mr. Secretary, having talked with Ambassador Dobrynin, how do you characterize the Russian attitude? They are willing to talk, but are they enthusiastic, cautious, what can you tell us about that?

A. Well, I had long talks with Mr. Gromyko on this subject, in New York. We talked three times for three or four hours' duration, total; and I would characterize his attitude as serious.

He gave me the impression that the Soviet Union is serious about these talks. He didn't indicate that they were entering the talks, or about to enter the talks for purposes of propaganda, and that their attitude was about the same as ours. It's a realistic attitude.

We are not talking about detente, or anything else. We are talking about whether it makes sense for the two of us to continue to spend immense amounts of money for the next 5, or 10, or 15 years on strategic weapons and end up at the end of that time in the same relative position—or whether it would be wiser to use the money for some other purposes.

Now that's just a matter of hardware.

If we can work out that kind of an agreement so that each of us feel it's to our advantage to enter that kind of an agreement, and we're satisfied that the agreement can be verified so that neither side can cheat—then it makes sense to do it.

So, I think they are serious about it. You always can be wrong but at the moment I would say that their attitude is serious and that they intend to approach it in the same attitude that we do.

Q. Mr. Secretary, do you expect, sir, that the initiation of these talks will, itself, affect the general pattern of East-West relations? As these talks proceed, will they have, in your judgment, a relationship to the conduct of international affairs as a whole—in the Middle East, for——

A. Well, let me say this: They are not conditional in any sense of the word.

We haven't laid down any conditions for these talks.

I suppose that when you're talking with the representatives of the Soviet Union in any field, it does tend to improve the relations somewhat—especially if the talks seem to be succeeding.

Now, we are talking with them on NPT, for example. We hope that they will ratify NPT.

We are talking with them in Geneva about Seabeds Treaty—and those discussions have gone rather well.

We are going to talk with them further about chemical and biological warfare limitations.

So I suppose that all of those things tend to improve the atmosphere between the Soviet Union and the United States.

But I don't think anybody should be misled. The mere fact that those talks seem to be going well doesn't necessarily mean other things are going to go well. We would hope that they will, but I think that the invasion of Czechoslovakia demonstrated that point. Just prior to the invasion of Czechoslovakia, there was a feeling of detente in Europe, that things were going very well between the United States and the Soviet Union—between East and West—and unfortunately, that invasion of Czechoslovakia changed that.

So to summarize, I think that it does tend, slightly to improve the atmosphere, but we shouldn't be euphoric about the fact that we are having talks.

Q. Mr. Secretary, in view of that, the question about Viet-Nam, which may relate to this, has the fact that you have said we are de-escalating in Viet-Nam had an effect on the Soviet attitude toward these talks?

A. Well as I say, I don't know what's had an effect on the Soviet attitude. There's no way of knowing for sure. I can speculate, but I don't think my speculation is worth any more than anyone else's.

Q. Thank you.

Q. You could try, sir. [Laughter.]

A. Well, I would rather read about it. [Laughter.]

Q. Mr. Secretary, do you expect the United States and the Soviet Union to enter these preliminary discussions with formal, substantive proposals on the 17th of November?

A. Well, I wouldn't think that we would start out that way, no. As I say, I think these talks will be exploratory.

I don't rule out, as Mr. Roberts asked, whether we rule out any discussion of substantive matters.

The answer to that is no.

But I wouldn't think that would be the way the discussions would start.

Q. Mr. Secretary, do you have any indication of what the Soviet position will be in terms of willingness, or lack of willingness, to agree to things like a MIRV moratorium, or some agreements on ABM?

A. No.

Q. Thank you, sir.

COAL DUST CAN BE SHARPLY REDUCED

(Mr. HECHLER of West Virginia asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. HECHLER of West Virginia. Mr. Speaker, it is now possible, feasible, technologically, and economically within reason to make a drastic reduction in the amount of coal dust at the working face of a coal mine. This fact is very dramatically illustrated in the Bureau of Mines Technical Progress Report entitled "Studies on the Control of Respirable Coal Mine Dust by Ventilation," to which I referred earlier today on the floor.

The substance of this report reveals the results of cooperative tests with industry in five bituminous coal mines. In a release dated October 28, the Bureau of Mines states that "improved ventilating methods were used to reduce the concentration of respirable dust, the cause of 'black lung' disease." A high-pressure auxiliary fan in ventilating the working face resulted in a very marked reduction in the coal dust level after careful tests. At an early date, I shall make available the backup statistical data on which this report was based.

I believe this report has great significance in relation to our debate over the proper dust standard to be included in the pending coal mine health and safety legislation. It is highly unfortunate that certain unidentifiable sources within the Nixon administration felt that this report should be suppressed instead of made publicly advailable. Only after I sent a telegram to the President late Monday urging that he direct the Department of Interior to spring loose this report did it see the light of day. I would certainly hope, Mr. Speaker, that the administration would be more active in the future in suppressing coal dust rather than suppressing reports.

The text of this report is so significant that it should be available for the consideration of all Members. It follows:

[Bureau of Mines Mineral Industry Health Program, Technical Progress Report 19, October 1969]

STUDIES ON THE CONTROL OF RESPIRABLE COAL MINE DUST BY VENTILATION

(By D. S. Kingery,[1] H. N. Doyle,[2] E. J. Harris,[3] M. Jacobson,[4] R. G. Peluso,[5] J. B. Shutack,[6] and D. P. Schlick[7])

[Figures and illustrations referred to in text cannot be reproduced in the RECORD]

ABSTRACT

Experiments initiated by the Bureau of Mines on August 26, 1969, and recent work of others, have demonstrated the effectiveness of ventilation for controlling concentrations of respirable coal mine dust. Substantial reductions in dust concentrations have been attained by increasing the volume and rate of air movement across the face and by controlling the airflow pattern.

Ventilation experiments conducted by the Bureau using high-pressure fans as auxiliary ventilation units showed that face-generated dust could be effectively controlled in five mines employing continuous mining machines. Additional data was obtained on industry installations in two mines using similar ventilation systems. By maintaining an airflow approaching 100 fpm across the entry, the experimental system reduced the concentration of respirable dust by factors as great as 6.4. In all mines where the system was used the face-generated dust concentrations were reduced to below 3 mg/m³. Total respirable dust in two cases was above the 3 mg/m³ value because of the dust content of the intake air. In some mines, depending upon the type of coal being mined and other dust control factors in use, it was possible to obtain concentrations of less than 2 mg/m³.

Although the technology for the application of the dust control system investigated is readily available, it is evident that additional engineering studies should be made in each mine where the system is to be applied.

Conditions in some mines may require a modification of the system. On the basis of the Bureau's experience to date, further studies will be made so that the various engineering parameters encountered in underground coal mining can be evaluated.

CONCLUSIONS

The following conclusions can be made from this investigation:

1. Controlled face ventilation employing a high-pressure auxiliary fan together with other components of the system will substantially reduce the concentration of respirable coal dust at the working face of underground coal mines. By maintaining an airflow from 70 to 100 fpm across the entry, results showed in all instances that the average respirable dust concentration at the continuous miner was reduced to less than 3 mg/m³. Total respirable dust in two cases was above the 3 mg/m³ value because of the dust content of the intake air. In some instances, however, respirable dust concentrations were reduced to less than 2 mg/m³.

[6] Mining engineer, Pittsburgh Field Health Group, Bureau of Mines, Pittsburgh, Pa.

[7] Mining engineer, Mineral Industry Health, Bureau of Mines, Washington, D.C.

2. Through proper engineering design of the auxiliary and main ventilating system of the mine, the hazard due to methane will also be reduced.

3. Because of the effects of concentrations of respirable dust in the incoming air the system investigated, by itself, is not a complete solution to the respirable dust problem. For the system to be totally effective, dust controls must be applied at dust generating points in the incoming air passageways.

INTRODUCTION

Pneumoconiosis, a respiratory disease which is caused by inhaling fine particles of coal mine dust, is recognized as a major occupational health problem in underground bituminous-coal mines. Consequently, the Bureau of Mines has launched a major effort to find ways for controlling respirable coal mine dust. Studies by the Bureau and other mining research agencies have indicated that the efficient use of water and ventilation represent the fundamental approaches to effective dust control. Although water sprays on mining machines have beneficial effect as a suppression measure for total airborne dust, current spray techniques have little effect on dust in the respirable range.

Calculations based on the theory of small particle behavior and air motion indicated to Bureau investigators that an airflow of between 70 and 100 fpm across the entry should result in significantly lower dust concentrations.

After analyzing engineering studies by the Bureau of Mines and the industry, it became apparent that a method for achieving the desired entry velocity was by using a high-pressure auxiliary fan and by maintaining the end of the exhaust tubing about 5 feet from the face. This assertion was supported by the following concepts:

1. Adequate airflow at the face confines coal mine dust generated ahead of the operator and captures dust particles. Dust can then be transported by the system and discharged into the return entry, where it can be treated or collected.

2. Previous studies conducted by the Bureau demonstrated the effectiveness of ventilation for the control of methane released at the working face. Similar techniques could be effective for dust control.

METHOD OF INVESTIGATION

The Bureau's investigation was centered upon the use of an auxiliary high-pressure axial-flow direct-driven fan with variable pitch blades. The original estimated power requirements were from 20 to 40 hp. An approved fan with such requirements was not available and could not be quickly supplied by a manufacturer. Therefore, two fans, operating in parallel, each with horsepower sufficient to produce 5,000 cfm, and a fan with a 10-hp motor capable of producing 9,900 cfm, were used in the first experiment. This series was conducted in a mine where coal was being extracted by a continuous miner, from the Pittsburgh coalbed, averaging about 6 feet in height.

Although favorable results were obtained in this initial study, the fans used could not produce the desired entry velocities originally specified by Bureau engineers. A second study was conducted using a 60-hp auxiliary fan from the Bureau's experimental mine in order to obtain higher entry velocities. Because of the fan's size and power requirement, it could only be used in mines capable of accommodating it. In the second mine studied, coal was extracted with a continuous miner from the Sewickley coalbed averaging 50 to 54 inches in height. Subsequent studies were conducted in mines in the Pocahontas No. 3 and No. 4, and Illinois No. 6 coalbeds.

Dust measurements were made according to standard Bureau procedures. For the purpose of this report, samples collected with an MRE instrument contained in the instrument package mounted on the continuous miner were used as a basis for comparison. It would have been desirable to use a personal sampler on the machine operator as the reference point. However, in some mines studied, the machine operators performed multiple tasks, requiring several different operators for each machine on a given shift. Therefore, the operator's exposure could not be used for obtaining representative data. Baseline studies of respirable dust concentrations were made wherever possible in the Bureau's studies, to establish the effectiveness of the ventilation system being tested.

Figure 1 illustrates the system used throughout this investigation.

VENTILATION THEORY [8 9]

Following the introduction of continuous mining equipment to the bituminous coalfields, increased production rates and rapid face advance led to increased frequency of methane ignitions from improper or poor face ventilation. As a part of a program to reduce this hazard, the Bureau of Mines obtained information relative to airflow patterns developed in the immediate face area by various combinations of ventilation methods and devices. Following these studies basic systems of air control were devised for dilution and removal of methane face emissions without accumulations of high concentrations in the occupied face region. Methane control and dilution was in all cases achieved by planned air circulation.

Although continuing progress has been made in face ventilation techniques, dust loading in the face atmosphere clearly indicates that ventilation systems now used are often inadequate to maintain respirable dust concentrations within acceptable limits.

Settling rates of airborne particulates less than 10 microns in diameter show that dust in the respirable size range may be transported for great distances by air currents. Because respirable dust generated at the face is transported by the air stream, ventilation techniques originally designed to control distribution and accumulation of methane face emissions can be used to confine, capture, and remove airborne dust produced at the face.

The theory for the control of coal mine dust is that dust particles smaller in size than 10 microns tend to behave in the same manner as a gaseous contaminant such as methane. Thus, the control of respirable dust is a function of the volume and velocity of air moving across the coal face. Another requirement is to maintain the zone of contaminated air as close to the face as possible to minimize the exposure of face workers.

Bureau studies on methane control methods have revealed definitive airflow patterns. These patterns are shown in figures 2 and 3. At the start of the investigation, information given on figure 2 was used to determine that exhausting air from the face in sufficient volume to assure a sustained velocity approaching 100 fpm across the entry, would result in minimizing the concentration of respirable dust. Diagrams shown on figure 3 established the need for maintaining the tubing within 5 feet of the coal face.

Experiments performed at the Bureau's experimental coal mine related horsepower requirements to air velocity and air volume under a variety of operating conditions as shown in figure 4.

From the data incorporated in figure 4 it was estimated that for entries having a 56 sq. feet area, a 15-hp, high-pressure, auxiliary fan, used in conjunction with a 20-inch diameter tubing, would be required to minimize the concentration of respirable coal mine dust; for entires of 96 sq. ft., a 30-hp. fan used with 24-inch tubing would be required to achieve the same result. In both cases noncollapsible tubing is specified, due to the effects of high exhaust pressures generated by the system.

Based upon this investigation and past Bureau experience, where conditions of extreme methane liberations override respirable dust control requirements, both dust and gas control objectives can be met by using a machine-mounted diffuser blower and an auxiliary fan system, as illustrated in figure 5.

For the ventilation system investigated in this study to be effective, these criteria must be met:

1. Intake to the exhaust system must be maintained within 5 feet of the face, and the volume of air induced by the system must be adequate in providing a minimum velocity of 70 fpm across the entry.

2. Recirculation of methane and respirable dust must be prevented by insuring that the volume of air being delivered to the crosscut is in excess of the demand of the exhaust system.

3. Coal should not be permitted to accumulate at the tail of a continuous mining machine, thereby restricting airflow, nor should other obstructions be permitted to restrict the airflow.

4. Incoming air should be relatively free of respirable dust.

DUST SAMPLING

Dust sampling instrument packages were placed in strategic areas—one on the continuous mining machine, and another in the intake airway.

To obtain comprehensive data on dust concentrations, these packages contained a variety of sampling equipment, including long-running midget impingers, personal samplers, total airborne dust samplers, and MRE instruments. In addition, personal samplers were placed on the machine operator.

All gravimetric samplers were operated continuously and provided integrated values for the full face shift. To determine interim or cyclic values, long-running midget impingers collected periodic samples. Thus, by relating midget impinger to respirable gravimetric samples, it will be possible to discern mining practices which result in unusually high dust concentrations.

SUMMARY OF FIELD CONDITIONS

Studies were conducted in developing sections of five mines using continuous mining machines in five coalbeds of three different States.

Coalbed height varied from 48 to 72 inches in the Bureau's tests. These tests were conducted in the Pittsburgh, Sewickley, Pocahontas No. 3 and No. 4, and Illinois No. 5 coalbeds. Water applied by sprays at rates varying from 5 to 15 gallons per minute was monitored by Bureau engineers using meters installed in the supply line.

In the tests fan pressure and air quantity ranged from 3.75 inches of water at 5,000 cfm to 15 inches of water at 15,000 cfm. In one instance, fans were employed in parallel systems. The exhaust systems tested produced air face velocities from 35 to more than 100 fpm. At each mine the maximum practical size tubing ranging from 18 to 24 inches was used in order to obtain maximum airflow volumes.

DISCUSSION OF TEST RESULTS

These experiments demonstrate that in the mines studied it is possible to attain a substantial reduction in concentrations of respirable coal mine dust; the respirable-dust-

[8] Luxner, James V. Face Ventilation in Underground Bituminous Coal Mines—Airflow and methane distribution patterns in immediate face area-line brattice. BuMines Rept. of Inv. 7223, 1969, 16 pp.

[9] Dalzell, R. W. Face Ventilation by Line Brattice and by Auxiliary Fans. Oral presentation at the National Safety Council, Chicago, Illinois, October 27–30, 1969.

concentration-reduction factors range from 1.7 to 6.4. The mines studied represented, in our opinion, difficult dust problems, either due to the type of coal being mined or for other reasons. In all mines studied production rates did not deviate significantly from normal during the survey period as indicated in table 1. The study was limited to mines employing continuous mining machines. The technology of the ventilation system described here should be applicable to all types of underground coal mining.

TABLE 1.—BASIC DATA ON MINES STUDIED

Mine	Coalbed	Bed height (inches)	Production (raw tons)				Shifts surveyed	
			Normal ventilation		Improved ventilation		Number of shifts	
			Average	Range	Average	Range	Normal ventilation	Improved ventilation
A	Pittsburgh	78	536	384–600	540	490–660	4	7
B	Sewickley	54	210	150–225	178	165–204	3	3
C	Pocahontas No. 4	78	190	108–228	160	128–204	6	6
D	Pocahontas No. 3	52	332	144–480	330	252–404	9	5
E	Illinois No. 6	72	370	342–396	460	387–648	2	5

Figure 6 presents Bureau results obtained by measuring the respirable dust concentration on the continuous mining machine at a point near the operator. Mines A through E are studies conducted entirely by the Bureau. In these mines dust studies were made before and after the ventilation system was in operation. Mines F and G are mining industry installations using in general the techniques described in this report with the notable exception that the fans used in the industry installations had less capacity than the one used by the Bureau of Mines. Also, baseline dust data was not available for these two mines.

In all mines studied, the incoming air was contaminated with respirable dust. Based on the assumption that it is possible to minimize this contamination by dust control or suppression at the appropriate dust generation points, the data shown in figure 7 was derived by subtracting the dust load of incoming air from the concentration of the respirable dust measured on the continuous mining machine. By using the adjusted concentrations for respirable dust, all average concentrations—with one exception in which the velocity of incoming air was only 35 fpm because of the small-size fans—were below 2 mg/m^3.

Uncontaminated intake air is necessary for respirable dust control. Actual measurements have shown dust concentrations in intake air ranging from one-half to over 2 milligrams of dust per cubic meter of air. Respirable dust particles will remain a part of the air current until either collected or dissipated by some method. Such coal dust contaminant sources are usually from open coal dumping stations, coal transfer points, uncovered coal trips, belt transportation systems, and roadways. These contaminant sources should be placed on separate air splits if possible or the air velocities passing over such points reduced.

Adequate air volumes at the face for coal dust control may require extensive and expensive modification and improvements in the primary ventilating system. These may be new air shafts and new fan installations, increasing the number of air courses, both intake and return, and other methods to reduce the mine resistance.

Because this report presents only the timely first results of the Bureau's investigations, engineering tables showing all gravimetric and midget impinger concentrations, production rates, water control data, and a detailed description of mine conditions have not been included. A Bureau of Mines information publication containing comprehensive data is being prepared.

AMENDMENT NO. 10

Mr. Speaker, the data contained in this report, which points the way toward a reduction of the dust level, fully justifies a new effort to bring down the coal dust level at a much faster rate than we had heretofore felt possible. We have progressed far beyond the point where we can afford to be satisfied with a dust level of 3.0 milligrams per cubic meter. Not only is the dust level of 3.0 milligrams medically unacceptable, but we now have the means within our power to push for an attainable goal far below that amount—a goal which we must work toward if we really believe that pneumoconiosis can be conquered.

I have an amendment which I plan to offer when the occasion arises, which follows:

AMENDMENT NO. 10—LOWERING THE DUST STANDARD FOR EACH MINER

On page 47, line 10, strike all through the period on line 18, and insert:

"(3) Within 6 months after the operative date of this title, the Secretary of Health, Education and Welfare shall publish a schedule in the *Federal Register* reducing, as technology improves, the level of respirable dust concentrations in the mine atmosphere to which each miner is exposed below the 3.0 milligrams of respirable dust per cubic meter of air established by paragraph (2) of this subsection to such lower level, as he determines to be medically acceptable to prevent new incidences of pneumoconiosis and to prevent any further development of such disease.

JUDICIAL REVIEW AMENDMENT

Mr. Speaker, because the judicial review amendment which I plan to offer was not printed in the RECORD yesterday, I furnish the text of this amendment for the benefit of Members:

AMENDMENT NO. 9—JUDICIAL REMEDY

On page 117, after line 17, insert: Title IV—Judicial Remedy.

"SEC. 501. Any miner in a coal mine subject to this Act who shall suffer personal injury in the course of his employment as a result of the gross negligence of the operator, may, at his election, maintain an action for damages, at law, with the right of trial by jury, against the operator of the coal mine, and in such action all statutes of the United States modifying or extending the common-law right or remedy in cases of personal injury to railway employees shall apply; and, in case of death of any coal miner as a result of any such personal injury, the personal representative of such coal miner may maintain an action for damages at law, with the right of trial by jury, against the operator of the coal mine, and in such action all statutes of the United States conferring or regulating the right of action for death in the case of railway employees shall be applicable. Jurisdiction in such actions shall be under the court of the district in which the operator resides or in which his principal office is located. This section shall not preempt any existing State statutes or other provisions of this Act which provides for compensation for coal miners. Any recovery obtained under this section shall be reduced by any amounts received under such compensation statutes."

PRESIDENT NIXON'S MARITIME PROGRAM

(Mr. PELLY asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. PELLY. Mr. Speaker, I was happy to hear, at long last, a maritime program announced by the President. It has been a long time coming. In fact, it has been since 1958 when a program to meet the problem of block obsolescence was called for.

It is especially good to witness the careful study that went into the program to revitalize our merchant marine. The President's program closely follows the one he outlined in a speech in my hometown of Seattle last September when he was a candidate for the Presidency.

But, it also reflects the extremely able and intelligent approach to our maritime problems by the new Maritime Administrator Andrew Gibson. I am highly impressed by the capabilities that have been demonstrated by Mr. Gibson. Supported by the Secretary of Commerce in preparing this plan, he overcame strong opposition.

This maritime program is not just a means of constructing 300 new ships; it is a method of reducing subsidies presently paid to keep our merchant ships in competition on the high seas.

The President's plans call for the construction of ships of new, modern design and with a capability of replacing two, three, or as many as five of the present-day World War II-type cargo carriers in our fleet. The new vessels are expected to require a lower construction subsidy and hopefully can greatly reduce the operating subsidy now being paid by our Government. This operating subsidy in 1968 alone totaled $174,834,000.

And, by the President's plan of letting multiship contracts it is hoped the price per ship can be greatly reduced.

Another vital concern is the balance-of-payments effect. The program is anticipated to have the potential of a positive $2 billion effect on our balance of payments over the next 10 years.

The effect this can have on employment throughout the land is immeasurable at this point, but once a labor force is mustered and combined with the technology our shipyards possess, America's flag once again will return to its rightful place on the high seas.

Mr. Speaker, I highly commend the President for his maritime program.

LEAVE OF ABSENCE

By unanimous consent leave of absence was granted as follows:

To Mr. BYRNE of Pennsylvania (at the request of Mr. BARRETT), for Tuesday, October 28, 1969, on account of illness.

To Mr. PUCINSKI, from October 29 through November 6, 1969, on account of official business.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. GROSS, for 10 minutes, today, and 30 minutes, tomorrow.

Mr. EDWARDS of Alabama, for 30 minutes, today; to revise and extend his remarks and include extraneous matter.

(The following Members (at the request of Mr. HUNT) and to revise and extend their remarks and include extraneous matter:)

Mr. WYATT, for 15 minutes, on October 28.

Mr. HOSMER, for 20 minutes, today.

Mr. SAYLOR, for 15 minutes, today.

(The following Members (at the request of Mr. ALEXANDER); to revise and extend their remarks and include extraneous matter:)

Mr. GONZALEZ, for 10 minutes, today.

Mr. MIKVA, for 60 minutes, on November 5.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. MICHEL and to include an editorial.

Mr. PHILBIN in five instances and to include extraneous matter.

Mr. YATES to revise and extend his remarks made on the continuing resolution.

Mr. PETTIS to extend his remarks immediately following those of Mr. COHELAN today.

Mr. MAHON to revise and extend remarks made in Committee of the Whole and to include tables and other extraneous material.

Mr. COHELAN to revise and extend remarks made in Committee of the Whole and include extraneous material including tables.

(The following Members (at the request of Mr. HUNT) and to include extraneous matter:)

Mr. CONTE.
Mr. PETTIS.
Mr. LUKENS.
Mr. HOSMER.
Mr. ZWACH.
Mr. BOB WILSON in four instances.
Mr. UTT.
Mr. HANSEN of Idaho.
Mr. BUSH in two instances.
Mr. SCHADEBERG.
Mr. TALCOTT.
Mr. BROWN of Ohio.
Mr. GUDE.
Mr. BROYHILL of Virginia in four instances.
Mr. SCHWENGEL.
Mr. BROWN of Michigan.
Mr. PELLY.
Mr. CUNNINGHAM in five instances.
Mr. BURKE of Florida.
Mr. MESKILL.
Mr. FULTON of Pennsylvania in five instances.
Mr. ASHBROOK.
Mr. HORTON.
Mr. DUNCAN.
Mr. FINDLEY.

(The following Members (at the request of Mr. ALEXANDER) and to include extraneous matter:)

Mr. EILBERG in two instances.
Mr. BIAGGI.
Mr. POWELL.
Mr. STEED.
Mr. RARICK in two instances.
Mr. SIKES in six instances.
Mr. WALDIE in two instances.
Mr. FRASER.
Mr. KYROS.
Mr. CONYERS in six instances.
Mr. WILLIAM D. FORD in two instances.
Mr. GREEN of Pennsylvania in three instances.
Mr. CHARLES H. WILSON in two instances.
Mr. HÉBERT.
Mr. KASTENMEIER in two instances.
Mr. HUNGATE.
Mr. BURKE of Massachusetts.
Mr. ANDERSON of California in two instances.
Mr. LOWENSTEIN in three instances.
Mr. FASCELL in two instances.

SENATE BILLS REFERRED

Bills of the Senate of the following titles were taken from the Speaker's table and, under the rule, referred as follows:

S. 1. An act to provide for uniform and equitable treatment of persons displaced from their homes, businesses, or farms by Federal and federally assisted programs and to establish uniform and equitable land acquisition policies for Federal and federally assisted programs; to the Committee on Public Works.

S. 11. An act to reinforce the federal system by strengthening the personnel resources of State and local governments, to improve intergovernmental cooperation in the administration of grant-in-aid programs, to provide grants for improvement of State and local personnel administration, to authorize Federal assistance in training State and local employees, to provide grants to State and local governments for training of their employees, to authorize interstate compacts for personnel and training activities, to facilitate the temporary assignment of personnel between the Federal Government, and State and local governments, and for other purposes; to the Committee on Education and Labor.

BILLS PRESENTED TO THE PRESIDENT

Mr. FRIEDEL, from the Commitee on House Administration, reported that that committee did on this day present to the President, for his approval, bills of the House of the following titles:

H.R. 5968. An act to amend the act entitled "An act to provide for the establishment of the Frederick Douglass home as a part of the park system in the National Capital, and for other purposes," approved September 5, 1962;

H.R. 9857. An act to amend the provisions of the Perishable Agricultural Commodities Act, 1930, to authorize an increase in license fee, and for other purposes;

H.R. 9946. An act to authorize and direct the Secretary of Agriculture to execute a subordination agreement with respect to certain lands in Lee County, S.C.; and

H.R. 11609. An act to amend the act of September 9, 1963, authorizing the construction of an entrance road at Great Smoky Mountains National Park in the State of North Carolina, and for other purposes.

SENATE ENROLLED BILLS SIGNED

The SPEAKER announced his signature to enrolled bills of the Senate of the following titles:

S. 210. An act to declare that certain federally owned lands are held by the United States in trust for the Indians of the Pueblo of Laguna; and

S. 1689. An act to amend the Federal Hazardous Substances Act to protect children from toys and other articles intended for use by children which are hazardous due to the presence of electrical, mechanical, or thermal hazards, and for other purposes.

ADJOURNMENT

Mr. ALEXANDER. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 9 minutes), the House adjourned until tomorrow, Wednesday, October 29, 1969, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1291. A letter from the Secretary, the Foundation of the Federal Bar Association, transmitting the annual audit report of the Foundation for the fiscal year ended September 30, 1968, pursuant to the provisions of Public Law 662, 83d Congress; to the Committee on the District of Columbia.

1292. A letter from the Secretary of the Air Force, transmitting a report on military construction contracts awarded by the Department of the Air Force without formal advertisement for the period January 1 through June 30, 1969, pursuant to the provisions of section 804 of Public Law 90–110; to the Committee on Armed Services.

1293. A letter from the Secretary of the Interior, transmitting the annual report for calendar year 1968 on the Federal Metal and Nonmetallic Mine Safety Act, pursuant to the provisions of section 20 of the act; to the Committee on Education and Labor.

1294. A letter from the Comptroller General of the United States, transmitting a report on medicare payments for services of supervisory and teaching physicians at Cook County Hospital, Chicago, Ill., Social Security Administration, Department of Health, Education, and Welfare; to the Committee on Ways and Means.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. BEALL of Maryland:

H.R. 14544. A bill to strengthen voluntary agricultural organizations, to provide for the orderly marketing of agricultural products, and for other purposes; to the Committee on Agriculture.

By Mr. BENNETT:

H.R. 14545. A bill to make available to veterans of the Vietnam War all benefits available to World War II and Korean conflict veterans; to the Committee on Veterans' Affairs.

By Mr. CONYERS:

H.R. 14546. A bill to provide that Federal assistance to a State or local government or agency for rehabilitation or renovation of housing and for enforcement of local or State housing codes under the urban renewal program, the public housing program, or the model cities program, or under any

other program involving the provision by State or local governments of housing or related facilities, shall be made available only on condition that the recipient submit and carry out an effective plan for eliminating the causes of lead-based paint poisoning; to the Committee on Banking and Currency.

H.R. 14547. A bill to provide Federal financial assistance to help cities and communities of the United States develop and carry out intensive local programs to eliminate the causes of lead-based paint poisoning; to the Committee on Banking and Currency.

H.R. 14548. A bill to provide Federal financial assistance to help cities and communities of the United States develop and carry out intensive local programs to detect and treat incidents of lead-based paint poisoning; to the Committee on Interstate and Foreign Commerce.

By Mr. DENT:

H.R. 14549. A bill to provide for the protection of children against physical injury caused or threatened by those who are responsible for their care; to the Committee on Ways and Means.

Br Mr. KYROS:

H.R. 14550. A bill to amend title II of the Social Security Act to provide a 15-percent across-the-board increase in the monthly benefits payable thereunder, with a minimum primary benefit of $80, to liberalize the earnings test, and for other purposes; to the Committee on Ways and Means.

By. Mr. STEED:

H.R. 14551. A bill to amend title 5, United States Code, to include as creditable service for civil service retirement purposes service as an enrollee of the Civilian Conservation Corps, and for other purposes; to the Committee on Post Office and Civil Service.

H.R. 14552. A bill to amend title II of the Social Security Act so as to liberalize the conditions governing eligibility of blind persons to receive disabilty insurance benefits thereunder; to the Committee on Ways and Means.

By Mr. WAGGONNER:

H.R. 14553. A bill to protect the privacy of the American home from the invasion by mail of sexually provocative material, to prohibit the use of the United States mails to disseminate material harmful to minors, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. ANDERSON of Illinois (for himself, Mr. DELANEY, Mr. DORN, and Mr. MCKNEALLY):

H.R. 14554. A bill to authorize the disposal of nickel from the national stockpile; to the Committee on Armed Services.

By Mr. BUSH:

H.R. 14555. A bill that section 481(a)(2) of the Internal Revenue Code of 1954 be amended; to the Committee on Ways and Means.

By Mr. HORTON:

H.R. 14556. A bill to facilitate the movement of persons and goods in interstate commerce, and to aid in eliminating the burdens on interstate commerce which result from lack of adequately coordinated transportation facilities in many parts of the United States, through a comprehensive program of Federal assistance to States and localities to aid in the provision of such facilities; to the Committee on Ways and Means.

By Mr. SAYLOR (for himself, Mr. CLARK, Mr. CORBETT, Mr. DENT, Mr. FLOOD, Mr. FULTON of Pennsylvania, Mr. GAYDOS, Mr. GRAY, Mr. JOHNSON of Pennsylvania, Mr. KEE, Mr. MCDADE, Mr. MOLLOHAN, Mr. MOORHEAD, Mr. MORGAN, Mr. OLSEN, Mr. PERKINS, Mr. PRICE of Illinois, Mr. ROONEY of Pennsylvania, Mr. SHIPLEY, Mr. SLACK, Mr. STUBBLEFIELD, Mr. STAGGERS, Mr. WAMPLER, Mr. WHALLEY, and Mr. YATRON):

H.R. 14557. A bill to require an investigation and study, including research, into possible uses of solid wastes resulting from mining and processing coal; to the Committee on Interior and Insular Affairs.

By Mr. DEVINE:

H.J. Res. 975. Joint resolution authorizing the President to proclaim the week of February 8–14 as "National Angel Flight Week"; to the Committee on the Judiciary.

By Mr. DANIEL of Virginia:

H. Res. 600. Resolution to express the sense of the House of Representatives that the United States maintain its sovereignty and jurisdiction over the Panama Canal Zone; to the Committee on Foreign Affairs.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. HELSTOSKI:

H.R. 14558. A bill for the relief of John and Libera Chimenti; to the Committee on the Judiciary.

By Mr. ST GERMAIN:

H.R. 14559. A bill for the relief of Angelina do Carmo; to the Committee on the Judiciary.

H.R. 14560. A bill for the relief of Manuel De Freitas and his wife, Raquel De Jesus Ferreira Freitas; to the Committee on the Judiciary.

By Mr. TEAGUE of California:

H.R. 14561. A bill for the relief of the heirs at law of Jiro Kunisaki and Ellen Kishiyama, his daughter; to the Committee on the Judiciary.

EXTENSIONS OF REMARKS

SECRETARY HICKEL SPEAKS ON POLLUTION TO EXECUTIVES

HON. J. CALEB BOGGS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Tuesday, October 28, 1969

Mr. BOGGS. Mr. President, on October 23 and 24, the Department of the Interior sponsored in Washington the National Executives' Conference on Water Pollution Abatement.

This excellent program attracted several hundred executives from across the Nation, Canada, Europe, and Japan to listen to speeches on the problems and solutions to water pollution. This proved to be one of the most successful conferences of this type ever held, as the speakers included the presidents of such companies as E. I. du Pont de Nemours & Co., International Harvester Co., Ontario Paper Co., Ltd., United States Steel Corp., as well as other top executives both from the United States and Europe.

At an evening session on October 23, the participants listened to remarks by the Secretary of the Interior, the Honorable Walter J. Hickel. I believe that this speech, which I also had the honor to hear, should be read by every American concerned about the need for water pollution abatement. I ask unanimous consent that it be printed in the Extensions of Remarks.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

REMARKS OF SECRETARY OF THE INTERIOR WALTER J. HICKEL BEFORE THE NATIONAL EXECUTIVES' CONFERENCE ON WATER POLLUTION ABATEMENT, WASHINGTON HILTON HOTEL, WASHINGTON, D.C., OCTOBER 23, 1969

It is a tragedy that business and government must come together—to solve a problem that should not exist.

There is no place for pollution in the United States and in the World.

But there is no place in this World that it does not exist.

President Nixon, in speaking to the United Nations called "protecting our environment" one of the five areas of concern to everyone.

The President said:

"Increasingly, the task of protecting man's environment is a matter of international concern.

"Pollution of air and water, upsetting the balance of nature—these are not only local problems, and not only national problems, but matters that affect the basic relationships of man to his planet."

Here in the United States we have overloaded the water that sustains us with so many wastes nature cannot handle them.

We have seriously upset the balance that sustained our environment for millions of years.

It is time that we—as individuals, business and government helped solve the problems we made for nature.

You have come here to examine the problems and exchange experiences and ideas.

I am here charged with the responsibility of eliminating existing pollution.

And preventing any future pollution.

I have come here charged with the responsibility of insuring that our children will live in an environment free from the destruction that we have done to nature.

I knew—when I accepted the responsibilities of serving as your 38th Secretary of the Interior, that the job would be tough.

But I want to tell everyone of you here tonight that we are condemning our children—and our children's children—if we don't *do* the job before us.

Some of the most blatant sources of pollution in the United States are in our urban areas—the cities and their suburbs.

And today, 140 million Americans—seventy per cent of all our citizens—live on less than two per cent of our land.

By the Year 2000, this urban population probably will grow to 270 million.

Municipal and industrial waste already totals over 18 billion gallons a year.

But we must see these pollution figures diminished—and finally stopped altogether.

But this will not be possible unless we finally start anticipating problems—instead of just reacting to them.

Let me give you a local example:

I think most of you here know that the elimination of air pollution is in the Department of Health, Education and Welfare—not in Interior.

And yet, among the many of you who flew into Washington for this Conference, how many of you know that the jets that flew you here, dump *35 tons* of solid wastes in just one day as they approach and depart Washington's airports? That's a lot of smog... and I'm afraid much of it ends up in our waters.

My point: pollution—of *all* kinds—is related.

All industry, large or small—in fact, all

200 million Americans—produce fantastic quantities of garbage and pollution.

You see, I am afraid man is a "messy animal."

In a way even nature is a "polluter." Nature's purest water—fresh rain water—can also contribute to pollution.

For as that rain water falls on the millions of acres of pavement that cover our cities . . . and as it gradually drains into our streams and rivers—through nature's natural re-cycling—it picks up and carries oil, scum, soot—and every other pollutant we can imagine.

So . . . that "pure" rain water doesn't remain that way very long—by the time it reaches a stream, a river, or the water table.

And the same holds true in rural areas—a fact those of you from the agricultural sector should not forget.

What happens when the pure rain water falls on a freshly plowed field? By the time it reaches a stream, it's probably loaded with fertilizing chemicals of every sort.

So what do we do about all these problems?

Well, those of you who know Wally Hickel, know that I'm a "positive approach" kind of guy.

I believe in taking a problem and turning it around into a benefit.

For example, some of the Interior Department researchers in Athens, Georgia, have discovered that Georgia's red clay actually reduces water pollution by holding pesticides in the soil.

Through absorption, the clay particles "hold onto" the pesticide molecules, rendering them less harmful and less mobile.

The next step is to develop chemical pesticides that will "break down" while they are being held so they are harmless when they finally reach our streams.

Again, my point: When you add up all that urban, industrial, agricultural, and even natural pollution, we have a coast-to-coast picture of environmental breakdown.

But each of us has a choice:

Improve the environment in which we live—or let it continue to deteriorate.

As far as I—and the Interior Department—are concerned, we have made our choice.

And, in all fairness, I know that many of you—too—have chosen the "positive approach" . . . the "let's get it done attitude" instead of the negative position that the problem is unsolvable.

After all, you—as businessmen—are also realists.

And many of you have already realized that pollution costs you "plenty." But this does not *have* to be the case.

Enlightened management, freed from some of the shackels of the past, is rapidly realizing that elimination of pollution not only means more black ink on the profit and loss sheet . . .

It also means dividends in public relations . . . that less definite, but equally vital, ingredient in a successful business.

The sad part is that some businessmen are still like the mayor of a certain eastern city who refused to install a new sewage treatment plant in his community.

It would have cost about $250,000 at the time—just a few years ago.

Later, when the court ordered him to install the facility. He found it now cost $400,000 for the equipment he had once rejected.

When confronted with this situation, he tried to resign. But the court would not let him, and the judge even suggested that the voters might be able to sue the mayor and the city council for the $150,000 difference.

The mandate which I would like to pass on to you today, from the American people is this:

They must act because they have the will to change and improve our environment.

And we must work quickly because the

We must convince everyone of the importance of stopping pollution.

future is closing in on us.

Again, I'm not a "sit back and wait" kind of guy.

We have initiated a tough, common sense policy for water pollution abatement.

And to date, we have moved to stop pollution as quickly and completely as possible within the mechanical, legal, and financial means available to us.

And gentlemen, this is only the beginning.

We have begun the "war against polluters," and we do not intend to lose.

But we need your continuing cooperation.

Much of industry has already spent billions of dollars on water pollution control.

And just as surely, I know that we must spend billions more before the job will be done.

It's tragic, but many people don't mind somebody else's water becoming unusable—it's only their own they care about.

Well, when the beaches are closed because they're covered with filth . . .

When your drinking water has a funny smell—and worse taste . . .

When you don't have enough water to take a bath—or it looks like it just came out of a storm drain, instead of a faucet . . .

When there are no more edible fish left in our rivers and lakes—because the fish themselves cannot stand the polluted water or to eat the smaller fish they would normally subsist on—because they, too, are "disease on the fin" . . .

At that point, ladies and gentlemen, we will have no one to blame but ourselves.

CALIFORNIA GOVERNOR ATTACKS PROGRAMS FOR NATION'S NEEDY

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. MADDEN. Mr. Speaker, I have received several protests from my district against the attempt of Gov. Ronald Reagan to usurp control of the funds for the Office of Economic Opportunity. The Governor has never been enthusiastic for Federal programs which come into his State to help the neglected needy. The following editorial in the Gary, Ind., Post-Tribune of October 22 has created alarm that his program of usurping control might infiltrate into the office of Governors in other States:

[From the Gary (Ind.) Post-Tribune, Oct. 22, 1969]

A Poor Plot

For once, California Sen. George Murphy is doing a song and dance routine that has a plot. The plot involves clamping a dangerous restriction on the Office of Economic Opportunity's power to help poor people get legal service they can't afford.

The script was apparently written by Gov. Ronald Reagan, another former Hollywood performer.

Murphy's amendment to a money bill, pushed through the Senate, would give governors the right to veto any legal service plan the OEO wants to start in their states.

Reagan hasn't fared well with OEO attorneys in his state, because the legal assistance they have given to migrant workers, especially, has frustrated some of his attempts to maintain the status quo.

The War on Poverty has touched more bases than those involving food, shelter and basic necessities. Protection of the law made available through expert legal help has also been denied poor people generally. They hunger for that too, and they deserve it.

The legal services plan has helped welfare mothers, slum tenants, even steelworkers, whose rights often have been brushed aside for lack of somebody to speak for them. Many landmark cases have hit the courts, a fact that some state and local officials view with varying degrees of irritation.

None has been troubled as much with the tide of progress as Reagan, who frankly doesn't like it.

Giving governors absolute veto over such programs would be a reactionary mistake. The House has a chance to correct the Senate's error, and we hope Northwest Indiana's representatives will get with it.

OEO Director Donald Rumsfeld is lobbying to get the amendment killed. He is enthusiastic about the legal services program. It has great promise, and should be allowed to flourish. Governors should have a say in federally-financed programs within their states, but they ought not have the power to block programs by whim.

California doesn't belong to Ronald Reagan alone, a fact he is finding out, and it irks him. But this case is bigger than California, for as California goes in this one, so goes the nation.

Sargent Shriver, former OEO boss, once said, "Any program which enables the poor to do battle with the forces that oppress them at governmental expense has a high potential for conflict with the officials who make public policy affecting the poor. This is especially true where it is governmental action, often in programs designed to aid the poor, that is found to be oppressive."

What that means is that Murphy and Reagan have produced a bad show.

DISSENT FROM THE DISSENTERS

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, October 28, 1969

Mr. THURMOND. Mr. President, many comments have been made about the public displeasure with the Vietnam war and our commitments there. Much is said about the necessity of dissent and the need to encourage dissenters.

Dr. John E. Huss, of Charleston, S.C., wrote a letter last week to the Charleston News and Courier in which he expressed his dissent from the dissenters. It is a fine letter, one which I think is a perfect expression of the proper attitude toward the American commitments in Vietnam.

Dr. Huss says:

Along with all true Americans, I want peace; I pray and yearn for it every day. I would like to see every American military man come home now—but not at the price of sellout and disgrace.

These are the sentiments of true Americanism and of our traditional commitments to honor and peace. Dr. Huss goes on to say:

War is an anachronism; and the days of bloodshed should perish from this earth. America is ready for an honorable peace, but if war goes on, let's put the blame where it belongs—on Hanoi and Moscow!

I put my confidence in the President of the United States and our government. If we would all stand as one there would be movement on the table at Paris.

Mr. President, these are noble feelings beautifully expressed. I ask unanimous consent that Dr. Huss' letter be printed in the Extensions of Remarks.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

[From the News and Courier, Oct. 23, 1969]

DISSENT FROM DISSENT

TO THE NEWS AND COURIER:

I want to take my stand and let it be known that although it is popular in our day to be in dissent with the government of the United States, I am in dissent with the philosophy of the dissenters.

The moratorium of Oct. 15 was something with which I could not find myself in sympathy. I will feel the same way about future moratoriums. If much of the philosophy that pervades our country today had existed in generations of the past we would have no America today.

Along with all true Americans I want peace; I pray and yearn for it every day. I'd like to see every American military man come home NOW—but not at the price of a sellout and disgrace.

One of the great poems of World War I has these lines written by John McCrae:

"If ye break faith with us who die,
We shall not sleep,
Though poppies grow in Flanders fields."

If there are to be day-long readings of the names of the 44,700 who have died in Vietnam, let us read the names motivated with the desire to see that these men have not died in vain. Let us not break faith with them.

War is an anachronism; and the days of bloodshed should perish from this earth. America is ready for an honorable peace, but if war goes on, let's put the blame where it belongs—on Hanoi and Moscow!

I put my confidence in the President of the United States and our government. If we would all stand as one there would be movement on the table at Paris. I repeat, I am in dissent with the philosophy of the dissenters!

JOHN E. HUSS.

VIETNAM—THE SHORTEST ROAD TO PEACE

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. RARICK. Mr. Speaker, last week a petition by some 28 retired military officers and a magazine article reflecting the views of another 12, all of whom unanimously agree that the war in Vietnam could be won in 6 to 8 weeks, and the killing ended by use of conventional weapons, if the military leaders were free of political restrictions. See page 31432 CONGRESSIONAL RECORD of October 23, 1969.

News reports have it that Gen. William Westmoreland, former top U.S. commander in Vietnam and now Chief of Staff of the Army, recently commented here in Washington that the war in Vietnam would already be over if U.S. forces had been unleashed.

General Westmoreland's statement reinforces the conclusion of the other distinguished officers that the shortest road to peace in Vietnam—the earliest end to the killing and drain of our resources—would be to adopt a positive policy—that being victory.

An Evans and Novak column of September 11 follows:

PRESIDENT FACES A WIDENING SPLIT BETWEEN GENERALS, AIDES ON WAR

(By Rowland Evans and Robert Novak)

The quiet but rising pressure of the generals for a military instead of political solution to the Vietnam war was dramatically evident in a recent private luncheon on Capitol Hill.

Guest of honor was Gen. William Westmoreland, formerly top U.S. commander in Vietnam and now chief of staff of the Army. His hosts were several congressmen, headed by Rep. Olin (Tiger) Teague of Texas, Democratic chairman of the House Veterans Committee and a hawk.

Westmoreland was careful to say nothing critical of President Nixon and the Nixon plan to withdraw U.S. combat troops as fast as they can be replaced by South Vietnamese. That plan was the brainchild of Westmoreland's boss, Secretary of Defense Melvin R. Laird.

But when the dishes were cleared and the coffee poured, the general's host asked hard questions, specifically whether the war could be won if all restraints were removed from the U.S. military. Westmoreland said that in his opinion the war would be over now if U.S. forces had been unleashed.

More important, Westmoreland—again answering specific questions—raised the horrible specter of hordes of North Vietnamese regulars suddenly descending on the U.S troops remaining after most of the combat troops have been withdrawn.

To the congressmen present, Westmoreland was conjuring up "a giant Dienbienphu"—a reference to the catastrophic French defeat by Ho Chi Minh in 1954.

Westmoreland's grim words could not be described as any veiled signal for a revolt of the generals. But they were tangible evidence of the rearguard action that Laird, Secretary of State William P. Rogers and the President himself are now fighting to carry out the troop-withdrawal policy.

The words are testimony, too, to deepening fears within the White House of right-wing political reaction against the President's plan to "Vietnamize" the war. To the extent that U.S. casualties remain high as the withdrawals proceed, Mr. Nixon is highly vulnerable to political attack.

This partially explains the long delay in the President's announcement of a second troop pullback, following the first withdrawal of 25,000 troops announced on June 8.

Moreover, in making the decision to delay that second announcement, the President was buying time out of political factors having nothing at all to do with Vietnam. The success of the Apollo moon shot, it was decided in the White House, created so much pro-Nixon euphoria that a delay in the announcement promised for August would be politically acceptable. White House strategists also calculated that a troop pullout would have maximum effectiveness in cooling the campuses if it came after the start of the new school year.

In sum, the White House determined that Mr. Nixon could appease the generals by stretching out the process of de-Americanizing the war without triggering an immediate backfire from the doves.

But despite the euphoria of Apollo, the cost of the long delay has been severe. It has damaged Mr. Nixon's credibility and has revealed the fundamental split between his civilian advisers—Laird, Rogers, and Henry Kissinger, his national security adviser—and the generals.

It isn't generally known, for example, that during the polite, public spat between the State and Defense Departments over the level of North Vietnamese infiltration into South Vietnam, some high military officers in the Pentagon secretly lobbied the press. Their message: That the State Department did not know what it was talking about in claiming a major reduction in infiltration. This lobbying undoubtedly was done without Laird's knowledge.

Furthermore, the delay was deeply resented at working levels of the State Department (it came only four days after Rogers' careful press conference pledge that the U.S. would take major risks for peace).

This is the backdrop to the President's summit meeting Friday. With every major civilian and military official involved in the war present, Mr. Nixon will have to adjudicate growing differences between his generals, more convinced than ever that the enemy is now on the brink of military defeat, and his civilian advisers, who will insist on following the announced plan of withdrawals.

Whichever way Mr. Nixon chooses, the generals, emboldened by their success last month, are not about to give up their flanking attacks on the policy of pulling U.S. troops out of the war. That is the real cost of the President's delay.

MEALS ON WHEELS

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, October 28, 1969

Mr. SCOTT. Mr. President, when the Senate passed the Food Stamp Amendments of 1969 (S. 2547) on September 24, it contained my proposal to permit the elderly and the incapacitated homebound to exchange food stamps for cooked meals prepared by nonprofit organizations. S. 2547 is now under consideration by the House of Representatives and I urge that body to duplicate the forward-looking action taken by the Senate in approving my plan.

My bill was inspired by the meals on wheels programs being conducted in 27 States across America by more than 75 charitable organizations. My proposal was designed to encourage and make possible the expansion of the meals on wheels and similar programs throughout the Nation where the need exists. It is a fact that there are many elderly incapacitated persons who are homebound and very often among the most isolated, lonely, hungry, and malnourished in the communities and who cannot shop, prepare meals, or cook for themselves.

I am deeply concerned about the local legal restraints which could dangerously thwart this growing movement to bring nutritious meals to needy families. William Raspberry's article published in last Wednesday's Washington Post is an all-too-graphic example of the kinds of difficulties good Federal Government pro-

grams must overcome. The burden is upon the localities to do whatever is necessary to cooperate with the Federal and State governments, as well as private or religious groups, which can and are willing to alleviate some of the human suffering which unfortunately exists in our country.

I strongly urge the Zoning Commission in the District of Columbia to take remedial action to correct the unjust situation described in Mr. Raspberry's column.

Mr. President, I ask unanimous consent that William Raspberry's column be printed in the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

CITY BLOCKS "MEALS ON WHEELS" FOR AGED

(By William Raspberry)

St. James Lutheran Church had this great idea: They would prepare meals for elderly, blind, shut-in and otherwise handicapped people who cannot do their own marketing and cooking. The meals would be delivered, twice daily, for the actual cost of the food.

Volunteers would do most of the work, with perhaps a paid cook. It was to be a nonprofit operation.

But St. James is located at 16th Street and Eastern Avenue NW, an area zoned as residential.

The District's zoning administrator held that the church's proposed "Meals on Wheels" operation was at least technically a commercial catering operation and, therefore, could not be considered a normal church activity.

The ruling was upheld by the board of zoning adjustment, and that's pretty much how it is right now. But that's not how the Rev. John A. Scherzer intends for it to remain.

Dr. Scherzer, a retired minister who until recently was acting director of Lutheran Social Services, thinks the ruling doesn't make much sense.

How, he wants to know, can it be right to permit "healthy and active people to enjoy the consumption of food on church premises"—or for that matter to allow churches to hold bingo parties and rummage sales—"while the preparation of meals, packaging and delivering them in compliance with public health standards to hungry, undernourished, helpless neighbors is illegal?"

St. James proposes to supply a hot noon meal and a cold supper five days a week for $10 a week to some 30 residents of the 16th and Eastern area. Eventually, Lutheran Social Services had hoped to supply the meals to some 3,000 shut-ins, operating from churches all over the city.

Dr. Scherzer said volunteers would handle the marketing, packaging and delivery of meals. As the program has worked in other cities, he said, only the cooks and in some cases, cooks' assistants are paid.

Zoning officials, in rejecting the plan, contended that the requirement that participants pay for their meals makes it a commercial catering operation, a contention Dr. Scherzer won't buy.

"No commercial catering establishment is in operation purely for the purpose of meeting the needs of clients without any concern for profit," he said.

He said he personally canvassed a sampling of catering establishments listed in the Yellow Pages and found that the lowest quotation he could get was for $3.75 per person a day plus packaging and delivery charges.

This, he said, demonstrates that "Meals on Wheels" is a commercial enterprise in only the most limited sense. Zoning officials have, in effect, made "illegal and impossible the practice of love and compassion," he said.

There is no denying that point, although Dr. Scherzer may be a little harsh on the zoning officials.

It is not a question of whether the proposed service is a needed one; it unquestionably is. At issue is whether it can be permitted under the zoning laws.

Sterling Tucker, the D.C. Council vice chairman whose assistance has been sought by Lutheran Social Services, said he has looked at the ordinances and finds that the board of zoning adjustment is "technically correct."

"If you charge any money at all, you technically are operating a commercial establishment," Tucker said. "I don't think you can criticize the board on that score. They could have interpreted the law differently, but they might have been outside their jurisdiction."

But Tucker, a member of the zoning commission, the next step in the appeal ladder, said he will propose that the commission "provide a broader interpretation" that will exclude nonprofit operations from the "commercial" definition.

If Tucker can sell his point of view, the old folks and the handicapped might get their meals after all.

PEACE

HON. HASTINGS KEITH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. KEITH. Mr. Speaker, our former colleague, Larry Curtis, of Boston, has brought to my attention an editorial which recently appeared in the Christian Science Monitor. Written by Editor-in-Chief Erwin Canham, this article succinctly states the central dilemma of our efforts to extricate American forces from South Vietnam:

> The nub of the Vietnam problem, of course, is not that there should be American disengagement but how to bring it about and what to do to prevent future tragedies . . . There should not be a total upsetting of the balance of Southeast Asia so that more nations fall to aggression. The United States cannot shake off its responsibilities as a world citizen.

Editor Canham's credentials are well known. He is a 1925 graduate of Bates College and was a Rhodes Scholar at Oxford. His expertise in the field of international relations derives in part from his experience as a former alternate U.S. delegate to the U.N. General Assembly. He has served with distinction as editor of the internationally known Christian Science Monitor for many years.

His editorial is thoughtful and deserving of wide attention. Accordingly, I insert it at this point in the RECORD under unanimous consent:

PEACE

(By Erwin D. Canham)

The yearning for peace runs deep in the human heart.

It is not confined to those who march for peace. Yet the sight and sound of some 100,000 persons gathered in a traditional public meeting place such as Boston Common, striving to express their yearning, is a tremendous experience.

We must not assume that such expressions of public will and emotion can do anything like all that is needed to assure peace. There were similar outpourings between the two world wars. In Britain, particularly, deep yearnings for peace were expressed in the so-called Peace Ballot, signed by some 12 million people.

Those British expressions were widely misinterpreted and on balance they did harm. Part of the Peace Ballot was support of collective security through armaments to enforce peace against aggression. Winston Churhill himself actively supported the movement. Yet in public thought, and governmental action, the Peace Ballot was interpreted as merely pacifism. It inhibited Britain's badly needed rearmament against Nazi aggression.

ISSUE COMPLICATED

The present sentiment for peace in the United States can also be badly misinterpreted. There is within it, of course, a profound rejection of all war. But this sentiment is almost totally conditioned by the Vietnam war. How would sentiments run if the proposal was to conduct operations against some racist nation which was seeking to suppress the freedom of others? Or if it were action to enforce some United Nations decision?

The issue is also confused with the unfinished business of American society, both domestic and international. Certainly much needs to be done to reduce the evils of racial injustice, poverty, and pollution. The international role of the United States must not be one of imperialism or domination, but of cooperation so that lesser-developed nations may make better progress at meeting their own needs.

The nub of the Vietnam problem, of course, is not that there should be American disengagement, but how to bring it about and what to do to prevent future tragedies. There must not be a Dunkirk. There must not be a slaughter of the South Vietnamese. There should not be a total upsetting of the balance in Southeast Asia so that more nations fall to aggression. The United States cannot shake off its responsibilities as a world citizen.

NEGOTIATIONS HARMED?

It would be wonderful if the American Government could put to use the idealism and fervor which demands an end to the Vietnam war. Perhaps somehow it can. The demonstrations appear to hurt the government in its efforts to negotiate a peace, by encouraging Hanoi to hang on until the plum drops in its lap. But the negotiations might never have reached formal agreement anyway. There has been no real sign of success. Instead, the war is likely to deescalate, to simmer down, and to become essentially merely a civil struggle between the Vietnamese which someday they can settle on their own terms.

Thus, it may be possible for the United States to increase its troop pullouts, to strengthen pressures on the Saigon government to take larger responsibilities, and above all to persuade it to strengthen the terms of that government so it can expect wider public support in South Vietnam.

UNILATERAL DANGER

American public opinion needs more credible evidence that progress is being made toward ending the war. Presumably President Nixon revealed such evidence to former Vice-President Hubert H. Humphrey on his recent White House visit. This would explain Mr. Humphrey's supporting statement. American public opinion needs to feel that the commitment to disengage major U.S. participation in Vietnam is irrevocable.

An American program for peace cannot be based on unilateral disarmament. That would be the surest road to war, as it was in the

1930's. Agreed reduction of armaments is something else again. The United States can also clean up its own defense scandals now coming to light. It can press on diligently with rigorous scrutiny of its defense system and expenditures. It can look harder at the political influence of defense industry.

But in the world of the 1970's, the preservation of peace still requires deterrent military power. It requires international police power against aggression. The arms race could be contained, but this can only be done through secure international agreement. That way lies the present, transitional road toward peace.

MORATORIUM AGAINST COMMUNISM

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, October 28, 1969

Mr. THURMOND. Mr. President, we have heard a lot about moratoriums lately. The people who favor this sort of demonstration have gotten a lot of publicity and are doing damage to the efforts of the President to bring the war to an honorable conclusion.

However, there is one moratorium that I favor, and that is the moratorium which was organized last Sunday in Buffalo, N.Y. This was the "Moratorium Against Communism," arranged by the American Hungarians of the Niagara Frontier. The Hungarians understand the nature of communism and have learned the hard way. This is the 13th anniversary of the Hungarian uprising. The Reverend Paul Kanton, one of the organizers of the Moratorium Against Communism, said he wanted to "ask freedom-loving Americans to proclaim a moratorium against the Communist dictators in Moscow."

I ask unanimous consent that an article entitled "Hungarian Group Sets Sunday Rally Outside City Hall," published in the Buffalo News of Wednesday, October 22, 1969, be printed in the Extensions of Remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Buffalo Evening News, Oct. 22, 1969]

HUNGARIAN GROUP SETS SUNDAY RALLY OUTSIDE CITY HALL

A "Moratorium Against Communism" has been scheduled for Sunday at 3 PM in the Council chambers of City Hall by the American Hungarian of the Niagara Frontier.

Commemorating the 13th anniversary of the Hungarian uprising, the program will include a speech by Walter Chopyk, a member of the Captive Nations Committee, and an English poetry reading by Hungarian poets.

In honor of the occasion, Mayor Sedita has proclaimed Oct. 26, Hungarian Freedom Day. The Hungarian Boy Scouts also will participate.

The Rev. Paul Kantor of the West Side Hungarian Reformed Church organized the commemoration to "ask freedom-loving Americans to proclaim a moratorium against the Communist dictators in Moscow."

Mr. Kantor also said that Communist dictators "make it their business to send agents to the U. S. A. to misguide our young people" and that Students for a Democratic Society (SDS) ought to be renamed "students for Destroying Society."

BLINDNESS GIVES REPORTER INSIGHT

HON. RALPH TYLER SMITH

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Tuesday, October 28, 1969

Mr. SMITH of Illinois. Mr. President, in a recent issue of the Chicago Tribune there was featured a story entitled "Blindness Gives Reporter Insight." This is a real human interest story in which Donna Gill sets forth her unusual experience. I ask unanimous consent that the article be printed in the Extensions of Remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"BLINDNESS" GIVES REPORTER INSIGHT

(By Donna Gill)

The click of heels echoed on the hard surface below. Voices to the left. Luggage scraping. Muted laughter. Sounds, everywhere sounds.

I was blind.

It had only been moments since Norman Dahl of the Illinois Lions clubs blind activities committee, had taped the gauze over my eyes and applied the wide blindfold, but already I was getting an idea of what it was like in the world of the sightless—what it was like to be blind.

ARRIVED AT O'HARE

We had arrived at O'Hare International airport early that crisp morning to board a flight to Detroit, there to transfer to a car for the trip 25 miles north to Rochester, Mich., and the Leader Dogs for the Blind school. For the rest of the day—flying, eating, traveling, walking, and just living—I would be blind.

I held Dahl's arm and he led me away from the ticket counter and down the corridors of the airport. It was hard to concentrate. It was a mixed jumble, as if hearing everything in the world all at once and for the first time.

As people walked by, I remembered listening to stereo demonstration records—the ones where the train comes at you and fades in the distance while you try to imagine what it looks like.

It was a world of electronic blackness with dots and flashes of white streaming across the insides of your eyes like when you first close your eyes to go to sleep in a darkened room. At this point, the noises were a turmoil of conflicting signals.

"Now we're approaching some steps and . . ."

My heart dropped into my toes. I was scared. A step? Mt. Everest. But I told myself my fear was unfounded. I stepped. There. That wasn't so bad.

Then we boarded the plane. Temperature changed. Voices echoed. The situation had changed and the body and brain were busy compensating for a handicap. The brain worked for me, selectively plucking meaningful noises out of a topsy-turvy for reference and discarding other sounds.

HANDS BEGIN TO SEE

My ears heard what they should, my feet investigated the material beneath me, and my hands began to see as I groped for the seat belt.

I love to fly. There is an exhilaration that comes from watching ground disappear and breaking thru billowing clouds into a beckoning sky. It would be missing this time. Depression loomed with its unseeing eyes and black stare.

But the mood didn't last long. There was too much going on.

Take-off might be terrifying for a sightless person not used to flying. You are immersed in a kaleidoscope of noise and sensation as if you are being launched in a jet-propelled cage that doesn't extend beyond the seat and voice next to you.

BACK INTO PERSPECTIVE

However, after the climb, voices of passengers in other parts of the plane and echoing air noises of a large plane in flight end the closed feeling and bring spaces back into perspective.

I felt a wave of air sickness due to motion exaggerated when one can't see, and then breakfast came. I could hardly wait to dig in. It was more than hunger; it was a test. Could I feed myself? Could I be independent?

Dahl told me where the food was according to the clock. Fruit, 11. Roll, 8. Milk, 10; Omelet and bacon, 6.

LEARNS TO EAT

I fumbled, but soon found that weight, temperatures, pressures, and textures help you find food and tell you if it is secure on the fork. It may have been sloppy and uncoordinated, but eating that meal truly gave me a sense of accomplishment.

The next battle was regaining balance after leaving the plane and on the way to the waiting car. Then the world of voices began again as we started the trip.

I felt totally blind, not blindfolded. I couldn't wait to get to the school, meet my dog, and take off on my own, without having to wait for someone to offer me an arm.

FACED CAR SICKNESS

I keep my mind off being car sick—something that doesn't happen to me when I can see—I tried to figure out where we were by the noises. Traffic sounds, echoes in underpasses, the length between stops, and the odors all combined to give me clues.

But the sighted world was far away from mine, and I dropped into a feeling of invisibility, much as the ostrich imagines he can't be seen if he can't see.

The feeling was temporary, however. As time passed I got used to the blindness and ignored it. I began not to even notice the blackness before my eyes.

IMAGINATION TAKES OVER

Imagination took over and I visualized things or just saw nothing. It is not quite a feeling of staring into space. It is more of a beige world that has no form or color. It is a nothing.

But when it becomes a nothing, you become a something. Blindness has been accepted, concentration becomes acute, and you learn. I had gone thru curiosity, depression, sickness, defeat, and victory in only a few hours and I felt more alive than I ever had.

Dahl told me of the program at the Leader school. Dogs of many breeds are trained for 12 weeks. The trainers themselves have been blindfolded for 30 days so they will understand what the blind person is going thru when he arrives for the following four-week course.

COST IS $2,500

The cost—about $2,500 for a team—is underwritten so that the service is free to the blind. Lions clubs in many states finance 70 to 80 per cent of the work of the 30-year-old non-profit school.

In Illinois, Lions clubs raise money annually thru Candy Day for the blind, to be held next Friday.

We were there. The car door opened, and

a friendly voice announced, "Hi. Welcome. I'm Poc." He was Harold Pocklington, director, but "here we use only first names. This is family."

VOICES SOUND FRIENDLY

I felt trusting, almost too much so. Any voice sounds friendly when you have been in the darkness. I wondered if blind persons get over this feeling with time and independence.

I took a blind person's tour of the facilities there, saw a porcelain lion statue with my hands, and then left for downtown for training with a Leader Dog.

Poc and the others at the school give no special favors to blind persons. And it is welcomed by the blind, because no one wants to think he is pitied or catered to.

"There's nothing more maddening, if you're blind, than to go to a restaurant with a friend, only to have the waiter ask the other guy what you want to order as if you lost your mind as well as your sight," Poc said.

Downtown I met Dan McDonald, one of the trainers. We began without a dog. At the start of training, you walk behind a harness held by the trainer.

He teaches you hand and voice signals, the proper way to find a curb, how to turn corners, how to keep in step. The trainer studies you. Are you hesitant? Afraid? A slow or fast walker? What do you do in emergencies? Are you outgoing or introverted? What is your voice tone?

MATCHED WITH DOG

The trainer uses this information to match you with a dog. The goal is a coordinated unit, a dog and human that act and move as one. It was time to bring out the dog.

I was excited. This was it. I could hardly wait. There was Queenie, a white German Shepherd.

I clasped the harness handle in my left hand with the leash resting across the handle and under my thumb.

"Queenie, forward! Good dog!"

WALKS QUITE FAST

Away we went, four miles per hour, faster than most pedestrians walk. It is a strange feeling at first to go almost running off into the darkness. The more we walked, the better we got. But soon, the darkness remains I wasn't scared. I believed in the dog.

OWN JOB EASY

I imagined the white dog detouring, around obstacles and pedestrians, watching for traffic, and looking out for low-hanging awnings. My job was so easy in comparison—just walk along and praise the dog.

I was not afraid of bumping into things, but I did run into the edge of a building. It was my own fault—I was walking too far away from Queenie. I laughed at myself and we continued.

It was a good feeling to be normal, even tho blind. The walking was coming naturally, and I began to think about where we were. We started in an area that I thought must be older homes on a side street because grass grew in the cracks of a broken sidewalk and traffic was almost nonexistent.

CROSSES SOME STREETS

We crossed a few streets, turned a few corners, and it was time to head for the business district. We got to a corner. Queenie stopped to give me time to find the curb, and then I signaled her to go forward.

I started to step off the curb, but she wouldn't let me.

She stepped around in front of me and blocked my move. I was dumbfounded about her actions until a car came whipping around the corner. That time the "good dog" and dozens of pats were truly heart felt. When it was clear, Queenie and I crossed the street, stopping before the up-curb, and continuing the walk.

MINOR VICTORIES ACHIEVED

I could tell more now. I knew when we were approaching an intersection before Queenie stopped because of traffic sounds. I knew we were in a busy section now because of the people passing by, the noises, and the condition of the sidewalk. Curbs and minor obstacles taken for granted by the sighted became minor victories to us.

Dan said many blind persons fear turning themselves over to a dog and pull back, trying to stop the dog instead of going with it. That wasn't my problem, but direction was. I had trouble trying to find the correct store in a block of stores.

But dogs learn your routine and often know where you want to go and take you right there, sometimes even putting their noses on the doorknob to help you find it.

STORY OF AMPUTEE

Dan told me about one dog whose owner was not only blind but also a double amputee who collapsed while walking. Whenever the man would wobble, the Leader Dog would throw itself against the man's legs to prop him up until he regained his balance. Dogs also walk slower for persons who have trouble with mobility. They seem to know instinctively that something is wrong.

The lesson was over—and Queenie was gone. I missed her. I could see how attached a dog and person could become in a short time.

Experts vary on their preferences for travel aids for the blind—some prefer dogs, others a cane or other mechanical device. No one method is correct for every blind person. But I could see how companionship would be a strong argument for a dog.

RETURNS TO SCHOOL

It was time to go back to the school grounds, have a late lunch, listen to a movie about the school, and talk to some of the students about their accomplishments—they bowled, cooked, worked, went to college, played golf, and enjoyed fairly normal lives.

By then I was exhausted.

Reactions to blindness vary with the individual, but I had gone over stages that many blind persons go thru a longer period of time; curiosity, depression, changing attitudes and habits, resignation, learning, and return to normalcy.

It had been a mental and physical strain, but when the blindfold was finally removed, it was like being reborn. I couldn't look at things fast enough.

The day was over. The other students would stay there. Their blindness would not end.

For me, it was over, but one thing would never be the same. From then on, I would be seeing things thru appreciative eyes—eyes that had to be blind before they could really see.

ART LINKLETTER'S MISSION

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. PUCINSKI. Mr. Speaker, the following editorial, which I believe is self-explanatory, appeared in the Chicago Tribune on October 23:

ART LINKLETTER'S MISSION

Fortunately, Art Linkletter is a man to whom personal tragedy can give the strength and desire to help protect others from the same tragedy.

Mr. Linkletter blames the recent death of his 20-year-old daughter, Diane, on LSD—"a tiger in her bloodstream." Her death has determined him to do all he can to warn others of the danger of drugs that warp the mind. He has agreed to testify before a Congressional committee, and he has made a recording telling of his daughter's drift into the shadowy world of drugs and of her family's efforts to dissuade her. Few who have heard it will be able to forget it.

Too few people recognize or are willing to admit the danger that these drugs pose to so many of the young. Too little has been said about the deaths and insanity that have already resulted from their use. The tendency, as Mr. Linkletter says, is for families to hush these things up "as a terrible secret."

There are many ways of fighting this danger; laws and border patrols; the punishment of drug peddlers and promoters who are willing to sabotage a generation in the name of "love" in order to make a fast buck; and the solemn warnings of elders who, all too often, talk about drugs with about as much authority as they talk about Santa Claus or the balance of payments.

But all of us were young once and most of us can remember the tendency to discount the solemn advice of our elders and to want to find out for ourselves. Today's youth is especially restless. To more of them than ever, an experience is something to be experienced, just as to a mountain climber a mountain is something to be climbed. If a young person is restless or disturbed or foolish enough, he will find himself imprisoned in a psychedelic chamber of unreality from which he may not be able to escape for years if ever.

Sometimes the lure of independence or experience does not yield to reason. It takes an unusually vivid and personal lesson to get the message across—something like the anti-smoking warnings delivered on television by the late William Talman of the Perry Mason show while he was dying of cancer. This is what the experience of the Linkletters can now provide for others.

It has taken some courage for Mr. Linkletter to talk publicly about the events and family discussions leading up to his daughter's plunge from a sixth floor window. He deserves the admiration and sympathy of his contemporaries and the life-long gratitude of every young man or woman who hears of his family's tragedy and decides, "That's not for me."

HANOI'S MYOPIA

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. BOB WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

[From the San Diego Union, Oct. 18, 1969]

HANOI'S MYOPIA

Certainly one of the most unsettling aspects of the so-called Moratorium Day of protest against our involvement in the Vietnam War is in the new confidence it has given the enemy.

Even before the day began, Hanoi was blatantly intruding into our domestic affairs, attempting to prescribe the behavior of American citizens. The thrust of Hanoi's propaganda was simple; the price of "peace" is surrender.

The day after the protest, North Vietnam was saying that a nation that could send men to the moon should be able to manage a precipitate retreat from South Vietnam. Xuan Thuy, Hanoi's chief negotiator at Paris, added that President Nixon showed his contempt for American public opinion by failing to heed the protestors.

And, as an act of consummate brutality, Hanoi lost no opportunity before or after Moratorium Day to exploit the anxieties and fears of the wives of American prisoners of war. The wives were turned back by the North Vietnamese in Paris, and told to join the protest against our national policy. The implication was "or else."

In all these matters the facts are clear.

First, there can be no genuine peace through surrender. There never has been. Our landing of men on the moon and the rate of withdrawal of American troops from Vietnam are not remotely related. The savagery toward prisoners and exploitation of the raw emotions of distraught wives speaks for itself.

And, of course, President Nixon is showing respect for American public opinion.

The latest polls show 57 per cent of the Americans favor his leadership. By contrast the protestors in Moratorium Day did not represent 10 per cent of the nation's college students or .0025 per cent of the population.

Hanoi, in seeking to manage the affairs of the United States of America, is suffering from acute myopia.

GENOCIDE IN TIBET IGNORED BY UNO

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. RARICK. Mr. Speaker, the Dalai Lama of Tibet laments that his people are in eminent danger of extinction as a race, religion, ethnic group, and ancient and honorable culture.

The Red Chinese acts he describes are immediately recognized as the internationally abhorred practice of genocide—deportation, sterilization, promoted intermarriage, destruction of monks and all vestiges of their religion and culture.

The destruction of the Tibetans right before our eyes should remind all that there are more subtle methods of committing genocide than liquidating people at the wall.

But throughout the Communist occupation and rape of Tibet—to where they are today almost a nonexistent race—there has been no voice of wrath or censure from that great debating society, the UNO, which last week-end spent its energies and time recounting its imaginary accomplishments, and seeking more appropriations. Nor has there been any action taken by the 67 nations of the world which have ratified the Genocide Convention. If the convention has any meaning at all, why have not these nations interceded and shaken the conscience of the world at these unprecedented atrocities

Apparently the only concern in the UNO is to condemn the deliberate, peaceful separate development, and preservation of racial and cultural identities—the antithesis of genocide—in South Africa; to censure the civilized self-government of Rhodesia; to deplore the Portuguese administration of its African provinces and to perpetuate itself at the expense of American taxpayers.

In fact, in the absence of even calling for international economic sanctions against Red China for the genocidal acts against the Tibetans, the United Nations Organization demonstrates that it condones genocide while condemning the antithesis.

Pertinent and related news clippings showing the true state of affairs follow:

[From the Washington Post, Oct. 25, 1969]

DALAI LAMA SAYS RACE FACES EXTINCTION

NEW DELHI.—"The Tibetan race is in danger of extinction," the Dalai Lama, exiled god king of Tibet, said recently of conditions in the homeland he has not seen for 10 years.

"The Chinese have deported Tibetans. They practice sterilization in some areas. They encourage intermarriage," he said in an interview, gesturing occasionally with both hands.

Wrapped in a maroon-colored monk's robe, the Dalai Lama, 34, spoke of the changes in his country since the Chinese Communists occupied it in 1950 and forced him to flee for his life nine years later.

He said there is "not a single monk" left in Tibet, a land of about 3 million people where 10 per cent of the population was once made up of Buddhist monks.

"They have destroyed practically all documents and temples," he said. The documents—books and scriptures some of them hundreds of years old—held the secrets of centuries of Tibetan history and culture isolated from the outside world by the forbidding peaks of the Himalayan Mountains.

Speaking through an interpreter, a Buddhist monk, on the more difficult questions, the Dalai Lama said ambushes by Tibetan guerrillas have become so common that "Chinese must travel in large groups for protection."

Last month Indian Foreign Ministry sources reported the Chinese were moving nuclear installations out of their troubled Singkiang Province bordering the Soviet Union to safer positions in Tibet.

"The information about these rumors seems to be true, but we have no detailed information," the Dalai Lama said.

"It's disheartening the situation can only deteriorate in Tibet and become a greater loss for the Tibetan people," he added.

[From the Washington Post, October 1969]

U.N. AID

UNITED NATIONS.—Ninety-eight countries pledged a total of $131.6 million to the UN development program. Fifteen other countries, including the United States, are expected to pledge $106 million more, bringing the total to $238 million.

This compares with $195 million pledged for 1969. Forty-five countries increased the sums promised for 1970. President Nixon has asked Congress for $100 million as the American contribution compared to about $75 million last year, but Congress has not yet acted.

South Africa was expelled from the Tokyo Congress of the Universal Postal Union because of its segregationist policies, but a motion to expel it from the organization altogether was defeated by a tie vote of 57–57. Expulsion from the meeting passed by 63 to 53.

U.S. ENVOY SUGGESTS PRACTICAL GOALS FOR U.N. IN 25TH ANNIVERSARY YEAR

(By Robert H. Estabrook)

UNITED NATIONS, October 23.—The United States told the General Assembly today that the United Nations ought to avoid self-congratulations on its 25th anniversary in 1970 and concentrate on realizable objectives.

Among these Ambassador Charles W. Yost pointed out an agreement on guidelines for UN peacekeeping operations. The United States firmly believes, he said, "that this goal can be achieved during the coming year."

This optimism is based on negotiations with the Soviet Union and other countries here. Yost stressed that any agreement recognizing the "primary role" of the Security Council also must take account of the residual responsibilities of the assembly and the authority of the secretary general.

Extra support for the peacekeeping function was supplied by Cyrus Vance, former deputy secretary of defense, Vietnam negotiator and President Johnson's special envoy in the Cyprus dispute, which involves a current UN peacekeeping operation.

Vance told a United Nations Day audience in Des Moines, Iowa, that a standby UN peacekeeping force of 25,000 men should be established to be drawn largely from the middle powers, with a reserve of 15,000. He also proposed that the United States take the lead in settling the UN financial dispute and establishing a $60-million peacekeeping fund.

Ghanaian Ambassador Richard Akwei presented a report of the preparatory committee on the 25th anniversary. But introduction of a resolution sponsored by 20 nations, including the United States, to set up an anniversary session of the assembly next October was delayed by objections.

Algeria objected on behalf of a group of nonaligned countries in an effort to broaden the resolution with more references to the second UN development decade, friendly relations among states and decolonization.

In a related move, the Lusaka manifesto on Southern Africa was placed on the assembly agenda at the request of 39 African countries. Drawn up by East African leaders in Zambia, it distinguishes between racism in South Africa and Rhodesia and the lack of self-determination in Portuguese territories such as Angola and Mozambique.

Yost paid tribute to the Lusaka manifesto. His speech also emphasized disarmament efforts and more reference to the World Court and similar bodies in peaceful settlement of disputes. Yost further supported the objective of an end to colonialism and alien domination.

[From the Rhodesia Herald, July 30, 1969]

BASIC CHINESE OBJECTIVE IS ZAMBEZI BELT, WHERE WHITE AND BLACK AFRICAS MEET

"What is the *quid pro quo* for China? When does Chairman Mao present his IOU?" This is the Chinese puzzle in Africa today.

These are the two questions one constantly encounters in Addis, Nairobi, Dar, Lusaka and the other capitals where the full impact of China's "forward policy" is now being felt.

It is a circular puzzle with no obvious answer. It rattles about in the subconscious mind as one travels the bush roads of Zambia and Tanzania, in the terrain where the prospective Zamtan Railway is to be built. £115m., 1,042 miles of steel, operational by 1975.

"The Chinese think long: finish the railway five years from now: finish the guerilla war in 20."

The speaker had been a Western diplomat who gave me lunch in Dar es Salaam; one of the many China watchers among the men who staff 47 diplomatic missions in the Tanzanian capital.

His words came back to me as I slowed the car to glance at a neat, inconspicuous signboard where there was a break in the elephant grass and two tyre tracks led away under the thorn trees.

Beneath the Chinese characters were a few words in English stating that this was the Zambia-Tanzania rail survey, People's Republic of China.

Thirty yards away, jutting above the tall grass, was a cluster of bamboo poles topped with bulging plastic lanterns looking like red pumpkins. The same bright mandarin red they use for the book jackets for the Thoughts of Chairman Mao.

I was far inland from the Indian Ocean, on the route that runs up and over the spine of Africa at Mbeva at 5,600 ft.—higher than the main pass on the Canadian Pacific in the Rockies, and often as cool if not cooler.

All told, more than 1,000 miles of track to be laid through baking scrubland, the Mikumi flood plain, the fortress wall of the Rift Valley and on through the malarial zone that killed David Livingstone, to Zambia's railhead and the Copperbelt.

The equivalent stretch on the CPR took the Canadians 10 years; the Chinese propose to drive their last spike in five. The comparison may be unfair; China will have modern equipment, road access, and a work force of 4,000 men who are unlikely to complain.

But no one who has seen the enormous Friendship Textile Mill near Dar es Salaam doubts that the railway can be built on schedule on simple, rugged lines suited to African conditions.

SMILES FADED

Western visitors strove to conceal polite smiles for two reasons when the Friendship Mill was opened for inspection after the dedication ceremony.

First, the machinery—obviously new—looked as if it had been ordered from some sepia catalogue of the 1920s. Secondly, wherever you would expect to find a tabulator or cash register the Chinese had installed a simple abacus.

A year later the smirks are forgotten.

Harassed African managers, used to the holdups when a machine from the West breaks down and you queue up for a technician, find to their relief that almost any handyman can keep the Chinese machines in good order. As for the abacus, it proves to be both speedy and unbreakable.

I thought of the diplomat's words again—"the Chinese think long"—when I encountered a British engineer who knows the Mtwara zone like the back of his hand, though our conversation took place a thousand miles inland from there.

IGNORANCE

"Drive through here today," he said—"if you can get a permit, which I doubt—and the Chinese instructors will pick you up on their walkie-talkie network and track you all the way: round through Newala, up to Masasi and Nachingwea, and back across to the Lindi junction. It's good practice for their pupils."

What strikes the traveller like myself most forcibly of all, on returning to Europe, is the bland insouciance—one could almost describe it as willful ignorance—about what China's aims are in Africa and how effectively she is pursuing these goals under the new diplomatic policy that began in 1966

The Zamtan Railway is the textbook example.

The myth that obstinately persists in London and the other capitals in the West goes like this: the Chinese are heavy-handed; they are extracting absolute allegiance to the Peking line as the pre-condition to any aid they actually give; they are not serious about Zamtan, which remains pie-in-the-sky and is useful simply to keep the African Governments in a client role and for fending off the Russians.

The facts are the opposite.

Quite simply the explanation seems to be that the Chinese burnt their fingers in the affair of the Algiers Summit in 1965, learned their lesson about the ultra-sensitivity of Africans, and made a diplomatic volte-face soon afterwards.

The Algiers affair was the proposed "Second Bandung" that never came off. But so insistent was Premier Chou about China's friends agreeing to take their places at the table—part of the policy for out-flanking the Russians—that Chinese diplomats were made to crack the whip with clumsy urgency that failed to work.

LOST FACE

Ultimately, in a shake-out that ruffled the OAU and drove Algeria and Egypt into the Moscow camp, the Algiers summit collapsed. Peking lost face badly; and after a minor demarche in November the Chinese pulled back and reconsidered their whole Africa policy.

Other events forced the process on. Nkrumah fell while actually visiting Peking in February, 1966. In Ghana, the legendary "Chinese training camp" at Obinimasi, in the bush north of Accra, proved to be a reality and Col. Yen Leng and his instructing staff were asked to leave.

Later when Formosa's deputy Foreign Minister, Mr. Yang, was passing through Accra Airport and members of the Red China mission went out as a team to heckle and boo him, the Ghana Government asked Peking to withdraw its mission.

This reduced mainland China to 13 missions in Africa against 19 for Chiang Kai-shek's Nationalists.

The Chinese rethink appears to have ended in a decision in 1966 to concentrate on the part of Africa where offers of economic and military aid would inevitably be received with gratitude rather than suspicion.

In retrospect, it is obvious enough: Peking would move in on the Zambezi belt where the black-white confrontation had sharpened with Ian Smith's UDI.

A Russian gaffe strengthened the Chinese position as the true friends of black Africa.

Portugal invited two members of the editorial board of Pravada to visit Mozambique for a tour of the "terrorist zones" and this was accepted in principle.

(An unofficial Soviet mission was in Portugal in February this year, supposedly paving the way for the embassy that Dr. Caetano has invited them to open in Lisbon.)

Britain's failure to respond effectively to UDI provided another opening.

When Tanzania broke with Britain over the failure to bring down Smith, Dr. Nyerere sacrificed £7m. of new aid money still in the pipeline from Britain. Mr. Wilson suspended (and later cancelled) the loan.

Peking after a short interval announced a new interest-free loan to help bridge the gap bringing Chinese total aid to £16m.

When, a year after UDI, President Nyerere spoke the first words at the opening of a 100-kilowatt transmitter, the most powerful in Eastern Africa, which is now the main voice of black Africa in the propaganda war with Salisbury and Pretoria, Mr. Ho and Mr. Chou were guests of honour.

For China as they remind you in Dar es Salaam, had built and equipped the transmitter and paid the bill.

GUERILLA CAMP

Four Chinese experts were reported to have arrived in Tanzania last month to start the surveys for a new cement works and a brick factory.

These projects were merely the latest in an endless list of state farms, rice projects, a sports stadium, a shoe factory and so on.

There is the army barracks at Nachingwea, the new training course at Moshi for police field force units, the unchronicled list of guerilla camps, and the tanks—sufficient for two squadrons, with reserves—which can be glimpsed as one passes the main army barracks at Calito.

Both in Tanzania and Zambia there are extensive teams of Chinese doctors, orderlies and medical technicians who may be connected with the guerilla programme, but also carry out an impressive "meet-the-people" campaign in the villages.

President Nyerere has a sharp retort for those from the West who offer unsolicited advice about China. He says, simply:

"We will never allow our friends to choose our enemies for us. Our independence is not for sale to the East any more than the West."

On the South Africa-Rhodesia problem President Nyerere said in May, at the opening of the new textile mill at Mwanza, built with French aid:

"Only the Western world can help solve the problem of Southern Africa with the minimum of violence. We still appeal for that. It can be seen in the recent Lusaka Manifesto.

"If all this fails we shall be compelled to take arms from the East, and we shall be accused of being Communists.

"To us China is a friend in need. Take, for example, the railway between Tanzania and Zambia. We tried very hard to get it built by the Western world. But we failed. The Chinese are ready to build it for us. But the West, now, does not want China to build it. So, should we go without a railway?"

As for this project being a lot of airy politics, the thing that emerges from talks at Ministries in Dar and Lusaka is the hard, specific nature of the agreements.

These began with Presidents Nyerere and Kaunda making separate visits to Peking, continued with the setting up of a corporate body to manage the project—the Zambia-Tanzania Railway Authority—and continued with talks in Peking, where the signing ceremony, on Septmber 5, 1967, was attended by Chou En-lia.

Apparently oblivious of these facts, the director of the AID office in Washington, Peter Straus, said in September, 1967:

"We are now engaged in a survey of Middle Africa transportation. The study obviously will include the proposed Zambia railroad."

The American agency carrying this report quoted "Washington sources" on the Zamtan project: "Non-Communist countries do not take the Chinese offer very seriously."

On September 10 the leader of the Zambian team, Mr. Soko, arrived home from Peking, and said: "I am fully satisfied the railway will now go ahead."

On December 26 that year eight Chinese experts arrived quietly in Dar, led by a Mr. Liu Chi-fu. They had talks in Lusaka on December 30.

The moment when the die was finally cast came on April 1 last year with ministerial talks between the three Governments at Dar. This resulted in the "Tripartite Agreement" of April 8.

The formal signing ceremony followed on April 28, 1968.

WELL AHEAD

I gather the agreement provides for the survey and design stage that is now running well ahead of schedule, on a route of 1,042 miles between existing railheads at Kidatu in Tanzania and Katanino in Zambia.

And although there has yet to be a final summit session on the long-term finance, the 1968 document sets out the general terms of the interest-free loan to the value of 200m. Zambian Kwachas, which is roughly £115m. (sterling).

On April 12, 1968, amid hoots of sirens, the 20,000-ton liner MV Yao Hua slid into Dar harbour with the advance party of 154 surveyors lining the rails. Each clasped his little red book, and the banner above their heads proclaimed: "Long Live the Invincible Thoughts of Mao Tse-tung."

The West may continue to scoff, but I am sure Mr. Vorster in Pretoria takes China very seriously indeed.

DOD'S "CHRISTMAS BONUS"

HON. JEROME R. WALDIE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. WALDIE. Mr. Speaker, Government service can sometimes be an experience rife with disappointment and frustration. Dependent upon the whims of a political bureaucracy, many Government employees expensively trained for particular skills, are leaving the Government rather than be subjected to the economic and professional harassment leveled at them in the wake of so-called economy efforts.

One such employee, a constituent of mine, is leaving Government service for the reasons stated above.

I have chosen not to include her name so as to protect her from zealous supervisors who fear criticism of the system.

Mr. Speaker, I am of the opinion that this once dedicated public servant has justifiable reasons for criticizing this system and I think it is in the interest of the Members of the Congress to judge for themselves if this brand of economy is the best way to run a business.

The letter follows:

The Honorable JEROME WALDIE,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN WALDIE: Today I received an early Christmas bonus from the Department of the Navy (my employer of the past twenty-two years) advising me that I would be reduced in salary $1400.00 per year effective 24 November due to budget limitations. I find myself in the position, which is not unique to career government employees, of being removed from a position for which I have been especially trained at great government expense, of having financial commitments which I will be unable to meet and with every prospect of having my future retirement plans shattered. As a crowning indignity, there will be no "Saved Pay" to cushion the blow for the next two years.

Sir, I am tired of working at a job which offers me so little in the way of job security, so little in the way of fringe benefits and *nothing* in the way of concern for people. I am *more* tired of having my job become a political football with every change of political administration. I am tired of the pay raises which are given so late, so grudgingly and so publicly and which are taken away so *quietly* by the simple expedient of denying funds to meet the increased payroll. I am tired of being gagged by the Hatch Act to the extent that I cannot tell my voting friends and neighbors how it really is in the career federal service. I am tired of administrations which decry unemployment publicly and create it privately. I am tired of beng expected to smile bravely when the ship springs a leak and charge forward at three-fourths pay for the greater glory of the economy and the Secretary of Defense. I am tired of being patted on the head by the Admirals whose jobs are never put in jeopardy by a reduction in force. I am tired of being expected to give loyalty and dedication to an employer who offers me nothing in return. I am tired of being dehumanized in the effort to survive economically. Most of all, I am tired of the Republicans who have made all of these things possible.

Since I am eligible to option for severance pay in lieu of demotion, I am leaving the career service on the effective date of my adverse personnel action; it is ironic that I will be able to earn more money in the next twelve months by not working than by accepting the offer of alternate employment. Perhaps, the overall savings realized from current methods of reduction in force will not be nearly as effective as the budget-choppers hoped.

THE FARM YOUTH

HON. JOHN M. ZWACH

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. ZWACH. Mr. Speaker, the problem of the declining economic status of our countryside is a serious consideration of all of our people in the Minnesota Sixth Congressional District.

One of our newspaper editors who is particularly vocal in this respect is O. B. Augustson of the West Central Daily Tribune of Willmar. He has spent a fruitful lifetime in the countryside. He writes with the authority of firsthand experience.

Recently, he attended a 4–H banquet held in his hometown of Willmar. There are some thoughts in the editorial he wrote following that banquet that I would like to share with my colleagues by reprinting them herewith in the CONGRESSIONAL RECORD:

THE FARM YOUTH

(By O. B. Auguston)

Tuesday evening, as a member of the local Kiwanis Club, a sponsor, we attended the annual 4–H banquet held at our high school. What a fine occasion this is and has been down through the years. And what a sight to look over the assembly of so many hundreds of boys and girls from the country, who, as members, comprise the many 4–H clubs of our country. When you look at all these youngsters you get an idea of the size of this movement in our midst.

These boys and girls of the country try to personify certain beliefs and principles. At this time, during national 4–H Week, they are stressing that "Head, Heart, Hands, and Health" together are the creative forces that develop love for fellowmen, encourage leadership, and teach responsibility while molding character. Those are high principles and we believe we need a lot of them in our time, even more, if we are at all conscious of certain conditions in our country.

The crowd of farm youth at the banquet is still very large. But we imagine that what has happened in the country as far as agriculture is concerned could have some effect on the number of youths in various clubs, unless there are more clubs and more members recruited.

One hears at times of urban youth in the movement. As to this, one would prefer country youth exclusively as they do have everything in common. Blending often leads to complications and a basic identity may be lost that has great value, something like the thought incorporated in the saying, "this is our very own."

Our constant regret, however, is any decline in the number of farm boys and girls who may be left if the trend continues for less and less family farms, for such are the backbone of the 4-H movement. Not that it can't exist with less, but there is always something intrinsic in larger numbers all interested in the same goals and purposes.

If the cities are to grow, why think in terms of the countryside growing less? Also, it seems to us, that some of the finest of human traits and qualities have come from the countryside, from rural America.

Perhaps what good things are found in the present interurbia may be traced to the kind of rural area folks who went to those big cities in the yesterdays and laid some worthy foundations. For it goes without saying and backed by facts that in practically all areas of the things desirable, the percentages in rural America are the highest. And in reverse, the percentage of the things undesirable are the lowest in rural America.

So one would say, "Let us still strive to retain our family farms, retain our farm youth on the land and to achieve these things, still strive for an economy which will attain both of these."

OPEN LETTER TO PRESIDENT NIXON FROM DUMITRU DANIELOPOL

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. UTT. Mr. Speaker, I am including an open letter to President Nixon from Dumitru Danielopol, who is a special correspondent for the Copley Press. The following letter appeared in the Joliet Herald-News, Joliet, Ill. on October 14, 1969:

[From the Joliet Herald-News, Oct. 14, 1969]

DUMITRU DANIELOPOL: TO OUR PRESIDENT

President RICHARD M. NIXON,
The White House,
Washington, D.C.,

DEAR MR. PRESIDENT: Don't feel lonesome on Wednesday—Vietnam Moratorium day—when anti-war demonstrators attack you and try to force you to do something you know is wrong.

There are hundreds of millions of people here in the United States and around the world who know that you are right. They know that freedom is indivisible, that it cannot accommodate tyranny in one corner of the world and survive in another.

People like myself whose birthplaces are now behind the Iron Curtain are wholeheartedly with you. We have learned about communism at first hand. Poles, Czechs, Hungarians, Bulgarians, Albanians, Romanians, Lithuanians, Latvians, Estonians, Yugoslavs, Ukranians, Cubans, Chinese, Jews, Christians, Mohammedans—no matter what color, race or creed—we have suffered indiscriminately at the hands of the Communists. We know their ruthlessness and their perfidy.

The tens of millions who have taken refuge from communism in free lands stand by you.

We don't want to see what happened to us happen to the people of Vietnam, if it can be prevented.

And you know, and we know, that it can be prevented.

The great majority of native-born Americans back you, too, Mr. President, especially those sent overseas to fight the Nazis and the Fascists because governments in democratic countries in Europe in the 1930s failed to understand totalitarianism and failed to do what America is doing right now—stopping aggression while there is still time.

Every major national veterans organization in this country is on record in support of U.S. involvement in Vietnam.

No one wants to prevent free discussion, free opinion and even dissent—but on the condition that our rights are respected, too.

It seems incredible that so many people in high places advocate appeasement and the

abandonment of a country fighting for its inalienable right to self determination.

Never in history have the aims of the Communists coincided with those of free people. Never have they voiced any policies that did not try to destroy freedom somewhere in the world. Yet today they seem to have so many articulate allies.

We know, Mr. President, that should the Americans abandon Vietnam—as the dissenters insist—America will cease to be the greatest country in the world.

There are times in the history of great countries and of great men when they have to stand up—even if alone—for what is right.

I witnessed some of those moments in the House of Commons when Winston Churchill tore his government and his party to shreds for the shameful Munich agreement of 1938. He was powerless, but he knew he was right.

From London, I heard Col. Charles de Gaulle, an unknown, call on his fellow Frenchmen, who had been shamefully defeated, to rally against overwhelming odds in the summer of 1940. He, too, was powerless, but he knew he was right.

Mr. President, you are in a much more favorable position than those leaders. You have the power, you have the time, for you are our President and our Commander in Chief, and you have an arsenal that can bring an honorable conclusion in Vietnam.

And, Mr. President, you have us on our side. We don't march or demonstrate, but that doesn't mean we aren't ready to help you.

Sincerely,

DUMITRU DANIELOPOL.

Washington, D.C.

ZAMBIAN INDEPENDENCE DAY—OCTOBER 24, 1969

HON. ADAM C. POWELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. POWELL. Mr. Speaker, Zambia is one of the new sovereign states in southern Africa. With an area of about 290,000 square miles and a population of about 4,000,000, it is a land-locked country, bounded on the east by Tanzania, on the southeast by Mozambique, on the south by Rhodesia, and on the west by Angola. It is a high plateau country, rich in valuable minerals, though 85 percent of the people earn their living by agricultural occupation.

The country became a British protectorate in the 1890's, and later was known as Northern Rhodesia. In 1924 a legislative council was instituted, and since 1945 this council was dominated by native representatives. Gradually they pressed for national independence, and attained their goal on October 24, 1964. The new state is the Republic of Zambia. It is a member of the British Commonwealth, and has been a member of the United Nations for more than 4 years. Zambia possesses one of the largest known copper mine deposits, which is a great boon to its economy. Its agricultural products are peanuts, tobacco, cotton, and grain.

On the fifth anniversary of Zambia's Independence Day we wish peace and prosperity to the people of Zambia.

HORTON OFFERS COMPREHENSIVE TRANSPORTATION PLAN

HON. FRANK HORTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. HORTON. Mr. Speaker, honking horns, cars darting in and out of lanes, massive traffic jams, have become the normal routine of everyday commuting.

We have turned our highways leading to airports and railroad and ports into giant parking lots. Or we have gone the other direction, and built airports in the midst of nowhere, highways that do not connect with rail terminals, bridges that do not relate to roads, and the list goes on.

In the next 6 years there will be 30 million more people, 20 million more automobiles, and four times the traffic at airports. We have spent millions to create mazes leading to nothing.

Mr. Speaker, the answer is not another railroad, another airport, another highway. The answer is to coordinate our existing facilities—patch up the quilt.

In my own area the Rochester-Genesee Regional Transportation Authority has been created to coordinate transportation plans for the Greater Rochester, N.Y., community. This includes a major metropolitan center, suburbs, small villages and rural towns.

Today, I am cosponsoring legislation originally offered by my able colleague, Hon. LOWELL P. WEICKER, JR., of Connecticut, which will help alleviate this growing transportation jam. It will encourage coordinated planning on an interstate, State, and local level.

This bill, called the Federal Transportation Act of 1969 provides that no Federal money can be spent for any transportation project unless it is clearly shown to be part of an overall transportation plan for the State.

In addition, it sets up a transportation trust fund made up of all Federal money earmarked for transportation facilities. This money will be allocated to the States in a ratio based on 20 percent land area, 40 percent total population, and 40 percent large population centers.

The Secretary of Transportation will be responsible for administering this act through the new Office of Planning and Coordination to be established in the Department.

The key to unsnarling traffic in the next 20 years is service. It must be adequate, coordinated, and useful. Mr. Speaker, our biggest mistake would be to aimlessly spend millions on proliferating our disordered system.

The Federal Transportation Act will, I believe, create a turning point in our meandering. It will provide for the development of orderly financing and coordinate thousands of rambling transportation systems.

Mr. Speaker, I urge my colleagues to consider the alternatives, and to fully support this measure.

RAIL PLAN ASKS 2½-HOUR RUN, BOSTON TO NEW YORK

HON. JAMES A. BURKE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. BURKE of Massachusetts. Mr. Speaker, may I take this opportunity to bring to the attention of the Members of the U.S. Congress an article that appeared in the Sunday edition of the Boston Globe, written by Globe staff member A. S. Plotkin, one of the Nation's top experts on the problems of railroad transportation.

This column reveals the results of a consultants' report by the New England Regional Commission indicating that it is possible to provide railroad passenger service to and from Boston and New York on a scheduled 2½-hour run.

The Department of Transportation should take a good hard look at this report.

The entire Northeast corridor needs railroad beds.

Faster passenger and freight service is needed.

The news article follows:

RAIL PLAN ASK 2½-HOUR RUN, BOSTON TO NEW YORK

(By A. S. Plotkin)

A consultants' report claiming that 2½-hour Boston-New York rail service is needed and feasible was released yesterday by the New England Regional Commission.

A key element in the $600 million proposal would be the laying of 90 miles of straight new track between Providence and New Haven. This would cut out much of the curvy Shore Line route now used, it was contended, and new electrically-powered trains could use their potential speed of 160 m.p.h.

The basic report was completed earlier this year and was described in an exclusive Boston Globe story June 15. The commission, a state-Federal agency, is responsible for planning and carrying out economic and social development in the region.

A spokesman denied release of the report was delayed until now because Gov. John Dempsey of Connecticut was unhappy with the proposal.

Penn Central now runs eight conventional slow trains daily between the two cities. It also operates one daily round trip with the jet-powered Turbotrain, under contract with the U.S. Dept. of Transportation.

This small experimental train, a product of United Aircraft, takes three hours, 39 minutes. There is no prospect soon of appreciably faster—or more—trips with two available Turbotrains even if grade crossings on the Shore Line route are made safer.

The report was prepared by Systems Analysis and Research Corp. of Cambridge and Thomas K. Dyer Inc. of Lexington.

The consultants claim that by heading west out of Providence, and via Willimantic, Ct., about 20 miles can be saved over the Shore Line route. It is mostly open, unpopulated country.

They say the improved line would draw many riders, and save billions otherwise needed for new roads and airports, reduce air pollution and stimulate economic development.

Financing, it is contended should be mostly from Federal sources, possibly including a new public-private venture like COMSAT, the satellite agency.

D.O.T., with limited money for high speed ground experiments, is loath to put all of it in rail ventures, and will soon try air-cushion and other unorthodox systems. It has set aside only about $9.5 million for Turbotrain, and about $13 million for Metroliner—although United Aircraft and Penn Central each has invested millions of its own.

A dissent to part of the consultants' report was appended by the commission. It came from United Aircraft, which claimed that use of its Turbotrains, instead, of electrically-powered trains, would do away with the need of making such huge new capital outlays for new railbeds.

The Turbotrain maker claims its equipment could make the Boston-New York runs in under three hours with an investment of $100 million.

SPEAK NOT FOR DEAD SON, FATHER TELLS PROTESTERS

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. HÉBERT. Mr. Speaker, Mr. Howard C. Harrison, who resides in my congressional district in New Orleans, has called to my attention an article which appeared in the Times-Picayune of October 17, 1969.

It concerns a father's remarks about his son who died in Vietnam. After reading the article, I agree with Mr. Harrison that all should read what this patriotic American had to say.

I insert the article at this point in the RECORD:

SPEAK NOT FOR DEAD SON, FATHER TELLS PROTESTERS—"LET THEM REMEMBER HE DID NOT SURRENDER"

LAS VEGAS, NEV.—"When they read my son's name to advocate peace at any price—the price being defeat, let them remember that he whose name they read did not surrender," wrote an anguished Malcolm Thompson.

"When they read the name of Gregory M. Thompson, let them realize that they are proving before the world the truth of the oft-repeated Communist claim that many Americans have become soft, decadent and yielding to any determined force which opposes them . . .

"When those hypocrites read the list of dead who defended South Vietnam, let them know that they have reached the ultimate low in the world record of human infamy, in that they willingly and cunningly utter a dead man's name to achieve the defeat of the cause for which he died."

Thompson's son, Gregory, was an 18-year-old Army PFC who was killed in combat in Vietnam May 17, 1969. The father's words, in a letter sent the Las Vegas Review-Journal the day after Moratorium Day, mirrored the other side of America's continuing Vietnam debate.

"It is the ones who saw his body returned in a flag-draped coffin who should be heard—not the protesters," Thompson wrote.

"These transparent propagandists were not there to see my son buried, nor do they accompany me on my trips to lay flowers on his grave . . .

"It is we the parents who said goodbye to him when he went away to fight—not the peace agitators.

"It is we the parents who wrote long, anxious letters to him during his three months of almost continuous combat—not the agitators . . .

"My son was killed while fighting for his country.

"America cannot be permitted to perpetually persuade its citizens to instill in their sons a sense of patriotism, loyalty and a determination to defend the oppressed, and then, after the sons have died, suddenly change her mind and yield to those who killed him."

WE CAN RUN, BUT WE CAN'T HIDE

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. MICHEL. Mr. Speaker, Mr. C. L. Dancey, editor of the Peoria Journal Star, Peoria, Ill., appeared in a debate on our involvement in Vietnam before a college audience at Bradley University recently and his editorial of October 20, 1969, sets forth some interesting observations regarding the attitudes and the mood of those young people. I include the editorial entitled "We Can Run—But We Can't Hide," in the RECORD at this point:

[From the Peoria Journal Star, Oct. 20, 1969]

WE CAN RUN—BUT WE CAN'T HIDE

(By C. L. Dancey)

I looked out on 1,500 or 2,000 youthful faces at Bradley last week and watched them as they heard me and others speak about the war—in different ways.

I was impressed by these young people. In their varied reactions to different appeals and moods, there was something new.

They have a real problem, smacking them straight in the face, just as they are walking onto the adult stage.

And they seem to sense that it is only the first such real problem, and that more decisions on how to survive in a contentious world of many nations and terrible weapons will face them from this day on.

There is more to it than the immediate threat over their heads posed by Vietnam and they seem to recognize this.

Many of them are clearly genuinely concerned to acquire some real understanding of this problem and some real preparation for dealing with future ones.

It's true that many want to believe Vietnam is just one gigantic American mistake which we can correct and then live happily ever after. They are relieved and enjoy hearing that our whole policy is and has been "Rubbish!" and all we have to do is change it.

But it is a different reaction than I've seen in previous college audiences. It is limited. There is a sense that they are feeling, now, something of the reality into which they have been born.

Joe Louis said it about a prize fighter many, many years ago.

He said: "He can run but he can't hide!"

It seemed to me these young people have an uneasy feeling, now. They have a vague awareness that this is the situation in which America finds itself in this world.

We can run—but we can't hide.

And they are concerned to know and understand more about these matters—more than just therapy and reassurance.

I had a feeling most of them came for something more than what was actually provided.

I think we should have taken them, and their problem, more seriously.

And I think they sense and realize that the "Rubbish!" approach might just as well have been "Oskywowow!" and "Yea, Team!" That this was the approach of a pep rally—rather than a responsible inquiry.

One of the professors said that this great outpouring of young people to hear what was supposed to be a responsible and serious discussion of truth, the whole truth, revealed that "At last, Bradley was something more than a basketball school!"

The attitude of the students, indeed, suggested that.

But the language of a political pep rally is not a great step up the ladder, after all, from that of a basketball pep rally—and if the role of cheerleader is going to be played, it is more seemingly in girls with short skirts than in professors.

These young people deserve something more than two sets of opposing "absolutes" thrown at them, when they know full well that claims of "total virtue" and of "total evil" are equally absurd.

Clearly, in their faces, these "absolute!" approaches are the balance of truth and understanding unassisted. Seeking knowledge. Seeking genuine understanding, instead of Razzmatazz.

Because a great truth remains that they will live with new crises and new messes and new frustrations from this day forward and they need to be equipped to deal wtih them as realistically and shrewdly as possible.

Nor is there any simple magical ideological formula for it.

There is this great trust they clearly sense, about the U.S. and themselves, which makes answers, understanding, and the equipment for facing problems absolutely essential: In the world of 1969 and forward.

We can run—but we can't hide.

HOUSING BILL APPROVAL

HON. JERRY L. PETTIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. PETTIS. Mr. Speaker, the press of congressional duties in my home district this past weekend prevented me, regrettably, from staying for the final vote Thursday on the housing bill, though I was fortunately able to delay my departure until it was obvious that this important piece of legislation would receive an overwhelming vote of approval. However, for the record, I would like to state that had I been able to remain for the final rollcall on passage, I would have joined those 339 colleagues who cast a yea vote because I believe that housing for low- and middle-income families is certainly one of the high-priority items on our legislative calendar.

With the trend toward higher and higher costs for the working people of this country and the downward trend in new starts, it has become increasingly more apparent that the Nation is facing a housing crisis of growing magnitude. I have become particularly alarmed at the continually rising costs and interest rates which have put decent, adequate housing virtually out of reach for great numbers of Americans.

The units lost through natural disasters and urban renewal programs have obviously added to the housing shortage and the pinch perhaps is felt no more keener than in my own 33d California District. The vacancy rate in San Bernardino County is the lowest in the State and I have no doubt that many of our colleagues have districts no less affected.

The goal of H.R. 13827 is not only more homes but a suitable, safe, and sanitary home with a livable environment for every American family and it is my sincere hope that we can now proceed without delay toward achieving the necessary objective of 20 million new housing units in the next 10 years.

THE MAINE TIMES

HON. PETER N. KYROS

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. KYROS. Mr. Speaker, it might seem surprising that Time magazine would devote several columns of attention to a weekly newspaper in my State, the Maine Times, which has a subscriber list which, while growing, is still less than 10,000 and an estimated readership of less than 50,000. It might seem even more surprising that this article would appear in Time's environment section, rather than the press section. But to those who have come to appreciate what the Maine Times is really all about, it is not surprising at all. This recognition is but one of the many tributes which the Maine Times is receiving after its initial year of publication.

The Maine Times is already a success as a newspaper, or "magapaper," as it calls itself. Its readership includes not only the more influential and concerned citizens of Maine, but many persons who will some day move to our State, in order to appreciate the unique natural beauty which is Maine's most precious commodity. But the Maine Times goes beyond success as a publication; it is a triumph for our State, for its people, and ultimately for all of us.

I am inserting in the RECORD for the benefit of my colleagues the article which appeared in the October 31, 1969, edition of Time:

RESOURCES: TRYING TO SAVE MAINE

Not long ago, industrial developers asked the 236 voters of Trenton, Maine, to approve the construction of an aluminum refinery and a nuclear power plant on the pristine shores of Union River Bay. A yes vote might have been expected. After all, countless U.S. towns beg for new industry to pay taxes and provide jobs. But the Trenton vote was a resounding no. A key factor was the Maine *Times*, a plucky weekly newspaper that lambasted the developers and explained precisely how their plans could pollute Trenton's air, land and water.

One year old this month, the *Times* is a unique statewide paper that tirelessly harasses would-be wreckers of Maine's environment. The attack is mounted by two Yale graduates, Editor John N. Cole, 46, and Publisher Peter W. Cox, 32, who raised $100,000 to pay for offset printing, two full-time reporters and a rented building in the hamlet of Topsham. Cole quit an incipient gray-flannel career in Manhattan to become a commercial fisherman, later edited several Maine newspapers. Cox is the son of Oscar Cox, a noted international lawyer. By no means opposed to all industry, they have warmly praised a few lumber and paper companies for enlightened use of Maine land. What they do oppose is destruction of the unspoiled Maine coast by high-risk industries like oil and aluminum. As Editor Cole puts it: "There is no such thing as a little rape."

PROTESTS AND PAYOFFS

With punchy headlines and a tabloid format, the paper unflaggingly alerts its 10,000 readers to each week's environmental toll—an oil spill off Casco Bay, a fish kill at Mystery Lake, a historic barn razed at the University of Maine. Much vitriol is aimed at the paper industry, a major source of water pollution in the state. The *Times* recently flayed a new wave of fly-by-night operators who reopen abandoned paper mills for "short-term profit and long-term pollution."

Happily, the muckraking pays off. Largely because of the *Times*, for example, one of those reopened mills closed last week. One article detailed how paper mills in the Pacific Northwest took the smell out of making brown paper, with the implication that Maine's mills should do the same. Another story started a cleanup of the Saco River by pinpointing 39 specific sources of pollution along its 125-mile length. In recent weeks, the paper single-handedly fought to ban snowmobiles from the virgin wilderness of Baxter State Park—successfully.

NAKED STATE

Maine is the last state on the upper Eastern seaboard that has not been industrialized. Now its vast forests and ore deposits make it a tempting target for mindless exploitation. As Cole tells it, even the Mafia has joined various land grabs in Maine.

The big worry is the oil industry. Maine still has no laws regulating oil spills, offshore drilling and the like. Yet oilmen are now surveying the state's harbors, the only ports in the East deep enough to berth the industry's ever larger supertankers. The key trouble spot is Machiasport, where three companies plan major refineries despite thick fogs and tricky currents that pose serious risks of tankers mishaps and oil spillage. Devoid of controls, says Cole, "the state is standing stark naked to the oilmen."

Nonetheless, Cole has "no doubt" that the oil industry will gain entrée to Maine's ports. But he and others are fighting hard for legal safeguards. And despite the pressures, he is optimistic. "Maine is still relatively clean," he says. "If enough people are concerned about the state, we can do something with it." By rousing such concern, the *Times* may ease the pain in Maine.

MEANING OF PEACE IS THE ISSUE

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. BOB WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

[From the San Diego Union, Oct. 16, 1969]

MORATORIUM SHOWS CONFUSION: MEANING OF PEACE IS THE ISSUE

Several important truths were underscored yesterday as the people of the United States of America dramatized our involvement in the Vietnam War.

One is that all responsible Americans are for "peace" whatever their political persuasions.

But another is that it is impossible to use the word "peace" today and be fully understood.

To the idealists and the naive peace is simply "non-war."

They cry, "Get out of Vietnam this instant and everything will be miraculously peaceful forever," failing to realize that weakness cannot beget tranquility.

To the Communists—here, in Hanoi and in Cuba—"peace" translates into victory for them, and still more aggression.

The Communist brand of peace simply means subjugating to their will anyone and everyone who stands in their way.

The late Syngman Rhee of South Korea described peace, Communist style, in these words: "If survival alone is your idea of peace, you have no problem. Just surrender. The Communists do not kill their slaves."

This is the consequence of the instant, transitory peace advocated by the Moratorium Day leaders yesterday.

And if people listened closely to the Moratorium Day dialogue they could also have heard some of the consequences of such capitulation by the United States.

The unreasoned retreat would inevitably mean more crosses, row upon row, with an American under each.

It would mean abandonment of 16 million South Vietnamese to the savagery of a vicious aggressor.

It would prolong the worldwide confrontation between Communists and free men, assuring future wars and bloodshed.

It would mean a worldwide realignment of alliances that would presage the decline of the United States of America from its world eminence.

It would mean that the affairs of the government of the Unted States itself would be influenced more and more by whoever could mobilize the largest mob.

But overshadowing all of these sober reflections, it was evident yesterday from the reaction of the usually silent majority in the United States that the mood of the nation is for a genuine peace.

The quiet Americans were saying that they want a genuine peace in the world—one that assures man personal security, the right to aspire and an equal opportunity to reach his aspirations.

Unless this kind of peace is our object in Southeast Asia, even the simple absence of war will become only a dream.

A PRIEST SHOULD GO TO THE BEACH EVERY NOW AND THEN

HON. JEROME R. WALDIE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. WALDIE. Mr. Speaker, I have long been acquainted with Msgr. Joseph Skillin, vice chancellor and secretary of the Diocese of Oakland, Calif., and have been one of his most ardent admirers. He is a rare man. He is truly a man of great faith and compassion.

I am so impressed with Monsignor Skillin's dissertation on "A Priest Should Go to the Beach Every Now and Then," that I should like to incorporate it in the CONGRESSIONAL RECORD so that it may be shared by all. It follows:

A PRIEST SHOULD GO TO THE BEACH EVERY NOW AND THEN

(By Msgr. Joseph Skillin)

Feel the wind play on your face.
The sun tightens your skin to a tanner tough.
The salt leaps out of the sea to season your lips.
Watch the water move a million grains of sand;
watch the sand swallow a million frothy bubbles of the sea.
Know that the rock is slowly molded by powerful salt chisels.

Yet the jutting rock demands the onrushing wave to step aside.
And all the while the sun, or the fog, or the stars
paint the entire scene a rotating collage of color.
Yet it is always the same place—
A place of life
And death
And turmoil
And exchange.
But these are the very things that make that beach a vision of Power and Glory.
To be aloof, unrelated, untouched
Unchanged, or unchanging
Is to be dead.
Pray for the beachboys.

OUR NATIONAL PARKS' FUTURE?

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. ANDERSON of California. Mr. Speaker, is the future of our national parks in danger? It appears that our parks are in danger because of inaction by the administration which threatens to not only cut off funds for the purchase of new sites, but to also render other parks defenseless against encroaching commercial development. Everglades National Park falls into the latter category, as Christian Science Monitor staff writer Robert Cahn points out in an October 22 article. Because of the timeliness of the article, I submit it for the RECORD and commend it to the attention of my colleagues.

The article follows:

EVERGLADES OPTIMISM PETERS OUT

(By Robert Cahn)

The aura of optimism surrounding the Sept. 10 "summit" meeting on protecting the Everglades National Park has faded in both Washington and southern Florida.

At a press conference after the meeting of Secretary of Transportation John A. Volpe, Secretary of the Interior Walter J. Hickel, and Florida Gov. Claude R. Kirk Jr., the principals sounded as if the "enemy" was well on the run.

The mammoth international jetport planned for the site six miles north of the park boundary would be stopped; an alternate jetport site would be found; environmental safeguards would be adopted before a jet-training airport was allowed to become operational; and land-use studies would be made to protect the park from future developments.

AIRPORT TO OPERATE

Since Sept. 10, however, virtually nothing has been done. Meanwhile, threats to the park are mounting.

The Dade County Port Authority's training airport is preparing to start operations Nov. 15 even though environmental safeguards have not been set.

The joint task force of the Interior and Transportation Departments which Secretary Volpe said on Sept. 10 would complete a report on Everglades-airport problems "within 30 to 60 days, if not less," has not held a single meeting since Sept. 10.

A new danger has emerged even closer to the park, in the possibility of a commercial subdivision on 33,000 acres of Big Cypress Swamp. The proposed land-development project borders the northwest sector of the park and could drastically affect the water supply for a large section of the park.

The National Audubon Society has filed with the Federal Aviation Administration (FAA) a formal memo of opposition to operation of the training airport and is having an informal hearing with FAA officials this week in Miami.

POSTPONEMENT URGED

On Oct. 17, four United States senators urged Secretary Volpe to order a postponement of the Nov. 15 date for commencement of training operations at the single-runway airport just completed.

"It is extremely unlikely that this timetable will leave room for adequate consideration and adoption of the necessary plans to protect the park" the senators said in a letter. Signing the letter were Sens. Clifford P. Case (R) of New Jersey, Philip A. Hart (D) of Michigan, Henry M. Jackson (D) of Washington, and Gaylord Nelson (D) of Wisconsin.

But officials of the FAA, which is a part of the Department of Transportation, have not had a mandate from Secretary Volpe to consider environmental hazards before beginning operations. The FAA already has published the required notice in the Federal Register setting aside airspace within an 8.5-mile radius of the training airport.

The recently released "Leopold" report of the Interior Department recommended consideration of environmental factors such as air pollution from engine exhausts, excessive noise levels, and the hazard of having planes strike birds in flight.

The report, which said that the proposed international jetport and its attendant facilities would destroy the national park, was prepared by an Interior Department team under the leadership of Dr. Luna B. Leopold of the U.S. Geological Survey.

Interior Department officials in Washington are considering environmental safeguards such as a 5,000-food minimum flight level over the National Park, no use of hard pesticides in certain areas, and no burning of solid rubbish on the training airport site.

But neither Interior nor Transportation has taken the initiative in calling a task-force meeting to work on environmental safeguards.

At the Sept. 10 press conference, Secretary Volpe said that he and Secretary Hickel and Governor Kirk agreed that a training airport can "with proper safeguards and effort, be utilized without having an adverse environmental impact on the ecology of the Everglades." The joint task force was being instructed to make positive recommendations as to how the park could be protected, he added.

JETPORT LINKED

The new threat, even closer to the park, is directly connected with the proposed jetport. A land developer has filed a petition for a drainage district of 33,000 acres in a Monroe County watershed area which serves the headwaters for a large section of the park. The district would actually include several parcels of private land within park boundaries.

A spokesman for the developers says the immediate purpose of putting in a canal system for drainage would be for agriculture. "Eventually this land can be developed in relation to the jetport," the spokesman told a Miami newspaperman.

A hearing on the drainage-district application will be held Nov. 17 in Key West. The National Park Service is expected to oppose granting the application because of hazards to the park. The National Audubon Society also will oppose the application, says Joe B. Browder, Southeastern representative of the society.

DRAINAGE FORESEEN

Says Mr. Browder, "The proposal to drain land between the park and the jetport ought to be proof enough for anyone, including Secretaries Hickel and Volpe, that development of even the training facility will result in the drainage of Big Cypress Swamp and that part of the national park that depends on it for water.

"Leaving the Dade County Port Authority with a right to develop any facility is going to continue to generate constructive commercial development," Mr. Browder adds.

Both the Leopold report and a special report on the Everglades by a panel of the National Academy of Sciences and the National Academy of Engineering have advocated that protections be found to prevent development of the Big Cypress Swamp, even if the international jetport is moved from its present site.

The study by the academies suggested that a natural-water conservation district be formed for the entire Big Cypress Swamp area. The Department of the Interior is known to be planning a large-scale study of the area, aimed at finding ways of protecting the water supply for the park.

Florida sources also report no progress on the proposal by Governor Kirk to find an alternate site for the jetport. Officials say that no alternate sites have been referred for consideration either to the Federal Aviation Administration or to the Interior Department.

DREAMING, WISHFUL THINKING ARE NOT GOING TO END THIS WAR

HON. GLENN CUNNINGHAM

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. CUNNINGHAM. Mr. Speaker, for a number of years I have had the pleasure to read the material of Gould Lincoln, a respected elder statesman of the Fourth Estate.

In the Saturday, October 25, issue of the Washington Star, Mr. Lincoln had some very sage advice:

It's time we who talk of dreams wake up and come down to earth, realize we have a war on our hands and the duty we owe to the American people and the country—and to the people who are seeking to be free and looking to us for help. Dreaming and wishful thinking are not going to end this war or solve the many problems which confront us.

Mr. Speaker, I commend the following column by Mr. Lincoln to my colleagues:

I HAD A DREAM—MOSTLY POLITICAL

(By Gould Lincoln)

In this day of division in the Republican party and among the Democrats, of division over the Vietnam war, of division between white and black, and among the whites and blacks, it is forgotten that divisions have run always deep during time of war. They have arisen, indeed, in every war, beginning with the War of the Revolution, down to the war in Vietnam. And America and its people have always survived. It undoubtedly will survive again.

In every war we have had peaceniks. We had the Tories during our fight for freedom from Britain. We had our peaceniks during the Civil War which freed the Blacks. We had huge numbers of peaceniks before we entered the first World War—with people of German extraction, Republican and Democrat alike, leading the way. Before World War 2 the isolationists—peaceniks to the end—divided party and country.

For example as late as Aug. 7, 1941, a bill to extend the military draft survived in the House of Representatives by a single vote and it passed the Senate by a vote of 44 to 28. Here too the division was largely along po-

litical party lines though the parties had their own divisions, as they do today over the Vietnam war. At that time there was a Democrat in the White House.

Today there is a Republican. The opponents of the draft in the Senate were 14 Democrats, 13 Republicans and 1 Independent. In the House the vote for passage of the draft bill was 203 to 202. Think of that, at a time only months before Pearl Harbor.

The House rollcall showed 182 Democrats voting for the draft, joined by only 21 Republicans, under the leadership of James W. Wadsworth of New York, who was given credit for influencing some Democrats to line up for the bill, too. Voting against the draft were 65 Democrats and 133 Republicans.

The war in Korea, waged to preserve the freedom of the people of South Korea and sanctioned by the United Nations, was bitterly denounced later as "Truman's War," just as the peaceniks today denounce the Vietnam war as "Johnson's war" and more recently as "Nixon's war." And by the same caliber of peaceniks.

During all those wars, for the freedom of people attacked by totalitarian powers, men of importance "had a dream"—Wilson, who fought World War I and Henry Ford who opposed it and Roosevelt who got us into World War 2.

"I have a dream" has been the cry of men seeking peace and unity in this country. I had a dream, so vivid as to appear fact. I dreamed that in this day of Democrat against Democrat and Republican against Republican and white against black and vice versa, Franklin Delano Roosevelt had offered himself as a candidate for President to unite the battle-torn Democratic party.

Dwight D. Eisenhower had come forward as a candidate for president on the Republican party ticket to unite the warring factions of the GOP. Each also looked forward to uniting the American people, black and white. Roosevelt who got this country into a great war, and Eisenhower who fought that war to victory.

So certain was I that my dream was reality and so certain was I that each man could unite his party and lead it, I was preparing to write the story.

Then I woke up.

And it's time that others who talk of dreams wake up too and come down to earth, realize that we have a war on our hands and the duty we owe to the American people and the country—and to the people who are seeking to be free and looking to us for help. Dreaming and wishful thinking are not going to end this war or solve the many problems which confront us.

Vice President Spiro Agnew is speaking out for reality, for the cause of peace in which he believes—as does his superior, President Nixon. He is denounced and criticized as a name caller. He is entitled to his day and his say, although the dreamers say "No."

THE PRINCETON UNDERGRADUATES FOR A STABLE AMERICA

HON. DONALD E. LUKENS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. LUKENS. Mr. Speaker, recently a letter was brought to my attention that I think my colleagues would benefit from hearing.

The letter, written by Pvt. Tim Jorgensen presently serving in Vietnam, is in response to the formation of the Princeton Undergraduates for a Stable America—USA—by a young constituent of mine, Harding Jones of Middletown, Ohio. Harding, who is a sophomore at Princeton University, has received overwhelmingly favorable response to his organization, and this letter is one of the most stirring.

Private Jorgensen's comments should be read to all those who demonstrated against the war in Vietnam. His comments clearly reveal the damaging effect that such public antiwar criticisms have on the morale of our troops in Vietnam.

Mr. Speaker, the letter follows:

October 15, 1969.

TO HARDING JONES: This is to be a short note in appreciation of what myself and many G.I.'s here in Viet Nam feel is the best move by our fellow undergraduates.

I personally commend you and your experts in forming the undergraduates for a stable America—

Viet Nam is a rare experience and enables those who serve here to see and judge things in a completely different scope—

Being here some 6 months I have formed many thoughts concerning my country. And when the G.I. reads of all the violence in his hometown he gets very depressed—

I was this way, depressed, until I read this article in the "Stars & Stripes"—you brought new hope for myself and many G.I.'s.

I wish to convey all my support to your organization and would very much like to attend a meeting and talk with you all—

Good luck and all my support.

Sp.4. TIM M. JORGENSEN.

APO S.F.

CONGRESS NEGLECTING PROBLEMS

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. BOB WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

[From the San Diego Union, Oct. 17, 1969]

PRESIDENT ASKS ACTION—CONGRESS PROBLEMS

During his inaugural address nine months ago President Nixon urged people of the United States of America to lower their voices so they could hear each other better.

Showing remarkable restraint more recently, the President followed his own advice when he asked Congress to accelerate action on executive legislative proposals.

It would have been easy for the President to pursue the same formula that was employed by President Truman—who won reelection in 1948 partially by campaigning against a "do-nothing" Congress.

But President Nixon chose not to follow this path. Instead he appealed to Congress with candor and calmness. In doing so, the President showed that his primary concern is for the welfare of the nation rather than the narrow matter of the 1970 congressional elections.

As President Nixon aptly noted, the majority of the people of the United States are more interested in positive accomplishments than in political posturing.

At the same time he would have been remiss not to note that this Congress has really little to show for nine months of session.

Only one of the major appropriations measures has been passed. And Congress has increased its own salaries substantially.

But the people of the United States have far deeper concerns.

A raging inflation has yet to be quenched. The crime rate is rising, pornography is flooding the mails, the post office is inefficient, selective service hangs over the heads of young men for half a decade, welfare costs are almost out of sight and schools are wondering where their next dollar is coming from.

The lethargy of Congress has failed to speak to these problems. It also has created new problems for all three branches of government.

At the Supreme Court the calendar has been adjusted to slow the pace because Congress has yet to confirm the court's ninth member.

The chief executive can hardly be charged with inaction when he does not know how much money he will have, what the congressional limitations will be on his programs, or even what he can plan on in the way of foreign aid. He is trying to run a government household without the assurance of a paycheck.

And because so much time has already been wasted, Congress will now either face a logjam as it approaches adjournment, or it will have to establish a set of rigid priorities to meet the obvious needs. To assure cogent legislation we recommend the latter.

For the welfare of the nation, Congress should accept the President's challenge for mutual action. That is the best kind of politics.

PODELL SOCIAL SECURITY BILL DEMANDS 50-PERCENT INCREASE IN ELDERLY BENEFITS

HON. BERTRAM L. PODELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. PODELL. Mr. Speaker, the greatest shame of our Nation today is the plight of 20 million senior citizens, whose fixed incomes are being rapidly destroyed by inflation. While the Government talks, inflation continues to eat away at their limited resources. So far, only one proposal has emanated from the Nixon administration which is aimed at the increasing difficulties of the older American and it has fallen far short of the mark. A mere 10-percent increase in social security is too little, too late for them. They say nice things about social security, but just do not have their hearts in it. It therefore remains for the Democratic Party to put forward a meaningful reform in the area of increasing social security.

Major corporation profits are going up

along with prices, and the elderly pay. They must have drugs, which are constantly going up in price. In order to have such necessities, which curb pain, they often do without other necessities, especially in the way of food, clothing, and those few little extras which make the difference in the quality of their lives.

These people bought their retirement with valuable dollars which are now being turned into too few cheap dollars. None of them were poor when they retired, but they are becoming poor now. None of them want to become public charges. All they ask is that society be fair to them, allowing them to live in dignity, without a shadow of fear hanging over their heads. We have a vehicle for this justice immediately at hand in the form of the social security system, which is not being utilized to its fullest extent on behalf of older citizens of our Nation. They spent year after year of prime work contributing to society, and now they sit helplessly while it doles out a pittance to them. This is especially unjust in light of the fact that what they ask for has been given by other countries to their elderly for years. Bismarck did it a century ago. Many European countries, destroyed in World War II, treat their older citizens better than we do now. We can and must make the social security system operate with more justice, and we can do so almost immediately. The money is there, and I have introduced a measure in cooperation with Mr. JACOB GILBERT of New York, which is aimed at accomplishing just this set of goals.

There has been enough in the way of empty promises. Let the President and the Congress take action as Franklin Roosevelt, Harry Truman, and Jack Kennedy did when they were in office and could do something for the elderly. My bill is very basic and comprehensive, commanding support from the National Council of Senior Citizens and the AFL–CIO.

The bill recognizes for the first time that our elderly have a right to live their retirement years in dignity and reasonable comfort. Current social security benefits, some as little as $44 monthly, do not provide that assurance.

My bill will increase overall benefits by at least 50 percent, also providing a monthly minimum of $90 beginning in January and $120 beginning in 1972. Hearings are now underway in the House. The Podell bill boosts benefits for our older citizens in 10 different ways. The 10 major points, each an improvement over the present program, are as follows:

First, an increase in retirement benefits from a minimum of $120 to a maximum of $378;

Second, computation of benefits on the basis of a retiree's highest earnings;

Third, at age 65, 100 percent widow's benefits;

Fourth, improved benefits for those retiring prior to age 65;

Fifth, increase in permissible earnings for retirees, without loss of benefits;

Sixth, increase in death benefit to $500;

Seventh, liberalization of disability benefits;

Eighth, improvement of widow's benefits;

Ninth, extension of medicare to the disabled; and

Tenth, extension of medicare to include prescription drugs.

A new principle is further introduced in tandem with my measure. The Federal Government is included as a partner in the social security system. All Americans have a share in that social security system. Decent retirement benefits can come only from adequate Federal financing.

Here then, is my entire package. All the Congress has to do is act, instead of promise, as in the past. Inflation and the elderly's needs will not wait another minute.

The attached charts compare existing programs with what the elderly would receive under my proposal:

MONTHLY CASH SOCIAL SECURITY BENEFITS UNDER PRESENT LAW AND UNDER THE GILBERT BILL FOR A RETIRED COUPLE (MAN AND WIFE) AT AGE 65

Average monthly earnings	Benefit amounts: Present law	Gilbert bill: Effective January 1970	Gilbert bill: Effective January 1972
Minimum benefit	$82.50	$135.00	$180.00
$150	132.60	159.20	191.10
$250	172.50	207.00	248.40
$350	210.60	252.80	303.30
$450	247.50	297.00	356.40
$550	284.90	341.90	410.30
$650	323.00	392.40	471.00
$750		438.00	525.60

MONTHLY CASH SOCIAL SECURITY BENEFITS UNDER PRESENT LAW AND UNDER THE GILBERT BILL FOR A WIDOW AT AGE 62—Continued

Average monthly earnings	Benefit amounts: Present law	Gilbert bill: Effective January 1970	Gilbert bill: Effective January 1972
Minimum benefit	$55.00	$90.00	$120.00
$150	88.40	106.10	127.40
$250	115.00	138.00	165.60
$350	140.40	168.50	202.20
$450	165.00	198.00	237.60
$550	189.90	227.90	273.50
$650	218.00	261.60	314.00
$750		292.00	350.40

MONTHLY CASH SOCIAL SECURITY BENEFITS UNDER PRESENT LAW AND UNDER THE GILBERT BILL FOR A RETIRED WORKER OR WIDOW AT AGE 65

Average monthly earnings	Benefit amounts: Present law	Gilbert bill: Effective January 1970	Gilbert bill: Effective January 1972
Minimum benefit	$55.00	$90.00	$120.00
$150	73.00	90.00	120.00
$250	94.90	113.90	136.70
$350	115.90	139.10	166.90
$450	136.20	163.40	196.10
$550	156.70	188.10	225.70
$650	179.90	215.90	259.10
$750		240.90	289.10

ANALYSIS OF SOCIAL SECURITY (OASDHI) BILL INTRODUCED BY REPRESENTATIVE JACOB H. GILBERT

Item	Existing law	Bill
1. Benefit amounts:		
(a) Basic amounts	Benefits for a worker beginning at age 65, or when disabled before age 65, range from $55 to $218. Benefits for dependents and survivors are based on these amounts.	Benefit amounts for the worker would be increased in 2 steps: Beginning and range: January 1970, $90 to $293; January 1972, $120 to $537. Benefits for dependents and survivors would be increased proportionately.
(b) Automatic adjustment	No provision	Benefit amounts would be automatically adjusted annually for at least a 3-percent increase in the cost of living.
(c) Actuarial reduction	Benefits for workers, and their wives or husbands, who start getting benefits before age 65 are payable at reduced rates. The benefits are reduced to an amount that willon the average give the same total lifetime benefits that would have been paid if the benefits had not begun until age 65. A worker's benefit at age 62 is 80 percent of the benefit he would have gotten at age 65; a wife's or dependent husband's benefit is 75 percent of the amount payable at age 65.	Smaller reductions would be made. A worker's benefit at age 62 would be 85 percent of the unreduced amount; a wife's or husband's, 82½ percent.
(d) Widow's and widower's	Benefits beginning at or after age 62 are equal to 82½ percent of the benefit amount that would be payable to the deceased spouse.	The amount payable where benefits begin at or after age 65 would be equal to 100 percent of the benefit amount that would be payable to the deceased spouse. Benefits beginning before age 65 would be reduced; where benefits begin at age 62 the benefit amount would be equal to 82½ percent of the benefit of the deceased spouse.
	Disabled widows and widowers can get benefits at or after age 50. Where benefits begin before age 62, the benefit amounts are reduced.	Benefits would be payable to a disabled widow or widower at any age. No reduction would be made in benefits that begin before age 62; the benefit amount would be 82½ percent of the deceased spouse's benefit, the amount payable under present law and under the bill to a widow who begins getting her benefits at age 62.
(e) Special age-72 payments	Certain people who reach age 72 before 1972 and who have not worked under social security long enough to get regular benefits can get special payments of $40 for an individual, $60 for a couple.	The special payments would be increased in 2 steps:

Beginning	Individual	Couple
January 1970	$48	$72
January 1972	58	87

(f) Lump-sum death	Equal to 3 times the worker's benefit amount but not more than $255. Range: $165 to $255.	The $255 limit would be increased to $500.

ANALYSIS OF SOCIAL SECURITY (OASDHI) BILL INTRODUCED BY REPRESENTATIVE JACOB H. GILBERT—Continued

Item	Existing law	Bill
2. Benefit computations	All social security benefit amounts are based on the insured worker's average monthly earnings. Nearly all benefits are now based on average monthly earnings after 1950—figured over 5 less than the number of years after 1950 and up to the year the worker reaches age 65 (62 for women), becomes disabled, or dies.	The number of years used in figuring the worker's average monthly earnings would be reduced by ⅛ beginning in December 1970, and to this best 10 years out of any 15-consecutive years beginning in December 1972. The average monthly earnings figured over the shortened periods would be adjusted to take account of the length of time the person worked under social security. The ending point of the period that is used to determine insured status for a man, and the number of years over which a man's average monthly earnings are calculated, will be the beginning of the year in which he reaches age 62 instead of age 65. The ending point for men will be the same as it is for women under present law.
3. Earnings test	No benefits are withheld on annual earnings of $1,680 or less. For earnings up to $1,200 above $1,680 (i.e. $2,880), $1 is withheld for each $2 of earnings, and for additional earnings $1 is withheld for each $1 of earnings, except that no benefits are withheld any month in which a person does not earn more than $140 in wages nor render substantial services in self-employment. No provision for automatic increases	No benefits will be withheld on earnings of $1,800 or less. For earnings up to $1,200 above $1,800 (i.e., $3,000), $1 would be withheld for each $2 of earnings, and for additional earnings $3 would be withheld for each $4 of earnings, except that no benefits would be withheld for any month in which a person does not earn more than $150 in wages nor render substantial services in self-employment. Beginning in 1973, the $1,800 and $150 amounts specified above would be automatically increased as average earnings levels rise.
4. Parent's benefits	Benefits for aged dependent parents of deceased workers only are equal to 82½ percent of the worker's primary insurance amount (or 75 percent of that amount if more than 1 parent is entitled to benefits).	Benefits would be provided for aged dependent parents of retired and disabled workers. The benefit amounts for the parent of a living worker would be equal to 50 percent of the worker' primary insurance amount; actuarially reduced if taken at age 62-65. The benefit amount for parents of deceased workers would continue to be 82½ percent.
5. Noncontributory wage credits for military service.	Noncontributory wage credits of $100 are provided for each month of military service after 1967.	Would extend noncontributory wage credits of $100 a month retroactively to 1957.
6. Disability provisions:		
(a) Definition of disability	Benefits cannot be paid until after a 6-month waiting period, and are payable only if the disability is expected to last for at least 12 months or to result in death.	The waiting period would be reduced from 6 to 3 months, and the requirement that the disability must be expected to last 12 months or to result in death would be eliminated.
(b) Alternative definition for older workers.	Workers must be unable to engage in any substantial gainful activity by reason of a medically determinable physical or mental impairment.	Workers aged 55–64 could qualify if unable to engage in substantial gainful activity (by reason of a medically determinable physical or mental impairment) in their regular work or in any other work in which they have engaged with some regularity in the recent past.
(c) Childhood disability benefits	Benefits are payable (if the insured parent dies, becomes disabled, or retires) to an adult son or daughter who becomes totally disabled before he reaches age 18.	Benefits would be payable if such adult son or daughter becomes totally disabled before he reaches age 22.
7. Medicare:		
(a) Financing both hospital insurance and supplementary medical insurance on the basis of payroll contributions and general revenues.	Hospital insurance is financed by contributions from employers, employees, and the self-employed. Supplementary medical insurance is financed by monthly premiums paid by enrollees and matched by the Federal Government. Moneys are deposited in, and benefits and administrative expenses are paid from, 2 separate trust funds. Eligibility for hospital insurance is based on eligibility for cash benefits (except for a special transitional provision) while medical insurance is available to virtually all those over 65.	Would eliminate supplementary medical insurance premiums and provide for financing both hospital and medical insurance programs through contributions of employers, employees, and the self-employed, and a matching contribution by the Federal Government. All moneys would go into a combined trust fund, which would pay the benefits and administrative expenses of both programs. Eligibility requirements for both hospital and medical insurance would be identical to that required under existing law for hospital insurance.
(b) Medicare for the disabled	Medicare is available only to people age 65 and over (without regard to disability).	Would extend medicare, under the combined financing approach described above, to people under age 65 entitled to monthly cash disability benefits. Benefits would begin with the 1st month for which the individual is eligible for cash benefits and end 12 months after cash benefits cease.
9. Contribution rate schedule	Employer-employee, each (percent):	Employer-employee, each (percent):

Year	OASDI	HI	Total
1970	4.20	0.60	4.80
1971 to 72	4.60	.60	5.20
1973 to 75	5.00	.65	5.65
1976 to 79	5.00	.70	5.70
1980 to 86	5.00	.80	5.80
1987 and after	5.00	.90	5.90

Year	OASDI	HI	Total
1970	4.20	0.60	4.80
1971 to 72	4.80	.65	5.45
1973 and after	5.10	.90	6.00

Self-employed (percent):

Year	OASDI	HI	Total
1970	6.30	0.60	6.90
1971 to 72	6.90	.60	7.50
1973 to 75	7.00	.65	7.65
1976 to 79	7.00	.70	7.70
1980 to 86	7.00	.80	7.80
1987 and after	7.00	.90	7.90

Self-employed (percent):

Year	OASDI	HI	Total
1970	6.30	0.60	6.90
1971 to 72	6.90	.65	7.55
1973 and after	7.10	.90	8.00

10. Federal contributions	No provision	General revenue contributions gradually increasing over a 10-year period to an amount equal to approximately ⅓ the total cost of the program.

SENATOR CHURCH ON VIETNAM

HON. JOHN CONYERS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. CONYERS. Mr. Speaker, on October 8, the distinguished Senator from Idaho, the Honorable FRANK CHURCH, introduced into the other body a resolution he cosponsored with his able colleague, Senator MARK HATFIELD, urging an accelerated withdrawal of American troops from Vietnam.

Senator CHURCH'S well-reasoned arguments have often granted to his colleagues effective answers to even the most difficult questions on this subject. Earlier this year I inserted in the RECORD his speech, "U.S.-U.S.S.R.: Twin Sentinels of the Status Quo." I would like to commend him again today for the edification his speeches so regularly provide, and insert into the RECORD the speech he made in support of his Vietnam resolution for the consideration of all the Members of this body.

The text of the speech follows:

VIETNAM: DISENGAGEMENT NOW—THE CASE FOR A SENSE-OF-THE-SENATE RESOLUTION

(By Senator FRANK CHURCH, Democrat, of Idaho, member of the U.S. Senate Foreign Relations Committee)

In the second year of the American Revolution the great William Pitt rose in the House of Lords and spoke words which, in a less civilized nation, might have been taken for treason. "My lords," he declared, "you cannot conquer America. . . . You may swell every expense and every effort still more extravagantly; pile and accumulate every assistance you can buy or borrow; traffic and barter with every little pitiful German prince that sells and sends his subjects to the shambles . . . your efforts are forever vain and impotent, doubly so from this mercenary aid on which you rely, for it irritates, to an incurable resentment, the minds of your enemies. . . . If I were an American, as I am an Englishman, while a foreign troop was landed in my country, I never would lay down my arms—never—never—never!" [1]

The England to which Pitt counseled was not a decrepit naton but a rising empire still

Footnotes at end of article.

approaching the peak of its power. The inglorious end of the American war, from the British point of view, was not followed by a worldwide loss of confidence in Britain's word or Britain's power. Yorktown was followed by Waterloo and in the nineteenth century Great Britain acquired vast new domains, becoming the vital center of world commerce and industry. The real loser of the American Revolutionary War was America's ally, France, whose prodigal waste of resources—all for the sake of humbling England—almost certainly helped bring about the French Revolution of 1789. To compound the irony, when the British Empire finally did disintegrate, it was not in the wake of defeat but of British "victories" in the two World Wars.

The paradox turns back upon us full circle. The victory denied George III by ragtag American rebels fighting to end foreign rule, has now, nearly two centuries later, been denied to us in distant Vietnam by stubborn, native guerrilla fighters equally determined to drive the foreigner from their land.

Faced with their implacable resolve, what kind of "victory" can be won? The "victory" of holding a proud people hostage? The "victory" of inflicting a "favorable kill ratio" upon an enemy who will not quit? The "victory" of maintaining a puppet government in Saigon propped up by the money we lavish on it, and sustained in the field by the troops we send—and others we hire—to fight for it? No, there is no "victory" we can win in Vietnam worthy of the name. President Nixon himself concedes as much when he says: "We have ruled out attempting to impose a purely military solution on the battlefield."

In fact, our favored euphemism regarding Vietnam is not victory at all but an "honorable settlement," a term allowing of almost unlimited possibilities of interpretation. In the present circumstances, however, its meaning seems clear enough. On the one hand, we have been unable to suppress the rebellion; on the other hand, we do not wish to acknowledge that fact. We do not wish to acknowledge it to the communists, for fear their appetite for conquest will be whetted. We do not wish to acknowledge it to our allies, for fear their confidence in our power will be diminished. And most of all, we do not wish to acknowledge it ourselves, for fear that our own, surprisingly fragile confidence in ourselves will be undermined. And so we seek an "honorable settlement," an agreement under which no one will say what everyone knows: that the United States of America has made a bad mistake and finds it necessary to liquidate that mistake.

The time has come for the pretense to end; for the prideful nonsense to stop about securing an "honorable settlement" and avoiding a "disguised defeat." The truth is that as long as our troops stay in South Vietnam, we shall occupy a hostile country. There is no way that the United States, as a foreign power and a Western one at that, can win a civil war among the Vietnamese. Even now, five years after we entered the conflict, it remains a struggle between rival factions of Vietnamese for control of the government in Saigon. The outcome rests, now as before, on the Vietnamese themselves.

If we can find the resolution to end our protracted involvement in this war, we shall suffer no lasting injury to our power or prestige. I do not think that the liquidation of our intervention in Vietnam will mean the loss of our global greatness, any more than the loss of the American colonies cost England her greatness in the eighteenth century, or any more than the loss of Algeria and Indochina cost France her national stature. On the contrary, the end of empire was not a defeat for France but a liberation, in the wake of which a demoralized nation recovered its good name in the world and its own self-esteem. The termination of our war in Vietnam would represent a similar liberation for America, and even a victory of sorts—a victory of principle over pride and of intelligent self-interest over messianic delusion.

I. THE NATIONAL INTEREST

The United States Government is not a charity-dispensing institution; its primary obligation is not to the Saigon generals, or to some portion of the Vietnamese people, but to the American people, to their security and well-being. When all is said and done about our "honor" and "commitment," the fact remains that our presence in Vietnam can be justified—if it can be justified—in terms of American interests, correctly defined as the freedom and safety of the American people.

Before anyone can prescribe an American course-of-action for Vietnam, it is necessary to be absolutely explicit about what our interests are in that benighted country and what they are not. I do not agree with President Nixon that, having crossed the bridge of intervention, it is useless to belabor the original issue [2]—as if the presence of half a million American troops and the loss of nearly 40,000 American lives represented an investment that had to be redeemed by sacrificing still more lives, regardless of the wisdom of our continued presence there. It is quite essential that we reexamine the decisions of preceding Administrations, not for the sake of political retribution, or even for the sake of history, but for the express purpose of identifying our interests. Why we intervened in Vietnam in the first place has everything to do with whether and how we should get out.

"A great nation," the President says, "cannot renege on its pledges." [3] What pledges, indeed, have we failed to keep? The amount of money, weapons, ammunition, food, equipment and supplies we have funneled into South Vietnam is beyond belief, vastly exceeding the outside help given North Vietnam and the Vietcong by all the communist governments combined. To fight for the South, we have sent an American expeditionary force of half a million men; no Russians or Chinese have been imported to fight for the North. Hanoi and the Vietcong do their own fighting. I say that Saigon—with larger and better-armed forces in the field than any arrayed against it—must stop relying on us to fight its war. We have kept our pledges, and done far more besides. We didn't undertake to make South Vietnam the 51st American State; we didn't promise to stand guard over the 17th parallel as though it were an American frontier.

But, the President argues, if we were to allow the Vietcong and the North Vietnamese to prevail, "the cause of peace might not survive the damage that would be done to other nations' confidence in our reliability." Here Mr. Nixon espouses Mr. Rusk's concept of an exemplary war, which presumably demonstrates to other countries that the United States stands willing to intervene wherever necessary, in order to put down threats of internal communist subversion as well as external communist aggression. Yet the President himself has now announced to the world that the United States has a new policy: in the future, Asian governments must defend themselves against subversion from within, and not look our way again. The motto, "No more Vietnams" cannot be reconciled with the fiction that we are still fighting an exemplary war in that country.

Footnotes at end of article.

Withdrawing from Vietnam, according to President Nixon, "would bring peace now but it would enormously increase the danger of a bigger war later." [4] The assertion that by fighting in Vietnam we prevent other wars is pure speculation, rooted not in evidence but in analogy, the analogy of the thirties when appeasement whetted Nazi Germany's appetite for aggression.

No good historian will buy that analogy. History unfolds more in paradoxes than in parallels. Mark Twain once observed that "We should be careful to get out of an experience only the wisdom that is in it—and stop there; lest we be like the cat that sits down on a hot stove-lid. She will never sit down on a hot stove-lid again—and that is well, but also she will never sit down on a cold one anymore." [5] In the case of Vietnam we would do well to settle for the unwisdom that is in it and stop the sacrifice of *real* American lives for the sake of saving hypothetical ones in some conjectural war in an unforecastable future.

We dare not, says the President, abandon the South Vietnamese to "a massacre that would shock and dismay everyone in the world who values human life." Here again we are dealing with something that might happen; in the meantime does no one who values human life feel "shock and dismay" by the senseless sacrifice of American lives in endless assaults on useless hilltops and by death tolls of hundreds of GI's every week? Surely there is another way to protect those South Vietnamese who may feel the need for sanctuary, if it comes to that. Better that we open our own gates to them, than keep on sending Americans to die for them in their own land. As for the Saigon generals, there should be ample facilities for them on the French Riviera.

What indeed does Vietnam have to do with the vital interests of the United States, which is to say, with the *freedom* and *safety* of the American people? I attempted to define those interests four years ago shortly after our full-scale intervention in Vietnam began. As to *freedom*, I said:

"Freedom, as a matter of fact, is not really at issue in South Vietnam, unless we so degrade freedom as to confuse it with the mere absence of communism. Two dictatorial regimes, one sitting in Hanoi, the other in Saigon, struggle for control of the country. Whichever prevails the outcome is not going to settle the fate of communism in the world at large, nor the problem of guerrilla wars. They did not begin in Vietnam and will not end there. They will continue to erupt in scattered, farflung places around the globe, wherever adverse conditions within a country permit Communist subversion to take root."

And as to the safety of the American people, I added:

"Nor can it be soundly contended that the security of the United States requires a military decision in South Vietnam. Our presence in the Far East is not anchored there. Saigon does not stand guard over Seattle. We conquered the Pacific Ocean in the Second World War. It is our moat, the broadest on earth, from the Golden Gate to the very shores of China. There is no way for the landlocked forces of Asia to drive us from the Pacific, there is no need for us to retain a military base on the mainland of Asia." [6]

After four years of futile warfare, I see no reason to alter that evaluation of American interests. The plain fact is that we did not then, and do not now, have a vital interest in the preservation of the Thieu-Ky government, or even in the preservation of a noncommunist government, in South Vietnam. Nor do we have a vital interest in whether the two Vietnams are united or divided. We have

preferences, to be sure, and our pride is at stake after committing ourselves so deeply, but preference and pride are sentiments not interests. From the standpoint of our interests, we have been fighting an unnecessary war for five long years, making it possibly the most disastrous mistake in the history of American foreign policy. It can never be vindicated; it can only be liquidated.

II. AN UNSUCCESSFUL WAR

The war in Vietnam has been more than unnecessary; it has been unsuccessful as well, and that, in the hard world of politics, is usually the greater crime. The Dominican intervention was unnecessary, illegal, and destructive of our relations with Latin America, but it achieved its immediate objective, the suppression of a revolution, with the result that the issue has not remained to plague and divide us. Had Mr. Rostow and his colleagues been right in 1965 in their supposition that the war in Vietnam could be won with "surgical" air strikes and a few months of ground warfare, the question of the war's necessity would not be the lacerating issue that it is today. But the Vietnam strategists were neither wise or prescient nor lucky. With disastrous insensitivity to the thought processes of an alien culture, and with contemptuous disregard of the warnings offered by some of us in the Senate, they applied their "scientific" theories of warfare in the apparent belief that the Vietnamese would respond to "graduated" degrees of punishment as they themselves would have responded—by weighing immediate costs against prospective gains. But the Vietnamese turned out not to be scientists. They reacted irrationally and unaccountably by refusing to give up. Their calculations of cost and gain turned out to be different from ours; their willingness to endure punishment turned out to be greater than we had thought possible.

Our strategy in Vietnam has failed but neither the Johnson Administration nor—thus far—the Nixon Administration has been willing to acknowledge that failure. In lieu of the tortured rationalizations of the previous Administration, President Nixon experiments with a cautious troop withdrawal tied to the tenuous hope of a growing South Vietnamese military capacity. In their Midway communique Mr. Nixon and Mr. Thieu rejoiced in hamlet elections, in "the failure of the other side to achieve its objectives," and in the new-found strength of the Saigon army, while Mr. Thieu himself recited appropriate lines about the "constant duty" of the Saigon forces "to assume a greater share of the burden in South Vietnam."

Perhaps this time, for the *first* time, the optimistic prognosis will be borne out, so studiously does it ignore hard issues and well-known facts, that one strongly suspects that what we are confronted with today is not a new strategy but a new "image" for the discredited old strategy, a new device for postponing difficult decisions, a new expedient for holding off the critics of the war. It would appear that President Nixon, like President Johnson, is becoming preoccupied with politics to the neglect of policy.

This, in turn, leads to the frustration which gives rise to a search for scapegoats. In much the same way that the German General Staff—which had actually initiated Germany's surrender in World War I—later perpetuated the myth of defeat by betrayal on the home front, the men who led us into the Vietnam quagmire have sought to place the blame for the catastrophe on their domestic critics, on those of us who said that we never should have entered the quagmire in the first place and who now insist that we ought to get out. The "real battlefield," according to this self-serving doctrine of the architects of failure, is not in Vietnam but in America, where, if only the critics would be silent, the will of the enemy would supposedly be broken. In its crude form as a spurious, jingoist "patriotism," the argument runs that the war critics are near-traitors, provisioners of "aid and comfort to the enemy." In the scarcely more august language of our last two Presidents, the critics are "nervous nellies" and "neoisolationists"—deriders of patriotism, as Mr. Nixon put it, a "backward fetish." [7]

The critics are also credited with the failure to make progress in over a year of negotiations at Paris. With a cold eye fixed on the agitated state of American opinion, so the argument runs, the enemy is emboldened to resist our "reasonable" proposals. "It's awfully hard to play chess with twenty kibitzers at your elbow," Mr. Kissinger complains, "all of them demanding explanations of the purpose of every move while your opponent listens." [8]

The "kibitzers" who are such an inconvenience to Mr. Kissinger are the very dissenters whose protest finally persuaded President Johnson to stop the escalation of the war and go to the conference table. Had these critics remained silent as the war makers would have had them do, the limited war in Vietnam might by now have escalated into a full-scale war with China. Whatever hope of peace there now is, it is the "kibitzers'" gift to the architects of failure. Long may they "kibitz," acting, let it be remembered, on their own concept of patriotism—which is not the patriotism of silent acquiescence in a policy they detest, but the patriotism of Camus, who would have us love our country for what it ought to be, and of Carl Schurz, that "mugwump" dissenter from McKinley imperialism, who proclaimed: "Our country, right or wrong. When right, to be kept right; when wrong, to be put right."

For all the misjudgment of generals and policy makers—and for all the allegedly disruptive dissent at home—the root cause of failures lies not with ourselves but with our Vietnamese allies. Had an honest and patriotic government ruled in Saigon, it would probably have beaten the Vietcong long ago, with no more than material support from the United States. The Vietnamese people are not lacking in military courage and resourcefulness; the Vietcong have demonstrated that. What is lacking is the ability of the Saigon government to inspire either the confidence of its people or the fighting spirit of its army. There is little mystery as to why this ability is lacking. An American study team made up primarily of prominent churchmen recently reported, after a trip to Vietnam, that the Thieu government ruled by terror, using torture and brutality to suppress political opposition, and that the regime relied "more upon police state tactics and American support to stay in power than upon true representation and popular support." [9]

Of all the misrepresentations which have been perpetrated about Vietnam none has been more insulting to the intelligence and offensive to the moral sensibility of young Americans than the portrayal of the Saigon regime as an upholder of freedom and democracy.

Mr. Clark Clifford, our last Secretary of Defense, who found the courage to tell President Johnson the truth about Vietnam, had this to say of the Saigon generals:

"There is complete callousness about the cost of the war to us. They have no concern over the loss of our men or treasure. They see us as a big, rich country, well able to afford it. They are going one way and we are going another. I see no likelihood of our goals getting closer together. But they have become very adroit at saying what the American public wants to hear . . . They are sweet talking us."

What's more, I would add, they are exercising a veto over American policy in Vietnam. At his latest press conference, President Nixon reiterated that we were willing to negotiate on anything, except "the right of the people of South Vietnam to choose their own leaders." Then, calling for "internationally supervised elections," Nixon said, "we will accept the result of those elections and the South Vietnamese will as well, even if it is a Communist government. . . ."

Mr. Nixon may think so, but not Mr. Thieu. His immediate rebuttal was plain enough. The Saigon Government, he said, had no intention of accepting a "coalition with the Communists" or "domination by the Communists" under any circumstances whatever. This is hardly surprising, since Mr. Thieu has consistently defied American policy. No sooner had he returned to Saigon from his love-feast with President Nixon at Midway last June, than he proclaimed: "I solemnly declare that there will be no coalition government, no peace cabinet, no transitional government, not even reconciliatory government." [10]

In neither instance, did any disavowal issue from the White House. President Nixon, like his predecessors before him, appears to be manacled to the Saigon generals. Lyndon Johnson flew five times to Mid-Pacific rendezvous with these same men. Now President Nixon has followed in that beaten path and emerged, like Mr. Johnson, with the same pretensions of harmony. Lacking either the willingness to depend on their own army or the support of their own people, the Saigon generals have held an ace-in-the-hole which has kept them in power and in command of events: their influence amounting to a veto over America's war policy. Had they anything like the same influence in Vietnam that they have had in Washington, Thieu and Ky would have overpowered the Vietcong long ago.

Well, we have an ace-in-the-hole too: the fact that this war is not now and never was essential to our interests, which is to say, to the freedom and safety of the American people. Pride has cheated us of the power deriving from our own interests, because, in order to gain access to that power, we would have to admit error. That same pride has been Saigon's lever over America's war policy: they survive on it, while Americans die for it.

III. THE STRATEGY OF PEACE

Sooner or later, Vietnam will revert to the control of the Vietnamese. Whether on the basis of a negotiated peace or an unnegotiated withdrawal, American forces will eventually have to be removed from Vietnam. When that happens, if not before, the Vietnamese civil war will be settled—as it should and would have been settled long ago but for American intervention—by the interplay of indigenous forces within Vietnam. If a formal settlement comports with the indigenous balance of forces, whatever it may be, the settlement will be a lasting one. If it does not, it will be overthrown.

There are—as we have learned and should have known without this trial by fire—limits to the ability of an alien power to work its will in a hostile environment. Our own Civil War provides an example: after four years of savage warfare and eleven years of military occupation, the Union finally withdrew its forces from the South, allowing that region to revert to the political domination of the same people who had dominated the secessionist Confederacy. Another example is provided by the Boer War, Britain's turn-of-the-century "Vietnam." After more than two years of frustrating warfare against

Footnotes at end of article.

a guerrilla force of provincial rebels—in the course of which the mighty British Empire became an object of universal scorn and detestation—the British finally beat the Boers, organized the Union of South Africa and then, perforce, turned the political control of the country back to the defeated Boers, who have dominated South Africa ever since.

The common factor in the American Civil War, the Boer War and the Vietnam War is that each confronted a dominant alien power with an intolerable dilemma: it could impose its will only by the sustained application of overwhelming force; the alternative was to withdraw that force, leaving the indigenous factions to strike their own natural balance more or less as they would have if the alien power had not intervened in the first place. In the one instance "victory" becomes insupportable, in the other meaningless.

Weighing this dilemma along with the other main considerations I have set forth—that this war is a failure and was never in our interests to begin with—what is to be inferred for a strategy of peace?

The point of departure is the clear, candid acknowledgment of our own lack of vital interest in the internal regimes of the two Vietnams. This means that we must break through the pride barrier which has thus far deterred us from admitting that, from the standpoint of our own interests, this war is and always has been a mistake. The purpose of this admission is not flagellation but freedom—the freedom of action which will only be ours when we end our thralldom to the Saigon generals and begin to act in our own interests and no longer on the basis of theirs.

In recent weeks, there has been increasing talk of changing the military mix in Vietnam by replacing American ground troops with Vietnamese, while retaining American supply and support troops in their combat role. This is not a formula for extricating the United States from Vietnam; it is, rather, a formula for keeping up to 300,000 American troops engaged in Vietnam indefinitely. Its purpose is not to get out, but to stay in.

The imperative is that we get out. This does not mean, of course, that the South Vietnamese Government would have to follow suit, or that it would be helpless in the face of its enemies. It would still have 1,500,000 men under arms as against 135,000 Vietcong and 90,000 North Vietnamese soldiers now in South Vietnam. If the ARVN could be inspired to defend the Saigon government, it would survive; if it could not be so inspired, then the government does not deserve to survive. In any case, we have done enough. We have fought their war for five long years and sacrificed almost 40,000 American lives. It is enough.

The process of disengagement need not be a long, protracted one. We can initiate it immediately by starting to withdraw forces on a significant scale—not the token scale initiated by the Nixon Administration. At the present rate of withdrawal, American troops will be engaged in Vietnam for the next 8 to 10 years!

Nearly everyone now recognizes that our intervention in Vietnam was in error. Two years ago, our political skies were still filled with hawks; today, scarcely a hawk can be seen on the wing. President Nixon himself, once a ferocious hawk, may not openly admit, but he implicitly acknowledges, that this country has no vital interest at stake in Vietnam. Otherwise, we couldn't possibly leave the outcome for others to decide, even in a free election.

But we have our own hang-ups: twenty years of obsession with communism—deeply ingrained in the wormwood of our politics. Mr. Nixon keeps searching for a settlement that will be popular, or at least welcome, here at home. He keeps pushing for an American-style election in Vietnam, presided over by a special electoral commission composed of all factions, and internationally supervised, and then wonders aloud why so "generous" a proposal should fall on such deaf ears. For an answer, we might ask ourselves how, during our own Civil War, the Union Government would have responded to a British or French proposal for an internationally supervised plebiscite on Southern secession!

A policy wrong from the start can't be made to come out right. Our country is accustomed to imposing unconditional surrender on its enemies; there can be no compromise settlement of the war in Vietnam which will be applauded by the American people. Nor can there be any settlement worthy of reliance, regardless of its terms, for once we have left, no force remains to keep it.

Still, Mr. Nixon stalls for time, trying to pry loose a settlement with modest troop withdrawals. He talks of bringing pressure on Hanoi. But you cannot bring pressure on an enemy by starting to leave! His real purpose is to bring pressure on Saigon to dignify our exit by accepting a transitional arrangement that will make it seem to the American people that the war has not been entirely pointless, that all the sacrifice has not been in vain.

So we wait, month after month, for some miracle to occur in Saigon or Hanoi that will bring the moribund peace talks back to life. We hint to Hanoi that progress at the conference table, or a wind-down of the war, will mean faster withdrawal of American troops, while we tell Saigon that the pace will depend on the demonstrated ability of their forces to replace our own. In the resultant muddle, all we have succeeded in doing is to place the time-table out of our hands into theirs. I say American policy must wait no longer upon the pleasure of either Saigon or Hanoi. It is time to come home!

For our own part, we have neither the need nor the *right* to sacrifice a single American life for any objective exceeding our own vital interest, which is the preservation of the freedom and safety of the American people. If this be thought ungenerous or unaltruistic, I put it to you that no nation has the moral right to be generous or altruistic with the lives of its own citizens. Perhaps a totalitarian nation, conceiving itself a spiritual entity transcending its individual citizens, may claim that right. A democratic nation cannot: its very existence is for the purpose of protecting and serving its citizens.

That is why it has become so necessary to disengage from Vietnam, leaving it to the indigenous forces in that tortured land to vote, negotiate or fight their civil war through to the conclusion which, but for our intervention, would long ago have been reached.

IV. WHY WE MUST GET OUT

We must get out of Vietnam because a process of deterioration has begun in our society which cannot be arrested, much less reversed, until we do get out. Dividing the American people as no issue since the Civil War has divided them, the war in Vietnam has been the cause and catalyst of great domestic ferment in the United States. The crisis it has directly caused is a moral one; the deep offense done to so many Americans by the blatant incompatibility of this war with the traditional values of our society. At the same time, by diverting financial and political resources, and by dividing and demoralizing the American people, the war has incapacitated us for effective action in respect to the worsening crises of race and poverty, crime and urban deterioration, pollution and ecological decay.

None of this has to do with simple war-weariness, or, as President Nixon seems to think, with weariness "of the weight of free world leadership that fell upon us in the wake of World War II."[11] Something more fundamental than fatigue is involved. Twenty-five years ago the American people were simultaneously fighting two great wars on a vastly greater scale and at an even larger cost than the war in Vietnam, and their spirit never flagged. It is not just the burden of leadership or the exertions of warfare that outrage so many of our citizens, but *this* war, with its blood-soaked strategy of attrition, its unsavory alliance, and its objectives both irrelevant to our interests and offensive to our principles. Nor is "weariness" in any way descriptive of what the war critics are experiencing; they are not tired but angry—angry about the needless killing and the stubborn pride which has kept us from putting a stop to it.

I recently received a letter from a young man who is deeply troubled by these matters. With your indulgence I will read a portion of my reply:

"The deep disillusionment of young people in their country has its roots in the Vietnam war. When the power of the state is used to force young men to fight a war they believe to be wrongful, under penalty of imprisonment if they refuse, the seeds of sedition are sown. We now reap the bitter harvest, manifested in angry uprisings on campuses from coast to coast . . .

"Whenever the limb is shaken, all the leaves tremble. Once the moral authority of the government is rejected, on an issue so fundamental as a wrongful war, every lesser institution of authority is placed in jeopardy. Every sacred principle, every traditional value, every settled policy becomes a target for ridicule or repudiation. Cauldrons of anarchy soon begin to bubble and boil.

"So it has happened that our country is coming unstuck. The ferment distorts every issue; perspective is lost . . .

"I am convinced we must end the war—or at least our participation in it—before we can begin to stick this country back together again. Then we must have the help of men like you, men who haven't abandoned all faith, and who regard the job as worth doing."

Even now there is one thing in which we can take hope, and that is the great force of our American moral traditions. Out of all the dissent and disruption we have learned something about ourselves—that we still believe in our own values, that Jefferson's idea of liberty and Lincoln's idea of equality and Woodrow Wilson's idea of a world community of law are still capable of moving us and guiding our behavior. We have learned, to be sure, that we are capable of violating our traditional values, but we have also learned that we are not capable of violating them easily, or permanently, or indeed without setting in motion the regenerative forces of protest and moral reassertion.

There will be time enough, when peace is restored, to contemplate the "lessons of Vietnam." Perhaps, if peace comes in the way that I believe it must come, some of our recent and present leaders will take it as the war's "lesson" that America has shown itself unworthy of world leadership. Others will conclude that we must develop more sophisticated techniques of intervention, or that we must improve our "social science," or substitute political and economic for military means of intervention. Still others, at the opposite extreme, will probably judge that we must never again involve ourselves in war on a distant continent. All of these propositions, and variations upon them, will undoubtedly be put forth as the "lessons" of Vietnam, but my own hunch is that none of these will stand as a definitive "lesson" or as a reliable guideline for the future.

It may be that there is no lesson in Vietnam other than the modest one suggested by Jim Thomson of Harvard: "never again to take on the job of trying to defeat a

nationalist anticolonial movement under indigenous communist control in former French Indochina." [12] Or the equally modest lesson: that we have got for a time—not necessarily forever—to tend to neglected matters at home. Or perhaps we will have learned nothing more than that we are a people with a moral tradition, a people who discriminate among their wars and who do not easily act against their own traditional values.

QUESTIONS GROW ON SUPERSONIC-PLANE PLANS

HON. WILLIAM L. HUNGATE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. HUNGATE. Mr. Speaker, the enclosed article on sonic booms is inserted for the benefit of those who have received agency or Defense Department or other engineering replies advising them that sonic booms do not cause damage, and declining payment. The article indicates the precise amount paid in such tests to specific cities in specific years.

The article follows:

[From the Christian Science Monitor, Sept. 19, 1969]

BOOM QUESTIONS GROW WITH SUPERSONIC-PLANE PLANS

(By Richard W. McManus, staff writer of the Christian Science Monitor)

As President Nixon nears a decision on whether to ask Congress for funds to continue development of a 1,800 m.p.h. supersonic transport (SST) debate swirls around the controversial aircraft.

Both proponents and those totally opposed to the aircraft—financed 90 percent with federal funds—push their views vigorously.

"It's inevitable," says one side.

"There is simply no practical way for supersonic travel," says the other.

In the middle stand the governors of the 50 states and a United States congressman. Because they are concerned about the aircraft's jolting sonic boom, they want to have a hand in deciding where the plane—if produced—would fly.

Without a favorable nod from the President, the program would probably collapse through lack of development money after next April, when currently appropriated government funds will have been used up.

PRESTIGE AND LEADERSHIP

But long before then, Mr. Nixon will doubtless have reached his decision. Involved in his present pondering must be the questions of this nation's prestige, its continued world aviation leadership, and its balance of payments. These issues have to be weighed against other priorities nagging for federal attention.

Giving dramatic emphasis to the President's answer may well be the first supersonic flight of the British-French Concorde. The French prototype of this aircraft (another prototype exists in England) is expected to get its first crack at the sound barrier in tests this month.

When this happens, the SST debate in the United States is bound to sharpen. Airlines in this country already have put their names in for Concordes, which are expected to make commercial flights in 1972 or 1973.

Thus long before the SST's inaugural flight could occur in 1978, the American public will have to confront the boom question, say officials of the Federal Aviation Administration. The FAA, a government regulatory agency, is responsible along with private industry for American SST development.

Although the Concorde, carrying up to 132 persons, will be lighter and slower (1,450 m.p.h.) than the 280-passenger SST, it will fly at a lower altitude, so the booms will be comparable. These booms, caused by the aircraft tearing through the atmosphere faster than the air can get out of the way, are measured in pounds per square foot (p.s.f.) of overpressure. Overpressure is pressure in excess of normal atmospheric pressure. Boom severity will range from 1 to 2.5 p.s.f.

A 1966 report by the Aerospace Industries Association of America (a view from the technologist's angle) describes the boom problem this way:

RESTRICTIONS OVER LAND?

"Although modern-day community noises are generally taken for granted, the introduction of a new disturbance such as that of the sonic boom will require some human adjustment. It is also true that we will not know, with finality, the degree of public acceptance of the sonic boom until the supersonic transport has been fully tested."

But according to the FAA's top scientific adviser outside of government on the SST project, Prof. Raymond L. Bisplinghoff of the Massachusetts Institute of Technology, the aircraft's development has always proceeded with the assumption that commercial supersonic flights over land would not be allowed.

The FAA is not so definite. According to its brochure The United States Supersonic Transport Program, the agency's position is this: "Because sonic boom annoys people, the SST may be restricted to supersonic flight over the oceans and other unpopulated areas."

Thus, with the start of the supersonic jet age perhaps little more than two years away, those who want to help determine where these sleek sound breakers' will fly are asking to be heard.

ADVANTAGES WEIGHED

Early this month all 50 state governors at the National Governors' Conference in Colorado Springs, Colo., took their stand on the issue. The governors unanimously adopted a resolution that "no routine commercial supersonic flights should be permitted over the various states and territories without prior consultation by the federal government with the governors of the states concerned."

"It has not been convincingly shown," said the resolution, "that the advantages to be gained in the operation of supersonic transport would counterbalance the possible adverse environmental noise effects to which the citizens of the various states would be subjected."

Expressing similar concern from the "people" side of the boom debate, Sen. Clifford P. Case (R) of New Jersey submitted a bill to Congress in February asking for a two-year study of the boom question. During this study all nonmilitary supersonic flights would be banned. Based on the study's results, the ban might continue. But it could be lifted only by congressional action.

According to a spokesman for the Senator, a decision on this question, which will involve the welfare or at least have a bearing on the peace and quiet of so many Americans, should not be left to a regulatory agency. He says this is particularly true since the FAA, which is overseeing the plane's development, will want to insure its economic success.

COST SET AT $1.4 BILLION

It is the contention of some SST detractors that economic pressures of flying this costly aircraft eventually will lead to overland routes.

The costs already are building. The two SST prototypes, which if federal appropriations continue will be ready in 1972, would cost $1.4 billion. The government, with more than $600 million already in the project, is paying most of the development costs. The two principal contractors, Boeing Aircraft and General Electric, with some aid from the airlines, are making up the balance.

The FAA estimates that at least 500 SSTs will be sold between the time the plane goes into commercial service in 1978 and 1990. The agency says this predicted market is based on the assumption that the aircraft may be limited to transoceanic operations because of the boom.

Once the two prototypes are completed and have achieved 100 hours of flight testing, the government then expects to pull out of the enterprise.

At this point, says Professor Bisplinghoff, another $4 billion to $5 billion will have to be raised from the private sector to put the plane into production.

Private industry will spend this kind of money only if the plane is a success, he says. The government, Boeing, and General Electric will lose if it is not.

And I'm willing to say it's going to be a success, he adds.

ONLY CONTACT THROUGH BOOM

How this success might come about is what worries the plane's opponents. Still, one of the outspoken critics of the SST, Prof. William A. Shurcliff of Harvard who is director of the Citizens League Against the Sonic Boom, contends his and other groups' opposition to the project is going to be successful and the SST will be shelved.

"We're being helped," he says, "by the economic pinch, and because of this the government is becoming leery of putting money into this ill-advised project."

"Practically every person you know won't be flying an SST," he adds. "Your only contact will be through hearing the boom. And when it [the SST] hits you with the boom, the plane is already about 30 miles away."

This means, he says, that it would be difficult for a person wishing to make a damage claim to identify the plane that was responsible.

Sonic boom tests that have been carried out over American cities have resulted in these damage payments:

St. Louis (1961–62), $58,648; Oklahoma City (1964), $100,000; Chicago (1965), $114,763.

In the Oklahoma City test a poll showed that 27 percent of the people felt they "could never learn to live with the boom."

Still, B. J. Vierling, the FAA's deputy director for SST development, asks why the majority view shouldn't prevail. He says it still has not been determined, though, what level of public disturbance due to the boom will be acceptable.

LAWSUITS AND ILL WILL

But, he says, the airlines wouldn't want to involve themselves "from a practical point of view" in sonic-boom damage lawsuits or cause public ill will.

What is not disputed by anyone is that supersonic flight will shrink travel time considerably. The Concorde is to chop flight time between London and Sydney, Australia, from 27 to 12 hours. The American SST would bring these two cities even closer.

"Where it will pay off will be in the vast reaches of the Pacific," says Prof. Bisplinghoff.

When it crosses this ocean, however, it would have to make one or two stops for fuel. Its range would thus be under that of the Boeing 747, the jumbo subsonic jet, which will go into service early next year.

But says Prof. Bisplinghoff: "We'll get that up. It'll take a while." He says the 707 initially didn't have its present range.

So goes the debate. Neither side concedes much to the other.

Some observers, meanwhile, view the coming boom—whether SST or other—as part of an even larger question. They feel the problem is that man may eventually overwhelm himself with his technological advances if these are uncontrolled.

According to a report by a panel of academicians to the House Committee on Science and Astronautics: "The challenge is to discipline technological progress. Nor can this opportunity be forgone without incurring a considerable risk to mankind."

SOVIET SCENE '69: TRIP UNVEILS U.S.S.R. TODAY

HON. TOM STEED

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. STEED. Mr. Speaker, a group of 10 American editors has returned from a visit to the Soviet Union in which they traveled 8,000 miles inside that country in an intensive 16-day tour.

All are members of the American Society of Newspaper Editors, invited to the U.S.S.R. by the Soviet Union of Journalists.

Charles L. Bennett, managing editor of Oklahoma's largest newspaper, the Daily Oklahoman, described his visit in a series of articles entitled "Soviet Scene, '69."

He states his aim as follows:

Readers should be aware that the series is based on physical observation of several parts of the Soviet Union, plus many conversations with Soviet newsmen, officials and citizens. Nearly all of the conversations were carried on through interpreters and in group interviews. The aim of the series is simply to present a fresh, first-hand glimpse of a vast country of immense importance to the future of the world in which we live. As far as possible, the writer attempts to present the idea of the Soviet citizens in their own words and from their point of view, not his.

At a time when it is so vital to understand the Soviet Union and its present policies and attitude, I believe this series will be of interest to many Members. I will enter today the first two articles, to be followed by the continuing series:

TRIP UNVEILS U.S.S.R. TODAY

(By Charles L. Bennett)

An unusual opportunity to see six widely separated areas of the Soviet Union, and to talk with Soviet citizens, newsmen and officials leaves a visitor with an unusually difficult problem: How to sum up his impressions? The answer is that he shouldn't if he wants to avoid over-simplification or the kind of generalities that can be punctured by numberless exceptions.

But a visitor can piece together a mosaic of thousands of brief glimpses of people and things. Passing bits of conversation can be laced into detailed quizzes of high officials. Official statements can be balanced against what the visitor knew, or thought he knew—before he went—about a complicated, puzzling and surprising nation. Or he might recall matching wits with hardnosed, sophisticated Soviet journalists, always trying to extract the one different answer that will shed new light.

I was privileged to be one of ten U.S. editors who, accompanied by an American photographer, ventured into the Soviet for a 16-day expedition.

Our trip had its roots in negotiations, begun several years ago, which ripened into a proposal by the Soviet Union of Journalists for an exchange of visits. They suggested that ten editors designated by the American Society of Newspaper Editors would visit the U.S.S.R. and an equal number of Soviet journalists would come to the United States.

It wasn't that simple, of course. Months of negotiations between the U.S. State Department and the Soviet foreign ministry preceded the trip. Even so, as we flew into Moscow, we did not know what cities we would visit, to whom we would be able to talk, or what we could see.

Now, after 8,000 miles of travel in the U.S.S.R., after hours of talking with all kinds of Soviet citizens and seeing cities, countryside, stores, factories, homes, new and the old, admirable things and distasteful things; after all this, many questions remain. But then, too, thousands of bits of the mosaic fall into place and make memorable, meaningful pictures.

Solemn-faced people file past dramatic reminders of a war that killed 20 million of their countrymen. Vasily Isayev, vice-mayor of Moscow, reminds us that "Sixty-two thousand cities and villages were absolutely wiped off the face of the earth. People lived in earthen huts and they had to completely rebuild their cities."

Asked if, in another generation, Soviet young people might not forget the lessons of World War II a radio journalist comments, "No. This is hammered into them every day."

Accompaniment to the compelling reminders of the war, which are everywhere, is the drumbeat refrain of a theme repeated over and over, in a dozen different ways. The theme is: "No one must ever do this to us again."

One of our companions debates a mathematical term with one of the top scientists at "Science City," the huge educational and research center on the plains of Siberia. It is just outside Novosibirsk, 3300 miles east of Moscow and 1250 miles from the Chinese border.

The mathematical debate rages on, with Joe Adamov, our Moscow radioman interpreter, bridging the language gap as fast as he can talk in Russian and English. Suddenly he pauses for breath, looks up and says with a bemused smile, "You know, I don't understand what I'm saying in either language!"

One of our group says he would like to be able to see and talk with some of the "dissident intellectuals" in the U.S.S.R., mentioning the names of jailed Yuli Daniel and Andrei Sinyavsky, among others.

Our host replies with a smile: "If you break one of our laws, you may have a chance to see them!"

"I don't want to see them for that long," our editor decides.

A journalist in Minsk, during a five-hour dinner table talkfest, is irritated by some of our questions. He retaliates with a deadly serious accusation: "Your FBI briefs everyone who wants to come to the U.S.S.R. and threatens them to keep them from coming. Many have told us that, if they do come, they will not be guaranteed their same job when they go back."

We ask the manager of the huge Belaz truck factory in Byelorussia what the reaction was to the Apollo moon landing. Brisk, youthful Ivan Sidorovich says: "Very positive. We were all happy. We are all one world. We were thrilled that man, regardless of nationality, had accomplished this, overcome such difficulties. I am sure that American workers, were just as happy when Yuri Gagarin opened up this space era. There are no boundaries."

We plead with our journalist hosts, for perhaps the tenth time, to arrange for us to go to the Chinese border, to see for ourselves what is going on there. We are in Alma Ata, a lovely city in Kazakhstan and only 250 miles or so from the boundary with Communist China.

"You can't," they reply. "You never know when or where something is going to happen and you might see nothing. There are no accommodations there for you. Besides, it's not safe."

In this city we see a wonderful variety of faces . . . Uzbeks with sun and wind-darkened skin and short-cropped hair under their embroidered skull caps. Russians with smooth, rounded Slavic faces. Blond Ukrainians. The Asiatic faces of Uighurs and Kazakhs and mixtures that show traces of the Mongols, the Golden Horde whose raiders once swept across these steppes on missions of plunder and destruction.

Suddenly, with these faces in front of us, we understand what we've been told in nearly every city—that the U.S.S.R. is made up of at least 20 distinct nationalities, and as many as 170 different ethnic groups.

Atina Zhaketova, the well-rounded and bright-eyed Kazakh editor of a major women's magazine tell us there are 14 major nationalities in this republic alone, including her own people, Russians, Byelorussians, Ukrainians, Koreans and Uzbeks and Germans and several others. We ask whether there ever were any tensions between the Kazakhs and Russians, or among any of the others.

"We have had no friction at all," she replies. And then we wonder about how that could possibly have happened, and we try to recall the details of recent disturbances in the Crimean region when native nationalists suggested a Russian administrator go home "because you can't even say 'Good Morning' to us in our own language."

We also, suddenly, understand a rather strange letter many of us received when our Soviet trip was announced. An American of Ukrainian extraction had written to each of us. "I wish to point out a common mistake often made by American newsmen," he wrote. "That is calling 'Russian' the non-Russian nationalities like Armenian, Azebanijan, Byelorussian, Estonian, Georgian, Kazakh, Korghiz, Latvian, Lithuanian, Moldavian, Tadjik, Turkmen, Ukrainian, Uzbek and many other autonomous Republics . . . The Soviet Union is not Russia, not a monolithic Russian nation, but an empire comprising many nationalities with their separate cultural, historical, religious and linguistic distinctions."

(All of this explains, as you may have guessed, why we will write in this series of the U.S.S.R. and the Soviet Union . . . but of Russia and Russians only when we really mean just that part of the Soviet, or just those particular Soviet citizens.)

Another scene shifts into memory and we are at the famed Kirov ballet in Leningrad, that historical museum city which is a must-see for every traveler to the Soviet Union.

Leningrad has pride from its survival of the 900-day siege. It left 600,000 of its citizens dead but frustrated Hitler's vow that he would celebrate Christmas of 1941 in the Hotel Astoria, where our group stayed. Germans finally did enter Leningrad by the thousands, as prisoners of the Red Army when its counter-offensive swept the invaders back to the Baltic.

But today's pride of Leningraders is in this ballet troupe we are watching. To them, the Bolshoi ballet, so familiar to many Americans because of its tours, is just "the Moscow ballet;" first place in the ballet world, they say, belongs to "the Kirov."

They are performing in a different theater while their own is being repaired. The ballet is "Don Quixote" and the Spanish grandee provides only the thinnest of story lines to support the action on the stage. But the story doesn't matter, because the staging, the costumes, the sets and, particularly, the dancing are phenomenal. Exciting, elegant, competitive and beyond anything we ever expected to feel from watching ballet, it is an experience. We join the wildly cheering audience and reluctantly stoll away savoring the thought that here, at least, we have seen true excellence in the Soviet Union.

We see competition and excitement of a far different kind one morning in Novosibirsk. Crowds of people are hurrying to work. An already-jammed bus stops. Ten or fifteen people move toward the bus and it's a silent but grim struggle. No quarter is given or asked, even by or for the women. Finally, somehow, they all squeeze into the bus with the last man in hanging onto the doorstep with toes and a firm grip on the handrail.

Some of us are surprised to learn that 72 per cent of all the doctors in the U.S.S.R. are women, as are 60 per cent of the economists, 27 per cent of the construction workers, 43 per cent of the workers on state farms.

When we discover that women in the Soviet Union, unlike the men, have a choice as to whether they will work or not, someone comments: "That seems like discrimination."

A Soviet women's leader explains: "That's because men have a deficiency. They can't have babies and nurse them. We feel that this maternal function is very important to society."

Travel in the Soviet Union is a guessing game. The crack "Red Arrow" train leaves the Moscow station exactly on time, gives a smooth overnight ride and arrives in Leningrad exactly on time.

One airplane trip leaves exactly on time, proves to be a comfortable and pleasant flight and gets us to our destination on the dot. Another time, we spend 18 hours in the Moscow air terminal—shaving, talking, eating and fitfully sleeping on the benches. We are told not to leave because the plane might be able to go any time; the weather at the other end might clear up. Finally, we are told it will leave at 11:30, board the plane at 12:30 and at 2:05 the plane takes off.

For the Soviet citizens, there still are the notorious queues for many kinds of consumer goods. Usually, now, it appears these are mainly for the scarce items, rather than for run-of-the-mill staples.

Prices on many items seem fairly normal to an American as he translates them into dollars. A television set may cost from 200 to 500 rubles, a man's suit 150, or a pair of women's shoes 25. But then we remember the average wage of Soviet workers is 120 rubles a month.

Many times, we are asked by the Soviets why we are in Vietnam and what is being done about a settlement there. They know as well as we do what is going on; they just want to hear our answers and, sometimes, to insert a verbal needle about "U.S. aggression." One of our hosts gives the essence of the usual Soviet comment in a few words: "If you came from a smart country, you'd let it peter out."

In Sochi, the resort area along 90 miles of glittering coast of the Black Sea, we try the menthol inhalers at the famous Matsesta baths, dine delightfully in an open-air restaurant atop a mountain that overlooks the former vacation hideway of Joseph Stalin.

Then we visit a palatial rest home for miners. Perched on a hillside, it looks like a palace and its public rooms are furnished accordingly. As we tour the institution and see that the bedrooms look more like standard Soviet hotel rooms, we hear an explanation of the U.S.S.R. health system. It's given by Dr. Nikolai Stukalov, who lost one leg while serving as an Army surgeon during World War II. He tells about the 26-day leaves, with pay, that are granted to Soviet workers needing the rest-vacation-treatment that the center provides.

He also takes us down the funicular railway to the pebble-covered beach. Bikini-clad miners' wives are there and the miners, engineers and mining executives who make up the clientele of this particular rest center. Many of them appear as portly as the most caricatured capitalist, in barely adequate bathing trunks. They greet the American visitors warmly and, in a matter of minutes, we are surrounded by 25 or so—deep in good-humored debate about Vietnam, their government and ours, and the China situation.

Everywhere we go—city, farm or beach—we ask about China.

Everywhere we ask, we hear almost the same answer. This time it is from Valentin Rogoznikov, a miner from Siberia. We find him sunning with a copy of Pravda covering his face. He arouses himself quickly when we ask what he thinks of the Chinese situation at the border.

"I think our government decided properly to give them a crushing rebuff," he says, "so they won't try to intrude on our peaceful life." He goes on to say that it is a "provocation of the Chinese government. We hope it will be a temporary situation. They are doing it to cover up the deficiencies in their system. We do not blame the Chinese people, but their leaders. We have helped them a great deal in the past. We do not think it will lead to war. Sooner or later they will come to their senses."

It is a familiar response. We hear it every time we ask the question, almost in the same words each time and almost in the same words it has appeared in Pravda and Izvestia.

We ask: "How do you know the reports you hear are true?"

He replies: "I happen to live in the place from which most of the border guards come. Some of them have returned. I have heard them speak on television and tell what happened."

"Do you have any feeling of not getting full information on the subject?"

"No. We get full information on everything. We believe our press and have had confirmation from friends."

Another piece of mosaic. We believe he really does believe his press.

Everywhere we go, our journalist hosts tell us the aim of their newspapers—as well as radio, television and magazines—is "to serve the interests of the country, the Communist party and the people." Alma Ata editor Feodor Mikhailov asks: "Our press and government and people all agree . . . so why would we come out for something against government policy?"

This is how it was. All the time we debated with the Soviets, we were debating with ourselves. Our questions were: "What is the purpose of our being here? What can we learn? What can we believe? What can we make them believe?"

We put the question of why we were invited to Vyacheslav Chernyshev, the energetic and "get it done" secretary of the Soviet Union of Journalists, our official hosts:

"We want a good business relationship with journalists of the U.S.," he said. "We are doing this to get better acquainted and to be better able to inform the people of our countries. This is not a simple thing, but when we have personal contact it helps us to have better knowledge and insight."

"We have a proverb," he added. "It is better to see a thing once than to hear it 1,000 times."

An old Moscow hand and knowledgeable server of the U.S.S.R. scene was asked his idea of why the Soviet journalists had invited us.

"It's part of their trying to project a better image. It's the first anniversary of the Czechoslovakian thing. They want to be viewed as friendly. If they tell you a motive, you can be pretty sure it's not the real one. They want to project the image of stability, happiness, peaceful construction—the idea that they want complete total disarmament, peace . . . to get the U.S. to be peaceful. They feel everyone is against them."

In later parts of this series, the pieces of mosaic will be looked at more closely—the role of women, the major questions of war and peace, housing, agriculture, industry, government, the social scene, health and education, and Soviet citizens as we met and talked with them.

(Second of a Series)

"MAYOR" WHO ISN'T A MAYOR RUNS SHOW IN SOVIET CITIES

(By Charles L. Bennett)

If you have the only show in town, it had better be a good one.

That's the situation faced by the "mayor" of any city in the Soviet Union—because his really IS the only show in town.

The "show" he heads includes every business and industry in the city—all the restaurants, theaters, stores and factories, public transportation, hospitals, hotels, gasoline stations. He's responsible for seeing that there's a job for every man in the city—and most women. He has to see that they have homes, operates their schools and colleges, provides recreation and health care, wedding ceremonies, clubs for the children and dry cleaning.

On top of all this, he furnishes all the usual governmental services of any American city—streets, sewers, water supply, police and fire protection, zoning and city planning and all the rest.

In Moscow or any other Soviet city, the man in charge of the city government isn't a "mayor" at all. He's a man like Vladimir Fedorovich Promyslov and his title is Chairman of the Executive Committee of the Supreme Soviet of the City of Moscow.

Promyslov and his counterparts in all the other cities are executive officers for the Supreme Soviet of the city, an elected body responsible for fixing the broad goals and policies under which the city operates.

Moscow's 6,600,000 people elect the city's Supreme Soviet, made up of 1,140 deputies serving two-year terms on the basis of one deputy for every 6,000 citizens. The deputies work on study commissions and meet once every quarter to discuss major problems.

After those discussions, and in accordance with the long-range plans of the city, the republic in which it's situated, and the national government, it's all up to Promy-

slov and his staff of 230 full-time workers. Under them are the 29 administrative districts of the city, each headed by a district counselor with 200 to 400 deputies. Altogether, there are about 8,000 deputies in the city.

For heading this all-encompassing organization, the urbane and genial Promyslov receives 550 rubles a month. At the official exchange rate, that is about $605 a month or $7,260 a year. Of course, he points out, with such additions as the Soviet's free education and health care, his "real pay" is somewhat higher than the dollar figure would indicate.

Our touring group of editors asked Moscow's mayor what his chief concerns were these days.

"Housing still is the number one problem," he said. We learned as we went on to Leningrad, Minsk, Novosibirsk and Alma Ata that every mayor listed housing as the top problem. War damage and population growth, plus the movement of rural people to the cties, have created housing shortages of monumental proportions in most Soviet cities. (The massive efforts to close the housing gap will be detailed in a later story in this series.)

"After that," Promyslov said, "transportation and traffic planning are the second most important." Despite the lack of anything like the number of automobiles seen on American streets, the first faint signs of traffic jams are beginning to appear in Moscow. Trucks appear to equal or surpass the number of passenger cars right now, but those in our group who had visited Moscow before said the increase in the number of cars was one of the things they noticed most.

Soviet Citizens have had to outwait long lines even to apply for a car—and sometimes even the signups have been cut off—and then had to wait up to two years for their automobile. But they're expecting better things now. Soviet factories plan to increase auto production sharply and city officials like Promyslov expect their traffic problems to grow accordingly.

With 1875 miles of major thoroughfares within the city now, Moscow plans to build 800 miles more of major highways to help accommodate the expected traffic increase.

"We are working on a system of centralized, television-operated traffic control for the whole city." Promyslov said. "We have been studying Paris, Munich, London and other cities as part of our preparation." He picked those cities because he saw some of their plans for similar systems at various international exhibits.

Promyslov has been in the United States, too, so he has some first-hand knowledge of what heavy traffic means.

Moscow's arterial highway pattern had an interesting beginning with the circular walls built around the original city, founded on the site of the present Kremlin hill 822 years ago. The tops of the earthen walls were found to be good wagon roads and the circle pattern has been repeated at varying distances from the city's center. Like spokes of a wheel, other highways radiate straight out from the central area, crossing the circular highways.

The outer circular highway is the official boundary of the city, enclosing about 3,420 square miles (about five times the area of Oklahoma City).

Beyond this outer highway and completely surrounding the city is a green belt of more than 400,000 acres. "This provides a zone of pure air around the city," Promyslov said, "and no building can be done there without permission from the city. Generally, it is not permitted.

"Each district of the city has its own rest area within the greenbelt, with sports fields, marine sports and other recreation. Each enterprise, such as a factory of business takes its people to one of the rest areas assigned to it."

Even inside the city, Promyslov said, 25 percent of the total area is in green space and parks "and the plan is that these green areas will remain as they are."

Vasily Isayev, vice chairman of the city Soviet's executive committee, picked up the conversational ball as Promyslov left to catch a plane. "There are now about 80,000 privately owned passenger cars in Moscow." he said. "But most transportation in the city still is public."

The public transportation includes electric trolley busses, taxis and an extensive subway system.

"The public system transports 12 million passengers a day now," Isayev said, "and we are going to have to expand it rapidly."

One-third of that daily load is carried on Moscow's justly famous subway. Clean, well-lighted, tile-walled stations are decorated with statues and murals. The trains look like new and operate on split-second timing.

Isayev stepped to a huge, lighted wall map at one side of the paneled chamber we were in and pointed out the subway lines.

"We now have about 80 miles of parallel, double-tunnel subway lines," he said, "and we plan 120 miles more." He said the average cost of building a kilometer of subway was between 7 million and 8 million rubles. That figures out, for the total additional mileage to more than $1.65 billion at current exchange rates.

"But the transportation system pays a profit," Isayev assured us. Its income over costs is only one of many revenue sources the city plows back into further improvements.

"Income is always above our expenditures," the city official said. "We normally have 50 million to 100 million rubles profit to use on whatever projects we want to. Housing rent is low and doesn't cover the cost of maintaining the apartments. But the whole transportation system produces profit, along with the industries and other enterprises run by the city, like the hotels, restaurants and movie houses. We have profit from trade, too, and a small tax on trade turnover. There are no other taxes.

"We provide the music, opera and ballet, too, but we don't make any profit on them; we're happy if they even break even."

Total operating income for the city in 1969, he added, will be about 1.5 billion rubles.

What about air and water pollution, we asked.

"On the whole Moscow is a very clean city. We are trying to build large, central heating stations rather than to have numerous small ones around the city. Also, we are using high quality gas that causes less fumes. In the old days, Moscow burned wood, then coal and later fuel oil. The smog was very bad. We also stopped the use of diesel buses to cut down the air pollution.

"Water pollution is a problem. The Moscow River doesn't really satisfy us because it is dirtyish, but much better than it once was and people can still fish and swim in it. To control industrial and business pollution of the river" he said, "we had to make a real Draconian decision.

"We simply ordered the industries to put on the necessary filters for industrial waste, by set dates, or shut down. Our sanitary department has almost unlimited powers to shut down a factory, fine the factory itself, or to fine the manager personally for violation of the pollution rules.

"We have the authority, but much remains to be done. We haven't been able to channel all the surface water of the city and waste into one central system yet. There are some local sewer systems and we still get some illegal dumping of waste. In one recent case we have pinpointed the general area it's coming from, but we haven't found the exact factory yet. We will, though."

(Another source told us later that Soviet officials are considering making industrial water pollution a criminal, as well as civil, offense. The trouble, this source said, is that some factory managers, trying to make profit records for their plants, have decided it was cheaper to pay the civil fines than to install the necessary filters. That kind of capitalist thinking, this source said, is not likely to be permitted for very long in the Soviet.)

Moscow has no problem with pure drinking water Isayev said. In fact, they are able to provide the same pure water both to industry and for personal use. A canal from the Volga river into the Moscow river and storage reservoirs along the way, have made this possible.

"Our water reserves look okay to the year 2000, but after that we will have to find new sources," Isayev said.

No population explosion is going to trap Soviet city officials in the same kind of urban growth problems American cities face. They project their plans for natural increases but immigration to the cities is strictly controlled. Some plants and other enterprises have been moved out of Moscow simply to prevent overcrowding. No new plants can be built, nor can a factory or other business bring additional people in for its work force without permission from the city Soviet and no Soviet citizen moves from city to city unless he's approved for a job change by the government.

Minsk's chief planner, Victor Chernishov, struggles with most of the same problems we heard about in Moscow. One of his current projects is planning a new surface drainage system for the city. A cloudburst we were caught in at the nearby Belaz truck plant showed us ample evidence of the need.

"It's hard to say what it will cost," Chernishov said, "because it will be built in stages. We know the first stage will cost us 36 million rubles (nearly $40 million at current exchange rates).

The slow-flowing Svisloch river also was giving him pollution problems but, at the same time, providing the setting for an elaborate plan of parks, recreation areas connected by monorail, and green space through the heart of the city.

In Alma Ata, a city surrounded by snow-capped mountains, city officials are combatting a different kind of river problem. A mountain stream, placid and harmless most of the year, produces a roaring flood in springtime—flushing automobile-sized boulders down upon the city. Huge concrete and steel fences have been erected in the stream valley to halt the boulders but that hasn't solved the problem.

Now a 330-foot high earthen dam is being built far back up in the mountains as a "holding pool" for the rocks and debris, with a sluiceway under the dam to let the water through.

"We used 5,000 tons of dynamite to blow off the sides of two mountains, all at once, and drop them into the mouth of the valley," the vice-mayor said. "This dam will last for a thousand years."

Novosibirsk's Gorda Skoblikov, chief architect for this Siberian city of more than a million people, already is talking about the creation of "satellite" communities for industry, to avoid overcrowding of the central city. One satellite already has been created, but this is the famous "Science City"—a modern complex of college, university and research institute centers.

Founded only in 1893, Novosibirsk took just 62 years to grow to a million population. Its growth stemmed, mainly, from purposeful decisions by the Soviet government to move educational, research and industrial enterprises out of Moscow and other cities and to reestablish them on the Siberian plains.

In contrast to the other city offices we visited, Novosibirsk's planner would not permit us to photograph the model of his new city plan; it includes provisions for new bridges across the river that flows through the city.

COMPARISON OF CURRENT FOOD STAMP PROPOSALS

HON. WILLIAM J. GREEN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. GREEN of Pennsylvania. Mr. Speaker, few of us would argue that there are Americans who are deprived of a substantially nutritious diet because of low income. But finding an answer to the problem is rather difficult. Fully five different food stamp proposals have been introduced in Congress. On September 24, the McGovern-Javits bill passed the Senate and the House Agriculture Committee is currently holding hearings on food stamps.

I thought it would be helpful to my colleagues to be able to compare the existing law, the Food Stamp Act of 1964, with the proposed legislation—the Senate passed bill, S. 2547; the Nixon administration proposal, introduced by Representative CATHERINE MAY on June 17 as H.R. 12222; the bill I coauthored with Representative TOM FOLEY on August 11, H.R. 13423, and the Poage bill or the Food and Agriculture Act of 1969, introduced by Representative W. R. POAGE on June 25 as H.R. 12430.

The following is a comparison of these proposals:

Item	Present act	Senate substitute (S. 2547)	Nixon-May bill (H.R. 12222)	Foley-Green bill (H.R. 13423)	Poage bill (H.R. 12430)
1. Policy of program	Raise levels of nutrition among low-income households.	Permit low-income households to receive a share of food abundance sufficient to provide them with adequate levels of food consumption and nutrition.	Permit low-income households to purchase a nutritionally adequate diet.	Provide adequate levels of food consumption and nutrition among low-income households by permitting them to purchase a nutritionally adequate diet.	No change.
2. Method and level of funding.	Authorization of appropriations: Fiscal 1970, $340,000,000; fiscal 1971 (1st 6 months only, through Dec. 31, 1970), $170,000,000.	Authorization of appropriations: Fiscal 1970, $1,250,000,000; fiscal 1971, $2,000,000,000; fiscal 1972, $2,500,000,000.	Authorization of appropriations: Fiscal 1970, $610,000,000; fiscal 1971–72, such sums as Congress may appropriate.	Food stamps to be a Commodity Credit Corporation-run program with CCC empowered to use up to $19,500,000,000 in borrowing authority to fund this and various farm programs, followed by appropriations to reimburse CCC for previous year's expenditures.	Authorization of appropriations: Such sums as may be necessary.
3. Carryover of unexpended funds.	None—Unspent funds automatically revert to the Treasury.	Unspent funds continue to remain available until expended.	Unspent funds continue to remain available until expended.	No problem with CCC financing.	No change.
4. Terms of program	Ends Dec. 31, 1970	Ends June 30, 1972	Ends June 30, 1973	Ends June 30, 1974	Open ended.
5. Territorial coverage	50 States only and District of Columbia.	50 States, District of Columbia, Puerto Rico, Virgin Islands, Guam, Trust Territories of Pacific.	No change	50 States, District of Columbia, Puerto Rico, Virgin Islands, Guam, and American Samoa.	No change.
6. Individual coverage	Group of related or nonrelated individuals living as 1 economic unit sharing cooking facilities and for whom food is customarily purchased in common. Not residents of institutions or boarding houses.	As in Foley-Green bill	do	Includes persons residing in private nonprofit institutions or in boarding houses (except for persons in fraternities, sororities, or social clubs) as well as persons 65 years or over.	Do.
7. Product coverage	Any food or food product except alcoholic beverages, tobacco, imported packaged foods, and imported meats or meat products.	Includes items necessary for personal cleanliness, hygiene, and home sanitation.	do	Includes imported food or food products where Secretary determines that comparable domestic items are not reasonably available; nonfood products which Secretary determines to be essential for personal cleanliness, hygiene, and home sanitation; meals to residents of private nonprofit institutions or boarding houses and to persons over 65 by private nonprofit organizations or schools.	Do.
8. Store coverage	Establishment or house-to-house trade route that sells food to households for home consumption.	As in Foley-Green bill	do	Same as in present program plus private nonprofit institutions or boarding houses and private nonprofit organizations or schools which provide meals to persons 65 years or over and DOD commissaries for households otherwise eligible to utilize them.	Do.
9. Income eligibility level	State agency to determine consistent with income standards used in federally aided public assistance programs.	Secretary to set minimum income eligibility level for purchasing adequate diet at no less than $4,000 for household of 4 or the equivalent as well as maximum income level for participation, with possible regional variations.	Secretary to establish uniform national standards of eligibility in consultation with Secretary of HEW (emergency eligibility standards to help disaster victims on a temporary basis).	Secretary to set eligibility standards with maximum disposable income criteria to be equal to 4 times the cost of the low-cost food plan as varied for household size, composition, 4 regions, and rural-nonrural areas.	Do.
Example: Family of 4 with 2 schoolchildren.	$1,800 (Virginia) to $4,140 (Alaska, New York).	$4,000	$3,600	New York City, $6,530; rural Vermont, $4,550; Cleveland, $6,030; rural Iowa, $4,220; Atlanta, $5,450; rural Mississipp, $3,810; Los Angeles, $6,160; rural Utah, $4,310.	Do.
10. Resource limitation on eligibility.	State agency to determine	State agency to fix subject to Secretary's approval, but no inclusion of income realized through liquidation of resources.	Secretary to establish as part of uniform national eligibility standards.	Secretary to determine maximum value for personal or real property owned by eligible household.	Do.
11. Method of certification	Determined by State welfare agency (forms and investigation).	Certification solely by execution of affidavit prescribed by Secretary.	No change	Certification solely on execution of affidavit prescribed by Secretary.	Do.
12. Challenge to certification.	No provision	No change	State agency to grant fair hearing and prompt determination to any aggrieved household affected in participation.	Operating agency to have right to challenge information included in affidavit before panel of 3 appointed by Secretary with challenged household to participate on basis of affidavit information during pendency of challenge.	Do.

Item	Present act	Senate substitute (S. 2547)	Nixon-May bill (H.R. 12222)	Foley-Green bill (H.R. 13423)	Poage bill (H.R. 12430)
13. Penalties	Criminal offense to knowingly acquire coupons in unauthorized manner.	No prosecution on basis of any information or statements contained in affidavit, except for fraud.	No change	Additional criminal offense for knowingly making a false affidavit; enforcement by special unit within Office of Inspector General known as the Food Stamp Squad.	Do.
14 Interjurisdictional certification.	No provision	As in Foley-Green bill	do	Certification valid for 60 days if household moves to another political subdivision in which program is operating.	Do.
15. Place of coupon issuance.	Purchase at banks, credit unions, welfare agency offices, poverty agencies, local businesses.	Purchase through post offices, participating retail food stores or other participation insuring convenient manner, including banks, and credit unions.	do	Purchase through operating agency or, if operating agency delegates responsibility, from post offices, banks, credit union, community action agencies, and other public or private nonprofit agencies.	Do.
16. Frequency of coupon issuance.	At least monthly	At least weekly	No change from present program.	At least weekly	No change.
17. Method of coupon purchase.	Transfer for cash	Cash or deduction of charge by State from federally aided public assistance payments when household so elects plus permission to purchase portion of full coupon allotment with proportionate reduction in charge.	Cash or deduction of charge by State from federally aided public assistance payments when household so authorizes and Secretaries of USDA and HEW approve.	Cash or deduction of charge by State from federally aided public assistance payments or from Federal old-age, survivors, and disability insurance benefits by Federal Government when household so authorizes.	Do.
18. Price of coupons	Amount equivalent to household's normal expenditures for food.	No more than 25 percent of household income to be charged any eligible household (test of reasonable investment).	No more than 30 percent of household income to be charged any eligible household.	If income is between ⅓ and ⅔ of low-cost food plan ($40 to $80 a month for average family of 4)—no more than 5 percent of disposable income. If income is between ⅔ and 1⅓ of plan ($80 to $160 a month)—no more than 10 percent of disposable income. If income is between 1⅓ and 2 times plan ($160 to $240 a month)—no more than 15 percent disposable income. If income is between 2 and 3 times plan ($240 to $360 a month)—no more than 25 percent of disposable income.	Do.
19. Free coupons	None, except in 2 counties in South Carolina for families of 3 or less with less than $20 of income a month and families of 4 or more with less than $30 of income a month.	To households with income less than ½ the cost of a nutritionally adequate diet (now $767 or ½ of $1,534 June 1969 cost of low-cost food plan—approx.mately $64 a month.	To households with little or no incomes or other financial resources under standards prescribed by Secretary (less than $30 a month for family of 4).	If household's disposable income is less than 33⅓ percent of low-cost food plan applicable to household ($40 a month for average family of 4).	None, except that properly supervised employment, service, or public work equivalent in value to cost may be substituted therefor.
20. Total value of coupons	Such amount as will provide household with an opportunity more nearly to obtain a low-cost nutritionally adequate diet with a range of from $58 a month (southern family of 4 with income under $30 a month) to $100 (northern family of 4 with income of $325 a month).	Low-cost food plan or $127-plus a month for a family of 4 to be equivalent to nutritionally adequate diet, with annual revision.	Economy food plan or $100 a month for a family of 4 to be equivalent to nutritionally adequate diet.	Low-cost food plan defined as nutritionally adequate, taking into account regional and rural—nonrural food price differentials—(between $108.80 a month in rural Mississippi and $135 a month in New York City for a family of 4).	No change
21. Federal administrative responsibility.	Food Stamp Division of Consumer and Marketing Service.	No change	Food Stamp Division transferred to new Food and Nutrition Service.	Commodity Credit Corporation with 7-man Board of Directors (Secretary, Under Secretary, and 5 Assistant Secretaries of Agriculture) to oversee with daily operations by Food Stamp Division in new Food and Nutrition Service.	Do.
22. State and local administrative responsibility.	State agency must request program and set plan of priorities among counties which desire to participate. Possible program revocation by Secretary if State agency fails to comply substantially with act, regulations, or State plan of operation and State fails to correct such failure within reasonable time of notification thereof by Secretary.	Authority for Secretary to operate programs directly or to use other local public or private nonprofit organizations to administer State program if State fails after reasonable period to comply with the law or if Secretary determines that there is a need for the unrequested program or if no program is being operated after Jan. 1, 1971, or if Secretary determines that the ratio of participants to the poor is inadequate to effectuate act's purposes.	State agency must provide for operation of food stamp or commodity distribution program in each of its political subdivisions by June 30, 1970 (or 1971 if Secretary is willing because Governor notifies him of need for State legislative action), or else State cannot continue to participate in either program; State must provide for commodity distribution program until areas can be approved by Secretary for food stamps.	Secretary must directly administer program or administer it through private nonprofit agency when State agency has not submitted plan of operation for program in all of its political subdivisions, but only in nondesignated area. Secretary may so administer program if number of persons participating in an area is less than 50 percent of the OEO-classified number of poor persons in the area for 3 consecutive months after July 1, 1970. If Secretary fails to exercise discretion so to administer, he must report annually to the Congress his reasons for failing to do so and the reasons for the low level of program participation.	Do.
23. Payment of administrative costs.	Federal Government finances cost of bonus coupons and their printing and 62.5 percent of travel and salaries of State personnel engaged in certifying nonassistance households.	Secretary shall pay all issuance costs.	Same as in present program plus 62.5 percent of cost of hearing officials and outreach personnel.	Secretary permitted to pay State agencies 50 percent of their administrative costs including all certification and issuance costs, and up to 100 percent of administrative costs to private nonprofit agencies operating the program or a simultaneous commodity program.	Do.

Item	Present act	Senate substitute (S. 2547)	Nixon-May bill (H.R. 12222)	Foley-Green bill (H.R. 13423)	Poage bill (H.R. 12430)
24. Simultaneous commodity distribution and food stamp issuance.	Not unless emergency situation caused by a national or other disaster as determined by Secretary—interpreted to exclude long-term, nonnatural disasters.	Permitted during temporary emergency; in any county during the transition period from commodity distribution to stamps until food stamp participants exceeds average of commodity participants in 3 most recent prestamp months; and at request of State agency if State agrees to pay distribution costs of program.	Secretary may authorize for whatever period he determines necessary upon State agency request to effect orderly program transition (3 months?) with continued limited Federal payment of administrative costs of both programs or upon State agency request if State agrees to finance all of commodity distribution costs.	Permitted during temporary emergencies; at State agency request in program transition period; at State agency request at any time if State agrees to pay distribution program costs (other than food); and at request of private nonprofit agency which wishes to run distribution program.	Do.
25. Program outreach	No provision	As in Foley-Green bill plus requirement that State make every possible effort to insure that all eligible households are certified.	State agency must undertake effective action to inform poor of program's availability and benefits and insure their participation including use of services of other federally funded organizations.	Potentially eligible households must be informed of program's existence and given aid in making application.	Do.
26. Education	No provision other than administrators should take steps, including the coordination of other bodies' informational and educational efforts, to insure that participants obtain needed staple foods, particularly those in abundant or surplus supply.	Participants to be afforded nutrition counseling and home economics services through voluntary cooperation of Federal, State, local, or private agencies.	No change	As in Senate substitute	No change.

DRAFTING OF 19 YEAR OLDS

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. TEAGUE of Texas. Mr. Speaker, with the consideration of H.R. 14001, the Selective Service Amendment Act of 1969, coming before the membership tomorrow, I feel it is imperative we place in the RECORD and consider the statistics of U.S. casualties in South Vietnam by age and military service as of July 1969. Time and again, I have asked myself, Is 19 years of age the most optimal at which to draft and send our men into combat? Should 18,116 of our country's best 18-, 19-, and 20-year-old men have been sent into combat, most of whom never having had the opportunity to vote for the men who sent them off to war. I hope my colleagues will give much consideration to the issue of whether we should draft 19-year-olds first.

The tabulation follows:

U.S. CASUALTIES IN SOUTHEAST ASIA BY AGE AND MILITARY SERVICE

Attained age	Military service					
	USA	USN	USCG	USMC	USAF	Total

THE $20,000 FARM PAYMENTS LIMITATION

HON. PAUL FINDLEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. FINDLEY. Mr. Speaker, the Agriculture appropriations bill for 1970 is now being considered by a Senate-House conference. One of the most important decisions to be made by the conferees is whether to retain the $20,000 limitation on payments to individual farmers which the House included in the bill. Because of the misinformation which exists on this question, I am including the text of my letter of today to Secretary of Agriculture Clifford M. Hardin. As my letter indicates, it would be beneficial to both the American farmer and the taxpayer to retain the payments limitation in the final bill.

Text of letter follows:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
October 29, 1969.

Hon. CLIFFORD M. HARDIN,
Secretary of Agriculture.

DEAR MR. SECRETARY: In the interest of better income for cotton farmers as well as the

broader interests of all taxpayers I urge that you take the unusual but thoroughly justified step of rescinding your decisions of October 15 and October 17 calling for an increase of one million acres planted to cotton for the 1970 crop.

In this letter and the tabulation attached I will set forth the reasons for this recommendation. In summary, it would appear indefensible for the Department of Agriculture to call for increased cotton production in 1970 just a few weeks after you had warned the Congress of a costly buildup of unneeded cotton inventory if the $20,000 payment limitation feature is retained in the appropriation bill for agriculture, now in conference.

A further reason to drop plans for increased acreage arises from the administrative cost of going through the adjustment and notification procedure. This procedure, which has not been gone through for years because the allotment has remained unchanged, will add needless expense to the operation of the ASCS offices. Because the procedure is necessarily involved and requires time to carry out, I feel confident that the cancellation of plans for the larger allotment can still be accomplished.

I therefore urge that the Department of Agriculture maintain the 1970 acreage allotment for cotton at the present level of 16.2 million acres, as was originally set, rather than lifting it to 17.15 million acres. This would permit the Senate and House conferees on the 1970 Agriculture Appropriations bill to retain the $20,000 payments limitation amendment voted by the House and at the same time, according to the Department's own figures, save taxpayers $63 million over projected expenditures for 1970 and increase income to cotton farmers by $172 million compared with 1969.

The only reason to increase the acreage allotment for cotton is "to assure the maintenance of adequate stocks in the United States to provide a continuous and stable supply of the different qualities of cotton needed in the U.S. and in foreign cotton-consuming countries." (USDA Bulletin 3215–69.) When you testified before the Subcommittee of the Senate Appropriations Committee on June 4, 1969, you asserted that the "snapback provision" of the cotton program which would be activated by the payments limitation would result in additional cotton production which would have to be purchased by the government to the extent that it would cost the taxpayer an additional $160 million over the cost of the projected program.

However, events since then have proved that the assumptions upon which your staff based this calculation were grossly inaccurate. The chief miscalculation was the prediction that under snapback the 1970 cotton crop would yield 550 pounds per acre. This yield was based upon the then projected 1969 cotton crop yield of 520 pounds per acre. In fact, the actual yield for this year is now estimated at only 450 pounds per acre—a downward adjustment of 70 pounds per acre or 777 million pounds for the 1969 cotton crop. In fact, this adjustment was given as the reason for the call for increased production of cotton next year.

This substantial change in forecasting cotton production prompted me to request the Department to revise its forecast for next year's cotton crop, upon which you based your conclusion that snapback would cost an additional $160 million.

I have just received the revised figures from the Department. After reviewing them, one must conclude that, rather than increasing the acreage allotment to assure an adequate supply of cotton, the Department should maintain it at the original 1970 level and accept the snapback provision and the $20,000 payments limitation.

If this were done, according to the Department's own figures, under snapback cotton production would only slightly exceed the revised 1970 level of production forecast if 17.15 million acres are planted. This would assure the maintenance of adequate stocks of cotton, while at the same time, again according to the Department's own figures, save the American taxpayer approximately $63 million over what the Department now proposes to spend for the cotton program next year. This savings would result because the total expenditure for inventory buildup, storage, payments, and loans under snapback would amount to only $987 million, while the Department now anticipates a cost of $1,050 million with an acreage allotment of over 17 million acres.

In addition, it should be pointed out, that the largest item making up this expenditure—$590 million for CCC cotton inventory—cannot truly be considered a "cost", as you have maintained. Based on long experience, this inventory would be resold at an average price of $120 per bale, thereby even further reducing the cost of the cotton program under snapback.

What is significant, however, is that if the Department of Agriculture maintains the acreage allotment at the originally announced 1970 level of 16.2 million acres, according to the Departments own figures it will actually cost less under a $20,000 payments limitation—not more—than the cotton program the Department is presently planning.

Sincerely yours,

PAUL FINDLEY,
Representative in Congress.

THE 1970 UPLAND COTTON QUOTA AND ALLOTMENT INCREASED AND ADDITIONAL DETAILS OF THE 1970 UPLAND COTTON PROGRAM ANNOUNCED

The U.S. Department of Agriculture today announced a revised national marketing quota of 16,008,333 bales (standard bales of 500 pounds, gross weight) and a revised national acreage allotment of 17 million acres for the 1970 crop of upland cotton. This represents an increase of 941,666 bales in the quota and an increase of one million acres in the allotment from that announced on October 1, 1969 (USDA 3046–69).

The increase is brought about by the declining 1969 crop prospects caused primarily by abnormal weather conditions throughout much of the Cotton Belt. The September 8

Crop Report, on which the original determinations were made, indicated a 1969 crop of 10,984,000 bales. The current report indicates production of 10,428,000 bales. The increase in the quota and allotment is necessary in order to assure the maintenance of adequate stocks in the United States to provide a continuous and stable supply of the different qualities of cotton needed in the U.S. and in foreign cotton-consuming countries.

Revised State allotments for the 1970 crop will be announced within a few days.

Also announced today were the following additional provisions of the 1970-crop program for upland cotton.

DOMESTIC ACREAGE ALLOTMENT

For the 1970 crop, the farm domestic acreage allotment has been set at 65 percent of the farm acreage allotment, the minimum authorized by law. Farmers who sign up to participate in the program and who plant at least 90 percent of their farm's domestic acreage allotment, but not in excess of the permitted acreage for the farm, will be eligible for price-support loans and, for price-support payments on the farm domestic allotment.

SKIP-ROW RULES

The skip-row rules which were in effect for the 1969 crop will be applicable to the 1970 crop. In general, under these rules, only the land actually planted to cotton is counted as cotton land in determining compliance with the program provisions.

LEASE AND SALE OF ALLOTMENTS

The final date for filing applications for the transfer of cotton allotments is December 31, 1969. Producers in 381 cotton-producing counties in the U.S. have approved for 1970 the transfer of allotments to farms outside the county. Allotments, however, cannot be transferred from one State to another.

PROJECTED YIELDS

A projected national yield of 500 pounds per acre has been established for the 1970 crop, a reduction of 45 pounds per acre from that set for the last three crop years.

The reduction announced today reflects the failure of cotton yields to realize the levels expected on the basis of trends a few years ago. The projected yield for 1967–68–69 crops was established at 545 pounds because of previous upward trend. During the past four years, yields have been leveling off and have trended down since 1965. The 1970 national projected yield is based on 1964–68 harvested yields (497 pounds average per acre), adjusted for abnormal weather, for trends, and for changes in production practices.

Projected State yields will be announced within a few days.

USDA ANNOUNCES STATE PROJECTED YIELDS, REVISED ALLOTMENTS FOR 1970 UPLAND COTTON

The U.S. Department of Agriculture today announced revised State acreage allotments for the 1970 crop of upland cotton. Also announced were State projected yields.

The new State acreage allotments result from the USDA announcement Oct. 15 (Press Release USDA 3215–69) that the national acreage allotment for 1970 upland cotton had been increased from the 16 million acres set earlier to the new allotment of 17 million acres. The increase was brought about by declining 1969-crop prospects.

Figures on the State projected yields, released today, average out to the 500 pound-per-acre national yield announced on Oct. 15. The State yields are apportioned among cotton-growing counties and are used in calculating price-support payments under the cotton program.

The national projected yield is down 45 pounds per acre from last year and reflects the failure of cotton yields to realize levels expected on the basis of trends a few years ago.

Other details of the 1970 upland cotton program—such as price-support loan and payment levels—will be announced later.

Following are State acreage allotments and projected yields:

State	1970 State's share of national allotment (acres)	1970 State's share of national reserve (acres)	1970 total allotment available for States (acres)	1969 total allotment available for States (acres)
Alabama	1,002,040	21,260	1,023,300	971,351

THE MIRACLE METS

HON. WILLIAM F. RYAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. RYAN. Mr. Speaker, on October 16, the New York Mets defied the sportswriters, the oddsmakers, and the Baltimore Orioles to become baseball's world champions.

Their victory sent the city of New York into a state of euphoria. All New Yorkers share the feelings of immense pride and joy in the Mets' victory and in the realization of their impossible dream.

I salute and congratulate the amazing Mets on their tremendous victory.

I am inserting in the RECORD the following editorial which was broadcast over WINS radio in New York on October 17 and October 18:

THE MIRACLE METS

(By Peter E. Schruth)

Rarely has New York City seen the kind of wild eyed enthusiasm and joy that swept through this normally reserved town the moment the Mets clinched the World Series. Strangers greeted each other and danced in the streets. Tons of ticker tape and any other form of paper that was dispensable and near at hand came pouring out of office windows. It was like Christmas, New Year's and the Fourth of July all rolled up into one.

What caused this tremendous outpouring? We suspect that millions of New Yorkers have been waiting for this moment ever since the Dodgers and Giants followed the gold rush trail to California. It was eminently right that when the Mets reached the pinnacle of glory that had so long seemed beyond their grasp, they should be led by former Dodger Gil Hodges.

The rags-to-riches story of the Mets is the American dream translated into real life. To those who hope for a better life, a better world, a better day tomorrow, the Mets are proof positive that such things are possible. If there is one thing everyone can learn from the Mets and their legions of loyal fans, it is that faith and perseverance still pay off.

WINS joins millions of Mets fans in saluting our local baseball heroes who are now Baseball Champions of the World. They've given New Yorkers something that we can all get together and cheer about—a gift for which all of us are deeply grateful.

THE MORATORIUM—ITS QUESTIONABLE RESULTS

HON. J. HERBERT BURKE

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. BURKE of Florida. Mr. Speaker, the critics of the Vietnam war have removed their gloves and have come out swinging.

As questions pro and con build, we must pause and reflect rather than jump to conclusions as to the honest result of the recent moratorium. It is true that many of those who supported the movement are Americans who sincerely believe that the United States should withdraw its forces from a war which they feel it cannot or is not trying to win.

I am sure, however, that all people in this country, whether they supported the moratorium or not, favor peace and do not advocate war; but by the same token,

we must remember that Rennie Davis, one of the eight revolutionaries on trial in Chicago for inciting riots during the Democratic Convention last year, told a rally in Grant Park at that time that North Vietnam has a "secret weapon," which secret weapon is a "revolutionary people." He said that there would be no peace, therefore, in this country until every soldier is brought out of Vietnam and that our system, which he called "the imperialist system," must be destroyed.

He and the other anarchists in this country, who unfortunately are being supported by many well-meaning Americans, argue that a Communist takeover in South Vietnam, either through the imposition of a transition coalition regime or by a military victory, would at least be a Vietnamese settlement and that this type of settlement would preclude our interfering further in Vietnam.

It is strange that these people, who view our part in the war as utterly immoral, forget the mass graves of the civilians in Hue, the ancient capital after its temporary occupation by the Communists, or the blood bath that will follow a complete American pullout.

Certainly, no matter how many marched in the moratorium, they cannot honestly fault President Nixon with regard to his efforts to end the war in Vietnam. He has taken significant steps to end our American involvement. He has reduced the number of American troops there and has promised to reduce them still further.

As a nation, we have always been a peace-loving and freedom-loving country and have never been satisfied with one unless we had the other—not only for ourselves but for the other peoples of the world, who share our love for peace and freedom.

Less than a year ago, the American people went to the polls, as our system of government provides, and in an orderly process, elected a new President. The American people spoke and changes in our position in Vietnam are being made. And, while perhaps there has not been as much progress as many, myself included, would have liked, in my opinion, there has been progress made and more will be made.

The real question, however, is how or in what manner shall we close our involvement in Vietnam?

Those who supported the moratorium in the House of Representatives, one after another, debated their position long into the night the evening before the moratorium. I, as one listener, came to the conclusion that although they spoke in opposition to the war, yet they really had no better answer to solve the problem than the course which the administration is trying to follow; namely, for gradual, meaningful withdrawal of our troops and orderly disengagement from the conflict, without complete surrender.

When the speeches which were made and the results of the moratorium itself have been analyzed, I can but come to the conclusion that the debate has come, after full cycle, back to the only conclusion—that is, the constitutional responsibility for bringing the conflict to an end rests with the President of the United States.

The President has stated that a negotiated settlement must include withdrawal of North Vietnamese forces from Cambodia and Laos. A unilateral withdrawal by the United States would leave Communist forces undisturbed, and the North Vietnamese have at least 50,000 troops in Laos, even though they pledged to respect neutrality and territorial integrity, under the 1960 Geneva accord.

No matter what our feeling is about the war, let us not forget that the real truth is that without American assistance, Laos would fall to the Communists.

There are those opponents of the war who argue that the United States has no vital interest in Southeast Asia. Although I do not agree with this contention, we should remember that even if it were true, we have committed ourselves to an obligation and we must ask ourselves what will happen to the credibility of our military prowess and our will to defend if we allow ourselves to withdraw unilaterally from Southeast Asia.

We would be considered a weak sister and such a mistaken view could be an open invitation to more serious agitation all over the world, and which could result in world war III.

If we honestly analyze this question, then we must admit that all hope of stability and peace would vanish from the earth. Certainly, an American defeat in Vietnam would also give the revolutionaries in this country a tremendous purpose to redouble their efforts to destroy our American system of government.

The point that I am driving at is that we cannot be successful in having a secured peace unless we indicate our strength of purpose to preserve freedom in the world, if we are to preserve our own. Impatience can be the word that may well lead us to destruction, for certainly it must be apparent that the Communist influence in the past was halted only when we have proudly, as a nation, said to them "We have had enough."

Surely, we must recognize that the preservation of freedom will not come by our capitulation to communism, nor will peace come unless the Communists themselves are sincerely interested in a movement for world peace.

The answer then as to what the results of the moratorium are still remains unanswered. Certainly, it did not constitute an ultimatum that we surrender. To me, if it was an ultimatum at all, it was one for our political leaders to work for peace—but still for a peace with honor and without surrender. We must guarantee to the American people that our Nation will remain strong, free, and with the hope, for ourselves and our children and their children, that peace will ultimately be a reality throughout the world.

I cannot, however, take the same position that some do in our country—that we are the bad guys, nor can I put blinkers on my eyes and presume that our Nation does not have enemies without as well as within.

I feel strongly that the road to peace is a bumpy one and that it can be achieved, but only if those nations which have instigated trouble throughout the world, namely, the Communist nations, accept a dual responsibility with us as peacemakers.

Those that took part in the moratorium have a right to oppose war. I want peace in the United States. We all want peace, but that has always been our Nation's goal.

So, why not ask the Communists what their goal is. Yes, you know that their goal is world communism, but we should remember that only the United States and its allies stand in the way.

SWEDEN CUTS AUTO REPAIR COSTS

HON. ABNER J. MIKVA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. MIKVA. Mr. Speaker, the spiraling costs of automobile repairs coupled with the shortage of qualified mechanics have become an ever increasing problem in the United States. But we do not fret by ourselves. Among other countries, Sweden has studied this matter thoroughly.

The Swedes have the highest number of automobiles per person in Europe. Thus, they have had a real stake in reducing repair costs. As a matter of fact, they have done just that. In testimony before the Senate Subcommittee on Antitrust and Monopoly, Mr. Dag Wedmalm, second vice president of the Folksam Insurance Group, stated that Sweden has reduced auto repair costs by as much as 15 percent.

What made this possible? Apparently one reason was that insurance company schedules prompted auto manufacturers to produce cars that could be insured at lower rates. The schedules themselves were not devised in a vacuum either. The Folksam Group itself operates a repair shop and thus learns firsthand how simplified design can lead to fewer, simpler repairs and greater traffic safety. It also finds out what rates are appropriate for given cars.

Though Sweden has a somewhat different economic structure from the United States, perhaps our auto manufacturers, insurance companies, repair companies, and consumers alike could profit from a study of Mr. Wedmalm's testimony.

The text of his remarks follow:

STATEMENT OF DAG WEDMALM

MR. CHAIRMAN, MEMBERS OF THE COMMITTEE: My name is Dag Wedmalm. I am the second vice president in charge of automobile insurance of The Folksam Group in Sweden.

Folksam is a cooperative insurance company which operates entirely without private profit objectives. The democratic administration of Folksam is a guarantee of the company's efforts to serve the policy holders. In automobile insurance we have grown rapidly to become the leading firm in Sweden in this branch. Close to 30 per cent of motor vehicles in Sweden are insured by Folksam.

We consider that this development is largely a result of our active premium policy and our efforts in the interests of motorists. Incidentally, every second Swede has an insurance of some kind with Folksam.

Sweden has had a very rapid development of motoring during the 1950s. In 1950 there was 1 car to every 20 persons, in 1960 1 to every 5.5 and, we estimate, in 1970 there will be 1 car to every 3 inhabitants. At present Sweden has the highest percentage of automobiles in Europe.

This rapid evolution created problems, in that highways and streets for example, were not improved at a corresponding rate. These problems were felt by the Swedish insurance companies—not only through the rapidly increasing numbers of claims but also because costs for automobile repairs rose more steeply than the cost of other goods and services. As a measure of this, I can note that between 1955 and 1964 the index for car repairs rose from 100 to 232, while the general consumer price index rose only to 136. These figures must be considered clear evidence that the automobile trade was out of step with the general pattern of development.

The unfavorable pattern of auto repair prices was the main reason why Folksam started its own repair business, in 1964. Another reason was the desire to gain insight into traffic safety as affected by repairs and design aspects.

In our desire to study the way in which other countries tackle automobile repairing it was natural that we should look to the U.S.—the home of motoring. A study group—of which I was a member—visited the U.S. in 1964 and studied the methods which American insurance companies and auto repair shops applied to the problems which we were facing. This trip inspired many important cost cutting initiatives in the field of damage repairs.

Our experience of shop work and what we saw in the U.S. soon told us that efficiency was not sufficiently high in the Swedish automobile repair trade. The question was, how should we attack the problem in order to achieve greater efficiency and thereby reduce costs. After an examination of statistics, especially the frequency of various types of repair, we gave priority to those cost cutting measures which would give a speedy result.

Discussion with Folksam brought forward the viewpoint that Folksam, despite its size as an automobile insurance company, could not alone influence the trade to a desirable degree. When Folksam put out the first feelers towards cooperation in 1965 this resulted in the formation of the Insurance Companies' Automobile Damage Repair Committee. The fact that insurance companies cooperated in matters of common interest, in this case the high cost of damage repairs, was not considered to affect their ability or will to compete in the premium sector. Events have proved the correctness of this assumption.

The work of The Automobile Damage Repair Committee towards cost cutting measures in the automobile repair field led to the thought that motorists ought to pay premiums based on different grounds to those adopted earlier. This train of thought suggested a tariff which took into account cost of repairs to a given make of car and also other significant factors, such as the frequency of claims. Such a system would give fairer premiums and also give the automobile manufacturer an interest in cost reduction measures, since a lower premium class should make a car easier to sell.

It was against this background that the insurance companies formed an Automobile Classification Committee in 1965, with the job of preparing a classification system that all companies would adopt. In Sweden we have basically three types of coverage: *third party liability insurance* which is compulsory, *comprehensive* which includes collision, fire, glass breakage and theft and *partial coverage* including only fire, glass breakage and theft.

In 1965 there were statistics giving average claims and claim frequency, related to the compulsory third party insurance, but these were not differentiated in a way that permitted the distinctions of different makes and models.

The first job, therefore, was to design a pattern for the classification of standard cars which took account of the factors that affect claim frequency. For the basic classification, engine power and the weight of the car were selected. The product of these two figures determined the placing of the car in one of nine premium classes. The jump in premium between each class was 15% of the basic premium.

Sports cars and tuned standard cars were given a penalty of 1 to 4 classes in view of their character and the increased risks. Each model of car was allocated a special code to facilitate the checking and statistical follow-up of the basic classification.

As regards collision insurance the basic classification was made mainly according to cost of repairs. Underlying this was knowledge of those parts on a car which are most susceptible to frequent damage. Information on this aspect was obtained from claim assessments by the insurance company assessors. After data processing, this material indicated which components on the car were responsible for the major portion of damage repair costs due to their frequency of damage and/or high repair costs. These components were selected for the calculation of the relative cost of repairs to each car model. The pattern, or "standard claim" that was thus built up was used to allocate each car to its appropriate collision insurance claim class. It was decided that there should be 26 such classes. The jump in premium between each class was to be 10% of the basic premium.

A standard model—the Volkswagen 1300—was chosen and this was given class code 10. The standard claim cost for each of the other models was then compared with that for the Volkswagen and class allocation was then made according to the predetermined increments in premium. This meant that, if a car carried a standard claim cost that was 10% above that for the Volkswagen then it would be placed in class 11, if the cost increase was 20% it would go in class 12, and so on. In the basic classification we also took account of the likelihood of a car being more frequently involved in claims than the average car. This might then result in it being placed in a higher class.

Partial coverage—that is fire, glass breakage and theft—was classified in the same way as collision. According to our experience, there exists close correlation between the relative costs of these types of coverages.

A computer program was designed, for common statistical processing, to provide a check on the correctness of the basic classification.

Given the very extensive and highly reliable statistcal data, it is possible to alter the classification for such cars which may have been incorrectly placed. Furthermore it gives us an opportunity to modify the pattern for basic classification. This is a very important part of the work, since a dependable basic classification which requires correction only in exceptional cases is essential if the policyholders are to have full confidence in the system. At present, the classification is undergoing review on the basis of 1968 figures.

When the classification system and the classification of all models had been completed, the automobile manufacturers and their main distributors were informed as to the construction of the system and the factors which influence classification. Those companies which found that their models had lost in consumer attraction compared with other models regarding insurance costs at once showed interest in the ways whereby they could reduce the classification of their products. The ensuing negotiations with the Automobile Classification Committee gave good results. As an example, General Motors cut their parts prices by 25%, Renault by 28%, Mercedes by 10–25% and Peugeot by 10%.

In order to further reduce repair costs a number of auto companies made efforts to increase the efficiency of the repair work. Manufacturers have also carried out design modifications in order to secure a lower premium class. On the Opel Kadett, for example, the front fender has been altered from welded to bolted design.

The effects of these measures on the premiums could be directly estimated as the Automobile Classification Committee knew the distribution of the cost of repairs and the frequency of damages on various parts of the car.

The system of classification of cars has meant that all the Swedish insurance companies now have a common system, whereby the relation between premiums for different cars is the same for all insurance companies. Cooperation in this sector has not prevented or restricted the ability or will to compete on premiums. Within the framework of the system, there is wide scope for competition between the insurance companies. For the companies, the system has offered a chance to effectively influence those costs which are most significant in premium fixing, i.e. damage repair costs, the tendency of a given car to result in personal injury claims, and the claims frequency for a given car. The costcutting efforts are, of course, of benefit to the consumer in that he pays lower insurance premiums.

At the Folksam repair shop we have consistently tried to reduce the cost of repairs. Efficient work methods, the right tools, careful planning of workplaces and materials handling—these are all important factors in the efficient operation of a repair business. We have carried out extensive experiments and trials, to some extent in cooperation with leading makers of tools. For a summary of the results, I would refer to the written reports of your hearings in December 1968.

We have found that running a repair business of our own has been beneficial in ways which include the following:

1. We have gained insight into the trade, which is particularly valuable in our central negotiations on pricing and in other ways.

2. We have the knowledge regarding which efficiency measures are necessary and feasible. By pointing to our own achievements we are able to influence the repair trade.

3. We are able to study repair techniques and methods from the traffic safety aspect. By passing on our observations to the trade we can prevent claims resulting from incorrectly performed repair work.

4. We can keep a check on the standard of repairs by regular dealers, by carrying out random inspections.

The proposals for efficiency measures and cost reductions that have emanated from the Folksam shop have been very well received by the trade. It may be appropriate to note that we have enjoyed particularly good cooperation with the Opel Division of General Motors.

In the field of traffic safety the Folksam repair shop has from April 1 this year commenced investigations of the internal safety of cars. As an insurance company, and through our workshop, we have access both to the damaged car and to details of any personal injuries that may have occurred. To secure correct medical assessments, we have started cooperation with appropriate experts.

I would here express the hope that we can establish cooperation with experts in

your country in the traffic safety sector. The exchange of experiences in this field would perhaps reduce the unfortunate consequences of driving.

In Sweden, certain makes of cars are covered by a 5-year collision warranty that includes the repair of damage to the car. As a rule, these warranties are re-insured with the Swedish insurance companies, who also undertake claim adjustment. Thus the insurance companies are able to guard the interests of the consumer as regards both premiums and quality.

The common classification system, the efforts of Folksan. and the work of the Automobile Damage Repair Committee towards greater efficiency and lower costs have resulted in the annual reduction of damage repair costs by about SKr 70 million (about 14 million dollars) for the Swedish insurance companies. This corresponds to some 15% of the annual claims costs for car repairs.

Cooperation on these matters is of the greatest significance. The Automobile Damage Repair Committee currently cooperates with similar committees in all the other Scandinavian countries and in several other European countries. These committees were formed after contacts with the Swedish committee. The problems in this field are international, and a common voice is more likely to win the ear of the auto manufacturers—e.g. in respect to design modifications which would lead to simplified repair methods and greater traffic safety.

FAMILY PLANNING SERVICES

HON. GEORGE BUSH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. BUSH. Mr. Speaker, the OEO family planning projects have been some of their most successful and I am pleased that this administration is giving them additional financial muscle by increasing their funds 50 percent—from $15 million to $22 million. There is no question that these services are badly needed.

This increased effort by Director Rumsfeld is part of this administration's goal to reach in the next 5 years the 5 million women in need of these services. The Republican Task Force on Earth Resources and Population, of which I am chairman, has been studying this problem of administering family planning services to these 5 million women who want but cannot afford them or do not even know how or where to get them. The task force commends Director Rumsfeld for his recognition of this sorry situation and his rapid action to overcome the problem.

One needs only to look quickly at the report prepared by the Planned Parenthood-World Population Research Department to see how ineffective Federal, State, and local governments have been in providing such necessary services. There is certainly nothing new about the fact that unwanted pregnancies of our poor and near-poor women keep the incidence of infant mortality and mental retardation in America at one of the highest levels of all the developed countries.

President Nixon in his population message to the Congress in July stressed the need for action in this area. It seems to me that this fast response on the part of OEO and the fast action taken by Secretary Finch in establishing a new unit on family planning within the Health Services and Mental Health Administration is indicative of an intrinsic interest in our poor and near-poor citizens, and not just mere rhetoric.

NIAGARA FRONTIER GROWERS CO-OPERATIVE MARKET SERVES THE BUFFALO AREA WELL

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. DULSKI. Mr. Speaker, the farmers markets of a few years ago are passing from the scene in our cities and towns. They provide produce right from the fields—no cellophane wrapping.

For many years, we in Buffalo, N.Y., had the Broadway Market. Now that is gone.

We are fortunate, however, in still having the Niagara Growers Co-Operative Market, located at Bailey Avenue and Clinton Street.

Here, the farmers from the surrounding area bring their wares in the early morning and make them available for sale to our people. Some 550 farmers participate in this market.

When they arrive in the wee hours—lights starts going on about 3 o'clock in the morning—the farmers have a choice: They can sell their produce directly to the home consumers, or they can sell to a middleman who in turn resells to the consumers.

The Niagara Growers is headed by Henry Marquart of Orchard Park, N.Y. The Buffalo Produce Exchange is the credit, billing and standard-setting agency for the Niagara Frontier Food Terminal of which Edward A. Waters is executive secretary.

Mr. Speaker, the Buffalo Evening News has captured the drama and the human relations of the Niagara Growers market in Buffalo in an excellent story in its October 18 edition, as follows:

FRUITS OF THE HARVEST POUR FROM FARMLAND TO MARKET

A day at the Niagara Frontier Growers Co-Operative Market starts when the stars are out.

On the fertile farms of Western New York, farmers like Floyd Salisbury of Wilson, load trucks with the fruits and vegetables of their acres and head toward Buffalo.

The sky—is still caped in black when Mr. Salisbury arrives at his stall.

All winter long, he and his wife, Hazel, have pruned the trees in their orchards.

"It's like a perfume factory when they blossom," he'll tell you, smiling at the heady May memory.

Now, at the market, as he arranges baskets of golden pears and ruddy apples with a large tender hand, is the climax:

The triumph over poor weather, insects, blight and perhaps, most threatening of all, the temptation of the small farmer to abandon the land for city work.

But the day's battle for Floyd—"These fellows are rugged individualists," says Carlton S. Raines, market manager—is not won yet.

Upon his arrival at the 10-acre market place, Farmer Salisbury has two choices: to sell his produce himself, or to dispose of it through a middleman, who in turn, will resell it at a marked-up price.

Hucksters or "street curb brokers," as farmers who both raise and sell their crops call the middleman, with a faint curl of the lip, today compose about half of the stall operators on "Farmer's Walk": The teeming fruit, vegetable, flower, honey and cider-lined thoroughfare where about 550 farmers sell the harvest of their hearts and hands.

But the middleman does give the farmer some advantage; he enables him to dispose of his produce and return to the farm by sunup. In a day when farm labor is scarce, this helps.

Floyd Salisbury, however, a plaid beret on his head, and his face like an old portrait, stands his ground, as his father, Harry, and his grandfather, Guy, did before him. Only Guy ploughed his fields with oxen.

Around him, as the sky lightens in the east, the fruit of plant and vine shine and glow in exultant color. The "20-ounce" apples, the saffron squash, the lacey broccoli, the glossy peppers and the crimson tomatoes.

The mist of basil, the transparency of onions and the majestic purple grapes.

Against the backdrop, the drama of America's free enterprise system unfolds for Western New York farmers who each year bring about 30,000 loads of produce to the market.

Barter is the essence of the market, which does a $3 million annual basis. Each man can demand his own price, based on the quality of his harvest and his own wits, guided of course, by State Department of Agriculture & Markets reports he has read or heard over the radio, which give the latest "going" rate.

Over-all, however, hovers both a catalyst and a threat: Produce is perishable, and must be sold while it's fresh.

As the sun streams down on the stalls, Farmer Salisbury pits his love of the land against reality.

Cross the street to the Niagara Frontier Food Terminal and see the wholesale side of the market business.

The long, low yellow brick buildings with their green, red, and pink and blue sheds have a carnival air.

Day starts with the greetings of locomotive whistles, bringing freight cars from across the country onto the terminal's dozen tracks.

About 3 AM the lights begin to go on in the 40 stalls of the "commission men," the wholesale dealers who roll up a $30 million annual business.

The damp air becomes saturated with the scent of produce from around the world as stalls are readied for chain store and independent supermarket buyers, and individual grocers.

When local crops are in harvest, the wholesalers also buy from Western New York farmers who come trekking in with their loads. A farmer may split his load, selling half at the terminal and half at the farmers' market.

Many of the wholesale men are of the second and even third generation in the business.

Grandfather or father started off simply, sometimes with a pushcart. It was a steep climb up, but now they're at the top:

The patriarch of the market, Louis J. DiCarlo, 56 years in the business, and his son, Jack, a UB graduate.

The father and son team of Joseph and Joseph Jr., Scandurra, another college lad.

Biggest of all—Bronstein & Rovner, a three-generation corporation.

James Desiderio and his namesake offering fancy imports such as kiwi fruit, Italian figs and chestnuts from Italy and more recently "soul" food such as sugar cane, okra and purple hull peas.

M. & T. Chirico Inc., whose name is synonymous with celery.

The third or fourth generation is inclined to leave the market.

"My grandfather and father were in it," says William Bernhard of Bronstein & Rovner. "I went to UB, and decided to stay here. It's an exciting business, and it gets in your blood. But my son, now he's a premedical student at Harvard."

It is an exciting business, in which the odds are supply and demand; weather conditions; railroad schedules; and always perishableness. A day can be a race or wrestle with any or all.

But underneath these mercurial and fluctuating factors of a highly competitive enterprise, whose modus operandi is bargaining, the cornerstone is the simple word "trust."

"It's people who make a market," says genial Jay H. Wattles, terminal president, who with his brother J. B. runs their family's butter and egg business. "It's one's personality, and how sharp one is in dealing with the growers that makes or breaks a person here.

"You see, no money is exchanged when an order is placed. A dealer telephones a grower in California—'Send me a carload of oranges, Joe.' And Joe sends it on trust.

"The whole thing is a matter of confidence in people who know you, and people you know. It's been that way since this business began. Your word is really your bond."

Before daybreak, these far flung orders—based on trust—start rolling in to the terminal by train or truck; 4000 carloads or their equivalent in truck tonnage arrive annually at the terminal from out of the state.

Aluminum trucks, some 40-feet long, hitched three in a row; red trucks, orange trucks, stakes (slat-sided vehicles) and vans fill the terminal in the morning light.

The place is filled with them, dwarfing the smaller conveyors—the electric fork lifts, the pallets, skate-wheel conveyors and wheeled handtrucks which haul the produce up or down to the bartering level.

Generally speaking, on both sides of the road, the bargaining is done quietly.

Mingling among the farmers and merchants, representatives of the Department of Agriculture gather the results.

By noon, the great central parking lot of the food terminal is deserted with only a food handler or two lounging against a stall post—a ghost town until tomorrow.

And Farmer Floyd Salisbury boards his empty truck and drives back to Wilson, thanking God he lives in the country.

TRIBUTE TO THE LATE HONORABLE EDWARD H. REES

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. EVINS of Tennessee. Mr. Speaker, I want to join with the congressional delegation from Kansas and other colleagues in paying a brief but sincere tribute to the late Representative Edward H. Rees who retired from the House in 1960 after 24 years of outstanding service. Ed Rees was chairman of the Committee on Post Office and Civil Service where he rendered a great service and was also the sponsor of legislation changing Armistice Day to Veterans Day thereby honoring veterans of all wars in which American servicemen participated.

Ed Rees was well known as one of the outstanding Members of the House during his time of service, and on one occasion received an award as Outstanding Congressman of the Year.

He will be greatly missed by his friends, and I take this means of extending this expression of my deepest and most sincere sympathy to Mrs. Rees and other members of the Rees family.

PRESIDENT'S MESSAGE ON MERCHANT MARINE

HON. WILLIAM S. MAILLIARD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 23, 1969

Mr. MAILLIARD. Mr. Speaker, campaign promises have a way of being forgotten the day after a successful election. Those of us in Congress who have worked to maintain a strong merchant marine have grown accustomed to campaign oratory that is never implemented.

On September 25, 1968, President Nixon delivered a careful analysis of the impending demise of our merchant marine. He concluded his remarks with the following words:

The old ways have failed, to the detriment of the seaman, the businessman, the balance of payments and the national defense. The time has come for new departures, new solutions and new vitality for American ships and American crews on the high seas of the world.

On October 23, 1969, President Nixon fulfilled the pledge which he made a year ago in Seattle. His message to the Congress does, in fact, offer new departures and new solutions which will indeed challenge the American shipbuilding industry, ship operators, and labor. After years of being treated as a stepchild of the economy, the leaders of maritime industry and labor now have been called upon to demonstrate that the President's confidence is well-founded.

All major programs are the result of the work of many people, and the President's maritime recommendations are no exception. President Nixon is fortunate in having such a capable team within the Department of Commerce. Recognition of the efforts of the Secretary of Commerce Maurice Stans, the Under Secretary Rocco Siciliano, and the Maritime Administrator Andrew Gibson is certainly due. Their dedicated efforts will not be forgotten by the American merchant marine.

Congress must now fashion the legislative framework for the President's maritime program. I am sure our responsibility will be carried out promptly.

AIR POLLUTION CONTROL

HON. WILLIAM J. GREEN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. GREEN of Pennsylvania. Mr. Speaker, the demand for air pollution control in this country can be measured by the growth of public opposition to the Justice Department's decision to drop the antitrust charges brought in Federal court in Los Angeles against automobile manufacturers. The suits allege that car makers have conspired to prevent the development of smog control devices.

The case has national significance. And because of this, it is receiving broad support across the Nation.

I was proud to see that two outstanding mayors from my home State, Pennsylvania, have filed briefs urging public access to the important information gathered in this case and vigorous enforcement of antitrust laws.

I am inserting in the RECORD the comments filed by Mayors Thomas J. Monaghan of Lancaster, and Louis J. Tullio of Erie:

[U.S. District Court, Central District of California]

UNITED STATES OF AMERICA, PLAINTIFF v. AUTOMOBILE MANUFACTURERS ASSOCIATION, INC., ET AL., DEFENDANTS—CIVIL ACTION NO. 69–75–JWC

MOTION FOR LEAVE TO FILE COMMENTS

Mayor Thomas J. Monaghan of Lancaster, Pennsylvania and Mayor Louis J. Tullio of Erie, Pennsylvania (hereinafter "Movants") by their attorneys, hereby respectfully request this Honorable Court for leave to file the attached Comments opposing the entry of the Consent Decree proposed by the parties in the above-captioned case. In support of this request, Movants allege as follows:

1. The Cities of Lancaster, Pennsylvania, and Erie, Pennsylvania, have a direct interest in the resolution of this vital litigation. The Cities of Lancaster and Erie are the focal points of large and expanding metropolitan regions, with combined in-city populations of approximately 200,000, and a combined metropolitan regional population of approximately 549,000. Both Cities, in addition, experience significant problems of air pollution. As is the case with all large cities, the major portion of these problems in the Cities of Lancaster and Erie may be traced directly to the operation of motor vehicles. The allegations of the Complaint filed by the United States in this case, if proved, would establish that the Defendants have been responsible over a period of at least 15 years for preventing development of effective air pollution controls for such motor vehicles. As such, a full public trial in this case would serve the public interest by establishing the responsibility, both moral and legal, of the Defendants for the damages resulting to the citizens of Lancaster and Erie, Pennsylvania, from automobile air pollution.

2. Movants first learned of this Honorable Court's Order of September 17 upon receipt in the mail on October 3 of the September 30 daily edition of the *Congressional Record*, in which Representative Brown of California reprinted the said Order on Page E7979. Promptly thereafter, Movants prepared the attached Comments, and are presently sub-

mitting them to this Honorable Court for consideration.

3. No prejudice will result either to the parties to this litigation or to the Honorable Court if Movants are permitted leave to file the attached Comments. Movants will not oppose an extension of time until October 23 for any Defendant who might wish to file a Response to the attached Comments. Such an extension would neither inconvenience nor require the postponement of the Hearing presently set for October 28 on the proposed Consent Decree, and all Comments and Responses would be thus filed with this Honorable Court well in advance of that date.

Wherefore, Movants respectfully request that this Honorable Court enter an Order granting them leave to file the attached Comments of Mayor Thomas J. Monaghan of Lancaster, Pennsylvania, and Mayor Louis J. Tullio of Erie, Pennsylvania.

Respectfully submitted,

JOHN M. ELLIOTT,
EDWARD F. MANNINO,
Attorneys for Movants: Thomas J. Monaghan, Mayor of Lancaster, Pa., and Louis J. Tullio, Mayor of Erie, Pa.

[U.S. District Court, Central District of California]

UNITED STATES OF AMERICA, PLAINTIFF v. AUTOMOBILE MANUFACTURERS ASSOCIATION, INC., ET AL., DEFENDANTS—CIVIL ACTION NO. 69-75-JWC

(Comments of Mayor Thomas J. Monaghan, of Lancaster, Pa., and Mayor Louis J. Tullio, of Erie, Pa.)

Pursuant to this Honorable Court's Order of September 17, 1969, inviting submission of "the views of all interested persons and public bodies," Mayor Thomas J. Monaghan of Lancaster, Pennsylvania, and Mayor Louis J. Tullio of Erie, Pennsylvania, hereby submit, through their attorneys, the following Comments in opposition to the Consent Decree proposed by the parties in this case on September 11, 1969:

1. These Comments are filed on behalf of Mayor Thomas J. Monaghan of Lancaster, Pennsylvania, and Mayor Louis J. Tullio of Erie, Pennsylvania. The Cities of Lancaster and Erie are the focal points of large and expanding metropolitan regions in Pennsylvania, with combined in-city population of approximately 200,000, and a combined metropolitan regional population of approximately 549,000. Both Cities experience significant problems of air pollution. As with all metropolitan areas, the major portion of these problems in Lancaster and Erie may be traced directly to the operation of motor vehicles. Indeed, the gravity of the automobile air pollution problem in Pennsylvania has recently been affirmed by the Joint State Government Commission of the General Assembly of the Commonwealth of Pennsylvania, which, after study, has concluded that "At the present time [1967], the air pollution originating with the motor vehicle is virtually uncontrolled in Pennsylvania." *Supplemental Report on Automotive Air Pollution*, pg. 12.

2. The substantial dangers to health posed by automobile air pollution have repeatedly been documented by state and federal agencies vested with the responsibility of safeguarding the public health and welfare. Thus, in his First Report to the United States Congress pursuant to the Air Quality Act of 1967, the Secretary of Health, Education, and Welfare reported (S. Doc. No. 92, 90th Cong., 2d Sess. (1968), at pp. 15–17):

"In terms of the total quantity of pollutants, the automobile represents the most important single source of air pollution in the United States today. The nationwide contribution of the motor vehicle to five major air contaminants is shown in figure 4. It is the prime source of two of these pollutants, carbon monoxide and hydrocarbons, and it produces nearly half the total nitrogen oxides released. Carbon monoxide, which impairs the oxygen-carrying ability of the blood, can reduce visual acuity and motor ability in small concentrations and is fatal in large doses. Many of the hydrocarbons react with nitrogen oxides in the presence of sunlight to form secondary products which irritate the eyes and throat and can alter physical function and enhance respiratory disease." (Footnote and Figure omitted.)

3. The potential catastrophic impact of unchecked automobile air pollution is illustrated by numerous and increasingly recurring air pollution crises in metropolitan areas. In Donora, Pennsylvania, in 1948, for example, 20 people died and 6,000 were rendered seriously ill by air pollution, while in November 1966, a large portion of Southeastern Pennsylvania was victimized by a severe photochemical inversion. At this same time, the deaths of 100 citizens of New York City were directly related to air pollution.

4. Damage to property from air pollution is also of great magnitude. For example, cash crop losses related to air pollution are estimated to be on the order of $6 to $10 million annually in California alone, with $13 billion annual property damage from corrosive pollutants. *The Automobile and Air Pollution: A Program for Progress, Report of the Panel on Electrically Powered Vehicles to the United States Department of Commerce* (October 1967), at pp. 13, 15.

5. The allegations of the Complaint in this action, if proved, would establish that the Defendants had exhibited a callous and cynical disregard for human life and property rights by unlawfully conspiring to prevent development of effective air pollution controls for the motor vehicles they manufactured over the past 15 years. As such, this is not an ordinary antitrust case, and an informed decision by this Honorable Court on whether to approve the proposed Consent Decree cannot be made without regard to the uniquely special context of this case.

6. Movants respectfully submit that approval of the proposed Consent Decree would run contrary to sharply defined and vital policies underlying state and federal air pollution legislation, discussed below, and also would violate settled federal policies, also discussed in detail below, in favor of vigorous enforcement of the federal antitrust laws.

7. The proposed Consent Decree is fatally defective in three major areas: (a) it fails to make available to potential public and private litigants the evidence gathered against the Defendants in the two-year investigation by the United States in the present case; (b) it deprives potential public and private antitrust treble-damage Plaintiffs of the collateral estoppel effect of a potential judgment in favor of the United States in this action; and (c) it imposes no adequate penalties upon Defendants commensurate with the allegations of the Complaint.

8. The vital interest in safeguarding the right of the public to clean air and a generally safe environment is manifested by the state and federal legislation set out in the following paragraphs.

9. It is clear that the United States is suing here not merely in its capacity as guardian of the public interest under the antitrust laws, but also to vindicate the important federal rights of all citizens of the United States to clean air, and to a generally safe environment. Thus, in the Air Quality Act of 1967, 42 U.S.C. § 1857(a)(2), Congress specifically found: "that the growth in the amount of complexity of air pollution brought about by urbanization, industrial development, and the increasing use of motor vehicles, has resulted in mounting dangers to the public health and welfare, including injury to agricultural crops and livestock, damage to and the deterioration of property, and hazards to air and ground transportation."

Moreover, Subchapter 2 of the Air Quality Act, 42 U.S.C. § 1857f–1–7, in recognition of the substantial acceleration of the air pollution hazard by the operation of motor vehicles, provides for motor vehicle emission standards, vesting the authority to prescribe such standards in the Secretary of Health, Education and Welfare.

10. A parallel policy determination has likewise been made by the legislature of the Commonwealth of Pennsylvania in a series of acts, *inter alia:*

(a) The Air Pollution Control Act of 1960, as amended, 35 Purdon's Pa. Stat. Annot. § 4001, *et seq.*, § 4002 of which broadens the definition of vehicular and other air pollution to include the discharge of any matter which *may* be inimical to the public health, safety, or welfare.

(b) The Metropolitan Transportation Authorities Act of 1963, as amended, 66 P.S. 2001, *et seq.*, clearly recognizes that potentially lethal air pollution is the by-product of traffic congestion and serious mass transportation problems, harmful to the economic and social well-being of the community. The Legislature mandated the sound replanning of metropolitan transportation systems and specifically manifested its concern that said replanning to the "maximum extent possible avoid vehicular air pollution." [See 66 Purdon's § 2004(28).]

(c) The Pennsylvania Urban Mass Transportation Assistance Law of 1967 [Act #8, 1968] found a further intensification of the traffic congestion, and attendant conditions against which the 1963 Act was directed—*inter alia*, automobile air pollution—and accordingly, for the first time funded mass transportation programs in the Commonwealth.

11. Even if the proposed Consent Decree is to be tested under ordinary principles of antitrust law, it is clear that it is inadequate to discharge the responsibilities of the United States in its capacity as trustee for potential private and public treble-damage Plaintiffs. The government has thus far expended two years and substantial sums of money in the investigation of this case. Yet the proposed Consent Decree is wasteful and ineffective in that it does not make any evidence thus gathered available to public or private bodies in subsequent litigation. In addition, said Decree would deprive such bodies of the collateral estoppel effect of a possible government judgment under Section 5(a) of the Clayton Act, 15 U.S.C. § 16(a).

12. The significant federal interest in encouraging the enforcement of the antitrust laws by Plaintiffs' treble-damage actions has long been recognized by both Congress and the Courts. It is this interest which underlies the very treble-damage provision itself, which has been an integral part of the antitrust laws since 1890 (Section 7 of the original Sherman Act, 26 Stat. 210) and is presently codified in Section 4 of the Clayton Act, 15 U.S.C. § 15. The legislative determination in 1955 to vest the United States with the right to receive actual damages plus the costs of suit from antitrust violators for harm sustained as a result of such violations further testifies to the importance of permitting effective enforcement of the antitrust laws by actions for damages. (Section 4 (A) of the Clayton Act, 15 U.S.C. § 15a.)

13. In addition to these clear Congressional mandates, vigorous enforcement of the antitrust laws by private and public treble-damage litigation has repeatedly been sanc-

tioned by the Supreme Court as an effective deterrent to violations. See, *e.g., Minnesota Mining & Mfg. Co. v. New Jersey Wood Finishing Co.*, 381 U.S. 311, 318–19 (1965); *Radovich v. National Football League*, 352 U.S. 445, 453–54 (1957); *Emich Motors Corp. v. General Motors Corp.*, 340 U.S. 558, 567–68 (1951); *Bruce's Juices, Inc. v. American Can Co.*, 330 U.S. 743, 751–52 (1947).

14. The importance for potential private and public treble-damage litigants of a prior judgment after full trial by the United States against antitrust violators stems from the fact that Section 5(a) of the Clayton Act, 15 U.S.C. § 16(a), makes such judgments *prima facie* evidence of all matters covered therein in a subsequent treble-damage action, and this obviates the necessity for time-consuming and costly discovery procedures. Recognizing this policy of lightening the burden for the private litigant, the Courts have repeatedly articulated an expansive view of the collateral estoppel effect accorded such judgments. Thus, in *Emich Motors Corp. v. General Motors Corp.*, 340 U.S. 558, 568–569 (1951), a criminal judgment was held available to subsequent private litigants as *prima facie* evidence of "all matters of fact and law necessarily decided by the conviction and the verdict, "since Section 5(a) of the Clayton Act was viewed as articulating a legislative policy "to confer, subject only to a defendant's enjoyment of his day in court against a new party, as large an advantage as the estoppel doctrine had the Government brought suit". In addition, in the recent *Hanover Shoe* litigation, the Supreme Court declared that the prior government decree was available to establish not merely the precise points enumerated in the decree, but could be used also as proof of any issue "actually adjudicated" in an antitrust suit brought by the Government, provided that such issue could be shown to have been adjudicated "by reference to the findings, opinion, and decree," *Hanover Shoe, Inc. v. United Shoe Machinery Corp.*, 392 U.S. 481, 485 (1968).

15. The possibility in a complicated case such as the present one of a successful private prosecution under the antitrust laws, absent a government decree entitled to collateral estoppel effect under Section 5(a) of the Clayton Act, is extremely unlikely. In *Hanover Shoe*, for example, the private and public treble-damage Plaintiff eventually recovered $4,239,609 in damages, plus $650,000 in counsel fees. In that litigation, Hanover relied upon the government decree in the prior *United Shoe* case to establish the violations of the antitrust laws. *Hanover Shoe, Inc. v. United Shoe Machinery Corp.*, 392 U.S. 481 (1968). The complexity of the government case suggesting the virtual impossibility of a private party establishing liability absent a government decree, is suggested by the trial judge's opinion in the government action against *United Shoe*:

"[T]he hearings took 121 days and covered 14,194 pages of transcript and included the offer of 5512 exhibits totalling 26,474 pages (in addition to approximately 150,000 pages of OMR's [records concerning machines in shoe factories as of a certain date] and over 6,000 soft copies of patents) and 47 depositions covering 2122 pages. At the close of the evidence, the Court asked for briefs and requested findings of fact and conclusions of law. The Government offered briefs totalling 653 pages and requests totalling 66 pages. United submitted briefs totalling 1240 pages, and requests totalling 499 pages." *United States v. United Shoe Machinery Corp.*, 110 F. Supp. 295, 299 (D. Mass. 1953), *aff'd*, 347 U.S. 521 (1954).

In order to properly implement the significant federal interest in vigorous private enforcement of the antitrust laws, your Movants respectfully submit that this Honorable Court should refuse to approve the Consent Decree proposed in this case and order the United States to proceed to trial, since such decree as presently formulated (a) would not be entitled to collateral estoppel effect under Section 5(a) of the Clayton Act, and (b) would prevent access by potential private and public treble-damage Plaintiffs to the extensive evidence thus far gathered by the United States in the two years it has spent on the present case.

In the alternative, if the Consent Decree is approved, your Movants respectfully submit that this Honorable Court should either order that all evidence gathered by the United States be made available to any private or public treble-damage litigant, once such litigant has withstood a Motion to Dismiss its Complaint on the merits, and has established a class, thus demonstrating its intent to vindicate the rights of the public in this vital litigation, or incorporate in the Consent Decree a provision declaring that Defendants have unlawfully conspired for 15 years to retard the development of effective air pollution controls for automobiles, and making such adjudication *prima facie* evidence of an antitrust violation for any subsequent treble-damage suits. See, *e.g., United States* v. *Lake Asphalt & Petroleum Co.*, 1960 Trade Cases ¶69,835 (D. Mass. 1960); *United States* v. *Bituminous Concrete Ass'n, Inc.*, 1960 Trade Cases ¶69,878 (D. Mass. 1960); *United States* v. *Allied Chemical Corp.*, 1961 Trade Cases ¶69.923 (D. Mass. 1960).

Respectfully submitted,

JOHN M. ELLIOTT,
EDWARD F. MANNINO,
Attorneys for Movants: Thomas J. Monaghan, Mayor of Lancaster, Pennsylvania, and Louis J. Tullio, Mayor of Erie, Pennsylvania.

OUR DAY OF SHAME

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. SIKES. Mr. Speaker, from the Panama City Herald of Tuesday, October 21, I submit an impressive editorial, which I feel carries a very significant message for every Member of Congress and every reader of the CONGRESSIONAL RECORD. It follows:

OUR DAY OF SHAME

Last Wednesday's so-called Vietnam Moratorium caused the vast majority of Americans to hang their heads in shame, but most of them kept their thoughts to themselves.

The tragic event was a great victory for world communism and probably killed any hope of America achieving an honorable peace in Vietnam.

The communists have been unable to win on the field of battle and their only hope for victory lies in the weakness of the American people. It now appears that they will win, thanks to the internal assistance being rendered in this country.

The same elements that spawned the Moratorium have many more such demonstrations planned in coming months, according to informed sources.

This latest national debacle is another example of a strong, militant, vocal minority speaking for the entire nation. Considerably less than five per cent of the population was involved in the Moratorium, according to one estimate, yet it appeared to the rest of the word that the entire country was participating in the demonstrations.

National news media is mainly responsible for creating this erroneous impression. The wire services, Associated Press and United Press, and the national television networks played the Moratorium up like it was one of the great news events of the century. This went on for days.

The silent majority, as usual, pretty much kept mum and was largely ignored. It's the troublemakers that inspire news copy.

The truth of the matter is that a handful of hippies, beatniks, draft dodgers, communists and other such trash conceived the idea. They received assistance from liberal politicians, but it was the wire services and networks that really put the show over for the agitators.

We're opposed to the Vietnam war, but not to the extent of selling out our country to the communists or betraying our boys now engaged in the Asian conflict. The communists will never listen to any realistic peace proposals so long as they think they have the American people on their side.

While it is a foregone conclusion that our involvement in Vietnam was a great mistake, we have too much at stake and the price we've paid is too high to give in completely to the communists. Too many American boys have died for this to happen.

In the meantime, every anti-war demonstration is a blow for the communist enemy. Their strategy always has been to divide and conquer and the demonstrators are doing a nice job of making it come true.

Regardless of the motivation behind the Moratorium, to us it meant desecrating the memory of some 40,000 American boys who have paid the supreme sacrifice for their country in a remote corner of the world known as Vietnam.

Yes, Wednesday truly was a day of shame for America.

HANSON RAY SISK—EMISSARY WITHOUT PORTFOLIO

HON. MORRIS K. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. UDALL. Mr. Speaker, those of us in Washington all too often imagine that the foreign relations of this country are totally a product of the decisions made here by the President, the State Department, and the Congress. Of course, this is not true. The standing of this country in the eyes of other countries is a product of many forces, including the actions of American businessmen in their dealings with businessmen abroad, the actions of American tourists, the friendliness of our citizens to visitors from abroad, and the conduct of Americans who live along our borders and deal every day with our neighbors from across the line.

One such American who helped shape our foreign relations with Mexico for many years was Hanson Ray Sisk, the respected editor and publisher of the Nogales Herald in Nogales, Ariz. Mr. Sisk died last Thursday at the age of 77, having published his daily newspaper since 1918. In recent years his son, Alvin, served as editor and manager of the newspaper, but Mr. Sisk continued to

write a column and help put out the paper until just a few weeks ago. Thus his career ended as it began in a newsroom getting out the day's news.

Through the years Mr. Sisk's influence was felt on both sides of the border, in Sonora as well as in Arizona. And I would say he was a very good emissary for our country in the way he conducted himself as a responsible editor dealing with many issues, large and small, affecting our relations with the people of Mexico and their government—Federal, state, and local.

Hanson Ray Sisk was a responsible, perceptive, and very independent sort of journalist who made a real contribution to the international community in which he lived. He was a warm, sensible, and delightful person to know. It was my privilege to know him as a friend.

Last Friday the Arizona Republic reviewed some of the highlights of his life, including Mr. Sisk's work as an Associated Press reporter "chasing revolutionaries" like Pancho Villa in the days just before America's entry into World War I. It is an interesting account which I commend to my colleagues. The Republic article of October 24 follows:

NOGALES HERALD PUBLISHER SISK DIES

(By Alma Ready)

NOGALES.—Hanson Ray Sisk, one of the most colorful newspapermen in Arizona and editor-publisher of the Nogales Herald since 1918, died yesterday.

Sisk, 77, suffered a heart attack Wednesday while he was reading a morning newspaper. He died yesterday at St. Joseph's Hospital here.

Sisk was the recipient of the first annual Master Editor-Publisher Award in 1963 presented by the Arizona Newspapers Association. He operated his paper continuously for more years than any other present publisher in Arizona. He had been a member of the Associated Press for more than 50 years and had been chairman of the AP in Arizona.

He had been in the newspaper business since he left his home in Madisonville, Ky., to join the staff of an Indianapolis newspaper at the age of 17.

In 1914, he joined the Associated Press. He then joined the El Paso Herald and was assigned to Mexico at a time when the sympathies of that country's populace were divided between President Carranza and the rebel leader Pancho Villa.

Sisk spent most of a year in the states of Chihuahua and Durango "chasing revolutionaries."

Later he liked to recall those exciting days. He remembered sitting at a desk in the Herald building behind a window that commanded a view of the hilltop in Nogales, Sonora, and watching two nations in action.

That was after the United States had become involved in protecting Americans from bullets that occasionally strayed across the border.

Camp Stephen D. Little had been established near Nogales and, after an American soldier was accidentally shot, Gen. John Pershing was sent here to take charge of the situation.

Sisk also became personally acquainted with Villa and later with the Mexican general Alvaro Obregon, who eventually overthrew Carranza.

When Obregon, who had married a Nogales girl, visited here in 1924, Sisk had two copies of his newspaper of the day of the visit printed on silk. He presented one to the general.

Sisk had become business manager of the Herald at the conclusion of his Mexican jaunt. He purchased the paper two years later from R. L. O'Neal, who later became a local justice of the peace.

Sisk married Dorothy Poole, a Nogales girl. The couple built a modest home here, which they still occupied at the time of his death.

For the past several years, Sisk's son, Alvin, has been editor and manager of the newspaper. The elder Sisk continued to put in a day at the office until just a few weeks ago when he and his wife spent a vacation in California and Nevada. He suffered a mild heart attack during the trip, but insisted it was nothing and continued to visit the office to write his daily front page editorial.

He maintained his interest in community affairs and recently attended a meeting of local businessmen called to discuss the effect of Operation Intercept on the local economy.

He also continued to attend special meetings of the school board and the city board of aldermen, although he complained occasionally to friends that he didn't know "some of these new people."

Sisk knew all the older people in town, however, and the stories of their ancestors.

He had been a member of the Pimeria Alta Historical Society for many years and was considered by many to be an authority on the history of the area.

Occasionally, in his daily column, "Views and Interviews," he retold some of the historical highlights.

Sisk had served two terms as president of the chamber of commerce, was a life member of the Elks Club and had held a state office in the Knights of Pythias. For many years, he was active in affairs of the Republican Party.

According to Craig Pottinger, editor-publisher of Nogales International, the area weekly newspaper, at the time of his death, Sisk had been a publisher in Arizona longer than any man living.

Pottinger himself began his Nogales career by working for Sisk.

He was visiting Nogales with a friend from Phoenix, Pottinger recalled, when they met Sisk on the street.

When he learned that Pottinger was also "in the business," Sisk offered him a job.

Pottinger stayed with the Herald for 1½ years before leaving to run a printing business "for a bunch of Democrats." In 1925, he began publishing the International.

Another of Sisk's early employes was Robert Berrellez, prize-winning Associated Press international correspondent who started with the Herald as a newsboy and worked up to an editorial desk job before joining the AP.

Survivors include his wife, Dorothy; his son, Alvin; two daughters, Mrs. William Graham Bell, Tucson, and Mrs. Rush Watkins Dozier, Madisonville, Ky.; a brother and two sisters out of state; three grandsons and two great-grandchildren.

Memorial services will be at 7:30 p.m. today at the United Fellowship Church. Private burial will be tomorrow in Nogales City Cemetery. Carroon Mortuary is in charge of arrangements.

THE INAUGURATION OF DR. THEODORE POWELL

HON. ABNER J. MIKVA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. MIKVA. Mr. Speaker, there are few more demanding or more challenging offices, especially today, than that of a college or university president. Thus, I believe that when a man rises to accept such a challenge he deserves our enthusiastic support. I would therefore like to extend my best wishes to Dr. Theodore Powell as he assumes the presidency of the Southeast and Fenger campuses of the Chicago City College.

In his inaugural address on October 11, 1969, Dr. Powell showed that he understands the needs of our time. His remarks revealed a desire to implement constructive changes in educational institutions. In rejecting both the instigation of violence and the suppression of dissent, he has charted a proper course. Dr. Powell's vision of a community based on harmony, understanding, and love should be the goal of all Americans.

I insert Dr. Powell's timely and instructive remarks at this point in the RECORD for the benefit of my colleagues.

The remarks referred to follow:

THE AGE OF AQUARIUS

On this day nine years ago, at the corner of Lenox Avenue and One Hundred Twenty-Fifth Street in New York City, I listened to the quick, insistent, challenging speech of Senator John F. Kennedy. This Catholic, who was striving to overcome the traditional bias of the American voter in presidential elections, spoke to his Harlem audience of the need for long-overdue action against another kind of bias that afflicted the American community.

That day, like this one, was most thrilling for me and will live in my memory. Yet, on that day, as on this one, I was in a city that was suffering from our inability to see and understand each other as human beings. Our urban communities, like our college communities, have been torn by dissension and violence. We have learned since, if we did not know it then, that in any community where the people have indulged themselves in the immorality of racial or religious bigotry, the wages of such sin will be paid by all of us—yea, even unto the third and fourth generation.

Now, since we have not heeded and acted upon the words of men of good will of earlier years, since we have failed to fulfill adequately the promise of a society with liberty and opportunity for all, this generation, in confusion, faces an era of violence. The exciting promises of nine years ago, although no less appealing today, now seem to be a very distant dream.

For my own education, and to remind myself that I was once involved with important matters like ideas and scholarship, before my spirit was benumbed and my mind dulled by an endless daily diet of memos, budgets, and committee meetings, to remind myself of those earlier days, and also to become better acquainted with the history of my newly-adopted city, I have been reading the classic sociological study, Harvey Zorbaugh's *The Gold Coast and the Slum*. Forty years ago Chicago was described as "a place of unusual interest" but lacking the unity and charm of a place in which "the common view is set forth in laws, customs and all the arts of life." The laws were not a communal product, and there was no organized public opinion which supported and contributed to their enforcement.

This was our City in the 1920's: a metropolis—but not a community. This is our City today: an even greater metropolis—and even farther from being a community. This is the City in which we must try to build our college.

In many respects, Chicago is still as Sandburg saw it:

"Hog-butcher for the world,
Tool-maker, stacker of wheat,
Player with railroads and the nation's freight-handler,
Stormy, husky, brawling
City of the big shoulders."

It is still very much a vigorous city and a toddlin' town. Physically, it is changed from the city described in *The Gold Coast and the Slum*. There are now the broad expressways stretching out like long fingers from the huge maw of the central city. It is served by the busiest airport in the world. And it presents in splendid variety some of the nation's best—and worst—architecture. The newcomer is quickly enraptured by the beauty of Lake Shore Drive and the twilight or the midnight magic of the lights along the shore; or in the hot summer days, the placid beauty of the little white triangles of sails scattered across the blue waters (well, almost-blue waters) of Lake Michigan. He is also impressed by the extent and the seeming success of urban renewal as he views the display of clean, shining, new apartments gleaming in the sunlight.

Despite all of this exciting appeal, the newcomer quickly learns that it cannot be said of this revitalized "alabaster" city that it is undimmed by human tears. Behind the glittering new apartments still lie the rat-infested houses of the slums. Beyond the thousands of people busily and profitably engaged in the commercial activities of the Loop, or in the industrial production of our own south side, are thousands of others, isolated from the major employment opportunities of the City. Outside of the much-admired and proudly publicized Circle Campus of the University of Illinois, and outside of the gothic spires and ivied walls of this splendid institution, the University of Chicago, there are more than thirty thousand less fortunate students, striving for their higher education in the makeshift arrangements provided at the several campuses of Chicago City College.

With such great disparity between what our City offers to some of its citizens, and in what it offers to others, it should be no surprise and no puzzle that Chicago maintains its reputation as a city of violence.

What can we expect as the product of economic deprivation? What can we expect as the result of educational disadvantage? What can we expect as the product of bigotry? These crimes of earlier generations have given us this heritage of seemingly meaningless violence that bloodies the pages of every daily newspaper. The guerrilla war now carried on in our streets is almost inevitable in a dynamic metropolis which is not supported by a sense of community. How can there be order, if the laws by which the system really operates are not a communal product? How can there be order, if there is no common view of laws and customs, and no public opinion which supports and contributes to their observance?

We are all too painfully aware that a real sense of community does not exist in our City. I am most keenly aware that it does not, unfortunately, exist in our College.

In the months ahead, we shall be planning to merge Southeast and Fenger into a single college. We shall be busily engaged in planning for construction of the temporary facilities that will provide us a much-needed home of our own. We shall also be concerned with review and improvement of the educational programs we offer our students. We must develop new programs to provide greater variety of opportunities to meet the different needs and interests of all who seek our services. We must also give attention to the question of what services the College might provide to our region of the City.

Each of these tasks is important to the development of a real community college. Their success will require contributions by faculty, staff, students, and residents of the region. The greatest task we face, however, is that of creating the environment which will make our institution not merely a college, but also a community. What kind of community shall our college be?

Sometimes I feel our students know better than they realize the kind of institution they desire. I do not mean their fervent denunciations of the machine, or the administration, or the establishment. Those unrestrained, sophomoric repetitions of the dogmas they acquired from diligent but undiscriminating studies of such scholarly publications as the *Village Voice*, the *Berkeley Barb*, and *Ramparts Magazine*, are good fun, exciting and stimulating, if not always illuminating. But—what kind of a college, what kind of a community, what kind of a world, do our students really want?

My best insights are obtained not from their recitations of the overheated paragraphs that seem to be products of some else's mind, but from their soulful chants of those songs which impress me as a faithful expression of their own hearts. What do you hear them sing that is relevant for the kind of college we might be?

"I've gotta be me. I've gotta be me."

"What the world needs now is love, sweet love."

"This is the dawning of the Age of the Age of Aquarius . . . Harmony and understanding. Harmony and understanding."

"Come on, people now, Smile on your brother. Everybody get together. Try to love one another, Right now, right now, right now."

I know full well from recent experience that student demands can be stated with rhetoric that is excessive, or in language that is offensive, but we need not let that close our ears to this other, more important, message which comes from their hearts.

Their denunciations of the establishment should not be ignored, of course. The administration of any institution, or of any community, needs occasional stirring up if it is not to become stagnant. I know of no way to operate a college or a community without some administrative machinery. And I know of no sure way to escape completely those ills of bureaucracy which afflict any administration. They can be minimized or remedied, however, by an alert constituency and judicious criticism.

My own preference is that such criticism, as far possible, should be kindly, constructive and private—at least, in the first attempt. I am not yet willing to accept the view that all policy decisions must be made on the basis of public confrontation, to the accompaniment of certain succinct Anglo-Saxon nouns and adjectives which raise questions about one's ancestry and private habits. It seems to me unproductive and unrealistic to assume that the fellows on the other side all have dishonorable motivations, and are agents of the devil. If that be the case, how could we ever hope to resolve our differences? I prefer it to be assumed that the other fellow is a man of integrity and good will, and that he might be influenced by listening to my side of the problem.

Perhaps these assumptions and principles are outmoded; this style of administration may be old-fashioned. Yet I shall keep trying to persuade our students that these can be effective methods for seeking change. If I succeed with the students, it may give me enough courage to try to persuade the rest of the college community. If we are to be, in fact, a college community, there must be a sense of sharing, some agreement on basic values, and a disposition toward true communication. We must strive to talk honestly with one another.

This was a key problem reported by the sociologist who looked at our city forty years ago. The inner city was afflicted not merely by size, not merely by numbers of population, but by the handicap of social distances: the isolation of one population group from another the superficiality of their contacts. "Over large areas of the city," wrote Dr. Zorbaugh, " 'community' is little more than a geographical expression."

This is, of course, still true, perhaps even more true in our own day. The violence that we now know is really the most emphatic means a man can use when he believes he is not being heard; or, if he is heard, his voice is ignored. This era of violence was predicted for us by James Baldwin in his moving, powerful, and portentous essay, *The Fire Next Time*.

One must acknowledge—indeed, how could one ignore?—that decades of injustice, whose cold cruelty has been more deeply refrigerated by icebergs of public indifference, have given overpowering impulse to reach for the torch of fire as the ultimate remedy. While acknowledging the cause of violence (I will not say justification), it must still be asked of those who seek solution through violence, what heritage will you leave for your children and grandchildren? Will you ask them to pay for *your* sins, as we are required to pay for the sins of our grandfathers?

There was a leader who tried to teach us that if we rely upon the rightness of our cause, we shall overcome injustice with love. But that young Moses did not lead us to the promised land quickly enough; so we were ready to abandon him even before the foul, hidden assassin cut him down. Dr. King has been dead only a little more than one year; we can still remember his voice; but we have forgotten his teachings and his dream.

There are some, I know, who contend that the dream has lost its utility and should be forgotten. They suggest, instead, that one turn only to those, like himself, whose voices and views are familiar, who share the experiences and values of the same clan.

The idea of a clan, in or out of costume, has never appealed to me; and my knowledge of American history gives me no reason to believe that such cultural isolation will reduce violence or advance social progress. Rather, I believe, that all of us in this city, and in other urban centers of the nation, must approach with candor, and tackle with energy, the central problem of our day, the lack of a sense of community among ourselves.

The urban community college offers an excellent means for achieving that sense of community in the various regions of the city. A college that is large enough to draw from a diversity of neighborhoods, yet small enough so that students and faculty may know one another—such a college can provide democratic experiences that will promote understanding and communication among the various population groups of the city. Availability of college facilities for community activities and cultural events open to area residents, can also contribute to that sense of community through shared experiences. The very existence and operation of the college as an institution open to all, where students from every neighborhood and family background may attend to improve their skills, develop their talents, and expand their knowledge, will be a symbolic representation of the best values of our society.

When we merge Southeast and Fenger, the combined enrollment will be approximately five thousand. It is especially intriguing to me that the size of the ideal city-state, according to Plato, was five thousand forty households. Shall our college, then, be close to the perfect size for the ideal community? It is worth noting, surely, that Plato's stu-

dent, Aristotle, disagreed with him (additional evidence that there is nothing new about student dissention). A more general definition of the size of the city-state prescribed that it should not be so large that the individual could not be known. Certainly, this must be a guiding principle in our planning—that there be room and a chance for recognition of each individual.

Still another definition of the ideal size of the city-state is buried in the depths of my memory and, despite the vast resources of scholarship available to a college president, its source remains unknown. Yet, I clearly recall having read that someone once said that the size of a city-state should not exceed the number of persons who could be assembled within range of a man's voice. I am not certain of the practical validity of this definition, but I believe more deeply in its symbolic truth. We must have a college in which we can hear each other's voice. If ever we cannot, or will not, listen to one another, the life of our college, the very meaning of academic community, will be in very serious danger.

If our college is to be worthy of recognition as an academic community, it is crucial that we hold on to those principles which ought to govern rational inquiry and civil discussion.

In the halls and classrooms of our college, can we not create an environment where each one feels he is heard by others; is free to declare his own ideas and sentiments, and where he hears voices that convey different accents, rhythms, and ideas? In hearing these voices, he will learn more about his neighbors; in learning more about his neighbors, he will learn more about himself.

From such knowledge will come understanding; and from mutual understanding, multiplied five thousand times and more, there may be developed an ability for true communication among us, a sense of community that will prevent destruction by the vast glaciers of indifference for one another or by the furious fires of frustration and hate.

Those inequities of which John Kennedy spoke still exist; and Dr. King's dream is still far from realization. We still carry our terrible inherited burden of all kinds of bigotry. How can we be a community? Bigotry is the antithesis of community. How can we have communication across a barrier of prejudice—if one rejects another because of his name, or his face, or his skin? The poet, Stephen Benet, told us, years ago:

Remember that when you say—

"I will have none of this exile and this stranger
For his face is not like my face and his speech is strange"

You have denied America with that word.

It is my deep conviction that the dream of one society open to all, is not dead; and that our college, as well as our City, must be based on that principle, and committed to that dream. For this is essential if we are to have not merely a great metropolis, but a good community.

This is the appeal I make both to those who would resort to violent means, and those who seek to suppress it. You cannot govern or control merely by physical force, because a community is not merely a physical entity. It is something more than a unit of government.

A community, a real community, is an atmosphere, an environment. Community, in truth, is spiritual. It is a psychic relation among men. It is a reaching out of mind and heart. It is the reception and comprehension of the beliefs, the joys, the sorrows, and aspirations of the mind and heart of your neighbor. Community, in short, is the product of communion among men.

To the establishment of such a college, I hereby pledge myself. This is the task for which I solicit your help, the mission to which I ask your commitment of mind and heart, let us create among ourselves, and among those we serve, a true community based on harmony, understanding, and love.

"PROGRESS THROUGH PEOPLE"—COOPERATIVE MONTH, 1969

HON. ORVAL HANSEN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. HANSEN of Idaho. Mr. Speaker, nearly a third of the families in this Nation belong to a cooperative of one kind or another. Some families—especially those in rural areas—belong to several. "Progress Through People," the theme as they observe Co-op Month during October, is well chosen to describe the aims and the achievements of these customer-owned businesses.

During this month it is appropriate, therefore, that we call the attention of all Americans to the significant contribution that cooperatives have made to the building of our Nation, particularly our rural economy. Cooperatives can play an even more important part in the future, not only in revitalizing rural America but in eliminating some of the root causes of urban problems.

In proclaiming October as Cooperative Month, 1969, President Nixon said:

Because I have seen the progress people have made by acting together I have pledged assistance to cooperative programs for farm and rural people. I believe cooperative self-help effort is a vital element in improving the economic position of farm families and expanding opportunity throughout rural America.

Many millions of people have put in money and energy to buy, sell, and obtain services through cooperatives. They have done this for good and valid economic reasons: to try to get better markets, credit, housing, and insurance as well as to improve purchasing opportunities and electrical, telephone, and health services.

The farmer of today finds himself engulfed in a world of big business and big labor. He finds himself with an ever-increasing need to band together with his neighbors to try to achieve equal footing in the marketplace. They still have a long way to go, but each year they get millions of dollars more for their products through these cooperatives, both through better prices and by sharing each year's net business margins.

Cooperatives remain the best bet to anchor the drifting economy of Small Town U.S.A. They are truly home owned. Owned by the customers themselves. Co-ops provide jobs for hometown people and keep money circulating in the community. Co-op refunds ring cash registers up and down Main Street. In many a rural community it is the cooperative that stands as a pillar of strength in the local economy. Yes, and very often you will find the cooperative is the community's biggest taxpayer.

Congress has enacted several laws over the years to assist people who wanted to help themselves through cooperatives. I hope we will continue to pursue this policy of encouraging self-help type of enterprises.

In this regard, farmers and other co-op members are rightfully disturbed over a section of the Tax Reform Act of 1969 which the House approved in August. The section relating to cooperatives is grossly unfair, unnecessary and unwise. It would permit the Federal Government to regulate the manner in which co-op members elect to distribute their earnings each year. This runs contrary to the very basic principles of private enterprise. The Senate Finance Committee used good judgment in deleting this section from the bill. I hope that this action will be upheld by the House-Senate conference committee.

One of the greatest unmet needs of this country today is to help people rediscover rural America. We must bring them out of the sagging cities, help them find homes, jobs, and the comforts of life in the countryside.

It has been said that cooperatives "offer the high adventure of business to ordinary citizens." Maybe it was that high adventure that they were seeking when they left rural America in the first place. If so, we must help them build bigger and better facilities that will offer the same satisfactions in the smaller towns and rural areas.

Cooperatives can and should lead the way. Rural electrics provide the light and power. Farm credit institutions serve a wide range of farmer borrowing needs. Marketing co-ops handle about one-fourth of our food and fiber. Purchasing co-ops furnish about one-fifth of the farmer's production supplies. Credit unions, housing, insurance, and health cooperatives serve not just farmers but anyone with a need.

Idaho is among the States observing Cooperative Month. Agriculture is, and in the foreseeable future will continue to be, Idaho's No. 1 industry. Cooperatives have played an important part in the growth and development of the State's agricultural economy.

Having grown up on a farm in Idaho and worked closely with cooperatives for many years, I know firsthand the benefits that come to farmers from membership in the cooperatives. Cooperatives have provided the tools of self-help, enabling farmers to process and market their products, and to obtain the services and supplies. Cooperatives provide the farmer's best hope to gain sufficient bargaining strength in the marketplace to obtain a fair price for his product. They are the most effective instruments to improve the American farmer's economic condition by helping him to earn a fair share of the national income. Public policy should, therefore, encourage cooperative enterprise.

Cooperatives are an important part of American capitalistic private enterprise system. Cooperatives are owned by their individual members who seek through their membership a better living by increasing their income or getting better service.

Mr. Speaker, I include as part of my remarks a letter from Cecil L. Griggs, secretary of the Idaho Cooperative Council, an article by J. Phil Campbell, Under Secretary of Agriculture, reprinted from the October News for Farmer Cooperatives, and an article by David W. Angevine, administrator, Farmer Cooperatives Service, USDA, entitled "Cooperatives: Progress Through People":

OCTOBER 8, 1969.

DEAR CONGRESSMAN HANSEN: "Progress Through People" is the slogan for Cooperative Month—October 1969 presently being recognized throughout the Nation. We approach a new decade aware that we are confronted by some exceedingly baffling circumstances:

That there is hunger in a land which produces food in such abundance as there is in the U.S.

That a technological revolution in food production has crowded millions of people off American farms and away from rural communities, to create stresses in urban centers already plagued with the problems of the ghettos, urban renewal, decentralization of industry, crowded schools and environmental pollution.

That the packages in which food is sold, the cost of distributing food to the consumer, the advertising needed to attract consumers' attention to brand names, the cost of processing food in unique forms—each of these, item by item, in many cases account for a larger share of the housewives' food dollar than the farmer receives.

That industrial firms and affluent individuals are attracted to agricultural production as a tax shelter and a hedge against inflation at a time when the "family farms" are diminishing in number, thus compounding the economic and social problems of rural America.

That cooperative self-help enterprises, designed to process and market agricultural products and obtain services and supplies, initiated, financed and operated by rural people, are so often the target of restraint-of-trade prosecution, attacks on rural educational services, and covert attempts to undermine the financial stability of cooperatives as exemplified in Section 531 of the Tax Reform Act of 1969 now before Congress.

And also, that an industry of the magnitude of Agriculture with a record of such a magnificent response in producing abundant food and fiber in times of war and peace must depend on government subsidies and grants-in-aid to keep body and soul together.

We are mindful and appreciative of your statement at our annual meeting in 1968, Mr. Congressman, when you said, "Our goal should be a strong rural America. We are confronted with a paradox; agricultural producers are fewer, the need for leadership is growing greater. The solution does not rely on the supply-vs-demand ratio, nor will population growth be the answer; it will take economic muscle."

We are likewise indebted to our own Governor, the Hon. Don Samuelson, who recognized publicly that agriculture is the basis for a great share of Idaho's economic activity, providing income from crops exported from the state, raw materials for numerous processing plants likewise engaged in exporting food products, employment of labor on farms and in handling and processing materials and products, and providing abundant food for its population. Further, that every citizen of Idaho benefits from the production of its farms by either sharing in the economic activity directly or indirectly or as a consumer of products. He commended Idaho citizens for forming their own strong, efficient cooperative business organizations and further emphasized that cooperatives not only contribute mightily to economic progress but play a role as community builders through their typically democratic form of organization.

During Cooperative Month—October 1969 it is timely to review the progress of U.S. Cooperation to date. For example, five out of six farmers use farmer marketing supply or service cooperatives to market about a fourth of the food and fiber raised, and obtain a fifth of farm supplies used. The U.S.D.A. Farmers Cooperative Service states that 5,560 co-ops market $13.3 billion worth of produce; 6,340 co-ops obtain supplies worth $3.5 billion yearly.

Farmers now completely own the cooperative farm credit system which supplies one million farmers $12 billion in capital annually through 3000 land banks and production credit associations and loans to cooperative association. Rural electric cooperatives provide light and power service through 900 associations serving six million users, and 230 telephone co-ops have 650,000 subscribers supplying service to more than 2 million people.

Bargaining cooperatives act as farmers' agents to negotiate market prices and terms of sale, with 300 associations bargaining for $2 billion worth of crops produced by 200,000 growers annually. A variety of cooperative-type services such as farm labor housing, rural water and sewer systems, recreational facilities and grazing associations get credit and grants from the Farmers Home Administration. Mutual irrigation companies, 7,700 of them, provide water for nine million acres on 150,000 farms—about a fourth of all irrigated land.

Cooperation is not limited to agriculture. Credit unions make loans to both rural and urban people, accounting for $11.9 billion in loans made from $12.8 billion savings accumulated by 20.8 million members. Co-op oriented insurance companies have 12 million members who get more than $776 million worth of insurance, and 1,350 farmers' mutual fire insurance companies provide service to three million members.

In the field of group health care, 7 million U.S. citizens are said to be enrolled in 180 plans with gross annual income of $200 million. Consumer goods societies surveyed by Farmers Cooperative Service produce $480 million worth of food and home supplies through 500 centers to 400,000 members annually. One hundred fishery cooperatives are reported to have 10,000 fisherman-members who operate 7,500 vessels.

We know that you, like other people in Idaho who are descended from the pioneers who reclaimed its rich agricultural lands as the frontiers moved westward, are deeply concerned about the problems of agriculture as well as those of our people in general. We do, indeed, wish to share the abundance produced from our natural and human resources. The principles and techniques of Cooperation have proved their worth within the structure of our capitalistic economy. We commend them to you as a Member of Congress, trusting that they will receive sympathetic attention as you and your fellow legislators seek "Progress Through People."

Sincerely,

CECIL L. GRIGGS,
Secretary, Idaho Cooperative Council.

MOVE FORWARD TOGETHER THROUGH COOPERATIVES

(By J. Phil Campbell, Under Secretary, U.S. Department of Agriculture and Steering Committee Chairman for Co-op Month, 1969)

Like yesterday's farmer, today's farmer is in a weak bargaining position. Unlike yesterday's farmer, today's farmer must make huge and increasing capital investments in his farm, and he is no longer a captive of the land.

These three factors—one old, the others new—have brought the family farm operator to a crossroads. Unless he can find ways to finance his operation and unless he gets enough voice in the market to assure himself parity of income, he may decide to let huge, absentee-owned, stock-selling corporations take over farming.

If he does, his decision will have the gravest consequences for the nation's consumers, for our natural environment and resources, for rural America, for the cities, and indeed for the world.

Therefore, we have some responsibility to help farmers find ways to finance their operations and to strengthen their bargaining position in the marketplace. The cooperative technique, which has served farmers so well, can help, as we pursue both objectives.

Credit Choices Confronting Farmers.—For example, in the field of financing, I'm sure many farmers will continue to depend on their credit cooperatives—the Federal land bank associations and production credit associations—to get the loans that they need and that they will repay with interest.

This is the traditional pattern of farm financing. Each farmer strives to build up his capital investment over a period of years, accumulating equity as he repays his loan. Yet I'm not sure it will suffice, as farm investment needs quadruple or, perhaps, increase ten-fold.

More farmers probably will lease land, as a means of dampening the total capital that's involved in a farm operation. Others may turn to joint ownership of farm machinery through small, 3-, 4-, or 5-member cooperatives. Still others may lease or rent machinery—perhaps that they and their neighbors own cooperatively.

And still others will turn increasingly to their cooperatives for custom services such as plowing, cultivating, spraying, and harvesting their crops.

Some farmers may decide to incorporate and sell shares in their corporations. Yet unless a farmer is willing to pass ownership and management of his farm into other hands, this is risky business. The American farmer has worked too long and too hard to climb the economic ladder of ownership to go back to being a corporate hired hand. For him, this is—in the parlance of the day—non-negotiable.

Another alternative—and one that has great possibilities—is an arrangement under which farm people pay interest throughout their lives to some continuing outside source of permanent credit, both for real estate and for operating capital. The farm operator would have title to the land and the property, but he would finance it by hiring capital, much as he hires labor.

He would not repay the loan, for the loan would never come due. It would be permanent credit.

Let's face it. This is a system of perpetual debt. Yet some of our biggest corporations are using it successfully. I'm wondering if farmers' credit cooperatives—as well as other financial organizations—can devise ways to provide this permanent credit and, at the same time, to leave the farmer's ownership and management of his farm relatively unimpaired.

Problems In The Market Place.—When farmers enter the market as individuals, they are in a weak position. On the one hand, they are so numerous and their individual output so small that no one of them can have much effect on total output or average price. On the other hand, the food industry, which buys their products, is concentrated in the hands of a relatively few firms.

In the manufacture of breakfast cereals, for example, the top four firms have 85 percent of the business. In food retailing, the four largest retailers in a city typically have 50 percent of the business. Twenty firms account for more than half the output of the canning industry. Twenty firms account for

more than two-thirds of the output of the frozen food industry.

To strengthen their bargaining position, farmers are turning instinctively to their cooperatives.

The Capper-Volstead Act of 1922 authorizes farmers to "act together in associations" to market their crops and livestock products. Congress prescribed no limits, save only that, if this cooperative action "unduly enhances" the price of any farm product, the Secretary of Agriculture may enter a complaint, hold a public hearing, and order the cooperative to cease such action.

In the ensuing years, farmers have used this authority to market, process, merchandise, and distribute the products of agriculture. Their cooperatives have proved themselves an effective instrument in enabling farmers to speak with greater authority in the marketplace.

Farmers haven't made full use of the authority Congress granted them nearly a half-century ago. One farm leader recently estimated that farmers are getting only one-fourth of the potential benefit of the Capper-Volstead Act. That may well be an overestimate.

Yet farmers today are moving. Lane Palmer, editor of *Farm Journal,* said recently, "Progress toward more effective marketing of farm products . . . (is) led by the cooperatives. Not in my lifetime have I been more encouraged by the trend of events."

What Is Needed.—If farmers are to use their cooperatives so as to be heard in the marketplace, they will need leadership, willingness to pay for the most expert management, sound planning, adequate financing, and determination. The Department of Agriculture can help, and we are eager to do so.

Co-op Month is an opportunity to look back over the past 12 months, to measure our "progress through people", and to stake out new objectives for the ensuing year.

The technology of agriculture is changing rapidly, is dynamic. Yet we hope to maintain the structure of agriculture, which is predominantly the family farm. Cooperatives have much to contribute, both to advanced technology and to structural stability. Let us move forward together.

COOPERATIVES: PROGRESS THROUGH PEOPLE

(By David W. Angevine, Administrator, Farmer Cooperative Service, USDA, and Executive Director, Co-op Month, 1969)

As the Nation observes Co-op Month 1969 this October, cooperatives take on a special meaning, one this year's theme describes—"Cooperatives: Progress through People."

Cooperatives give people a chance to do things for themselves—a chance to be more, to have more, to advance.

By owning their cooperative businesses, people progress in four areas—in the business world, in better communities, in personal growth, in international understanding.

Accomplishments in any one of these areas often carry over into the others.

All kinds of people use all kinds of cooperatives to progress—rural people with marketing, farm supply, electric, telephone, farm credit, and irrigation associations; urban people with housing, consumer goods, and health associations; and both rural and urban people with mutual insurance companies, buying clubs, and credit unions.

I. PROGRESS IN THE BUSINESS WORLD

Cooperatives are first of all businesses. Persons who use them own them and control them.

Cooperatives are a basic form of business in our free enterprise system. Through them more than a third of the families in this country have an individual, financial interest in enterprises handling billions of dollars worth of goods and services each year. Through them these families add to their incomes, secure needed services, and have a voice in the conduct of American business.

Cooperatives offer the high adventure of business to ordinary citizens.

Farmers use marketing cooperatives to establish their right of way in the marketplace where food and fiber they produce is sold, processed, packaged, and moved on to consumers. Each year they get millions of dollars more for their products through these cooperatives, both through better prices and by sharing each year's net business margins.

People have organized nearly 23,000 credit unions so they can borrow when they need to from savings they and others have accumulated.

As the result of years of credit union effort, last July the Federal truth-in-lending law became effective. Now every borrower and every credit user knows the true annual rate of interest before he enters into a business transaction.

Cooperatives, also have another foot in the business world, handling food, drugs, petroleum, furniture, and a long line of services from preschooling to funerals.

Rural electric co-ops, in addition to bringing light and power to rural Americans, have created a billion-dollar-a-year rural market for electric appliances and equipment. This means jobs for workers and dividends for stockholders of businesses that manufacture these. Co-op refunds ring cash registers up and down Main Street.

One upper Midwest farm supply cooperative recently exhibited the 23,000 items of merchandise it handles for its farmer-members. Besides items it manufactures itself, these came from 300 different suppliers.

II. PROGRESS IN BETTER COMMUNITIES

What's good for the people in them is good for the communities where they live and work. Housing cooperatives help families acquire ownership and a stake in the community, put down roots, and stabilize their lives.

Thousands of cooperatives hire many thousands of workers—managers, bookkeepers, skilled agriculturists, marketing and purchasing experts, distribution and transportation specialists, architects and builders, economists and writers. They add to the business drive of the community. Often the co-op is the leading business in town. One farmers' co-op, for example, is the largest industrial corporation headquartered in a city of half a million.

Co-op businesses pay local, State, and Federal taxes of all kinds, push community campaigns, and encourage members to shoulder their full responsibilities as citizens in a democracy.

Farmer Cooperative Service surveys show that marketing and farm supply co-ops have invested $306 million in major plants and facilities over the past 18 months. These mean jobs—jobs to build the plants, jobs to make the equipment, jobs to operate them, jobs to supply and maintain these plants, jobs to serve the plants' employees.

III. PROGRESS IN PERSONAL GROWTH

Over and above their business and economic contributions, cooperatives give people a chance to grow, to develop, to learn, to use untapped talents and knowledge, to "be somebody."

Members learn to think, to speak, to analyze their cooperative businesses at regular meetings. They learn to merge their interests in a common interest. They gain faith in themselves, faith in their neighborhoods, competence to take on other community responsibilities. They learn to conduct meetings, to convey ideas, to deal with others. They become leaders.

Many of those who accept greater leadership become directors of these cooperatives, and their opportunities to make meaningful decisions expand tremendous. On their judgments may hang jobs, the community's welfare, the quality of the environment, and the satisfactions of men and women who live there.

IV. PROGRESS IN INTERNATIONAL UNDERSTANDING

Visitors from overseas are often surprised to see people here use cooperatives and use them in such infinite variety. They tell us that cooperatives are a link in the chain of friendly relations among peoples.

U.S. cooperative specialists who work overseas help others better understand who Americans really are, and we learn a great deal from them.

These cooperative specialists have helped organize rural electric co-ops, credit unions, housing co-ops, farmers' marketing, purchasing, and credit co-ops. They have helped overseas governments establish agencies to develop cooperatives, write co-op laws, found co-op training centers, and organize banks for cooperatives.

As they return to the U.S., they often bring with them new techniques for developing cooperatives here, new insights into cooperatives' internal functioning, and keener appreciation of members' needs.

CZECHOSLOVAK INDEPENDENCE DAY

HON. GLENN CUNNINGHAM

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. CUNNINGHAM. Mr. Speaker, though they are suffering under an implacable and unrelenting totalitarianism in their homeland, the Czechoslovak people today mark the 51st anniversary of their independence.

It was on October 28, 1918, that the Czechoslovak National Council in Prague proclaimed the independence of the Czechs and Slovaks and establishment of the Republic of Czechoslovakia.

This was the culmination of the centuries-old struggle which these sturdy and stout-hearted people carried on against the overlords of their historic homeland.

Czechoslovaks enjoyed their hard-won freedom for only two decades, for the catastrophic events beginning in 1938 proved disastrous. First, their country was dismembered. They then were robbed of their freedom and, with the beginning of World War II, their fate was in the hands of the Nazis.

We all know what has been their lot since the end of World War II, especially since 1948, when they were forced to submit to Communist totalitarianism.

And in August 1968, the Soviet juggernaut rolled over defenseless Czechoslovakia, snuffing out its "liberalization movement."

Just last month, the Soviets purged reformer Alexander Dubcek and many of his followers to further tighten their grip. It is my hope that one day Czechoslovakia will again enjoy independence.

Mr. Speaker, I call to the attention of my colleagues the following editorial which appeared in the July-August issue of Assembly of Captive European Nations—ACEN—News:

CZECHOSLOVAKIA: 1 YEAR LATER

A year ago this August, the Soviet juggernaut rolled over the hopes and aspirations of defenseless Czechoslovakia. During the ensuing months, the fresh air of the "Czechoslovak Spring" was gradually but systematically polluted by the suffocating, noxious fumes of neo-Stalinism. The uncertain flicker of freedom sought in vain a harbor from the gusts of repression emanating from the Kremlin; the once daring and imaginative press, radio and television were reconverted into droning instruments of the regime; dissent was muzzled; and the Czechs and the Slovaks were seemingly once more condemned to a drab, monotonous existence.

Yet the dark post-August 1968 days have also brought to the surface a number of built-in weaknesses of totalitarian rule. The USSR had believed that the invasion and occupation of Czechoslovakia would nip all heretical tendencies in the bud. A closer look at today's Czechoslovakia belies such unqualified "optimism."

True, the new regime in Czechoslovakia appears to be firmly in control, and there are ominous indications of new, far-reaching purges of "liberals" and "reformers." The country, however, is not nearly as docile as the Soviets had hoped.

There are no free elections, but the workers are "voting" with slowdowns. In many plants, they have stopped paying union dues. Party cards are being returned or torn up. According to regime spokesmen, the drop in productivity has reached alarming proportions. Discussions in factory canteens focus on personal problems and outside interests; a conversation on "building Socialism" is considered in bad taste and a waste of time. In brief, the worker is serving notice on the regime that he is prepared to use all the tools at his disposal to prevent a return to the conditions existing before January 1968 when the Dubcek regime assumed power.

The voices of the students and writers may have been temporarily muted by censorship and intimidation, but the flame of dissent has not been extinguished. As one observer puts it, you cannot show a man a ray of hope and later tell him it was a mirage. The Soviets and hard-line Communists in general indulge in the wishful thinking that they can always turn back the clock, that the memories of a greater measure of freedom will wane with time. Repressive policies may at times arrest the revolution of rising expectations that has been sweeping the world. History attests, however, that any attemp to reestablish a *status quo ante* ends in failure. Time is rarely on the side of tyranny, and empires—even one as closely policed as that of the Soviet Union's—are subject to centrifugal forces that weaken their outer core and hasten their disintegration.

The proponents of neo-Stalinism are also underestimating the human element. Dominik Tatarka, one of the leading Slovak writers, wrote in the January 1969 issue of *Reporter*—then one of the most outspoken voices of dissent:

"To be human is not a calculated end; man cannot be used as building material for the construction of history . . . It is quite possible for whole armies, armed to the teeth, suddenly to disintegrate, as if they had been destroyed from inside by white ants. Even in the biggest tanks, under the strongest armor, in every uniform, there are human beings. Sooner or later they must behave like human beings . . ."

The men and women of East and Central Europe have lived in an age of darkness for over two decades. They, and their children—now grown to manhood—look at the past and shudder. Where are the promises of yesteryear? What has become of the earthly paradise the advent of Communist rule was to bring into existence? Why is captive Europe merely plodding along while the rest of the world is making significant strides in so many areas of human endeavor? And what has become of man's right to free choice, personal dignity, and the pursuit of happiness?

Are the Communist leaders serious in believing that they can make people forget the sorry record of their misrule and guide them back into yet another era of Big Brotherism, with no regard as to the individual's dreams and legitimate aspirations? The neo-Stalinists should have their ear closer to the ground. Young people in their twenties and thirties view communism as the most reactionary of ideologies. They have had first-hand experience with applied Marxism-Leninism, as "updated" by Stalin and his successors. They have found it obsolete, retrogressive, and unresponsive to man's fundamental needs and desires. To this younger generation, communism is no wave of the future; it is only a symbol of a wasted past.

Thus orthodox Communists and the sundry opportunists who have latched onto their coattails are little more than relics of the past. They still cling to their monopoly of power; they still can cow or terrorize the vast majority into outward submission. But they are the dinosaurs of today; the body has grown to gigantic proportions, but the head has not adapted to change. They may possess the means for protecting their vested interests, but once again—as in Stalin's time—they must spend their nights wondering about their future. Surely, in the rigid society they are trying to reinstall, someone will inevitably appear who will "out-orthodox" their orthodoxy and claim their place.

August 1968 was indeed a crushing blow for all who had hoped the "Czechoslovak Spring" would usher in a new era, not only for the Czechs and the Slovaks, but eventually for the other captive peoples of East and Central Europe as well. The forces of retrogression, however, may have won a Pyrrhic victory. They have tightened their hold on power, but they have alienated further the people over whom they rule. Their cycle, as that of the dinosaur, is bound to come to an end. They have lived on borrowed time long enough.

BOB CROMIE—NEW COLUMNIST FOR THE CHICAGO TRIBUNE

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. PUCINSKI. Mr. Speaker, the Chicago Tribune welcomed a new columnist to its pages this week—Bob Cromie, a longtime newsman and observer of the world and local scene.

As the Tribune commented in an editorial, Mr. Cromie has pretty definite views about a lot of things, and he intends to discuss them in print.

We in Chicago welcome him as well to the ranks of professional scriveners who enliven our city and provoke us to think a little more deeply—about everything.

Mr. Speaker, Mr. Cromie's first column for the Tribune follows:

WHERE I STAND

(By Bob Cromie)

Because this is a first column it seems only sporting to warn you what to expect in this space in the future.

I am middle-aged somewhat overweight, admittedly prejudiced. I do not care for French cooking, curling, the John Birch society, or most modern poetry.

I am very fond of children, dogs, sunsets, koala bears, books, some mothers, and apple pie if tart. Also of the writings of Saki, James Thurber, Peter Beagle, and Charles Lamb, of baked beans, old shoes, loafing in the sun, watching someone else work, any golf course, of pretending not to hear the telephone ring and of Dick Cavett.

I believe that an integrated society is the only hope for this country, that dignity and a chance for gainful employment are everyone's inherent right and that the Edsel wasn't any more of a mistake than the Spiro. I like Ernie Banks, Pete Seeger, the poems of Kenneth Fearing, Wrigley field, Studs Terkel, Jim Conway, the view of the skyline from the Planetarium, Ellington's "Sophisticated Lady," Vincent Starett, and a bowling ball nosing into the 1-3 pocket.

I do not care for extremists of the right or left, Texas millionaires who lavish money on un-American causes, bugging, wire tapping, people who hit other people, loud mouths, bigots, bores, cottage cheese, wide neckties, bullfighting, big-game hunting, "Silas Marner," censorship, the color pink, mud, dust, rain on Fridays, formal wear, coral snakes (except at a distance) or bread with calcium propionate added to retard spoilage.

I favor the dissemination of birth control information, the fluoridation of water, sex education in the schools, and equal rights for everyone, without exception and without delay. I do not consider any of these things part of a communist conspiracy.

I believed in M-Day and was very impressed with the quietly effective way it was observed on the campus of the University of North Carolina in Chapel Hill—at least those portions of the demonstration which I saw. I was not impressed by Mr. Agnew's reaction to this nation-wide observance, even tho his statement, plus those of Atty. Gen. Mitchell in another context, led to one of my favorite remarks:

"Never," a friend of mine said last week, "have I seen so many bulls in the same china shop."

I am tired of hearing about the bridge at Chappaquiddick, tho unhappy about the murk which still appears to conceal the truth about that tragedy, and equally weary of talk about Judge Haynsworth, George Wallace, the St. Louis Browns Fan club, Sen. Eastland, and kids who consider violence a substitute for intelligent action. This is not to be construed as an attack on long hair or hippies. Everyone should be allowed to dress as he pleases and wear his hair at any length he likes.

Finally, and I admit this summary of my likes and dislikes is sketchy and incomplete, I am sick of listening to people who judge their fellows by color instead of content, of reading about the Mets, and those who want to know what's wrong with the Bears. There's nothing wrong with the Bears. They're just having a bad season.

See you around.

THE TAX REFORM ACT OF 1969

HON. GEORGE BUSH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. BUSH. Mr. Speaker, the statement on the Tax Reform Act of 1969—H.R. 13270—presented to the Senate Finance Committee by Raymond J. Saulnier, professor of economics, Bernard College, Columbia University, made quite an impression on me.

I agree with Professor Saulnier's view that "there is a danger of it being en-

acted without an adequate evaluation of its potential overall effects." So that all may be aware of some of the problems this legislation presents, I have requested that this statement be printed in the RECORD at this time. It follows:

MEMORANDUM ON H.R. 13270: THE TAX REFORM ACT OF 1969

(Prepared by Raymond J. Saulnier)

This proposed legislation is so long (368 pages), so complex (26 major sections with 63 subsections) and so deeply affected by loophole emotionalism that there is a danger of it being enacted without an adequate evaluation of its potential overall effects. Yet it should be clear even to a casual reader of press summaries that, as it is found in H.R. 13270, the Tax Reform Act of 1969 would be seriously counter productive.

The object of H.R. 13270 is to correct certain inequities in the federal tax code but, whatever it would do in that connection, it would have seriously adverse side effects on two other matters that must be coordinate in importance with equity in the design of our tax laws, namely the nation's capability for achieving vigorous economic growth and the balance between private and public effort in our society.

Specifically, the bill would impair the nation's capability for achieving vigorous economic growth by a number of provisions that would reduce incentives to save and invest, including the proposed treatment of capital gains and the reduction of incentives to invest in real estate and in minerals resources. It would further inhibit growth by reducing—in some cases eliminating altogether—ways in which business concerns reward management achievement under present tax law. And the balance of its revenue effect, which would become increasingly negative between 1970 and 1972, would favor consumption at the expense of investment, thereby weakening government efforts to overcome inflation as well as impeding economic growth. The Treasury estimates that, under the bill as it stands, the net long-term shift in the tax burden would be to raise taxes on corporations by $4.9 billion while lowering taxes on individuals by $7.3 billion.

In addition, H.R. 13270 would have a number of unfortunate effects on the structure of American institutions. It would impair the ability of state and local governments to finance public facilities independently and, in so doing, weaken their position in our present governmental structure. It would seriously impair the ability of private nonprofit institutions—colleges and universities, museums, hospitals, *etc.*—to obtain the private gifts on which they rely heavily, in some case entirely, for the extension and improvement of their activities. And as this memorandum will show, it would weaken the enterprise system—the means through which this country has achieved a standard of living unparalleled elsewhere in the world and through which America, from its beginnings, has offered opportunity for personal development and improvement unmatched anywhere.

In doing all this, and more, some of the bill's major provisions offend one's sensibility by—

Being in a number of instance seriously, unnecessarily and punitively retroactive;

Violating the long-respected distinction between capital and income in their treatment by the tax laws;

Deviating from the established principle of taxing income when it is actually received; and

Deleting a whole series of still valid and justifiable incentives on the ground, apparently, that yesterday's incentive is today's loophole.

The justification for this wholesale rewriting of the tax code is that a small group of individuals in the $200,000-and-over income bracket—154 in number—had no federal tax liability in 1966. Whatever the merits of the case against these individuals, it must be recognized that they represent only one percent of the taxpayers in this income class. Yet in order to reach 154 individuals, H.R. 13270 would adversely affect the tax status of hundreds of thousands of taxpayers, corporate as well as individual, would affect every citizen through higher prices and rents, would imperil every nonprofit, gift-supported institution in the country. It is hard to imagine a bill from which the fallout threat would be greater.

As for the 154, how much federal tax they paid in other years is typically overlooked, as is the taxes they paid over the years to state and local governments. Typically, no account is taken of the income these individuals chose to forego in achieving tax exemption, nor the amount of capital or income they gave away, *etc., etc.* Nor is there an adequate evaluation in the public dialogue on these questions of what it will cost the nation in the impairment of its productive institutions to correct such genuine inequities as exist under present tax law by the methods proposed. There surely must be a better and fairer way to do it. One is impressed again and again that what we have here is a massive example of throwing the baby out with the bathwater—in this case a whole family of babies, with a few cups of bathwater.

Although H.R. 13270 has been described as a milestone in tax legislation by the Secretary of the Treasury, there are valid objectives of tax reform—long recognized inside and outside of government—that it does nothing to achieve. Notable among these are simplification of the tax code and revisions to promote growth. Value-added taxation, a major subject of tax discussion these past few years, is nowhere in this bill. Nor is fiscal responsibility a part of it. The fact that the bill would burden the finances of the federal government—in amounts estimated as high as $4.1 billion in 1972—by tax cuts that more than offset the increased revenue involved in tax reform and in repeal of the investment tax credit, has already been commented on. In short, H.R. 13270 deserves not a mere patching-up but a thorough overhaul. One thing is certain: if it is passed, even with the changes proposed by the Secretary of the Treasury (many of which go in the right direction but others, in the opinion of this writer, do not), no true tax reformer need fear he has been done out of a job. Actually, the tax reform problem would be rendered more difficult.

It would be impossible for any one individual—and certainly not in one brief memorandum—to present a full critique of this lengthy and complex bill. The fact that many provisions are not commented on here is not to be construed as meaning anything, one way or the other, *pro* or *con*, with respect to their specific merits. Limitations of space, time and energy have required concentration on only a few of the bill's major provisions. It is hoped, however, that the selection is of those most in need of critical comment.

Let us begin with certain of the bill's provisions that affect capital investment and thus the nation's potential for economic growth.

1. PERMANENT REPEAL OF THE INVESTMENT TAX CREDIT

Permanent repeal of the investment tax credit, as H.R. 13270 proposes, would remove an incentive to capital expansion and improvement that from its inception has been a constructive provision of the tax code. There may be abuses here and, if so, they should be corrected, but not by the wildest stretch of the imagination can the investment credit be regarded as a loophole in any meaningful sense. Its permanent repeal would have to be regarded as a blow at the ordinary, everyday business of improving the nation's productive plant. Certainly, if this provision is enacted the Congress should find some means—presumably through depreciation liberalization—to make the volume of investible funds generated internally by businesses more nearly consistent with what is required for capital investment. Otherwise, the productivity and international competitiveness of American industry will suffer a damaging setback.

Finally, although an on-again off-again handling of the investment credit deserves, in my opinion, no place in stabilization policy—planning for capital expansion and improvement needs and deserves a more stable framework of taxation—the anti-inflation purpose (for which there is a reasonable argument) would be better served by suspension than by permanent repeal, if that has to be the choice.

2. LIMITATION OF ACCELERATED DEPRECIATION PRIVILEGES IN REAL ESTATE INVESTMENT

Despite the well-known tendency for investment in new construction (notably, new residential construction) to lag behind other types of investment, and despite the widely-recognized and increasingly critical shortage of residential facilities, H.R. 13270 would reduce certain incentives which Congress on earlier occasions deliberately incorporated into the tax law to encourage construction and rehabilitation of real property. Under the House bill:

(a) accelerated depreciation—previously allowed on all new construction on the 200% declining balance and sum-of-the-years digits methods—would henceforth be restricted to the recovery of capital invested in new residential building;

(b) despite the fact that the incentive to invest in new construction depends heavily on an active market for used structures, straight line depreciation would be required on the latter (residential and nonresidential) in place of the 150% declining balance method presently allowed;

(c) although new nonresidential construction is crucial to the creation of a satisfactory total environment, it would be allowed a slower (150% declining balance) depreciation in place of the accelerated rate presently allowed;

(d) the excess of accelerated over straight-line depreciation would be recaptured as ordinary income on the sale of real property of any type, with no amelioration of this effect (as provided in present law) depending on how long the property was held, thus aborting the initial effect of fast writeoff; and

(e) the right to depreciate rehabilitation expenditures on a straightline basis over 20 months would be restricted to projects where additions or improvements have a useful life of 5 years or more, where they constitute low cost housing for nontransient use (declared eligible for such treatment by HUD) and where rehabilitation cost per unit is not less than $3,000 or more than $15,000.

These proposals—which treat accelerated depreciation as if it were a device for nonpayment of taxes rather than a deliberate, congressionally-designed arrangement for the deferral of taxes—are almost certainly destined to result in (i) a smaller increase in total housing supply than would be produced by wider availability of faster depreciation; (ii) a reduced availability of housing for low- and middle-income families; (iii) inadequate nonresidential facilities needed for a balanced total neighborhood environment; (iv) less rehabilitation of existing housing, further limiting total supply; and (v) increased rents. There must be a

way to prevent the tax-shelter uses of real estate—by what must be a very limited number of individuals—without these adverse and untimely effects on the whole construction and real estate industry.

3. HEAVIER TAXATION OF CAPITAL GAINS

It is a long established feature of tax law everywhere to tax capital gains less heavily than current income. In so doing, legislators have had in mind that if there is a gain from capital in terms of appreciation of principal value, it is (i) a gain from investment of income already taxed to the individual before it could be saved and invested; (ii) that it often reflects in whole or in part, the plowback of undistributed profits already taxed to the corporation; (iii) that the income from capital is also fully taxed as received; (iv) that capital gains are built up over time—frequently over a long time—and, with tax rates typically rising, an equitable and proper averaging process should put the capital gains tax at a lower level than the tax on current income; and (v) that a capital gains tax is levied, in any case, against an increase in principal value which, the world being what it is, is typically a result largely of inflation. No tax code can deal severely with investment gains without discouraging the investment process itself, either by lowering potential return or limiting liquidity, or both—and to discourage investment is to inhibit growth and everything that growth means for the creation of jobs and the enhancement of well-being for everyone. Yet H.R. 13270 would make present taxation of capital gains more severe by:

(a) extending the holding period required to distinguish between capital gain and income from ordinary transactions from six months to one year;

(b) eliminating the alternative tax rate for longterm capital gains, thus raising the upper limit of the effective tax on such gains for taxpayers with a marginal tax rate above 50% from the present 27½ (including surtax) to 38½ or by 40%;

(c) raising the alternative rate for corporate taxpayers to 33% (including surtax) from the present 27½; and

(d) permitting only 50% of an individual's net longterm capital losses to be offset against ordinary income, up to the $1,000 limitation, in place of the full deductibility presently allowed.

In addition to making invested funds more illiquid and discouraging both saving and investment, H.R. 13270's proposed treatment of capital gains would be clearly retroactive in effect, constituting an unanticipated capital levy not just on the 154 but on many thousands of unsuspecting Americans.

4. REDUCTION OF DEPLETION ALLOWANCE AND OTHER PROPOSALS AFFECTING MINERALS INDUSTRIES

One of the most capital-intensive and risk-affected industries in the United States—oil, gas and other mineral resources—would be dealt with especially severely by H.R. 13270. Apart from the adverse effect on these industries from repeal of the investment tax credit and the heavier taxation of capital gains, the proposed legislation—in the case of oil and gas—would (i) reduce percentage depletion allowances from 27½ to 20% on domestic properties; (ii) eliminate depletion allowances altogether on overseas properties; and (iii) treat production payments as loans.

Among the likely effects of these proposals are the following:

(a) the cost to U.S. companies of oil development would be increased substantially and, if there is anything at all to the shifting of taxes (and there must be in this case, since the profitability of oil companies in 1968 was only about the same as that of manufacturing concerns generally), the cost of gasoline at the local gas pump would be increased;

(b) the cost to US companies of oil development conducted overseas would be increased: (i) in all probability without increasing US tax revenues; (ii) with predictably adverse effects on the strategical position of the United States in world affairs; and (iii) with adverse effects, certainly in any longterm perspective, on the US balance of international payments; and

(c) with a lower after-tax cash flow, oil producing companies would need to depend more heavily on external financing for oil development, a necessity that would be felt most severely by individual developers and small companies.

5. REDUCED OPPORTUNITIES TO REWARD MANAGEMENT ACHIEVEMENT

The opportunity to reward a business executive for making a success of a company's affairs cannot possibly be anything but constructive in promoting economic growth. In this respect, the proposed 50% upper limit on taxation of earned income moves in the right direction; on the other hand, those provisions of H.R. 13270 that would limit opportunities to provide rewards other than by current income would be an obstacle to growth. Specifically, this criticism applies to:

(a) the bill's treatment of deferred compensation payments, a type of forward income-averaging which, under these proposals, would be taxed not at the rate applicable to the taxpayer in the year the income was actually receved but at a rate calculated, *ex post,* as what would have been applicable in the years in which the income was earned;

(b) allowing the deduction of interest only to the extent of investment income and long-term capital gain (plus $25,000) for the acquisition of stock (for example) under a stock option program, even though the interest is a cost incurred to make an investment, the income and capital gain from which (if there is any) will be taxable in due course;

(c) taxing as compensation the value of stock received in lieu of salary under restricted stock plans (except where the employee's interest is subject to substantial risk of forfeiture) despite the fact that in many instances the stock continues under restriction which prevents its sale to raise funds to pay the tax.

6. REDUCING TAX EXEMPTION OF INTEREST ON STATE AND LOCAL (MUNICIPAL) BONDS

H.R. 13270 would reduce the tax exemption accorded interest paid on state and local government securities (municipals), an exemption going back to the introduction in 1913 of the federal income tax and grounded in constitutional considerations, by:

(a) allowing an individual to count as tax preference income (in the limited tax preference—LTP—rule) an amount not to exceed 50% of total income (adjusted gross income plus tax preference income) regardless of the actual proportion of taxable to nontaxable income, thus treating some tax-exempt income as taxable;

(b) requiring that deductions be allocated to nontaxable income (in the allocation of deductions—ADR—rule) in the proportion of nontaxable income to total income, thus making some part of the deductions ineffective in the role for which they were originally granted.

Also, the bill would further restrict the availability and raise the cost of municipal debt financing by:

(c) making capital gains on debt securities held by financial institutions taxable at the income tax rate rather than (as now) at the capital gains rate.

Having thus taken away with one hand at least part of the tax exemption explicitly offered with the other, and having reduced the incentive for financial institutions to continue investing in municipals (commercial banks hold nearly 40% of the outstanding supply), the bill then says that if a state or local government chooses to finance on a taxable basis the federal treasury will provide a subsidy calculated to offset the higher cost of borrowing without benefit of tax exemption.

Quite apart from the constitutional questions raised by these proposals—which have to do with reciprocal tax immunity as a principle essential to desirable federal-state-local relations—there are a variety of important economic questions involved. Thus:

(a) again if there is anything at all to the shifting of taxes, this proposed erosion of tax exemption will raise the cost of financing to state and local governments and require an increase in tax rates at the state and local level; a measure of this effect can be judged from the fact that in recent markets tax-exempt securities sold at yields as much as 2 percentage points below those obtainable on taxable securities;

(b) to the extent that an erosion of the tax-exemption privilege induces state and local governments to elect the alternative of issuing taxable securities, the proposed legislation will require the federal government to undertake a new and conceivably large and growing function in administering interest rate subventions;

(c) the market for municipal securities is bound to be dislocated, indeed is already seriously dislocated, at a time when (most would agree) capital improvement programs at the local level are needed more urgently than ever before; already, the yield spread between taxable and nontaxable securities has narrowed by close to ⅓ of a percentage point.

Again, all this is done apparently to cut back on the use of tax-exempt municipal bond income to avoid tax liability, when the evidence indicates that this type of income is of major consequence to only a small minority of all high-income individuals.

7. TREATMENT OF CHARITABLE CONTRIBUTIONS

Finally, there are the provisions of H.R. 13270 that would significantly alter the balance of private *v.* government effort in various sectors of our society. It would do this by hampering the gift-raising capability of private nonprofit institutions on which every community in the nation, in one way or another, depends heavily for educational, cultural, medical and other facilities. It is especially serious that this would be done at a time when these institutions, with few exceptions, are operating under increasingly serious financial difficulties and when demands on them by the community are heavier than ever before.

The proposed increase from 30 to 50% in the general limitation on an individual's charitable contribution deduction would be a constructive and important change, but in a number of other provisions H.R. 13270 would be so technically complicated and so severe in its treatment of acts of charity and philanthropy that prospective donors would likely withdraw in bafflement if not in anguish as fund-raising personnel attempt to explain the tax implications of prospective gifts. Features of the proposed legislation that would make life more difficult for gift-supported institutions include:

(a) eliminating the unlimited charitable contribution deduction now available to donors, thus making it more difficult to obtain the large gifts that frequently are the events that make a success of ambitious fund-raising programs;

(b) treating as taxable the appreciation (unrealized, at that) of charitable contributions of appreciated property;

(c) placing what appear to be severe limi-

tations on the deduction available to donors in charitable remainder trusts, and charitable income trusts the remainder of which goes to a beneficiary other than a charity;

(d) requiring that in so-called bargain-sales to charitable organizations costs be allocated between the portion sold and the portion given, rather than allowed in full as a charitable contribution deduction;

(e) eliminating the rule that ma·e possible the so-called two-year charitable trust;

(f) eliminating the presently unlimited set-aside deduction available to nonexempt trusts and estates; and

(g) disallowing charitable deductions for gifts less than the donor's full interest in the property involved.

CONCLUSION

Without attempting to evaluate all the possible effects of H.R. 13270, the conclusion must be that, as it stands, it would—

Impair the nation's capability for achieving economic growth and improvement;

Reduce in particular the incentive to invest in new construction, in all probability doing little if anything to promote investment in new low-income housing;

Raise rents;

Raise the price of gasoline and mineral products generally;

Raise local taxes;

Create the need for a new federal program to help state and local governments finance public facilities;

Create the need for new federal programs to aid private gift-supported institutions; and

Hamper the fight against inflation.

THE TREASURY'S SEPTEMBER 4, 1969, PROPOSALS

The maleffects of H.R. 13270 would be ameliorated in part but not entirely by proposals made September 4, 1969, by the Secretary of the Treasury, in particular by his proposals for:

Cutting the estimated 1979 revenue shortfall from $2.4 to $1.3 billion;

Reducing the corporate tax rate by one percentage point in 1971 and an additional point in 1972;

Retaining the six-month holding period for capital gains and, with some exceptions, retaining the maximum 25% rate on such gains;

Excluding charitable donations of appreciated property from LTP and ADR:

Reducing the proposed tax on foundations from 7½ to 2% of income;

Excluding tax-exempt municipal bond interest from LTP;

Eliminating that section of H.R. 13270 that puts a limit on the deductibility of interest on indebtedness incurred to purchase or carry investment assets; and

Deleting that provision of the bill (Section 331) relating to deferred compensation.

However, the Secretary's proposals would leave unchanged or make even more severe certain sections of the proposed bill which, in the judgment of this writer, would have a counterproductive economic effect. Specifically, the Treasury's proposals would, among other things—

Leave the treatment of real estate investment as in the House bill except for the suggestion that commercial banks, mutual savings banks and savings and loan associations be allowed a special tax deduction of 5% against gross income from loans to finance residential construction (also for guaranteed loans to college students and loans guaranteed by the Small Business Administration);

Accept the reduction of percentage depletion for the minerals industries (though not a part of the administration's initial recommendations) and the inclusion of both depletion and intangible drilling costs in ADR (as initially suggested to the House) but would go beyond H.R. 13270 by proposing (as the administration did initially, but as the House did not) that both depletion and intangible drilling costs be included in LTP, though the latter not for taxpayers deriving 60% or more of their income from oil and gas operations;

Continue the limitation (as originally proposed by the administration) on restricted stock plans;

Accept the House proposals regarding charitable contributions, except the inclusion of donations of appreciated property in LTP and ADR;

Include tax-exempt interest in ADR (as does the House bill) but—with potentially damaging effect—without the ten-year phase-in which the bill provides;

Apparently employ an arrangement (to be disclosed later) such as an urban development bank in lieu of interest subsidies to state and local governments that elect to issue taxable securities; and

Retain the retroactivity of any change in the taxation of capital gains.

Clearly, there is a great deal still to be done to make H.R. 13270 consistent with *all* the goals of constructive tax reform.

Nothing said above is meant to disparge in the least the importance of efforts to check genuine abuses of the present tax code. No one can make a case for retreating from that task. The point is we must be sure that in the cleaning-up process it is bathwater and not babies that is thrown out, and that there is no exchange of new inequities for old ones. We need a tax code that is fair and equitable. But we also need a code that bolsters incentive to work, to save, to invest, to take risks (and heavy risks at that) and a code that will have the kind of effect on the institutional structure of our country—the place of private enterprise in the production process, the balance of state and local *v.* federal power, and the role of private nonprofit, gift-supported institutions—that will strengthen not weaken the democratic qualities in American life.

THE LATE HONORABLE EDWARD H. REES

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. ROONEY of New York. Mr. Speaker, I was indeed saddened to learn of the passing of the Honorable Edward H. Rees who for 24 years represented Kansas' Fourth Congressional District here in the House of Representatives. Ed Rees and I became very good friends and I, like so many of my colleagues here, feel his loss deeply. He was a wonderfully warm and gentle man, yet a man with firm convictions. Some of these I did not personally agree with but had to admire his devotion to them. I recall with pleasure some of the exchange of ideas we had; Ed was never at a loss for words. During his years in the House of Representatives Ed Rees served 16 of them on the Post Office and Civil Service Committee and twice was the chairman of that distinguished committee. He was devoted to economy but worked hard and long to improve the lot of Federal employees for whom he had high regard. He was also the sponsor of legislation which made November 11 Veterans Day—an annual observance dedicated to the veterans of all of our country's wars. Ed's life of public service was a long one starting back in 1912 in his home State and ending with his retirement from the House of Representatives in 1960. Throughout that long span he was known and loved by all who came in contact with him. To his lovely wife, Agnes, his son and family I extend our deepest sympathy at this sad time.

JOHN STEINBECK WRITES TO FRIENDS OF THE NATIONAL LIBERATION FRONT

HON. BURT L. TALCOTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. TALCOTT. Mr. Speaker, the war in Vietnam still drags on. Thank goodness, the level of casualties is mercifully down.

The objectives and the tactics of the Communists have not changed—only the tempo is different. The objective is still domination of South Vietnam; the tactics are still terroristic. Terrorist atrocities continue daily. This type of guerrilla war is the most difficult of all known warfare with which to cope. It is the most difficult for those removed from the scene to understand.

The famous author, John Steinbeck, was born and buried in my hometown of Salinas, Calif. The liberal press has always given Mr. Steinbeck high marks for his reportorial skill and his descriptive writing.

He toured South Vietnam in 1967 and wrote a letter from Saigon, which I ask unanimous consent to include in the body of the RECORD.

He made several points which deserve to be remembered as we try again to negotiate with the North Vietnamese Communists and their Vietcong collaborators. One is significant in respect to some current attitudes toward the South Vietnamese Government. No refugees are moving to the north or to Vietcong centers to avoid brutality, terror, or deprivation of liberty. Hopefully, any peace agreement or settlement will protect the South Vietnamese from the terrorism and deprivation of liberties now so flagrant in North Vietnam and among the Vietcong.

I urge the re-reading of John Steinbeck's poignant letter:

SAIGON.—Do you remember my telling you that any mistakes might be beauties but they would be my own? Well, I've only been two weeks in Vietnam but of that time I have spent 10 days out of 14 in the field from base camp to forward position, to patrol, to assault operation. I've covered a lot of country and have seen many things ugly and/or beautiful with my own eyes. I haven't been to the Delta yet.

Anyway I'm cocked and set to make some generalities which the home guard com-

mandos can shoot down if they wish. In New York, in other places and in those full-page advertisements in the New York Times as well as in political speeches aimed at U.S. foreign policy, I have heard and read that we are interfering with the internal affairs of a foreign country—that this is essentially a civil war and that the Vietnamese people should be allowed to settle it for themselves, that the V.C. is an organized army of Boy Scouts, selling their lives to free people from the intolerable pressure of a ruling class backed up by the brutal and imperialist soldiery which delights to kill and maim women and children.

My first generality item is that this is pure horse manure, and I base this on what I myself have seen.

The V.C. has much the same selfless impulse, the same gentle democratic direction and uses the same methods for gaining his ends as the Mafia does in Sicily. The parallel is very close. Terror and torture are his weapons. He bleeds the people he is saving of everything movable, kidnaps whole villages for forced labor, recruits the young men and holds the parents hostage. He murders any opposition noisily or secretly. He impales living bodies on sharpened stakes, slashes stomachs so that a man drags his intestines on the ground before he dies. He tosses grenades in markets where poor people gather to buy food.

If a village refuses to pay his tax (the Mafia or Cosa Nostra would call it protection) he burns the houses. And lately he has a refinement. A man suspected of communicating, only suspected, is taken to a village center. His neighbors are forced to look on while he is taken apart little by little, starting with fingers and toes but carefully so that bleeding will not give him quick release, and when they have finished, he is a ghastly mound of butcher's meat. You don't believe it? I could show you photographs but no American paper would dare print them for fear of disturbing the comfortable self-satisfaction of its readers.

I wish I could take the people who have written me hate-letters calling me murderer, through some of the sweet and tender activities of the National Liberation Front which is what Charley calls himself. But I suspect their stomachs couldn't stand it.

I would like them to see the refugee camps we help to build and help to maintain. These people did not run from us. They ran to us. Doesn't it make any impression that there are no reverse refugees. Nobody runs north to escape the brutality of the South Vietnamese and the brutal Americans. Why is that?

Of course this is a most complicated situation. The new party-line word in so many of my hate letters is simplistic. Well if this is simplistic, comrades, make the most of it. Charley is a pure SOB. His purpose is domination of the land and the minds of poor people and he will stop at no horror, no lie, no trick to achieve it.

This is a simplistic generalization. I can go into its complicative opposite if you wish, but meanwhile, if you hear someone celebrating the misunderstood and mistreated V.C., just punch him in the nose for me, will you?

But this is not a pretty war and Charley sets the pace. Our kids are learning to fight back. But how I would like to run a protest parade down a V.C. trail. Charley puts paddy peasants over a suspected path before he goes in. Maybe the Peace Marchers might like to serve in this capacity. Sorry to be so vehement but I've seen a boy with punji wounds.

Yours,

JOHN.

DAVID LAWRENCE ON NARCOTICS PARLEY

HON. CHARLES H. WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. CHARLES H. WILSON. Mr. Speaker, on October 27 in the Washington Evening Star, Columnist David Lawrence discusses the recent conference held by President Nixon and congressional leaders of both parties. The narcotics addiction and drug abuse problem according to the President is "just as important as the defense of our country." Mr. Lawrence presents an informative summary of the conference and the significant points made at it.

For my colleagues who may have missed the column, I am here including the text of it into the RECORD. Since I am sure many of you are as concerned as I am about this terrible problem, Mr. Lawrence's article should prove informative and worth reading. The column follows:

DOPE PARLEY MADE TELLING POINTS

(By David Lawrence)

What was the piece of news most important to the American people in the last few days?

It was the two-hour conference between President Nixon, leaders of both parties in Congress and the officials of our government who are dealing with the "dope" problem in the world today. The President said the subject is "just as important as the defense of our country."

More than 20,000 words were released to the press covering the two conferences. The first was a discussion between the President, the secretary of Health, Education and Welfare, the director of the Bureau of Narcotics, members of Congress and Art Linkletter, the TV star, whose daughter committed suicide two weeks ago after struggling with a problem created by drugs. Subsequently a separate meeting was held with the newsmen at which the head of the narcotics bureau and Mr. Art Linkletter spoke at length.

The presentation of this subject at the White House conferences might well have been on the television and radio. Here is a summary of the most significant points made, as revealed in the official transcript:

1. The President first emphasized that the subject was "completely above partisan consideration." He said that the country has too little information on the subject and that "there is too much ignorance" of its scope.

2. The director of the narcotic bureau, John E. Ingersoll, revealed that "Operation Intercept" on the Mexican border was very successful and that a system of cooperation between the United States and Mexico to prevent the smuggling of drugs has begun to function effectively. But he added that the principal sources of drugs brought into the United States were Turkey and France.

3. Mr. Ingersoll told of an important meeting just held by the International Organization of Criminal Police (Interpol) which has recommended that member countries make drugs available on prescriptions only, that governments supervise all transactions from production to retail distribution that all producers be licensed, that trade be limited to authorized persons, and, finally, that nonauthorized possession for distribution purposes be prohibited.

4. It was suggested that a distinction be made between mere users of narcotics and those persons involved in the illicit trade. New laws are being drafted for Congress to pass and for the states to enact. Tighter controls are urged not only on international traffic but over sales inside the United States.

5. It was disclosed also that some of the government's own agents become involved in the drug traffic. Mr. Ingersoll said he had the unhappy job of separating from the service more than 50 persons, indicting about 14 or 15 agents and former agents for federal offenses, including traffic in narcotics. He said the investigative workers are confronted with "the most fantastic temptations" because of the terrific profit in the drug trade.

6. Considerable discussion was devoted to the length of prison penalties. The argument was made that the professionals engaged in the drug business should receive longer prison terms than the users, and the the latter should be given light sentence and more treatment of the rehabilitation kind.

7. The director of the narcotics bureau spoke of drug traffic within the armed forces, and said "the principal problem lies in Vietnam" He mentioned that one agent flying in a helicopter had discovered many areas there where marijuana is grown.

8. President Nixon emphasized the need for law enforcent on the drug question at the federal, state and local levels in America. He remarked:

"We tend to blame it all on the kids and the others that are drawn into this field. It has been made available to them. The sale has been made. The government hasn't done its job. . . .

"On the education side, I was talking to Art Linkletter about this last night, I said, "Don't they start in high school?' He said, 'No, in junior high school.' This, apparently, is the problem."

9. Secretary Finch pointed out that in some school districts in Virginia the superintendents say more than half their students are using marjuana or other drugs.

10. Much of the discussion concerned marijuana, and the question was raised as to whether it is on a par with alcohol. Senator Jacob Javits of New York put it this way:

"The main point in marijuana is you can't take one drink. Once you have it, you have had it."

11. President Nixon made a final suggestion that, instead of "a dull educational program" on television about the evils of marijuana, heroin, LSD and other drugs, it would seem "that some exciting programs on this could have an enormous educational impact on the country.

BIG TRUCK BILL

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. SCHWENGEL. Mr. Speaker, my editorials for today are from the St. Paul Dispatch, and the St. Paul Pioneer Press, St. Paul, Minn. The editorials follow:

[From the St. Paul (Minn.) Dispatch, July 17, 1969]

TRUCKERS, AGAIN, WANT MORE

The annual push is on for the use of longer, wider and heavier trucks and buses on fed-

eral interstate highways. The House Public Works subcommittee is hearing testimony on a bill to permit bigger trucks and buses and an advertising campaign has begun in public print.

Last year, you'll recall, the trucking lobby almost had hauled such a bill quietly through Congress before the public got wind of it. Worried taxpayers and another powerful lobbying group, the American Automobile Association, managed to put the brakes on the truckers.

But they are back again, claiming that their proposed increases are "modest" and that the bigger trucks will be safer than the rigs which now rock our cars as they go rumbling by. Testimony at last year's congressional hearings showed that large trucks are involved in a significant percentage of the nation's fatal accidents. Federal Highway Commissioner Lowell K. Bridwell said that the 1968 bill failed to include adequate safety provisions and would "speed the deterioration" of the roads.

George Kachlein Jr., executive vice president of the American Automobile Association, addressed himself to the problem of road deterioration at the current subcommittee hearings, estimating that the larger trucks would create a $1.6 billion road repair bill over a 10-year period. He stated further that the AAA believes that such damage would occur each 10 years. Even if the monster trucks were to be taxed heavily enough to pay for such damage (which apparently they would not be under the present bill), the question remains as to what will happen to the speed and safety of interstate highway traffic if these roads are constantly being torn up and repaired. Speed and safety were the prime reasons for building the interstate system, if memory serves correctly.

In an apparent attempt to influence the motoring public, a major supplier of truck parts has taken a full-page magazine advertisement to argue for bigger and heavier trucks. At the top of the ad is a picture of a tree-lined, two-lane road and at the bottom is a photo of one of those typically arid, sun-baked treeless stretches of multi-lane interstate highway. Nearly everything has changed, says the ad.

In truth, there are still a lot of those two-lane roads remaining and many are located where those proposed monster trucks will have to use them to get to their destinations after they leave the interstate highways. At the subcommittee session Tuesday, Joseph Coupal, Iowa director of highways, pointed out that a substantial percentage of that state's road system could not stand the gaff of heavier truck traffic. Highway department heads of most other states would make the same statement.

The trucking industry may be correct when it says that the larger and heavier trucks would be more efficient and would allow the industry to keep shipping costs down. But, for the present, it appears as if what's good for the trucking industry is not good for the country.

[From the St. Paul (Minn.) Pioneer Press, Sept. 8, 1969]

TRUCKS AND SAFETY

Seldom has any government agency shown as callous a disregard for the public as has the Transportation Department in its statement of support for a bill to permit longer, heavier trucks on interstate highways.

The department has offered to support to the bill, if certain changes are made, even though the agency does not know how the bigger tractor-trailer rigs would affect highway safety. It seems incredible that the department would offer any support, however qualified, until it had complied and evaluated sufficient safety data.

Federal Highway Administrator Francis C. Turner admitted to a House Public Works subcommittee that federal highway officials do not have enough data to reach a "definitive conclusion" as to whether bigger trucks would pose an unacceptable safety hazard. Yet he proposed that Congress enact the bill because the department believes it would benefit the nation's economy.

Turner tossed a crumb to the safety-conscious members of the subcommittee by proposing that Congress postpone the effective date of the bill three years to allow time for setting safety standards. But what happens if it is learned during those three years that the bigger trucks will pose an unacceptable safety hazard? Will the bill be repealed? Not likely.

So, before such a bill is considered for passage, it is imperative that the facts be known and the safety standards set. There should be an effort made to determine what effect such trucks will have on the mental and emotional attitudes of auto drivers, how much nervous strain the presence of such trucks will cause, how much the "whoosh" of air from them will rock a passenger car, how much dirty slush they will throw onto an auto's windshield when they pass, how long it will take one to pull across a highway in front of a line of fast-moving cars, what hazards will be caused by the highway repair crews that will be out more frequently to repair damage caused by these monsters and what dangers await motorists along the routes these trucks will use between terminals and interstate highways.

Big trucks are dangerous. When they collide with a car, the car always comes out second best. Semi-trailers can jack-knife and tip over. At least three have toppled this summer on Interstate I–84 in and near St. Paul. It was only by chance that none of them hit cars. Congressional passage of a bill permitting the operation of even larger trucks without an evaluation of their effect on highway safety would be an abdication of responsibility.

The Transportation Department's proposal does not square with President Nixon's campaign statement that the safety of the traveling public must be protected. The department's position puts economics above human lives. That's a strange priority.

VFW POST NO. 5718 STAGES "SALUTE TO YOUTH"

HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. FASCELL. Mr. Speaker, after President Nixon proclaimed September 28 through October 4 of this year as "National Adult-Youth Communications Week," the Veterans of Foreign Wars—No. 5718—of Coral Gables, Fla. and its ladies auxiliary took the initiative to follow up this proclamation. Their program "Salute to Youth" was held on Sunday, September 28. Students and adults gathered to hear speakers on the role of today's youth.

Mrs. Anne M. Genesse, VFW Americanism chairman, said:

The theme was "Accentuate the Positive" and the purpose was to stress the positive and constructive side of the majority of today's youth; as opposed to the negative and destructive activities of the noisy minority... Our idea is to give recognition to the young people who are truly worthy of it and to present a positive approach to youth; we have all heard enough of the negative view point.

At the program, over 140 high school and college students from Coral Gables, South Miami, Miami Beach, Hialeah, and North Dade were honored by the VFW with citations for their outstanding community service. Individuals and groups received awards; included were: American Red Cross Youth Activities Volunteers, the Junior Venetian Aquatic Club, the Nursing Volunteers from Doctors' Hospital, representatives from the Decency Rally and from the University of Miami and Miami-Dade Junior College.

I wholeheartedly commend the Veterans of Foreign Wars and the Ladies Auxiliary of Coral Gables for their outstanding work in promoting understanding and for their efforts toward closing the "generation gap."

PAY FOR POSTAL WORKERS IS OUT OF LINE AND VETO THREAT ONLY AGGRAVATES SITUATION

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. DULSKI. Mr. Speaker, the House recently passed H.R. 13000, the Federal Salary Comparability Act of 1969, by a vote of 311 to 51.

This is vital legislation designed to accomplish two things: First, to set up a permanent system of adjusting pay for Federal employees; and second, to correct the present inequity which requires a postal worker to work 21 years to reach maximum pay.

The House acted despite the advance threat from the other end of Pennsylvania Avenue of a Presidential veto.

I think that it is regrettable that the Chief Executive chose to speak out so negatively on this matter before it had been acted upon by the Congress. Unfortunately, his action has only aggravated an already sensitive situation with regard to our postal workers.

As an example, I call the attention of Members to an article which appeared in a downstate newspaper the other day, as follows:

[From the Long Island (N.Y.) Press, Oct. 22, 1969]

LONG ISLAND POSTMEN MAY SEEK WELFARE; MOVEMENT SNOWBALLS AMONG LOW-PAID CARRIERS

(By Jeff Forgoston)

It looks like the two Manhattan letter carriers who applied for welfare benefits last week started something, because dozens of Long Island postmen now are contemplating the same action.

Carriers working in all sections of Queens, their number apparently growing each day, except to apply for relief en masse, probably at both the Jamaica and Long Island City welfare centers, sometime next week.

This display of the postmen's plight—less than $85 a week take-home pay for younger carriers—will have followed the expected appearance this afternoon of 20 Brooklyn letter carriers in their uniforms at the Department of Social Services' office at 330 Jay Street.

The snowballing welfare movement among postal workers was prompted by President Nixon's threat to veto a pending pay increase bill for federal employes, passed last week by the House of Representatives by a wide margin.

Postal union leaders are in complete agreement with the men.

"Does a guy who works for the U.S. government have to apply for welfare to support his family?" asked Albert Manzi, president of the Flushing Letter Carriers Association. "Is this fair? Is this justice?" Manzi, who works as a carrier out of the Middle Village station, said he has received about 60 calls from young postmen asking for help.

Thomas J. Spillett, head of the Long Island City Letter Carriers Association, has received only about 20 calls—but he sympathized with the postmen's economic hardships just as much as Manzi. "The entrance salary is so low, this is the problem," he said. "Good responsible men are coming into the postal service, but with this salary they can't stay."

Anthony Perrota, the president of the 1,000-member Jamaica Letter Carriers Association, said many men leave for better-paying jobs in the city's civil service. He has received about 50 calls.

In Freeport, about one-third of the 130-member Freeport Letter Carriers Association has inquired about seeking welfare benefits, said Aaron Trachtenberg, president of the local unit and vice president of the association's Long Island district. He said sentiment in this direction was growing throughout Nassau.

The annual starting wage for a letter carrier is $6,167. After five years, it is just over $7,100. The top salary is $8,400 for 25 years of service.

Manzi, whose Flushing association has 1,000 members pointed out that city policemen and firemen reach the top of the wage scale after only three years. A postal job, he added, "is for the birds. I'm in my 21st year and I'm still not at top salary." He said he grosses $8,200. The starting salary for a policeman is $9,499.

"It's pitiful," Manzi said. "You see men who have to work at two jobs who never see their kids." He estimated that 25 per cent of his group might be eligible for relief subsistence. Most are men under 30 years of age, some with several children.

Why haven't they sought welfare benefits prior to now?

Spillett, who works out of the Sunnyside station and lives in Flushing, had a theory. "Carriers," he said, "are just becoming aware that their salaries are so low that they are eligible for welfare."

Each case, however, will have to be judged on its own merit. A spokesman for the Department of Social Services said yesterday that decisions had not been reached yet on the two Manhattan postal workers who applied last week.

Spillett, who also holds the post of executive vice president of the state Letter Carriers Association, had another thought. He said some men may not submit a welfare application because of "a sense of shame. They're a little timid." But he added that he was trying to allay their fears, pointing out that their financial status was not their fault.

Another postal union leader agreed.

"The country doesn't seem to worry very much about our letter carriers," said Gustave J. Johnson of East Meadow, national field director of the National Association of Letter Carriers.

NATIONAL GALLERY OF ART CALENDAR OF EVENTS—NOVEMBER 1969

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. FULTON of Pennsylvania. Mr. Speaker, it is a pleasure for me to place in the CONGRESSIONAL RECORD the calendar of events for the month of November of the National Gallery of Art.

The National Gallery of Art is to be congratulated on its excellent, high-level presentations, and the events scheduled for November are a fine example of the programs offered.

I am happy to call this calendar of events to the attention of my colleagues and the American people, and urge that they take the time to visit the National Gallery of Art.

The calendar of events follows:

NATIONAL GALLERY OF ART—CALENDAR OF EVENTS, NOVEMBER 1969

Old master drawings from Chatsworth: Opening November 2 in the Central Gallery for exhibition through the month are 131 master drawings from one of the foremost private collections. Lent by Britain's Duke of Devonshire and circulated by the International Exhibitions Foundation for first showing in the United States, the exhibition includes superb examples by Dürer, Rembrandt, van Dyck, Raphael, two pages from Vasari's celebrated *Libro di Disegni*, and a section of six drawings by Parmigianino. Fully illustrated catalogue with introduction by James Byam Shaw, 10'' x 7½'', 160 pages, $3.00 postpaid.

Wright of Derby: November 22 is the opening date for an exhibition of 19 paintings and one drawing by an early Romantic artist who has only recently come to the forefront of scholarly attention, Joseph Wright of Derby. This is the third in a series of exhibitions of the work of individual British artists as represented in the private collection of Mr. and Mrs. Paul Mellon. Fully illustrated catalogue with introduction and notes by Ross Watson, 10'' x 7½'', 40 pages, 21 black-and-white illustrations, $2.25 postpaid.

Special film series: *Civilisation*, written and narrated by Kenneth Clark for B.B.C. television, will be shown on Sundays from 5:30 to 7:30 p.m. through December 14. Consisting of thirteen 50-minute programs in color, the series has not been previously seen in the United States. The former Director of the National Gallery, London, charts a course through ideas and events that led Western civilization from the collapse of Rome to our century. No seats reserved. See weekly listings.

Sunday lectures: The five Sunday afternoon lectures this month are all related to the drawings from Chatsworth. Besides a talk on the exhibition, and one on other important collections of drawings, there are three lectures on artists whose work is shown in the Chatsworth exhibition.

Recent publication: Paintings from the Samuel H. Kress Collection: Italian Schools XV–XVI Century, by Fern Rusk Shapley, published by Phaidon Press. Second in a series of three volumes, the book catalogues over 430 Italian paintings of the High Renaissance period. 459 pages, 445 illustrations including 13 color plates. $25.00 postpaid.

Christmas cards: The 1969 catalogue of National Gallery Christmas cards may be requested from the Publications Office by mail or by telephoning (202) 737–4215, ext. 285. The Christmas card sales desk is now open.

Gallery hours: Weekdays 10 a.m. to 5 p.m. Sundays 12 noon to 10 p.m. Admission free to building and scheduled programs.

Cafeteria hours: Weekdays, 10 a.m. to 4 p.m., luncheon service 11 a.m. to 2:30 p.m. Sundays, dinner service 2 p.m. to 7 p.m.

MONDAY, OCTOBER 27, THROUGH SUNDAY, NOVEMBER 2

Painting of the week: Canaletto. "The Square of Saint Mark's" (Gift of Mrs. Barbara Hutton) West Stair Hall-Main Floor. Tuesday through Saturday 12 and 2; Sunday 3:30 and 6.

Tour of the week: Art collectors of the past. Rotunda. Tuesday through Saturday 1; Sunday 2:30.

Tour: Introduction to the collection. Rotunda. Monday through Saturday 11 and 3; Sunday 5.

Sunday lecture: "Old Master Drawings from Chatsworth." Guest speaker: James Byam Shaw, lecturer, Christ Church, Oxford, England. Lecture Hall 4.

Sunday film: Civilisation, program No. 1 "The Skin of our Teeth." Lecture hall 5:30.

Sunday concert: Kathleen Joyce, contralto; Neil Tilkens, Pianist; East Garden Court 8.

MONDAY, NOVEMBER 3 THROUGH SUNDAY, NOVEMBER 9

Painting of the week: Vermeer. "Young Girl with a Flute" (Widener Collection), gallery 44. Tuesday through Saturday, 12 and 2; Sunday, 3:30 and 6.

Tour of the week: Paintings related to the old master drawings from Chatsworth. Rotunda. Tuesday through Saturday, 1; Sunday, 2:30.

Tour: Introduction to the collection. Rotunda. Monday through Saturday, 11 and 3; Sunday, 5.

Sunday lecture: "Master of Maniera: The Art of Francesco Parmigianino." Guest speaker: Sydney J. Freedberg, professor of fine arts, Harvard University, Cambridge. Lecture Hall, 4.

Sunday film: Civilisation, programs Nos. 2 and 3. "The Great Thaw & Romance and Reality." Lecture Hall, 5:30.

Sunday concert: National Gallery Orchestra: Richard Bales, conductor; Evelyne Scheyer, harpsichordist. East Garden Court, 8.

MONDAY, NOVEMBER 10, THROUGH SUNDAY, NOVEMBER 16

Painting of the week: Jasper Francis Cropsey. "Autumn—On the Hudson" (Gift of the Avalon Foundation) gallery 67. Wednesday through Saturday, 12 and 2; Sunday 3:30 and 6.

Tour of the week: Old master drawings from Chatsworth. Central Gallery. Wednesday through Saturday 1; Sunday 2:30.

Tour: Introduction to the collection. Rotunda Monday through Saturday 11 and 3; Tuesday (Veterans Day) 1; Sunday 5.

Sunday lecture: "The Carraccis' Conservative Rebellion: 1585–1605." Guest speaker: Robert Enggass, professor of art history, Pennsylvania State University, University Park. Lecture Hall 4.

Sunday film: Civilisation, programs Nos. 4 and 5: "Man, the Measure of all Things and The Hero as Artist." Lecture Hall 5:30.

Sunday concert: Daniel Comegys, lyric baritone; Igor Chichagov, pianist. East Garden Court 8.

MONDAY, NOVEMBER 17, THROUGH SUNDAY, NOVEMBER 23

Painting of the week: Lotto. *"Allegory"* (Samuel H. Kress Collection) gallery 27. Tuesday through Saturday 12 and 2; Sunday 3:30 and 6.

Tour of the week: *Early techniques of painting*. Rotunda. Tuesday through Saturday 1; Sunday 2:30.

Tour: *Introduction to the collection*. Rotunda. Monday through Saturday 11 and 3; Sunday 5.

Sunday lecture: *"Fact and Fancy: The Graphic Works of Jacques Callot." Speaker:* H. Diane Russell, Department of Graphic Arts, National Gallery of Art. Lecture Hall 4.

Sunday film: *Civilisation*, programs Nos. 6 and 7: *"Protest and Communication and Grandeur and Obedience."* Lecture Hall 5:30.

Sunday concert: Edmond Rosenfeld, *pianist*. East Garden Court 8.

MONDAY, NOVEMBER 24, THROUGH SUNDAY, NOVEMBER 30

Painting of the Week: Hobbema. "A Wooded Landscape" (Andrew Mellon Collection), gallery 47, Tuesday, Wednesday, Fri-

day, and Saturday 12 and 2; Sunday 3:30 and 6.

Tour of the Week: Late techniques of painting. Rotunda. Tuesday, Wednesday, Friday, and Saturday 1; Sunday 2:30.

Tour: Introduction to the collection. Rotunda. Monday through Saturday 11 and 3; Thursday (Thanksgiving Day) 1; Sunday 5.

Sunday lecture: "Great Collections and Great Collectors of Drawings." Guest Speaker: Jacob Bean, curator of drawings, the Metropolitan Museum of Art, New York. Lecture Hall 4.

Sunday film: Civilisation, programs Nos. 8 and 9: "The Light of Experience and The Pursuit of Happiness." Lecture Hall 5:30.

Sunday concert: Vladimir Weisman, violinist; Mario Miranda, pianist. East Garden Court 8.

ONE STANDARD

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. EILBERG. Mr. Speaker, the Senate is engaged in a great debate on the nomination of Judge Clement F. Haynsworth to the U.S. Supreme Court. While it is the constitutional responsibility of that body to approve Presidential nominations, it is certainly the responsibility of Members of this body to speak out when such a nomination is clearly not compatible with the best interests of this Nation.

Such is the case in Judge Haynsworth's nomination. I and my Philadelphia colleagues already have urged the President to withdraw the nomination. We were politely but curtly informed by the White House that:

The President remains convinced of Judge Haynsworth's integrity and believes that he will make an outstanding Associate Justice.

We urged the minority leader of the Senate to vote against the nomination in the Senate Judiciary Committee. He did not. Now we must urge that he vote against the nomination on the floor of the Senate.

Among the many issues raised by the nomination is the issue of double standards. Under unanimous consent, I insert in the RECORD a column from the Philadelphia Evening Bulletin of October 14, by my friend Michael von Moschzisker, who himself was a distinguished lawyer before turning to the world of letters and journalism:

FORTAS AND HAYNSWORTH: DIFFERENT STANDARDS?

(By Michael von Moschzisker)

On Saturday, the American Bar Association's judiciary committee reaffirmed its endorsement of Judge Clement F. Haynsworth for a seat on the United States Supreme Court. The committee then adjourned without explaining the reasons for its action and without stating how individual members voted.

In Washington just a few days before, the Senate Judiciary Committee took up President Nixon's nomination of Haynsworth and approved it by a 10 to 7 vote. Members emerged somber-faced from the meeting and did their best to avoid newspapermen. Pennsylvania's senior senator, Hugh Scott—who supported Haynsworth—went out a back door and walked down two flights of stairs before boarding an elevator.

Perhaps Hugh Scott wasn't feeling well, but how about the other Senators and the members of the bar association committee? Is something embarrassing them?

The answer may lie in an ugly whisper that is abroad, and that ought to be dragged out into the open. It is that the charges against Judge Haynsworth are being treated differently than those against Abe Fortas were treated last spring, and that this must be because Haynsworth, unlike Fortas, is neither a Jew nor a liberal.

Of course, this story rests on the assumption that the two men's cases are similar. As to that, let's look at the record . . .

Fortas was close to President Johnson, and it was conjectured that he might have lied about the extent to which he let down the standards of an independent judiciary by acting as counsel to the President while serving on the Supreme Court. Abe Fortas was friendly with convicted businessman Louis E. Wolfson too. There was suspicion that Fortas used his prestige as a Justice to try to help Wolfson escape punishment.

Judge Haynsworth is charged with nothing like that. To this extent the case against him is weaker than that against Abe Fortas.

The charge that Fortas counselled President Johnson in a way ill fitting a high court justice and that he assisted Wolfson improperly, were matters of conjecture, however. They were never proved to be true or false.

In the final analysis, the solid case against Abe Fortas came down to another matter. He was driven from the bench after he admitted receiving money from a Wolfson family foundation while serving as a Supreme Court Justice. There was no charge connecting this to any case Fortas sat on.

Now consider Judge Haynsworth. I think the suggestion that he should be refused confirmation because he is a southerner is unworthy. Men and women from every section are entitled to sit on the Court.

There is more to the charges against Judge Haynsworth than this, however. Senator Birch Bayh states that a firm called Carolina Vend-a-Matic paid thousands of dollars in directors fees to Haynsworth while he served on the United States Court of Appeals for the Fourth Circuit.

That resembles the charges against Fortas in connection with the money the foundation paid him. This isn't all, however. Judge Haynsworth joined in deciding cases involving companies whose business formed a substantial proportion of Vend-a-Matic's revenues. That is more than was proved against Fortas.

This does not mean Judge Haynsworth is venal. There is an appearance of evil, however, and in Abe Fortas' case men who now support Haynsworth said that was enough to disqualify him.

We will have to wait and see whether Senate debate on the Haynsworth nomination clears the air of the suspicion that he and former Justice Fortas have been judged by different standards.

MORATORIUM DAY AND THE UNIVERSITY—SHOULD NOT UNIVERSITY STUDENTS AND FACULTY RUN THE COUNTRY?

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. BROWN of Ohio. Mr. Speaker, much was said during Moratorium Day and about Moratorium Day. Unfortunately, but not surprisingly, little that was said was new. Most repeated old slogans, rehashing the warmed-over rhetoric which has begun to characterize much of the Vietnam "debate." Politicians and participants often as not reacted without reflecting and generally only paused to reinforce their own viewpoints.

Dr. Brage Golding, president of Wright State University, was a most welcome exception. His speech to the Moratorium Day activities on the campus constitutes a beacon light—not only in the Vietnam debate, but in the broader debate over the role of education—particularly higher education—in America.

In one sense, it is unfortunate that Dr. Golding's address was made on Moratorium Day. There, despite its insight and its illuminating view, it did not receive the attention it deserved due to the sheer volume of words uttered that day and the splashier publicity value of some of the more stellar participants.

The lasting applicability of this address far exceeds that of most of the moratorium observances, though the speech also speaks directly to that transitory issue. The speech initiates what I think is a more significant discussion in the long run—a discussion which relates directly to the ultimate success or failure of our political system. Dr. Golding has put a calm intellectual hand on a brewing and troubling problem in America—the relationship between the university and its liberally "educated" student bodies and faculties, and the Government.

Serious consideration should be given to the issues raised by this speech. It should be widely read and its message even more widely discussed. I am inserting it in the RECORD today in an effort to encourage such consideration:

VIETNAM WAR MORATORIUM—OCTOBER 15, 1969

(By Dr. Brage Golding, president, Wright State University)

I am pleased to have been invited to participate. I have given much thought to the role of the university in modern society—it is part of my job to do so and especially during the last year or so on the impact of the Vietnam war on universities, particularly our own.

I am opposed to the war in Vietnam.

War represents failure of diplomacy, of mutual trust, of common understanding.

War represents death and suffering.

War represents needless sacrifice.

War represents the total waste of our resources.

Limited war is even worse—if that is possible—since it means a commitment to all that a full war represents without even the possibly redeeming feature of a solution, right or wrong, through decisive victory.

And last, I am opposed because the possibly desirable objectives this country had, several generations of presidents ago when the war began, now seem incapable of attainment, regardless of the outcome.

However, intellectual honesty requires that this moratorium be put in its proper perspective. Further, you have made it clear that this moratorium was to be an educational experience and I am taking this assertion at its face value.

I am aware that speakers before and after me have and will be expressing views that most of you want to hear. The organizers of the moratorium have planned the events and speakers of the day, not primarily to provoke debate but to provide a justification

for anti-war protest. In other words, this day will be spent mainly as a reinforcing session for most of you rather than as an educational experience. I hope that what I have to say will, in some small measure, prove to be an educational experience for many of you.

There are two possible attitudes that a university can adopt toward the war in Vietnam. It can officially adopt a partisan attitude, as an institution, or it can remain officially neutral while allowing its personnel as private individuals to follow the dictates of their consciences. I remind you of the position I stated in my inaugural address just one year ago. I believed then and continue to believe that "while all members of the academic community should feel free to speak out on subjects of interest or concern, the university itself must not be partisan. It must not become a monolithic, ideological, vested interest. A partisan institution is hospitable only to those who support its tenets—it cannot be pluralistic—it cannot be a community—and it will not long be a residence for scholars."

In spite of the brilliance of these observations, many continue to believe in a direct relationship between higher education and public policy. What is the genesis of this belief? Why do so many students assume that political activity and educational activity are directly related?

Their assumption is based on a democratic ideal of education which we all share. We feel that the strength of our democratic republic (democratic with a small "d") depends upon a well-informed and politically aware citizenry capable of independent thinking and critical judgment. Everyone should be well-educated! With this ideal as a basis, the country has created the largest public educational system in the world.

As a consequence, most students today believe and, in fact, have been encouraged to believe by their teachers that a college education—and a liberal education in particular—automatically endows them with the capacity for and the responsibility to make wise political judgments and expound publicly their convictions on every aspect of public policy. This is nonsense! The capacity for good judgment comes with long experience. Any type of education should be dedicated to inculcating a healthy respect for the difficulties of arriving at simple answers to complex questions. Moreover the responsibility of an educated man is to recognize the limits of his knowledge and understand the difference between a judgment arrived at rationally and one reached emotionally.

It is an unfortunate fact that many of you have been led to believe that you bear an unlimited responsibility for the ills of the world and, concomitantly, an unlimited obligation to correct them. You do not and cannot carry these burdens alone! Your militant faith is the result of an overreaction by your teachers of an earlier generation who believed—and still believe—that all the evils of the world are simply corrected by further formal education.

Because an urban university such as ours interests itself in more and more of the entire community, the temptation arises to identify the part with the whole. The university is a microcosm of our society, we sometimes think. It is not too big a jump from this thought to the conclusion that society as a whole should follow the university's lead. If the majority of the people who constitute the university think that the Vietnam war should end tomorrow, we are told, the majority of the people who constitute society ought to hold the same opinion. Indeed, we are told the university as an institution is obligated to take a public stand on pressing public issues.

This line of thinking is extremely attractive to young faculty and to students who have grown up since the second World War. They have been overexposed to the idea that higher education should be socially and politically relevant and to the idea that their social and political responsibilities are unlimited. This overexposure, as I pointed out earlier, has in part been the work of the preceding generation. That generation went to the defense of liberal education and of democratic government and confused the two. A liberal education has to do with culture—a democratic government with politics. Although it is argued that the two are closely related, there is no justification for reducing culture to a mere appendage of politics. There is little wisdom in expecting or hoping that a formal education, even a liberal education, will produce citizens demonstrably superior in political wisdom. Political awareness—perhaps, but political wisdom—no! There is a school where it can be learned, but that school is not included in our multiversities. Political wisdom can only be learned, if it is to be learned at all, within the institutions of government, this term being understood in its broadest sense. Those who would commit the university to an institutional position on the Vietnam war would make the university one of those institutions of government. As such it would cease being a university, for it cannot be both at the same time.

The university exists for the pursuit of truth. Scholars and students must not tolerate compromise in their research or discussions. They are free to reconsider questions and to change their minds. Their faith in that truth is best served by constant criticism of presuppositions, evidence, and argument. University administrators are dedicated to maintaining the official responsibilities of both faculty and students within limits which will preclude the possibility that any faculty member or student will ever be called upon to compromise himself in the course of his academic work.

Government, on the other hand, exists for the pursuit of compromise! It is the official responsibility of the politician. If he cannot reconcile the opposing views of his constituents, the community may well be endangered. His lot is to be misunderstood and often damned. If he changes his mind, he is a hero to one side and a traitor to the other. Searching criticism of his work may destroy the good he has done. I have been fond of saying that "politics is the art of the possible." John Kenneth Galbraith disagrees—he says "Politics is not the art of the possible. It consists in choosing between the disastrous and the unpalatable."

During the past two decades these roles have been greatly confused. Convinced that they are both qualified and obligated to engage energetically in political activity (eagerly and incautiously applying the hypotheses of the social sciences to contemporary problems), many students and faculty members have figured prominently in sit-down strikes, marches, demonstrations, and campaigns. Many have survived, fortunately, with their powers of discrimination intact and their lives enriched.

Others, however, have corrupted both roles by mixing the two. Expecting politicians to display the freedom of scholars, they have demanded an instant end to long-standing policies and instant implementation of new ones, occasionally in the face of considerable opposition. Since the principle of rule by the majority does *not* apply in scholarly pursuits, they have discounted this rule in politics. Faculties polarize and do battle over the Vietnam war. Students demand courses relevant to particular contemporary problems, although they may never have learned how to discriminate between what is relevant and what is not or may never have considered adequately the question "relevant to what?" Faculty and students take on additional responsibilities which color their scholarship and their studies, not because they are incapable of doing two things at once, but because they make no effort to differentiate the two.

The policy of this University toward the Vietnam Moratorium is aimed at avoiding such confusion. You meet today as citizens who happen to be part of the Wright State community. You are probably more aware politically than your contemporaries who have not received an equivalent education. Please remember your education does not of itself confer political wisdom, even though obtained at Wright State.

ARE WE ASKING THE RIGHT QUESTIONS?

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. FRASER. Mr. Speaker, Mr. Paul C. Warnke, former Assistant Secretary of Defense for International Security Affairs, has asked in the October 1969 issue of the Washington Monthly, "National Security: Are We Asking the Right Questions?"

Mr. Warnke points out that:

In the area of conventional forces, we waste the time and the talents of our military leaders when we leave them to prepare their budget requests on the basis of assumptions devoid of political validity. Our military planners, in fact, are major victims of our defective interrogatory technique. The problem is not that their advice is too often ignored. It is that their answers frequently don't matter because we've asked them the wrong questions. It's neither fair nor fruitful to ask them to develop a military machine that will help achieve a set of foreign policy objectives which haven't been articulated—and which, when developed, can prove impervious to military solution.

Or, as he says elsewhere in his statement:

In making decisions on defense planning we're constantly in danger of putting the hardware before the horse sense.

Mr. Warnke's article should be read by all of us who will debate and vote upon the military appropriations bill.

The article follows:

NATIONAL SECURITY: ARE WE ASKING THE RIGHT QUESTIONS?

(By Paul C. Warnke)

In the area of national security, it is probably a good deal easier to raise questions than to supply answers. Anyone who has ever tried the latter can only hope that his successors will be better at it. But he may also find himself hoping that he, and the American public generally, can begin to do a better job of asking the right questions. Until we do, there is little purpose and even less justice in railing about the size of our defense budget. The military-industrial complex, with the soaring cost of its care and feeding and its dire consequences for the quality of American life, is the inevitable answer to the questions we have asked and the demands we have made in the name of national security. Our military-industrial complex exists because we have asked for it.

We can never cut it back to size and free up a fair share of our budget dollars for competing and compelling causes until we begin asking the right questions—about how our defense effort squares with the real world and with our genuine national security. Without the right questions directed to the right people we can never get answers that will permit us to design, or even to recognize, a defense budget commensurate with our over-all interests and objectives.

In not too oversimplified terms, the concept of security we evolved after World War II was to make sure that non-Communist countries stayed that way. During the years when "Who lost China?" was the popular security question, nobody in the national-security business, at least, craved identification as one who had "lost" some other strayed member of the non-Communist community.

The Eisenhower Administration pursued the concept of security by adhering to the doctrine of "massive retaliation." As the answer to the question of how we could prevent Communist take-overs, we could point to our nuclear striking force. But this answer became less and less plausible as our monopoly in intercontinental missiles dissipated. Neither we nor our potential adversaries could continue to believe that the United States would react to any and every Communist provocation by initiating a nuclear exchange in which our own society would be devastated.

Nor could we accept an "all-or-nothing" doctrine of defense that would leave us bereft of any ability to respond with conventional force to conventional attacks on friendly nations. So "massive retaliation" gave way to the more common-sense notion of a "flexible response" adequate to counter, and hopefully to deter, instances of aggression for which we would be unwilling to risk a nuclear holocaust.

But the cost of the capability to respond flexibly can be immense if an American military response must be contemplated whenever an international development disfavors our national interests. And this expense can be infinite if the adequacy of that capability must be measured in terms of a clear superiority in every aspect of armed might.

In a world in which we are not the single "great power," any such total military versatility and invincibility is clearly unprocurable—at any price. Until we begin to refine our questions and direct them toward realistic and realizable security goals, we will continue to ask the impossible and get answers that are unacceptable.

In the broadest sense, we now ask our government: make us safe from any attack by any foe. The answer is a defense budget in the neighborhood of $80 billion a year. It is an answer that is increasingly unsatisfactory. It certainly does not satisfy the Joint Cheifs of Staff, who recognize that this amount is inadequate to buy the American people anything like full protection. The Armed Services Committees of Congress can prove that a lower budget means less over-all military strength and less capacity to do things by military force, for a defense budget of $80 billion obviously provides the capability to meet contingencies that a budget of $50 billion must ignore. But before concluding that the $50 billion budget will leave us weaker and in greater danger, we need political judgments as to what unmet contingencies are apt to occur and—if they do occur and if they are unmet—what vital national interests may be adversely affected. We need the further political judgment of whether the $30 billion thus freed can be spent on problems of greater risk to our national security and in areas of greater benefit to the over-all quality of American life. We need the answers that will put in perspective any incremental gain in physical security.

In the age of intercontinental ballistic missiles, we cannot now, with any amount of money, buy physical safety from a Soviet attack of indescribable devastation. But the real pressures for a ballistic-missile defense—and perhaps even its lulling designation as the "Safeguard" system—derive from our unwillingness to accept emotionally what we have every factual reason to comprehend.

Nor can we curb the infinite expansion of the military-industrial complex by continuing a demand margins of superiority over our potential adversaries all across the spectrum of military armament. We should ask instead which leads are meaningful in terms of security or political advantage, and which are not. "Superiority" in nuclear missiles, for example, is too expensive if all it gives us is a status symbol. And "inferiority" is no cause for alarm or even embarrassment if what we have is enough to deter any Soviet effort at a pre-emptive strike.

We should keep in mind that what the Soviets themselves are doing may not always provide a useful measure of the appropriateness of our own defense expenditures. We sometimes seem to proceed on the assumption that we are not doing enough unless we more than match what the Soviets spend in every area of armed might. We rarely inquire whether the Soviets are spending to much. Instead, when there is criticism of our ABM deployment, we accept as valid the answer that, after all, the Soviets have already deployed an ABM of their own. Maybe we should ask whether theirs is a poor investment. While vaunting our superior sophistication in other things, both economic and social, we at times come perilously close to adopting Soviet answers when it comes to the allocation of our defense dollars on strategic weapons systems.

In the area of conventional forces, we waste the time and the talents of our military leaders when we leave them to prepare their budget requests on the basis of assumptions devoid of political validity. Our military planners, in fact, are major victims of our defective interrogatory technique. The problem is not that their advice is too often ignored. It is that their answers frequently don't matter because we've asked them the wrong questions. It's neither fair nor fruitful to ask them to develop a military machine that will help achieve a set of foreign-policy objectives which haven't been articulated—and which, when developed, can prove impervious to military solution.

In order to obtain the proper weapons systems—in the proper quantities and supporting the proper number of military personnel—we need a much clearer idea of the circumstances under which we will be willing to use them. The Systems-Analysis group within the Office of the Secretary of Defense serves an essential function in developing the most effective means of performing the various military missions. These civilian experts constantly discuss issues of relative cost effectiveness with the different Armed Services. But neither the civilian nor the military personnel of the Pentagon should be asked to speculate on the nature and number of instances in which they'll be asked to provide military force in furtherance of national objectives. Our current force posture—designed to fight two wars while handling another contingency somewhere else in the world—is the product of such speculation.

This "two-and-a-half war" concept did not arise from an informed prediction of international developments. It derived, during the last decade, from what Pentagon planners saw as the need to buttress conventional military forces neglected during our years of reliance on a nuclear strategy of "massive retaliation." But we lacked then, as we lack now, an accepted perception of our national-security interests; we had no measure for the adequacy of our conventional military capability. As a consequence, our forces are not shaped to fit a policy—and the risk always exists that the policy itself may be influenced by the military forces on hand. We need not conclude that our analyses of force requirements in the early '60's were wrong. But we do need to ask if, in today's world, our national scale of priorities justifies the expense of preparing to fight the Soviets in Europe, while we simultaneously fend off Chinese aggression in Asia and deal elsewhere with some lesser adversary.

It may be that I unduly discount the risk that Russia and China may resolve their differences to the point where they could even consider concurrently engaging us in large-scale conventional warfare. But it is difficult to imagine that either nation would deem the nuclear threshold sufficiently high to block an early resort to strategic forces. Before we commit ourselves to further funding against such an eventuality we should ask the National Security Council to consider the likelihood of this kind of dispersed Armageddon, and to shun a policy that might make it thinkable.

A bumper sticker of the recent past read: "Support Mental Health or I'll Kill You." Sanity in foreign policy compels the recognition that we can't use military means to make the world behave the way we'd like it to behave. We can't use it to compel a country to be free and democratic. And we're aware, at least tacitly, that however we may deplore aggression and strife anywhere in the world, most of it cannot affect our national security and most of it does not call for an American military response. But I don't think we've told those who originate our defense planning enough to permit their reasoned response to our basic questions about how national security can best be assured.

When we ask them to define the necessary dimensions of our military forces, referring them to our existing treaty commitments is not enough. No treaty negates our right to determine the character of our reaction on the basis of our perception of the national interest. Our one absolute commitment is to the preservation of our own independence. And we might fairly ask whether that independence does, in fact, turn on the viability of every international basket case with anti-Communist credentials.

To accept the facts of modern life, we need not adopt the extreme position that no defense effort is availing and that no measure of security can be obtained through expenditures for weapons systems. What is required is that debate about the level of defense expenditures—and about the kinds or quantities of armaments that we can prudently purchase—focus on the real risks and on the means realistically available to meet them. In national defense, as in our personal finances, we can afford to carry just so much insurance—particularly against the rarer tropical diseases. Our present preoccupation with physical security may be anachronistic when only two nations in the world can pose a physical threat and when neither could carry it out except at the cost of its own existence as a modern society.

In posing new questions about our national security, we need not repudiate the expert witnesses on whom we have relied in the past. Granted, the results achieved have not been uniformly satisfactory. But we should resist the temptation to blame our Vietnam troubles, for example, on the advice of our military men. In my view, we've consistently been asking them the wrong questions about Vietnam. Such issues as measuring the pace and permanence of pacification involve political judgments that only an objective Viet-

namese politician could make, if one could be found. Our commanders are probably right in thinking that a virtual U.S. military occupation is the best way to control an insurgency, but it does little to advance our announced political goal of self-determination for the South Vietnamese.

It has been suggested—by Candidate Goldwater in 1964 and by Senators on both sides of the aisle in years since—that victory in Vietnam requires only that we tell our military leaders that we have decided to win and then leave the war to them. This ignores, I think, our lack of an agreed definition of victory and our unwillingness to go all-out to achieve military conquest. Indeed, no satisfactory answer can be given to the question why we are in Vietnam, because we never asked the question in time. In late 1967, Secretary Rusk explained our presence as necessary to contain a projected one billion Chinese armed with nuclear weapons. But if the original purpose of American participation in Vietnam was to contain China, we never asked whether adoption of an attrition route to victory was consistent with that purpose. Certainly there are more promising avenues to the close-in control of China than by killing off the nationalistic North Vietnamese.

Much of the failure to examine the underlying political rationale stems from a fear of poaching on military preserves. But, in the absence of all-out war, our military means surely must be kept consistent with our political objectives. They can't be and they won't be unless we insist that our policymakers articulate these objectives.

Perhaps the first step toward useful answers in the realm of national security would be to abandon the partisan prose. "Missile gap" allegations from the 1960 campaign, like the outlandish charge of a "security gap" in 1968, have only made it more difficult for incoming administrations to pose the relevant questions. What should worry us is a "question gap" that leaves us without meaningful answers, both on national-security policy and on how it should be translated into military capability. In making decisions on defense planning we're constantly in danger of putting the hardware before the horse sense.

There are growing signs of a healthy willingness to question some of the items in the defense budget. But the absence of an overall policy from which these individual items derive makes the debate revolve largely around tangential issues.

For example, in examining the request for additional attack carriers, it is sensible to ask whether one nuclear-powered carrier is preferable to the two that could be built with conventional power for the same price. It's important to note the age of some carriers in our fleet and the alternative possibility of land-based aircraft. But the real questions remain unanswered. They concern the relationship between our tactical air power and our security interests. Fifteen nuclear attack carriers will indeed permit the flexible application of that power anywhere in the world. But where in the world, and against whom, will we want to apply it, and what should we pay for this capacity?

Without an updated justification for our carrier fleet, we can make no value judgments on the need for new fleet defense aircraft. The mission intended for the F–111B (the Navy version of the TFX) was to stand well off from the fleet for hours with a highly sophisticated missile capable of shooting down hordes of enemy bombers at great range. But debate about the F–111B focused on its weight, its expense, and whether Boeing might have done it better. The Navy succeeded in substituting the F–14A, which on paper provides a superior dog-fighter but continues with the basic mission of fleet defense. The case for continuing this multi-billion-dollar program should not rest on the merits of the airplane. The question we should ask is: what are the chances that our fleet will be sent to sea when there is a real risk of the kind of mass air attack that only the Soviets could mount? Perhaps we should be persuaded that this is plausible, but I think those responsible for our foreign policy should be asked to convince us.

The Senate, by almost a two-to-one margin, recently approved going ahead with the Advanced Manned Strategic Aircraft (AMSA). Supporters of a new nuclear bomber, while granting its redundancy, refer to the risk that our intercontinental ballistic missiles may work imperfectly. But no new bomber can provide the ability to destroy the Soviet missile forces and thus prevent nuclear retaliation. Nor, we are told, do we aim at any such "first-strike" capability. Our strategic forces are intended to deter and thus, in an age of sophisticated air defense, strategic missiles must remain our primary deterrent. How, we might ask, is that deterrent affected by a decision to proceed with a new manned aircraft on the premise that it is needed because the nuclear missiles may not work? Moreover, our continued expenditures for anti-bomber defense are rationalized as serving to discourage the Soviet Union from developing a new supersonic bomber. Do we expect our bomber to be that much better, the Soviet air defense that much poorer, or the Soviets that much smarter in deciding that manned bombers are obsolete?

Sound defense decisions outside the procurement area are equally impossible until we acquire a better sense of policy direction. In the military assistance field, continuation of our military advisors in Latin America obviously preserves a degree of United States influence. But shouldn't we ask, on a country-by-country basis, whom we are influencing, toward what ends, and how this serves our national interest?

As a military matter, reversion of Okinawa to Japanese administrative control primarily involves the question of our unrestricted freedom to use it as a military base. But politically we should ask whether there may ever be circumstances in which we will want to use Okinawa for military operations which the Japanese are unwilling to support. In situations where the Japanese conclude that such use is not in their security interests, can it be essential to ours?

British withdrawal from East of Suez will leave a "great-power" vacuum in the Indian Ocean. Do we need bases and boats to fill it or can we count on nature's abhorrence, and the people of the area, to do that job? The considerations that led to British colonialism in the Nineteenth Century, when empire was profitable, can't justify an American military presence in this century if it means little more than a bigger defense bill. The White House and State Department assert that we will not replace the British. But unless we tell our military planners to forget it, we may find ourselves continuing to pay for that possibility.

The asserted unavailablity of a "peace and growth dividend" will be a self-fulfilling prophecy if we use the peace to catch up on every item of our defense arsenal stinted by Vietnam priority needs. Before we can fit our defense program to our national interest, we must decide when and where we may seek to advance those interests by the application of military force. If our national security in fact demands a kind of Western Hemisphere "Brezhnev doctrine," we need the means to enforce a non-Communist orthodoxy. If we plan to support regimes in Southeast Asia against overthrow by their internal political rivals, we have to face up to the budgetary consequences. And if we must conclude that our security requires us to resist and repel external aggression wherever it appears in the world, then our present defense budget is indeed too little and too late.

But I doubt that these are the premises on which our foreign policy will proceed in practice. And I think that the theory underlying our defense budget should be consistent with what we plan in practice to do. This violates, I recognize, the principle of ambiguity in the conduct of foreign policy. There are admitted disadvantages in tipping off a hostile power as to the circumstances under which we may go to war. A degree of uncertainty is undeniably a valuable factor in deterring aggression. But the gray area should not be so large as to delude those who, if under attack, would have our best wishes but might expect our armed support. A coherent defense program can never be constructed if we continue to leave the architects confused about the purposes we want it to serve.

ONE-BANK HOLDING COMPANY LEGISLATION

HON. GARRY BROWN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. BROWN of Michigan. Mr. Speaker, due to the tremendous amount of interest in and quite some misunderstanding about, the one-bank holding company legislation (H.R. 6778) reported by the Banking and Currency Committee, I have prepared an in-depth statement in explanation of what the bill does, and does not, do and provide which may be of interest to my colleagues. The text of my statement follows:

Bank holding company legislation was first enacted in 1956 to regulate and limit the "noncongeneric"—not of a related nature—activities of holding companies which had two or more banks as subsidiary or affiliated companies. It should be remembered that a "holding company" is so named because its only reason for existence is to provide an organizational structure or nucleus for the financial and/or commercial corporate activities it "holds." I have emphasized "corporate" because as written in 1956 and as the law reads today, natural persons or combinations of natural persons—partnerships, et cetera—are not covered by the act; apparently because the drafters of the law recognized the impropriety under our free enterprise system of restricting or limiting the business activities in which an individual may engage absent violation of antitrust, anticompetitive, or restraint of trade laws.

When the 1956 bank holding company legislation was passed, holding companies having only one bank as a subsidiary or affiliate were excepted from the purview of the law because these "one-bank holding companies" were generally speaking, small, local, agrarian oriented operations, the noncongeneric activities of which were recognized to be in the community or public interest. In other words, these small one-bank holding companies posed no threat of an excessive concentration

of power through the combination "under one roof" of finance and commerce.

It was not until recent years that large banks and large commercial enterprises recognized—or in any case, decided to make use of—the structural benefits of resorting to the one-bank holding company exception in the 1956 act; and, since no size limitation had been incorporated in the law, they were free to use this so-called loophole.

Once big banks decided to avail themselves of this "one-bank" exception to the Holding Company Act, it became obvious that whatever threat multibank holding companies offered, huge asset one-bank holding companies could be as ominous. As a result, legislation was first introduced on February 17 of this year by Chairman PATMAN which would subject one-bank holding companies to the rules, regulations, and restrictions formerly only applicable to multibank holding companies.

Both the Patman bill and the bill introduced on behalf of the Nixon administration went beyond a closing of the "loophole" exemption of one-bank holding companies from the Holding Company Act of 1956. Both bills amended the Holding Company Act of 1956 to bring one-bank holding companies under its purview, but in addition one or both bills: changed the regulatory agency—under the 1956 act, the regulatory agency was the Federal Reserve Board; eliminated the partnership exemption; established a "laundry list" of either permitted or prohibited activities in which the holding company or any of its affiliates could engage; changed the general definition or description of the activities which would be permissible as properly congeneric or bank-related; established new guidelines with respect to unlawful interlocking directorates of corporations; and contained miscellaneous other provisions quite unrelated to holding company legislation.

After weeks of hearings during which all aspects of the issue were explored, including presentations made by the insurance, travel agency, and data processing industries, and representatives of the profession of accountants, the committee reported out the bill, still numbered H.R. 6778, which will soon be before the House of Representatives for its consideration.

The primary purpose of the bill reported by the committee is to bring one-bank holding companies under the jurisdiction and purview of the Holding Company Act of 1956 thereby subjecting one-bank holding companies to the same rules, regulations, and restrictions as are applicable to multibank holding companies. In addition, the bill continues the Federal Reserve Board as the regulatory agency, but changes the definition or description of permitted nonbanking activities of affiliates of a bank holding company to those which are "functionally related to banking." This latter language was suggested by Chairman Martin of the Federal Reserve Board during his testimony before the committee.

The committee did not deem it advisable to specify permitted and prohibited activities of affiliates of a holding company which owns a bank or banks except with respect to two activities. The bill specifically prohibits the Federal Reserve Board from approving the acquisition or retention by a bank holding company of shares of stock in any affiliate company which:

First, performs the function of an insurance agent, except where the insurance provided is limited to insuring the life of a debtor pursuant to or in connection with a specific credit transaction, or providing indemnity payments becoming due on a specific loan or other credit transaction while the debtor is disabled—under this provision of the bill, the bank holding company itself is restricted the same as an affiliate would be; or

Second, engages in the underwriting, public sale, or distribution of mutual funds.

Finally, the bill as reported establishes February 17, 1969 as the retroactive date from which the provisions of the amendatory legislation will be effective. The effect of this "grandfather clause" is to authorize the continuance of activities by bank holding companies if they were engaged in such activities prior to February 17, 1969, even though such activities may not meet the tests and requirements of the new legislation. However, any affiliate a bank holding company acquired, or proposes to acquire, subsequent to February 17, 1969, must meet the test of permissible activity as such activity is described and defined in the bill.

In many quarters, there is a gross misconception of the purpose of the bill. Many persons who are travel agents, data processors, accountants, or members of the insurance industry have been misled or have misconstrued the real purpose and impact of this legislation. This legislation does not pertain to the regulation or restriction of activities which may be carried on by a bank. In fact, this legislation has no real relevance to banks that are not affiliated with, or owned by, holding companies. The regulatory provisions of this legislation only govern and restrict the kinds of corporations or other business entities with which banks may be associated in a holding company. The regulation of the activities in which a bank may engage, is provided for in other laws which establish the Federal Deposit Insurance Corporation as the regulatory agency for State-chartered insured banks; the Comptroller of the Currency as the regulatory agency for national banks; and the Federal Reserve Board as the regulatory agency for banks which are members of the Federal Reserve System.

These latter agencies determine what activities are permissible for banks under their jurisdiction, and they will continue to do so, regardless of the passage or defeat of H.R. 6778. I cannot emphasize too much the fact that the legislation in question is more holding company legislation than bank legislation.

The foregoing describes what the bill does, and does not, do and provide, but what are the critics saying about the bill?

Criticism of the bill by and large is voiced by those industries or activities which to a greater or lesser degree feel banks have unfairly and improperly encroached upon their area of interest. Primarily these include the insurance industry, travel agents, the data processing industry and professional accountants. Needless to say, the Committee could have approved language in the bill which would have prohibited affiliates of a holding company which owns a bank from engaging in any insurance activity, travel agency function, data processing service, or activity which might be considered to be the practice of the profession of accountancy. It is equally obvious that the Committee in its judgment did not deem it necessary and/or advisable to specifically prohibit activities of an affiliated company other than the insurance and mutual funds prohibitions recited above. It is fair to state that a majority of the Committee recognized the need for flexibility in the regulatory agency regarding these other activities and that varying conditions and circumstances might dictate a total prohibition in one case whereas the public interest would be served by approving of the affiliation of a company engaged in one of these activities in other cases. This flexibility is incorporated in the language of section 4(c)(8) which reads in part:

". . . (8) shares [may be] retained or acquired with the approval of the Board in any company performing any activity that the Board has determined, after notice and opportunity for hearing, *is functionally related to banking in such a way that its performance by an affiliate of a bank holding company can reasonably be expected to produce benefits to the public that outweigh possible adverse effects.*"

Although representatives of the industries or professions, whose activities were not specifically denied affiliation with a holding company owning a bank, have been critical of the legislation because they felt a much tighter, more restrictive bill should have been reported by the Committee, the most vociferous of all have been the members and representatives of the insurance industry. A discussion of their objections is pertinent and relevant to the criticism voiced by others to the bill. Therefore, these objections should be more thoroughly examined.

The two main objections voiced by the insurance industry are: First, opposition to banks being in any way involved in the insurance or insurance-writing business; and, second, opposition to the "grandfather clause" of February 17, 1969—the date of January 1, 1965 having been suggested by the insurance industry, its contention being that it was after this latter date that the big banks started using the one-bank holding company "loophole" to engage in general insurance agency operations.

In discussing these objections, it should be said at the outset that probably no member of the Banking and Currency Committee is totally satisfied with

the bill as reported. It would be almost impossible to satisfy everyone in view of the totally different public welfare considerations which are involved in attempting to apply the provisions of a piece of legislation to the circumstances of small communities where financial conglomeration is almost essential to the public good as contrasted with the application of such legislation to our more populous urban centers where financial conglomeration can become an abuse and detrimental to the public welfare. A strong argument can be, and was, made that with respect to the smaller one-bank holding company operations, legislation is neither necessary nor desirable. Yet, the idea of setting size limitations and having different rules apply to the small and the large one-bank holding companies was almost unanimously rejected.

In examining the first objection of the insurance industry, it should be pointed out that some involvement by banks in what the insurance industry claims as its sole province has been lawful ever since the Bank Holding Company Act of 1956 was passed, and, as discussed earlier, what banks may do in this area is technically not a matter to be resolved by this legislation since H.R. 6778 is not intended to dispose of the question of what is a proper banking activity but rather it directs itself to the question of what kinds of activities companies may engage in which are affiliated with a holding company which has as one of its affiliates or subsidiaries a bank. It should be further pointed out that any insurance activity not prohibited by the specific language of the bill, may not be carried on by a company affiliated with a bank holding company unless it satisfies the test of section 4(c)(8) set forth above. The insurance industry or anyone else feeling aggrieved by a proposed affiliation will have an opportunity under this section of the law to point out why such affiliation should not be approved by the Board.

The second objection voiced by the insurance industry and others is a usual complaint. Any time legislation is enacted which makes unlawful the continuation of a previously lawful practice or activity, objections are heard from both sides of the issue. Those who are engaged in the lawful practice or activity feel that they should not be required to divest themselves of such activity and that any "cutoff" date should be coincident with, or subsequent to, the enactment of the legislation. Others, who object to the carrying on of such lawful activity, always advocate that the legislation be totally retroactive and that the continuation of any activity or association which is made unlawful by the legislation be prohibited and divestiture required. Since equity and fairness usually dictate a middle road, a "grandfather clause" results.

From the foregoing it is obvious that the date to which any grandfather clause relates will be considered arbitrary and capricious by many if not most, and irrespective of whether or not they favor or oppose such a clause. The reason the February 17, 1969, date was selected by a majority of the Banking and Currency Committee for the cutoff date is because that is the date Chairman Patman introduced his bill to regulate one-bank holding companies. This bill was the first legislation offered and with its introduction affected parties were given notice that legislation would be formally considered. Although the insurance industry has reached some consensus on the January 1, 1965, date, it is obvious that date is as arbitrary and capricious as is the February 17, 1969, date. Holding companies required to divest themselves of an activity perfectly lawful when entered into between the January 1, 1965, date and the date any legislation is enacted, could claim such requirement to be as much or more unjust as the injustice claimed to result by those who object to the later February 17, 1969, date.

Before concluding, it would be advisable for me to comment briefly upon the somewhat different and more particular concerns of the industries, other than the insurance industry, which feel they would be adversely affected by this legislation.

Travel agents and travel agencies would like to have language incorporated in this bill which would prohibit holding companies having a bank or banks from owning as an affiliate a company operating a travel agency business. Although most of the correspondence received from this industry requests a prohibition against banks engaging in the travel agency business, as previously indicated, this correspondence and these requests can only have relevance to this legislation to the extent such activity is carried on by a company affiliated with a bank in the same holding company. Disregarding this misconception, there was substantial testimony received by the Committee which supported the contention that the travel agency business originated with banks; that banks were the first to assist their traveler's check patrons and customers with reservations assistance and similar services now performed by travel agents; and, that there are many localities where it is not economically feasible for a travel agency to exist and that in those situations banks perform a real service to the community by providing travel agency services. It, therefore, was the committee's determination that the permitting or prohibiting of a travel agency affiliation with a bank holding company should be decided on an individual basis under the general test that the benefits of such an affiliation to the public must outweigh the possible adverse effects for such an affiliation to be approved.

The data processing industry admits that banks should be permitted to perform certain data processing services for their customers, but that such services should be strictly limited to the banking services rendered to or for the bank's customer. In other words, the data processing industry does not feel that banks should be permitted to use their data processing equipment for the performance of data processing services which are totally unrelated to the banking services they offer, nor should banks be able to provide data processing services for a nonpatron of the bank. Here again, it was the committee's determination that it would be difficult to draw the fine line by general rule which the data processing industry sought and that it would be advisable to let the circumstances and conditions of each individual case determine the question of the propriety of an affiliation; the public benefit versus adverse effects rule being the test of such propriety.

Professional accountants have objected to the legislation contending that it is inadequate since it does not specifically prohibit banks from engaging in any form of professional accounting services. Again, it would be somewhat difficult to particularize in legislation that which is considered to be a professional accounting service as distinguished from the acceptable bookkeeping activities performed by banks for their customers. And, probably the criticism is much more directed to the day-to-day operations of banks than it is to bank affiliations. The writing of such a prohibition by the committee would have had to be done in general language, that is, a prohibition against banks performing the services of professional accountants, but such language for reasons previously stated, is not appropriate in this legislation and is more a matter of day-to-day enforcement than a legislating of policy.

The abuses these industries cite by and large fall into a few basic categories: First, tie-in sales, that is, requiring a customer of the bank to use the services of an affiliate company; second, preferential loan or credit treatment of affiliates; third, anticompetitive affiliation with associated companies; and fourth, restraint of trade. In the hearings of the committee, it was quite well established that recent decisions of the U.S. Supreme Court interpreting existing antitrust and related laws would seem to make unnecessary further specific legislation in these areas. There is every indication that the enforcement agencies and the courts are going to scrutinize much more carefully and enforce more strictly activities and laws relative to companies which are associated under one umbrella so as to make sure that the convenient family structure does not result in improper self dealing, preferential treatment, restraint of trade, or anticompetitive dealings or transactions.

Although there are several aspects of the bill which do not meet with my total satisfaction, probably more could have been done with the section dealing with authorized or unauthorized "bank-related" activities of affiliates. Rather than merely expressing in the legislation our disapproval of companies conducting insurance activities other than credit life and credit health and accident, and transations in mutual funds, I believe it might have been appropriate to legislatively state certain other policy presumptions. For example, it might have been appropriate for us to state that it shall be presumed that the Federal Reserve Board shall not approve of the acquisition of companies by a one-bank holding company which companies' activities are those of public accountants, data processors, or travel agents—or any other

activity determined by the Congress to be an inappropriate activity for a bank holding company. In this way, the extraordinary circumstances which would justify a bank-holding company engaging, through an affiliate, in an otherwise inappropriate activity, would be sufficient to overcome such presumption and justify the approval of such acquisition by the Federal Reserve Board. In turn, absent such extraordinary circumstances the presumption would be sufficient to deny to the Board the authority to approve such acquisitions.

The Holding Company Act of 1956 covering multibank holding companies apparently has worked satisfactorily through the years since its enactment. With the passage of H.R. 6778, one-bank holding companies will be subjected to the same registration and regulation as multibank holding companies under the 1956 Act. Therefore, despite the many differences of opinion regarding this legislation, it should be passed to accomplish its primary purpose, that being the bringing of one-bank holding companies under the provisions of the 1956 Holding Company Act.

AFL–CIO BACKS O'HARA SAFETY BILL

HON. WILLIAM D. FORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. WILLIAM D. FORD. Mr. Speaker, my colleague from Michigan (Mr. O'HARA) is the principal sponsor of H.R. 3809, an occupational safety and health bill which is now the focus of hearings by the Select Subcommittee on Labor of the Education and Labor Committee. The administration has also introduced a bill in the same area, which falls far short of the O'Hara bill in most of the meaningful issues.

Recently, Mr. Andrew J. Biemiller, head of the legislative department, AFL–CIO, testified before the committee, urging the adoption of the O'Hara bill approach, and specifically pointing out many of the flaws of the administration proposal.

The Detroit Building Tradesman, published by the Detroit Building Trades Council, reported Mr. Biemiller's testimony on the O'Hara bill in a story which I include at this point in the RECORD:

LABOR DEMANDS END TO JOB SLAUGHTER—AFL–CIO BACKS O'HARA SAFETY BILL—BIEMILLER TELLS HOUSE UNIT OF ENORMOUS TOLL

WASHINGTON.—Labor has called on Congress to act quickly "to stop the killing in the workplace, the crippling injuries and the disease-induced illnesses that plague workers in the United States."

AFL–CIO Legislative Director Andrew J. Biemiller and President I. W. Abel, of the federation's Industrial Union Department, called for passage of a strong occupational safety and health bill, based on legislation introduced by Rep. James G. O'Hara (D., Mich.).

Biemiller told a House Labor subcommittee that more than 14,000 workers have died on the job since the AFL–CIO testified for similar legislation last year

"Another 2.2 million have been injured," he said. "Billions of dollars in wages and production have been lost; worst of all there has been innumerable hours of human suffering caused by the pain of slow death from the effects of asbestos, beryllium, carbon monoxide, coal dust, cotton dust, cancer-causing chemicals, pesticides, radiation and other occupational hazards."

And, he warned, the rate of occupational injuries is on the rise because "private industry has not taken the necessary steps to make the workplace safe and healthy."

Biemiller said the substitute bill the administration is supporting, however well-intentioned, is weaker and would be less effective than the O'Hara bill.

Abel said the substitute "would set up paper standards that employers and workers would rely upon at their peril."

Stressing the need for Federal action, Abel told the subcommittee that national safety and health codes are essential.

"The life and health of workers are equally precious in every state," he said. "Safety and health rules should be applied with equal force without regard to state boundary lines."

Biemiller presented to the subcommittee the resolution unanimously passed at the AFL–CIO's convention this month supporting the O'Hara bill as "the first decisive step" towards the objective of "a safe and healthy place of employment for every American working man and woman."

He praised President Nixon's message to Congress, stressing the need for Federal legislation, and said that the issue "is not longer whether or not there should be any Federal occupational safety and health legislation, but what kind of legislation should be enacted."

Explaining why the AFL–CIO supports the O'Hara bill in preference to the administration bill sponsored by Rep. William H. Ayres (R., O.), Biemiller cited these key differences:

The O'Hara bill directs the secretary of labor to issue on-the-job safety and health standards, and to enforce the law with power to shut down an unsafe operation in an emergency. Health standards would be based on recommendations developed by the Department of Health, Education and Welfare.

"The administration bill would establish a new five-member national occupational safety and health board, appointed by the President. Instead of providing a single focus for attacking the safety and health problems of the American workplace," Biemiller said, "it would constitute another layer of bureaucracy."

The bill, he added, "mixes up responsibilities like a mess of spaghetti" between the proposed board, the Labor Department and HEW.

Furthermore, Biemiller noted, the administration bill in practical effect would rely on private standard-setting organization such as the National Standards Institute and the National Fire Protection Association to develop the Federal codes.

Such groups have made "important contributions," Biemiller said, and the AFL–CIO has co-operated with them. But they tend to be dominated by management and various standard-setting committees "move with glacial slowness" in trying to reach a consensus.

NOISE POLLUTION

HON. CHARLES H. WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. CHARLES H. WILSON. Mr. Speaker, in this week's edition of Life magazine, William Zinsser comments on a growing problem found within the United States. According to the Life "Comment," authorities say that excess noise is a growing cause of, among other things, rapid heartbeat, mental illness, family strife, suicide, and murder. In my opinion, it is also responsible for inferior educational opportunities for students attending schools located near sources of excess noise.

My congressional district encompasses part of Los Angeles International Airport and consequently I have been quite concerned with the problems caused by jet created decibels. Consequently, I have joined with several other Members of Congress in a bipartisan effort to focus attention on the problem. Recently the city of Inglewood, Calif., an area within my district, and the community of Hempstead, Long Island, N.Y., jointly sponsored a conference on jet noise here in Washington. It was my privilege to address delegates sent to the meeting representing concerned cities throughout the United States. As a result of the conference a national organization is being formed to coordinate municipal, State, and Federal efforts to combat noise pollution.

I have personally introduced bills to soundproof classrooms affected by jet noise—H.R. 3850—to provide compensation to individuals whose property has suffered damage due to sonic booms—H.R. 8206—and to amend President Nixon's airport and airways development proposal to establish a noise abatement trust fund—H.R. 12824. I am presently conducting research to determine, city by city, the effects that noise is having upon the educational process of schools and school districts in close proximity to sources of excess airplane noise. I intend to eventually expand my research activities to include other sources of disturbances such as freeways, construction sites, railroad lines and other potential causes.

In our technologically advanced society it would seem to be a minor chore to reduce the present noise producers to acceptable levels. Must it take years of research to come up with startling discoveries that we are definitely subject to hearing loss and psychological disturbances due to the increasing din of our environment? Can we not act preventatively instead of after the fact? While I and many scientists and concerned citizens are aware of the dangers caused by noise pollution, must we be like voices shouting in the wilderness, not being heard by our colleagues and neighbors and possibly being drowned out by a combination of the noise about us and the apathy within the hearts of our fellow citizens? I hope not, but in any event, I shall continue in my efforts to bring relief to those presently suffering and protection to those who will be vulnerable in the future.

The article follows:

ARE WE HOOKED ON NOISE?—THE ESCALATION OF "ENVIRONMENTAL DIN"

(By William Zinsser)

A group of scientists met in Chicago earlier this year to hold a symposium on noise pollution and, presumably keeping their voices low, agreed that "environmental din" is

doubling with every decade and will have us all on the ropes by 1975.

"It might be a good thing if people's ears would bleed," one environmental psychologist told the meeting, which was held by the American Medical Association. "Then people might get aroused. It may take a disaster like the Santa Barbara oil slick to dramatize the situation. Otherwise, noise pollution could be the last straw, on top of air pollution and all the other pollutions, that might bring our society crashing down."

Well, I've never seen a bleeding ear and never hope to see one. Still, the man has a point, and it may be that America is entering a new phase of the democratic process—government by mishap. Santa Barbara proved that the country won't stop polluting its seas and beaches until it befouls an entire region beyond the tolerance of man, bird and fish.

Therefore what the nation really needs is a Secretary of Disaster, whose job would be to turn blunder into victory. He would repair all the erosions of everyday life that Washington is too inert to cure. The first person with ear-bleed, for instance, would go to see him, or the first person driven mad by air compressors or jackhammers in the street, or by jets in the air, or by noisy plumbing in the next apartment. The Secretary would hustle them over to a joint session of Congress and get the necessary legislation started.

What makes modern noise so insidious, the symposium experts said, is that we're getting hooked on the stuff, as dependent as an addict for our daily level of din. "A vacuum cleaner that was nearly silent, while technically feasible, would not be likely to sell very well," suggested Ray Donley, an acoustical engineer, "because today's housewife wants to hear the sound of power."

Far be it from me to doubt the word of an acoustical engineer, but in this case I'll make an exception. The wail of a vacuum cleaner is one acoustical treat that I think our wives can live without. Are we to believe that Mrs. America actually revels in the decibel count of her machine as it sucks old scraps of dirt and food from under the sofa? She endures the vacuum cleaner's roar out of gratitude for its labor, and simply assumes that science hasn't yet found a way to shut it up.

But science has found a way—Mr. Donley let the cat out of the bag. Hey, everybody! A silent vacuum cleaner is technically feasible! Pass it on! The only catch, he says, is that no woman will buy it. Want to bet?

After all, it's not as if a silent vacuum cleaner will plunge the neighborhood into deathly stillness, the sort of place where you can hear a pin drop. Dropped pins just aren't being heard in America today. Background noise in the average community has risen so sharply that it exceeds the standards accepted by industry. So don't be surprised, ladies, if your husband starts leaving home early and returning late. He just wants to get some quiet down at the plant.

And don't try to tell him that a vacation in the country is any answer. It isn't—power tools have seen to that. A vacationer who wakes with delight at 8 to the singing of birds will be enraged at 9 by the whine of a power saw a quarter-mile away. The notion that one man with one saw should not be allowed to destroy the sanity of several hundred people evidently doesn't trouble our lawmakers; otherwise they would write some silencing laws into the manufacturing laws. Nor is going to the lake any better—Thoreau's broad margin of life has been whittled away by water-skiers. The outboard motor that pulls the water-skier through his swoops and turns is one of the most strident creatures now loose in nature, and winter brings no relief. Then the 700,000 snowmobiles come out to play.

I'm not against water-skiing, or sawing, or any of these noise-making pastimes. I'm only against the noise that they make, which could be reduced if anybody cared enough. So what if the product would cost more? Anyone with enough money for power tools or an outboard motor is not hurting for dough. What's hurting is the central nervous system of whole communities. Authorities say that excess noise is a growing cause of, among other things, rapid heartbeat, mental illness, family strife, suicide and murder.

As for whether it's technologically possible to hush these machines, I'm assuming that it is. Any country that can achieve what its President calls "the greatest week in the history of the world since The Creation" should be able to manage such minor jobs of creativity—mere third-day stuff—as toning down the gadgets that are driving its citizens crazy.

I know this is the tritest thought now in the public domain: that if we can put a man on the moon, we should at least be able to redeem our cities, educate our children, elevate our minorities, feed our hungry, and clean our environment. Still, it's no less true for being a cliche, and I refuse to be shamed out of repeating it—anything to keep us from forgetting that our priorities are here on earth and our commitments to the quality of life.

Noise is now one of life's cruelest enemies. Yet the Department of Health, Education and Welfare didn't request in its last legislative package that Congress do anything about it. All hope, however, need not be lost. As one spokesman said, "HEW is undergoing a lot of reprogramming, and I think noise is going to get a very good looking at."

That may be the trouble right there. Washington is going to take a good look at noise. But is anybody going to listen?

SUPERSONIC TRANSPORT

HON. THOMAS J. MESKILL

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. MESKILL. Mr. Speaker, one of the most controversial technical-economic issues of this decade is the question of whether or not we should commit the Nation and its resources to the development and operation of a commercial supersonic transport—SST.

It is a difficult issue. Proponents and opponents have both made good arguments supporting their positions. The principal issues in the decision of whether to build or not to build can be separated into four main categories: economics, sonic boom disturbance, unanticipated technical difficulties, and Government funding policy and national priorities.

Having carefully considered the pro and con arguments in each of these areas, I am forced to conclude that development and operation of the SST should not be assigned the high priority it has been tagged with by the administration. It is with reluctance that I oppose the administration in its attempt to secure funds for continued development of the supersonic transport. There are still many questions involving technical problems that remain unanswered. The sonic boom is a difficult problem that has not been adequately resolved, even by the announcement of the Secretary of Transportation banning supersonic flights of SST's over land until the boom is controlled or eliminated.

In addition, there is disagreement among economists on the economic feasibility of the aircraft's development and operation; there is disagreement over the effect of the aircraft on America's balance-of-payments situation; and the effect of foreign competition and the higher supersonic air fares compared to lower subsonic fares is unknown. This adds up to a large number of unknowns.

At a time when we are trying to gain control of an overinflated economy, should we risk making a massive investment in a program whose outcome is so doubtful? I think we have too many more pressing problems which should receive national attention first. The SST is one area where we can trim the budget.

Let me take a moment to explain my opposition to the SST. First of all, I think we must ask ourselves if we think the SST is a sound investment for the Nation. We must remember that this investment is not a minor commitment, but a commitment that will accompany us for several years. It is a budgetary commitment that we will have to meet over a period of time.

Even expert economists and analysts acknowledge that the economic picture of the SST is highly sensitive. Widely varying estimates and predictions have been made about the economic outlook of the SST. Studies undertaken by Boeing—the contractor—and the Federal Aviation Administration predict a rosy future for the SST, but other studies have not been so favorable.

A study conducted under the auspices of the Commerce Department by Booz-Allen Applied Research, Inc.—BAAR INC—indicates higher cost estimates than those submitted by the contractors. This is understandable since most contractors tend to be optimistic about development whereas BARRINC based its estimates on past examples where program changes have upped costs. See appendix A. A plane that is designed to revolutionize commercial air travel is bound to require such program changes to meet new and unanticipated technical problems.

Many have touted the SST as "good business" for Uncle Sam—a boost for the aircraft industry, potentially—through sales on the world market—a big help to our sagging balance-of-payments situation. But let us look at the entire picture. First, we are already a year behind schedule in our development program of the SST. The Soviets are far ahead at this point in the development of a supersonic transport, having flight tested their plane on December 31, 1968.

Although in the past the Soviets have not been conspicuously successful in selling their commercial airliners outside the Soviet bloc, it is anticipated that they will be making a concerted effort to sell their supersonic transport to world airlines.

The French have also test flown the Concorde, their version of the SST, and are anticipating operating the plane for commercial use in the early 1970's.

While the American plane will be faster and larger than its competitors, can we be sure that the airlines of the world will be willing to put off procurement of a supersonic commercial plane until its

development is completed? Undoubtedly, the SST faces formidable competition which cannot help but cut into potential sales. Even development of the American jumbo jet, the 747, will have an effect.

Furthermore, a study by the Institute for Defense Analyses—IDA—concludes that under certain conditions, introduction of the U.S. SST would have a negative effect on U.S. balance of payments. The study argues that SST sales may to some extent supplant U.S. subsonic aircraft sales abroad, and that, if Americans comprise more than 50 percent of the marginal SST passengers, the travelers' foreign expenditures will tend to offset the SST's foreign sales contribution to the balance of payments.

In making decisions about the economic feasibility of the SST, the sonic boom which the plane will produce cannot be ignored. Obviously, sales will be influenced by restrictions imposed to control the effects of the sonic boom. The sonic boom is probably the single most objectionable aspect of the program. The possibility does exist that the boom can cause physical damage, and there have been reports that under certain conditions sonic booms can cause landslides and rock falls. If the physical situation is highly unstable, there is a good possibility that a sonic boom or repeated sonic booms could cause such an occurrence. This presents a threat to irreplaceable natural and artificial structures of historic and cultural significance. Even though a single boom may not cause the damage, the cumulative effect of a large number of sonic booms would be more likely to cause harmful damage.

In addition, while preliminary tests have been made, we do not really know the extent of the adverse psychological and physiological effects of the sonic boom on people. Preliminary tests indicate that a good portion of the population would find it intolerable to live with the resulting sonic boom at certain levels.

Secretary Volpe's announcement that the SST would be prohibited from flying over land until the sonic boom problem was worked out takes cognizance of the problem, but it is no answer in itself. First of all, the alternative of not flying the SST at supersonic speed over land undercuts much of the rationale for having such an aircraft. And second, once the plane has been developed and put into commercial operation will the Secretary of Transportation be able to resist the public pressure to permit overland flights at supersonic speeds?

There are other technical problems in the plane's development and operation which remain unanswered or unresolved. An issue of major concern, also related to noise, is that of engine noise during warmups and takeoffs. The engines on the SST, more powerful than conventional subsonic engines, are far noisier in the airport than are subsonic planes. With public resistance to aircraft noise around airports already a problem, this noise factor, combined with the sonic boom, definitely raises the question of public acceptability of the aircraft. This is a problem that has not been given the proper kind of consideration.

One of the difficulties with the SST is that, of course, we have no assurances that satisfactory solutions to the difficulties in technological development can be found. Furthermore, other technological problems may be uncovered as development proceeds that could even cause abandonment of the entire program.

In addition, we are currently suffering badly from overly congested airspace and inadequate development of facilities and equipment and manpower to handle the heavy air traffic. This is a very dangerous situation. Can we afford to risk midair collisions between airplanes traveling at supersonic speeds? Do we have the necessary equipment and manpower to get these supersonic vehicles into the air and down again safely?

I believe safety should be a paramount consideration, and anyone following the complaints of the air traffic controllers knows that our facilities leave much to be desired in the way of safety. I would rather we upgrade our airport facilities and safety standards before we embark on a course that will put super-high-speed aircraft into the skies. Only disaster can follow if we have not provided the facilities to handle them.

And finally, we must ask ourselves whether the objective of maintaining leadership in air transportation is important enough to divert scarce resources into such a risky venture when we are faced with a national housing shortage, when our ground transportation system is in bad shape, and when our cities are crying for help?

I am afraid we simply have too many other more pressing domestic problems, not to mention foreign commitments. At a time when we are fighting a war in Southeast Asia it is foolish to be spending money on a skeptical plane whose potential cannot be known and whose effect on the economy and population are uncertain.

This is a particularly bad time to be proceeding with such a large spending program. It comes at a time when we are suffering from a serious case of inflation—at a time when we are trying to trim the budget and reduce expenditures—at a time when the President has cut back on Federal construction projects and has asked business to use unusual restraint in investment ventures.

I ask, How can we justify this expense when we look at our economic landscape? How can we justify the expenditure of $662 million of tax funds for a plane of doubtful worth and acceptability when at the same time, the President admits the need for improving education, but complains that the economic picture forces him to make some drastic cuts in the education budget? I do not think we can.

If the venture is truly "good business," then business should be willing to take the risk to finance development. Since when has our Government taken the position that it ought to subsidize a monopolistic business enterprise with taxpayers' dollars? As the President said, "the supersonic transport is going to be built." But maybe we ought to let others build it while we rebuild our cities and restore the quality of our education. I do not think we have to be first in everything. We do not have the resources to do it. Let us be first in what counts most. Let us set our priorities. If we do not, we will do nothing well.

APPENDIX A

COMPARISON OF BAARINC ESTIMATES WITH CONTRACTORS' ESTIMATES

[In millions of dollars]

Contractors	Boeing/ General Electric	Lockheed/ Pratt & Whitney
Airframe	$27.388	$25.111
Engines	6.253	7.074
Avionics	.800	.800
Total	34.441	32.985
BAARINC:		
Airframe	42.967	39.806
Engine	8.733	8.319
Avionics	.800	.800
Total	52.501	48.925

CBW TRAINING FOR FOREIGN MILITARY PERSONNEL

HON. ROBERT W. KASTENMEIER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. KASTENMEIER. Mr. Speaker, a recent newspaper report to the effect that the Army has been offering courses dealing with chemical and biological warfare to military personnel from over 30 different countries has prompted me to ask for a full explanation of these activities from the Department of the Army.

I frankly am disturbed over the possibility that by our actions we may be contributing to the acceptability of chemical and biological weapons and that, during hostilities, the expertise gained by military officers of foreign nations will some day be used in waging offensive operations against other countries. According to one account, the knowledge gained by Egyptian officers several years ago from courses offered at Fort McClellan, Ala., was in fact utilized in poison gas attacks carried out by United Arab Republic forces in Yemen against civilian targets.

Mr. Speaker, I think it is of little significance whether these courses are labeled as being "defensive" or "offensive" since it is plain that in order to perfect defensive techniques against CBW, offensive strategy and methods must first be understood. The dissemination of CBW information to nations whose political complexions may change overnight is to my mind not in the interests of preventing the use of germs and poison gas as a substitute for other more sophisticated and costly arms. Our training policy also weakens the credibility of our own unofficial reassurances that the United States will never use these terrible weapons first.

I am looking forward to the Army's

full response to the questions I have raised concerning these courses, and I hope that this issue is being included in the review of our Nation's CBW policies that is supposedly going on at the present time.

A copy of my letter to Secretary of the Army Stanley Resor is printed below:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., October 27, 1969.

Hon. STANLEY R. RESOR,
Secretary of the Army,
The Pentagon,
Washington, D.C.

DEAR MR. SECRETARY: I am writing to express my concern over a recent report in the press that the Army has been training foreign military personnel from more than thirty countries in the use of chemical and biological warfare agents.

I would hope that the desirability of this particular facet of our extensive CBW program is being studied in the review of our nation's CBW activities. I am concerned over the very real possibility that the indiscriminate dissemination of CBW expertise might lead to situations where CBW operations might be attempted by some of these nations using the knowledge acquired here. According to the newspaper story, the skills acquired by Egyptian Army personnel in these courses were actually used in poison gas attacks on civilians in Yemen.

I also wonder whether we are not encouraging some of the poorer nations to develop CBW weapons as a substitute for more costly sophisticated armaments and for use as a threat against potential enemies. The many coups in recent years have demonstrated the instability of many regimes and the irrational behavior of governments in conflict situations, making the propriety of such training even more doubtful.

In order to clear up questions as to the value of these training activities, I would appreciate your furnishing me with a listing of the numbers, ranks and nationalities of foreign military personnel who have taken or are now taking these courses, and a description of the contents of each of the courses. In addition, I would appreciate answers to the following questions:

Could the course contents aid in any significant way in the development of an offensive chemical or biological capability by any of the participating states? Or, to put it another way, what guarantees do we have that so-called "defensive" techniques are not adaptable to offensive use at the discretion of the user?

At what level, if any, in the State Department were clearances sought for the enrollment of foreign nationals in these courses and was due consideration given to our overall foreign policy objectives as opposed to our bilateral relations with a particular country?

What were the extent and sources of the funds used to provide this training?

To what extent have we solicited foreign participation in these courses?

Is any training provided overseas by U.S. military personnel and are any materials provided?

What are the present plans within your Department for the continuation of these courses?

An airing of the issues raised is needed to dispel justifiable fears that in offering these courses to a large number of foreign military personnel, we are increasing the likelihood that CBW might be used. I also believe we are not strengthening our public posture, which always needs reinforcement, that we will not be the first to use CBW.

It is difficult to square this dissemination function with our nation's overall arms control efforts and fear of the continued proliferation of nuclear weapons. As you are aware, it is particularly difficult to verify research and stockpiling of chemical and biological agents.

If, on the other hand, it turns out that these courses have been offered routinely because they are considered of little strategic importance, then there is a danger that we are promoting the acceptability of CBW by treating it as just another form of warfare.

I am looking forward to your full and frank response to the points raised in this letter.

Sincerely,

ROBERT W. KASTENMEIER,
Member of Congress.

A NEW PLAN TO FIGHT PORNOGRAPHY

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. ASHBROOK. Mr. Speaker, the November issue of the Reader's Digest, the issue now available on the newsstands, carries an important article by the late Senator Everett McKinley Dirksen entitled "A New Plan To Fight Pornography." The editors of the Digest prefaced the article with these remarks:

Senator Dirksen completed work on this article barely a week before he died on September 7. We are convinced that the objective it espouses—that only juries of local citizens should make the final determination of what is obscene—is not only valid but attainable. The passing of the Dirksen anti-obscenity bill (S. 1077) would, in our opinion, constitute an appropriate memorial to this distinguished lawmaker.

The late Senator's concern over this issue was well founded. In the article he stated:

The business of pornography has reached such immense proportions that 200 companies are producing hard-core filth, with sales reaching over $500 million a year. Postal authorities are swamped with complaints from citizens objecting to the pornographer's lurid sex ads. In fiscal 1969 alone, 234,692 such protests were registered. A recent Gallup poll showed that 76 percent of the American people insist that tougher laws are needed to keep obscene publications off newsstands.

On February 19 of this year Senator Dirksen introduced S. 1077 while, on the same day I introduced an identical bill, H.R. 7201, in the House. The same legislation had been introduced by Senators Dirksen and MANSFIELD on September 18, 1968, but unfortunately died at the close of the 90th Congress for want of action. This year on the House side I have asked the Judiciary Committee for a report from the appropriate Federal agencies as to their position of this particular legislation. I am hopeful that the report will soon be forthcoming as committee action is desirable as soon as possible. The text of S. 1077 and H.R. 7201 reads as follows:

A bill to amend title 18 and title 28 of the United States Code with respect to the trial and review of criminal actions involving obscenity, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) chapter 71, title 18, United States Code, is amended by adding at the end thereof the following new section:

"§ 1466. Determinations of fact

"In every criminal action arising under this chapter or under any other statute of the United States determination of the question whether any article, matter, thing, device, or substance is in fact obscene, lewd, lascivious, indecent, vile, or filthy shall be made by the jury without comment by the court upon the weight of the evidence relevant to that question, unless the defendant has waived trial by jury."

(b) The section analysis of that chapter is amended by inserting at the end thereof the following new item:

"1466. Determinations of fact.".

SEC. 2. (a) Title 28, United States Code, is amended by adding at the end thereof the following new chapter:

"Chapter 176.—ACTIONS INVOLVING OBSCENITY

"Sec.
"3001. Judicial review.

"§ 3001. Judicial review

"(a) In any criminal action arising under any statute of the United States for the prosecution of any person for the possession, sale, dissemination, or use of any obscene, lewd, lascivious, indecent, vile, or filthy article, matter, thing, device or substance, no court of the United States or of the District of Columbia shall have jurisdiction to review, reverse, or set aside a determination made by a jury on the question whether such article, matter, thing, device, or substance is in fact obscene, lewd, lascivious, indecent, vile, or filthy.

"(b) In any criminal action arising under any statute of any State or under any law of any political subdivision of any State for the prosecution of any person for the possession, sale, dissemination, or use of any obscene, lewd, lascivious, indecent, vile, or filthy article, matter, thing, device, or substance no court of the United States shall have jurisdiction to review, reverse, or set aside a determination made by a court of such State on the question whether such article, matter, thing, device, or substance is in fact obscene, lewd, lascivious, indecent, vile, or filthy."

(b) The analysis of title 28, United States Code, preceding part I thereof is amended by adding at the end thereof the following new item:

"176. Actions involving obscenity---- 3001".

(c) The chapter analysis of part VI, title 28, United States Code, is amended by adding at the end thereof the following new item:

"176. Actions involving obscenity---- 3001"

As Senator Dirksen pointed out in his article, this legislation would free juries of local citizens to make the final determination as to whether a book, magazine, or movie is obscene. He stated:

In prosecutions under state or federal obscenity laws, the verdicts of juries as to the question of obscenity would not be subject to review by federal courts. The Supreme Court could, as always, review the *legal correctness* of any such prosecution, but it would no longer be allowed to look behind the lower court's findings of fact. (My bill would affect appeals to federal courts only, but I urge state legislatures to adopt similar rules for their appellate courts.)

Why this drastic step regarding the Federal courts, and in particular the Supreme Court?

The key role played by the Supreme Court in the deplorable smut glut now enraging American citizens was brought to public attention by the monumental

efforts of the Citizens for Decent Literature—CDL—whose founder Attorney Charles H. Keating and attorney for the executive board of CDL, James J. Clancy, testified on July 22, 1968, before the Senate Judiciary Committee on the proposed appointment of Justice Abe Fortas as Chief Justice of the U.S. Supreme Court. Referring to cases handed down in May and June 1967, by the highest court, the CDL representatives pointed out that the Court reversed 23 of the 26 State and Federal obscenity determinations. The community standards of 13 States were upset. Eight findings of fact by juries were reversed. The lengthy and thorough CDL testimony then proceeded to list the pertinent cases with their summaries and legal citations. This testimony, which I inserted in the RECORD on September 4, 1968, along with a CDL film showing some of the literature and films approved by the Court, brought into proper perspective the part played by the U.S. Supreme Court in the present hard-core pornographic deluge.

The presence of Senator Everett Dirksen will certainly be missed on the Senate floor, but his resolve and counsel, as expressed in the closing paragraph of the Digest article, should be both emulated and heeded:

For my part, I intend to use every means at my disposal to see that my bill is enacted. But I need the backing of an aroused citizenry. Every one of you can help, individually and through civic groups and local organizations, by writing your Congressman and both of your Senators expressing your outrage at the filth engulfing our land and urging their support of S. 1077. If all of us pull together, *we can win this fight!*

I insert the article, "A New Plan To Fight Pornography," by the late Senator Everett McKinley Dirksen, appearing in the November 1969, issue of the Reader's Digest, in the RECORD at this point:

A NEW PLAN TO FIGHT PORNOGRAPHY

(By Senator Everett McKinley Dirksen)

(NOTE.—Senator Dirksen completed work on this article barely a week before he died on September 7. We are convinced that the objective it espouses—that only juries of local citizens should make the final determination of what is obscene—is not only valid but attainable. The passing of the Dirksen anti-obscenity bill (S. 1077) would, in our opinion, constitute an appropriate memorial to this distingushed lawmaker.)

The United States is overwhelmed with smut. Like some medieval plague, the mounting flow of obscene books, films and magazines surrounds us, threatening our national health. Consider just a few of the symptoms accompanying this plague:

A multimillion-dollar printing factory in Phoenix, Ariz., keeps its presses rolling 24 hours a day, five days a week, turning out 35,000 lewd books each day. A Los Angeles, Calif., smut publisher who went into business just three years ago with $25,000 capital now grosses over a million dollars annually. A jury recently found two of his books to be hard-core pornography, and by his own admission he is in the business primarily to make money.

In recent years, the rapidly proliferating sleazy bookstores in cities throughout the nation have added a new attraction: filmed peep shows. For 25 cents, the customer can peer through a slot and watch naked men and women gyrate for a few moments. New York City alone now has some 400 peep-show machines scattered about.

Books, magazines and sometimes movies now show full genital exposure. Sexual intercourse has been shown in commercially exhibited films which are raking in millions of dollars across the country. Tabloid newspapers with such names as *Screw, Pleasure* and the *New York Review of Sex*—with pictures to match—are sold over hundreds of newsstands.

These are far from isolated cases. The business of pornography has reached such immense proportions that 200 companies are producing hard-core filth, with sales reaching over $500 million a year. Postal authorities are swamped with complaints from citizens objecting to the pornographer's lurid sex ads. In fiscal 1969 alone, 234,692 such protests were registered. A recent Gallup poll showed that 76 percent of the American people insist that tougher laws are needed to keep obscene publications off newsstands.

How did we reach such a state?

For some 12 years, the U.S. Supreme Court has labored to define what may be banned as obscene. In June 1957, the Court handed down a landmark decision in the case of *Roth v. United States*. Declaring that the First Amendment guarantees of free speech have never applied to obscene material, the Court held that "obscenity is not within the area of constitutionally protected speech or press."

The test of obscenity, as spelled out in this and later cases, is: Whether to the average person, applying contemporary community standards, the "dominant theme of the material taken as a whole appeals to prurient interest" and is "utterly without redeeming social importance." A key point in the declaration: a book or film must be judged in its entirety, not on the basis of isolated passages.

This legal definition, admittedly not perfect, is at least workable. Unfortunately, the courts—and, too often, the Supreme Court itself—have not permitted it to work. Time after time, juries have sought to apply the Supreme Court's guidelines to a book or movie, only to have their decision on the facts summarily overturned.

Here is a sampling fo the most important recent cases:

A Redwood City, Calif., nudie-film merchant named Sam Ratner exhibited an 8-millimeter strip-film entitled *Honey Bee*. It showed a well-endowed model, clad only in garter belt and stockings, undulating on a couch, moving her hands, torso, lips and pelvis to suggest sexual intercourse. A jury found the film to be pornography, without artistic significance or even a modicum of redeeming social importance. The appellate department of the superior court of California upheld this finding. Yet, incredibly, the U.S. Supreme Court overturned Ratner's jury conviction. Thus, the film was, in effect, declared *not* obscene, and was therefore protected by the First and Fourteenth Amendments.

In Rochester, N.Y., David E. Keney ran a bookstore featuring what he told customers were called "spicy hot" books. Three of his paperback books carried the titles *Lust School, Lust Web* and *Sin Servant*. Their message: detailed descriptions of sexual aberrations of all kinds. A jury found the books obscene. An appellate court agreed with the jury's decision, and New York State's highest court turned down the appeal. Nevertheless, this case was among a group of 26 obscenity-conviction appeals considered by the U.S. Supreme Court during its October 1966 term.

As in the Ratner case, the Supreme Court reversed Keney's conviction. In neither instance was the Court ruling on the legal correctness of the case, but rather was making its own value judgment that the materials involved were *not* obscene. By these declarations, it switched from being a conservator of legal tradition to being a censor of individual books and films—a most unfortunate switch.

In all, the Court reversed the obscenity determinations in 22 of the 26 October-term cases involving material ranging from homosexuality to sadism. With its decisions, the Court overturned the obscenity finding of eight juries and wiped out the attempts of 13 separate states to control the distribution of salacious material.

In Portland, Ore., newsstand operator Harold G. Childs was arrested for selling a book entitled *Lesbian Roommate*. A Portland jury found the book obscene and convicted Childs. On appeal, the supreme court of Oregon upheld the jury decision, describing *Lesbian Roommate* as a "series of sexual descriptions, tending to and produced solely for the arousal of exotic sexual fantasies."

The U.S. Supreme Court turned down a petition to consider the Childs case. But, just three months later, on June 23, 1969, a federal district judge made a remarkable intervention, granting a writ of habeas corpus to free Childs on the ground that *Lesbian Roommate* was *not* obscene. In his opinion, the book did not appeal to prurient interests, nor did it offend contemporary community standards. By this ruling, a federal judge overruled the judgment of a community jury and of the state supreme court, and made a shambles of that state's efforts to curb smut.

What can be done about this court-approved filth?

The Constitution of the United States provides us with an answer. Article IIII specifically empowers Congress to make "exceptions and regulations" to the Supreme Court's appellate jurisdiction. Thus, explained *The Federalist*—that historic group of essays written by early supporters of the Constitution—the Legislative Branch "would certainly have full power to provide that in appeals to the Supreme Court there should be no re-examination of facts where they had been tried by juries."

The pornography problem is so grave that Congressional action along such lines is desperately needed. Accordingly, I have introduced a bill (S. 1077) which would if passed, free juries of local citizens to make the final determination as to whether a book, magazine or movie is obscene. In prosecutions under state or federal obscenity laws, the verdicts of juries as to the question of obscenity would not be subject to review by federal courts. The Supreme Court could, as always, review the legal correctness of any such prosecution, but it would no longer be allowed to look behind the lower court's findings of fact. (My bill would affect appeals to federal courts only, but I urge state legislatures to adopt similar rules for their appellate courts.)

Thus, the people of our communities would decide what they think the moral standards under which their youngsters are to be reared should be. This procedure would avoid the dread hand of unreasonable censorship and would be in keeping with the best of American legal tradition. As Judge Learned Hand, one of our greatest jurists, once pointed out: "In this country the jury must determine, under instructions, whether a book is obscene. The court's only power is to decide whether the book is so clearly innocent that the jury should not pass on it at all."

Enactment of my proposal would not foreclose other steps urgently needed to win the fight against pornography. Local prosecutors, police and citizens must redouble their efforts to keep the filth peddlers at bay. The Administration's tough new program to crack down on the smut advertising now being mailed into the nation's homes must be passed. However, laws cannot do the job without the goad of public opinion. In the words of President Nixon: "When indecent books no longer find a market, when pornographic films can no longer draw an audience, when obscene plays open to empty houses, then the tide will turn."

For my part, I intend to use every means at my disposal to see that my bill is enacted. But I need the backing of an aroused citizenry. Every one of you can help, individually and through civic groups and local organizations, by writing your Congressman and both of your Senators expressing your outrage at the filth now engulfing our land and urging their support of S. 1077. If all of us pull together, we can win this fight!

REDS' NEGRO PUPPET CLAIMS SANCTUARY IN DETROIT

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. RARICK. Mr. Speaker, it seems we are about to be treated to one of the propaganda displays of our times in the case of a small-time hoodlum who has been built up by international communism to the point that he takes himself seriously.

Robert Williams was too loudmouthed for the NAACP in his native North Carolina. He fled the State when indicted for kidnaping, which is a crime in that State. Fleeing in interstate commerce to avoid prosecution for a felony is a Federal crime, so the FBI is also interested in him.

He has been in Cuba, Red China, Tanzania, mouthing constant seditious hogwash against the United States. He has openly counseled and encouraged such parlor games as murder, arson, and revolution. He even thinks he is a president.

Surprisingly, some of our officials seem to have fallen for the same song, treating him with kid gloves, delivering him new passports, dropping charges, granting him privileges which are totally unheard of in dealing with common criminals of this type. In the end, he has served his Red masters well.

For the information of this House, I insert pertinent news clippings and articles at this point in my remarks:

[From the Detroit (Mich.) News]

RETURN TO NORTH CAROLINA MEANS DEATH, RNA LEADER TELLS COURT

LANSING.—Robert Williams, leader of the black separatist Republic of New Africa (RNA), faces possible death if Michigan sends him back to North Carolina on a kidnaping charge, he says.

"If you send me to North Carolina, I'll just assume it will be a suicidal mission for me," Williams told an extradition hearing officer yesterday.

Williams' attorney, Milton Henry, of Pontiac, said Union County, N.C.—where the kidnaping allegedly took place—is "Klan country." "Law (there) . . . is conducted on a racist basis," he said.

North Carolina's "purpose is to get him back to perhaps harass and even kill him," said Henry, vice-president of the RNA. "They wouldn't want to try this case at 12th and Clairmont (in a black area of Detroit). We don't want to try it in North Carolina."

Williams, who appeared at the hearing with his wife, Mabel, and three other attorneys, said "American justice is on trial—not Robert Williams."

Joseph Thibodeau, assistant legal adviser to Gov. Milliken, set Nov. 10 for a second hearing after Henry said he could produce evidence to provide the indictments forwarded by North Carolina are forgeries.

After that hearing, Milliken will decide whether to return Williams to North Carolina to face the charges stemming from a 1961 "Freedom rider" demonstration.

Williams and four others were accused of kidnaping a white couple, Mr. and Mrs. G. Bruce Segall. The Segalls were held briefly, then released unharmed.

Henry said indictments sent to Milliken were dated 1965.

Indictments were handed down in 1961 and later voided by the North Carolina Supreme Court, he said. Indictments were brought again in 1967.

But those issued in 1965, Henry said, were against four persons—"but not Robert Williams. Your attorney general should go down to North Carolina and see what these people have done."

Henry argued also that the North Carolina law under which Williams was charged did not until 1962 define the term "kidnaping."

"This is unenforceable by virtue of vagueness," he said. "You can't be a fugitive unless there's a crime."

Henry noted the "political" nature of the situation in 1961—"it was slavery versus freedom," he said—and maintained that extradition involving a political charge is not allowed under statute.

He argued also that the Segalls are "not interested in prosecuting" the case. "It's the police and the Ku Klux Klan," he said.

Williams, suspended as head of the Union County chapter of the NAACP in 1959 for publicly disclaiming the group's nonviolent position, fled the United States after the first indictments were brought.

He asked for political asylum in Cuba, then journeyed to Communist China in 1966. He returned to this country only last month.

"We selected Michigan," Henry said. "We can get what the law says we are supposed to get—justice. We believe that Michigan, of all the 50 states, will give us the fairest hearing."

[From Tactics, June 20, 1969]

REDS HOPE FOR YENAN ON U.S. SOIL—ROBERT WILLIAMS COULD BE ITS FIGUREHEAD

Indulge in a little revolutionary fantasy, and then ask if it is so fanciful after all. The unmentionable and the unbelievable is that international communism would be so bold as to announce that a "People's Government of the U.S.A." has been set up in the New World. Crazy, man, crazy, even to suggest that the reds would be so bold and even mad as to declare that a revolutionary government of the United States existed in exile anywhere in the Northern or Southern Hemispheres, or in hiding anywhere on U.S. soil.

Yenan for years was the proclaimed capital of a self-proclaimed, communist government in China. Could there be a Yenan, U.S.A.?

Actually, all this needs, "in exile," or "in hiding," is the political permissiveness and the anti-anticommunism we are now pursuing, and the moral and legal permissiveness that now characterizes our society. All the reds need to do is to disguise the communist instigation and form of the destructive, subversive movement to full us. We have heard so much of the red salami tactic, of cutting off one slice at a time, that we haven't given any thought to the political consequences. We are not dealing with a salami, of course, but with our political system. The slicing is being done by the hungry, red apparatus.

Let us go to specifics. The tactics being used are to exploit one issue after the other, each time approaching more and more to the grand finale of final conquest, if they can get away with it. The civil rights movement was transformed cynically into an anti-Viet Nam war movement. Simultaneously, a college reform and free speech movement was focussed upon weakening the military structure generally, from research to the draft.

REPUBLIC OF NEW AFRICA

When will we learn that communists never abandon an objective, but bend over to force and power, their concept of co-existence? We laughed at Stalin's plan for a "black republic" on U.S. soil.

But the reds knew that law was not being enforced against conspiracy and treason. So a "declaration of independence" for a "Republic of New Africa" on U.S. soil was glibly announced at the end of Mar. 1968, and its revolutionary activities and even violence have been given the most respectable publicity by our news syndicates and such newspapers as the N.Y. Times. Indeed, this organ of the Establishment and Fabian socialism sounded the clarion call with editorials and purported "news" articles on the possibility of "two successor states—one black and one white"—developing out of the United States. The insidious but prestige-robed N.Y. Times magazine section of Sunday, Aug. 11, 1968 soberly gave over two complete pages and part of five other pages to a soberly written study, "The Case for Two Americas—One Black, One White," written, of course, by a professor. Respectable treatment of this kind given to this most vicious conspiracy is a cruel hoax played on the black citizenry of our land, and in effect, incitement to such suicidal treason.

Whether the editors who plot such pages are simply sick mischief-makers or masochists is academic.

The proclaimed "president" of this "black republic," that has no backing, but only the opposition of practically the entire colored and white population together, is the criminal fugitive, Robert F. Williams, who has been sending instructions on guerrilla warfare and murderous sabotage into the United States from such places as Havana and Peking. He has been encouraged to believe he can re-enter the United States, and take advantage of our permissive and ineffectual legal system to conduct a glamored publicity campaign for national destruction right inside the United States.

Communists, of course, take him seriously only as a front for them. If it can be arranged, he will appear somewhere in North or South America for such insurrectionary activity, or even concealed inside the U.S.

ELDRIDGE CLEAVER, AS "MINISTER OF INFORMATION"

The so-called Black Panther Party has its communist links through such centers as Alexandria, in Egypt. He was enabled to flee from the United States so he could avoid serving out a prison sentence, and is working against our country from Havana. A four-page leaflet signed by him as "minister of information" includes such names as Stokely Carmichael as "prime minister" and Bobby Seale as "chairman." Its "proposals" refer to "the racist pig gestapo police who occupy our colony as foreign troops occupying conquered territory."

Of course, behind the white and black parallel revolutionary movements are the communist psychological warfare planners operating from Moscow and Peking, with Havana as satellite headquarters.

None of this would warrant even mention, for none of it would have been able to blow up even a small shop with impunity except for the anti-anticommunist propaganda climate created by professionals. This has snared politicians and millionaires alike—sometimes in the same person. What has been required was the softening up of the American people, and the depriving of anti-communists of outlets by which the public could be given the benefit of their wisdom and experience. After all, they have been proven

consistently right, whereas the Walter Lippmanns, on the written record, have been shown by events to be consistently wrong.

Washington, as the national capital, provides a horrible example of this one-sidedness in communications. A slick magazine, richly subsidized, has been in existence for several years now. It is fake "liberal," but fat with advertising. Its name is the Washingtonian. A few months ago, a competitor appeared, as slick but with practically no advertising. It is called the Washington Monthly. The sort of so-called intellectual appeal of these magazines is shown by their cost, 60 cents for the former and a full dollar for the latter. Washington Monthly is as extremist as one can get in propagandizing for the weakening of our country in all its defenses. Frankly, except for the few still red labor unions, American workers would see through this subversion at once. Of course, we find the name of Murray Kempton on the "advisory board," with Richard Rovere as the chairman. Included, too, is Pete Lisagor, of the Chicago Daily News, one of those who has been undermining Otto F. Otepka, whose skills lie in the field of national security. His paper obviously runs Drew Pearson.

Who subsidizes Washington Monthly? No communist, De Tocqueville understood the phenomenon. The angel is said to be none other than John D. Rockefeller the Fourth! Ah, yes, a Democrat, he won a seat in West Virginia's legislature. His eyes, too, you see, are on the White House. This takes an organization, that has to be built up, and all sorts of organization men, such as writers, who have to be kept busy between campaigns.

[From the Washington Star, Sept. 12, 1969]

WILLIAMS ARRESTED ON RETURN TO UNITED STATES

(By Lyle Denniston)

Black revolutionary Robert F. Williams returned to the United States today after eight years in exile. He was promptly arrested by the FBI.

Williams, who fled the United States to avoid kidnaping charges in North Carolina, was arrested as his special Trans World Airlines flight landed in Detroit. He was wanted on a federal charge of unlawful flight to avoid persecution.

Williams, 44, returned amid confusion about who in the U.S. government wanted him back and who doesn't.

The Justice Department's Internal Security Division and the Federal Bureau of Investigation both disclaimed responsibility for any official pressure to return Williams.

Williams flew back on a special Trans World Airlines flight—a 130-seat airliner carrying only him, his lawyer, an airline security guard and the plane's crew of eight.

The flight left London 80 minutes early and the Associated Press quoted TWA officials as saying they were advised "from America" to move the time forward, presumably because someone feared a demonstration when the jet arrived in Detroit this afternoon.

Earlier, TWA had refused to carry Williams.

DOUBTS ON ROLE

Williams is a Negro, and some officials in the government apparently fear that he could emerge as a new militant leader among the nation's blacks.

The FBI and its Justice Department colleagues in the Internal Security Division apparently agree at least that Williams could become what one source described as "an aggravation" among Negroes.

Beyond that, however, there is no agreement between the department's two branches over the considerations which went into the final decision to return Williams to this country.

EMBASSY REQUEST CITED

A TWA spokesman here said Williams was brought back "at the request of the U.S. Embassy in London."

An official request of that kind was one of the three conditions the airline had imposed, according to the spokesman. The other conditions—also met—were that a "sufficient escort" be provided, and that TWA itself have control over the time and place of Williams' return.

The FBI had never indicated to the airline that it opposed Williams' return, according to the spokesman.

On the other hand, he added, the FBI had not pressed TWA directly to get Williams back, TWA's formal discussions over the return, it was reported, were entirely with the State Department in Washington or the U.S. Embassy in London.

TWA's unusual expense—reportedly $20,000—in making today's flight was undertaken at the initiative of the airline alone, the spokesman said, to avoid the risk of having Williams on a regular flight with other passengers—"which conceivably could have led to a disturbance."

State Department officials were not immediately available for comment on their part in the situation.

The state of North Carolina had only a limited role in the discussions over Williams, Deputy Atty. Gen. Ralph Moody said in a telephone interview today.

Since Williams still faces a kidnapping charge in that state, law enforcement authorities there were interested, Moody said. However, they had not directly pressed the federal government to seek Williams' return, he said.

Williams had been held in London, imprisoned as an "undesirable alien," during the days of uncertainty about whether he could get back to America by air, as he wanted. The British tried to send him back to Egypt, but he refused. He also declined to come to the United States by ship.

The FBI, sources suggested, has not been intimately involved in the U.S. government's handling of the question of William's return. That has been the responsibility of the Internal Security Division, bureau sources said.

However, the division in turn has insisted that its position was one of "ambivalence," and that it was the FBI which had really been in charge.

While the security division did seem somewhat concerned about Williams' impact on his return home, sources indicated the division made no attempt to bar his entry, partly because of an understanding it had that both the FBI and North Carolina wanted him in this country.

Since leaving the country, Williams had visited Cuba, Red China and Tanzania.

[From Battle Line, October 1969]

BLACK REVOLUTIONIST LEADER DECLARES DETROIT AS THEIR "SAFEST" AMERICAN CITY

It will be to Jerome P. Cavanagh's everlasting shame that he presided as Mayor of the American city that was chosen by this nation's enemies as the "safest" in the country for return of their leader, Republic of New Africa President Robert Williams, in order that he might now direct the revolution from within our own shores.

His arrival in Detroit was delayed a number of days when T.W.A. refused to carry him aboard their trans-Atlantic flight. Many people ridiculed the Republic of New Africa officials when they threatened the airlines. But T.W.A. wasn't laughing as they quickly changed their decision after the Communist Party called for massive demonstrations before T.W.A. offices; cancellations and harassment of Airline schedules, along with threats of sabotage by the black militants. In fact, T.W.A. flew a special flight with Williams as their only passenger in what could honestly be called their "blackmail run."

Let us take a closer look at this "beast" that has entered our city, a revolutionist that Breakthrough, led by Don Lobsinger, warned Detroiters about more than 4 years ago. Williams has outlined his concept of guerrilla warfare in his publication, the Crusader, printed in Red China. His views are similar to Mao-Tse-Tung's with whom he shared the same rostrum at a May Day rally in Peking recently. His book, "Negroes With Guns," has become the official guerrilla manual of several black extremist groups. He calls for a new concept of guerrilla warfare, one in which the revolutionists huddle as close to the "enemy" as possible so as to neutralize his modern and fierce weapons. He goes on to say, "any Afro-American revolt would constitute a unique form of urban warfare. The match and gasoline would be his most effective weapon."

Recently, another RNA official, Milton Henry made the statement, "The U.S. Army can't win in Vietnam and they can't win in the United States. We can fight from within. How are they going to get us out of here? Where would they make the guns to shoot us—in the United States? Do you think we are just going to let them keep on making guns? How will they transport their guns and soldiers—on railroad trains? The United States can be destroyed by sabotage and guerrilla warfare."

This then is the poison that our government allows to flow into the bloodstream of our country. Is it any wonder that the "impossible" is happening before our very eyes? The probability of a military takeover to save this country from a communist victory appears more likely every day.

COMMUNIST PRESS ACCUSES BREAKTHROUGH OF CAUSING RACIAL STRIFE AT LOCAL HIGH SCHOOLS

The ability of the communists to twist the truth is almost too much to comprehend. A number of Detroit high schools have witnessed black militant students, led by outside agitators, going on a rampage, attacking students and teachers alike, burning the American flag, replacing it with the flag of the Republic of New Africa and causing the schools to close down. Then the next day you read in the communist paper, the "Daily World," and also headlines in the Negro newspaper, that Breakthrough members were driving around with truckloads of their "goons," riling up the blacks just so the police could then step in and beat on their heads. It is a known fact that Breakthrough is opposed to having their members ride around in trucks.

[From Combat, Oct. 15, 1969]

"KILL BABY KILL"—THE ROBERT F. WILLIAMS STORY

(By Henry P. Durkin)

Less than a month ago one of the major promoters of a black-white civil war in the United States returned to this country after eight years of self-imposed exile to avoid criminal prosecution.

Robert F. Williams' trip to Detroit in September contains elements similar to Vladimir Lenin's historic return to Petrograd some 52 years ago. Both men waged propaganda war against the homeland from a safe haven overseas. Both men stand among the foremost advocates of terrorism as politics. Both reject reform as too gradual. And both came home treated as, in Churchill's phrase, the plague bacillus; Lenin and his entourage in the famous sealed railway car, Williams and his attorney encapsulated in a giant airliner, its only passengers.

Lenin ultimately triumphed in his October Revolution and destroyed the only representative government Russia has ever had. He did it to "free the workers." Williams promises that his revolution, pitting black against white in a racial civil war, will lead ulti-

mately to Negro Americans being free of "oppression."

Williams has gone far in eight years.

During those years, Williams' home had been Cuba, Red China, and Tanzania. Almost uniformly the press touted Williams merely as a "black militant" who wanted to return to clear himself of kidnaping charges in Monroe, North Carolina. And just as uniformly the press ignored his strange and fascinating activities over the years.

Williams, an ex-Marine, was born in Monroe, North Carolina, in 1925. In 1956 he joined the local chapter of the NAACP and soon became its president. At that time, the NAACP's demands followed the "separate but equal" philosophy of the national office, which predominated in the mid-50's. But Williams decided this was not enough and began to organize self-defense units in the Negro community. On one occasion, by the use of foxholes, sandbags, and a well-prepared strategy, his units succeeded in repulsing with gunfire a motorized Ku Klux Klan "invasion."

In 1959, just after an all-white jury in Union County had acquitted a white man of beating up a Negro, Williams, shaking with anger, told a reporter that Negroes must defend themselves even if it meant "meeting violence with violence if that is to be the only way we can obtain justice." Negroes, he said, should be "willing to die" or "even to kill if necessary" to protect themselves. "If it is necessary to stop lynching with lynching, then we must be willing to resort to that method." Remarks such as these prompted Roy Wilkins, NAACP national director, to suspend Williams for six months.

In 1960 Williams traveled illegally to Cuba a number of times and reported favorably about Castroland. Then, on April 21, 1961, Williams sent a telegram from Monroe to Cuba's foreign minister, Raul Roa, at the UN during the General Assembly debate on the Bay of Pigs invasion. Roa read the telegram to the delegates, as U.S. Ambassador Adlai Stevenson sat in silence: "Now that the United States has proclaimed military support for people willing to rebel against oppression, oppressed Negroes in the South urgently request tanks, artillery, arms, money, use of American airfields and white mercenaries to crush the racist tyrants who have betrayed the American Revolution and the Civil War. We also request prayers for this noble undertaking."

Four months later, in August 1961, North Carolina indicted Williams on a kidnaping charge. A white couple driving through the Negro section during one of Williams' bouts against the local police were dragged from their car and held prisoner in Williams' home. Eventually they were released and Williams fled to Cuba (via New York, Canada, and Mexico). While in hiding "somewhere in New York City" on his way to Cuba, Williams sent a long letter to the *Guardian* (*nee National Guardian*) presenting his side of the Monroe troubles. Williams admitted that a white couple was "captured, disarmed and placed under citizens' arrest by a group of Negroes," that the couple was brought to his yard, where he asked the "colored group to let them go; they did." And, Williams said, he told the white couple they could go, but that "they would have to leave through the angry crowd" which had gathered. Williams said he turned back to his house and the couple followed; when he looked for them a short time later they "had disappeared." Williams claims he fled because Monroe Police Chief A. A. Manney told him that "state troopers were coming and that in 30 minutes I would be hanging in the Courthouse square." He escaped with the help of some Negroes on their way to Greensboro, N.C., from where he and his family caught a bus for New York, arriving there August 28, 1961.

While he was living in Monroe, Williams had begun issuing a newsletter called *The Crusader* (first issue: June 26, 1958). He continued to publish it in Cuba, and also started making anti-American broadcasts over "Radio Free Dixie," courtesy of Castro's shortwave transmitters. In both he urged the Negroes in the United States to revolt.

Cuba was a good choice for Williams' first exile. His 1960 trips there had convinced him that Castro's "workers paradise" was ideal. At least one of Williams' trips was under the auspices of Fidel's American front, the Fair Play for Cuba Committee. In November 1960 Williams was one of the featured speakers at an FPCC rally in front of the U.N., protesting U.S. patrolling the coasts of Guatemala and Nicaragua against Cuban attempts at infiltration. Williams signed several of the FPCC advertisements in American newspapers. One of these, in the April 22, 1961 issue of the Baltimore, Maryland, *Afro-American*, was a "Declaration of Conscience by Afro-Americans": "Afro-Americans, don't be fooled—the enemies of the Cubans are our enemies, the Jim Crow bosses of this land where we are still denied our rights. The Cubans are our friends, the enemies of our enemies." Another ad in the New York *Post* three days later carried almost the same text.

Assorted left-wingers and Communists quickly jumped to Williams' aid, via an organization called the *Monroe Defense Committee*. Communists (identified in testimony as old-time or current; Moscow, Peking or Trotsky-oriented) were listed as supporters: William Albertson, Herbert Aptheker, William Epton, Carl Marzani, Jesse Gray, Cyril Phillips, Victor Perlo, and others. Liberals and leftists who also lent their prestige included James Baldwin, Ossie Davis, Ruby Dee, Nat Hentoff, A. J. Muste, and Lyle Stuart. And Clark H. Foreman, Executive Secretary of the Emergency Civil Liberties Committee (now renamed National Emergency Civil Liberties Committee) commented that Williams "represents the most practical approach for the Negro who considers himself entitled to be a full-fledged American."

In April 1962 the pro-Williams campaign had reached such proportions that Detroit Local #600 of the United Auto Workers passed a resolution calling on President Kennedy to give executive clemency to Williams!

But in *The Crusader* Williams was proclaiming "The slick John Kennedy gang is operating one of the greatest sham governments in the entire world," and that America was "a jungle filled with wild beasts and savages presided over by an impotent witch doctor, Slick John Kennedy." While continuing his attacks on Kennedy, Williams asked that money to keep the newsletter going be sent to Mrs. Anne Olson in Toronto, Canada—at the headquarters of Canadian Fair Play for Cuba Committee—and announced that his attorney, Conrad Lynn, was hard at work on the legal machinery to clear his name of the kidnaping charges.

"Radio Free Dixie," Williams' jazz music show mixed with political commentary, began to be heard every Friday from 11 p.m. to midnight, Eastern Standard Time. In one broadcast in late summer 1962, he said: "Communism is not lynching black people! Communism offers equality. If it were not for Russia, the oppressors of the Negro would have already conquered the world, and we can rest assured that it would be a racist world. If it were not for the power of the Soviet Union, all oppressed peoples everywhere would have very little hope of ever acquiring the means of freeing themselves. If it were not for the Soviet Union, the racists of the USA would already feel free to wage a campaign of total extermination against the Afro-American." Early in 1963, "Radio Free Dixie" began broadcasting three days a week. Stepped up, too, were the tirades against Kennedy, who became "Herr John" (the new Hitler): "he thinks he's God" and a "great benefactor to white supremacy and the southern racist enemies of the 14th Amendment to the US Constitution."

September 1963 saw a new development in Williams' political education. He turned up in Red China, telling Pekings' New China News Agency that he had wanted to come to China since the "triumph of the Chinese revolution" in 1949. While in China he sent President Kennedy a message protesting what he called "the savage persecution of American Negreos by U.S. racists." Williams warned "Let me remind you that these heathen racist crimes against black humanity shall be avenged!" (About two months later, a one-time member of the New Orleans Fair Play for Cuba Committee, Lee Harvey Oswald, assassinated Kennedy.)

The next issue of *The Crusader* appeared in February 1964 and made no further references to President Kennedy. Instead, that issue and subsequent ones carried detailed instructions for sabotage and terrorism. Example: "The weapons of defense employed by Afro-American freedom fighters must consist of a poor man's arsenal. Gasoline fire bombs (Molotov cocktails), lye or acid bombs (made by injecting lye or acid in the metal end of light bulbs) can be used extensively. During the night hours such weapons, thrown from the roof tops, will make the streets impossible for racist cops to patrol. Hand grenades, bazookas, light mortars, rocket launchers, machine guns and ammunition can be bought clandestinely from servicemen anxious to make a fast dollar. Freedom fighters in military camps can be contacted to give instruction on usage.

"Extensive sabotage is possible. Gas tanks on public vehicles can be chocked up with sand. Sugar is also highly effective in gasoline lines. Long nails driven through boards and tacks with large heads are effective to slow the movement of traffic on congested roads at night. This can cause havoc on turnpikes. Derailing of trains causes panic. Explosive booby traps on police telephone boxes can be employed. High-powered sniper rifles are readily available. Armor-piercing bullets will penetrate oil storage tanks from a distance. Phosphorous matches (kitchen matches) placed in air conditing systems will cause delayed explosions which will destroy expensive buildings. Flame throwers can be manufactured at home. Combat experienced exservicemen can easily solve that problem." (*The Crusader*, May-June 1964).

Copies of this issue were circulated in New York City before the now-famous Harlem riots of 1964. Williams had predicted such violence on page seven of the same issue: "This year, 1964, is going to be a violent one, the storm will reach hurricane proportions by 1965 and the eye of the hurricane will hover over America by 1966. America is a house on fire—Freedom Now!—or let it burn, let it burn. Praise the Lord and pass the ammunition!!!"

From November 25 to 30, 1964, Williams was in Hanoi attending the International Conference for Solidarity with Vietnam. He told the delegates "I feel much freer here than I ever felt in the U.S.A. . . . I believe this is the beginning of a new relationship between our two peoples, the people of Vietnam, the Afro-American people and our white allies in the U.S.A." Also, while in Hanoi, Williams broadcast to U.S. troops in South Vietnam to lay down their arms.

Prior to coming to Hanoi, Williams stopped off again in Peking, publishing the October 1964 edition of *The Crusader* there and having a personal meeting with Mao Tse-tung. Said Williams: "It was a great feeling for me, an exiled former NAACP official, to be in China when their first Atomic bomb was exploded . . . This bomb is not just a Chinese

bomb, it is a freedom bomb for all the oppressed people of the world."

Returning to Cuba, Williams announced that *The Crusader* now had a U.S. address: P. O. Box 359, New York, N.Y. 10025, which turned out to be the same address as the Revolutionary Action Movement (RAM), of which Williams was then Chairman-in-Exile. RAM's theoretical journal, *Black America* (Summer-Fall 1965) set the tone for its activities: "As the struggle becomes more intense, a Mau-Mau of a political form will probably have political ambitions which the house niggers (Uncle Toms) and the public racists will be unable to fulfill. It will probably assassinate racist leaders and house niggers who don't follow its line. The cry of the black community will be 'Liberation or Death!'"

Let's pause a moment and see what RAM members have been doing in the United States to carry out the movement's orders:

February 1965: RAM members were arrested in a plot to blow up the Statue of Liberty, the Liberty Bell, and the Washington Monument. The RAM group used the name of Black Liberation Front, led by Robert Steele Collier, Walter A. Bowe (a signer of the Fair Play for Cuba Committee ads referred to above), and Khaleel S. Sayyed. Attorney for Collier was Conrad Lynn, also Williams' lawyer, while Mark Lane (famous for his posthumous defense of Lee Harvey Oswald) defended Sayyed. All three plotters were found guilty and sentenced to between 18 months and 5 years in jail. Collier was released after 2 years and turned up as a $5,700-a-year New York City Parks Department employee in charge of recreational activities at the Tompkins Square Community Center, supervising local children and adults using the swimming pool. As soon as news of this leaked out, Collier was fired from the job and dropped out of sight until April 1969. At that time he was arrested as part of a Black Panther plot to bomb several New York department stores. Twenty-one Panthers in all were arrested. Coming to their defense were long time leftist attorneys William Kunstler and Arthur Turco.

June 1967: Sixteen RAM members were arrested in a plot to assassinate "moderate" civil rights leaders, including Roy Wilkins and Whitney Young, Jr. Leader of the plot, according to District Attorney Thomas Mackell, was Herman Ferguson, at that time an assistant principal in New York City's school system. Ferguson is East Coast Vice President of RAM and Minister of Education. Also named in the indictment was RAM's Special Ambassador Max Stanford, who was arrested in Philadelphia. At the trial, the prosecution declared that Senator Robert F. Kennedy was also on the RAM kill list. Ferguson was convicted and is now free on bail pending his appeal. Last November he was a candidate for the U.S. Senate on the Freedom and Peace Party ticket, a front set up by the Communist Party USA.

September 1967: Four RAM members were arrested in Philadelphia in a plot to poison hundreds of policemen and some of the city's top officials in the event of a riot. The Trotskyite-oriented Youth Against War and Fascism, headed by Mark Lane's former secretary, Deirdre Griswold, sponsored a protest rally in Philadelphia in October 1967. Among the scheduled speakers were Mae Mallory, one of Robert Williams' co-defendants from Monroe, N.C., and Conrad Lynn, Williams' and RAM's attorney.

During June 1966, Williams ceased his "Radio Free Dixie" broadcasts from Havana and went to China, claiming dissatisfaction with the Cuban regime because it barred him from opening an information office for his movement and because phonograph records and other material sent to him from outside Cuba for his broadcasts were stolen from the Cuban post office and even from Cuban Foreign Ministry diplomatic p ches. In addition, one issue of *The Crusader* was forged and contained anti-Chinese statements; also, $1,550 he sent to sympathizers in New York never reached them. Further, the Cuban government barred his accepting a speaking invitation in Sweden. Williams' other charges were that he was forced to use "only the progressively weaker longwave facilities of Radio Progresso" instead of the shortwave Havana Radio; that a promise of $200 a month to buy records and publications for his broadcasts was not kept; that his wife was not allowed to go to Canada, and that the Cuban authorities had refused to investigate his charges. But the biggest reason for transferring his base of operations, said Williams (in the August 12, 1966 issue of *Peking Review*) was Cuba's anti-Negro racism: "We Afro-American revolutionaries have discovered that some so-called socialists, we thought to be our comrades and class brothers, have joined the international Ku Klux Klan fraternity for white supremacy world domination. To our consternation, we have discovered that the bourgeois-oriented power structure of some socialist states, even one with a black and white population, would prefer to preserve the white reactionary anti-communist power structure in racist America, their natural enemy, than to see a just, democratic fraternal socialist state brought about by the revolutionary action of oppressed blacks that would serve the best interests of all people of all races."

From then on, Williams' newsletter appeared at regular intervals with the imprimatur "Printed in China as a Personal Journal." One of his first new slogans from Peking was the following: "The most noble cry to come out of racist America since the Boston Tea Party is the cry: Burn ˜aby Burn. It is a good starter for more than just fires. It is a point of origin for a mighty revolutionary process . . . Yes, Burn Baby Burn, like the Boston Tea Party, is a good point of origin but in the final analysis the brutal oppressor must go and the cry Kill Baby Kill must prevail." Williams even offered one of his own recipes: "Try the new sensational, Black Power Cocktail. Mix the Best! Gasoline, a little burnt thick motor oil and a dash of petroleum jelly. Catches on like napalm. Shake well before serving."

The nation's press again took notice of Williams in March 1968, when Milton Henry (then chairman of the Malcolm X Society) announced the formation of the Republic of New Africa (see *Combat*, Sept. 1, 1968; April 15, 1969). Williams was elected President of RNA at this founding convention of the National Black Government Conference.

With this announcement, serious work began to arrange for Williams' return to the U.S. In June 1968, Williams took the first step on his trip back: he visited Dar Es Salaam, Tanzania, where he met with Milton Henry and his brother, Imari, and Mae Mallory, who had flown to Tanzania. In addition to political meetings, Williams found time for a ten-day, 1500-mile motorcycle tour down to Zambia. He said he undertook the trip to test his stamina, to inspire black youth to a greater sense of exploration and to see seldom-visited villages of Africa. (Williams had traveled to Tanzania with his wife, Mabel, on Chinese alien travel documents, having been without a U.S. passport since his flight from America in 1961.) In October 1968 Williams wound up his visit and returned to Peking. Curiously, before Williams boarded a ship in Dar Es Salaam for the return to Red China, an official of the U.S. Embassy presented him with a new American passport.

Back in China, Williams began publishing *The Crusader* again and started to include some of his revolutionary poetry. In one issue (May 1968) he gave his own lyrics to the "Star Spangled Banner": "Burn baby we must, insurrection is just,/And this be our cry: 'In Guns is our trust.'/And our glorious new flag in triumph shall wave/O'er a Black people free, never more to be slave!"

The official announcement of Williams' return came from Milton Henry on August 23, 1969 in Washington, D.C., at a four-day "legislative conference" of the Republic of New Africa. But Williams' return was delayed just a bit: arriving in London via Cairo on September 6, Williams was stopped by British immigration authorities and taken to Pentonville Prison, because Trans World Airlines refused him passage, saying that the airline had "concluded that his presence aboard our aircraft both in the air and upon his arrival at a United States destination would be inimical to the best interests of T.W.A. and its passengers."

Five days later, TWA announced it would transport Williams back to the United States via a special flight (only passengers: Williams and his attorney, Milton Henry).

Williams arrived in Detroit on September 12 and the New York *Times* reported the historic event on page 1 and devoted an entire "Man in the News" column to him, never once mentioning his philosophy of terrorism; to the *Times*, he was just a "Pioneer Black Militant." As soon as he stepped off the plane, Williams was arrested by Federal authorities on a fugitive warrant issued by North Carolina and then released on $1,000 bail. Local officials in Detroit took him into custody and Williams appeared in the Common Pleas Court where the warrant was reviewed and he was released on a $10,000 personal recognizance bond.

"War" to Robert Franklin Williams means, in the words of RAM's underground newspaper, *Afro World*, that "We must vow to meet violence with violence, 'an eye for an eye and a tooth for a tooth,' filling the Mighty White American cities with White American blood; leaving not a building standing in their pure, white, Christian land 'till we can walk in dignity with our black brothers and sisters of the earth.'"

The Crusader carries specific instructions for causing havoc and destruction. One of the most detailed plans appeared in the September–October 1967, issue:

"A united, well organized, armed and trained Black America is a potential force to be reckoned with in its own right. . . . A precision-type guerrilla warfare is the prerequisite for the black man's survival and liberation in racist America. Such a campaign must be well organized and coordinated. There must be a vast network of communication and central planning. No matter how primitive, black freedom fighters must establish their own coded and clandestine communications system. There must be central planning and a national supreme command. Afro-American revolutionary forces must create a top-notch agency. This agency must be responsible for the establishment of an efficient and extensive intelligence network. It must infiltrate the armed forces, the National Guard, the police, the FBI, the CIA, public utility services and all political groups, right, center and left. The power structure's facilities must be utilized to advance the cause of Afro-American liberation. . . . The most aggressive and irrepressible arm of the over-all organization would be the fire teams. . . . The mission of these thousands of active teams would be setting strategic fires. They could render America's cities and countryside impotent. They could travel from city to city placing lighted candles covered with large paper bags, allowing enough air at the bottom to allow the flame to burn until it burned to dry leaves and grass, thus devastating the forests. . . . The fire teams roving in automobiles would find unguarded rural objectives even more accessible. A few

teams could start miles and miles of fires from one city to another. The psychological impact would be tremendous. By day the billowing smoke would be seen for miles. By night the entire sky would reflect the holocaust and emit a feeling of impending doom. . . ."

THE NEW LEFT—HEIRS OF THE GUILLOTINE

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. RARICK. Mr. Speaker, in a thought provoking address delivered at King's College, New York, last week, Mr. Jeffrey St. John, a prominent member of the Conservative Party, seems to have put his finger squarely on the New Left and its role in history.

Students of history have long understood the relative roles of the American Revolution and the bloody French Revolution which followed within a few years. Mr. St. John accurately sums up the difference—the founders of our Nation were capable of building, and did build, while the French Revolution was capable only of destruction, destroying finally its revolution.

The New Left offers nothing but destruction. It is totally incapable of anything constructive, has no ideas but nihilism and anarchy, and from this bankruptcy can produce only violence. It, too, will consume itself, but only after innocent blood has been shed in more cities than Chicago.

I commend Mr. St. John's address to the careful attention of all members of this House, and include it in my remarks:

FINISHING THE WORK OF THE FOUNDERS—A FREEDOM MANIFESTO FOR OUR TROUBLED TIMES

(Speech by Jeffrey St. John based on his book, "Countdown to Chaos: Chicago 1968," published by Nash Publishing Corp., Los Angeles, given on October 21, 1969, King's College, Briarcliff Manor, N.Y.)

[Copyright 1969 CINCOM Inc. Not to be reproduced except for press quotations without permission from CINCOM Inc.]

"Historians will differ," wrote former New York Times correspondent and author Arthur Krock, "on whether the political philosophy and the military economic direction of any nation has changed more fundamentally than those of the United States in a comparable period of time, 1933–1967. But as an eye witness to governmental and other public action throughout these years, I have formed the opinion that the United States merits the distinction of having discarded its past and meaning in one of the briefest spans of modern history."

Can a nation, having discarded its past and its meaning, escape the consequences of such an act? The violence, lawlessness, and social disruption that has engulfed the nation in recent years suggest it cannot. When a country cuts itself off from its historical experience and the principles that allowed it to flourish, it is like a giant ocean liner on a dark fog-bound sea without a philosophical rudder or radar to guide it. And almost no one today denies that somehow two hundred years after the signing of the Declaration of Independence we have lost our sense of direction and bold daring as a nation.

We began, as most of us know, with a profound sense of direction, provided by perhaps the most remarkable group of men to ever come together in one given period of history. What would our Founding Fathers say of those individuals and groups today who initiate violence for political ends and ignore the principles upon which our laws and our Constitution are based?

First, the Founders might compare today's New Left radicals not with themselves but with the radicals of the late eighteenth century who precipitated the French Revolution. The Founders might point out that while they supported the aim of the revolution in France, it failed in its promise of freedom because French radicals—like today's New Left—knew only how to destroy, not how to build.

America's revolutionaries of 1776 constructed a system that was responsible for one of the most remarkable social, political, and economic revolutions in the history of mankind. This is the legacy left to America by a small band of brilliant men. The French radicals left their people a Napoleonic dictatorship. Many scholars see France's constant turmoil in the nineteenth and twentieth centuries as directly traceable to the failure of the French Revolution.

Second, the Founders might conclude with horror and disappointment that the actions of the New Left, given its premises and philosophy, could, if unopposed, destroy the free political, social, and economic system that the American Revolution had made possible.

But why is it that our nation now finds its institutions under violent attack and its streets and college campuses virtual battlegrounds after so brilliant a beginning?

THE INTERRUPTED REVOLUTION

The American Revolution of 1776 is an interrupted revolution. After 150 years of living close to the Founders' philosophy we gradually drifted from the main tributary of our beginning and traditions.

The social and political system inherent in the Declaration of Independence and the United States Constitution provided the freedom for every man to be the founder of his own fortune. And this system created the geographical unity for trade and cooperation among the states of the union. Such freedom and unity developed the climate necessary for the unprecedented burst of creative energies that culminated in the countless mechanical inventions and industries of nineteenth-century America, which formed the foundation for today's Technological Revolution with its resulting material abundance and affluence. Thus, our material wealth today is the direct result of the events of the nineteenth century which were made possible by the freedom won in the revolution of 1776.

In a profound, affirmative way, the Founders studied the past and all the lessons it offered, and constructed an original, uniquely American, free social and political system. The Founders also looked deeply into the nature of human beings and sought to harmonize their thinking with the natural state of men and women. The Founders came to the conclusion that the natural state of man was to be free and that he had within him the potential to act responsibly if offered a set of principles and a philosophy.

What is staggering about this achievement is that such a benevolent outlook toward man had never before been professed, let alone expressed in a workable, concrete social system. Men like Thomas Jefferson fought hard to extend this principle to all men, meaning the abolition of slavery. But in a mood of compromise the Founders defaulted on the issue of slavery, which would only be corrected with the great Civil War of 1860. This lethal compromise illustrates that the deeds of the dead often have a hold on the living, and to compromise on basic principles is to invite disaster at a later date.

In the same year that the Declaration of Independence was signed, Adam Smith first published his work on free economics, *The Wealth of Nations*. Like the Founders, Smith drew on centuries of historical experience in arriving at certain theoretical principles concerning free economics. His work had a profound influence on the Founders. Later, in 1789, the framers of the U.S. Constitution drew major inspiration from Smith—Thomas Jefferson praised *The Wealth of Nations* for its "sheer genius." In the same decade, the 1770's, another momentous event occurred: the invention by Watt of the first workable and salable steam engine.

Thus, in one decade, the Founders laid the political and social foundation for the Industrial Revolution of the nineteenth century; Smith's *The Wealth of Nations* laid the theoretical economic foundation, that is, the practical principles to guide men of productive genius; and James Watt's invention of the steam engine laid the physical foundation, for steam engines later became locomotives, which made possible the railroads of the world—uniting people, nations, and even continents.

Yet in the midst of all these unprecedented and breathtaking material and intellectual achievements, in the nineteenth century, there began to rise just prior to the U.S. Civil War, a group of intellectuals in America who felt left out and unrewarded by the then newly emerging industrial era. Holding a philosophy that stood for collectivism and state control of the lives of the American people and the means of economic production, such men and women stood as a counter-revolutionary force to those principles of the Founders that set forth a belief in individualism and limiting the power of the state. These intellectuals, many of them Marxists and Socialists, sought to smear and distort the achievements of the Founding Fathers and the industrial and inventive geniuses of the nineteenth century.

Eventually, the attempt to interrupt and subvert the achievements of the revolutions of the eighteenth and nineteenth centuries in America climaxed in the election of the Franklin D. Roosevelt New Deal in 1933. Just as the influences the Founders set into motion in 1776 did not find their greatest fulfillment until decades later, so the efforts of America's counter-revolutionaries begun in the nineteenth century did not come into concrete political form until 1933.

ROOSEVELT'S COUNTER-REVOLUTION

The New Deal was said to have been a necessary response to the Great Depression—which was allegedly caused by the collapse of the free economic system.

However, the Great Depression of the 1930's was the direct result of attempts by government to control freedom. Between 1865 and 1933 intellectuals influenced certain political leaders to correct abuses and "monopolies" caused by Big Business and the private economic system. But those monopolies arose because city, state, and federal governments used their power to *close out competition* for the advantage of politically influential businessmen. Each government-imposed "correction" of abuses undercut the natural working of free economics, making the situation much worse until by the late 1920's the private economic sector collapsed in a monetary crisis under the burden of government controls.

Instead of removing these life-bleeding controls and restraints on freedom, the Roosevelt New Deal added still more government controls. When spending schemes did not cure the Great Depression, but only drugged it, Roosevelt turned to the oldest

solution known to men and nations: he began gearing American industry for war. In doing so he committed a former free economy, which profited more from peace than from war, to a warfare and welfare state economy.

In no small measure, the distortion of our economic and political life that began under FDR made possible the violence and upheavals of the 1960's. The machinery of government, built over the decades since the Thirties, is breaking down under its own deficiencies and gargantuan size. Professor Peter Drucker of New York University has observed:

"Modern government has become ungovernable. There is no government today that can claim control of its bureaucracy and of its various agencies. . . . This is a threat to the basic capacity of government to give direction and leadership."

Since FDR's counter-revolution against the principles of 1776 and 1789, our nation has tried to straddle the principles of both revolutions: the 1776 Revolution's principles of rights and limited government, and the 1933 revolution's principles of growing government that often leads to the violation of individual rights. Neither an individual nor a nation can serve two masters, as Abraham Lincoln stated (in a different context) in his House Divided speech of June 16, 1858:

"A house divided against itself cannot stand. I do not expect the house to fall but I do expect it will cease to be divided. It will become all one thing or all another."

So it is with the United States: divided between the force of government and the struggle for individual freedom, it will become all one thing, or all the other. The violence, anarchy, and social discord of the 1960's exemplify the inability of the American Republic to remain divided—and, equally, the incapacity of the government to properly give direction and leadership.

In the cities of our nation this breakdown has made possible the rise of radical political elements who seize upon the government's inability to provide promised social services and firm leadership to assault violently the entire social and political system and the principles of the Founders.

Criticism that government is a danger, heard in the past only from more conservative circles, now transcends political party lines. Therefore, given the admission by many that the principles and programs of the New Deal are unworkable or have collapsed, what choices are left open to Americans in the second half of this century?

There are three choices. One: We can submit to the forces of the New Left who have made it clear that their solutions to our mounting problems are not less government, but more—going beyond Franklin Roosevelt's program in the vain hope of curing the very problems government helped create.

Two: We can seek to bring government under control and make it more manageable—streamlining government agencies, cutting waste and duplication, and keeping a tight check on spending schemes.

The third choice is that we can turn toward a truly free enterprise system through an "Era of Reform and Repeal," step by step ridding ourselves of those programs, policies, and ideas that have ended in impoverishing the poor and prosperous alike. We can appeal those programs instituted by government and the counter-revolutionaries that contribute to the violation of individual rights and deny the spirit and letter of the U.S. Constitution and Declaration of Independence. It is because we have broken with these moral and philosophical covenants that we are paying a heavy price in mounting chaos.

For those Americans who cherish freedom, the third course of action is the only avenue left open. An "Era of Reform and Repeal" would mean removing the restraints that force freedom into a series of retreats, that progressively creates dependency, and limits the choice of the individual. And individual choice is what *you* and other college students across the nation are seeking, and what adults are accused of frustrating.

1976—FOCAL POINT FOR A FREE FUTURE

The distinguished author John Dos Passos observed that the problem "is whether we can improvise a workable program fast enough to reverse the trends toward disintegration and anarchy. The time for generalities is past," he stated. "Someone must present a practical chart for the future which will restore to the American people a sense of direction."

In 1976 we will celebrate the two-hundredth anniversary of the signing of the Declaration of Independence. The bicentennial year honors the achievements of a handful of brilliant minds that gave a new nation a sense of dynamic direction and purpose. It was a beginning that laid the foundation for the most remarkable social, political, and material revolution in mankind's history. This two-hundred-year period may rightfully be called "The Era of the Triple Revolutions"—the American Revolution, the Industrial Revolution, and today's Technological Revolution.

As we near 1976, radical political forces in our society would take us further away from those founding principles by offering more of the extreme political philosophy of government force. The New Left programs have already demonstrated their weaknesses, including a propensity to multiply rather than solve our nation's problems. As Dos Passos also observed, our current crisis indicates that "we suffer from an essential shoddiness of much of the philosophy which underlay the New Deal . . . the Liberal approach to human problems has reached a dead end."

You on our college campuses and the young in our cities who are opposed to the violence of the New Left are without a rallying point and, most important, without the ammunition with which to answer the attacks on the American system. The New Left can only inflict further damage on our democratic republic if they continue to be unopposed because you who cherish the American tradition do not have a more clearly held alternative.

It is one thing to suppress violence by law. It is more difficult to remove the deeper causes from which anarchy, violence, and disruption flow.

Therefore you must arm yourselves with the philosophical and historical roots of the American system. By this, I mean the philosophical and political programs of the Founders must be clearly understood. This is your ammunition against the forces of the New Left which seek to destroy the very foundations of the Republic. It is your battle cry, it is a great American anthem that largely goes unsung because it is not understood. You cannot learn to play an instrument if you do not first know how to read music, and so it is true historically. To finish what the Founders began we must know what are their principles that form the foundation for the most original, the most unique, the truly most revolutionary program in the entire history of Western man. These are your tools with which to fight the totalitarians of modern times.

As I pointed out at the beginning of my talk, we are like a large, magnificent ocean-liner without a philosophical or moral rudder. And because of the renunciation of our nation's founding principles and its constructive past we are now engulfed in the irrationality and lawlessness all around us.

THE REAL REVOLUTIONARIES

Americans who recoil in righteousness and rightful anger at force, violence, and flight from freedom such actions portend, must not sit back and either lament such actions or give lip service to documents like the U.S. Constitution and the Declaration of Independence. As great as they are in enunciating the principles of freedom, they are only as strong as the honesty and integrity of the men and women who use them, interpret them, and defend them. When a nation's citizens lose sight of a document's meaning, it loses all its moral or actual power, and force fills the place where once freedom stood supreme.

America needs a Freedom Manifesto in these troubled times, and a new and dynamic leadership that will help thoughtful and concerned Americans rediscover the ideals, philosophy, and political program of the Founding Fathers. This does not mean "going back," for the philosophy of the Founders is a philosophy for all ages and for all seasons—born of struggle, tempered by time's experience, and tested in the laboratory of life. The universality of the Founders' philosophy is richly reflected in its influence not only on Americans and on our nation, but on the very outposts of the civilized world.

The Founders of America were the only real revolutionaries of the last two hundred years; all other revolutionaries were pretenders because what they sought was power over people. Understanding the evils that even well-meaning men in power could inflict on their fellow countrymen, the Founders sought not power over people but the unleashing of the power within the individual.

We shall overcome our troubled times if we but have the will and the intelligence to shape a realistic manifesto that reflects the principles, the hopes, and the highest expectations of our Founding Fathers—finishing what they so nobly began.

As young Americans this is your task. The philosophical and political program of the Founders remains unfinished because many adults have discarded it. Pick up this noble fallen standard of liberty, law, and the philosophy of reason. It is your intellectual arsenal, it is your inheritance, and it is your true revolutionary role for the future.

RETARDED SCOUTS HELPED BY BOYS

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. EILBERG. Mr. Speaker, we have frequently heard of the benefits of the Boy Scout movement. I think that most people do not realize that scouting is innovating all the time.

A remarkable new experiment in the country is taking place in my own district in the largest mental hospital in the State.

About 1 year ago, as chairman of the Frontier District, Philadelphia Boy Scouts of America, and as Congressman of the district, I presented a charter to the director of the hospital, Dr. Daniel Blain. Dr. Blain is without a doubt one of the foremost men in his field in America today. It is a tribute to him that he would encourage scouting among his patients in the hospital.

I think it of great interest to provide a report on what has been happening as reported in the Philadelphia Evening Bulletin, Thursday, October 23, 1969, as follows:

[From the Evening Bulletin, Oct. 23, 1969]

RETARDED SCOUTS HELPED BY BOYS

(By Ben McElveen)

Boys serve as "sort of Big Brothers" to retarded adult males in an experimental Boy Scout Troop at Philadelphia State Hospital at Byberry, where a weekend work camp starts Friday.

Mrs. Dorothy Zuckerkandel, a hospital staff member, explained yesterday "it's the first scout troop for mentally retarded adult males at a state hospital in Pennsylvania."

The members of Boy Scout Troop 760 are retarded men from 30 to 60. Several other regular Boy Scout Troops serve as "helpmates" for the adult scouts.

But, Mrs. Zuckerkandel said, "these men were originally being undersold and no one anticipated as much response as they are getting.

"Nobody really knew how much they could do over a year ago when the troop was formed," she said. "But we've found they are a great deal more receptive and capable of doing far more in such a project that they really enjoy."

MEET WEEKLY

The adult scouts meet weekly in three separate patrols at the hospital, located on Roosevelt blvd. at Southampton road.

The men learn regular scouting skills such as rope tieing, outdoor activities and arts and crafts. "They have their own uniforms and are really thrilled about that," Mrs. Zuckerkandel said.

The troop was formed in February, 1968, when a charter for the new troop was presented by U.S. Rep. Joshua Eilberg (D-Pa) to Dr. Daniel Blain, director of the hospital.

"When they were first chartered," Mrs. Zuckerkandel said, "each of the new men scouts recited a different portion of the scout oath. It gave them all a chance to participate."

TROOP HAS FLAG

She said there are currently about 15 retarded adult males in the troop. Richard Delaney is scoutmaster and William Spencer and Brad Storey are both assistant scoutmasters.

"The troop now has its own flag for Troop 760," she added.

The troop has participated in various parades, taken part in good deed projects and served to help paint-up and fix-up the hospital.

Meanwhile, some 100 Boy Scouts and their leaders are expected to join with this troop during the third weekend work camp of "good turn" projects this weekend.

The scouts will join in recreation programs, display scouting skills and take part in campfire activities at the hospital.

CAMPFIRE PLANNED

A highlight of the Saturday campfire will be the investiture of Byberry's own Troop 760 of male retardates, who will receive merit badges in a court of honor.

Serving as "buddies" will be Troop 341 of Pennypack District, whose scoutmaster is Leonard Picar of Brighton st.

Patients and staff from the hospital's North and East units will work with the scouts. Among the "good turn" projects will be the development of a fish pond, bulb planting and bench repairs.

Other troops participating in the scouting workshop and their scoutmasters are Troop 240, Pennypack District, Charles Pirring, E. Steinbest st.; Troop 33, Edge Hill and Valley Forge, Donald Kelley, Laverock rd., Glenside; Troop 394, Frontier District, Alfred Clark, Emerson st.; Troop 117, Pennsbury, Bob Paff, Levittown, and Troop 254, Pennypack, Lou Flade, Welsh rd.

PROFESSOR WARNS OF PARENTAL ANGER ON SEX EDUCATION

HON. GLENN CUNNINGHAM

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. CUNNINGHAM. Mr. Speaker, I recently introduced a bill which would prohibit the use of Federal funds in sex education programs unless there was approval by the local school board.

Dr. Rhoda L. Lorand, an adjunct associate professor at Long Island University, was in Washington last week and voiced her concern over the way sex education is being handled in the United States.

In an article in the Sunday Washington Star, Dr. Lorand said she feels many of the advanced sex education programs are simply "too much too soon." She told Star reporter David Braaten:

We've got to put a stop to it before the bitterness and suspicion of the parents brings a reaction that will sweep away all sex education.

Mr. Speaker, there is merit in what Dr. Lorand has to say and before we allow Federal funds to be spent in such a manner, let us take a very close look at the programs involved. Better still, let us pass the bill I have introduced and have those at the local level decide what type of program they should have.

I urge each of my colleagues to spend a few minutes in reading Dr. Lorand's observations.

The article follows:

PROFESSOR WARNS OF PARENTAL ANGER ON SEX EDUCATION

(By David Braaten)

Parental outrage at the way sex education is being handled may sweep the entire subject out of the public schools, a child psychologist warned yesterday.

Dr. Rhoda L. Lorand, an adjunct associate professor at Long Island University, voiced her concern in an interview during a visit to Washington.

The parents' revolt is a grass-roots movement, Dr. Lorand said. The fact that critics of the sex education programs include some political right-wingers is used to intimidate liberals, she said, and allows proponents to avoid arguing the case on its merits.

Things are fast reaching the point where some parents won't trust the schools to teach anything, so angry are they at the sex-education programs. The attitude of some school administrators, who shrug off honest criticism and ridicule all critics, doesn't help the situation, Dr. Lorand said.

WOULD HAVE MORATORIUM

Her suggested solution is a complete moratorium on sex education, for as long as is necessary to determine exactly what kind of program parents are willing to accept. It wouldn't do children any harm to go without sex education for a year while the issue is thrashed out, she said.

Dr. Lorand makes no secret of her position. She thinks many of the advanced sex-education programs are simply "too much too soon."

Teaching third- and fourth-graders the details of sexual intercourse, complete with diagrams and colored slides, can do serious harm to children, she believes.

"But even assuming it's a good program, you can't help a 7- or 8-year-old child with information that the parents aren't ready for them to have," said Dr. Lorand. "We've got to put a stop to it, before the bitterness and suspicion of the parents brings a reaction that will sweep away all sex education."

MIXED CLASSES OBJECTED TO

A particular target of Dr. Lorand's criticism of modern programs is the use of mixed classes for sex lectures. Little girls, she said, are especially shy and sensitive about the changes that puberty brings, and the last thing they need is to have them discussed in front of boys.

Dr. Lorand believes in a certain amount of sex education—in the fifth or sixth grade, and with separate classes for boys and girls—but deplores the explicit, detailed information on intercourse that is being given in some of the more ambitious programs.

Part of the trouble, Dr. Lorand feels, is that sex education has become a multi-million-dollar industry, involving lucrative publishing contracts, consultant fees, audio-visual aids and government and foundation grants. The advocates of sex education often have a vested interest in entrenching and expanding the programs, she feels.

Dr. Lorand has written a book herself, "Love, Sex and the Teen-Ager," but she disapproves of its use in classroom discussion. Almost any sex question that troubles a school-age child could be answered by having the right kind of books available for library use, plus a guidance counselor to explain whatever remains unclear, she said.

Summing up her critique of the leading champion of more sex education, the official-sounding but private organization called Sex Information and Education Council of the United States, Dr. Lorand said: "Their trouble is, they don't understand sex, they don't understand children and they don't understand the parent-child relationship."

OPERATIONAL INTERCEPT SUCCESSFUL

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 28, 1969

Mr. BOB WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

[From the San Diego Union, Oct. 19, 1969]

MEXICO COOPERATION PLEDGED: OPERATION INTERCEPT SUCCESSFUL

A cautious assessment of the results of Operation Intercept shows the dramatic effort to stem the flow of illicit drugs and narcotics into the United States is on the road to success.

Its success is not to be measured only in kilograms of contraband seized at the border nor in the number of arrests of would-be smugglers during three weeks of intensive surveillance at ports of entry.

Nor should the appraisal be affected by the unpleasant but inevitable side-effects of the operation—the toll in depressed business activity on both sides of the border, and the strain on tempers of those subjected to long delays and searches.

The real measure of the effectiveness of Operation Intercept, which now is included in the new Operation Cooperation program, is what it accomplished in the broad framework of America's serious drug problem.

A direct and conspicuous accomplishment is that the United States and Mexico now stand on a higher plateau of understanding and cooperation in facing those aspects of the drug problem which affect both nations.

The decision to scale down the intensity of surveillance at our border stations rests on Mexico's pledge to intensify its own law enforcement efforts against production and transportation of drugs. The Mexican government already had announced a program of health checks at the border to discourage entry of narcotics users.

Within hours after the new policy was announced, it was reported that Mexican troops had raided an illicit plantation inland from Acapulco and put the torch to $40 million worth of marijuana. It has agreed to roadblocks to stop narcotics on highways 5 and 15.

This is marijuana that will never become contraband at any border station, that will never find its way into the locker of a high school student, that will never lose its effect on innocent lives.

Operation Cooperation also recognizes the responsibility of the United States in helping Mexican authorities weed out an illicit industry supported largely by demand from our country. U.S. foreign aid funds have been earmarked for Mexico to help finance a stepped-up enforcement program below the border.

And implicit in the new policy is that the United States recognizes a need for more strict control over the legal traffic of manufactured drugs from the U.S. suppliers into Mexico, drugs which too easily find their way back into this country as contraband.

What first emerged as a strain on friendly relations with the United States and Mexico has led to a greater acceptance of mutual responsibilitiy in maintaining the basis for that friendship.

Operation Intercept created an atmosphere of emergency along our common boundary. Operation Cooperation emphasizes that the drug problem still is an emergency whose solution requires full-throttle effort.
